4. Creating a Culture of Sepsis Awareness
5. Value for Money
6. Improving Transitions in Care from the Intensive Care Unit

# Partnering with Canadian Families to Understand and Address the Multifaceted Impacts of the COVID-19 Pandemic and Related Restrictions on Child and Youth Wellbeing

The overarching aim of our youth and family focused project is to rapidly identify underlying drivers of stress and trauma due to the pandemic, as well as associated protective mechanisms, in diverse subpopulations of youth and families in Canada to help shed light on how we can best support families through pandemic recovery and beyond. To achieve this goal, we are conducting a multi-phased mixed-methods study to comprehensively assess youth and family experiences, outcomes, and needs.
