

PROBLEM STATEMENT

- **Disproportionate idle times** across the brick sorting lanes have amplified the physically challenging nature of the post.
- behavior factors Organizational prevent the implementation of complex changes to the sorting station.

OBJECTIVE

- **Balance** workload across all lanes.
- Analyze current manual materials handling (MMH) techniques and advise on potential solutions

CURRENT STATE

- **Underutilization** of operators at individual lanes.
- Operators tend to adopt poor ergonomic postures.
- Operator perceptions can create a **negative** sentiment.

Current State – *Sorting station strapper*

Current State - Brick sorting station

Current State – *Poor Ergonomic Posture*

• **Time studies** of each lane.

| Lane | 1 | 2 | 3 | 4 |
|---------------------|-----|-----|-----|-----|
| Idle Time (minutes) | 21 | 22 | 55 | 180 |
| Time active | 459 | 458 | 425 | 300 |
| % Active | 96% | 95% | 89% | 63% |

Current State – Time study

 Conducted surveys and interviews to understand issues with the current system.

• Analyze recurring **injuries**

| • | Conducted | ergonomic | risk |
|---|------------|-----------|------|
| | assessment | t | |

| # of Bricks per lift | Daily Cumulative Damage (%) | Associated Risk Level |
|-------------------------|--------------------------------|--------------------------|
| 2 | 1.3% | Low |
| 4 | 4% | Low |
| 5 | 4% | Low |
| 8 | 5.3% | Low |

Vertical Height (m) Description 0.71 28 in (knee height) 1.10 43.5 in (waist height)

1.47 58 in (shoulder height) 1.83 72 in (overhead)

LiFFT Analysis - Vertical height values for each subtask

PROPOSED SOLUTION #1

- Implements a policy in sorting that encourages a more **even** distribution of empty jigs.
- Each lane will contribute in a more balanced manner, increasing productivity.
- Frequent rests for the outer lanes.

Time study - Lane idle time per shift due to full jigs

| Percentage of Workers | Hardest Part of Job | | |
|-------------------------------------------------|---------------------|--|--|
| 62.50% | Bending/Stooping | | |
| 18.75% | Weight of the Brick | | |
| 18.75% | Twisting | | |
| Ergonomic Analysis – Types of postures observed | | | |

• Lifting Fatigue Failure Tool (LiFFT) Analysis Recommended Cumulative Rest Allowance (RCRA) Analysis Potvin. J (2021) LiFFT and RCRA Analysis

LiFFT Analysis - Resulting cumulative damage values and risks

Workstation view showing only jigs immediately available to operators.

PROPOSED SOLUTION # 2

- **Expansion** of the existing sorting platform for increased access to railcar/brick.
- Minimizes lane idle time to give workers better access to empty jigs, allowing them to sort at their own pace.

FUTURE WORK AND POLICY RECOMMENDATIONS

- Proper Training on Safe Lifting Techniques.
- Encourage Early Reporting of MSD Symptoms.
- Workplace stretching programs.
- Implement a shift rotation schedule.
- Ensure periodic breaks.
- Monorail operators should have a **signal system** implemented to remove unnecessary complexity.
- Develop and foster an inclusive workplace culture.

| Jig Number | Capacity (# of Brick) | Completed Rows |
|------------|--------------------------|----------------|
| 1 | 52 | 2 |
| 2 | 96 | 4 |
| 3 | 148 | 6 |
| 4 | 200 | 8 |

Proposed Solution–Brick capacity comparison
