A Statement of the Aims of Undergraduate Education at Dalhousie

Dalhousie University offers undergraduate education enriched by a longstanding institutional commitment to research and to graduate and professional education. The University tries to assist all its undergraduate students to become independent thinkers and articulate communicators, knowledgeable about their chosen disciplines or professions, conversant with a reasonable body of general knowledge, and committed to learning throughout their lives.

**Dalhousie assists its students to learn how to think for themselves.** Students in all disciplines and professions can expect to develop skills and attitudes crucial for logical and independent thought. The faculty strives to teach students how to think, rather than what to think, and to enable them to make fair-minded enquiries in their fields of study and into the broader ethical, cultural and social issues that shape our lives. An educated person thinks carefully, reconsiders received ideas, and leads an examined life. The development of these habits of mind is the primary goal of undergraduate study.

**Dalhousie assists its students to learn to express themselves, orally and in writing with clarity, precision and style.** It does so, not only because communication skills permit the efficient transfer of information, but also because they make possible dialogues which lead to new ideas and to deeper appreciation of existing knowledge. Because a communal effort to exchange ideas and information is at the heart of university life, students in all disciplines and professions need opportunities to develop their skills in writing and in speaking at all levels of the undergraduate curriculum.

**Dalhousie assists its students to master a combination of specialized and general knowledge.** The specialized knowledge acquired by undergraduates at Dalhousie varies from discipline to discipline and even from student to student. Such knowledge should include, not only data skills, but also an understanding of the theories, structures and processes central to the discipline or profession in question, and an awareness of their practical applications and ethical consequences. Undergraduate students at Dalhousie should become familiar with a significant body of general knowledge as well. All should become acquainted with concepts central to our own culture and those of others. All should acquire basic quantitative skills and some knowledge of the principles of science and technology. All should share a sense of history and an appreciation of achievements in literature, philosophy and the arts. Such general knowledge helps us not only to confront the practical demands of work and life, but also to comprehend more fully our experience of the human condition.

**Dalhousie assists its students to develop the capacity for commitment to learning throughout their lives.** Their educational experiences within and outside the classroom should be rich and diverse. By providing social, cultural, recreational and other opportunities for student involvement and leadership, Dalhousie acknowledges responsibility for promoting both personal and intellectual growth.
Smoke Free/Scent Free Dalhousie

Providing a Healthy Work and Study Environment

To protect people from involuntary exposure to tobacco smoke, in 2003, Dalhousie declared the University entirely smoke-free. The No Smoking Policy prohibits smoking in all University buildings, including University residences, on University property and in University Vehicles.

Under this policy, those wishing to smoke are asked to leave University property (http://safety.dal.ca/programs_services/smokefree/property.php). While smoking on public property, smokers are asked to avoid littering, to be respectful of others, and of course to abide by the municipal by-law.

The University has also acted to support its many students and employees who report that they are harmed when they are exposed to scents which are present in many scented personal care products. Scents in perfume, cologne, hair-spray, after-shave, and even some soap and fabric softeners, cause serious illness in people who are sensitive to these chemicals.

To provide an environment which supports teaching and learning, Dalhousie asks students, staff, faculty and visitors, to refrain from using such scented products while at the University. The scent reduction program is part of a broader effort to limit, to the fullest extent practical, exposure to all chemicals in our buildings.

For more information on the Smoking Policy and the Scent Reduction Program, contact the Safety Office by email at Safety.Office@dal.ca or consult the web sites http://safety.dal.ca/programs_services/scentfree/ and http://safety.dal.ca/programs_services/smokefree/.

Important Notices

Students are advised that the matters dealt with in this Calendar are subject to continuing review and revision. This Calendar is prepared some months before the year for which it is intended to provide guidance. Students are further advised that the content of this calendar is subject to change without notice, other than through the regular processes of Dalhousie University, and every student accepted for registration in the University shall be deemed to have agreed to any such deletion, revision or addition whether made before or after such acceptance. Additionally, students are advised that this calendar is not an all-inclusive set of rules and regulations but represents only a portion of the rules and regulations that will govern the student’s relationship with the University. Other rules and regulations are contained in additional publications that are available to the student from the Registrar’s Office, and/or the relevant faculty, department or school.

The University reserves the right to limit enrolment in any program. Students should be aware that enrolment in many programs is limited and that students who are admitted to programs at Dalhousie are normally required to pay deposits on tuition fees to confirm their acceptance of offers of admission. These deposits may be either non-refundable or refundable in part, depending on the program in question. While the University will make every reasonable effort to offer courses as required within programs, prospective students should note that admission to a degree or other program does not guarantee admission to any given course. However, no student in a graduating year may be excluded from a course required by that student to meet degree requirements because of lack of space (This rule does not apply to elective courses or to preferred sections of courses.). Students should select optional courses early in order to ensure that courses are taken at the most appropriate time within their schedule. In some fields of study, admission to upper level courses may require more than minimal standing in prerequisite courses.

Dalhousie University does not accept any responsibility for loss or damage suffered or incurred by any student as a result of suspension or termination of services, courses or courses caused by reason of strikes, lockouts, riots, weather, damage to university property or for any other cause beyond the reasonable control of Dalhousie University.

Inquiries should be directed to:

The Registrar
Dalhousie University
PO Box 15000
Halifax, Nova Scotia B3H 4R2

Admission Dates 2014/2015

Final Dates for Receipt of Applications for Admission

Regular Session 2014/2015

Faculties of Arts and Social Sciences, Computer Science, Engineering, Management, and Science

International Students (except USA) ........................................................... April 1
Students entering from Canada or USA..................................................... June 1
Returning Dalhousie Students ............................................................... August 15
Diploma in Meteorology ........................................................................ August 15

Faculty of Agriculture

Bachelor of Agriculture ................................................................. July 1
Diploma in Veterinary Technology.................................................. February 28
All other programs ............................................................................. August 15

Faculty of Architecture and Planning

Bachelor of Community Design ................................................. June 1
Bachelor of Environmental Design Studies ........................................ March 1

Faculty of Health Professions

Pharmacy ............................................................................................... February 1
Social Work, Health Sciences ..................................................... February 15
BSc (Recreation)1, BSc (Kinesiology)1, and BSc (Health Promotion)1 ........................................................................ June 1
Health Services Admin (DHSA, DEHSM) ......................................... March 15
BSc (Nursing) ....................................................................................... March 15

Dentistry2

DDS .................................................................................................. December 1
Dental Hygiene ................................................................................... March 15
Dentistry Qualifying Program ..................................................... September 1
Bachelor of Dental Hygiene (BDH) .................................................. March 15
Paediatric General Practice Residency Program ............................. October 15

Medicine2

MD ................................................................................................. August 15

Law2

JD .................................................................................................. February 28

Winter Term

BA and BSc programs only .......................................................... November 15
Returning Dalhousie Students .................................................. November 15
BEDS Transfer students .................................................. November 15

1 Late applications may be considered but we cannot guarantee space in programs.
2 Information on these programs is included in the appropriate calendar.
3 For students returning to the same undergraduate programs, or attending as Special Students in any faculty.

NOTE: In order to be considered for entrance scholarships, applications for admission from high school students must be received by March 15 for most programs.
Definitions

The following definitions are intended to facilitate an understanding of the calendar and not to define all words and phrases used in the calendar which may have specific meanings.

Academic Dismissal
An student's required withdrawal from a program due to unsatisfactory academic performance.

Academic Program
A distinct group of courses and other requirements which lead to eligibility for a degree or other university-awarded credential.

Academic Terms
- Fall term: September - December
- Winter term: January - April
- Summer term: May - August
- Regular term: September - April

Advanced Standing
Students possessing advanced knowledge of a subject will be encouraged to begin their studies in that subject at a level appropriate to their knowledge, as determined by the department/school/college concerned. However, such students must complete, at Dalhousie, the full number of credits required for the particular credential being sought.

Audit Student
A student permitted to attend courses but not expected to prepare assignments, write papers, tests or examinations. Credit is not given nor is a mark awarded for audit courses. Courses appear on the transcript with the notation “Aud.” If not already admitted to the University, audit students must apply. Students may register to audit a course only after the first day of courses.

Candidate
The term candidate for a doctoral degree is used to identify a student who has fulfilled all the requirements for the PhD except for the submission and defence of the thesis; thus, a candidate will have successfully completed the residency requirement, all course work, qualifying and comprehensive examinations (as applicable), and the thesis proposal defence (if applicable). This status is equivalent to the common terms “all but the thesis” or “all but dissertation” used at some institutions. The term candidate cannot be employed with regard to a Masters degree student.

Clerkship
See Internship.

Clinical Practice
See Internship.

Continuing Fees
The tuition fees charged to graduate students who have fulfilled their program fee applicable, and the thesis proposal defence (if applicable). This status is equivalent to the common terms “all but the thesis” or “all but dissertation” used at some institutions. The term candidate cannot be employed with regard to a Masters degree student.

Credit
A unit by which University course work is measured. A full year (X/Y) course is normally worth one full credit (six credit hours).

Credit Hours
One full credit is equal to six credit hours and one half credit is equal to three credit hours.

CRN
Each course has a course reference number (CRN) attached to it. This number is to be used when registering for courses.

Crosslisted Courses
Courses are crosslisted based upon course content that deals with more than one subject area in a substantive way. The crosslisting recognizes the interdisciplinary nature of the course.

Email
Email is an authorized means of communication for academic and administrative purposes within Dalhousie. The University will assign all students an official email address. This address will remain in effect while the student remains registered and for one academic term following a student’s last registration. This is the only email address that will be used for communication with students regarding all academic and administrative matters. Any redirection of email will be at the student’s own risk. Each student is expected to check her or his official email address frequently in order to stay current with Dalhousie communications.

Exclusion
An exclusion is when one course is sufficiently similar to another course that credit will only be given once if both are taken.

Externship
See Internship.

Fieldwork
See Internship.

Full-time Students
Those registered for three full courses (18 credit hours for UG, AC, HP level, 12 credit hours for TC level) or more in the Regular term, or the equivalent of three half credits (nine credit hours for UG, AC, HP level, six credit hours for TC level) courses or more in either the Summer, Fall or Winter term.

Good Standing
Students who meet the required GPAs are considered to be in good academic standing.

Grade Point Average (GPA)
Weighted sum of the grade points earned, divided by the number of credit hours enrolled.

Term GPA: Courses taken in a single term.

Cumulative GPA: All courses taken while enrolled in a level of study.

GSIS
Graduate Student Information System. The electronic database used to approve graduate student program requirements and progress.

Graduate Student
A student with a Bachelor’s degree, usually with Honours or equivalent, enrolled in a Master’s or Doctoral program, or a graduate diploma program.

Internship, Fieldwork, Clinical Practice, Externship, Practicum, Clerkship
These terms are used in programs to describe practical professional educational experiences that are conducted in a non-university setting such as a health or social service agency.
General Information

4 Definitions

Level of Study
The following are levels of study:
- TC Technology Diploma - Faculty of Agriculture
- AC Architecture/Engineering (Years 3 and 4)
- HP Health Professions
- UG Agriculture
- Arts & Social Sciences
- Computer Science
- Engineering (Years 1 and 2) and Bachelor of Food Science
- Management

Non-thesis Program
A Master’s program of study based on course work which may also include a research project. This includes many of the professional graduate programs. Some of these programs also offer a thesis option.

Part-time Students
Students registered for fewer than three full-credit courses (18 credit hours for UG, AC, HP level, 12 credit hours for TC level) or the equivalent of three half-credit (nine credit hours for UG, AC, HP level, six credit hours for TC level) courses in either the Summer, Fall or Winter term.

Part-time Graduate Student (Program Fee)
A part-time graduate student paying program fees is a student who has been approved by the department and the Faculty of Graduate Studies as working part-time on their graduate degree. A part-time graduate student is taking less than nine credit hours per term.

Part-time Student (Per Course Fee)
A student who is taking less than nine credit hours (three half-credit course) in a term is considered a part-time student.

Per Course Fee
The fees charged to students in a Per-Course Fee Degree. Students pay fees according to the number of courses taken in any given term.

Practicum
See Internship.

Prerequisite
A requirement that must be fulfilled prior to registering in a specific course.

Probation
Warning to students that their academic performance is unsatisfactory and that they will be dismissed from their program unless their performance improves by the end of the next term.

Program Fees
The tuition fees charged to students in a program-fee degree. The program fee is based on total tuition for a specified number of years, varying according to the number of courses taken in any given term.

Qualifying Students (Master’s only)
A full-time or part-time student with a Bachelor’s degree or its equivalent in a specified number of years are required to pay a continuing fee.

Residency
The period of time that graduate students are expected to be on campus for fulfillment of their formal program requirements. In some programs, part of the residency period may, with permission, include some time off campus (e.g. for fieldwork or research).

Scholarship GPA
See Awards section page 600.

Special Students
Students who are not candidates for a degree or diploma but who wish to take courses which may be allowed for credit. This is not the same as auditing a course. Special students must satisfy normal admission requirements.

Special Student - Graduate Studies (SSGS)
A student who is not registered in a graduate program but is taking graduate courses. Special students must satisfy normal admission requirements.

 Supervisor
The supervisor is a member of Faculty of Graduate Studies who is directly responsible for the supervision of a graduate student’s program. In this capacity, the supervisor assists the student in planning a program, ensures that the student is aware of all program requirements, degree regulations, and general regulations of the department and Faculty of Graduate Studies, provides counsel on all aspects of the program, and stays informed about the student’s research activities and progress. The supervisor is also charged with ensuring that a student’s research is effective, safe, productive, and ethical. Specific duties of the supervisor include preparation of a program of study with the student, arrangement of and attendance at all supervisory committee meetings and candidate examinations, while ensuring that these courses are scheduled and held in accordance with Faculty of Graduate Studies and Departmental regulations, and reviewing the thesis both in draft and in final form.

Thesis Only Fees
See Continuing Fees.

Thesis Program
A Master’s or Doctoral program of study involving a major research component in the form of a written thesis. Some programs offer a non-thesis option.

Transcript
A transcript is a complete history of a student’s academic record at Dalhousie. Partial transcripts, e.g. a portion of a student’s record pertaining to registration in a particular degree, faculty, or level of study, are not issued.

Transfer Student
A transfer student is one who is awarded credit towards a Dalhousie degree for academic work completed at a previous university or equivalent institution of higher learning.

Undergraduates
Students who are candidates for an undergraduate degree or diploma.

Visiting Student
A person permitted to take courses at Dalhousie for transfer of credit to another university.

Visiting Student Graduate Studies (VSGS)
A person permitted to take courses at Dalhousie for transfer of credit to another university (Letter of Permission required).

Work Term
Career related work experience required in Co-operative Education programs. Work terms are usually 13-16 weeks in duration.

Writing Intensive
Writing Intensive courses are those which emphasize the process of writing, frequency of writing assignments, and weighting of these assignments in the course grades. A Writing Intensive course is normally taken as a sequel to a Writing Requirement course, but does not satisfy the Writing Requirement.

I. Course Codes
Numbers
0010-0099 pre-university preparation courses
0100-0399 technology level courses
1000 level courses are introductory
2000-4000 level courses are advanced
5000-9000 level are Graduate level (with some exceptions)
Definitions

Credit Hours—examples only

- 0.5 credit hours = 0.5 credit UG, AC, HP level
- 1 credit hour = 1 full credit UG, AC, HP level
- 2 credit hours = 2 full credits TC level

Subject Codes

Four letter codes are used to describe the department offering a particular course as follows:

- ACAD - Academic
- AGRI - Agriculture
- AGRN - Agronomy
- ANAT - Anatomy & Neurobiology
- ANSC - Animal Science
- APSC - Applied Science
- AQUA - Aquaculture
- ARAB - Arabic
- ARCH - Architecture
- ARTS - Art
- ASSC - Arts and Social Sciences Interdisciplinary
- BCBD - Community Building and Design
- BIOA - Biology (Faculty of Agriculture)
- BIOL - Biology
- BIOC - Biochemistry and Molecular Biology
- BIOE - Biological Engineering
- BIO - Biology
- BIOT - Biophysics
- BMNG - Biomedical Engineering
- BUSI - Business Administration
- CANA - Canadian Studies
- CBBI - Computational Biology and Bioinformatics
- CI&K - Community Health & Epidemiology
- CHEE - Chemical Engineering
- CHEM - Chemistry
- CHIN - Chinese
- CHMA - Chemistry (Faculty of Agriculture)
- CIVL - Civil Engineering
- CLASS - Classics
- CMMT - Communications
- CNLT - Centre for Learning and Teaching
- COMM - Commerce
- CPIT - Complimentary Studies
- CFRF - Creative Non-Fiction
- CRWR - Creative Writing
- CSCA - Computer Science (Faculty of Agriculture)
- CSTG - Computer Science
- CTSM - Contemporary Studies
- DCVT - Diagnostic Cytology
- DENTH - Dental Hygiene
- DENTQ - Dentistry Qualifying
- DENT - Dentistry
- DIIM - Disability Management
- DMUT - Diagnostic Medical Ultrasonic Technology
- ECE - Electrical and Computer Engineering
- ECOM - Electronic Commerce
- ECON - Economics (Faculty of Agriculture)
- ECON - Economics
- EDC - Education
- EFLA - English (Faculty of Agriculture)
- EMDF - Early Modern Studies
- ENGL - Engineering
- ENGL - English
- ENMM - Engineering Math
- ENGN - Engineering (Faculty of Agriculture)
- ENNL - English Language (CE)
- ENV - Environmental Sciences (Faculty of Agriculture)
- ENV - Environmental Engineering
- ENVI - Environmental Studies
- ENVK - Environmental Science
- ERTH - Earth Sciences
- EURO - European Studies
- EXTE - Extension Education
- FOOD - Food Science (Faculty of Agriculture)
- FOSC - Food Science & Technology
- FREN - French
- FRNA - French (Faculty of Agriculture)
- GELA - Geology
- GEOF - Geography (Faculty of Agriculture)
- GENE - Genetics
- GERM - German
- GWSW - Gender and Women’s Studies
- HAHP - Health and Human Performance
- HEED - Health Education
- HESA - Health Administration
- HINF - Health Informatics
- HSTA - History (Faculty of Agriculture)
- HIST - History
- HDPS - Health Professions
- HORT - Horticulture
- HPRD - Health Promotion
- HSCS - Health Sciences Education
- HSTC - History of Science and Technology
- HUCD - Human Communication Disorders
- IACR - International Development (Faculty of Agriculture)
- IDIS - Interdisciplinary Studies
- IENG - Industrial Engineering
- INF - International Food Business
- INFO - Information Management
- INF - Information Science
- INF - Information Technology
- INFA - Interdisciplinary Studies (Graduate)
- INWK - Engineering Interworking
- IPHE - Interprofessional Health Professions
- ITAL - Italian
- JOUR - Journalism
- KINES - Kinesiology
- KINF - King’s Foundation Year Programme
- LAWS - Law
- LEIS - Leisure Studies
- MARI - Marine Affairs
- MARI - Marine Biology
- MATH - Mathematics
- MATE - Materials Engineering
- MATH - Mathematics (Faculty of Agriculture)
- MBDT - Medical Lab Technology
- MDCH - Medical Imaging
- MED - Medicine
- MEDS - Medical Science
- MEK - Medicine
- MICI - Microbiology & Immunology
- MINE - Mineral Resource Engineering
- MTHA - Mathematics (Faculty of Agriculture)
- MUCL - Music
- NENS - Neuroscience
- NUTM - Nuclear Medicine Technology
- NURS - Nursing
- NUTR - Nutrition
- OCCU - Occupational Therapy
- OCEA - Oceanography
- ORAL - Oral & Maxillofacial Surgery
- ORAL - Oral Health Professions
- PENG - Petroleum
- PGIM - Post-Graduate Medicine
- PGPH - Post-Graduate Pharmacy
- PHAC - Pharmacology
- PHAR - Pharmacy
- PHAS - Pharmaceutical Sciences
- PHPP - PHD Program
- PHIL - Philosophy
Undergraduate Programs

Faculty of Agriculture
Bachelor of Agriculture - International Food Business (4 year)
Bachelor of Science (Agriculture) (4 year major)
Bachelor of Science (Agriculture) (4 year double major)
Bachelor of Technology (4 year major)
Diploma in Engineering (2 year)
Diploma in Technology - Business Management (2 year)
Diploma in Technology - Managed Landscapes (2 year)
Diploma in Technology - Plant Science (2 year)
Diploma in Technology - Veterinary Technology (2 year)

Faculty of Architecture and Planning
Bachelor of Environmental Design Studies (2 years)
Bachelor of Community Design (3 years)
Bachelor of Community Design (4 year honours)

Faculty of Arts and Social Sciences
Bachelor of Arts (3 year concentration)
Bachelor of Arts (4 year major)
Bachelor of Arts (4 year double major)
Bachelor of Arts (4 year combined honours)
Bachelor of Arts (4 year honours)
Bachelor of Arts (4 year double major)
Faculty of Management
Bachelor of Commerce (4 year co-op)
Bachelor of Management (4 years)*
Bachelor of Science Recreation/Bachelor of Management (5 years)*
Bachelor of Science Recreation/Bachelor of Management (5 year honours)*
*Also available as an internship program
** Suspension of program pending approval

Faculty of Science
Bachelor of Science/Bachelor of Arts (3 year with minor)
Bachelor of Science/Bachelor of Arts (4 year major)*
Bachelor of Science/Bachelor of Arts (4 year double major)*
Bachelor of Science/Bachelor of Arts (4 year concentrated honours)*
Bachelor of Science/Bachelor of Arts (4 year combined honours)*
Bachelor of Science (4 year multi-disciplinary honours)
Bachelor of Science/Bachelor of Engineering Concurrent (5 years)*
Bachelor of Science (Medical Sciences)
Diploma in Meteorology (1 year)
*Also available as a co-op program
Dalhousie University

Dalhousie University blends the finest academic traditions with innovative thinking and outstanding educational opportunities. Located on Canada’s east coast – an area long known for its natural beauty and friendly people – Dalhousie is a warm and welcoming university that attracts students from around the globe.

Dalhousie has been at the heart of Halifax, Nova Scotia – a lively coastal city – for almost 200 years. The university features both an historic, tree-lined urban campus and a rural agricultural campus, located about an hour from the city.

Dalhousie combines a welcoming atmosphere with the international prestige of a big-name school. With 12 faculties and more than 4,000 classes in over 180 areas of study, the university offers its more than 18,000 students a wealth of choice and innovative degree programs.

Dalhousie encourages student learning through exchange programs, fieldwork, community service and cooperative education. Its collaborative learning environment encourages students to interact with one another and with faculty experts to share ideas and offer new perspectives. A member of the U15, Canada’s elite research-intensive universities, Dalhousie combines the culture of a more intimate undergraduate college with the opportunities of a larger research institution.

This collaborative spirit also extends off campus. Dalhousie conducts research in partnership with teaching hospitals, professional organizations, businesses and industry, non-profit agencies and other universities. As Atlantic Canada’s leading research university, Dalhousie attracts more than $140 million in research grants and awards annually. The university is a world leader in marine-related research and home of the international Ocean Tracking Network. Dalhousie also offers Canada’s first undergraduate program in Ocean Sciences.

Atlantic Canada’s only Faculty of Agriculture, offering programs in areas such as international food business, pre-veterinary medicine and plant sciences, is located at Dalhousie’s Agricultural Campus in Truro, Nova Scotia.

The University of King’s College, situated adjacent to the Dalhousie campus, is an affiliated institution, and its students in arts and science receive Dalhousie degrees in the name of both institutions.

Dalhousie University is a member of the Association of Universities and Colleges of Canada, the Association of Atlantic Universities and the Association of Commonwealth Universities.

Executive Officers

President and Vice-Chancellor
Richard Florizone, BSc, MSc (Saskatchewan), PhD (MIT)

Dr. Kevin Ganley

Senate
The Senate is the University’s senior academic decision-making body. It is responsible for the approval of new programs and academic units and it manages the reviews of Faculties, Centers and Institutes. Senate approves the granting of degrees and diplomas, including the conferral of Honorary Degrees. It is responsible for setting academic regulations which affect the University as a whole, including regulations governing student conduct and discipline, as well as regulations concerning faculty tenure and promotion.

Senate has 77 members - 52 elected Faculty representatives, 17 academic administrators (President, Vice-President Academic and Provost, Vice-President Research, University Librarian, and the Deans of each faculty), seven students elected by the Dalhousie Student Union (one of whom shall be a graduate student and one who should represent the Agricultural Campus), and a representative from the University of King’s College.

Senate normally meets on the second Monday of each month from 4:00 - 6:00 pm. In addition, if there are sufficient items of business, Senate will meet on the fourth Monday of the month, from 4:00 - 6:00 pm

Chair of Senate
Lloyd A. Fraser, EdD

Vice-Chair (Academic Programs)
Jeff Howard, BEd, PhD

Vice-Chair (Student Affairs)
Alan Pirid, BSc, PhD
Admission Requirements

Dalhousie University is an affirmative action and equal opportunity educational institution. Students who are Aboriginal, Black persons of African descent, or persons with a disability and who do not meet the normal admission requirements may choose to self-identify and request special consideration.

Dalhousie University reserves the right to rescind any acceptance of an applicant into a program or to rescind an offer of admission of an applicant into a program. Please refer to University Regulations, page 20.

1. General Admission Requirements

Applicants must meet the admission requirements as outlined in the appropriate section of this calendar.

1. Place of Residence

For the purpose of admission to the University, the place of residence of a student is the place of domicile. This is normally presumed to be the place (country, province, etc.) where the parents or guardian’s home is located. That place remains unchanged unless the Registrar is satisfied that a change of residence has been established elsewhere.

2. Age Requirement

No person under 16 years of age is admitted to any course except on the specific recommendation of the admissions committee of the relevant Faculty or School, which shall take into account all aspects of the applicant’s preparedness for the course or program involved, and which may attach such conditions to the applicant’s admission as the committee judges appropriate.

3. Students from Canadian High Schools

For general admission to most programs, students require grade 12 level university preparatory English and four additional university preparatory courses. Special attention will be paid to grades in English and mathematics. Final grades in individual university preparatory courses other than mathematics and English must be at least 60%.

Any special or pilot course must have been previously approved by Dalhousie if it is to be used as one of the credits needed for admission.

4. Students from a Community College, College of Applied Arts and Technology (CAAT) or a CEGEP

Applicants who have completed studies in a Community College, College of Applied Arts and Technology (CAAT) or a CEGEP must present a minimum grade of 60%.

Courses may be eligible for transfer credits. Please refer to section 12.

5. Acceptable High School Courses for Admission

- English
- Biology, chemistry, French, geography (or global geography), German, history (or global history), Latin, mathematics, physics, calculus, comparative religion, computer-related studies, economics, environmental studies, Gaelic, geology, journalism, law, music, political science, sociology, Spanish, theatre, drama and other courses provincially coded as academic or advanced.

6. For Students from Quebec

Students attending high schools offering Grade 12 must meet the distribution and average requirements outlined for students from the Atlantic provinces, or first year CEGEP with minimum 70% overall average, with no individual academic subject below 65%.

7. Students from Outside Canada

American High School Curriculum

Students studying in an American-based curriculum (in the United States, or abroad), are required to present a Grade 12 high school average of “C” or better. In addition, students must present a minimum SAT score of 1000 or an ACT score of 23 or better.

British Curriculum (GCE and GCSE)

Students studying in a British-patterned curriculum (GCE) are required to present the General Certificate of Education with at least five subjects. These must include at least two Advanced Level courses (A-levels), or four AS-level courses, with grades of at least “C”. Exceptional candidates may be admitted on A-Level results.

Advanced Placement (AP), Baccalauréat (French Baccalauréat), A-level (GCE) and International Baccalaureate (IB) courses are accepted towards meeting admission requirements. Please refer to the General Admission Requirements section of the Calendar for specific admission requirements. Courses may be eligible for transfer credits. Please refer to section 12.

Admission Requirements by Country

For most countries, we consider the same academic preparation that is required for university entrance in that country - that is, successful graduation from an academic secondary school program or equivalent. View our Admission Requirements by Country chart at www.dal.ca/admissions/international-students/admissions/requirements-by-country.html for more information.

8. English Language Proficiency Requirements

English is the language of study at Dalhousie; therefore all applicants whose first language is not English must provide proof of English proficiency. This requirement can be satisfied with one of the following criteria:

- Test of English as a Foreign Language (TOEFL)
  - TOEFL (computer-based) - 237 with no band below 21
  - TOEFL (paper-based) - 580 with no band below 55
  - TOEFL (IBT) - 80 with no band below 20
- Students must achieve 4.0 or better on the essay or TOEFL Writing Test
- International English Language Testing System (IELTS) - 6.5 with no band below 6.0
- Michigan English Language Assessment Battery (MELAB) - 81
- Canadian Academic English Language Assessment (CAEL) - 70
- Certificate of Proficiency in English (CPE) minimum grade C and Certificate in Advanced English (CAE) minimum grade B
- IB Higher Level English class A1, A2 with a minimum grade of 5 or English B with a minimum grade of 6
- AP English Examination (Language Composition, Literature and Composition) with a minimum grade of 4
- O-Level GCSE or IGCSE English Language or English Literature course with a minimum grade of B
- CanTest of English for Scholars and Trainees (CanTest) - 4.5
- Student must achieve 4.0 or better on the essay or TOEFL Writing Test
- Certificate of English for Scholars and Trainees (CanTest) - 4.5
- Student has graduated from a Dalhousie-recognized school which uses English as the primary language of instruction and the student has spent three successful years in the English program
- Student has studied full-time for at least three years (or equivalent in part-time study) in a secondary school where the language of instruction and examination was English
- Student has studied full-time for at least one year in a recognized university where the language of instruction and examination was English and the course curricula require proficiency in English.

The following Web links will provide more information on English Language proficiency tests:

TOEFL - http://www.ets.org/toefl
IELTS - http://www.ielts.org
MELAB - http://www.melab.org
CAEL - http://www.cael.ca

PLEASE NOTE: Fulfillment of admission requirements does not necessarily provide the prerequisite background for all first year courses. Please consult the course description section of this calendar.
11. Mature Students

Applicants who are Canadian Citizens or permanent residents and 21 years of age or older by the first day of courses, and are not eligible for admission on the basis of regular admission requirements, may apply for admission to some programs as a mature applicant. In order to be eligible, the applicant must either have no university-level study, or have attempted less than one year of transferable coursework. The student cannot have been in full-time university-level study for a minimum period of two years.

Applicants must provide a completed application for admission, high school or post-secondary transcripts, any other relevant documents (e.g. SAT scores, if available), and a letter outlining life and work experience since last attending full-time study. Applicants will be expected to clearly outline their education goals and motivation to succeed at university study. All factors will be considered in the admission decision.

Admission under this policy is restricted to first year of undergraduate programs. Applicants must have completed grade 12 English (or equivalent) with a minimum grade of 65%. Admission to some programs will require completion of other required subjects.

A student admitted on this basis may be restricted in the number of courses he/she can register in during the first year. Otherwise, these students have the same rights, privileges and responsibilities as other students within their program.

12. Transfer Students

Students wishing to apply for transfer credit should consult Academic Regulation 7.2 in this calendar. Certificates of course descriptions from calendars are acceptable in lieu of originals. Certificates in languages other than English or French must be accompanied by certified translations into English. Students applying with one year or less of university work must also submit high school transcripts.

The minimum GPA for admission as a transfer student may vary by program of study. Please contact the Registrar’s Office for more information.

Note: Transfer credit will not be awarded for work completed while a student was academically ineligible.

13. International Baccalaureate (IB), Advanced Placement (AP), Baccalauréat (French Baccalauréat), Advanced Level (GCE) Courses

Students taking any of these courses, may qualify for advanced placement or transfer credits.

Transfer credits will be awarded based on equivalent Dalhousie courses. Credit may be awarded to students with Higher level IB courses with final grades of 5, 6 or 7 or with AP national exam results of 4 or 5. For students with a baccalaureat exam result of 11 or higher on courses with a minimum coefficient of 4, transfer credits may be awarded. Those who have completed A-Level courses with a final grade of C or higher may receive transfer credit.

Students may opt to forgo transfer credit awarded for these programs. To do so, applicants must contact the Registrar’s Office (902) 494-2630.

Lists of equivalent Dalhousie credits that have been previously determined can be found on the Registrar’s Office website. Students wishing to apply for transfer credit should consult Academic Regulation 13.2 in this calendar. Certificates of course descriptions from calendars are acceptable in lieu of originals. Certificates in languages other than English or French must be accompanied by certified translations into English. Students applying with one year or less of university work must also submit high school transcripts.

14. International and Exchange students attending Dalhousie as Visiting Students

International students must meet the following requirements:

• Good academic standing at the home institution
• Written academic approval from the appropriate department head, Dean or designate (e.g., Registrar) to undertake coursework at Dalhousie (written approval is usually in the form of a letter of permission)
• The required visa to study in Canada
• Proof of adequate health insurance for the duration of the stay in Canada
• Proof of proficiency in English

PLEASE NOTE: Students studying for less than one full academic year are restricted from taking full-year courses (see Course Codes and Definitions).

15. Rescission of Acceptance into a Program

Dalhousie University reserves the right to rescind any acceptance of an applicant into a program or to rescind an offer of admission of an applicant into a program. Such rescissions shall be in writing and may be made by the President or the Vice-President (Academic) and Provost, in consultation with the appropriate Dean, at any time prior to the applicant’s registration being confirmed by the Registrar. Any such rescission shall be reported to the Senate in camera.

16. Canadian and Local Students attending Dalhousie as Visiting Students

All students wishing to attend Dalhousie University on a letter of permission from their home university must submit the following:

• A completed application for admission
• Letter of permission from the home university
General Information

12. Admission Requirements

• Students applying from Saint Mary's, Mount Saint Vincent, and NSCAD University are not required to pay the application fee, all other applicants are required to pay the application fee.

At the end of each academic session, grades will be forwarded to Saint Mary's, Mount Saint Vincent, and NSCAD University on the student's behalf. Students from all other universities must arrange for transcripts to be sent to the home university.

II. Specific Program Requirements

A. Faculty of Agriculture

Pre University Study
The Faculty of Agriculture offers pre-university study in Math, Chemistry and Physics. Applicants who do not meet the stated admission requirements in Math or Science may still be admitted to a degree program in the Faculty of Agriculture on the condition that they complete the pre-university level course prior to entering the degree level required subject.

1. Bachelor of Science (Agriculture) & Pre-Veterinary Studies
- English 12
- Pre Calculus Math 12
- Chemistry 12
- Two other acceptable university-preparatory courses at the grade 12 level
- Minimum final grades:
  - English 60%
  - Pre Calculus Math 65%
  - Chemistry 65%
- Overall Average 70%

Applicants in all majors except Agricultural Business, Agricultural Economics and Plant Science will be required to have Physics 12 or to take the preparatory physics on campus prior to enrolling in university level physics.

It is recommended that applicants also take Biology 12, and where available at the high school level, courses in Agriculture or Food Science.

2. Bachelor of Agriculture - International Food Business
- English 12
- Academic Math 12
- Three other acceptable university-preparatory courses at the grade 12 level
- Overall average of 70%

3. Bachelor of Technology

A. Faculty of Agriculture
- English 12
- Math 11
- One other acceptable university-preparatory course at the grade 12 level
- Minimum overall final average of 60%

Applicants to the Equine concentration are expected to be experienced in the care and handling of horses. A Competency Form outlining practical experience and knowledge in the industry is required. This form can be found online at dal.ca/applynow

B. Faculty of Architecture and Planning

1. School of Architecture

1.a. Bachelor of Environmental Design Studies (BEDS)
- English 12
- Pre Calculus Math 12
- Chemistry 12
- Biology 12
- Minimum overall final average of 60%

Applicants who do not meet the minimum academic requirements for admission (two years of university, required courses, 2.5 GPA). All mature students must complete at least one full year at a university. In the application, a Mature Student should describe related work experience and any other pursuits and skills that may serve as grounds for admission.

2.b. Mature Students

An application will be considered from a Mature Student – an individual who will be at least 25 years old at the time of registration in the BEDS program and does not meet the minimum academic requirements for admission (two years of university, required courses, 2.5 GPA). All mature students must have completed at least one full year at a university. In the application, a Mature Student should describe related work experience and any other pursuits and skills that may serve as grounds for admission.

2.c. Post-Secondary Institutions

The Admissions Committee gives priority to applicants with a combination of academic performance and creative ability. Well-rounded personal and academic experience is beneficial, as well as experience in drawing, craft, and computer applications.

2. Minimum Academic Requirements

The minimum requirements for admission are:
- a portfolio of design work that demonstrates creativity and/or artistic skill;
- two years in a university degree program (10 full-year courses, 20 half-year courses, or a combination), with a 2.5 grade point average (B- average), including the following courses:
  - a full-year course (or two half-course) in mathematics or natural sciences, for which Grade 12 math is a prerequisite: e.g., algebra, calculus, trigonometry, biology, chemistry, engineering, physics,
  - a full-year course (or two half-course) in humanities or social sciences: e.g., art history, classics, literature, music, history, philosophy, anthropology, political science, psychology, sociology,
- a half-year course that emphasizes written composition (often designated by a university as “writing requirement” or “writing intensive”)

2. Post-Secondary Institutions

An application will be considered from a Mature Student – an individual who will be at least 25 years old at the time of registration in the BEDS program and does not meet the minimum academic requirements for admission (two years of university, required courses, 2.5 GPA). All mature students must have completed at least one full year at a university. In the application, a Mature Student should describe related work experience and any other pursuits and skills that may serve as grounds for admission.
2. Transfer Students

The School of Architecture welcomes applications from transfer students from other architecture schools in Canada and abroad. Admission and level of entry is based on courses completed elsewhere that are equivalent to required courses at Dalhousie, the level of achievement in the design portfolio, and on the applicant’s total years of university. To meet professional accreditation standards, the School cannot offer a level of entry that would permit a student to obtain the MArch degree with less than six full years of university, including two years of general studies.

3. Documents

A BEDS applicant must submit all of the following items before the application can be reviewed:

1. To be submitted to the Registrar’s Office: Admission, Registrar’s Office
   PO Box 15000
   Dalhousie University
   Halifax, NS B3H 4R2
   • Undergraduate application form
   • Undergraduate application fee (see University Fees in this Calendar)

To confirm receipt of the items above, please contact the Registrar’s Office: (902) 494-2440.

2. To be submitted to the School of Architecture: Admissions, School of Architecture
   5410 Spring Garden Road
   PO Box 15000
   Dalhousie, NS B3H 4R2
   • An official academic transcript from all previous post-secondary institutions
   • A portfolio of design work (about 10-15 items) that demonstrates creativity and/or artistic skill
   • A letter written by the applicant, describing his/her background and interest in architecture and in the BEDS program
   • Two letters of recommendation, including at least one from an academic instructor
   • Evidence of competency in English for applicants whose native language is not English (see University Admission Requirements in this Calendar)

To confirm receipt of the items above, please contact the Architecture Office: arch.office@dal.ca or (902) 494-2440 for additional application instructions, please visit http://archplan.dal.ca

4. Application Deadline

The deadline for undergraduate applications from Canada and all other countries is March 1. Transfer applications are reviewed three times every year: in February, June, and October. For an application to be considered, all items must be received by February 1, June 1 or October 1.

2. School of Planning

2.a Bachelor of Community Design

Admission to the Bachelor of Community Design program is limited. Not all applicants who meet the minimum requirements can be accepted.

Admission to the program is based on academic performance.

High School Applicants

• Satisfactory completion of grade 12 or equivalent with at least five academic university preparatory courses including:
  • English
  • Academic math
  • One science
  • Two additional university preparatory courses
  Biology, geology or geography are recommended courses for students interested in this field. Only applicants with a minimum average of 70% will be considered.

Applicants with Previous Post-Secondary Experience

• Satisfactory completion of the required academic grade 12 subjects as outlined in university level courses in those subject areas.
• Applicants must have a minimum GPA of 2.0.

• All applicants, both high school and transfer, are admitted to the first year of the program. Following admission, a limited number of transfer students may be considered for registration in second year planning courses based on availability of space and level of academic preparation (including number and subject area of course credits transferring from previous post-secondary study) among other requirements. Students must complete the Equalized Program form available from the Registrar’s Office; to be considered for admission to the second year class. For more information, please contact the School of Planning directly.

C. Faculty of Arts and Social Sciences

1. Bachelor of Arts

• English
• Four other acceptable university-preparatory courses
• Minimum final grades:
  • English - 65%
  • Other Subjects - 60%
  • Overall Average - 70%

2. Bachelor of Music, BA Music and other Music degree programs

• Satisfy the requirements for Bachelor of Arts
• Demonstrate proficiency as instrumental or vocal performer in an audition/ interview
• Demonstrate knowledge of the basic rudiments of music theory (roughly equivalent to Grade II theory, Royal Conservatory of Music in Toronto),ural and keyboard skills. Each is assessed through written diagnostic tests as part of the audition/interview.
• Submit the supplementary application form to the Faculty of Music.

It is recommended that students apply early for the purposes of admission, audition, and music scholarship consideration. Audition dates are listed on the supplementary form and all audition procedures should be completed by June 30.

Applicants who, in the estimation of the Auditioning Committee, show considerable musical talent but are in need of more emphasis on preparatory studies will be required to take preparatory courses. Applicants with significant background deficiencies will be advised to seek further preparation through private instruction before applying.

Students wishing to transfer from another institution into the second or third year of their chosen Music program must take validation examinations in music history, theory, aural and keyboard skills, and their applied major instrument before transfer of credits can be considered. Failure to pass an examination will necessitate enrollment in the appropriate first- or second-year course. Validation examinations must be written at the same time as the audition/interview. Transfer applications are subject to the June 1 deadline.

3. Diploma in Costume Studies (two years)

• Satisfy the admission requirements for Bachelor of Arts
• Minimum 65% in Grade 12 English

Students are asked to submit a brief letter outlining their interest in the program, their background in sewing, costume study/design and/or the theatre. University credits will enhance applications. Due to the special nature of this program, transfer credits for university work are not offered.

D. Faculty of Computer Science

1. Bachelor of Computer Science

• English
• Pre-calculus mathematics
• Three other acceptable university-preparatory courses
• Minimum final grades:
  • English and mathematics - 65%
  • Other subjects - 60%
  • Overall average - 70%

2. Bachelor of Informatics

• English
• Academic mathematics
Undergraduate book  Page 14  Wednesday, March 12, 2014  12:03 PM

General Information

which in some instances, may be a requirement for graduation. Students should check with their School/College for details concerning any record checks or screening requirements relevant to clinical, fieldwork, or placements in their particular program. Note that facility requirements may change from time to time and are beyond the control of the University. Students should also be aware that some professional regulatory bodies may require a satisfactory record check as a condition of professional licensure.

1. School of Health and Human Performance

Admission to programs offered by the School of Health and Human Performance is limited. Not all applicants who meet the minimum requirements for admission can be accepted.

1.a Bachelor of Science (Health Promotion)

High School Applicants: Satisfactory completion of grade 12 or equivalent, with a minimum average of 75% in at least five academic university preparatory courses including:

- English (minimum 70%)
- Biology or Chemistry (minimum 70%)
- Three other acceptable university-preparatory courses

Transfer Applicants: Satisfactory completion of the required grade 12 academic subjects as outlined or university level courses in these subject areas.

1.b Bachelor of Science (Kinesiology)

High School Applicants: Satisfactory completion of grade 12 or equivalent, with a minimum average of 70% in at least five academic university preparatory courses including:

- English (minimum 70%)
- Academic mathematics (minimum 70%)
- Students are encouraged to have grade 12 courses in Biology or Chemistry or Physics.

Transfer Applicants: Satisfactory completion of the required grade 12 academic subjects as outlined or university level courses in these subject areas.

1.c Bachelor of Science (Health Promotion)

High School Applicants: Satisfactory completion of grade 12 or equivalent, with a minimum average of 75% in at least five academic university preparatory courses including:

- English (minimum 70%)
- Academic mathematics (minimum 70%)

Transfer Applicants: Satisfactory completion of the required grade 12 academic subjects as outlined or university level courses in these subject areas.

1.d Bachelor of Science (Recreation)/Bachelor of Management

High School Applicants: Satisfactory completion of grade 12 or equivalent, with a minimum average of 70% in at least five academic university preparatory courses including:

- English (minimum 70%)
- Academic mathematics (minimum 70%)

Transfer Applicants: Satisfactory completion of the required grade 12 academic subjects as outlined or university level courses in these subject areas.

Statement Regarding Criminal Records Check

The Faculty of Health Professions at Dalhousie University does not require a Criminal Records Check or other screening procedure (e.g., Vulnerable Sector Screen) as a condition of admission into its programs. However, students should be aware that such record checks or other screening procedures will be required by facilities outside the University used for clinical, fieldwork or co-op placements or experiences related to an academic course assignment which in some instances, may be a requirement for graduation. It is the student’s responsibility to have such procedures completed.

E. Faculty of Engineering

1. Bachelor of Applied Science in Food Science

Admission for this program is currently under review, contact the Registrar’s Office for more information.

2. Bachelor of Engineering

2.a From High School

Experience persons in the workplace may be admitted as mature students.

2.b Transfer Students

Students wanting admission with advanced placement in the BEng degree program are advised that at least one half of the coursework must be completed at Dalhousie including the final two study terms with a full course load.

2.c Associated Universities Transfers

On completion of the Engineering Diploma at an Associated University, a student may be eligible for admission to the Bachelor of Engineering program at Dalhousie. Applicants must complete an Application for Admission form (available from the Registrar’s Office), and submit the application plus an official transcript from their Associated University, verifying completion of the program entrance requirements, to the Registrar by the application deadline.

F. Faculty of Health Professions

Some programs in the Faculty of Health Professions have been established to meet the needs of the Maritime or Atlantic provinces. Admission of applicants outside the preferred region may be limited.

Affirmative Action

The Faculty of Health Professions recognizes that Affirmative Action is required to increase the admission of and number of graduates from underrepresented groups: Aboriginal peoples, African Canadians and Persons with (dis)Abilities. The constituent Units of the Faculty will develop and implement Affirmative Action policies that are consistent with the Human Rights Commission.

As a matter of priority, the Faculty will develop strategies to identify and create recruitment and support systems that will encourage and support members of these underrepresented groups to apply to and graduate from the Faculty of Health Professions.

Statement Regarding Criminal Records Check

The Faculty of Health Professions at Dalhousie University does not require a Criminal Records Check or other screening procedure (e.g., Vulnerable Sector Screen) as a condition of admission into its programs. However, students should be aware that such record checks or other screening procedures will be required by facilities outside the University used for clinical, fieldwork or co-op placements or experiences related to an academic course assignment which in some instances, may be a requirement for graduation. It is the student’s responsibility to have such procedures completed.
Forms and detailed instructions can be found on the School of Health Sciences website: http://www.dal.ca/SHS

1. Selection criteria
The selection criteria used by the Admissions Committee include:
• Place of residence
• Academic performance
• Non-academic performance

1.a Place of Residence
Priority consideration is given to permanent residents of the Maritime provinces (NS, NB, PEI), then to permanent residents of other Canadian provinces/territories and finally to all other applicants.

Applicants are considered to be from the Maritime provinces if:
• The principal residence of the applicant’s parent(s) or guardian is located in the Maritime provinces; or
If the applicant is independent of his/her parent(s) or guardian, he/she must have lived and worked on a full-time basis in the Maritime Provinces for a minimum of one full year and not have attended school on a full-time basis.

1.b Assessment of Academic Performance
Assessment of academic performance based on the applicant's transcripts accounts for 80% of the applicant's overall total score.

High School Applicants
• Completion of academic Grade 12 with at least five Grade 12 university preparatory courses, including:
  • English
  • Academic Math
  • Two Sciences
  • Diagnostic Cytology: Biology, Chemistry

Admission to this program is currently under review. Contact the Registrar's Office for more information.

The selection criteria used by the Admissions Committee include:
• Completion of courses in English, Math and two sciences as outlined above for high school applicants. If these courses were not taken part of post-secondary study, they must be at the academic Grade 12 level with a minimum grade of 70%.
• A minimum grade of C in the required subjects if taken at the post-secondary level.
• Minimum cumulative GPA of 2.75 or in most recent year of full-time studies.

1.a Assessment of Non-Academic Performance
Assessment of non-academic performance accounts for 20% of the applicant's overall total score.

A letter of intent and resume are required. Forms and detailed instructions can be found on the School of Health Sciences website: http://www.dal.ca/SHS

Applicants will be assessed on the following non-academic criteria:
• Demonstrated knowledge of the selected health profession
• Leadership
• Community involvement
• Teamwork

1.d Special Circumstances
In exceptional situations, special consideration may be given by the Admissions Committee to applicants who do not meet all admissions requirements. Applicants will be required to submit a letter stating the reasons for special consideration.

2. Personal Suitability
Students in the professional streams included in the BHSc program work with clients who trust them to provide safe and competent care. A criminal records check will be required for only those students accepted into the BHSc program.

1. Affirmative Action
In keeping with the Dalhousie University Faculty of Health Professions Affirmative Action Policy, the School of Health Sciences is committed to increasing the number of students who identify as African Canadian, Aboriginal Peoples and persons with disabilities.

Applicants wishing to apply under the Affirmative Action Policy must indicate on their admissions application and meet the minimum admission requirements.

4. Application Submission
Application form, fee and all official transcripts should be sent to the Registrar’s Office.
All other supporting documents should be sent directly to the School of Health Sciences.

Application deadline is February 15.

Applicants must submit the following:
• Completed application form and fee
• For high school applicants, an official high school transcript
• For other applicants, an official transcript from all previous post-secondary institutions
• Letter of intent
• Resume

Forms and detailed instructions on the School of Health Science website: http://www.dal.ca/SHS

5. Notification
Each applicant is notified of their status upon application by mail, normally by the end of April. Those applicants who are put on the waiting list may expect to hear about acceptance as late as September.

6. Deposit Fee
A non-refundable deposit of $200 (applicable to tuition fees) is required within three weeks of receipt of written notification of acceptance in order to reserve a place in the program.

2.b Bachelor of Health Sciences (Post-Diploma Program)
The Bachelor of Health Science, Post-Diploma program, is a configuration of the BHSc developed for practitioners in the following professional streams:
• Diagnostic Cytology
• Diagnostic Medical Ultrasonound
• Medical Laboratory Technology
• Nuclear Medicine Technology
• Radiological Technology
• Respiratory Therapy

The objective of the post-diploma program is to provide registered technologists and therapists the opportunity to obtain a degree in health science. It is not intended as an opportunity to merely refresh skills or competencies.

The program comprises 60 credit hours of university study (equivalent to two years full-time study). In recognition of the reality that potential students are likely to be working full-time, the program is available on a part-time basis.

Note: Respiratory Therapists wishing to apply to the Anaesthesia Assistant Certificate (AAC) must fulfill the admission requirements and follow the process for application to the Post-Diploma Program.
(Admission for 2014-2015 has been suspended)
1. Admission Requirements
   • Successful completion of a diploma program in the profession for which you are applying*
   • Two years of post-diploma work experience in that profession
   • Evidence of good standing with the applicable Canadian professional association or college.
   • For Diagnostic Medical Ultrasound, completion of advanced training in ultrasound following a diploma in another allied health profession, plus at least two years work experience in ultrasound, may be substituted.
2. Documentation Required
   • Completed Dalhousie application form plus application fee (see Application for Admission form)
   • Official transcript of diploma program, plus official transcripts from any other post-secondary institution attended
   • Current registration number with applicable Canadian professional association or college, or photostat copy of current membership card
   • Letter of intent
   • Resume with two contact references (two letters of reference for AAC program)
3. Guidelines for Letter of Intent
   This letter provides the opportunity for applicants to expand upon their experience, any advanced or specialty education they may have and their interest in undertaking university studies.
4. School of Health Administration
   3.a Diploma in Health Services Administration
      Applicants must meet the Dalhousie University undergraduate admission requirements. It is recommended that students not apply directly from High School and have work or volunteer experience in the Health Services industry. A complete application consists of the following documents:
      • Application and fee
      • An official transcript from high school and previous post-secondary institutions
      • One letter of reference
      • Resume
   3.b Diploma in Emergency Health Services Management
      Applicants must meet the Dalhousie University undergraduate admission requirements. It is recommended that students not apply directly from High School and have work or volunteer experience in the Health Services industry. A complete application consists of the following documents:
      • Application and fee
      • An official transcript from high school and previous post-secondary institutions
      • One letter of reference
      • Resume
   4. School of Nursing
   4.a Bachelor of Science (Nursing) - Four Year
      Admission to the Bachelor of Science Nursing program is limited. Not all applicants who meet the minimum requirements can be accepted.
      Requirements differ based on the previous education and background of the applicant.
      1. Selection criteria
         The selection criteria used by the Admissions Committee include:
         • Place of residence
         • Academic performance
   3.a Place of Residence
      Owing to the limited enrolments and the large number of applicants, this program primarily serves permanent residents of Nova Scotia but each year a limited number of places are also available for well-qualified residents of other Canadian provinces and international students.
      Applicants are considered to be from Nova Scotia if:
      • The principal residence of the applicant’s parent(s) or guardian, he/she must have lived and worked in a full-time basis in Nova Scotia (not attending school on a full-time basis) for a minimum of one full year; or
      • The applicant, or his/her parent(s), guardian or spouse does not meet the preceding requirements as the direct result of a recent employment transfer in or out of Nova Scotia.
   3.b Academic performance
      High School Applicants
      • Satisfactory completion of grade 12 or equivalent with at least five academic university preparatory courses including:
        • English
        • Biology
        • Chemistry
        • Academic Math
        • A minimum grade of 70% in the required subjects.
        • A minimum overall average of 70% in the five university preparatory courses used to meet admission requirements.
      Applicants with Previous Post-Secondary Experience
      • A minimum grade of 70% in the required academic grade 12 subjects as outlined above for High School applicants; or
      • A minimum grade of B+ in the required subjects at the Post-Secondary level.
      • A minimum cumulative GPA of 2.5 based on overall Post-Secondary career or most recent year of studies (30 credit hours).
5. Notification
   In exceptional circumstances, special consideration may be given by the Admissions Committee to applicants who do not meet all admission requirements. These decisions are at the discretion of the Admissions Committee and are not subject to appeal.
   3. Affirmative Action
      The School of Nursing has an Affirmative Action Policy for residents of Nova Scotia who belong to the indigenous Black and Aboriginal population. Applicants wishing to apply under the Affirmative Action Policy must indicate on the self-identification section of the application form. Applicants must meet the minimum admission requirements.
   4. Final Date for Receipt of Applications for Admission
      March 15
   5. Notification
      Each applicant is notified of the status of their application by mail, normally by the end of May. Those applicants who are put on the waiting list may expect to hear about acceptance as late as September. Incomplete and late applications will not be considered.
   5.a Bachelor of Science (Nursing) (Arctic Nursing)
      A program for Inuit is available. Please contact the School of Nursing for information.
   6. Deposit Fee
      Due to the large number of applications a non-refundable deposit of $200 (applicable to tuition fees) is required on admission.
      For High School students the $200 deposit is payable by May 15 in order to reserve a place in the program.
      For all other applicants the $200 deposit is payable within three weeks of receipt of written notification of acceptance in order to reserve a place in the program.
      The following guidelines have been established for the School of Nursing: if the deposit is not received by the deadline the place will be offered to another applicant without further notice. Students who have paid their deposits but who

16 Admission Requirements
have not appeared at the School of Nursing by the first day of the Orientation Program will be considered to have withdrawn from the School unless they have written permission from the Admissions Committee.

5. College of Pharmacy

a. Bachelor of Science (Pharmacy)

Applicants to the BSc Pharmacy program must fulfill the requirements of a first year BSc at Dalhousie University as outlined in the Degree Requirements section of this calendar. Equivalent subjects from other universities will be given equal status for purposes of determining admission.

Courses required for admission are the following Dalhousie courses:

- CHEM 1011.03/1012.03 or 1021.03/1022.03
- MATH 1000.03 or 1215.03
- SCIS 1060.03 or 2060.03
- BIOL 1010.03/1011.03 or BIOL 1020.03/1021.03
- ENGL 1005.Y or 1016 or any two English courses designated as a writing requirement (ex. ENGL 1010.03, 1020.03, 1040.03, 1050.03 or 100.03 or equivalent)
- Six credit hours or three free credit hour courses in any Social Science subject
- Minimum grade of 70% in each prerequisite course
- Applicants must present at least one year of study in which they successfully complete five full credits of study (30 credit hours) over the fall and winter terms.

Transfer credits will not be granted for students who exceed the minimum admission requirements. The problem-based curriculum which integrates science, pharmaceutical science and pharmacy practice requires that students will complete all coursework in the four year program.

Incomplete applications and applications submitted after the deadline, February 1 (see Application Dates for details), will not be considered.

1. Selection Criteria

The selection criteria used by the Admissions Committee include:

- Place of residence
- Academic performance
- Assessment of non-academic criteria

A score out of 100, is calculated for each applicant based on academic performance and assessment of non-academic criteria.

1.a. Place of Residence

This is the only College of Pharmacy for the Maritimes and therefore preference is given to Maritime applicants. Attendance at a Maritime university does not, by itself, constitute having established residence in the Maritime provinces.

Applicants are considered to be from the Maritimes if:

- The principal residence of the applicant’s parent(s) or guardian is located in the Maritime provinces, or
- The applicant (or spouse) has been employed full-time in the Maritime provinces for the preceding 12 consecutive months.

Applicants whose parent(s), guardian or spouse do not meet the residency requirements as a direct result of a recent employment transfer either into or out of the Maritime provinces would not necessarily be expected to conform to the above guidelines.

Exceptions to these guidelines will be considered on an individual basis. Residence will be determined for each applicant on February 1st of the year for which admission is being sought.

A limited number of students from outside the Maritimes are accepted into the College of Pharmacy on a competitive basis so that the ability to obtain consistently better than average applicants’ overall total score.

The assessment of non-academic criteria accounts for 40% of the applicants’ overall total score.

2. Notification

Applicants will be informed of the status of their application no later than late July. Those applicants who are put on the waiting list may expect to hear about acceptance as late as September.

3. Deposit Fee

In addition to the deposit requirement (page 14), the following guidelines have been established for the College of Pharmacy: if the deposit is not received, the place will be offered to another applicant without any further notice.

Students who have paid their deposits but who have not appeared at the College by the first day of the College of Pharmacy Orientation Program will be considered to have withdrawn from the College unless they have written permission from the Admissions Committee.

4. Special Cases

In exceptional circumstances, special consideration may be given to applicants who do not meet all admission requirements. These decisions are at the discretion of the Admissions Committee and are not subject to appeal.

5. Affirmative Action

The College of Pharmacy has an Affirmative Action Policy for residents of the three Maritime provinces who belong to the African Canadian and Aboriginal populations. Applicants wishing to apply under the Affirmative Action Policy must check “yes” on the Supplemental Form. Applicants must receive a minimum of 65% in each of the five prerequisite courses.

6. School of Social Work

a. Bachelor of Social Work

The study and practice of social work is intellectually, emotionally and physically demanding. It is important for potential applicants to be familiar with the expectations and ethics of the profession before applying to the Bachelor of Social Work program in order to self-assess for readiness. This material can be found on the websites for the Canadian Association of Social Workers and the Canadian Association for Social Work Education.

Admission to the Bachelor of Social Work degree is limited. Not all applicants who meet the minimum requirements can be accepted. A limited number of places are offered once a year to the most qualified candidates as selected by the School’s Admissions Committee. Equal consideration is given to part-time and full-time applicants. Applicants indicate if they are applying for on-site or distance study and the applications for each delivery method are given separate full-time applications. Students who fail to complete five full credits of study (30 credit hours) over the fall and winter terms.

Exceptional circumstances may be considered on an individual basis. Residency will be determined for each applicant on February 1st of the year for which admission is being sought.

A limited number of students from outside the Maritimes are accepted into the College of Pharmacy on a competitive basis so that the ability to obtain consistently better than average applicants’ overall total score.

The assessment of non-academic criteria accounts for 40% of the applicants’ overall total score.

2. Notification

Applicants will be informed of the status of their application no later than late July. Those applicants who are put on the waiting list may expect to hear about acceptance as late as September.

3. Deposit Fee

In addition to the deposit requirement (page 14), the following guidelines have been established for the College of Pharmacy: if the deposit is not received, the place will be offered to another applicant without any further notice.

Students who have paid their deposits but who have not appeared at the College by the first day of the College of Pharmacy Orientation Program will be considered to have withdrawn from the College unless they have written permission from the Admissions Committee.
Admission Requirements

General Information

18  Admission Requirements

2. Application Process
Application and all supporting documents must be received by February 15. Please visit http://www.socialwork.dal.ca for detailed instructions on how to prepare and submit your application.

Applications for admission are assessed once a year and enrolment is in September only. Each applicant is notified by mail of the Admissions Committee's final recommendation to the University Registrar.

The BSW application is self-administered. The application can be downloaded including detailed instructions and forms for completing the application process. A full application includes the following (Note: only two out of the three references are required):

• Dalhousie Undergraduate Application for Admission
• BSW Application Information and Instructions
• BSW Applicant's Checklist, Part I
• BSW Form Personal Statement Cover Sheet
• BSW Form Recommendation 1: Academic
• BSW Form Recommendation 2: Work
• BSW Form Recommendation 3: Volunteer
• BSW Form Work & Volunteer Experience Summary

2a. Affirmative Action
The School of Social Work has an affirmative action policy for applicants who are Acadian, Aboriginal, African Canadian, members of other racially visible groups, persons with (dis)Abilities and for Lesbian, Gay, Bisexual, Transgender, Two-Spirit, Queer and intersex (LGBTTQI) people. The school is committed to admitting and graduating the highest possible number of students who qualify under this policy. Members of these groups who have five general (non-social work) university credits that average B- are encouraged to apply under this policy. Applicants make their request in a place provided on the Social Work Statement cover sheet, which is part of the BSW application package. Each candidate is considered individually on the basis of her/his qualification, rather than in relation to other applicants. The admissions prerequisites and selection criteria are otherwise the same for all candidates.

3. Selection criteria
The selection criteria used by the Admissions Committee include:

• academic achievement
• work and volunteer experience
• references
• social work statement

Interviews are not part of the admission process unless specifically requested by the Admissions Committee.

3.1 Academic Achievement
An initial screening is made on the basis of academic achievement. Grades from the last 60 credit hours attempted (equivalent to two years of full-time study), including failures, are used to determine the cumulative admission average. Repeated courses with lower grades will be excluded from the GPA calculations. Courses from non-university programs, including college level courses, do not qualify for consideration and are not included in the cumulative university average. A minimum cumulative GPA of 2.7 (B- or 70%) is necessary for an application to be considered.

3.2 Relevant work and/or volunteer experience
Relevant work and/or volunteer experience in areas of social or human services that bear a direct relationship to social work can contribute meaningfully to the applicant's preparation for social work practice.

3.3 References
The BSW application requires two out of the following three reference forms: (academic, work, volunteer). These assist the Admissions Committee in assessing the candidate's personal suitability and readiness for professional education in social work.

3.4 Social Work statement
Candidates write a statement that asks them to discuss a current social issue and their motivation to study social work. This also assists the Admissions Committee in assessing the candidate's personal suitability and readiness for professional education in social work.

3.5 Canadian Residency Requirement for Distance Study
The online (distance delivery) option is only available to residents of Canada as defined by Canada Customs and Revenue Agency.

4. Studying by Distance Delivery
Taking a social work degree via distance delivery in your own community will give you access to a challenging, top quality, accelerated education in social work. You will have access to a well-structured, web-based learning environment and have opportunities to apply new learning in supervised field work. Courses are delivered through an on-line learning management system known as Blackboard. Students are expected to participate in ongoing discussions in the courses. This requires students to post comments on the course discussion boards, to respond to other students' postings, and to work in small groups as required. The web-based courses provide the opportunity for a high-level of interactivity amongst students and between students and instructors. Please note that this delivery method differs significantly from correspondence courses. Regular ongoing access to a home computer is essential for effective interactivity in your courses.

If you are thinking about studying by distance we suggest you visit http://www.distanceeducation.dal.ca.

G. Faculty of Management

1. Bachelor of Commerce Co-op

• English
• Academic mathematics **
• Three other acceptable academic courses
• Minimum final grade: English, Math - 70%.
• Other subjects - 60%
• Overall Average - 75%

** Required Math for Commerce:
• NS - Math 12 (academic or advanced) or Pre-Calculus 12 or Calculus 12
• PEI - Math 621 or 631
• NB - Math 120, 121, 122
• NF - Math 30D, 30E or 320T
• Western Canada - Math 12, Math 30, Math 31, Math 40
• Ontario - MDM4U or MHF4U or MCV4U or MCA

Transfer Students

Transferring into the Dalhousie Commerce Co-op Program from another university program is usually quite easy, and we endeavour to give such students as many transfer credits as possible.

Regardless of what program in which they were previously enrolled, students who have earned at least four credit hours courses (or eight credit hours courses) in the following areas will usually be able to enter directly into the second year of Commerce Co-op at Dalhousie:

• Business in a Global Context (half-year course)
• Introduction to Financial Accounting (half-year course)
• Business Communications (written) (half-year course)
• Micro-Economics (half-year course)
• Core Business Applications (Computer Science) (half-year course)
• Business Communications (written) (half-year course)
• Business in a Global Context (half-year course)
• Western Canada - Math 12, Math 30, Math 31, Math 40
• Ontario - MDM4U or MHF4U or MCV4U or MCA

Otherwise, students will normally be placed in the first year of the program, but may be able to use transfer credits to reduce their course loads during some of their terms.

Transfer to the Bachelor of Commerce Co-op Program will not be allowed after September of the second year. Students transferring into this program will be assessed a co-op transfer fee.

Students transferring into the Bachelor of Commerce Co-op Program should note:
1. In order to ensure that all students pay the same co-op fees, students who transfer into the second year of the Bachelor of Commerce Co-op Program will be charged a transfer fee equivalent to the co-op fee that would have been paid in the first year of the program.
2. Due to the co-op structure of the program, a minimum of three years in the Dalhousie program will be required in order to complete the Commerce Co-op degree.
III. Application Submission

It is the responsibility of each applicant to ensure that the application file is complete. The following must be submitted by each applicant to the Registrar’s Office:

- A completed application form
- The appropriate application fee for the program (refer to Application for Admission form)
- For students applying directly from high school, an official record of high school work
- An official academic transcript from all previous post-secondary institutions (if applicable)
- Evidence of competency in English for applicants whose first language is not English (see Section 7 on English Language Tests, page 10)
- Supplementary information as required for specific programs
- Mature applicants should also enclose a letter

Documents, once submitted, become the property of Dalhousie University and cannot be returned.

1. January Admissions

Admission of first-year students in January is not recommended because the number of introductory courses in the winter term is very limited. Part-time students and transfer students may be admitted for courses beginning in January in BA, BSc, BEDS, and Special Student programs. The application deadline for January admission is November 15.

2. Response to Applications

Dalhousie will respond to your application as promptly as possible and will advise you of any missing documentation. Please notify the Registrar’s Office if your address changes.

When documentation is complete, applications are forwarded to the appropriate admissions committee. Although every effort is made to obtain decisions quickly, there will be some delay at times, particularly with limited enrollment programs.

As soon as decisions are made, applicants will be advised by mail.

3. Early acceptance

Applicants currently attending high school, who have good academic records and a competitive admission average may be given early acceptance, conditional on satisfactory completion of work in which they are currently enrolled.

4. Final acceptance

Applicants must successfully complete high school courses in the required subjects with a minimum average of 70%. An official transcript of final grades must be submitted to the Registrar’s Office by August 1st.

** Required Math for Bachelor of Management:
- NS - Math 12 academic or advanced or pre-calculus
- PEI - Math 12B or Math 12C
- NL - Math 12B, 12C, 12D
- NF - Math 2102 or Math 2205 or 2102
- Western Canada - Math 30/MATH 31/Math 40
- Ontario - Math MDM4U or Mhf4U or MCV4U

** Subject to final MPHEC approval

II. Bachelor of Science

1. Bachelor of Science and Bachelor of Science Co-op

   - English
   - Pre-Calculus Math
   - Three other acceptable university-preparatory courses
   - Minimum final grades:
     - English, Math - 65%
     - Other subjects - 60%
     - Overall Average - 70%
   - English, Math - 80%
   - Other subjects - 60%
   - Overall Average - 80%
   - It is recommended that students take two science subjects.

2. Bachelor of Science (Medical Sciences)*

   - English
   - Pre-Calculus mathematics
   - Three other acceptable university-preparatory courses
   - Minimum final grades:
     - Mathematics 80%
     - Pre-Calculus - 80%
     - Overall Average - 80%
   - Subject to final MPHEC approval

3. Integrated Science Program (DISP)

   - Satisfy requirements for Bachelor of Science
   - At least one grade 12 science course
   - Minimum grades:
     - English 75%
     - Mathematics 80%
   - Overall average 80%

4. Diploma in Meteorology

   - For students entering from another university, a 15 credit BSc or preferably, a 20 credit BSc, in physics or mathematics or chemistry with appropriate physics courses
   - Strong background in mathematics and physics
   - Courses taken should also include statistics and computer science
   - Dalhousie also offers an integrated program that leads to a BSc in physics (20 credits) and the Diploma in Meteorology. (See the Physics and Atmospheric Science Department entry, page 558 for details.)

I. Faculties of Dentistry, Law, Medicine, and Graduate Studies

For information concerning admission into these faculties, consult the appropriate calendar, or contact the appropriate faculty office directly.
University Regulations

General
1. The Senate is charged with the internal regulations of the University, including all matters relating to academic affairs and discipline, subject to the approval of the Board of Governors. Within the general policies approved by Senate, academic requirements are administered by the Faculty concerned.
2. All students must agree to obey all the regulations of the University already made or to be made. Students must also comply with the regulations of the Faculty in which they are registered, and pay the required fees and deposits before entering any course or taking any examinations. Additionally, students are advised that this Calendar is not an inclusive set of rules and regulations but represents only a portion of the rules and regulations that will govern the student’s relationship with the University. Other rules and regulations are contained in additional publications that are available to the student from the Registrar’s Office and/or the relevant Faculty, Department or School.
3. Students are bound by the regulations of the home faculty regardless of the faculty in which the student takes courses.
4. Students should be aware that certain courses at the University involve required laboratory work where potentially hazardous materials are in use. These may include animals, other biological materials which may include cryo and products, tissues, fluids, waste, but also microorganisms and toxins as well as a wide variety of chemicals. Examples of physical hazards may include noise, radioactive isotopes and non-ionizing radiation (e.g. lasers). Since there are potential health risks associated with the improper handling of such materials resulting in exposure, Dalhousie University requires that, as a condition of taking a course where such materials are to be used, students must read and agree to comply with the instructions for the safe handling of such materials. In the event that students do not comply with the instructions for the safe handling of such materials, students will receive no credit for the required laboratory work unless other acceptable alternatives are approved by the instructor. In many cases, alternate arrangements are not possible and students should consider enrolling in a different course.

Rescission of Acceptance into a Program
Dalhousie University reserves the right to rescind any acceptance of an applicant into a program or to rescind an offer of admission of an applicant into a program. Such rescission shall be in writing and may be made by the President or the Vice-President (Academic) and Provost, in consultation with the appropriate Dean, at any time prior to the applicant’s registration being confirmed by the Registrar. Any such rescission shall be reported to the Senate in camera.

Official Examination Regulations
1. Candidates will not be admitted to the Examination Room more than thirty minutes after the beginning of the examination. Candidates will not be permitted to leave the examination within the first 30 minutes.
2. Candidates are required to present their valid Dalhousie ID card at all examinations scheduled during the official examination periods and sign the signature list when used.
3. No articles such as books, papers, etc. may be taken into the examination room unless permission has been made by the examiner for reference books and materials to be allowed to the students. All electronic computing, data storage, electronic dictionary and communication devices must be turned off, placed and sealed in the opaque storage bag on the exam writing surface. Calculators may be used at discretion of the instructor.
4. Candidates may not leave their seats during an examination except with the consent of the invigilator.
5. If more than one book is used, the total number should be marked in the space provided above. The other books should be properly marked and placed inside the first book. All books supplied must be returned to the invigilator.
6. Candidates found communicating with one another in any way or under any pretext whatever, or having unauthorized books, papers, electronic computing, data storage, or communication devices in their possession, even if their use be not proved, will be investigated by the Chief Invigilator. A written report will be submitted to the Faculty Academic Integrity Officer.
7. After the first thirty minutes have elapsed, students may hand in their examination book(s) to an invigilator and quietly leave the examination room.

Policy in the Event that a Formal Examination Cannot be Completed at the Regularly Scheduled Time
Formal examinations, up to three hours in length, are scheduled by the Registrar each December and April during formal examination periods, as laid out in the Calendar. If, in the unusual event that one of these examinations must be postponed or abandoned at short notice, the following policies will apply.
1. If more than 50 percent of the time allocated for the examination has elapsed, students’ work up to the premature and of the examination, but permitted for the actual time written, will lead to the mark to be obtained from the formal examination.
2. If less than 50 percent of the time allocated for any examination has elapsed, the examination will be rewritten as soon as possible, normally on a day when examinations are not scheduled. Students will be informed by the Registrar of the time and place of the rewrite on the Website of the Registrar (http://www.dal.ca/exams).

Formal examinations, up to three hours in length, are scheduled by the Registrar each December and April during formal examination periods, as laid out in the Calendar. If, in the unusual event that one of these examinations must be postponed or abandoned at short notice, the following policies will apply.
1. If more than 50 percent of the time allocated for the examination has elapsed, students’ work up to the premature and of the examination, but permitted for the actual time written, will lead to the mark to be obtained from the formal examination.
2. If less than 50 percent of the time allocated for any examination has elapsed, the examination will be rewritten as soon as possible, normally on a day when examinations are not scheduled. Students will be informed by the Registrar of the time and place of the rewrite on the Website of the Registrar (http://www.dal.ca/exams).

In all cases in which a formal examination cannot be written at its scheduled time and special arrangements must be made, it is essential that faculty ensure that all students in the course are treated fairly and equitably and according to the evaluative criteria in the course description given to students at the beginning of the term. If an examination is terminated as under point #1, any student who feels disadvantaged by not having been able to write an examination for the length specified in the course description, may appeal through the appropriate departmental or school appeal mechanism for an examination of the specified length. Appeals will be investigated by the Dean and in a timely fashion. If an appeal is granted, arrangements for such a makeup examination will be made between the student and the course instructor.

If a formal examination cannot be written at its scheduled time, it is the responsibility of students to check the Registrar’s Website for when the examination will be rewritten. Announcements will be made as soon as possible after the original time, normally within 24 hours, and results will normally take place within the regular examination period.

Policy for the Scheduling of Courses/Examinations
Normally, the University schedule and conducts courses on weekdays, i.e., Monday to Friday, and sometimes Saturday, and examinations on weekdays and Saturdays, but not Sundays or statutory holidays. No examinations or courses should be scheduled on Good Friday, Easter Saturday or Easter Sunday. Otherwise, exams will be scheduled full days Monday through Thursday and Saturday, Friday until 3 pm, and sometimes Sunday after 12 noon. However, the University reserves the right, in exceptional circumstances and with the approval of Senate, to schedule courses or examinations on Sundays or statutory holidays, as the case may be.

Requests for an Alternative Final Examination Time
A student requesting an alternative time for a final examination will be granted if request is only in exceptional circumstances. Such circumstances include illness (with medical certification) or other mitigating circumstances outside the control of the student. Elective arrangements (such as travel plans) are not considered acceptable grounds for granting an alternative examination time. In cases where it is necessary to make changes to examination arrangements late in the term, or Senate has approved exceptional examination arrangements, a special effort will be made to accommodate difficulties the change may cause for individual students.
The decision whether to grant a student’s request for an alternative examination time lies with the instructor of the course concerned as does the responsibility for making the alternative arrangements.

This policy may also be applied at the discretion of the instructor to tests and examinations other than final examinations.

### Retention of Student Work

**Faculties of Architecture and Planning and Engineering**

All work submitted by students as part of their academic work in the Faculties of Architecture and Planning and Engineering automatically becomes the property of the University and may be retained for exhibition or other purposes at any time and for an indefinite period.

**Faculty of Computer Science**

The Faculty of Computer Science has the right to retain the original or a copy of any work handed in by students. This will only be used for evaluation or for administrative purposes. The permission of the originator of the work is required if it is to be used in any other way.

**Communication with Students**

1. All students must report their local address while attending the University to the Registrar’s Office, on registration or as soon as possible thereafter. Subsequent changes must be reported promptly. This may be done online at [http://deanfacl.dal.ca](http://deanfacl.dal.ca).
2. Email is an authorized means of communication for academic and administrative purposes within Dalhousie. The University will assign all students an official email address. This address will remain in effect while the student remains a student and for one academic term following a student's last registration. This is the only email address that will be used for communication with students regarding all academic and administrative matters. Any redirection of email will be the student’s own risk. Each student is expected to check her or his official email address frequently in order to stay current with Dalhousie communications.
3. Students who change their name while attending Dalhousie must provide proof of name change to the Registrar’s Office.

### Freedom of Information and Protection of Privacy

**The Freedom of Information and Protection of Privacy Act (FOIPPO) provides for the protection of an individual’s right to privacy but also requires that certain records be disclosed upon request unless they are exempted from disclosure. The Act requires that the University disclose personal information if that information would constitute an unreasonable invasion of personal privacy.** Applicants to Dalhousie are advised that information they provide along with any work handed in by students will be retained for evaluation or for administrative purposes. The Faculty of Computer Science has the right to retain the original or a copy of any work handed in by students. This will only be used for evaluation or for administrative purposes. The permission of the originator of the work is required if it is to be used in any other way.

### Release of Information About Students

The following information is available, without application through the Freedom of Information and Protection of Privacy Act:

**I. Disclosure to students of their own records**

1. A transcript is a complete history of a student’s academic record at Dalhousie. Partial transcripts, e.g., a portion of a student’s record pertaining to registration in a particular degree, faculty or level of study only, are not issued.
2. Students have the right to inspect their academic record. As an employee of the Registrar's Office will be present during such an inspection.
3. Students will, on submission of a signed request and payment of a fee where applicable, have the right to receive transcripts of their own academic record. These transcripts will be marked “ISSUED TO STUDENT.” Official transcripts will be sent on a student’s request to other universities, to business organizations, etc. The University will not release copies of transcripts if students owe monies to the University.
4. Transcripts are issued for a student while a student discipline case is pending and the committee subsequently makes a decision that affects the student’s transcript, revised transcripts will be sent to recipients if transcripts are issued while the case was pending.

**II. Disclosure to Faculty, Administrative Officers, and Committees of the University**

Information on students may be disclosed without the consent of the student to University officials or committees deemed to have a legitimate educational interest.

**III. Disclosure to Third Parties**

1. The following information is considered public information and may be released without restriction:
   - Name
   - Period of Registration
   - Certificates, Diploma, Degrees awarded
   - Field of Study (as relates to degree awarded)
   - Home town and Award Distinctions
   - As indicated in the conversation program.

2. Information will be released without student consent to persons in compliance with a judicial order or subpoena or as required by federal or provincial legislation.

3. Necessary information may be released without student consent in an emergency, if the knowledge of that information is required to protect the health or safety of the student or other persons. Such requests should be directed to the Registrar.

4. In compliance with Statistics Canada requirements, a student's personal identification number assigned by the university or college that attended will eventually appear on a student’s transcript of record.

5. The Federal Statistics Act provides the legal authority for Statistics Canada to obtain access to personal information held by educational institutions. The information may be used only for statistical purposes, and the confidentiality provisions of the Statistics Act prevent the information from being released in any way that would identify a student. Students who do not wish to have their information used are able to ask Statistics Canada to remove their identifying information from the national database by contacting us by:
   - Email: PSS-SIEP_contact@statcan.gc.ca
   - Mail: Institutional Surveys Section
   - Centre for Education Statistics
   - Statistics Canada, Main Building
   - SC2100-K Tunney’s Pasture
   - Ottawa, ON  K1A 0T6

   Students should also be aware that the Maritime Provinces Higher Education Commission (MPHEC) collects data on behalf of Statistics Canada, and that it uses the data for similar purposes. Statistics Canada will notify the MPHEC of any student choosing to have their personal information removed from the national database, and their information will subsequently be removed from the MPHEC database.

   Further information on the use of this information can be obtained from the Statistics Canada Website: [http://www.statcan.gc.ca](http://www.statcan.gc.ca)

   6. Other than in the above situations, information on students will be released to third parties only at the written request of the student, where the student has signed an agreement with a third party, one of the conditions of which is access to her/his record (e.g., in financial aid). This restriction applies to requests from parents, spouses, credit bureau and police.

### Accommodation Policy For Students

Dalhousie University recognizes the diversity of its students and is committed to providing a learning environment and community in which students are able to participate without discrimination on grounds prohibited by the Nova Scotia Human Rights Act. In particular, the University is committed to facilitating students’ access to the University’s academic programs, activities, facilities and services.

The University’s commitment to safeguarding students and employees from prohibited discrimination is set out in the Statement on Prohibited Discrimination, and the procedures for addressing alleged violations of the Statement by employees are set out in the Statement on Prohibited Discrimination Procedures for Complaints against an Employee of the University.

### Complaints against an Employee of the University

The University regulations set out the procedures for addressing complaints against an employee of the University. The procedures for addressing complaints against an employee of the University are set out in the Statement on Prohibited Discrimination Procedures for Complaints against an Employee of the University.
As stated in the Statement on Prohibited Discrimination:
The University operates in accordance with the Nova Scotia Human Rights Act. The Act prohibits discrimination in certain activities including the provision of or access to services and facilities, accommodation, publications and employment. Discrimination is defined as making "a distinction, whether intentional or not, based on a characteristic, or perceived characteristic [not list below] that has the effect of imposing burdens, obligations or disadvantages on an individual or class of individuals not imposed upon others or which withhold or limits access to opportunities, benefits and advantages available to other individuals or classes of individuals in society." The Act prohibits discrimination based on the following grounds or characteristics:

a) age
b) race
c) colour
d) religion
e) creed
f) sex

vi) sexual orientation
vii) physical disability or mental disability
ix) an irrational fear of contracting an illness or disease
x) ethnic, national or aboriginal origin
xi) family status
xii) marital status
xiii) source of income
xiv) political belief, affiliation or activity
xv) association with an individual or a class of individuals having characteristics referred to in (2) to (14)

The University recognizes that it has an obligation to provide a learning environment and community free from prohibited discrimination. The University has an obligation to make accommodations for students in instances where a student's learning environment or the University community in which they operate has a discriminatory effect on the student's ability to fully participate in, and have access to, University academic programs, activities, facilities and services. In particular, the University is obliged to make every reasonable effort short of undue hardship to take substantial, timely and meaningful measures to eliminate or reduce the discriminatory effects of the learning and community environment, including facilities, policies, procedures, and practices.

The purpose of this policy is to set out clear procedures to be followed in all instances where a student seeks accommodation to eliminate or ameliorate discrimination on one of the prohibited grounds. This policy replaces existing policies or practices concerning student accommodation.

Policy
Definitions
1. In this policy, "academic accommodation" means accommodation in relation to the student's participation in an academic program or particular course;

- "administrative head" means the individual with day-to-day operational responsibility for a University operation, activity, service or non-academic program;

- "non-academic accommodation" means accommodation in relation to University activities and services that are not otherwise considered academic accommodation;

- "student" shall include individuals enrolled at the University;

- "Student Accommodation Liaison" means the individual or committee assigned responsibility for managing accommodation requests by each Faculty in accordance with section 3 of this policy.

Role of Student Accommodation Office, Faculty and Administrative Heads
2. Subject to the terms of this policy, the Advising and Access Services Centre will be responsible for administering student requests for accommodation, in consultation with the Faculty's Student Accommodation Liaison in relation to academic accommodation, and in consultation with the relevant administrative head in relation to non-academic accommodation.

3. Each Faculty shall either assign a senior academic administrator or a Faculty, School or Department committee the responsibility to act on behalf of the Faculty in relation to academic accommodation requests under this Policy. Such individuals or committee shall be referred to in this policy as the Student Accommodation Liaison.

4. Prior to the commencement of each academic year, the Student Accommodation Liaison shall be responsible for approving parameters for academic accommodations relative to the Faculty's particular academic program and course requirements.

Requests for accommodation
5. It is the student's responsibility to make a request for accommodation in accordance with this policy. The request for accommodation must be made reasonably in advance of the event or process in relation to which accommodation is being sought so that a decision can be made. Except in rare circumstances when significant psychological or mental health issues arise, there should be no "after-the-fact" accommodation. The University will consider a request for accommodation made by a third party (physician, family member, caregiver, advocate or other representative) only where the student has provided prior written consent.

6. A request for accommodation shall be made by the student in writing to the Advising and Access Services Centre, and shall contain the following information:

- the reasons for the accommodation (i.e. particulars of the discriminatory impact on the student on one of the prohibited grounds) and any supporting documentation;
- the accommodation being requested and/or any suggestions as to how the accommodation can be achieved;
- where a medical condition is relevant to the request, copies of medical reports or additional medical documentation to substantiate the request and to assist in identifying the most appropriate means of accommodation; and
- where the request relates to academic accommodation in relation to a learning disability, a current psychological/educational report describing the nature of the learning disability.

Assessment and Decisions concerning accommodation
7. The assessment by the Advising and Access Services Centre is a two-step process. First, the Advising and Access Services Centre screens the request to ensure that only requests arising in relation to one of the prohibited grounds of discrimination are permitted to proceed. If the request does arise in relation to one of the prohibited grounds, The Advising and Access Services Centre shall proceed to the second step, and shall consider all relevant factors in making a preliminary assessment as to whether an accommodation could be made without imposing an undue hardship to the University. In making such an assessment, The Advising and Access Services Centre will usually consult with the student making the request. Relevant factors include, but are not limited to, the following:

- Linkage – whether the proposed accommodation will have the practical effect of eliminating or reducing the identified barrier;
- Safety – whether the proposed accommodation would pose a safety risk to the student, staff or other students or to the student seeking accommodation;
- Financial Cost – what are the costs (estimate out-of-pocket expenses to put the accommodation in place together with any long-term costs to sustain the proposed accommodation), and would such costs be prohibitive;
- Size and nature of the program or service – how disruptive would the proposed accommodation be to the program or service, considering the number of students, faculty and staff and the nature and inter-relationships of their roles;
- Impact on academic requirements – whether the proposed accommodation will substantially undermine the academic requirements of the program; and
10. The Advising and Access Services Centre in consultation with the Student
9. Where the request is for non-academic accommodation, the Advising and
2. The notice of appeal described under section 10 of the policy shall be on Form
15. All faculty, staff and students shall cooperate with accommodation plans
12. Where a student believes that his or her request for accommodation has not
11. There shall be an Accommodation Appeals Committee comprising two
whether any adjustments to the accommodation plan are necessary. In consultation with the
Student Accommodation Liaison, and course instructor as required, the
Access Services Centre shall inform the student, those who are necessary for the
Accommodation Liaison of the decision. Except in extraordinary
Access Services Centre may review accommodation plans from
time to time to determine whether any adjustments to the accommodation plans
are necessary.

Where the circumstances are not addressed by the approved
parameters, the Advising and Access Services Centre shall also consult with the
Student Accommodation Liaison. The Advising and Access Services Centre shall inform the student, those who are necessary for the
implementation of the decision (such as the course instructor), and the Student
Accommodation Liaison of the decision. Except in extraordinary circumstances, decisions concerning accommodation shall be communicated
within five working days of the student’s request. A request can be expedited
at the request of the student if circumstances warrant. In consultation with the
Student Accommodation Liaison, and course instructor as required, the
Advising and Access Services Centre may review accommodation plans from
time to time to determine whether any adjustments to the accommodation plans
are necessary. The Advising and Access Services Centre in consultation with the Student
Accommodation Delegates and the administrative heads, as appropriate, will monitor accommodation plans from time to time to ensure that they have been implemented in accordance with this policy.

Appeals
11. There shall be an Accommodation Appeals Committee comprising two
members appointed by the Vice-President Finance and Administration, two
members appointed by the Vice-President Academic and Provost, two
members appointed by the Vice-President Student Services, and three students
appointed by the Vice-President Student Services.
12. Where a student believes that his or her request for accommodation has not been
handled in accordance with this policy or is not satisfied with the type of
accommodation provided, the student may appeal such decision by providing
written notice to the Advising and Access Services Centre within 10 working
days of the date of the decision. Upon receipt of such notice, the Advising and
Access Services Centre shall ask the Vice-President Academic to select a
hearing panel comprising three employees and two student members of the
Accommodation Appeals Committee to hear the appeal.
13. The Accommodation Appeals Committee’s hearing panel may uphold the initial
decision concerning the accommodation or may determine that an alternate
form of accommodation should be provided. The decision of the hearing panel
is final, and cannot be appealed further.

Confidentiality
14. Particulars of requests for accommodation, including supporting
documentation, shall be treated as strictly confidential, and shall not be
disclosed to other persons without the consent of the student requesting
accommodation, except and to the extent that such disclosure is reasonably
necessary for the effective implementation of the accommodation plan.

Cooperation
15. All faculty, staff and students shall cooperate with accommodation plans
implemented under this policy. Failure to cooperate may be considered
prohibited discrimination under the Statement on Prohibited Discrimination.
16. Notwithstanding anything in this policy, students have the right at any time to
seek the assistance of the Nova Scotia Human Rights Commission.

Procedures
1. Requests for accommodation under section 5 of the policy shall be on Form
B.
2. The notice of appeal described under section 10 of the policy shall be on Form
B.

Support Services
Dalhousie University endeavours to provide a broad range of support services to
all its students. Students wishing to obtain assistance from the University shall
be expected to undertake a reasonable measure of self-advocacy to ensure that they
are provided with the support services necessary. Such support services may
include personal counselling, academic counselling, academic advising, and
academic skill training.

NOTE: Accommodation of a student's needs due to disability will be facilitated
if the student self-discloses and makes prior arrangements. Accommodation may be denied if advance notification or prior arrangements have not been made.

Policy on the Submission of Student Papers
Any instructor may require student assignments to be submitted in both written
and electronic (computer-readable) form, e.g., a text file or as an email
attachment, as defined by the instructor. Use of third-party originality checking
software does not preclude instructor use of alternate means to identify lapses in
originality and attribution. The results of such assessment may be used as
evidence in any disciplinary action taken by the Senate.

Procedures
If an instructor plans to use originality-checking software in a course, students
shall be informed in the course syllabus that their written work may be submitted to a text-matching software service, which is meant to assure students that
everyone will be evaluated on the basis of their own work and to warn students that plagiarism is likely to be detected. The planned use of originality-checking
software will also be included in the oral presentation of the course syllabus in the
initial course meeting.

Students shall also be informed in the course syllabus that they are free, without
penalty of grade, to choose an alternative method of attesting to the authenticity of
their work.

Students shall inform instructors no later than two weeks after the commencement
courses of their intent to choose an alternate method.

Instructors shall provide students with at least two possible alternatives that are
not unduly onerous and that are appropriate for the type of written work.

Alternatives shall be chosen from the following:

a) Submitting copies of multiple drafts demonstrating development of the work;

b) Submitting an annotated bibliography;

c) Submitting photocopies of sources;

d) Other alternatives devised by the instructor, provided that they are not unduly onerous.

Intellectual Honesty
A university should be a model of intellectual honesty. As such Dalhousie
University shares in the academic values of honesty, trust, respect, fairness and
responsibility (Centre for Academic Integrity, 1999 - of which Dalhousie University is a member). Failure to meet the University’s standards with respect to
these values can result in an academic offence. The length of time a student has
attended university, the presence of a dishonest intent and other circumstances
may all be relevant to the seriousness with which the matter is viewed.

Violations of intellectual honesty are offensive to the entire academic community,
not just to the individual faculty member and students in whose course an offence
occurs.

Instructors are responsible for setting examinations and assignments as part of
the learning process and for evaluating those examinations and assignments,
including ensuring that any rules stated for the procedures used in an examination
or assignment are followed. Any violation of such stated rules that could result in a
student gaining an unfair or unearned advantage may be considered to be an
academic offence.

Examples of Academic Offences
There are many possible forms of academic dishonesty. Since it is not possible to
list all instances of academic dishonesty, the following list of examples should be
considered only as a guide. The omission of a dishonest action from this list does
not prevent the University from prosecuting an alleged instance of that action.

University Regulations 23
A. Plagiarism

Members of academic communities are privileged to share in knowledge generated through the efforts of many. In return, each member of the community has the responsibility to acknowledge the source of information used and to contribute knowledge that can in turn be treated and used by others. Consequently, the University attaches great importance to the contribution of original thought to learning and scholarship. It attaches equal importance to the appropriate acknowledgment of sources from which facts and opinions have been obtained.

Dalhousie University defines plagiarism as the submission or presentation of the work of another as if it were one’s own.

Plagiarism is considered a serious academic offence that may lead to the assignment of a failing grade, suspension or expulsion from the University. If a penalty results in a student no longer meeting the requirements of a degree that has been awarded, the University may rescind that degree.

Some examples of plagiarism are:

• failure to attribute authorship when using a broad spectrum of sources such as written or oral work, computer code/programs, artistic or architectural works, scientific projects, performances, web page designs, graphical representations, computer programs, written or oral work, computer codes/programs, artistic or architectural works, scientific projects, performances, web page designs, graphical representations, scientific projects, performances, web page designs, graphical representations, scientific projects, performances, web page designs, graphical representations, scientific projects, performances, web page designs, graphical representations, scientific projects, performances, web page designs, graphical representations, scientific projects, performances, web page designs, graphical representations, or images;

• downloading all or part of the work of another from the Internet and submitting as one’s own; and

• the use of a paper prepared by any person other than the individual claiming to be the author.

The proper use of footnotes and other methods of acknowledgment vary from one field of study to another. Failure to cite sources is required in the particular field of study in the preparation of essays, term papers and dissertations or theses may, in some cases, be considered to be plagiarism.

Students who are in any doubt about how to acknowledge sources should discuss the matter in advance with the faculty members for whom they are preparing assignments. In many academic departments, written statements on matters of this kind are made available as a matter of routine or can be obtained on request. Students may also take advantage of resources available through the Writing Centre at writcentre.dal.ca or the Dalhousie Libraries at library.dal.ca/services/#f16.

B. Irregularities in the Presentation of Data from Experiments, Field Studies, etc.

Academic research is based on the presentation of accurate information and data that are obtained honestly. The trustworthiness of our findings is essential to the construction and to be recognized for their abilities. Any behavior intended to obtain advantage over another person violates this principle. A member of the University who企图s, or who assists any other person in an attempt, to falsify, by irregular procedures, any requirements for a course, commits an academic offence and is subject to a penalty.

Students who are in any doubt about how to acknowledge sources should discuss the matter in advance with the faculty members for whom they are preparing assignments. In many academic departments, written statements on matters of this kind are made available as a matter of routine or can be obtained on request. Students may also take advantage of resources available through the Writing Centre at writcentre.dal.ca or the Dalhousie Libraries at library.dal.ca/services/#f16.

C. Other Irregularities

Dalhousie University strives to provide equal opportunities for learners to demonstrate and to be recognized for their abilities. Any behavior intended to gain advantage over another person violates this principle. A member of the University who attempts, or who assists any other person in an attempt, to falsify, by irregular procedures, any requirements for a course, commits an academic offence and is subject to a penalty.

In the absence of specific approval from the instructor of a course, all students should assume that every assignment is to be completed independently, without any form of collaboration.

Students should take reasonable precautions to prevent other students from having access, without permission, to their tests, assignments, essays or term papers.

The following are some examples of irregular procedures. The list should be used only as a guide since it is not possible to cover all situations that may be considered by the Senate Discipline Committee to be irregular:

• writing an examination or test for someone else;

• attempting to obtain or accepting assistance from any other person during an examination or test;

• during the time one is writing an examination or test, having material that is not specifically approved by the instructor;

• without authorization, obtaining a copy of an examination or test, topic for an essay or paper, or other work;

• without authorization from the faculty member in charge of that course, submitting any work for academic credit when one is not the sole author or creator;

• without authorization submitting any work that has been previously accepted for academic credit in any other course in any other degree, diploma or certificate program, or has been completed as part of employment within the University, for example, as research activity. A repeated course is considered to be a separate course.

D. Aiding in the Commission of an Academic Offence

No student may encourage or aid another student in the commission of an academic offence, for example:

• by lending another student an assignment knowing that he or she may copy it for submission;

• by offering another student to copy answers during an examination.

E. Misrepresentation

Any person who provides false or misleading information during an investigation of a suspected academic offence is guilty of an offence.

Discipline

1. Members of the University, both students and staff, are expected to comply with the general laws of the community, within the University as well as outside it.

2. Alleged breaches of discipline relating to student activities under the supervision of the Dalhousie Student Union are dealt with by the Student Union. Alleged breaches of discipline relating to life in residences are dealt with by the residence discipline policy unless the President determines that some non-residence University interests are involved. Senate is charged with the authority to deal with cases of alleged academic offences, see examples above, as well as with certain other offences that are incompatible with constructive participation in an academic community.

3. On report of a serious breach of the law, or a serious academic offence deemed by the President, or in his or her absence by a Vice-President or the Dean of a Faculty, to affect vital University interests, a student involved may be temporarily suspended and denied admission to courses or to the University by the President, Vice-President or Dean, but any suspension shall be reported to the Senate, together with the reasons for it, without delay.

4. No refund of fees will be made to any student required to lose credit for any course taken, required to withdraw or who is suspended or dismissed from any course or any Faculty of the University.

Academic Dishonesty

Faculty Discipline Procedures Concerning Allegations of Academic Offences

I. Premise

These procedures deal with allegations of academic offences and do not deal with violations of the student code of conduct. The purpose of these procedures is to delegate assessment of certain allegations of academic offences to the Faculty level.

Guideline for Evaluators

An alleged first or later breach of any academic standard by a student should never be dealt with by an evaluator, but in all instances, should be referred to the Academic Integrity Officer in accordance with these procedures. Any attempt by any person or body other than the Senate, the Senate Discipline Committee, or the Academic Integrity Committee to impose a penalty for an alleged offence is null and void and leaves the student still liable to discipline for that offence. Further, a student remains liable to discipline for a suspected offence notwithstanding a failure on the part of an evaluator to report the allegation in accordance with these procedures.

Where an allegation of a breach of academic standards has been made or is pending, the evaluator should not reveal the mark or grade to anyone until the Vice-Chair (Academic Administration) has confirmed the disposition of the matter by the Senate Discipline Committee or the Academic Integrity Officer.
II. Academic Integrity Officers

1. Academic Integrity Officers are associated with the Faculties of Dalhousie University.

2. The Academic Integrity Officer shall act between the student and instructor, and may appear at Hearing Panels of the Discipline Committee or the Discipline Appraisal Board.

3. The Academic Integrity Officer is the Dean of the Faculty. The Dean may further delegate this role to one or more members of his/her academic staff except those who are Senate Officers, who are otherwise involved in the student discipline process, or who otherwise are in a potential conflict of interest relative to this role. Anywhere the name of the delegate(s) shall be communicated in writing to the Vice-Chair (Student Affairs) who shall report to Senate.

4. The Academic Integrity Officers shall meet as a group with the Senate Discipline Committee (SDC) at least once a year to discuss relevant policy issues and training requirements with a view to maximizing consistency and predictability in the administration of academic offences across the University. Such meetings will be convened and chaired by the Vice-Chair (Student Affairs).

5. Penalties

Penalties shall follow the guidelines contained within the University’s Academic Regulations and the Senate Discipline Committee terms of reference set out in Section 10 of the Senate Constitution, which are reproduced below for convenience.

The range of penalties which may be imposed by the Senate Discipline Committee be circumscribed only by the requirement that such penalty or penalties be of an academic nature and, without restricting the generality of the foregoing, may include any one or more of:

a) notation of the fact of discipline on the student’s official transcript for a period of not more than one academic year;

b) failure of the academic year;

c) suspension for one academic term or year or to a maximum suspension of three academic years;

d) expulsion from the University;

e) loss of a current or continuing scholarship, or both, or loss of eligibility to receive or to maintain scholarships or prizes or bursaries; and

f) removal from the Dean’s List.

6. Faculty Procedures

When an academic offence is suspected, the instructor shall submit a signed statement outlining the basis for the allegation, together with all relevant supporting evidence, to the Academic Integrity Officer of the Faculty which is responsible for the delivery of the course at issue, or in the case of an allegation in relation to a graduate thesis or other non-course graduate materials, to the Academic Integrity Officer of the Faculty of Graduate Studies.

The Academic Integrity Officer shall forward the matter to the Senate Discipline Committee for assessment of an appropriate penalty.

If the Academic Integrity Officer has the authority to convene a meeting with all students facing allegations arising from the same fact situation (“common allegation”), the Academic Integrity Officer also has the discretion to convene additional meetings with the student(s)’ advisor, if any, and the instructor. The Academic Integrity Officer (SDC) has the discretion to convene additional meetings as may be reasonably required. In the event an initial meeting does not occur within a reasonable time after a prima facie case is established, the Academic Integrity Officer shall forward the matter to the Senate Discipline Committee.

7. Subparagraph 8 of paragraph 8, in the case of two or more students facing allegations arising from the same fact situation (“common allegation”), the Academic Integrity Officer has the authority to convene a meeting with all such students in accordance with paragraphs 8 and 10 and to make findings for all such students under these Procedures, regardless of the fact that one or more of such students may have a record of prior academic offence(s). If the Academic Integrity Officer’s assessment is that there is sufficient evidence to support a finding that the student has committed an academic offence, for any such student who has no record of prior academic offence(s), subject to paragraph 4, the Academic Integrity Officer shall assess an appropriate penalty for the student in accordance with these Procedures; and for any such student who has a record of prior academic offence(s), the Academic Integrity Officer shall forward the matter to the Senate Discipline Committee for assessment of an appropriate penalty.

8. Following the meeting convened in accordance with paragraph 8, the Academic Integrity Officer shall make a preliminary assessment of whether there is sufficient evidence to support a finding that the student has committed an academic offence, and if there is sufficient evidence, make a preliminary assessment of what penalty would be appropriate in the circumstances. In making the latter assessment, the Academic Integrity Officer shall exercise broad discretion in considering possible mitigating circumstances including but not limited to extraordinary personal circumstances and lack of educational experience.

9. If the Academic Integrity Officer’s assessment is that there is insufficient evidence to support a finding that the student has committed an academic offence, the student is informed in writing within five working days of the meeting. This does not preclude an Academic Integrity Officer from referring the matter to the SDC at any time.

10. If the Academic Integrity Officer’s assessment is that there is sufficient evidence to support a finding that the student has committed an academic offence, AND that the appropriate penalty for the student’s conduct is any of the penalties described in paragraph 5 above, except those listed in subparagraphs 5 to 9 to the Senate Discipline Committee to provide the student with the option of accepting the proposed penalty, or, of proceeding to the Senate Discipline Committee for a full hearing. The option shall be presented to the student within five working days of the meeting, and the student shall have two working days to respond. In the event that the student elects to accept the finding and proposed penalty, the Academic Integrity Officer shall so advise the Vice-Chair (Student Affairs).

11. Within 14 calendar days of the Vice-Chair (Student Affairs) being advised of the finding and agreed penalty under paragraph 12, the Vice-Chair (Student Affairs) shall jointly review the finding and agreed penalty to determine whether the process is consistent with the Faculty Discipline Procedures Concerning Allegations of Academic Offences. If so, they shall notify the matter on behalf of Senate and the Vice-Chair shall notify the student and the Academic Integrity Officer of such notification. For ratification to occur, the decision must be unanimous. The finding and agreed penalty shall stand, despite possible appeals (procedural) errors. The Vice-Chair (Student Affairs) shall ensure that the offence is recorded on the Senate Discipline database and that the Registrar and any others are notified of the finding and penalty for immediate implementation. If the Vice-Chair (Academic Administration) and/or the Chair (Student Affairs) are not satisfied that the academic concerns can be resolved. If the Vice-Chair (Academic Administration) and the Academic Integrity Officer are unable to resolve any concerns, the matter shall be referred back to the Academic Integrity Officer for further consideration under these Procedures, after which the Vice-Chair
General Information

16. Prior to a hearing by the Senate Discipline Committee of an allegation against a student, the Academic Integrity Officer shall provide a written allegation to the Senate office identifying the evidence initially presented by the instructor pursuant to paragraph 5 and any additional evidence obtained by the instructor in the course of the assessment of the matter. The written allegation shall not include reference to whether or not any meetings did occur pursuant to paragraph 6 or 7, any statements that may have been made by the student at such meeting(s), or any alternate versions of the facts and circumstances that may have been presented by one or more students at such meeting(s). The student shall have the opportunity to provide a written submission in response to the hearing by the Senate Discipline Committee. Notwithstanding the foregoing, in the event of a statement made by a student at a hearing of the Senate Discipline Committee that is inconsistent with a statement previously made by that student in the meeting(s) with the Academic Integrity Officer, the Academic Integrity Officer may refer to statements that may have been made by the student at such meeting(s).

17. Confidentiality must be maintained by those involved in each case when an academic offense is suspected and the instructor submits an allegation to the Academic Integrity Officer, except as reasonably necessary to implement the finding and appeal process or as required in subsequent disciplinary procedures related to the same matter.

Senate Discipline Committee

Jurisdiction of the Senate Discipline Committee

1. The Senate Discipline Committee has jurisdiction to hear:
   a) Complaints referred to the Senate Discipline Committee under the Code of Student Conduct ("Code Complaints"), and
   b) Allegations of academic offenses referred to the Senate Discipline Committee under the Faculty Discipline Procedures Concerning Allegations of Academic Offenses ("Integrity Allegations").

2. For the purpose of these procedures, the following definitions shall apply:
   a) Allegation means a Code Complaint or an Integrity Allegation as the context requires.
   b) University Representative means the President of the University or his/ her designee in the case of Code Complaints, or the Academic Integrity Officer in the case of Integrity Allegations.

3. The Senate Discipline Committee’s jurisdiction extends to Allegations against a student who, before or during the course of the disciplinary process involving him or her, but prior to adjudication, has:
   a) been compelled to withdraw academically;
   b) chosen not to register at the University;
   c) chosen to withdraw from the course, the program, or the University prior to being disciplined, or;
   d) chosen not to register at the University.

4. In the case of Integrity Allegations, a Hearing Panel of the Senate Discipline Committee may:
   a) dismiss the allegation; or
   b) impose any of the following:
      i) the student may have been presented by one or more students at such meeting(s). The student shall have the opportunity to provide a written submission in response to the hearing by the Senate Discipline Committee. Notwithstanding the foregoing, in the event of a statement made by a student at a hearing of the Senate Discipline Committee that is inconsistent with a statement previously made by that student in the meeting(s) with the Academic Integrity Officer, the Academic Integrity Officer may refer to statements that may have been made by the student at such meeting(s).

v) failure of the course;
vi) suspension for an academic term or year (to a maximum suspension of three academic years);
19. The University Registrar shall present the Allegation and witnesses, if any. The student and any members of the Hearing Panel may question the University Registrar and the University Representative's witnesses following the presentation of the Allegation.

20. The student may present his or her defence and witnesses, if any, following the University Registrar's presentation. The University Representative and any members of the Hearing Panel may question the student and any of the student's witnesses following the presentation of the defence.

21. At the discretion of the Chair of the Hearing Panel, the parties may make final arguments following the presentations. The student shall have the last word.

22. At the discretion of the Hearing Panel, any evidence sought to be admitted by either party from witnesses who are not available to give evidence in person may be received in some or other form.

23. The student is considered innocent until the Allegation is proven on a balance of probabilities, the burden of which lies with the University Representative.

24. The decision of the Hearing Panel shall be by majority.

25. The Hearing Panel shall report its decision including reasons for the decision and any penalty imposed, to the Vice-Chair (Student Affairs) who shall forward a copy of the decision to the student and the University Registrar.

26. An audio recording of each oral hearing shall be made. The recording and all correspondence and documentary evidence relating to uphold proceedings shall be kept in accordance with the records management policies of the University Secretariat. The student may obtain a copy of the audio recording by making written request to the Vice-Chair (Student Affairs) and may use such recording only for the purpose of an appeal of the decision in question.

27. Appeals from decisions of the Senate Discipline Committee may be made to the Senate Appeals Committee in accordance with the Senate Appeals Committee - Jurisdiction and Appeals Procedures.

28. The Senate shall maintain a confidential database of discipline decisions for the purposes of general reporting and proper adjudication of repeat offences.

King's College

29. Appeals from decisions of the Dalhousie Registrar shall be made to the University Registrar. The student shall have the right to present his or her version of the facts to the University Registrar. The University Registrar may then either uphold the decision of the Dalhousie Registrar or overrule the decision of the Dalhousie Registrar and impose a new penalty.

30. If an appeal is made to the University Registrar, the student shall be afforded a full hearing. The student may present his or her defence and witnesses, if any, following the presentation of the University Registrar's decision. The University Registrar may question the student and any of the student's witnesses following the presentation of the defence.

31. The student may present his or her defence and witnesses, if any, following the University Registrar's presentation. The University Representative and any members of the Hearing Panel may question the student and any of the student's witnesses following the presentation of the defence.

32. At the discretion of the Chair of the Hearing Panel, the parties may make final arguments following the presentations. The student shall have the last word.

33. At the discretion of the Hearing Panel, any evidence sought to be admitted by either party from witnesses who are not available to give evidence in person may be received in some or other form.

34. The student is considered innocent until the Allegation is proven on a balance of probabilities, the burden of which lies with the University Representative.

35. The decision of the Hearing Panel shall be by majority.

36. The Hearing Panel shall report its decision including reasons for the decision and any penalty imposed, to the Vice-Chair (Student Affairs) who shall forward a copy of the decision to the student and the University Registrar.

37. Appeals from decisions of the Senate Discipline Committee may be made to the Senate Appeals Committee in accordance with the Senate Appeals Committee - Jurisdiction and Appeals Procedures.

38. The Senate shall maintain a confidential database of discipline decisions for the purposes of general reporting and proper adjudication of repeat offences.

King's College

39. Appeals from decisions of the Dalhousie Registrar shall be made to the University Registrar. The student shall have the right to present his or her version of the facts to the University Registrar. The University Registrar may then either uphold the decision of the Dalhousie Registrar or overrule the decision of the Dalhousie Registrar and impose a new penalty.

40. If an appeal is made to the University Registrar, the student shall be afforded a full hearing. The student may present his or her defence and witnesses, if any, following the presentation of the University Registrar's decision. The University Registrar may question the student and any of the student's witnesses following the presentation of the defence.

41. The student may present his or her defence and witnesses, if any, following the University Registrar's presentation. The University Representative and any members of the Hearing Panel may question the student and any of the student's witnesses following the presentation of the defence.
4. Unauthorized Use of University Facilities, Equipment or Services

a) No student shall use any facility, equipment or service of the University, or part or remain on any premises, to which he or she has not legitimate access, or contrary to the expressed instruction of authorized persons.

b) No student shall use any University computing equipment, facility, network or system for any disruptive or unauthorized purpose, or in a manner that violates any law, Dalhousie University regulations, policies and procedures, or in any way that is incompatible with the principles in the Acceptable Use of Information Technology Resources sections. Examples of inappropriate use of computer equipment, facilities, networks and systems include, but are not limited to:

i) copying, removing or distributing software and/or data without authorization;

ii) using another person's account, or misrepresenting themselves as another user;

iii) displaying confidential passwords, access codes, etc., assigned to themselves or others;

iv) interfering with the work of others using computing equipment, facilities, networks, systems or accounts;

v) displaying, transmitting, distributing or making available information that is discriminatory, obscene, offensive, derogatory, harassing or otherwise objectionable;

vi) breaching terms and conditions of software licensing agreements;

vii) interfering with the normal operation of computing equipment, facilities, networks or systems by, among other things, flooding the network with messages, sending chain letters or pyramid solicitations; victimizing the University's computing equipment, facilities, networks and systems for profit or commercial gain.

c) No student shall destroy, misuse, misfile, or render inoperable any stored information such as books, films, data files or programs from a library, computer or other information storage, processing or retrieval system.

5. Aiding in the Commission of an Offence

No student shall encourage or aid another student in the commission of an offence defined in this Code, or encourage or aid behavior by a non-student which, if committed by a student, would be an offence under this Code.

6. Alcohol and Drug Use

No student shall contravene the Liquor License Act of Nova Scotia or a provision of the Campus Alcohol Policy, nor shall any student possess, use or sell a drug to which access is restricted by the Narcotics Control Act.

7. False Information and Identification

a) No student shall knowingly furnish false information to any person or office acting on behalf of the University.

b) No student shall forge, alter or misuse any document, record or instrument of identification.

c) No student shall knowingly furnish false information to any person regarding his or her standing, status or academic record at Dalhousie University.

8. Unauthorized Possession of a Firearm or Weapon

No student shall possess a firearm or other weapon on the University premises without the specific written permission of the Chief of Security.

9. Contrevention of University Regulations

When a rule, regulation or policy of the University prohibits or proscribes certain conduct but does not provide any penalty for breaches of the rule, regulation or policy, breaches shall be dealt with under this Code.

10. Other

No student shall contravene any provision of the Criminal Code or any other federal, provincial or municipal statute on the premises of the University or in the course of the University's programs or services, or University-approved events or activities.

D. Procedures

1. Whenever possible and appropriate, reason and informal measures shall be used to resolve issues of individual behavior before resort is made to formal disciplinary procedures.

2. Any person may make a complaint against any student for misconduct. A complaint shall be prepared in writing and directed to the Vice-President, Student Services. Any complaint should be submitted as soon as possible after the event takes place. All complaints shall be presented to the accused student in written form. Along with notice of the complaint the accused student shall be advised of his/her right to be represented throughout the process, including by a Student Advocate.

3. The Vice-President, Student Services, or designate shall conduct an investigation to determine if the complaint has merit and/or if it can be disposed of informally by mutual consent of the parties involved or a basis acceptable to the Vice-President, Student Services, or designate. If an informal investigation is determined to be appropriate and successful, the student(s) involved in the incident will receive credit towards their educational requirements.
disposition of the complaint results, such disposition shall be final, and there shall be no subsequent proceedings.

4. An agreement that a student will withdraw from the University for a period of time, or not re-register, may be part of an informal disposition of a complaint. In such instances this will not be recorded on the student’s academic record, but a “black” on further registration may be entered in the student information system.

5. The Vice-President, Student Services, shall report annually to Senate regarding the number and nature of complaints that are disposed of informally.

6. If the complaint cannot be resolved informally through the procedures described in Section 5, or if in the judgment of the Vice-President, Student Services, it is not appropriate for the complaint to be so resolved, the Vice-President, Student Services, shall refer the complaint to the Senate Discipline Committee for a formal hearing. In determining whether to refer a case to the Senate Discipline Committee, the Vice-President, Student Services, may seek advice from a student Discipline Advisor or other appropriate source.

7. Where there are criminal or civil proceedings pending against the student for acts related to the complaint, the Vice-President, Student Services, may defer prosecution of the complaint on such terms and conditions as are appropriate in the circumstances (including an interim suspension) and the conclusion of all or part of such proceedings where the circumstances of the case warrant. Conviction of a criminal offence will be considered prima facie evidence of a parallel offence under the Code.

8. Any statements an accused student makes to the Vice-President, Student Services, or designate in the course of an attempt to resolve a complaint informally may not be submitted to the Senate Discipline Committee as evidence.

9. Hearings shall be conducted by the Senate Discipline Committee according to procedures determined by the Committee. In other than exceptional circumstances, hearing the Senate Discipline Committee shall occur within 60 calendar days of the referral of a complaint to the Committee.

10. The President or designate shall appoint a person to present the complaint.

11. If a student fails to appear at a hearing, the hearing may proceed, provided that the student has been given adequate notice. Except in the case of a student charged with failing to obey the summons of the Committee or University official, no student may be found to have violated the Student Code solely because the student failed to appear before the Committee. In all cases, the evidence in support of the complaint shall be presented and considered.

E. Sanctions

1. In each case in which the Senate Discipline Committee determines that a student has violated the Student Code, the sanction(s) shall be determined and imposed by the Committee.

2. The following sanctions may be imposed upon any student found to have violated the Student Code:

   a) **Warning** – A notice in writing to the student that the student is violating or has violated institutional regulations.

   b) **Probation** – A written reprimand for violation of specified regulations. Probation is for a designated period of time and includes the probability of more severe disciplinary sanctions if the student is found to be violating any institutional regulations during the probationary period.

   c) **Loss of Privileges** – Denial of specified privileges for a designated period of time.

   d) **Restitution** – Compensation for loss, damage or injury. This may take the form of monetary or material replacement.

   e) **Disciplinary Sanctions** – Work assignments, service to the University or other such discretionary assignments that are considered appropriate by the Discipline Committee.

   f) **Conditions** – Conditions may be imposed upon a student’s continued attendance.

   g) **University Suspension** – Suspension of the student from the University for a specified period of time, after which the student is eligible to return. Conditions for readmission may be specified.

   h) **University Expulsion** – Permanent separation of the student from the University.

3. More than one of the sanctions listed above may be imposed for any single violation.

4. Other than expulsions from the University and suspension for the duration of its existence, disciplinary sanctions shall not be made part of the student’s academic record, but shall be kept on file in the Office of the Vice-President, Student Services, for use in the event of future breaches of this Code.

5. No student found guilty of an offense under this Code shall refuse to comply with a sanction or sanctions imposed under the procedures of this Code. Such refusal will constitute grounds for the imposition of additional sanctions.

6. The Committee may direct that a sanction be held in abeyance if a student’s registration at the University is interrupted for any reason.

F. Interim Suspension

In the following circumstances, the President of the University, or a designee, may impose an interim suspension prior to the hearing before the Committee.

1. Interim suspension may be imposed only: (a) to ensure the safety and well-being of members of the University community or preservation of University property; (b) to ensure the student’s own physical or emotional safety and well-being; or (c) if the student poses a threat of disruption or of interference with the operations of the University or the activities of its members.

2. During the interim suspension, students may be denied access to specified campus facilities (including courses) and/or any other University activities or privileges for which the student might otherwise be eligible, as the President or the designate may determine to be appropriate.

3. A student who is the subject of an interim suspension may request a hearing before the Senate Discipline Committee on the issue of the interim suspension itself. This request shall be submitted in writing, with reasons, to the Secretary of Senate. The Committee shall hear the matter, including submission by the President or designate, within ten working days, and shall have the authority to confirm, negate, or alter the terms of the interim suspension.

Protection of Property

Dalhousie University is the owner and/or occupant of the lands and buildings which comprise its campuses. In addition to all other processes set out in this Calendar (including the Code of Student conduct), the University reserves the right to exercise all rights and remedies available to it pursuant to any statute, by-law, regulation, ordinance, order, or otherwise, in order to protect campus property and those who use it.

2. Without limiting the foregoing, Dalhousie University may issue a notice against a student pursuant to the Protection of Property Act prohibiting entry to all or part of the campuses or prohibiting a particular activity or activities on all or part of the campuses, where circumstances warrant. Such a notice may be issued either separately or in conjunction with the procedures set out in the Code of Student Conduct. The notice may be in force for the period stated in the notice which will normally be for up to one calendar year. If considered appropriate by the Vice-President, Student Services, a notice may be renewed for further periods.

3. A notice under the Protection of Property Act may be issued by Dalhousie University in relation to the Student Union Building at the request of the President of the Student Union. In the case of urgent or emergency situations, such a notice may be issued immediately. If the Student Union request is to have a prohibition extended beyond seven days for a registered Dalhousie University student, the Student Union shall make a written request to the Vice-President, Student Services, providing detailed reasons for the request and the process followed leading up to the request for the notice, including details of when the student was advised that his or her conduct warranted such a notice and ought to cease, the reasons provided to the student, and whether the student was afforded the opportunity to respond or to rectify, balance or cease the inappropriate activity.

4. A Dalhousie University student may appeal any notice issued against him or her under the Protection of Property Act in writing to the Vice-President, Student Services.

Senate Appeals Committee

Jurisdiction of the Senate Appeals Committee

1. The Senate Appeals Committee has appellate jurisdiction.

2. The Senate Appeals Committee does not act as an investigative body.

3. The Senate Appeals Committee does not receive a determination of: a) allegations of discrimination, which are addressed under the Statement on Prohibited Discrimination, or b) requests for accommodation, which are addressed under the Accommodation Policy for Students.

4. The Senate Appeals Committee shall consider the following appeals initiated by students:

   a) appeals of decisions of the Senate Appeals Committee.

   b) appeals of decisions of the Committee of the Senate.

   c) appeals of decisions of the Senate.

University Regulations 29
4. Upon receiving notice of an academic appeal, the Senate Vice-Chair (Student Affairs) shall give notice of the appeal to the Appellant, the Respondent, and the Faculty of the applicable Faculty.

5. An appeal may be initiated on the following grounds:
   a) academic appeals from decisions or the refusal to make decisions at the Faculty level regarding academic standards, academic evaluation, academic progression, academic advancement, or the application of other University or Faculty academic regulations.
   b) discipline appeals from decisions of the Senate Discipline Committee.

6. The Senate Appeals Committee shall not consider appeals:
   a) by students in an academic appeal who have not exhausted the appeal procedures of the relevant Faculty,
   b) by students from the decision of a Faculty regarding professional unsuitability, such appeals falling under the jurisdiction of the Senate Hearing Committee,
   c) by a faculty or faculty members,
   d) by applicants for admission to University programs, or
   e) by applicants for scholarships, awards or bursaries.

7. A Hearing Panel of the Senate Appeals Committee may:
   a) dismiss the appeal;
   b) allow the decision under appeal to stand, despite possible insubstantial procedural errors;
   c) in an academic appeal, allow the appeal, with an appropriate remedy within the authority of Senate;
   d) in a discipline appeal, allow the appeal and:
      a) suspend the decision of the Senate Discipline Committee in its entirety,
      b) to hear the matter itself, with the consent of the Appellant and the Faculty, or
      c) direct a re-hearing on the merits by a newly constituted panel of the Senate Discipline Committee, no members of which were on the hearing panel whose decision was under appeal.

8. In an academic appeal, the Hearing Panel shall not conduct a substantive evaluation of the work of a student, but if unsuitability in the evaluation procedure is established, the Panel may direct a re-evaluation of the work to be conducted by qualified persons designated by the Panel.

9. The hearing of each appeal shall be in camera. The Chair of the Hearing Panel shall determine procedures for the hearing in a manner that is consistent with the principles of natural justice. The hearing shall be conducted by qualified persons designated by the Panel.

10. The decision of the Hearing Panel shall be by majority. The Hearing Panel shall be sequestered for a period of three calendar years from the date of the decision of the Hearing Panel, in accordance with the policy of the University Secretariat.

Suspension or Dismissal from a Program on the Grounds of Professional Unsuitability Faculty of Health Professions

The Faculty of Health Professions, acting through Committees on Studies at the School/College and Faculty levels, and in consultation with the Directors and Dean, may suspend or terminate a student from a program if the student is judged to be unsuitable for the profession in which he/she is studying. Because of the nature of the study and practice of the various health professions, which places care givers in a position of special trust, certain impairments or some types of conduct unforeseeable to a student upon entry to a program may be grounds for suspension or dismissal.

The following list includes examples of behaviors that might indicate unsuitability for the various health professions. The nature of these behaviors is such that, should any of them ever be repeated, grievous harm could be caused to clients.

These lists should not be considered to be all inclusive:
   a) a criminal act (e.g., assault, sexual assault, fraud, and drug trafficking) which according to the vocational Faculty was determined to be of such a nature as to bring disrepute to the profession, or by which in the opinion of the Faculty, the student demonstrated poor judgment, lack of integrity or (other) unsuitability for the profession, or evidence that, on the balance of probability, the student had committed such a act;
   b) being under the influence of alcohol or drugs while participating in client care, any other professional activity, or any activity related to the practice of the health profession;
   c) in accordance with provisions of the Nova Scotia Human Rights Act, the occurrence of a health condition that impairs essential performance required for the health profession;
   d) unethical behavior as specified by the code of ethics/standard of practice of the health profession.

The student’s situation will be considered with discretion throughout the investigation of the allegation of unsuitability and the deliberations shall determine whether the student’s suspension, dismissal or neither is recommended. The principles of natural justice and due process will be observed in all investigations.
Any member of the University community can bring to the attention of the Director behaviors that are deemed unsuitable. These behaviors will be investigated and allegations heard.

Appeals will follow the appeal procedure for academic matters within the Faculty of Health Professions notwithstanding that the criteria are different. At the University level, appeals will require formation of an ad hoc Senate Committee. Where the rules of a faculty, such as Health Professions, expressly provide that suitability, fitness, or aptitude for the practice of the profession is a requirement for advancement or graduation, or both, and a Faculty determines that a student should be suspended or dismissed or otherwise should not advance or graduate because of unsuitability for the relevant profession, an appeal from the Faculty decision may be made to an ad hoc appeal committee established by the Senate Steering Committee. The Ad-hoc Appeal Committee shall (1) hear an appeal by a student from the decision of a Faculty regarding suitability, fitness or aptitude for the practice of the relevant profession when: a) the student has exhausted the approved appeal regulations and procedures of the relevant Faculty; and b) the student alleges that there were irregularities or unfairness in the application of the regulations in question. The Ad-hoc Appeal Committee shall not hear appeals: a) by students on a matter involving a requested exemption from the application of Faculty or University regulations or procedures; b) on substantive aspects of a finding of unsuitability.

### Acceptable Use of Information Technology Resources

#### A. Purpose

The purpose of this policy is to outline appropriate use of Information Technology Resources owned, leased, controlled and/or operated by the University.

#### B. Application

This policy applies to all individuals who have been granted a NetID and/or Banner account by the University. The purpose of this policy is to outline appropriate use of Information Technology Resources owned, leased, controlled or operated by the University, including those purchased through research funds.

#### C. Definitions

In this Policy:

- "User Account" means a NetID and/or Banner account issued by the University.
- "Information Technology Resources", or "IT Resources", means computing equipment, peripherals, facilities, networks or systems owned, leased, controlled or operated by the University, including those purchased through research funds.
- "User" means an individual who has been issued a User Account.

#### D. Policy

1. **Accounts**
   1.1 Authorized access to IT Resources requires a User Account. User Accounts are non-transferable.
   1.2 Users are responsible for any and all uses of their User Account and are expected to take reasonable steps to ensure the security of their User Account.

2. **Acceptable Use**

   2.1 Users shall use IT Resources for authorized purposes only.
   2.2 No User shall use IT Resources for any disruptive or unauthorized purpose, or in a manner that violates any law, University regulations, policies or procedures. Examples of unacceptable uses of IT Resources include, but are not limited to, the following:

   2.2.1 using another person’s User Account, or misrepresenting themselves as another User;
   2.2.2 disclosing passwords or other access codes assigned to themselves or others;
   2.2.3 interfering with the normal operation of IT Resources by, among other things, unauthorized network interception, network traffic, flooding the network with messages, sending chain letters or pyramid solicitations;
   2.2.4 copying, removing or distributing proprietary software and/or data without authorization;
   2.2.5 breaching terms and conditions of software licensing agreements;
   2.2.6 accessing, displaying, transmitting, or otherwise making available information that is discriminatory, obscene, abusive, derogatory, harassing or otherwise objectionable in a university setting;
   2.2.7 destroying, misplacing, misfiling, or rendering irretrievable any stored information on a University administered computer or other information storage, processing or retrieval system;
   2.2.8 unauthorized use of IT Resources for profit or commercial gain; and
   2.2.9 attempting to or circumventing security facilities on any system or network.

3. **Consequences of Unacceptable Use**

   3.1 If there is reason to suspect that a User has violated this policy, the President and/or the Assistant Vice-President Information Technology Services or the Information Security Manager may temporarily revoke or restrict User Account access privileges of any User, pending further investigation by the Information Security Manager.

   3.2 To aid in the investigation of a suspected violation of this policy, the Information Security Manager may examine a User’s User Account information, including, but not limited to, emails, files, and any other material or data connected with the User Account, provided that the User obtains the Assistant Vice-President Information Technology Services’ prior written approval. If the User in issue works within the Information Technology Services Department, then approval must be obtained from the President.

   3.3 If the investigation concludes that a violation of this policy has occurred, the Information Security Manager may temporarily revoke or restrict User Account access privileges of any User, pending further investigation by the Information Security Manager in accordance with applicable collective agreements or human resource policies, as appropriate.

   3.3.1 in the case of students, initiate disciplinary proceedings under the Code of Student Conduct;
   3.3.2 in the case of employees, refer the matter for consideration of discipline in accordance with applicable collective agreements or human resource policies, as appropriate.
Academic Regulations

These regulations apply to all students in the College of Arts and Science and the faculties of Agriculture, Architecture and Planning, Computer Science, Engineering, Health Professions and Management. Students in the faculties of Architecture and Planning, Computer Science, Engineering and Health Professions should also consult the regulations specific to their faculty, school or college found in the appropriate sections of this calendar.

PLEASE NOTE:
A student is governed by the academic regulations in place at the time of initial enrollment or as long as the degree is completed within the time permitted (see Section 15, page 35), and that subsequent changes in regulations shall apply only if the student elects. Students applying the old academic regulations should consult the calendar of the appropriate year.

It is the student’s responsibility to maintain documentation of registration and subsequent changes. The Registrar’s Office will rely solely upon computer records and will not maintain paper records of changes to a student’s registration.

1. Definitions
For definitions of some commonly used terms, see page 2.

Academic advisors at Dalhousie strive to enable students to make a successful transition to university, to take responsibility for learning, to set academic, career and personal goals as well as to develop strategies for achieving them. Specifically, academic advisors at Dalhousie help students:
• assess and clarify their interests, academic abilities and life goals;
• develop suitable educational plans consistent with their academic, career and life goals;
• select appropriate courses and complementary educational experiences;
• interpret institutional rules and requirements;
• develop decision-making skills;
• resolve academic problems, conflicts and concerns;
• evaluate their progress towards their goals;
• by referring them as necessary to other resources.

2. Course Selection

2.1 Numbering of Courses
Courses are numbered to indicate their general level. Those in the 1000 series are introductory degree level courses at Dalhousie. Courses in the 2000, 3000, 4000 series are introductory technology level courses at Dalhousie. Courses in the 5000, 6000 series are usually first available to degree level students in the second, third and fourth year respectively. Often these courses have prerequisites. Some departments, schools, colleges have minimum grade requirements for entry and courses above the 1000 level. Such requirements are listed in the calendar entries for the departments, schools, colleges concerned.

Courses listed in the 1000 series are introductory technology level courses at Dalhousie. Courses in the 2000 series offer more detailed exploration of a discipline at the Technology level. 2020 level courses usually have prerequisites or require background knowledge.

Courses listed in the 3000-4000 series are university preparatory courses. An example of a course identifier is as follows: CHEM 1011 CHEM subject code 1011 course number & level Courses with numbers below 1010 normally do not carry credit.

2.2 Academic Advice
Academic advising is available to all students prior to registration. To find out who your advisor is, see the advising website (www.dal.ca/advising) and click on “Where to go for advising.”

Academic advisors at Dalhousie strive to enable students to make a successful transition to university, to take responsibility for learning, to set academic, career and personal goals as well as to develop strategies for achieving them. Specifically, academic advisors at Dalhousie help students:
• assess and clarify their interests, academic abilities and life goals;
• develop suitable educational plans consistent with their academic, career and life goals;
• select appropriate courses and complementary educational experiences;
• interpret institutional rules and requirements;
• develop decision-making skills;
• resolve academic problems, conflicts and concerns;
• evaluate their progress towards their goals;
• by referring them as necessary to other resources.

3. Workload

3.1 Regular Year

3.1.1 College of Arts and Science
Thirty credit hours per academic year shall be regarded as constituting a normal workload for a student. Students wishing to increase their workload to 18 credit hours in any term and have a sessional GPA greater than 3.00 should contact the Registrar’s Office. Students with a GPA less than 3.00 will need to contact the appropriate Assistant Dean to request permission.

3.1.2 BComm School of Business
Thirty credit hours per academic year shall be regarded as constituting a normal workload for a student. However, winter term of third year and first term of fourth year require BComm Co-op students to take 18 credit hours. For this reason, BComm Co-op students must apply to exceed the normal workload policy (see below).

During the work term, the work assignment shall constitute the normal workload.

Note that the second and third summers are regular academic and workterms for co-op students. Students wishing to increase their workload to 18 credit hours in any term and have a sessional GPA greater than 3.00 need to contact the Registrar’s Office. Students with a GPA less than 3.00 will need to contact the Undergraduate Advising Office, Suite 2086, Rowe Building. Such permission will normally be granted for more than three credit hours per term, but to any student who is in his/her first year of study or who, in the preceding academic term, earned a term GPA of less than 3.00 or a full load of courses. Students are not permitted to take more than six courses in any single academic term.

3.1.3 Faculty of Agriculture
A normal full-time course load for students registered in degree programs in Agriculture is considered to be five courses per semester. A normal full-time course load for students registered in the technology programs is five to six courses per semester, depending on the program. Students wishing to increase their workload to six courses per semester (degree) or seven courses per semester (technology) with a sessional GPA greater than 3.00 should contact the Registrar’s Office. Students with a GPA less than 3.00 will need the permission of the faculty advisor and the Assistant Dean - Students.

3.1.4 Faculties of Architecture and Planning, Computer Science, Engineering, Health Professions and Bachelor of Management
For normal workloads, see the individual school or college section of the calendar. Written permission from the school or college Committee on Studies or the Program Administrator for Bachelor of Management is required if the normal workload is to be exceeded. Applications from students who give good reasons for working to take an overload will be considered. Such permission will normally be granted to any student in his first year of study, or to any student who, in the preceding academic term, obtained a grade point average of less than 3.00.

3.2 Summer Session

It is recommended that students take only six credit hours in each of the May - June or July - August parts of term. Students who want to exceed the recommended number of credit hours should speak to an academic advisor in their faculty, school or department.
4. Registration

1. It is a student's responsibility to register. Registration instructions are available on the web at [link]. Registration for courses is completed using the online_mPart of the Registration process is the submission of the Student Information Sheet. The preferred mode of submission for Part of the Registration process is the submission of the Student Information Sheet. The preferred mode of submission is through the online registration system, which is accessible at [link].

2. A student is considered registered after receipt of all course selection forms. Selection of courses is deemed to be an agreement by the student for the payment of all assessed fees.

3. All students are required to submit an ID card or validate an existing ID card at the DalCard Office.

4. Space in class. Enrollment is limited in all courses, and admission does not guarantee that space will be available in any course or section. However, a student in a graduating year may be excluded from a course required that student must meet degree program requirements because of lack of space. This rule does not apply to elective courses or all sections of courses. Any student in a graduating year who encounters such a situation should immediately consult the department chair, school director or dean.

5. Students may be removed from courses for which they do not have prerequisites. Prerequisite waivers can be granted only by the instructor and must be submitted in writing, with the instructor's signature, to the Registrar's Office.

ID cards are mandatory and must be presented to write an officially scheduled examination. In addition, some services such as the issuance of honorary or scholarship cheques, library privileges, Dalplex and Langille Athletic Centre require the presentation of a valid Dalhousie ID card.

5. Course Changes and Withdrawal

5.1 Course Changes

It is recognized that some students may wish to make changes in programs already arranged. Course changes will normally be completed during the first two weeks of courses. (For Summer term information, see the Summer School Schedule.) The last dates for adding and deleting courses are published in the schedule of Academic Course Add/Drop Dates, page 1 of this calendar. Course changes should be made at the website [link].

Please note that dropping or changing courses may affect your eligibility for student aid.

5.2 Withdrawal

Non-attendance does not, in itself, constitute withdrawal. Withdrawals are effective when a student withdraws from courses on the web at [link]. A written notification is then received at the Registrar's Office.

In the Faculty of Health Professions students who wish to withdraw from the university must obtain written approval from the appropriate school or college and submit the appropriate forms to the Registrar. Students should not discontinue attendance at any course until their withdrawal has been approved.

Students withdrawing voluntarily from the University should consult the individual faculty regulations and the Fees section of this Calendar. When the work of a student becomes unsatisfactory, or a student's attendance is irregular without sufficient reason, the faculty concerned may require withdrawal from one or more courses, or withdrawal from the Faculty. If a student is required to withdraw from a Faculty such a student may apply to another Faculty; however, in assessing the application, previous performance will be taken into consideration.

6. Counting of Credits for Two Dalhousie Programs

6.1 Undergraduate Degrees

Students who hold one undergraduate degree from Dalhousie and who wish to gain a second undergraduate degree must fulfill the requirements of the second degree and meet the following stipulations:

1. Only credit hours that are applicable to the program for the second degree may be counted for credit.

2. Each credit hour carried forward must have a grade of C or higher.

6.1.1 College of Arts and Science

For the honors degree, a minimum of 10 new full credits are to be taken, in accordance with "Degree Requirements" listed elsewhere in this calendar.

For the major (120 credit hour) BA degree, a minimum of 60 new credit hours, or the equivalent, must be taken. At least 18 of these are to be beyond the 1000 level in a new major subject, and at least 18 of the 36 must be beyond the 2000 level.

For the major (120 credit hour) BSc degree, a minimum of 60 new credit hours, or the equivalent, must be taken. At least 24 of these are to be beyond the 1000 level in a new major subject, and at least 24 of the 42 must be beyond the 2000 level.

For the 90 credit hour degree, a minimum of 45 new credit hours must be taken. At least 24 of these are to be beyond the 1000 level in a new area of concentration, and at least 12 of the 24 must be beyond the 2000 level. Normally, 12 credits will be in a subject other than the major.

Students may obtain a second BSc by completing the above requirements. More than one BA is not awarded.

6.1.2 Management

For the BCom co-op degree a minimum of 60 new credit hours (plus three work terms) must be taken, of which at least 48 must be in the core area and include the three work-term credits.

For the 90 credit hour (120 credit hour), a minimum of 60 new credit hours must be taken, and all core requirements must be counted for credit.

6.1.3 Health Professions

For degrees in the Faculty of Health Professions no more than half the credit required for an undergraduate degree may be carried forward from an earlier degree.

6.1.4 Architecture and Planning

For the BEDES degree, a minimum of one third of the credits required in the third and fourth years must be taken while registered in the BEDES program.

6.1.5 Computer Science and Engineering

For the BCom, BINF, and BEng degrees, a minimum of 60 new credit hours must be taken.

6.1.6 Transfer Credits from Dental Hygiene

Students who have completed the Diploma in Dental Hygiene at Dalhousie University may receive 30 credit hours towards a BSc or BEng.

6.1.7 Agriculture

For the BSc (Ag) a minimum of 60 new credit hours must be taken.

6.2 Counting of Credit for two Dalhousie Diplomas in Technology Programs

Students who hold one technology diploma from Dalhousie and who wish to gain a second technology diploma must fulfill the requirements of the second diploma and meet the following stipulations:

a. Only credits that are applicable to the program for the second diploma may be counted for credit.

b. Each credit hour carried forward must have a grade of C or higher.

c. At least half of the credits in the second diploma must be new credits.

6.3 Counting of Credit from Diploma in Technology to Undergraduate Programs

Students who have completed technology level courses may be eligible to receive degree level credit for such courses, to a maximum of 60 credit hours, evaluated on a course by course basis with a minimum grade of "C". Students who successfully complete a Technical Diploma program in the Faculty of Agriculture and apply to the Bachelor of Science (Agriculture) program will receive a minimum of 30 credit hours toward the degree.

6.4 Counting of Credit from Continuing Education Courses toward Diploma in Technology Programs

Special permission to complete a limited number of select continuing education courses in the Faculty of Agriculture may be granted to students enrolled in technology diploma programs. These courses must be approved in advance by the Dean or designate. Any student who wishes to explore this option should contact their academic advisor.
7. Transfer Students

7.1 Transfer Credits - All Faculties

As Dalhousie transfer credits may be granted for courses which are offered by a recognized university or equivalent institution of higher learning and which are considered to be equivalent to courses offered at Dalhousie and to be appropriate to a student’s academic program at Dalhousie. Transfer credit will be granted for any course in which a final mark of C or higher was obtained. Transfer credits are subject to the approval of the appropriate department/school/college. For courses not within the purview of a Dalhousie department/school/college, the Registrar’s Office will assess transfer credits. Students may appeal, in writing, a negative decision and should justify the inclusion of such courses in the student’s proposed program. Copies of calendar descriptions are necessary. Such descriptions are not normally included with univeristy transcripts, and it is the student’s responsibility to provide them.

Bachelor of Commerce and Bachelor of Management require course syllabi that includes the length of the course, topics covered, evaluation, textbook used, and required reading. College of Arts and Science and Faculty of Management courses that are more than 10 years old may not be used to fulfill degree requirements unless a waiver is granted. See Regulation 15, page 34 for information on other faculties.

Transfer credits may be counted towards fulfillment of the concentration, major or honors or Commerce/Management core area requirement of a bachelor’s degree with specific advance approval from the appropriate department/school/college at Dalhousie. To obtain a first degree or diploma, at least half of the credits, including at least half in the field of concentration or major or minor, must normally be taken at Dalhousie. For the BComm Co-op degree, a minimum of 60 credit hours (plus three workterms) must be taken, of which at least 48 must be in the core area and include the three workterm credits. For the BHealth degree, a minimum of 60 credit hours may be counted towards the program.

In the Faculty of Health Professions to obtain a first degree, all or most of the advanced work of the program (i.e., at least half the credits taken in the second and subsequent years of study) must be taken at Dalhousie.

Note: Transfer credits will not be awarded for work completed while a student was academically ineligible.

7.2 Architecture and Planning

For the BDes degree, a minimum of 60 credit hours of advanced level work must be taken at Dalhousie. The workload will not exceed Dalhousie’s limitations.

7.3 Computer Science

For the BCS and BSEN degrees, at least half of the credits must be taken at Dalhousie. 60 credit hours of CSCI courses, including 50 of the third and fourth year CSCI courses, must be taken at Dalhousie.

7.4 Engineering

For the BEng degree, at least half of the credits, including the final two-year term with a full course load, must be taken at Dalhousie. For the Bachelor of Applied Science, at least half of the credits for the degree must be taken at Dalhousie, including half in the major field.

7.5 Procedures

As soon as the student’s record has been assessed the Registrar’s Office will inform the student which transfer credits have been awarded. The number of credits which have been approved, and which Dalhousie courses may not be taken, will be included in the letter. If more credits have been approved than can be applied to the student’s program, the Registrar’s Office will decide the appropriate transfer credits. Transfer credits awarded on admission appear on a Dalhousie transcript as credits only, no marks are shown.

If by registration time the student has not received written confirmation of transfer credits, the student should check with the Registrar’s Office. Information, although incomplete, may be available and may be helpful in choosing Dalhousie courses.

Before selecting courses the student should consult with the appropriate department/school/college to determine how the transfer credits will fit into the student’s specific academic program at Dalhousie. Transfer credit will be granted for any course in which a final mark of C or higher was obtained.

7.6 Courses Taken at Other Universities on Letter of Permission

A student who wishes to take courses at other institutions while registered at Dalhousie must obtain approval in advance on a form available online at www.dal.ca/Reg. A Letter of Permission will be provided if all the following conditions are met:

• the student is in good academic standing, i.e., students who have been academically dismissed or are on probation are not eligible
• the student has not exceeded the allowable number of transfer credits
• the course at the other institution is acceptable for transfer to Dalhousie
• the workload will not exceed Dalhousie’s limitations

7.7 Advanced Standing

Students possessing advanced knowledge of a subject will be encouraged to begin their studies in that subject at a level appropriate to their knowledge, as determined by the department/school/college concerned. However, such students must complete, at Dalhousie, the full number of credit hours required for the particular credential being sought.

9. Part-Time Students

Part-time students are admitted to course work and programs offered in the College of Arts and Science. Admission requirements and regulations are the same for all students.

9.1 College of Arts and Science

Part-time students are admitted to most of the programs offered in the College of Arts and Science. Admission requirements and regulations are the same for all students.

9.2 Faculty of Management

The Faculty of Management is committed to providing students the opportunity to obtain a degree/diploma through full-time study and part-time study. Where the latter is feasible.

9.3 Faculty of Health Professions

Because of the restriction on the duration of undergraduate studies (see Academic Regulation 15, page 34), the opportunity for part-time study is limited in the majority of programs.

9.4 Faculty of Architecture and Planning

Part-time study is not available in the Bachelor of Environmental Design Studies (BEDS) program. Part-time study is available in the Bachelor of Community Design (BCD) program.
### 11. Experimental Courses—College of Arts and Science

Experimental courses, on any subject or combination of subjects to which arts or sciences are relevant, and differing in conception from any of the courses regularly listed in departmental offerings, may be formed on the initiative of students or faculty members.

If formed on the initiative of students, the students concerned shall seek out faculty members to take part in the courses. Whether formed on the initiative of students or on the initiative of faculty members, the faculty members who wish to take part must obtain the consent of their department.

The course may be offered over the regular session or for one term only.

A course shall be considered to be formed when at least one faculty member and at least eight students have committed themselves to taking part in it for its full length.

Courses may be formed any time before the end of the second week of courses in the fall term to run the regular session or fall term, or any time before the end of the second week of courses in the winter term. If they are formed long enough in advance to be announced in the calendar, they shall be so announced, in a section describing the Experimental Programs, if they are formed later, they shall be announced (a) in the Dalhousie Gazette, (b) in the Dalhousie Calendar, and (c) on a central bulletin board set aside for this purpose.

One faculty member taking part in each experimental course shall be designated the rapporteur of the course with responsibility for (a) advising the curriculum committee of the formation and content of the course; (b) obtaining from the curriculum committee a ruling as to what requirements or arrangements of distribution, concentration, and credit the course may be accepted as satisfying; (c) reporting to the Registrar on the performance of students in the course; (d) reporting to the curriculum committee, after the course has finished its work, on the subjects treated, the techniques of instruction, and the success of the course as an experiment in pedagogy (judged so far as possible on the basis of objective comparisons with more familiar types of courses).

Students may have 30 credit hours of experimental courses (or some equivalent combination of these with half-credit courses) credited as satisfying course for any of the requirements for the degree, subject to the rulings of the relevant curriculum committee (above) and to the approval of the departments.

### 12. Summer School

12.1 Summer Session

Dalhousie currently offers a Summer session of approximately 16 weeks, May - August. See Regulation 3.2 for permitted work-load.

### 13. International Exchange and Study Abroad Programs

A number of programs enable Dalhousie University students to pursue part of their studies in another country and culture. For details regarding courses taken at other universities, see Regulation 7.6, page 34.

University-wide programs allow students from a variety of academic departments to take part in a study abroad or exchange program. These are coordinated by the Study and Exchange Advisor in International Centre, located in the Killam Library, main floor. Department-specific programs are coordinated by an individual within the department/faculty. Additional information is available at: [www.dal.ca/exchange](http://www.dal.ca/exchange).

It is important to note that there are application deadlines for these programs; plans to apply up to a year prior to departure.

### 14. Preparation for Other Programs

Work in the College of Arts and Science is a prerequisite for various programs in other faculties and other institutions. A brief summary of the academic work required for admission to certain programs is given here. Further information may be found later in this calendar, or in the Faculty of Graduate Studies calendar or the Dentistry, Law and Medicine calendar.

**Graduate Studies:** The normal requirement for admission to a graduate program is an honours degree or the equivalent.

Students who are registered in an honours program may, with permission from their supervisor and the course instructor, be eligible to complete up to six credit hours of study at the graduate level. These credits could be used in place of undergraduate degree requirements toward completion of the undergraduate degree. With permission of the program's graduate coordinator and the Faculty of Graduate Studies, such credits may also be applied to a subsequent Master's degree in some programs. Please consult the Graduate Calendar, section 3.7 Advanced Placement, for details.

Students registering in any graduate level course, regardless of their level of study, will be graded in accordance with the grading scale and must obtain a grade of C- or higher in order to receive credit. For courses that are cross-listed between the undergraduate and graduate level, students who register in the graduate level course may switch to the corresponding undergraduate course by the dates specified in the Academic Dates listed at the front of the Calendar.

**Architecture:** Two years of university study are required for entry to the BDES program in architecture. For details, see the Architecture section in this calendar.

**Dental Hygiene:** Completion of 30 credit hours at the university level of one regular session's duration in the following: biology, psychology, social work, a writing course, one term course in introductory statistics and one term course in introductory chemistry. For details, see the Dentistry, Law and Medicine calendar.

**Dentistry:** See the Dentistry, Law and Medicine calendar.

**Design:** Students completing one year in the College of Arts and Science at Dalhousie may be admitted into the second year of the four year program leading to the Bachelor of Design degree in communication design at the NSCAD University.

**Law:** At least two years of work leading to one of the degrees of BA, BSc, BComm, or BPhot. For details, please see the Dentistry, Law and Medicine calendar.

**Medicine:** A BA, BSc, BComm, or BPhot degree. For details, see the Dentistry, Law and Medicine calendar.

**Veterinary Medicine:** The equivalent of 20 one-term courses (two years of university-study) are required for admission to the Atlantic Veterinary College of the University of Prince Edward Island. Credits must include two mathematics courses, including statistics; four biology courses, including genetics and microbiology; three chemistry courses including organic chemistry; one physics course; two English courses, including one with an emphasis on writing; three humanities and social sciences courses; five electives from any discipline.

### 15. Duration of Undergraduate Studies

15.1 College of Arts and Science/Faculty of Management

Students are normally required to complete their undergraduate studies within 10 years of their first registration, and to comply with the academic regulations in force at the time of that registration. This is also the normal limit for transfer credits. However, the student appeals committee of the appropriate Faculty or School may grant permission in certain studies for a reasonable further period, subject to such conditions as the committee deems appropriate and with the
Students should be aware that certain courses at the University involve required laboratory work where potentially hazardous materials are in use. These may include animals, other biological materials which may include crops and products, tissues, fluids, toxins, but also radioactive isotopes and xenon as well as a wide variety of chemicals. Examples of physical hazards may include noise, radioactive isotopes and non-ionizing radiation (e.g. lasers). Since there are potential health risks associated with the improper handling of such materials resulting in exposure, Dalhousie University requires that, as a condition of taking a course where such materials are to be used, students must read and agree to comply with the instructions for safe handling of such materials. In the event that students do not comply with the instructions for safe handling of such materials, students will receive no credit for the required laboratory work unless the instructor, the appropriate college or department, and the student agree that arrangements are not possible and students should consider enrolling in a different course.

16.1.1 Academic Accommodation for Students with Learning Disabilities
See Accommodation Policy page 21

16.2 Examinations and Tests
Tests are normally scheduled during course time. Tests scheduled outside course time should not conflict with the regularly scheduled courses. Dates and times must be included in the course syllabus.

Periods of approximately three weeks in the spring and one and one-half weeks in December are set aside for the scheduling of formal written examinations by the Registrar. Instructors wishing to have examinations scheduled by the Registrar for their courses must so inform the Registrar at the beginning of the first week of classes in the fall and winter terms. Instructors may also arrange their own examinations at times and places of their choosing during the formal examination periods, with the understanding that in cases of conflict of examinations for an individual student, the Registrar’s examination schedule takes priority.

16.2.1 College of Arts and Sciences, Faculties of Agriculture, Architecture and Planning, Computer Science, Engineering, Health Professions and Management

No written tests or examinations, with the exception of project presentations and major papers, worth more than 25% of the final grade, may be held in the last two weeks of a term, without the explicit approval of the appropriate faculty, school, or college. No tests may be held at the end of courses and the beginning of the official examination period with the exception of those activity modules and laboratory courses in the Faculty of Health Professions in which special facilities are required.

Students may contact the dean/director’s office of the appropriate faculty/school/college for assistance if they are scheduled for more than two examinations on the same day.

16.3 Submission of Grades
On completion of a course, the instructor is required to submit grades to the Registrar. Grades are due seven calendar days after an exam scheduled by the Registrar or 14 days after the last class where there is no final exam scheduled by the Registrar. Such grades are to be based on the instructor’s evaluation of the academic performance of the students in the course in question.

16.4 Incomplete
Students are expected to complete course work by the prescribed deadlines. Only in special circumstances (e.g., the death of a close relative) may an instructor extend such deadlines. Incomplete work in a course must be completed by:

Full-term courses ................................................................. Feb 1
Winter and regular session (September - April) courses ........ Jan 1
May - June courses ................................................................ Aug 1
May - August courses .......................................................... Oct 1
July - August courses .......................................................... Oct 1

Exceptions to this rule will normally be extended only to courses which require field work during the summer months. At present the list of these courses consists of:

- ENV 3000, 3001, 4901, 4902, 4952,
- ENV 4902, 4903, 4904, 4905, 4906,
- ENV 4907, 4908, 4909, 4910, 4911,
- ENV 4912, 4913, 4914, 4915, 4916,
- ENV 4917, 4918, 4919, 4920, 4921,
Students taking any of these courses in their final year should note that they will not be able to graduate at the spring convocation. The Registrar’s Office is not permitted to accept a late clearance of IN to late grade changes other than those due to errors. If there are exceptional circumstances, a recommendation should be forwarded to the undergraduate coordinator or the Committee on Studies of the appropriate faculty/school. Unless IN is changed it counts in the GPA and has a grade point value of 0.00 – it is a failing grade.

16.5 Supplements

Faculties of Engineering and Health Professions

In courses where supplements are available, a student must have achieved a grade of "FM" in the course in which the supplement is to be written. On re-examination of the course, the student must have achieved a grade of "FM" to be eligible to write a supplemental examination. In the Faculty of Health Professions, the highest grade that can be awarded is "C" for professional courses and "D" for other courses. Only the supplemental grade will be included in the grade point average.

Supplemental exams will be administered by the participating faculty/school/college. Students should check directly with their faculty/school/college for detailed information on the awarding of FM grades and eligibility for supplemental examinations.

16.6 Special Arrangements for Examinations, Tests and Assignments

As the discretion of the instructor, alternate arrangements for examinations, tests or the completion of assignments may be made for students who are ill, or in other exceptional circumstances.

Where illness is involved, a certificate from the student’s physician will be required. This certificate should indicate the dates and duration of the illness, when possible should describe the impact it had on the student’s ability to fulfill academic requirements, and should include any other information the physician considers relevant and appropriate. To obtain a medical certificate, students who miss examinations, tests or the completion of assignments should contact the University Health Services or their physician at the time they are ill and should submit a medical certificate to their instructor as soon thereafter as possible. Such certificates will not normally be accepted after it is more than the time limit above.

Where illness is involved, a certificate from the student’s physician will be required. This certificate should indicate the dates and duration of the illness, when possible should describe the impact it had on the student’s ability to fulfill academic requirements, and should include any other information the physician considers relevant and appropriate. To obtain a medical certificate, students who miss examinations, tests or the completion of assignments should contact the University Health Services or their physician at the time they are ill and should submit a medical certificate to their instructor as soon thereafter as possible. Such certificates will not normally be accepted after it is more than the time limit above.

Requests for alternate arrangements should be made to the instructor in all cases. The deadline for changing a grade of ILL is:

- Fall term courses ................................................. Feb 1
- Winter and regular session (September - April) courses .......... Jan 1
- May - June courses ................................................. Aug 1
- May - August courses .............................................. Oct 1
- July - August courses ............................................. Oct 1

16.7 Reassessment of a Final Grade

Students who have questions about final grades that are assigned are encouraged to discuss them with the course instructor. In addition, students may consult the chair of the department, director of the school/collage, dean of the faculty, an academic advisor or a student advocate. If their concerns cannot be resolved, students may also use the formal process that follows for the re-assessment of final grades, except when such grades are the result of an academic discipline penalty.

Once a final course grade has been submitted to the Registrar, a student who wishes to have a final grade reassessed should make a written request to the Registrar and pay the requisite fee of $50 per course. The request must identify the specific component which the student wishes to re-assessed and the grounds for the request. Such requests must be made by:

- Fall term courses ................................................. Mar 1
- Winter and regular session (September - April) courses .......... Jul 1
- May - June courses ................................................. Jul 1
- May - August courses ............................................ Sep 1
- July - August courses ........................................... Nov 1

When such a request is received, the Registrar will forward it to the dean of the faculty or director of the school/collage offering the course. The re-assessment will be conducted according to procedures developed for the purpose by the faculty/school/collage. These should reflect the nature of the academic disciplines and assessment involved, and should provide for a review of the assessment by a qualified person or persons not responsible for the original evaluation.

17. Academic Standing

Students’ academic standing is normally assessed at the end of each term.

For institutions outside of Canada, a grade of P (pass) or F (fail), as appropriate, will be translated into a Dalhousie grade and corresponding grade points assigned. For institutions that use a grading system not included in the above, the appropriate Dalhousie letter grade and corresponding grade points will be assigned. For institutions outside of Canada, a grade of P (pass) or F (fail), as appropriate, will be translated into a Dalhousie grade and corresponding grade points assigned.

18. Good Standing

Students who meet the required GPA are considered to be in good academic standing. In the Faculties of Agriculture, Architecture and Planning, Arts and Social Sciences, Computer Science, Engineering, Health Professions, Management and Science a cumulative GPA of 2.00 is required.

19. Probation

19.1 Faculty of Agriculture, Architecture and Planning, Arts and Social Sciences, Computer Science, Engineering (Lower Division, Years 1 and 2 and Bachelor of Applied Science), Health Professions, Management and Science

19.1.1 - Students with a cumulative GPA of less than 2.00 and greater than or equal to 1.70 who have completed at least 24 credit hours will be placed on academic probation.

19.1.2 - Students on probation are allowed to continue to register on probation provided their term GPA is at least 2.00. Students will be returned to "good standing" when they achieve a cumulative GPA of 2.00. Students on probation who do not achieve a term GPA of 2.00 will be academically dismissed.

19.1.3 - Students require a cumulative GPA of 2.00 to graduate. Therefore, no one will be allowed to graduate while on probation.

19.2 Faculty of Engineering (Upper Division, Years 3 and 4)

19.2.1 - Students in the Bachelor of Engineering (Upper Division) with a cumulative GPA of less than 2.00 and greater than or equal to 1.70 who have completed at least two fall credits will be placed on academic probation.

19.2.2 - Students on probation may continue to register on probation provided their term GPA is at least 2.00. Students will be returned to "good standing" when they achieve a cumulative GPA of 2.00. Students on probation who do not achieve a term GPA of 2.00 will be academically dismissed.

19.2.3 - Students require a cumulative GPA of 2.00 to graduate. Therefore, no one will be allowed to graduate while on probation.

20. Academic Dismissal

20.1 Academic Dismissal - Faculties of Agriculture, Architecture and Planning, Arts and Social Sciences, Computer Science, Engineering (Lower Division, Years 1 and 2 and Bachelor of Applied Science), Health Professions, Management and Science

20.1.1 - Students with a cumulative GPA of less than 1.70 who have completed at least 24 credit hours will be academically dismissed for a 12 month period. Students require a cumulative GPA of 2.00 to graduate. Therefore, no one will be allowed to graduate while on probation.

20.1.2 - Students with a cumulative GPA of less than 1.70 who have completed at least 24 credit hours will be academically dismissed for a 12 month period.

20.1.3 - Students with a cumulative GPA of less than 2.00 and greater than or equal to 1.70 who have completed at least two fall credits will be placed on academic probation.
20.1.2 - Students on probation who do not achieve a term GPA of 2.00 or greater will be academically dismissed for a twelve month period.

20.1.3 - Students who have been academically dismissed will not be allowed to apply for readmission for at least twelve months.

20.1.4 - Students who have been academically dismissed for the first time and have subsequently been re-admitted after an absence of a twelve month period may re-register on probation.

20.1.5 - Faculty of Arts and Social Science students who have been academically dismissed for the second time will not normally be allowed to apply for re-admission for at least three calendar years. Students may, however, petition the Student Affairs Committee for re-admission after two years provided they have met the Academic Forgiveness requirements.

20.1.6 - Faculty of Health Professions students who have been academically dismissed twice will not be allowed to apply for re-admission.

20.1.7 - Faculty of Engineering (Upper Division, Years 3 and 4) students who have been dismissed and who have been required to withdraw from the university for one term or more may be readmitted to a program in the Faculty of Computer Science only once.

20.1.8 - Faculty of Science students who have been required to withdraw for a second time must meet with the Assistant Dean (Student Affairs) who may recommend that they qualify for re-admission following a second calendar year of study or who may refer the matter to the Faculty Committee on Studies and Appeals.

20.1.9 - Faculty of Science students who have been required to withdraw for a second time must meet with the Assistant Dean (Student Affairs) who may refer the matter to the Faculty Committee on Studies and Appeals.

20.1.10 - Faculty of Management (Upper Division, Years 3 and 4) Students who have been academically dismissed for the second time will not normally be allowed to apply for re-admission for at least three calendar years. Students may, however, petition the Program Director for re-admission after two years.

20.1.11 - Faculty of Agriculture students who have been academically dismissed for the second time will not normally be allowed to apply for re-admission for at least three calendar years. Students who have been dismissed for either the first or second time may appeal this decision (see section 24 of the academic calendar).

20.2 Faculty of Engineering (Upper Division, Years 3 and 4) -

20.2.1 - Students with a cumulative GPA of less than 1.70 who have completed at least 12 credit hours will be academically dismissed for an eighteen month period.

20.2.2 - Students on probation who do not achieve a term GPA of 2.00 or greater will be academically dismissed for an eighteen month period.

20.2.3 - Students who have been academically dismissed will not be allowed to apply for re-admission for at least three calendar years. Students who have been dismissed for either the first or second time may appeal this decision (see section 24 of the academic calendar).

20.2.4 - Students who have been academically dismissed for the first time and have subsequently been re-admitted after an absence of an eighteen month period, may re-register on probation.

20.2.5 - Students who fail the same course more than once will be dismissed.

20.2.6 - Students who have been academically dismissed for a second time will not be readmitted to any engineering program at Dalhousie.

20.3 Faculty of Health Professions - Suspension or Dismissal from a Program on the Grounds of Professional Unsuitability

20.4 Policy on Academic Forgiveness

The Academic Forgiveness policy allows a returning student to apply to the Registrar’s Office for academic forgiveness of his/her prior cumulative grade point average. The policy is designed for undergraduate and technology students who have had a period of absence from their academic program and have demonstrated acceptable academic performance following their return. The Academic Forgiveness policy is subject to the following regulations.

20.4.1 Regulations

1. Academic Forgiveness applies only to returning undergraduate and technology students who have had an absence of at least three calendar years from their program or faculty at Dalhousie University.

2. For undergraduate students, a minimum of 24 credit hours of coursework, or for Diploma in Technology students, a minimum of eight credit hours, with a grade point average of at least 2.0, must be completed after returning before a written request for Academic Forgiveness may be submitted to the Registrar’s Office.

3. Academic Forgiveness will affect the student’s cumulative grade point average in all courses taken after the three-year absence. Academic Forgiveness applies to all courses taken at all colleges/universities during the forgiveness period, not only selected courses or terms.

4. No punitive grades resulting from an Academic Discipline decision will be forgiven.

5. A student can have the Academic Forgiveness policy applied to his or her academic record only once.

With the approval of the Registrar or designate, in consultation with the Dean, the student will be granted Academic Forgiveness. The student’s transcript will remain a record of all coursework completed and original grades obtained. Courses taken prior to the three or more year absence will not be used in computing the student’s cumulative grade point average, with the exception of punitive grades awarded as the result of an Academic Discipline decision. Students will be eligible to retain credit for courses in which they received a passing grade. Students will be required to complete at least half the credits required for their academic program following Academic Forgiveness before they will be eligible to graduate.

The transcript will have “Academic Forgiveness” noted on it at the end of the last term for which the student receives forgiveness.

21. Graduation Standing

Note that students entering the College of Pharmacy in September 1997 or later should consult the College of Pharmacy for information on graduation and scholarship standing.

21.1 Minimum Cumulative GPA

21.1.1 - A minimum cumulative GPA of 2.00 is required for the awarding of an undergraduate degree in the Faculties of Agriculture, Architecture and Planning, Arts and Social Sciences, Computer Science, Engineering, Health Professions, Management and Science.

A minimum cumulative GPA of 2.00 is required for the awarding of Diploma in Technology in the Faculty of Agriculture. For details on the required standing for graduation in honours programs, see the Degree Requirements section of this calendar for the Faculties of Arts and Social Sciences, Science and the appropriate faculty/school section for honours programs in other faculties.

21.2 Graduation with Distinction

Faculties of Agriculture, Architecture and Planning, Arts and Social Sciences, Computer Science, Engineering, Science and Management

A cumulative GPA of 3.70 is required to graduate with distinction. For the purpose of determining whether a student will graduate with distinction, all courses taken while registered in a level of study at Dalhousie, including courses taken on letter of permission, repeated courses, and courses for which non-passing punitive grades were awarded, are included. At least half of the courses must be completed at Dalhousie. The notation “Distinction” will appear on the transcript.

Faculty of Health Professions

A cumulative GPA of at least 3.70 is required to graduate with Distinction from the Faculty of Health Professions programs. For the purpose of determining whether a student will graduate with distinction: credits that are transferred into a degree program from other Dalhousie programs are included in final GPA calculations, credits from programs outside Dalhousie taken prior to program calculations, credits from programs outside Dalhousie taken prior to program
40 Academic Regulations

21.3 Scholarship Standing

Please see Awards Section, Scholarship GPA, page 207, for information on the GPA required for scholarship purposes.

22. Graduation

In order to graduate students must submit an Intention to Graduate Form to the Registrar’s Office by the deadlines indicated:

Graduation Month | Deadline
--- | ---
May | December 1
October | July 1

In cases where requests can be accommodated after the deadline, a $50 fee will be charged.

23. Dean’s List

23.1 Eligibility

Full-time students will be assessed for eligibility for the Dean’s list at the end of each academic term. Students who achieve a term GPA of 3.85 will be placed on the Sexton Scholar List.

Part-time students will be considered once at the end of each academic year. For this purpose, a part-time student is one who takes at least nine credit hours during the academic year but less than nine credit hours in any one term in the academic year. The student must achieve a GPA of 3.70 in every term in the academic year.

NOTES:
1. The number of students placed on the Dean’s list will normally not exceed 15% of the class.
2. Students registered for full-year courses, i.e., courses that run from September through April will be considered for the Dean’s list when full-year course results are available.
3. The notation “Dean’s List” will appear on the transcript.

23.2 Sexton Scholar List

Students in the Faculties of Architecture and Planning, Computer Science, and Engineering who have achieved a cumulative GPA of 3.85 upon graduation will be placed on the “Sexton Distinction List”. The notation “Sexton Distinction” will appear on the transcript.

23.3 Sexton Distinction List

Students in the Faculties of Agriculture and Planning, Computer Science, and Engineering who have achieved a cumulative GPA of 3.85 upon graduation will be placed on the Sexton Distinction List. The notation “Sexton Distinction” will appear on the transcript.

24. Appeals

24.1 Appeals for Students with Learning Disabilities

Appeals by students with learning disabilities will follow the usual procedures of the relevant faculty at Dalhousie University. See Accommodation Policy, page 217.

24.2 College of Arts and Science/Faculty of Management/ Faculty of Agriculture

Any student who believes they will suffer undue hardship from the application of any of the academic regulations may appeal for relief to the academic appeals committee of the faculty or school in which they are registered. Students wishing to appeal a decision based on faculty/school regulations must complete an “Application for a Waiver of an Academic Regulation” form, available online at www.dal.ca/campus_life/student_services/academic_support/academic_appeals.html or in the Registrar’s Office. The arguments and expectations of the petitioner must be clearly stated.

An appeal from a student, arising from an academic dismissal from the faculty should be addressed to the Assistant Dean in the Faculty of Arts and Social Sciences, the Committee on Studies and Appeals in the Faculty of Science, Academic Director, Undergraduate Programs, in the Faculty of Management, or to the Assistant Dean, students in the Faculty of Agriculture, as appropriate.

24.3 Faculty of Architecture and Planning

Appeals should be directed to the School of Architecture office or the School of Planning office.

24.4 Faculty of Computer Science

Appeals should be directed to the Academic Appeals Committee.

24.5 Faculty of Engineering

Appeals should be directed to the Academic Appeals Committee.

24.6 Faculty of Health Professions

School/College Committee on Undergraduate Student Appeals

Contact the School/College or Faculty of Health Professions office for the complete terms of reference for the Committee on Undergraduate Student Appeals and the application regarding academic appeals.

Faculty Committee on Undergraduate Student Appeals

The jurisdiction of the Faculty Committee on Undergraduate Student Appeals is to hear academic appeals beyond the school/college level when the approved appeal regulations and procedures of the respective school/college have been fully exhausted by the student. Decisions of the Faculty Committee may be appealed to the Senate Academic Appeals Committee.

The Committee has no jurisdiction to hear student appeals on a matter involving a requested exemption from the application of faculty or university regulations or procedures except when irregularities or unfairness in the application thereof is alleged. This means that only procedural issues and not the merits of the case, are subject to appeal.

25. Changes in Regulations

In general, any change to academic regulations which affects a currently registered student adversely will not apply to that student. Any student suffering undue hardship from application of any of the academic regulations may appeal for relief to the appropriate academic appeals committee as in Section 24.
II. Pathways

Our Pathways Division provides options for those who may require some additional preparation to ensure their success or those who may not be taking a traditional approach to university admission. Pathways programs are: Transition Year Program (TYP), University Preparation classes (UPrep) and English as a Second Language Programs (ESL). We also offer Mature Student Advising for older students returning to learning.

1. Transition Year Program

Address: 1499 Lehmann Street
PO Box 15000
Halifax, NS B3H 4R2
Phone: (902) 494-2135
Fax: (902) 494-3662
Website: http://collegeofcontinuinged.dal.ca/Transition-Year-Program

TYP has served the post-secondary educational needs of the Mi'kmaq and Black Nova Scotian communities for over 40 years. It is a one-year program designed for African-Canadian and First Nations students who wish to enter university but who do not yet meet standard entrance requirements. TYP was established to address historical and current educational disadvantages to members of the Mi'kmaq and Black Nova Scotian communities.

TYP prepares its students for full admission to Dalhousie BA degree programs at the beginning of their second year on campus. Some students may qualify for entry into other degree programs at Dalhousie. The program introduces students to the university in a variety of ways. Its curriculum, which includes a variable number of non-credit classes, is adapted to individual needs and objectives. TYP core curriculum includes classes in Black and Native Studies, Strategies for University Learning, English and Mathematics. Students may also choose a regular first-year elective. Classroom instruction is complemented by an orientation session, special lectures, campus tours, workshops and field trips. The program’s staff are drawn from the Dalhousie University community as well as the Nova Scotian Black and First Nations communities.

2. University Preparation Classes

Address: 1499 Lehmann Street
PO Box 15000
Halifax, NS B3H 4R2
Phone: (902) 494-2135
Fax: (902) 494-3662
Website: http://collegeofcontinuinged.dal.ca

Dalhousie offers a “bridging program” for high school and mature students who are not fully prepared to start university or for those needing assistance in a particular subject area while enrolled in university. The university prep classes offered through the College are designed to help students develop their academic skills in a specific subject, improve their marks, complete a prerequisite to enter a specific university program and build confidence before taking a university credit class.

University Preparation Classes Offered

The Writing Skills for Academic Study class prepares students for the writing demands in all university level classes and is accepted by Dalhousie in place of NS English 12. University Prep Chemistry is accepted in place of NS Chemistry 12 and may be used as the prerequisite for all Dalhousie first-year chemistry classes. Math 0010: Pre-Calculus and Math 0011: Pre-Calculus Plus are accepted in place of NS Math 12 Pre-Calculus and enable students to pursue university math and science classes. Math 0009 0.5: Academic Math is accepted in place of NS Math 12 for entrance to the Faculty of Arts, Bachelor of Commerce, Management and Nursing programs. PHY 0010.00: University Prep Physics is
Applicants must have completed grade 12 English (or equivalent) with a minimum grade of 65. Admission to some programs will require completion of other required subjects.

A student admitted on this basis may be restricted in the number of classes he/she can register in during the first year. Otherwise, these students have the same rights, privileges and responsibilities as other students within their program.

Services include pre-admission counselling and university preparation classes such as Writing Skills for Academic Study, Chemistry, Physics, Biology, Academic Math and Pre-Calculus.

III. Professional Development

In an era of decreasing resources and increasing demand, effective management development and training is crucial in every sector and organization. The College has long provided programs designed to meet the needs of the business, governmental and voluntary sectors.

For more than 30 years Dalhousie University has been a leading Canadian provider of professional development in Engineering, Management and Technology. Our programs are offered in Halifax and major centres across Canada in a variety of formats including seminars, short classes, and certificate programs.

Programs are facilitated by instructors from both industry and academia, many of whom have international consulting and lecturing experience.

We offer unique certificate programs that enable participants to consolidate their knowledge and enhance their experience in specific technical areas. Programs are multiple classes assembled to deliver a comprehensive understanding of the critical topic issues.

Those who do not wish to complete a full certificate program are welcome to register for individual classes. Conversely, those who have taken component classes of a certificate program can submit their application for admission to complete the full certificate.

Certificates

• Certificate in Computer Science
• Certificate in Information Systems Management
• Certificate in Software Management and Development
• Certificate in Information Design and Management for the Web
• Business Analysis Certificate
• Technical Writing Certificate
• Certificate in Quality Management
• Certificate in Project Management (Classroom Delivery)
• Certificate in Advanced ISO 9001:2008 Implementation and Management (AIM-2008)
• Certificate in Leadership Development
• Certificate in Negotiation and Conflict Resolution
• Certificate in Environmental Management
• Certificate in Occupational Health and Safety Management
• Certificate in Ergonomic Program Management
• Canadian Risk Management (CRM) Designation
• Home Inspection Certificate

The following are available by distance education:

• Certificate in Business Management
• Certificate in Financial Management
• Certificate in Human Resource Management
• Certificate in Local Government Administration
• Certificate in Local Government Financial Administration
• Certificate in Local Government Human Resources Administration
• Certificate in Local Government Law and Ethics
• National Advanced Certificate in Local Government Administration
• Certificate in Fire Service Leadership
• Certificate in Fire Service Administration
• Certificate in Hazardous Materials
• Police Leadership Certificate
• Advanced Police Leadership Certificate
• Introduction to Employment Services
• Improving Non-Profit Governance
• Certificate in Project Management (Online option)
• Certificate in Process Improvement and Control (Online option)
The College also works with Dalhousie and external partners to offer specialized programs. Each of these programs incorporates distance education in their delivery.

The Certified Employee Benefit Specialist (CEBS) Program is offered in partnership with the International Foundation of Employee Benefit Plans in Brookfield, Wisconsin. This professional designation program is aimed at benefit managers, consultants, human resource administrators, investment specialists, professionals, insurance company representatives, trust officers and others interested in employee benefits.

The Credit Union Institute of Canada (CUIC) Management Studies and General Studies Programs are offered in cooperation with CUSOURCE and designed for credit union employees across Canada. The Credit Union Director Achievement (CUDA) Program is offered by CUSOURCE and jointly certified by Dalhousie University.

IV. Consultation

Based on the expertise of its resident and associated faculty, the College offers consulting in the areas of: Municipal Management, Fire and Police Management; Distance Education Design, Survey Research; Adult Education; Workshops, and Focus Groups; Community Development; and Needs Assessment.
II. Degree Programs

The College offers unique interdisciplinary undergraduate programs in Environment, Sustainability and Society (ESS), in the Bachelor of Arts, Bachelor of Computer Science, Bachelor of Management, Bachelor of Science, Bachelor of Computer Science, Bachelor of Journalism, and Bachelor of Informatics programs.

- Bachelor of Arts (BA): ESS can be subject A or B with any major or honours subject in the Faculty of Arts and Social Science or the Faculty of Science.
- Bachelor of Science (BSc): ESS can be subject A or B with any major or honours subject in the Faculty of Science. ESS can be subject B in the BSc double major or combined honours with Computer Science.
- Bachelor of Management (BMan): ESS can be done as a minor.
- Bachelor of Community Design (BCD): ESS can be subject B of a double major or honours, double major.
- Bachelor of Computer Science (BSc): ESS can be done as a minor.
- Bachelor of Journalism (BJH): ESS can be subject B of the BJH combined honours.
- Bachelor of Informatics (BInf): ESS can be done as a minor.

Program Requirements

A. BA, BSc, Double Major/Combined Honours, Environment, Sustainability and Society

i. Environment, Sustainability and Society as Subject A

- SUST 1000.06 (one full credit in fall term)
- SUST 1001.06 (one full credit in winter term)
- • SUST 2000.06 (one full credit in fall term)
- • SUST 2001.06 (one full credit in winter term)
- • SUST 3000.03
- • SUST 3502.03
- • SUST 4000V/Y.06

Double Major

- three full credits (18 credit hours) ESS electives (at least two credits outside subject B)
- may be combined with minor(s)

Combined Honours

- two full credits (12 credit hours) ESS electives (at least one credit outside subject B)
- • SUST 4000X/Y.06
- Cumulative GPA in Honours subject courses of 3.3, with no individual grade less than C
- may be combined with minor(s)

Subject B: Any Major/Honours subject in the Faculties of Arts and Social Sciences or Science

For detailed requirements, please consult the Calendar and Academic Advisor for your allied subject.

ii. Environment, Sustainability and Society as Subject B

Subject A: Any Major/Honours subject in the Faculties of Arts and Social Sciences or Science or Computer Science

For detailed requirements, please consult the Calendar and Academic Advisor for your allied subject.

Subject B: Environment, Sustainability and Society

- SUST 1000.06 (one full credit in fall term)
- • SUST 1001.06 (one full credit in winter term)
- • SUST 2000.06 or SUST 2001.06
- • one additional full credit (six credit hours) in SUST at the 2000 level or above
- • three credits (18 credit hours) from the approved list of ESS elective (at least two credits outside subject A)
- • at least two full credits (12 credit hours) must be at the 3000 level or above.

General Degree Requirements

For BA and BSc students, either SUST 1000.06 or SUST 1001.06 satisfies the writing requirement. For BA students either SUST 1000.06 or SUST 1001.06 satisfies the Life and Physical Sciences requirement. For BSc students either SUST 1000.06 or SUST 1001.06 satisfies the Science Requirement. For general BA/BSc degree requirements, please go to page 732.
Subject A: Community Design
See School of Planning for specific requirements

Subject B: Environment, Sustainability and Society
- SUST 1000.06 (one full credit in fall term)
- SUST 1001.06 (one full credit in winter term)
- SUST 2000.06 (one full credit in fall term)
- SUST 2001.06 (one full credit in fall term)
- SUST 3000.03
- SUST 3002.03
- SUST 4000C/406
- One credit (six credit hours) from the approved list of ESS electives, outside PLAN
- SUST 1000.06 satisfies the BCD English writing requirement
- SUST 1000.06 and SUST 1001.06 both satisfy the science requirement and social science requirement for BCD students

C. BCD Honours, Double Major in Community Design (Environmental Planning or Urban Design and Planning) and Sustainability
Qualified BCD students may apply for the Honours program in year 3. See School of Planning for details.

Subject A: Environmental Planning or Urban Design and Planning
See School of Planning for specific requirements

Subject B: Environment, Sustainability and Society
- SUST 1000.06 (one full credit in fall term)
- SUST 1001.06 (one full credit in winter term)
- SUST 2000.06 (one full credit in fall term)
- SUST 2001.06 (one full credit in fall term)
- SUST 3000.03
- SUST 3002.03
- SUST 1000.06 satisfies the BCD English writing requirement
- SUST 1000.06 and SUST 1001.06 both satisfy the science requirement and social science requirement for BCD students

D. BMgmt Major in Environment, Sustainability and Society
See Faculty of Management, Bachelor of Management Degree program for general requirements
- SUST 1000.06 or (SUST 1001.06)
- SUST 2000.06 or SUST 2001.06
- Three credits (18 credit hours) from the approved list of ESS electives (at least two credits outside MGMT and at least two credits at the 3000 level or above)
- SUST 1000 or SUST 1001 satisfy the first year ESS Major requirement, however, SUST 1000 also satisfies the BMgmt Writing requirement and can be more easily accommodated in the first year BMgmt schedule. SUST 1001 does not satisfy the BMgmt Writing Requirement.

E. BCSc Minor in Environment, Sustainability and Society
- SUST 1000.06
- SUST 1001.06
- SUST 2000.06 or 2001.06
- two full credits (12 credit hours) from approved list of ESS electives at the 3000 level or above
- one full credit (six credit hours) from approved list of ESS electives at the 2000 level or above

F. BJH Combined Honours in Journalism and Environment, Sustainability and Society
See University of Kings College, Bachelor of Journalism program for general requirements
- SUST 1000.06
- SUST 1001.06
- SUST 2000.06 or SUST 2001.06
- two credits (12 credit hours) from approved list of ESS electives at the 3000 level or above

G. BInf Major in Environment, Sustainability and Society
See Faculty of Computer Science, Bachelor of Informatics program for general requirements.
- SUST 1000.06
- SUST 1001.06
- SUST 2000.06 or SUST 2001.06
- two credits (12 credit hours) from approved list of ESS electives at the 3000 level or above
- one credit (six credit hours) from approved list of ESS electives at the 2000 level or above

III. Minor in Environment, Sustainability and Society
- a minimum of three full credits (18 credit hours) and a maximum of four and one half credits at the 2000 level or above in BCD courses
- prerequisites: SUST 1000.06 and SUST 1001.06

IV. RBC Sustainability Leadership Certificate
The RBC Sustainability Leadership Certificate offers a powerful, creative, hands-on program consisting of three weekend modules, two personal action projects and a series of written reflections. The program is designed to cultivate students' skills and confidence to lead social and environmental change.

All students at Dalhousie University are eligible to apply for the program. Prerequisites are one of: SUST 1000, SUST 1001, AGRI 1000 or evidence of experience or course work in fields related to environmental and social sustainability. Applications may be made online at the College of Sustainability website in September and the program begins each year in October. For more information and to apply for the program please go to: http://www.dal.ca/faculty/sustainability/programs.html

V. Course Descriptions
SUST 1000.06: Introduction to Environment, Sustainability and Society 1.
An interdisciplinary issues-based approach to environment, sustainability and society drawing on themes from across the faculties, this course introduces students to the conceptual frameworks underlying our understanding of the environment and sustainability. Topics include energy, water, climate change, human population, economics, policy, food, urbanization and equity.

NOTE: One full credit in fall term.

FORMAT: Writing requirement. Team taught lecture/tutorial

SUST 1001.06: Introduction to Environment, Sustainability and Society 2.
Drawing on themes from across the disciplines, diverse conceptual frameworks and analytical methods underlying our understanding of the environment and sustainability are explored. Topics include energy, water, climate change, human population, economics, policy, food, urbanization and equity.

NOTE: One full credit in winter term.

FORMAT: Team taught lecture/tutorial

SUST 2000.06: Humanity in the Natural World: An Introduction to Problem Based Learning.
This course introduces students to problem-based learning. Students examine the development of environmental thought, ideas of sustainability, and conflicting positions on humanity’s place in the natural world. Issues are explored utilizing multiple perspectives drawn from the University. Students undertake group and individual research and develop critical analytical and quantitative skills.

NOTE: One full credit in winter term.

FORMAT: Team taught lecture/tutorial

SUST 2001.06: Humanity in the Natural World: An Introduction to Problem Based Learning.
This course examines the interface between human development and the environment at the global level using a problem-based approach. Various
SUST 4900.03: Advanced Topics in Environment Sustainability and Society.
This course addresses current interdisciplinary issues in sustainability with topics varying each semester. The course is taught by Dalhousie faculty, and/or visiting scholars.
PREREQUISITE: This class is restricted to students in the Environment, Sustainability and Society (ESS) program, or with permission from the Academic Advisor in the College of Sustainability.
RESTRICTION: Must have third year status or above

VI. List of Approved ESS Electives
Note: It is the student’s responsibility to check the course calendar for pre-requisites to these courses.

College of Sustainability
SUST 2000.06: Environment, Sustainability and Society Internship.
PREREQUISITE: SUST 2000.06 or SUST 2001.06. Cumulative GPA 3.0 or better. Must be in ESS program.
FORMA T: Internship
NOTE: Instructor approval required for registration. Visit: ess.dal.ca and click on "Community Engagement."

SUST 3502.03: The Campus as a Living Laboratory.
This course addresses current interdisciplinary issues in sustainability with topics varying each semester. The course is taught by Dalhousie faculty, and/or visiting scholars.
PREREQUISITE: This class is restricted to students in the Environment, Sustainability and Society (ESS) program, or with permission from the Academic Advisor in the College of Sustainability.
RESTRICTION: Must have third year status or above.

SUST 4000X/Y.06: Environment, Sustainability and Society Capstone.
Students work in multidisciplinary groups, with community partner organizations to identify real problems and develop meaningful solutions to address them. Groups work with advisors and experts to create detailed plans of action based on strong research and analysis, working in a studio environment.
FORMA T: Seminar studio/group research project

SUST 4800.03: Environment Sustainability and Society Independent Study.
This independent study course allows fourth-year students to study a topic in Environment, Sustainability and Society not covered in other courses, or in more depth. Students must first consult with a faculty member to arrange the topic of study. An outline of the Independent Study must be approved by the Associate Director Undergraduate of the College of Sustainability.
PREREQUISITE: This class is restricted to fourth-year students in the Environment, Sustainability and Society (ESS) program, or with permission from the Associate Director Undergraduate of the College of Sustainability.
RESTRICTION: Must have completed 90 credit hours, permission required

SUST 4900X/Y.06: Honours Thesis Project.
Independent research project carried out under the supervision of an approved faculty member or affiliated professional.
FORMA T: Thesis

SUST 4950.03: Advanced Topics in Environment Sustainability and Society.
SUST 4950.03: Advanced Topics in Environment Sustainability and Society.

College of Sustainability
SUST 2000.06: Environment, Sustainability and Society Internship.
PREREQUISITE: SUST 2000.06 and SUST 1001.06 or permission of instructor
FORMA T: Team taught/lecture/tutorial

SUST 3000.03: Global Approaches to Environmental Decision-Making.
Examination of the historic and current context for environmental decision-making in terms of public policy, global and domestic economy, political and business agenda-setting, science, technology and ethics. Alternative solutions that support the goal of long-term ecological integrity are examined. Students are encouraged to critically reflect on their 2nd year experience.
FORMA T: Seminar/studio/group research project
PREREQUISITE: SUST 2000.06 or SUST 2001.06
NOTE: Instructor approval required for registration. Visit: ess.dal.ca and click on "Community Engagement."

SUST 3502.03: The Campus as a Living Laboratory.
This course addresses current interdisciplinary issues in sustainability with topics varying each semester. The course is taught by Dalhousie faculty, and/or visiting scholars.
PREREQUISITE: This class is restricted to students in the Environment, Sustainability and Society (ESS) program, or with permission from the Academic Advisor in the College of Sustainability.
RESTRICTION: Must have third year status or above.

SUST 3950.03: Topics in Environment Sustainability and Society.
This course addresses current interdisciplinary issues in sustainability with topics varying each semester. The course is taught by Dalhousie faculty, and/or visiting scholars.
PREREQUISITE: This class is restricted to students in the Environment, Sustainability and Society (ESS) program, or with permission from the Academic Advisor in the College of Sustainability.
RESTRICTION: Must have third year status or above.

SUST 4000X/Y.06: Environment, Sustainability and Society Capstone.
Students work in multidisciplinary groups, with community partner organizations to identify real problems and develop meaningful solutions to address them. Groups work with advisors and experts to create detailed plans of action based on strong research and analysis, working in a studio environment.
FORMA T: Seminar studio/group research project

SUST 4800.03: Environment Sustainability and Society Independent Study.
This independent study course allows fourth-year students to study a topic in Environment, Sustainability and Society not covered in other courses, or in more depth. Students must first consult with a faculty member to arrange the topic of study. An outline of the Independent Study must be approved by the Associate Director Undergraduate of the College of Sustainability.
PREREQUISITE: This class is restricted to fourth-year students in the Environment, Sustainability and Society (ESS) program, or with permission from the Associate Director Undergraduate of the College of Sustainability.
RESTRICTION: Must have completed 90 credit hours, permission required

SUST 4900X/Y.06: Honours Thesis Project.
Independent research project carried out under the supervision of an approved faculty member or affiliated professional.
FORMA T: Thesis

SUST 4950.03: Advanced Topics in Environment Sustainability and Society.
SUST 4950.03: Advanced Topics in Environment Sustainability and Society.

College of Sustainability
SUST 2000.06: Environment, Sustainability and Society Internship.
PREREQUISITE: SUST 2000.06 and SUST 1001.06 or permission of instructor
FORMA T: Team taught/lecture/tutorial

SUST 3000.03: Global Approaches to Environmental Decision-Making.
Examination of the historic and current context for environmental decision-making in terms of public policy, global and domestic economy, political and business agenda-setting, science, technology and ethics. Alternative solutions that support the goal of long-term ecological integrity are examined. Students are encouraged to critically reflect on their 2nd year experience.
FORMA T: Seminar/studio/group research project
PREREQUISITE: SUST 2000.06 or SUST 2001.06
NOTE: Instructor approval required for registration. Visit: ess.dal.ca and click on "Community Engagement."

SUST 3502.03: The Campus as a Living Laboratory.
This course addresses current interdisciplinary issues in sustainability with topics varying each semester. The course is taught by Dalhousie faculty, and/or visiting scholars.
PREREQUISITE: This class is restricted to students in the Environment, Sustainability and Society (ESS) program, or with permission from the Academic Advisor in the College of Sustainability.
RESTRICTION: Must have third year status or above.

SUST 3950.03: Topics in Environment Sustainability and Society.
This course addresses current interdisciplinary issues in sustainability with topics varying each semester. The course is taught by Dalhousie faculty, and/or visiting scholars.

I. Introduction

The Faculty of Agriculture was established in 1905 as the Nova Scotia Agricultural College and merged with Dalhousie University in 2012. Students in the Faculty of Agriculture study a range of undergraduate degree programs including animal science, agricultural business, agricultural economics, aquaculture, environmental landscape horticulture, environmental science, integrated environmental management, international food business, plant science and pre-veterinary medicine.

The Faculty offers diploma and technical programs in business management, engineering, managed landscapes, plant science and veterinary technology, as well as a variety of certificate programs.

Dalhousie’s beautiful Agricultural Campus, located just outside Truro in Bible Hill, Nova Scotia, is home to the Faculty of Agriculture as well as more than 950 students. The campus is well equipped with a range of student services, residences, food and athletic facilities, clubs and societies, all of which lead to a rich and diverse campus life.

II. Faculty

Professors Emeriti

Hamilton, P. Y., BSc (Agr) (McGill), PhD (McGill) - Professor Emeritus
Langille, W. M., BSc (Acadia), MSc (McGill) - Professor Emeritus
Robinson, A. R., BSc (Agr) MSc (McGill), PhD (McGill) - Professor Emeritus
Sanger, P. M., BSc (Melbourne), PHD (Dalhousie), MA (Victoria) - Professor Emeritus
Stinson, G. W., BSc (Agr), MSc, PhD (Guelph) - Professor Emeritus

Read, R., BSc (Agr) (Newcastle), PhD (Newcastle-Upon-Tyne) - Professor Emeritus

Professors

Abrams, R., BSc (Reading), MSc (Skirling), PhD (Oregon)
Anderson, D. M., BSc, MSc (Manitoba), PhD (Saskatchewan)

III. Degree Requirements

A. Bachelor of Agriculture - International Food Business *

* This is a dual degree awarded with a Bachelor of Administration (Honours) from CAH Vilentum University in the Netherlands

Vilentum University in The Netherlands and Dalhousie University have partnered to offer a new four-year, dual-degree program. Graduates will be awarded a Bachelor of Agriculture in International Food Business from Dalhousie University and a Bachelor of Administration in International Food Business (Honours) from CAH Vilentum.

This exciting new dual-degree program offers a four-year international and two work terms—one in North America and one in Europe. In year one, North American students will study at Dalhousie University, and European students will study at CAH. Year two is offered in The Netherlands when both groups of students will study together. This continues in year three when both groups of students study on Dalhousie’s Agricultural Campus in Truro, NS. Students complete year four at their home university.

This four-year degree emphasizes its international focus by beginning with a one-week orientation in Iceland, where European and North American students get to know one another while exploring the Icelandic food industry. This unique program will appeal to students who enjoy studying independently, have an interest in business and are keen to explore the world.

Program Design and Delivery

The Bachelor of Agriculture in International Food Business is a modularized, competency-based program of study. The academic courses are integrated into a series of 10 modules throughout the first three years of the program. The module titles are listed below

Year 1 Theme: International Business Essentials

<table>
<thead>
<tr>
<th>Semester 1</th>
<th>Semester 2</th>
</tr>
</thead>
<tbody>
<tr>
<td>Module 1.</td>
<td>Module 2.</td>
</tr>
<tr>
<td>Acquiring Knowledge of International Food Systems</td>
<td>Analyzing and Realizing Financial Performance</td>
</tr>
</tbody>
</table>

Year 2 Theme: Innovation and Marketing

<table>
<thead>
<tr>
<th>Semester 1</th>
<th>Semester 2</th>
</tr>
</thead>
<tbody>
<tr>
<td>Innovation and Entrepreneurship in Food Business</td>
<td>Developing External Communication Strategies</td>
</tr>
</tbody>
</table>

Year 3 Theme: Leadership, Finance and Business Planning

<table>
<thead>
<tr>
<th>Semester 1</th>
<th>Semester 2</th>
</tr>
</thead>
<tbody>
<tr>
<td>Market Research</td>
<td>European Placement</td>
</tr>
</tbody>
</table>

Students who complete all modules plus year 4 will receive credit in the following courses to meet the core requirements of the program:

- ECOA 1002: Introduction to Economic Reasoning
- EGSA 1801: Business Writing
- FOOD 1000: Food Safety and Quality Assurance
- INFB 1000: International Food Policy and Environment
- INFB 1001: International Food Business Project I

50 Faculty of Agriculture
MGTA 4003: North American Placement II
MGTA 4002: North American Placement I
Semester VIII
Elective
MGTA 4001: Advanced Entrepreneurship
MGTA 3007: Quality Management
Semester VII
MGTA 3000: Management Accounting
MGTA 3003: European Placement I
MGTA 3004: European Placement II
MGTA 3005: New Product Development
MGTA 3006: Retail Management
MGTA 3007: Quality Management
MGTA 3008: Intermediate Marketing Research
MGTA 4001: Advanced Entrepreneurship
MGTA 4002: North American Placement I
MGTA 4003: North American Placement II
INTH 1002: Business Math
MGTA 4004: Research Methods for Economics and Business
RESM 4005: Project-Seminar for Economics and Business
nine electives (including two, four course specializations)

Year 1 Semester I
ECOA 1002: Introduction to Economic Reasoning
ECLA 1003: Business Writing
INFB 1000: International Food Policy and Environment
INFB 1001: International Food Business-Project I
MGTA 1001: Introduction to International Business

Semester II
INFB 1002: International Food Business-Project II
FOOD 1000: Food Safety and Quality Assurance
MGTA 1002: Food Supply Chain Management
MGTA 1003: International Business Communications
MGTA 2006: Advertising and Promotion

Year 2 Semester III
MGTA 2002: Marketing
MGTA 2010: Innovation Management
MGTA 3005: New Product Development
MGTA 3006: Retail Management
MTHA 1002: Business Math

Semester IV
INFB 1000: Introductory Calculus I
INFB 1001: Introductory Calculus II
MTHA 1000: Introductory Calculus III
MTHA 1001: Introductory Calculus IV
ECOA 1000: Principles of Microeconomics
CHMA 1000: General Chemistry I
CHMA 1001: General Chemistry II
BIOA 1000: Biological Sciences
AGRI 1000: Agricultural Ecosystems

Year 4 Semester IX
RESM 4004: Research Methods for Economics and Business
Elective (First Specialization)
Elective (First Specialization)
Elective (Second Specialization)
Elective (Second Specialization)

Semester X
RESM 4005: Project-Seminar for Economics and Business
Elective (First Specialization)
Elective (First Specialization)
Elective (Second Specialization)
Elective (Second Specialization)
In year four, students must take two, four course specializations. The following is a list of Specializations students can choose in consultation with the International Food Business Coordinator:
• Agrology Studies
• Animal Studies Development Studies
• Environmental Studies
• Economic Studies
• Horticultural Studies
• Management Studies
• Organic Agricultural Studies
• Quantitative Methods Studies
• other

B. Bachelor of Science (Agriculture)
Dalhousie offers a four-year program leading to a degree in Agricultural Science. Students in the Agricultural Sciences who successfully complete the prescribed courses with a cumulative GPA of at least 2.0, and who are in good standing, will be granted the degree of Bachelor of Science in Agriculture, BSc (Agr). Graduates of this program meet the formal educational requirements for Professional Agrologists in the provincial Institutes of Agrologists of the Atlantic Provinces.

Normally, students select a major during their first year and continue in that field of study until they graduate.
• 120 Credit Hours
• 56 credit hours of approved agricultural courses from the list below
• 36 credit hours of approved Languages and Humanities/Social Sciences electives from the list, of which three credit hours must be at the 3000 level or above
• 18 credit hours at the 3000 level or above
• Specific Major Requirements as follows

Major Subjects

Double Major
Students wishing to complete a double major must satisfy all of the degree requirements for the BSc (Agr) and the program specific requirements of each major with the exception of the research methods course. One set of research methods courses should be completed and the research project should cover both majors. Students must complete a minimum of 24 credit hours in the second major that are not included in the first major. A degree with a second major may take longer to complete than a single degree major due to scheduling challenges.

Required Courses for All Majors
1800 Level
AGRE 1000: Agricultural Ecosystems
BIOA 1002: Biology I
BIOA 1003: Biology II
CHMA 1000: General Chemistry I
CHMA 1001: General Chemistry II
ECOA 1000: Principles of Microeconomics
MTHA 1000: Introductory Calculus I
MTHA 1001: Introductory Calculus II

Faculty of Agriculture
One of:
EGLA 1000: Composition
EGLA 1001: The Novel or
EGLA 1002: Nature in English & American Literature

2000 Level
STAA 2000: Introduction to Statistics

4000 Level
RESM 4XXX: Project Seminar I
RESM 4XXX: Project Seminar II

Approved Agricultural Courses
• AGRI 1000, 1001, 2000, 3001, 4000
• FOOD 3000, 3001, 4000
• GENE 4000
• IAGR 2003, 3000, 3001, 4000
• MGTA 2003, 4001
• MCRA 3000, 4000
• NUTR 3000, 3001, 3002
• RESM 4000, 4001, 4002, 4003, 4004, 4005, 4006, 4007, 4008, 4009, 4010, 4011
• SOIL 2000, 3000, 3001, 4001

Approved Languages and Humanities/Social Sciences Electives
Courses in the following subject areas, and the additional specific courses listed below, must the Languages and Humanities/Social Sciences elective requirements:
• Languages and Humanities: EGLA (English), ARTS (Art), HISA (History), FRNA (French), SPNA (Spanish), PHLA (Philosophy)
• Social Sciences: ECOA (Economics)*, EXTE (Extension Education), CMMT (Communications), GEOA (Geography), HISA (History), PSYC (Psychology), POLS (Political Science), RURS (Rural Studies), SOCI (Sociology)
• AGRI 3001: Issues in Agricultural Health and Safety
• HORT 3008: Horticultural Therapy
• IAGR 2002: International Rural Development
• IAGR 2003: Food Security and Rural Development in Cuba
• SPEC 4009: Special Topics in Rural Studies
*Student taking majors or minors in Agricultural Business or Agricultural Economics cannot use ECOA courses for completion of their Languages and Humanities/Social Sciences Electives.

1. BSc (Agri) - Agricultural Business
Required Courses & Suggested Schedule
Year II: Semester III
ECOA 2000: Intermediate Microeconomics
ECOA 3000: Mathematical Economics
MGTA 2002: Marketing
MGTA 2004: Financial Accounting
three credit hours of electives

Year II: Semester IV
ECOA 1001: Principles of Macroeconomics
ECOA 2003: Agricultural Future and Options
STAA 2000: Introduction to Statistics
six credit hours of electives

Year III: Semester V
ECOA 3006: Statistics for Economics & Business
MGTA 2001: Financial Management
MGTA 3000: Management Accounting
six credit hours of electives

Year III: Semester VI
ECOA 3002: Agricultural & Food Policy
ECOA 3003: Mathematical Programming
MGTA 4001: Advanced Entrepreneurship
six credit hours of electives

Year IV: Semester VII
RESM 4005: Project-Seminar for Economics & Business
12 credit hours of electives
Electives must include:
• six credit hours of Languages and Humanities/Social Science courses which cannot be from the ECOA destination and three credit hours of these must be at the 3000 level or above.
• 12 credit hours of approved Agricultural Courses.

2. BSc (Agri) - Agricultural Economics
Required Courses & Suggested Schedule
Year II: Semester III
ECOA 2000: Intermediate Microeconomics
ECOA 3000: Mathematical Economics
MGTA 2002: Marketing
MGTA 2004: Financial Accounting
six credit hours of electives

Year II: Semester IV
ECOA 1001: Principles of Macroeconomics
ECOA 2001: Intermediate Macroeconomics
ECOA 3006: Statistics for Economics and Business
ECOA 4004: Trade
MGTA 2001: Financial Management
three credit hours of electives

Year III: Semester V
ECOA 3002: Agricultural & Food Policy
ECOA 3003: Mathematical Programming
ECOA 3004: Agricultural Markets & Prices
six credit hours of electives

Year III: Semester VI
ECOA 3002: Agricultural & Food Policy
MGTA 3000: Management Accounting
nine credit hours of electives

Year IV: Semester VII
RESM 4005: Project-Seminar for Economics & Business
12 credit hours of electives

Year IV: Semester VIII
RESM 4004: Research Methods for Economics & Business
12 credit hours of electives
Electives must include:
• six credit hours of Languages and Humanities/Social Science courses which cannot be from the ECOA destination and three credit hours of these must be at the 3000 level or above.
• three credit hours of approved Agricultural Courses.

Electives must include:
• six credit hours of Languages and Humanities/Social Science courses which cannot be from the ECOA destination and three credit hours of these must be at the 3000 level or above.
• 12 credit hours of approved Agricultural Courses.

Electives must include:
• six credit hours of Languages and Humanities/Social Science courses which cannot be from the ECOA destination and three credit hours of these must be at the 3000 level or above.
• three credit hours of approved Agricultural Courses.
3. BSc (Agri) - Animal Science

Required Courses & Suggested Schedule

Year II: Semester III
ANSC 2005: Animal Agriculture
CHMA 3000: Organic Chemistry I
GENE 3000: Genetics
PHYS* or STAA 3000*: Introduction to Statistics
three credit hours of electives

Year II: Semester IV
BIOA 2006: Mammalian Physiology
CHMA 3001: Biochemistry
PHYS* or STAA 3000*: Introduction to Statistics
six credit hours of electives

Year III: Semester V
BIOA 3008: Growth, Reproduction and Lactation
NUTR 3000: Animal Nutrition
nine credit hours of electives

Year III: Semester VI
ANSC 3000: Animal Breeding
NUTR 3001: Applied Animal Nutrition
nine credit hours of electives

Year IV: Semester VII
RESM 4002: Animal Science Project-Seminar I
12 credit hours of electives

Year IV: Semester VIII
RESM 4003: Animal Science Project-Seminar II
12 credit hours of electives

Electives must include:
- six credit hours of Languages and Humanities/Social Science courses of which three credit hours must be at the 3000 level or above.
- nine credit hours of approved Agricultural Courses.
- 12 credit hours of approved Animal Science electives at the 3000 or 4000 level from the following list:
  - ANSC, 3001, 3002, 3003, 3004, 3005, 4000, 4003, 4004, 4005, 4006, 4007, 4008, 4009
  - AQUA 3000, 4000, 4001
  - BIOA 3004, 3005, 3006, 4000, 4001, 4003, 4004
  - GENE 3001, 4000
  - NUTR 3002, 4000
  - SPEC 4000

Year III: Semester VI
ANSC 3000: Animal Breeding
AQUA 3000: Fish Health
APSC 3013: Aquacultural Systems Technology
NUTR 3002: Fish Nutrition** or elective (three credit hours)
three credit hours of electives

Year IV: Semester VII
AQUA 4000: Shellfish Production***
RESM 4010: Aquaculture Project-Seminar I
nine credit hours of electives

Year IV: Semester VIII
AQUA 4001: Shellfish Production***
RESM 4011: Aquaculture Project-Seminar II
nine credit hours of electives

* Students must complete either PHYS 1000 or PHYS 1002. If PHYS 1000/1002 is done in semester I, then STAA 3000 will be done in semester II. If STAA is done in semester I, then PHYS 1000 or PHYS 1002 will be done in semester II.

** Students must complete either NUTR 3000 or NUTR 3002.

*** Students must complete either MGT 1000 or MGT 2002 or MGT 2004

4. BSc (Agri) - Aquaculture

Required Courses & Suggested Schedule

Year II: Semester III
AQUA 2000: Introduction to Aquaculture
CHMA 3000: Organic Chemistry I
GENE 2000: Genetics
PHYS* or STAA 2000: Introduction to Statistics
three credit hours of electives

Year II: Semester IV
CHMA 3001: Biochemistry
APSC 3004: Aquacultural Environment
MCRA 2000: Microbiology
PHYS*: Physics
STAA 2000*: Introduction to Statistics
three credit hours of electives

Year III: Semester V
BIOA 3005: Physiology of Aquatic Animals
BIOA 3006: Aquatic Ecology
NUTR 3000: Animal Nutrition** or elective (three credit hours)
six credit hours of electives

Year III: Semester VI
AQUA 3000: Fish Health
APSC 3013: Aquacultural Systems Technology
NUTR 3002: Fish Nutrition** or elective (three credit hours)
three credit hours of electives

Year IV: Semester VII
AQUA 4000: Shellfish Production***
RESM 4010: Aquaculture Project-Seminar I
nine credit hours of electives

Year IV: Semester VIII
AQUA 4001: Shellfish Production***
RESM 4011: Aquaculture Project-Seminar II
nine credit hours of electives

* Students must complete the combination of PHYS 1000 or PHYS 1002 and STAA 2000 in year II. If PHYS 1000/1002 is done in semester I, then STAA 3000 will be done in semester II. If STAA is done in semester I, then PHYS 1000 or PHYS 1002 will be done in semester II.

** Students must complete either NUTR 3000 or NUTR 3002.

*** Students must complete either MGT 1000 or MGT 2002 or MGT 2004

5. BSc (Agri) - Environmental Sciences

Required Courses & Suggested Schedule

Year II: Semester III
CHMA 3000: Organic Chemistry I
ENVS 2000: Environmental Studies I
SOIL 2000: Introduction to Soil Science
STAA 2000: Introduction to Statistics
three credit hours of electives

Year II: Semester IV
CHMA 3001: Biochemistry or CHMA 3009: Environmental Chemistry
ENVS 2001: Environmental Studies II
MCRA 2000: Microbiology
STAA 3000: Introduction to Planned Studies: Surveys & Experiments
three credit hours of electives

Year III: Semester V
BIOA 3001: Ecology
CHMA 3010: Bio-Analytical Chemistry or
ENVS 4000: Geographic Information Systems (GIS)
ENVS 3001: Environmental Sampling & Analysis
PHYS 1000: Physics for the Life Sciences** or
PHYS 1002: Physics I or three credit hours of electives
three credit hours of electives

Year III: Semester VI
ENVS 3002: Waste Management & Site Remediation
PHYS 1000: Physics for the Life Sciences I** or
PHYS 1002: Physics I or three credit hours of electives
nine credit hours of electives

Year III: Semester VII
ENVS 3004: Principles of Pest Management
ENVS 4000: Air, Climate and Climate Change
HORT 3000: Environmental Processes & Natural Landscape Functions
RESM 4006: Environmental Sciences Project Seminar I
three credit hours of electives

Year IV: Semester VIII
ENVS 3000: Environmental Impact Assessment
RESM 4007: Environmental Sciences Project-Seminar II
nine credit hours of electives
Physics - Students must complete either PHYS 1000 or STAA 2000 but not both for credit.

Within the Environmental Sciences major, students may select any one of the following areas of specialization:

• Environmental Biology
• Environmental Chemistry
• Environmental Soil Science
• Pest Management
• Water Management

Interested students are to consult with the academic advisor.

Electives must include:

• six credit hours of Languages and Humanities/Social Science courses of which three credit hours must be at the 3000 level or above.
• Students who complete CHEM 3010 must include six credit hours of approved Agriculture electives. Students who complete ENV A 3005 must include three credit hours of approved Agriculture electives.

6. BSc (Agr) - Integrated Environmental Management

Required Courses & Suggested Schedule

Year II: Semester III
APSC 2002: Bioresource Systems Analysis
APSC 2011: Technology for Precision Agriculture
PHYS 1000: Physics for Life Sciences I* or STAA 2000: Introduction to Statistics* three credit hours of electives

Year II: Semester IV
APSC 1003: Practices & Mechanics of Materials
ENGN 2014: Bioresource Processing
PHYS 1000: Physics for Life Sciences I* or STAA 2000: Introduction to Statistics* three credit hours of electives

Year III: Semester V
APSC 2013: Machinery & Building Technology
APSC 3020: Energy Production & Utilization
ENV A 3021: Ecohydrology six credit hours of electives

Year III: Semester VI
ENGN 3016: Engineering Economy
ENV A 3002: Waste Management & Site Remediation
STAA 2000: Introduction to Statistics or three credit hours of electives

Year IV: Semester VII
APSC 4006: Wastewater Management
RESM 4009: Plant Science Project Seminar II nine credit hours of electives

Year IV: Semester VIII
RESM 4001: Bio-Environmental Systems Management Project Seminar I nine credit hours of electives

Electives must include:

• six credit hours of Languages and Humanities/Social Science courses of which three credit hours must be at the 3000 level or above.

7. BSc (Agr) - Plant Science

Required Courses & Suggested Schedule

Year II: Semester III
BIOA 2000: Cell Biology or BIOA 2001: Cell Biology Laboratory
BIOA 2002: Plant Genetics
CHMA 2000: Organic Chemistry I
GENE 2000: Genetics
SOIL 2005: Introduction to Soil Science

Year II: Semester IV
BIOA 2002: Plant Physiology
BIOA 2004: Structural Botany
CHMA 3001: Biochemistry
MCRA 2000: Microbiology three credit hours of electives

Year III: Semester V
BIOA 2000: General Entomology
BIOA 3002: Weed Science
STAA 2000: Introduction to Statistics or three credit hours of electives

Year III: Semester VI
BIOA 2005: Principles of Plant Pathology
RESM 4010: Plant Science Project Seminar I or SOIL 3005: Soil Fertility & Nutrient Management or three credit hours of electives
STAA 2000: Introduction to Statistics or three credit hours of electives

Year IV: Semester VII
PLSC 4002: Plant Ecophysiology
RESM 4009: Plant Science Project Seminar II nine credit hours of electives

Year IV: Semester VIII
SOIL 3005: Soil Fertility & Nutrient Management or three credit hours of electives
12 credit hours of electives

Electives must include:

• six credit hours of Languages and Humanities/Social Science courses of which three credit hours must be at the 3000 level or above.

C. Diploma in Engineering

The first two years of the Bachelor of Engineering program may be completed in the Faculty of Agriculture. After the first two year students will receive the Diploma in Engineering and may progress into the upper years of Engineering in the Faculty of Engineering.

Required Courses & Suggested Schedule

Year 1 Semester I
BIOA 1030: Biology for Engineers
CHMA 1000: General Chemistry I
ENGN 1001: Engineering Design I
MTHA 1001: Introduction to Calculus I
PHYS 1002: Physics I

Year 1 Semester II
CHMA 1001: General Chemistry II
CSCA 1000: Computer Science
ENGN 1006: Engineering II
MTHA 1001: Introduction to Calculus II
MTHA 3000: Applied Linear Algebra

PHYS 1003: Physics II
Faculty of Agriculture

E. Minors

1. Minor in Agricultural Business

18 credit hours to include:

• MGMT 2002: Marketing
• MGMT 2003: Financial Management

12 credit hours of additional courses approved by the Business & Social Sciences Department Head

Students may count a maximum of nine credit hours of MSTA or ECOA courses from their major towards their minor (ECOA 1000 excluded). Interested students need the approval of the department head and should consult the department.

2. Minor in Agricultural Chemistry

15 credit hours of chemistry courses including:

• CHMA 2000: Organic Chemistry I
• CHMA 3003: Advanced Integrated Chemistry Laboratory I
Nine credit hours of courses approved by the Department of Environmental Sciences.
Students may not select courses which are required for their major.

3. Minor in Agricultural Economics
18 credit hours chosen from the following, in consultation with the Agricultural Economics advisor:
- ECOA 1001: Principles of Microeconomics
- ECOA 2003: Principles of Macroeconomics
- ECOA 3000: Microeconomics

Students may not select courses which are required for their major. Students should consult the Department for selection of appropriate courses.

4. Minor in Animal Science
18 credit hours of courses approved by the Animal Science advisor.

Students may count a maximum of nine credit hours of MGTA or ECOA courses from their major towards their minor (ECOA 1000 excluded). Interested students need the approval of the department head and should consult the department for additional information.

5. Minor in Animal Welfare
18 credit hours including:
- ANSC 3002: Domestic Animal Behavior
- ANSC 3005: Animal Welfare
- ANSC 4009: Directed Study in Animal Sciences (can be used for the minor if the topic is within the area of animal welfare science)
- BIOA 3004: Environmental Physiology
- BIOA 4004: Animal Adaptation & Stress
- PHLA 3000: Environmental & Agricultural Ethics
- RESM 4XXX: Project Seminar I & II (can together count as one course towards the minor if the research project is conducted in the field of animal welfare science)

Students may select up to nine credit hours to count towards the minor as well as the major.

6. Minor in Aquaculture
18 credit hours chosen from the following, in consultation with the Aquaculture advisor:
- AQUA 2000: Introduction to Aquaculture
- AQUA 3000: Fish Health
- AQUA 4000: Fish Production
- AQUA 4001: Shellfish Production
- BIOA 3005: Physiology of Aquatic Animals
- BIOA 5006: Aquatic Ecology
- APSC 2013: Aquacultural Systems Technology
- NUTR 3002: Fish Nutrition

Students may select up to nine credit hours to count towards the minor as well as the major.

7. Minor in Environmental Sciences
15 credit hours including:
- ENV A 2000: Environmental Studies I
- ENV A 2001: Environmental Studies II

Nine credit hours of courses approved by the Department of Environmental Sciences.

Students may not select courses which are required for their major.

8. Minor in Food Science & Technology
15 credit hours including:
- CHMA 2003: Food Chemistry I
- FOOD 3000: Food Quality Assurance
- MTHA 2000: Microbiology

Three credit hours chosen from the following:
- ANSC 3003: Eggs & Dairy Products
- ANSC 4004: Meat Science
- CHMA 3007: Food Chemistry II** or
- CHMA 3008: Intermediate Food Chemistry**
- CHMA 4001: Directed Studies in Chemistry
- FOOD 3001: Functional Foods & Nutraceuticals
- FOOD 4000: Directed Studies in Food & Bioprocess Science

* Students may not select courses which are required for their major. However, if MCRE 2000 is required in a student’s major, an additional elective must be selected from the list above.
** Either CHMA 3007 or CHMA 3008, but not both, can count towards the minor.

9. Minor in Genetics & Molecular Biology
18 credit hours including:
- BIOA 2000: Cell Biology or
- BIOA 2001: Cell Biology Laboratory
- GENE 3000: Genetics
- MTHA 3000: Introduction to Molecular Genetics

Nine credit hours selected from the following:
- ANSC 3000: Animal Breeding
- GENE 1001: Population & Quantitative Genetics
- GENE 4000: Molecular Applications to Animal Production
- GENE 4003: Biotechnology
- GENE 4004: Lab Techniques in Genetics
- PLSC 4000: Plant Breeding
- RESM 4XXX: Project Seminar I & II can together count as one course toward the minor if the research project is conducted within the field of genetics and molecular biology.

Students are encouraged to select courses that can count toward this minor as well as toward their major.

10. Minor in Mathematics
15 credit hours including:
- MTHA 3000: Advanced Calculus
- MTHA 3001: Differential Equations
- MTHA 3002: Applied Linear Algebra
- STAA 3000: Introduction to Statistical Methods
- STAA 3001: Introduction to Planned Studies: Surveys & Experiments
- STAA 4000: Intermediate Statistical Methods
- STAA 4001: Computer Science
- STAA 4002: Data Structures & Numerical Methods
- ECOA 3000: Mathematical Economics
- ECOA 3003: Mathematical Programming
- ECOA 3004: Statistics for Economics & Business
- PHYS 1001: Physics for Life Sciences II
- PHYS 1003: Physics III

11. Minor in Pest Management
15 credit hours including:
- ENV A 3000: Principles of Pest Management
- MCRE 2000: Microbiology

Nine credit hours from the following:
- BIOA 2000: Principles of Plant Pathology
- BIOA 3002: General Entomology
- BIOA 3003: Weed Science
- BIOA 4001: Plant-Microbe Interactions
- ENVA 4002: Economic Entomology
- ENVA 4003: Advanced Plant Science

* If MCRE 2000 is required in a student’s major an additional elective must be selected from the list above.

Students may not select courses which are required for their major. Students in the Plant Science major are required to take 12 credit hours of the courses listed above for their major, they will only be required to complete the additional 12 credit hours to be granted the Minor in Pest Management.

Students should see the academic advisor in the Environmental Science Department for selection of appropriate courses.
12. Minor in Plant Science
15 credit hours of approved Plant Science courses (see Plant Sciences section, page 99)
Students cannot select courses which are required for their major. Students should see the academic advisor in the Plant & Animal Science Department for more information.

Approved Plant Science Courses:
IAGR 1000
PLSC 1000, 2000, 3000, 4000, 4002, 4003, 4004
SPEC 4010, 4011

F. Bachelor of Technology - Environmental Landscape Horticulture

Required Courses & Suggested Schedule
The Bachelor of Technology Environmental Landscape Horticulture is designed to prepare students for a career in the landscape horticulture profession. It will prepare students to work successfully in the diverse landscape industry or to create their own business within the industry. Years one and two of the program are satisfied by the successful completion of the Diploma of Technology - Managed Landscapes or a two-year landscape-related program approved by the Department of Environmental Sciences. Students who wish to pursue graduate studies should take RESM 4007 and RESM 4008.

Year III: Semester V
BIOA 2000: Plant Diversity
CHMA 1000: General Chemistry I
APSC 3019: Communications Technology
ENV A 2000: Environmental Studies I
HORT 3000: Environmental Processes & Natural Landscape Functions

Year III: Semester VI
ENV A 2000: Environmental Studies II
MOTA 1000: Small Business Entrepreneurship
HORT 2000: Landscape Plant Nursery Management
PLSC 3000: Theory & Practice of Plant Propagation
SOIL 2000: Introduction to Soil Science* or Three credit hours of electives

Year IV: Semester VII
ENV A 2004: Principles of Pest Management
ENV A 4005: Geographic Information Systems (GIS)
HORT 3001: Landscape Project Management
HORT 4000: Urban Trees Management
three credit hours of electives

Year IV: Semester VIII
APSC 3018: Technology Modules
APSC 3015: Irrigation & Drainage or three credit hours of electives
HORT 2003: Design & Construction of Turf Facilities
HORT 3008: Horticultural Therapy
six credit hours of electives
* Students who have not met the Soil Science requirements of the Diploma of Technology - Managed Landscapes will be required to take SOIL 2000.

G. Certificate Programs
Certificate of Specialization in Organic Agriculture
The Certificate of Specialization in Organic Agriculture initiative provides students with an opportunity to specialize in the expanding area of organic agriculture. The Certificate of Specialization in Organic Agriculture enables students to approach agriculture from their area of interest, to know they can be recognized for this accomplishment, and to continue to take other courses in agriculture toward a degree. Any student who has successfully completed four of the eligible agriculture credit courses and has an overall GPA of at least 2.0 in these courses can apply to receive a Certificate of Specialization in Organic Agriculture. Two of the courses may be substituted with approved organic agriculture courses offered by external institutions (see below). A Letter of Permission is required for these alternative courses.

Eligible Courses
AGRI 2000: Transition to Organic Agriculture
AGRN 2000: Organic Field Crop Management
ANSC 2004: Organic Livestock Production
ENV A 2002: Composting and Compost Use

Note: Students will not be required to take the courses in any particular order. AGRI 2000, ENV A 2002, and HORT 2001 are currently offered in the Fall semester; AGRN 2000 and ANSC 2004 are currently offered in the Winter semester.

All courses in the Certificate of Specialization in Organic Agriculture program are offered only through web-based distance education. Other institutions offering web-based courses that are approved for the certificate program:

- McGill University (Organic Soil Fertilization)
- University of Laval (French translation of courses AGRI 2000, AGRN 2000, ANSC 2004, and ENV A 2002)*
- University of British Columbia (Key Indicators of Agroecosystem Sustainability)
- University of Guelph (Organic Marketing)
- University of Manitoba (Organic Crop Production on the Prairies)
- University of Saskatchewan (Weed Control in Organic Agriculture)

* A student cannot receive credit for the same course in both French and English.

Certificate in Technology Education
The Certificate in Technology Education Program is intended to up-grade and diversify the technology background of Technology Education teachers presently working in Nova Scotia schools. It is approved in Nova Scotia by the Minister of Education for teaching license upgrading. This program is an innovative collaboration between the Faculty of Agriculture and Nova Scotia’s Technology Education Teachers Association, the Nova Scotia Department of Education, and Acadia University. The program provides a variety of hands-on experiences and teaching methodologies that strengthen traditional skills and introduce new technologies to better meet the demand for qualified technology educators for the public school system.

Instruction is conducted outside regular school hours, in evening or summer sessions. Students must complete 30 credit hours of approval courses with a cumulative GPA of 2.0. Twenty four credit hours must be from the Faculty of Agriculture course list; the remaining six credit hours are teaching methodology courses offered by Acadia University. The program must be completed in a maximum of six years. Courses can be taken in any sequence. The offering of this program is subject to and sufficient enrolment.

Required Courses (eight required)
ENCN 1001: Engineering Design I
APSC 1003: Practicum and Mechanics of Materials
APSC 1004: Wood Construction Technology
APSC 1005: Metal Construction Technology
APSC 2000: Environmental Impacts and Resource Management
APSC 2005: Fluid Power Technology
APSC 2008: Digital Electronics and Computer Interfacing
APSC 3001: Engineering Measurements and Controls
APSC 3013: Technology Modules
APSC 3019: Communications Technology

Acadia Courses
EDUC 3015: Problems in Education: Technological Education and Sustainability
EDUS 5873: Technology & Curriculum: Technology Studies

Note: It is the responsibility of individual teachers to ensure that they comply with the requirements of the NS Department of Education for continuing education and upgrades. For more information, see certification.ednet.ns.ca/ approval_upgrading.shtml.
H. Diploma in Technology - Business Management

The Diploma in Technology - Business Management is a program designed to provide the fundamentals of business management and at the same time allow students to concentrate in one of the following areas: Agriculture, Dairy Farming, Equine Studies, Greenhouse and Nursery, or Pet Studies. This two-year diploma provides students with the management, communication, and leadership skills necessary to manage a business such as a farm, a stable, or a pet related or greenhouse and nursery retail operation. Careers in marketing, sales, or service are other options.

This diploma is a unique mix of technical-credit courses and courses designated as workplace readiness courses (non-credit). The workplace readiness courses develop the practical skills and knowledge required to work in business and in the areas of concentration. The workplace readiness courses common to all the options include: career preparation, public speaking, first aid, Occupational Health and Safety (OHS), Workplace Hazardous Materials Information System (WHMIS), business ethics, and professionalism. Specialty workplace readiness courses are specific to the area chosen, e.g., Hazard Analysis and Critical Control Point (HACCP) and livestock medicines for the dairy farming and Agriculture options. Some of those courses will be scheduled throughout the semester, and others will be offered at the beginning of the semester. Students may be required to bring protective clothing and footwear, depending on the options chosen.

Some of the options - Pet Specialty, Agriculture, and Greenhouse and Nursery - have an internship requirement for the spring and summer semesters. Students will be expected to obtain employment in their area of specialty and complete a designated list of competencies. The employer will be expected to complete an assessment of the student's performance. See the course descriptions for more details.

Pathway to Bachelor of Science (Agriculture) Major In Agricultural Business Degree

Students who graduate from the Diploma in Technology Business Management program have the option of continuing their studies in the Bachelor of Science (Agriculture) program. Students who graduate from the Diploma in Technology Business Management program are awarded a minimum of 30 credit hours toward the BSc (Agriculture) degree, provided all other program requirements are met. In addition, in consultation with the academic advisor, DBM students may identify additional elective courses that are available to transfer for credit towards the BSc (Agriculture) program. Diploma in Technology Business Management students interested in exploring or developing a pathway to the BSc (Agriculture) are strongly encouraged to meet with their academic advisor early in their program.

Diploma in Technology - Business Management Concentrations

1. Agriculture

Students planning to operate/manage a farm or who wish to work in the agricultural industry in sales or service should choose this specialization. Along with the primary emphasis on business, students can choose among a number of livestock, field crop, or horticulture electives to develop a program best suited to their long-term career interests.

Required Courses

Year I Semester I
ACAD 0020: Skills for Academic Success*  
ANSC 0112: Animal Biology and Management or  
PLSC 0100: Utilization of Plant Resources  
ECOS 0100: Introductory Microeconomics  
EGLA 0101: Writing For Business  
MTHA 0100: Business Math  
MGTA 0100: Accounting  
SOIL 0100: Principles of Soil Science

Year I Semester II
CMMT 0020: Career and Employment Skills*  
MGTA 0011: Applied Accounting & Taxation  
MGTA 0014: Small Business Entrepreneurship  
SOIL 0200: Soil Management  
Elective**  
Elective**  
Elective**

Year I Semester III (Spring/Summer)
INTA 0100: Internship

Year I Semester IV
APSC 0200: Environmental Management  
MGTB 0020: Business Leadership, Ethics, and Professionalism*  
MGTA 0024: Financial Management  
MGTA 0026: Marketing  
Elective**  
Elective**  
Elective**

Year I Semester V
CMMT 0021: Introduction to Public Speaking*  
ECOS 0202: Production Economics  
FOOD 0020: Topics in Agriculture and Food Enterprise Management*  
MGTB 0030: Business Law  
MGTB 0031: Business Project  
MGTB 0032: Human Resource Management  
Elective**  
Elective**

Required Workplace Readiness certificates:

WHMIS, First Aid, OHS, Farm Safety, On-farm HACCP or QA, Livestock Medicines course (for students interested in livestock production)  
* Workplace Readiness course  
** Students can select elective courses from a number of areas (both degree and diploma, provided prerequisites are met) including agronomy, horticulture, and animal science. Distance Education courses on specific topic areas such as beef and sheep are also available. ENG/211 Technology in Practice Agriculture is highly recommended for students interested in crop production. Students will need to consult with the Agriculture Program Advisor to assist in the selection of courses best suited to their future career plans.

2. Dairy Farming

This specialization is designed for students interested in a career in the dairy industry, whether it is operating their own dairy farm, working as a herdsperson, or employed in sales or service for the dairy industry.

Required Courses

Year I Semester I
ACAD 0020: Skills for Academic Success*  
ANSC 0200: Dairy Industry I*  
ANSC 0212: Animal Biology and Management  
ECOS 0100: Introductory Microeconomics  
EGLA 0101: Writing For Business  
MTHA 0100: Business Math  
MGTA 0100: Accounting  
SOIL 0100: Principles of Soil Science

Year I Semester II
ANSC 0205: Optimizing Bovine Reproductive and Genetic Performance  
CMMT 0020: Career and Employment Skills*  
MGTA 0011: Applied Accounting & Taxation  
SOIL 0200: Soil Management

Year I Semester III
ANSC 0213: Principles of Dairy Melee and Handling  
ANSC 0214: Animal Food and Nutrition Management  
ANSC 0215: Principles of Agriculture*  
ANSC 0216: Small Business Management  
SOIL 0200: Soil Management  
Elective**  
Elective**  
Elective**

Year I Semester IV
ANSC 0204: Dairy Herd Health and Nutrition Management  
ANSC 0207: Records Management and Decision-making for Dairy Herds  
CMMT 0021: Introduction to Public Speaking*
nursery stock. On bedding plants, manager of a garden centre, and production manager of field cucumbers. Career possibilities include: owner of a greenhouse operation focused on grown nursery stock, and of greenhouse vegetable crops such as tomatoes and production and marketing of ornamental plants including greenhouse- and field-solid business education, this program provides a detailed understanding of the love and at the same time receive a solid business education that is directly transferable to any type of business operation.### 4. Greenhouse and Nursery

This concentration is designed for people who are passionate about plants and would like a business career in a "green" and "growing" industry. Along with a solid business education, this program provides a detailed understanding of the production and marketing of ornamental plants including greenhouse- and field-grown nursery stock, and of greenhouse vegetable crops such as tomatoes and cucumbers. Career possibilities include: owner of a greenhouse operation focused on bedding plants, manager of a garden centre, and production manager of field nursery stock.

**Required Courses**

**Year I Semester I**
- ACAD 0020: Skills for Academic Success*
- ANSC 0117: Companion Animal Growth, Development, and Nutrition
- APSC 0100: Environmental Management
- MGTA 0100: Business Law
- MTHA 0100: Business Math
- MGTA 0101: Accounting
- PLSC 0100: Principles of Soil Science
- SOIL 0100: Principles of Soil Science

**Year I Semester II**
- ANSC 0118: Principles of Animal Welfare and Husbandry
- ANSC 0119: Animal Food and Nutrition Management
- CMMT 0021: Introduction to Public Speaking*
- MGTA 0103: Business Law
- MGTA 0104: Small Business Entrepreneurship
- SOIL 0200: Soil Management

**Year II Semester III**
- ANSC 0116: Companion Animal Development and Nutrition
- ANSC 0124: Equine Health, Genomics and Reproduction
- APSC 0100: Environmental Management
- MGTA 0200: Business Leadership, Ethics, and Professionalism*
- MGTA 0201: Customer Relations Management
- MGTA 0204: Financial Management
- MGTA 0205: Human Resource Management
- MGTA 0206: Marketing
- SOIL 0200: Soil Management

**Year II Semester IV**
- ANSC 0114: Animal Food and Nutrition Management
- ANSC 0120: Small Ruminants and Their Management
- APSC 0100: Environmental Management
- MGTA 0200: Business Leadership, Ethics, and Professionalism*
- MGTA 0201: Customer Relations Management
- MGTA 0204: Financial Management
- MGTA 0205: Human Resource Management
- MGTA 0206: Marketing
- SOIL 0200: Soil Management

**Year III Semester V**
- ANSC 0124: Equine Health, Genomics and Reproduction
- APSC 0100: Environmental Management
- MGTA 0200: Business Leadership, Ethics, and Professionalism*
- MGTA 0201: Customer Relations Management
- MGTA 0204: Financial Management
- MGTA 0205: Human Resource Management

**Required Workplace Readiness certificates:**
- WHMIS, First Aid, OHS, Farm Safety, On-farm HACCP, Dairy Medicines course, Dairy Skills experience**
- **Workplace Readiness course**

**5. Pet Specialty**

This concentration is best suited for students interested in working in the pet industry as either owners or managers of pet-related businesses. Sales and service are other areas of employment, e.g., managing the pet section of a department store or selling pet-care products to other businesses. Along with the business courses, students will study the care and management of small animals, reptiles, and fish.

**Required Courses**

**Year I Semester I**
- ACAD 0020: Skills for Academic Success*
- ANSC 0116: Companion Animal Enterprise
- APSC 0100: Environmental Management
- EGCA 0100: Writing for Business
- MGTA 0100: Business Math
- MGTA 0101: Accounting
- PLSC 0100: Principles of Plant Resources
- SOIL 0100: Principles of Soil Science

**Year I Semester II**
- ANSC 0117: Companion Animal Growth, Development, and Nutrition
- ANSC 0120: Small Ruminants and Their Management
- APSC 0100: Environmental Management
- MGTA 0200: Business Leadership, Ethics, and Professionalism*
- MGTA 0201: Customer Relations Management
- MGTA 0204: Financial Management
- MGTA 0205: Human Resource Management
- MGTA 0206: Marketing
- SOIL 0200: Soil Management
**Elective**

**Year I Semester III (Spring/Summer)**
- INTA 0100: Internship

**Year II Semester IV**
- HORT 0200: Greenhouse & Floriculture Crop Management
- MGTA 0200: Business Leadership, Ethics & Professionalism*
- MGTA 0202: Managing Retail Operations & Physical Resources
- MGTA 0203: Customer Relations Management
- MGTA 0204: Financial Management
- MGTA 0206: Marketing
- PLSC 0200: Plant Propagation

**Required Workplace Readiness certificates:**
- WHMIS, First Aid, OHS, Workplace Safety, HACCP or QA

**Workplace Readiness course**

**Students can select elective courses from a number of areas including**
- Agriculture**
- Animal Health and Safety**
- Aquaculture**
- Environmental Science**
- Environmental Management**
- Equine Science**
- Forestry**
- Horticulture**
- Plant Science**
- Wildlife Management**

**Required Workplace Readiness certificates:**
- WHMIS, First Aid, OHS, Farm Safety, On-farm HACCP, Dairy Medicines course, Dairy Skills experience**
- **Workplace Readiness course**

**Elective**

**4. Greenhouse and Nursery**

This concentration is designed for people who are passionate about plants and would like a business career in a "green" and "growing" industry. Along with a solid business education, this program provides a detailed understanding of the production and marketing of ornamental plants including greenhouse- and field-grown nursery stock, and of greenhouse vegetable crops such as tomatoes and cucumbers. Career possibilities include: owner of a greenhouse operation focused on bedding plants, manager of a garden centre, and production manager of field nursery stock.

**Required Courses**

- MGTA 0200: Business Leadership, Ethics & Professionalism*
- MGTA 0202: Managing Retail Operations & Physical Resources
- MGTA 0203: Customer Relations Management
- MGTA 0204: Financial Management
- MGTA 0206: Marketing
- PLSC 0200: Plant Propagation

**Required Workplace Readiness certificates:**
- WHMIS, First Aid, OHS, Workplace Safety, HACCP or QA

**Workplace Readiness course**

**Students can select elective courses from a number of areas including**
- Agriculture**
- Animal Health and Safety**
- Aquaculture**
- Environmental Science**
- Environmental Management**
- Equine Science**
- Forestry**
- Horticulture**
- Plant Science**
- Wildlife Management**

**Required Workplace Readiness certificates:**
- WHMIS, First Aid, OHS, Farm Safety, On-farm HACCP, Dairy Medicines course, Dairy Skills experience**
- **Workplace Readiness course**

**Elective**

**5. Pet Specialty**

This concentration is best suited for students interested in working in the pet industry as either owners or managers of pet-related businesses. Sales and service are other areas of employment, e.g., managing the pet section of a department store or selling pet-care products to other businesses. Along with the business courses, students will study the care and management of small animals, reptiles, and fish.

**Required Courses**

**Year I Semester I**
- ACAD 0020: Skills for Academic Success*
- ANSC 0116: Companion Animal Enterprise
- APSC 0100: Environmental Management
- EGCA 0100: Writing for Business
- MGTA 0100: Business Math
- MGTA 0101: Accounting
- MGTA 0104: Small Business Entrepreneurship
- CMFT 0020: Career and Employment Skills*
MGTA 0101: Applied Accounting & Taxation
MGTA 0104: Small Business Entrepreneurship
MGTA 0207: Advertising and Promotion

Year I Semester III (Spring/Summer)
GTA 0100: Internship

Year II Semester IV
ANSC 0201: Introduction to Companion Animal Health
ANSC 0212: Companion Animal Genetics and Reproduction
MGTA 0206: Business Leadership, Ethics, and Professionalism*
MGTA 0221: Managing Retail Operations and Physical Resources
MGTA 0203: Customer Relations Management
MGTA 0204: Financial Management

Year II Semester V
ANSC 0208: Biology and Care of Aquarium Fish and Reptiles** or
ANSC 0209: Biology and Care of Pet Birds and Small Mammals**
ANSC 0211: Companion Animal Facilities Management
CMMT 0201: Introduction to Public Speaking*
MGTA 0210: Business Law
MGTA 0211: Business Project
MGTA 0212: Human Resource Management
MGTA 0208: Retail Sales Management
Required Workplace Readiness certificates and experience:
WHMIS, First Aid, OHS, Workplace Safety, Small Animal Work Experience***

I. Diploma in Technology Managed Landscapes

The Diploma in Technology Managed Landscapes is a two-year program which helps prepare students for careers in landscape design, planning agencies, recreational parks, or institutions, or in self-employed roles as landscape horticultural technicians.

The Diploma in Technology Managed Landscapes is fully approved by the International Certification Council (ICC) and the Certification Committee of the Canadian Nursery Landscape Association (CNLA). Interested students may apply for a Passport to Certification that enables modular training and testing toward international recognition as a Certified Horticultural Technician. The curriculum fully encompasses the requirements for certification in various industry sectors. Students who successfully complete the Diploma in Technology Managed Landscapes with a cumulative average of at least 2.0 are eligible for admission to the two-year Bachelor of Technology Environmental Landscape Horticulture program, as seniors one and two of the B Tech Environmental Landscape Horticulture program are satisfied by the successful completion of the Diploma.

Required Courses
Year I Semester I
EGLA 0101: Writing for Business
HORT 0100: Landscape Plants I
HORT 0102: Turfgrass Production and Management
HORT 0103: Landscape Horticulture I
SOIL 0100: Principles of Soil Science

Year I Semester II
BIOA 0101: Plant Physiology and Stress Management
APSC 0101: Horticultural Technology
HORT 0101: Landscape Plants II
HORT 0206: Landscape Maintenance
HORT 0102: Landscape Installations

Year II Semester III
BIOA 0201: Ecology
APSC 0100: Surveying
HORT 0204X: Landscape Plants III
HORT 0207: Arboriculture
HORT 0209: Landscape Horticulture II

Year II Semester IV
BIOA 0101: Plant Pathology
BIOA 0201: Weed Science
HORT 0204Y: Landscape Plants III
HORT 0201: Residential Landscape Design and Construction
SOIL 0209: Soil Management

Required Workplace Readiness certificates:
CMHTE0202 Career and Employment Skills
CMHTE0201 Introduction to Public Speaking

J. Diploma in Technology Plant Science

The two-year Diploma in Technology Plant Science program prepares graduates for exciting careers in the dynamic plant-based industries of the future. Emerging information and technology related to bio-energy, nutrition, health, environmental protection, and plant genetics will make a plant science education a valuable asset. This program provides an innovative approach to the production and use of plant resources, with emphasis on responsible environmental and social stewardship, commercialization of ideas and strong practical skills in horticultural or agronomic plant production techniques, entrepreneurship, problem-solving, communication, and decision-making, all built on a solid foundation in the bio-sciences.

Studies begin with a first year of required courses that allow students to build their knowledge in the bio-sciences, plant production, and business, and to develop their interests. The program then provides the opportunity in the second year to select from a wide variety of courses to give each student the flexibility to match courses to their interests and career goals. With the help of a knowledgeable program advisor, students can choose from courses in edible horticulture, ornamental horticulture, agronomy, plant science, business, or engineering.

Pathway to Bachelor of Science (Agriculture) Major in Plant Science Degree

Students who graduate from the Diploma in Technology Plant Science program have the ability to make significant progress towards the completion of the BSc (Agriculture) major in Plant Science degree program. Students who graduate from the technology program are awarded a minimum of 30 credit hours toward the BSc (Agriculture) degree, provided all other program requirements are met. In addition, in consultation with the Plant Science Technology Academic Adviser, students can identify additional elective courses that will transfer for credit toward the BSc (Agriculture) major in Plant Science degree program. Plant Science students interested in exploring a pathway from the Diploma to the BSc (Agriculture) (are strongly encouraged to meet with their academic adviser early in their program.

Required Courses
Year I Semester I
BIOA 0200: Entomology
EGLA 0101: Writing for Business
MGTA 0100: Accounting
PLSC 0100: Principles of Plant Resources
PLSC 0200: Plant Propagation
SOIL 0100: Principles of Soil Science

Year I Semester II
BIOA 0102: Plant Physiology and Stress Management
BIOA 0101: Plant Pathology
CSCA 0200: Computer Methods
MGTA 0104: Small Business Entrepreneurship
MGTA 0201: Human Resource Management

Semester III and Semester IV
Twenty-four credit hours (six courses in each semester) chosen in consultation with a program advisor. One course (PLSC 0202), if chosen, is taken during the Spring/Summer between Semesters II and III.

Facility of Agriculture
Recommended Electives

The following courses are suggested as electives in the study areas related to the Diploma in Technology: Plant Science. Courses not on the list may also be eligible as electives, if approved by the student and the VT faculty. Students choosing other technical-level courses or degree courses at the 1000 and 2000 level. Consultation with the program advisor is recommended. Many of these courses have prerequisites; it is the student’s responsibility to ensure that these requirements are met.

K. Diploma in Technology Veterinary Technology

The Veterinary Technology (VT) Program prepares graduates with the skills and knowledge required to enter veterinary practice as technical assistants to veterinarians. Veterinary technicians have also made successful careers in a variety of other fields, including the management of animal shelters, research with animals in universities and private companies, sales for veterinary supply companies, and employment with zoos and in wildlife rehabilitation.

The Veterinary Technology Program is a two-year program with four standard semesters and an intersession after the first year. In addition to on-campus learning there are off-campus externships at the Atlantic Veterinary College and in general veterinary practices. To reflect the major employment opportunities in Atlantic Canada, the program is orientated mainly towards companion animals. The medical large-animal content is appropriate for graduates entering mixed practice and for those who wish to further develop their livestock or equine competence. Under the supervision of veterinarians and veterinary technicians in the VT program’s Budding Animal Clinic, students learn the skills and tasks required of them in companion animal practice.

Students in the Veterinary Technology Program must successfully complete 16 credit hours of required courses each academic year (Fall/Winter) to be eligible to continue in the program the following year. Students who do not meet these requirements, or who withdraw for any reason, will need to reapply if they wish to return to the program. They will be considered along with the new pool of applicants and will not have preferential admittance. They must fulfill all orientation and application procedures, and adhere to the February 28 application deadline. Students who wish to return in the winter semester may only do so if there is space in the program, and they are required to supply by December 1.

The Veterinary Technology Program is accredited by the Canadian Veterinary Medical Association. The animal facilities are approved for teaching by the Canadian Council on Animal Care. The Animal Clinic is accredited by the Nova Scotia Veterinary Medical Association.

* Electives must be approved by the Program Coordinator.

IV. Continuing and Distance Education

A variety of courses and programs, including credit and non-credit certificates, online programs, professional development and skills training are offered through Continuing and Distance Education. Our education is outcomes-based, and with formats and scheduling that work for the students. Continuing and Distance Education offers on-site training, including the block release sections of the Farm Technician Apprenticeship Program held in Prince Edward Island.

For information on courses and programs visit dal.ca/agriculture or call (902) 893-6566.

V. Canadian Association of Diploma in Agriculture Programs

The Canadian Association of Diploma in Agriculture Programs (CADAP) is an association of post-secondary, educational institutions offering diploma programs in agriculture. The purpose of the association is to promote excellence in agricultural education. The association provides opportunities for technical students in several of the programs to enroll in another college for one semester of their second academic year. By encouraging participation in the programs of another CADAP institution, another region of Canada, or another country, CADAP provides opportunities for students:

- to broaden their studies
- to become more familiar with another region of Canada, or another country
- to live a different cultural experience, and
- to gain practical experience in another region of Canada or another country.

CADAP offers scholarships to students in diploma programs. For more information please see their website www.cadap.ca.
Any student wishing to do a technical exchange program at another institution must have that program approved. The request should be submitted to the Registrar’s Office by the student’s program advisor or the Department Head. Upon approval of the program, the student will be issued a Letter of Permission detailing which courses will be replaced in the student's program and which courses must be completed at the host institution. The program must be laid out before the student leaves for the exchange institution.

VI. Professional Organizations for Agrologists

Agrology is “the profession of applying science and scientific principles to the business and art of agriculture”. University graduates who are skilled in the science and business of agriculture are encouraged to join their provincial Institute of Agrologists. Provincial Institutes offer the opportunity to get to know and exchange ideas with other professional agrologists in the province and in other parts of Canada through membership in the Agricultural Institute of Canada. Membership in an Institute of Agrologists provides an element of fellowship in the profession, as well as opportunities to attend scientific conferences and educational tours and to receive newsletters and technical publications. Membership in an Institute is required by provincial statute to practice agrology in most provinces.

Academic

I. Undergraduate Degree Level Course Descriptions

ACAD 1050.03: Foundations in Academic Study & Research.

This course introduces participants to university culture and helps them to enhance academic performance. Course experiences build a practical understanding of the learning process at the university level, enabling students to develop strategies to be more effective learners. Topics include performance expectations, conventions of academic critical reading and writing, research methods, academic literature review and analysis, discipline-specific learning strategies, goal setting, and effective use of university resources.

NOTE: Fall Semester

FORMAT: Lecture 3 hours

II. Technology Level Course Descriptions

ACAD 0020.00: Skills for Academic Success.

The objective of this course is to facilitate the successful transition from high school or the workplace to university life. This course will expose students to the functions of various student services on campus, encourage the development of good study skills, and explore the life management skills necessary to achieve success at university.

NOTE: Fall Semester – This is a Workplace Readiness course required for the Diploma in Business Management.

FORMAT: Lecture 1 hour per week.

ACAD 0021.00: University Study Skills.

This course provides students with the skills they need to be successful university students, including note taking, textbook reading, exam taking, and time management skills. The course will introduce students to the resources available on campus and will help them understand their learning styles and strengths. Students in this course will learn how to balance their commitments and use their study time efficiently. It provides an essential bridge for students coming to university directly from high school, as well as an important refresher for students who have had a break in their studies.

NOTE: Fall and Winter semesters

FORMAT: Lecture (six two-hour sessions).
Agriculture

I. Undergraduate Degree Level Course Descriptions

AGRI 1000.03: Agricultural Ecosystems (A).
This course is an introduction to agriculture and food systems. The principles of agricultural production as studied in the disciplines of animal science, plant science, agricultural engineering, and soil science will be integrated to give a comprehensive view of agricultural ecosystems. Course work will include lectures, laboratories, problem-solving exercises, and small-group work. There will be a farm tour for all AGRI 1000 students on September 19, 2012, from 1 pm until 7 pm. The course will expose students to issues and raise questions to be considered during the remainder of their undergraduate careers. The goals of this course are to provide students with knowledge of the application of science to agriculture, and to assist students to understand the integrated nature of agriculture and food systems in both regional and global contexts. Associated course goals are to develop communication and independent learning skills and the ability to function effectively in teams, situations, and to stimulate students to think critically, logically, and quantitatively while respecting the values and ideas of others.
NOTE: Fall semester
FORMAT: Lecture 3 hours, lab and/or tutorial 2 hours per week.

AGRI 2000.03: Transition to Organic Agriculture (A).
This course is recommended for students looking for a general introduction to organic agriculture. The course consists of five stand-alone modules: Why organic?, Organic Certification, Planning the Farm System, Transition to Organic Crop Production, and Transition to Organic Livestock Production. Throughout the course students will be encouraged to participate in discussion groups and use the organic information resources currently available over the Internet.
NOTE: Fall semester
FORMAT: DE—only offered as a web-based distance education course.

AGRI 3001.03: Issues in Agricultural Health and Safety (A, H).
This course is a series of ten online modules on Agricultural Health & Safety designed for agricultural students, farm managers and owner-operators, and anyone else who wishes to obtain a better understanding of the health and safety issues present on Canadian farms. The course describes the health and safety situation and the major health and safety risks in the agriculture industry, and highlights the importance of improving the current situation.
NOTE: Fall or Winter semester
FORMAT: DE—only offered as a web-based distance education course.
PREREQUISITE: Third-year standing

AGRI 4000.03: Contemporary Issues in Agriculture (A).
This course allows senior students in all disciplines to discuss current topics of interest to agricultural professionals. These topics could include soil degradation, integrated pest management, antibiotics in feed, the occupation of farming, animal welfare, etc. Students will be given weekly required readings.
NOTE: Fall semester. This course has limited enrollment.
FORMAT: 3-hour seminar weekly.
PREREQUISITE: Third- or fourth-year standing

Agronomy

I. Undergraduate Degree Level Course Descriptions

AGRN 2000.03: Organic Field Crop Management (A). DE.
This course will introduce students to organic principles and practices applied to the production and management of field crops. The criteria for optimum yield and quality of field crops are presented within the context of organic farming principles, sustainable soil and nutrient management, and the requirements for organic certification. Five stand-alone modules provide a framework for study:*Soil and Field Management Practices: methods used in organic farming to build and maintain soil fertility, preserve soil structure, conserve and recycle nutrients, reduce weed pressure, and reduce outbreaks of pests and diseases.*Nutrient Management Planning: how to optimize the efficiency of nutrient cycling, improve resource utilization, and minimize nutrient loss on the farm.*Forage: organic methods of production for pasture, hay, silage, cover crops, or grain; manure.*Row Crops: organic methods of production of cereal row crops (corn, soybean, root crops); outdoor potatoes, cucurbits, and others.*Grains (spring wheat, winter wheat, winter rye), spring-seeded grains (spring wheat, oats, and barley); cereals (canna, flax), and others.
NOTE: Winter semester
FORMAT: DE—only offered as a web-based distance education course.

This course takes a systems approach to the study of crop and soil management in rotations involving the growing of the principal cereals, oilseeds, pulses, and other grains, and their relationship to other crops in a rotation. Through a whole-farm approach over time, it studies environmentally and economically sustainable methods for grains cash crops and grain-based animal feed production. It stresses soil and water conservation and an understanding of the principles and processes of the nutrient cycles, which are critical to improving the food production environment. Students will gain knowledge of grains as they relate to people and the environment, from soil to shelf, both in a Maritime temperate climate and in an international context.
NOTE: Fall semester
FORMAT: Lecture 1 hour, lab 2 hours per week.
CROSS-LISTING: AGRN 0201

Forage crop production, management, and use will be discussed in the context of agricultural ecosystems. Emphasis will be placed on beneficial management practices to reduce negative impacts on the environment while maintaining profitability and sustainability of rural communities. Topics covered will include pastures, hay, and silage, as well as the role of perennial and annual forages in crop rotations.
NOTE: Winter semester
FORMAT: Lecture 1 hour, lab 2 hours per week.
CROSS-LISTING: AGRN 0202

AGRN 2008.03: Potato Production (A).
History, biochemistry, and eco-physiology of the crop are emphasized. Production practices for seed, table, and processing stock and marketing in the Atlantic Provinces are examined. Soil fertility, crop health management strategies, and nutritional qualities and storage are covered in detail. Some commercial operations are visited.
NOTE: Winter semester
FORMAT: Lecture 1 hour, lab 2 hours per week.
PREREQUISITE: Preparatory: AGRN 1000
CROSS-LISTING: AGRN 0200
Animal Science

I. Undergraduate Degree Level Course Descriptions

This course is an introduction to the behaviour, anatomy, nutrition, and history of horses. What behavioral principles underlie horse training? How is their performance influenced by their conformation? What is unique about their digestive system? How do horses evolve? The course will include discussion of sources and treatment of illness and disabilities, and the biology and control of common parasites; demonstrations of English and Western riding (students will not be taught to ride); visits to the Truro Raceway; study of the importance of shearing to the working horse; and exposure to the use of horses as draft animals.
NOTE: Full semester
FORMAT: Lecture/lab 3 hours per week with online component.
PREREQUISITE: second-year standing or equivalent, in any program
CROSS-LISTING: ANSC 0217

ANSC 2004.03: Organic Livestock Production (A) DE.
This course provides information on organic livestock production in general, as well as more detailed analyses of organic beef and sheep, dairy, and swine and poultry production. An in-depth study of organic approaches to livestock health is included. The course is divided into five stand-alone modules: Introduction to Organic Livestock Production, Organic Beef and Sheep Production, Organic Dairy Production, Organic Swine and Poultry Production, and Health Management in an Organic Livestock System. A variety of information delivery methods will be used, including text on the Internet, a printed resource guide, and a CD-ROM with video clips and slide shows. Students will be encouraged to participate in discussion groups and use the organic information resources currently available over the Internet. Evaluation will be based on participation, written assignments, module quizzes, and a final exam.
NOTE: Winter semester
FORMAT: Lecture 3 hours, lab 2 hours.
PREREQUISITE: AGRI 1000

Through a mixture of classroom lectures and exercises at Faculty of Agriculture, Dalhousie, this course will enable students to recognize common breeds of farm animals, to describe livestock production cycles and methods, and to understand the place of farm animals in the world food system. The course will provide introduction to subject matter covered in more senior animal science courses, such as nutrition, reproduction, behavior and welfare, animal anatomy, and environmental physiology. The interaction of livestock production with our environment will be examined.
NOTE: Full semester
FORMAT: Lecture 3 hours, lab 2 hours.
PREREQUISITE: AGRI 1000

ANSC 2006.03: Equine Health, Genetics and Reproduction.
Students examine in detail the processes of reproduction and lactation in horses, as well as the requirements for care and management of the mare during breeding, parturition, and lactation. Students also study the growth and development of the foal and the requirements for the care of the foal. The common breeds of horses

II. Technology Level Course Descriptions

AGRN 0200.02: Potato Production.
History, biosystematics, and eco-physiology of the crop are emphasized. Production practices for seed, table, and processing stock and marketing in the Atlantic Provinces are examined. Soil fertility, crop health management strategies, and nutritional qualities and storage are covered in detail. Some commercial operations are visited.
NOTE: Winter semester
FORMAL: Lecture 3 hours, lab 2 hours per week.
CROSS-LISTING: AGRN 0200

AGRN 0201.02: Cereal-Based Cropping Systems.
The course takes a systems approach to the study of crop and soil management in rotations involving the growing of the principal cereals, oats, barley, peas, and other grains, and their relationship to other crops in a rotation. Through a whole-farm approach over time, students will develop environmentally and economically sustainable methods for grain cash crops and grain-based animal feed production. The course will stress soil and water conservation and an understanding of the principles and processes of the nutrient cycles, which are critical to improving the food production environment. Students will gain knowledge of grains as they relate to people and the environment, from soil to shelf, both in a Maritime temperate climate and in an international context.
NOTE: Full semester
FORMAT: Lecture 3 hours, lab 2 hours per week.
CROSS-LISTING: AGRN 0201

AGRN 0202.02: Forage-Based Cropping Systems.
The second course in cropping systems focuses on the forage crops. Students will acquire the basic knowledge and skills for the management of forage crops within cropping systems in a socially and environmentally responsible manner. Soil and water conservation will be emphasized in the context of production agriculture. Production and management for sustainable yields of forage crops under conditions specific to Atlantic Canada will be emphasized. Students will develop investigative and critical thinking skills to evaluate forage publications and enable them to address production challenges as they arise.
NOTE: Winter semester
FORMAT: Lecture 3 hours, lab 2 hours per week.
CROSS-LISTING: AGRN 0202
and the genetics of coat colour, conformation, and performance potential will be discussed. The course will enable students to evaluate the genetic merit of sire and dam, and to plan matings and genetics strategies to meet the genetic goals of their particular operation. Students will obtain a basic knowledge of health care and disease prevention, and be able to address issues relating to biosecurity.

NOTE: Fall semester
FORMATT: Lecture 3 hours, lab 2 hours.
PREREQUISITE: ANSC 2002
CROSS-LISTING: ANSC 5214

ANSC 2007.03: Beef Production and Management (A).
This course will focus on the management of commercial beef farms, ranging from cow/calf to stocker/finisher operations. Components of breeding, nutrition, and behaviour will be discussed. A systems approach to the management of the farm will be undertaken. The role of the manager in optimizing production is an important component. A historical perspective on the Atlantic beef industry along with an overview of emerging trends will be part of the course. Key beef industry issues such as the impact of BSE, animal welfare, and beef marketing will be discussed.

NOTE: Fall semester
FORMATT: Lecture 3 hours, lab 2 hours.
PREREQUISITE: ANSC 2005 or ANSC 5210
CROSS-LISTING: ANSC 5218

ANSC 3000.03: Animal Breeding (A).
The course covers variation in animal performance and the techniques whereby genetic superiority can be recognized and improved. Goals and programs of improvement are discussed with reference to commercial farm species. The emphasis is on programs in current use but applications of new technologies are included. Labs deal primarily with data collection, analysis, and computer applications.

NOTE: Winter semester
FORMATT: Lecture 3 hours, lab 2 hours.
PREREQUISITE: GENE 2000, STAT 2000

ANSC 3001.03: Animal Health (A).
This course seeks to impart an understanding of animal health and its importance in livestock production enterprises. Students are taught to recognize signs of health and illness and to understand the principles and practices of disease prevention and treatment. Common infectious and non-infectious diseases and illness common in Atlantic Canada are studied. The need for veterinary collaboration is emphasized, and the circumstances in which referral should be sought are discussed.

NOTE: Winter semester
FORMATT: Lecture 3 hours, lab 2 hours.
PREREQUISITE: MCRK 2000

ANSC 3002.03: Domestic Animal Behaviour (A).
This course studies the behaviour of farm animals and presents information that is relevant to the care and management of animals. Topics covered include domestication, animal communication, social behavior, reproduction and sexual behavior, development of behavior, genetics of behavior, and the influence of management systems and practices on behavioral characteristics. Considerable attention is also given to welfare issues in animal agriculture.

NOTE: Fall semester
FORMATT: Lecture 3 hours, lab 2 hours.
PREREQUISITE: Biologia 2000 or Biologia 2005

ANSC 3003.03: Eggs and Dairy Products (A).
This course deals with the nature and composition of eggs and milk, and their products such as cheese and yogurt, by-products, processing, and storage.

NOTE: Fall semester
FORMATT: Lecture 2 hours, lab 2 hours

ANSC 3004.03: Meat Science (A).
This course covers growth of meat animals and the nature of muscle, bone, and fat; conversion of muscle to meat; quality and grading of fresh meat; by-products, meat processing, meat products, and by-products.

NOTE: Winter semester
FORMATT: Lecture 2 hours, lab 2 hours

ANSC 3005.03: Animal Welfare (A).
This course deals with the well-being of animals, with emphasis on farm animals. Issues include what we mean by animal welfare, what the animal welfare issues are in modern agriculture and in modern society, and how we use ethology and physiology to assess animal welfare. The course outlines the international efforts to improve farm animal welfare. There is a term project in which students attempt to assess animal welfare in a particular farm (or other) environment, and all students will participate in class debates on current issues in animal welfare.

NOTE: Winter semester
FORMATT: Lecture 3 hours, lab 2 hours.
PREREQUISITE: At least third-year standing

ANSC 3006.03: Companion Animal Biology.
This course allows students to gain insight into the genetic, physiological, and behavioral characteristics of companion animals. Students will be introduced to responsible pet ownership and the importance of spaying and neutering. The course will cover topics such as the biology of companion animals, the effects of nutrition on health, and the importance of exercise and play in promoting animal well-being.

NOTE: Winter semester
FORMATT: Lecture 3 hours, lab 2 hours. Offered in alternate years; next offered in 2014/2015.
PREREQUISITE: Biologia 2000, GENE 2000

ANSC 4003.03: Avian Production Systems (A).
This course will focus on the management of commercial poultry, poultry genetics, nutrition, and disease prevention. The course will cover aspects of poultry production including nutrition, management, breeding, housing, health, and disease prevention. A systems approach to the management of animal facilities.

NOTE: Winter semester
FORMATT: Lecture 3 hours, lab 3 hours. Offered in alternate years; next offered in 2014/2015.
PREREQUISITE: ANSC 2005, NUTR 1000

ANSC 4004.03: Ecology of Milk Production in Ruminants (A).
Milk is a highly priced food, the efficient forage-based production of which has been a major economic phenomenon for humanity. Four main species — cattle, buffalo, goats and sheep — have been selected to produce milk for humans. All are from the Bovidae Family (Suborder Ruminantia) of ruminants. Cows are the main source of milk for humans. Dairy cows, milk production, feeding, management, and the genetics of coat colour, conformation, and performance potential will be discussed.

NOTE: Winter semester
FORMATT: Lecture 3 hours, lab 3 hours. Offered in alternate years; next offered in 2014/2015.
PREREQUISITE: ANSC 2005

ANSC 4005.03: Swine Science and Pork Production (A).
This course will focus on the management of commercial pork production. The course will cover aspects of pork production including nutrition, management, breeding, housing, health, and disease prevention. The course will cover topics such as the biology of swine, the genetics of swine, swine feeding, and the importance of these for management of animal facilities.

NOTE: Fall semester
FORMATT: Lecture 3 hours, lab 3 hours.
PREREQUISITE: ANSC 2005, GENE 2000

ANSC 4006.03: The Science of Modern Sheep Farming (A).
Sheep are among the first animals to be domesticated and since then, sheep have been bred for different roles: wool, meat, milk. In the Maritimes, the importance of sheep in the rural economy is on the increase. This course will guide students through the science of sheep production. Nutrition, parasite management, breeding, housing, health and sheep marketing will be discussed. The traditional roles of sheep have included as the topic permits. Laboratory sessions will cover aspects of sheep management such as wool production, nutrition, parasite control, and sheep mating and genetics.

NOTE: Winter semester
FORMATT: Lecture 3 hours, lab 3 hours.
PREREQUISITE: Biologia 2000, GENE 2000

ANSC 5006.03: The Science of Modern Dairy Farming (A).
Dairy farming is a major economic activity in many countries. This course will focus on the management of commercial dairy farms, including nutrition, management, breeding, and disease prevention. The course will cover topics such as the biology of dairy cows, the genetics of dairy cows, and the importance of these for management of animal facilities.

NOTE: Fall semester
FORMATT: Lecture 3 hours, lab 2 hours.
PREREQUISITE: Biologia 2000, GENE 2000

ANSC 5007.03: Beef Production and Management (A).
This course will focus on the management of commercial beef farms, ranging from cown-calf to stocker/finisher operations. Components of breeding, nutrition, and behaviour will be discussed. A systems approach to the management of the farm will be undertaken. The role of the manager in optimizing production is an important component.

NOTE: Fall semester
FORMATT: Lecture 3 hours, lab 2 hours.
PREREQUISITE: ANSC 5006 or ANSC 5005
CROSS-LISTING: ANSC 5218

ANSC 5008.03: Ruminant Nutrition (A).
This course will focus on the management of commercial dairy farms, including nutrition, management, breeding, and disease prevention. The course will cover topics such as the biology of dairy cows, the genetics of dairy cows, and the importance of these for management of animal facilities.

NOTE: Winter semester
FORMATT: Lecture 3 hours, lab 2 hours.
PREREQUISITE: ANSC 5005, NUTR 3001

ANSC 5009.03: Swine Science and Pork Production (A).
This course will focus on the management of commercial pork production. The course will cover aspects of pork production including nutrition, management, breeding, housing, health, and disease prevention. The traditional roles of pork have included as the topic permits. Laboratory sessions will cover aspects of pork production such as pork feeding, nutrition, parasite control, swine mating and genetics.

NOTE: Winter semester
FORMATT: Lecture 3 hours, lab 3 hours.
PREREQUISITE: ANSC 5005, GENE 5000

ANSC 5010.03: Avian Production Systems (A).
This course will focus on the management of commercial poultry, poultry genetics, nutrition, and disease prevention. The course will cover aspects of poultry production including nutrition, management, breeding, housing, health, and disease prevention. A systems approach to the management of animal facilities.

NOTE: Winter semester
FORMATT: Lecture 3 hours, lab 3 hours. Offered in alternate years; next offered in 2014/2015.
PREREQUISITE: ANSC 5005, NUTR 1000
FORM A T: Lecture 3 hours, lab 2 hours.

NOTE: Fall semester
FORM A T: Lecture 3 hours, lab 3 hours.

PREREQUISITE: AGRH 1000, AGRH 2002

ANSC 4008.03: Carnivore Biology.
This is an advanced-level course in mammalian biology focusing on species in the Order Carnivora. The specialized features of the biology of mammalian carnivores will be reviewed, emphasizing seasonal breeding and reproduction, nutrition and physiology, and health and disease. Species discussed will include feline, companion, and zoo animals, and wildlife. The practical aspects of the course will use the mink as a model animal.
NOTE: Winter semester
FORM A T: Lecture 3 hours, lab 2 hours.

PREREQUISITE: BIO 3000, NUTR 3000

ANSC 4009.03: Directed Studies in the Animal Sciences.
This course permits senior students, under the direction of faculty members, to pursue their interest in areas not covered, or not covered in depth, by other courses.
NOTE: Full, Winter or Summer semester
FORM A T: Lecture 3 hours, lab 2 hours.

PREREQUISITE: Permission of the Department/Program Advisor; students must obtain consent of an instructor who is willing to be a supervisor
EXCLUSION: Note: ANSC 4009 cannot duplicate subject matter covered through regular course offerings.

II. Technology Level Course Descriptions

ANSC 0020.02: Dairy Industry I.
Students participate in an examination of the structure of the dairy industry and of the supply management system in which dairy farms operate. They will also be required to identify current issues facing the industry and to examine their potential impact on sustainability and opportunities for the Canadian dairy industry.
NOTE: Fall semester – This is a Workplace Readiness course required for the Dairy Farming option in the Diploma in Business Management.
FORM A T: Lecture 1 hour

ANSC 0021.02: Dairy Industry II.
A continuation of the topics in ANSC 0020. Students extend their examination of the issues facing the dairy industry in a series of lectures presented by speakers from a variety of fields.
NOTE: Winter semester – This is a Workplace Readiness course required for the Dairy Farming option in the Diploma in Business Management.
FORM A T: Lecture 1 hour

ANSC 0022.00: Equine Industry.
This course enables students to examine the structure of the equine industry and to discuss the issues, challenges, and opportunities facing the industry. Speakers from the equine industry are invited to discuss relevant topics, and students participate in the discussion and write summaries of the discussion.
NOTE: Full semester – This is a Workplace Readiness course required for the Equine Specialty option in the Diploma in Business Management.
FORM A T: Lecture 1 hour

ANSC 0112.02: Animal Biology and Management.
Students examine the biology of growth and development in companion animals, with a focus on care and management during breeding, parturition, growth, and location. Lectures cover the principles that are common to all species, and the labs and tutorial sessions focus on more specialized topics that are relevant to the management of bovine, equine, and other ruminant species.
NOTE: Full semester
FORM A T: Lecture 3 hours, lab 2 hours.

ANSC 0113.02: Principles of Animal Welfare & Husbandry.
Students examine the biological basis for animal behaviour, animal welfare, environmental physiology, and animal health. They also examine the role and importance of legislation and voluntary codes of practice in animal welfare and animal health. The course will enable the student to analyze and select handling practices, housing options, biosecurity, and disease prevention options that meet the needs of the animal and the enterprise. Lectures cover the principles that are common to all species, and the labs and tutorial sessions focus on more specialized topics that are relevant to the management of bovine, equine, and other ruminant species.
NOTE: Winter semester
FORM A T: Lecture 2 hours, lab 2 hours

ANSC 0114.02: Animal Feed and Nutrition Management.
Students examine in detail the biology of digestion and nutrient metabolism and the assessment of feedstuff quality in forage-based feeding systems. The course will enable the students to analyze strategies for meeting nutrient requirements and avoiding nutritional problems, and to assess feed efficiency and feed costs for the enterprise. Lectures cover the principles that are common to all species, and the labs and tutorial sessions focus on more specialized topics that are relevant to the management of bovine, equine, and other ruminant species.
NOTE: Winter semester
FORM A T: Lecture 3 hours, lab 2 hours

ANSC 0116.02: Companion Animal Enterprise.
This course will enable the student to oversee the routine care of animals in a companion animal facility and to develop some of the basic workplace communication skills necessary in such an enterprise. Students examine the structure of the companion animal industry and discuss the issues, challenges, and opportunities facing the industry. The basic care component covers mainly dogs and cats, with some coverage of other species, and a portion of this will be conducted outside class time. The industry overview component covers all species represented by the industry, as well as the different segments of the industry.
NOTE: Full semester
FORM A T: Lab 3 hours

ANSC 0117.02: Companion Animal Growth, Development, and Nutrition.
Students examine the biology of growth and development in companion animals and analyze the requirements for care and management throughout the life cycle. They also examine the biology of nutrition and the nutritional requirements throughout the life cycle, and relate this information to specific products, supplements, and feeding regimens. The course will enable the student to work with a nutritionist or veterinarian in establishing and implementing feeding and nutritional programs, and to interpret the legal and other limitations to providing foods and nutrition products and services for companion animals. The course covers mainly dogs and cats, with some coverage of other species.
NOTE: Full semester
FORM A T: Lab 3 hours

PREREQUISITE: ANSC 0018

ANSC 0204.02: Dairy Herd Health and Nutrition Management.
Students participate in an in-depth examination of the health and nutrition requirements of the individual dairy cow, and of the requirements for maintaining high standards of health and optimal nutrition in the dairy herd. The course will enable the students to use herd records and on-site evaluations to troubleshoot health and nutrition problems and to identify solutions to those problems. The course will also enable the student to use a variety of technical and human resources in meeting future challenges in health and nutrition.
NOTE: Winter semester
FORM A T: Lecture 3 hours, lab 2 hours

PREREQUISITE: ANSC 0012, ANSC 0013, ANSC 0014

ANSC 0205.02: Optimizing Bovine Reproductive and Genetic Performance.
This course is designed to provide an in-depth examination of bovine reproduction and the requirements for maintaining high success rates in herd detection and AI procedures. Students will use herd records and on-site evaluations to troubleshoot breeding problems and to identify solutions to those problems, and use a variety of technical and human resources in meeting future challenges in breeding management. In the other half of the course, students participate in an in-
PREREQUISITE: ANSC 0117

FORMAT: Lecture 3 hours, lab 2 hours.

NOTE: Fall semester

ANSC 0206.02: Managing Dairy Milking Systems and Housing Facilities.

Students examine in detail the management of the milking system and evaluate current and future options in milking systems technology. They also examine current and future options for housing and equipment, and analyze the ability of those options to meet the financial, environmental, and animal welfare goals of the operation. Tours and field trips give the students an opportunity to view a variety of housing and milking systems. Some of the tours or field trips may be conducted outside scheduled class time.

NOTE: Full semester

FORMAT: Lecture 3 hours, lab 2 hours.

PREREQUISITE: ANSC 0113

ANSC 0207.02: Records Management and Decision-making for Dairy Herds.

Students examine record-keeping options for dairy herds and use hard records to analyze key aspects of herd and farm performance. They also use case studies and records summaries to benchmark performance and to analyze the herd’s ability to meet its targets. Establishing and maintaining the records required to meet certification (e.g., HAACP) requirements are also integral components of the course.

NOTE: Winter semester

FORMAT: Lab 3 hours

PREREQUISITE: ANSC 0201, ANSC 0205

ANSC 0208.02: Biology and Care of Aquarium Fish and Reptiles.

Students examine the biology of growth and development in aquarium fish and reptilian species, and analyze the requirements for care and management throughout the life cycle, including the requirements for nutrition and health care. A considerable portion of the course is devoted to the selection and set-up of aquarium and terrarium systems and to troubleshooting problems. The course will enable the student to ensure high standards of health and nutrition for fish in aquarium systems and for reptiles.

NOTE: Winter semester

FORMAT: Lecture 3 hours, lab 2 hours. Offered in alternate years; next offered in 2015/2016.

PREREQUISITE: ANSC 0115

ANSC 0209.02: Biology and Care of Pet Birds and Small Mammals.

Students examine the biology of growth and development in avian and small animal species and analyze the requirements for care and management throughout the life cycle, including the requirements for nutrition and health care. The selection and setup of housing systems are important components of the course. The course will enable the student to ensure high standards of health, nutrition, and care for birds and small animals.

NOTE: Winter semester

FORMAT: Lecture 3 hours, lab 2 hours. Offered in alternate years; next offered in 2014/2015.

PREREQUISITE: ANSC 0116

ANSC 0210.02: Introduction to Companion Animal Health.

Students examine the causes and predisposing factors of diseases common to companion animals, and of the principles of disease management and prevention as they apply to companion animal facilities. The course will enable students to establish and implement biosecurity and health management protocols, and to interpret the legal and other limitations to providing health care products and services in consultation with the facility veterinarian. The course covers mainly dogs and cats, with some coverage of other species.

NOTE: Full semester

FORMAT: Lecture 3 hours, lab 2 hours.

PREREQUISITE: ANSC 0117

ANSC 0211.02: Companion Animal Facilities Management.

Students examine the biological and behavioral considerations important in designing companion animal housing and facilities, and explore the options available for ensuring high standards of animal welfare in the facility. The course will enable the student to design and implement protocols for managing the facility and for ensuring compliance with regulatory requirements or industry standards. Students participate in tours and field trips to view a variety of housing and facilities options. Some of the tours or field trips may be conducted outside scheduled class time. The course covers mainly canine and feline facilities, with some coverage of facilities for other species.

NOTE: Winter semester

FORMAT: Lecture 3 hours, lab 2 hours.

PREREQUISITE: ANSC 0116

ANSC 0212.02: Companion Animal Genetics and Reproduction.

Students examine the processes of reproduction and lactation in companion animals, and analyze the requirements for care and management during mating, parturition, and lactation. They also study the common breeds and the genetics of colour and conformation, and examine the requirements for choosing breeders and planning mating that meet the objectives of the breeding program. The course covers mainly dogs and cats, with some coverage of other species.

NOTE: Full semester

FORMAT: Lecture 3 hours, lab 2 hours.

PREREQUISITE: ANSC 0116

ANSC 0213.02: Equine Growth and Nutrition.

Students will study the physiological growth and development at every life stage from conception to old age in the horse. The nutrition component focuses on the digestive system of the horse and the requirements for specific nutrients at different stages of growth and development. Analysis of different types of feeds and the formulation of diets based on life stage and level of activity will be conducted. The course will enable the student to troubleshoot nutrition problems in a variety of equine enterprise types.

NOTE: Full semester

FORMAT: Lecture 3 hours, lab 2 hours.

PREREQUISITE: ANSC 0113, ANSC 0114

ANSC 0214.02: Equine Health, Genetics, and Reproduction.

Students examine in detail the processes of reproduction and lactation in horses, as well as the requirements for care and management of the mare during breeding, parturition, and lactation. They also study the growth and development of the foal and the requirements for the care of the foal. The common breeds of horses and the genetics of coat colour, conformation, and performance potential will be discussed. The course will enable students to evaluate the genetic merit of sires and dams, and to plan matings and genetics strategies to meet the genetic goals of their particular operation. Students will obtain a basic knowledge of animal health care and disease prevention, and be able to address issues related to biosecurity.

NOTE: Full semester

FORMAT: Lecture 3 hours, lab 2 hours.

PREREQUISITE: ANSC 0113, ANSC 0114

CROSS-LISTING: ANSC 2006

ANSC 0215.02: Equine Facilities Management.

Students examine the behavioral and environmental considerations important in designing an equine facility, and explore the options available for ensuring high standards of animal welfare in the facility. The course will enable students to design and implement protocols for managing the facility and for ensuring compliance with regulatory requirements or industry standards. Students participate in tours to view a variety of facility options. Some of these tours may be conducted outside scheduled class time.

NOTE: Winter semester

FORMAT: Lecture 3 hours, lab 2 hours.

PREREQUISITE: ANSC 0213, ANSC 0214

ANSC 0216.02: Equine Health and Fitness.

Students examine the anatomy and physiology of the horse with special attention to the respiratory, skeletal, muscular, and cardiovascular systems. The course will enable students to analyze how the horse’s health and soundness is affected by its environment, level of fitness, and condition.

NOTE: Winter semester

FORMAT: Lecture 3 hours, lab 2 hours.

PREREQUISITE: ANSC 0213

Animal Science 67
ANSC 0217.02: Companion Animal Behaviour.

In this course, students will study the fundamentals of animal learning and how these principles affect success in training and behaviour modification. Attention will be given to understanding and solving behaviour problems (e.g., separation anxiety, dominance aggression, fighting, inappropriate urination, and behavioural stereotypes). The focus is on companion animals – dogs and cats, and to some extent horses. The normal development of behaviour in those species will be covered.

NOTE: Winter semester
FORMA T: Lecture 3 hours.
CROSS-LISTING: ANSC 2003

ANSC 0218.02: Beef Production and Management.
This course will focus on the management of commercial beef farms ranging from cow-calf to steer-feeder operations. Components of breeding, nutrition, and behaviour will be discussed. A systems approach to the management of the farm will be undertaken. The role of the manager in optimizing production is an important component. A historical perspective on the Atlantic beef industry along with coverage of emerging trends will be part of the course. Key beef industry issues such as the impact of BSE, animal welfare, and beef marketing will be discussed.

NOTE: Fall semester
FORMA T: Lecture 3 hours, lab 2 hours.
PREREQUISITE: ANSC 0114
CROSS-LISTING: ANSC 2007

ANSC 0219.02: Equine Behaviour and Learning.
This course explores the evolution of the horse and the history of equine domestication. Equine behaviour in both the feral and domesticated horse will be examined, and students will learn how understanding equine body language has practical applications within current training and husbandry practices. Type and causation of various abnormal equine behaviours and methods of behavioural rehabilitation will be covered. Students will examine equine perception and principles of learning, and how application of these principles can improve training and behaviour. Students will also study the human horse relationship.

NOTE: Winter semester
FORMA T: Lecture 3 hours.
PREREQUISITE: ANSC 0113

Applied Science

I. Undergraduate Degree Level Course Descriptions

APSC 1000.03: Computer Aided Graphics and Projection.

This is an introductory course to familiarize students with common metal construction technologies, machines, and tools used in a metal fabrication shop. The principles of welding and welding applications will be emphasized. Students will be required to present seminars on various fabrication techniques and construction tools. Occupational Health and Safety issues pertaining to metal shop work procedures will be covered.

NOTE: Winter semester
FORMA T: Lecture 2 hours, lab 3 hours

APSC 1004.03: Wood Construction Technology I.

This is an introductory course in the selection, operation, and maintenance of woodworking hand and power tools. The principles of selection, operation, and maintenance of workshop tools in the modern woodworking shop are studied. Students will be required to present seminars on various fabrication techniques and construction tools. Occupational Health and Safety issues pertaining to wood shop work procedures will be covered.

NOTE: Winter semester
FORMA T: Lecture 2 hours, lab 3 hours

APSC 1005.03: Metal Construction Technology I.

This is an introductory course for familiarizing students with common metal construction technologies, machines, and tools used in a metal fabrication shop. The principles of welding and welding applications will be emphasized. Students will be required to present demonstrations on the use of various metal hand and power tools, as well as present a seminar on some form of metal fabrication technology. Occupational Health and Safety issues pertaining to metal shop work procedures will be covered.

NOTE: Full semester
FORMA T: Lecture 2 hours, lab 3 hours

APSC 2000.03: Environmental Impacts and Resource Management (A).

This course is an introduction to environmental engineering and technology, emphasizing a quantitative-engineering approach. The course addresses the issues associated with the sole and ecologically appropriate handling, processing, storage, and utilization of organic wastes arising from human activities, including agricultural and bio-resource production systems. Topics covered will include: growth models for populations of living organisms, as well as models for depletion and replenishment of natural resources; the concept of mass and energy balances applied to quantity changes in environmental systems; physical, chemical, and biological unit operations for treatment and reduction of solid,
liquid, and gaseous wastes; and reduction of pollution impacts on air and water resources.

NOTE: Full semester
FORMA T: Lecture 3 hours, lab 3 hours.
PREREQUISITE: ENGN 1002, CHMA 1001

This course is an introduction to the concept of systems theory and analysis. The emphasis will be on the use of systems principles to plan, design, construct, and operate systems. Students will be exposed to case studies and special lectures focusing on bioresource systems and analysis as an integrated problem-solving tool. Real-world systems will be examined through field tours and guest speakers. New faculty will give case studies in their areas of expertise.

NOTE: Full semester
FORMA T: Lecture 3 hours, lab 3 hours.

Principles necessary for understanding and providing optimal aquatic environments for aquaculture production are reviewed. Topics in water habitat management will be emphasized, including: water properties of both fresh- and salt-water systems; water quality and recirculating systems; methods of dissolved oxygen and removal of metabolic wastes in aquaculture rearing systems; and evaluation of water resource requirements for aquaculture.

NOTE: Winter semester
FORMA T: Lecture 3 hours, lab 3 hours.

APSC 2007.03: Fluid Power Technology.
This course covers the subjects essential to understanding the design, analysis, operation, and maintenance of fluid power systems: hydraulic, pneumatic, and water. Emphasis is placed on the practical applications of fluid power and the functioning of system components such as reservoirs, pumps, compressors, motors, valves, filters, lines, and hoses, and mechanical and electrical controls in typical fluid power circuits. The principles of fluid flow, pressure and force, energy conservation, and power in the context of using fluid energy to do useful mechanical work are covered. Theory is presented to emphasize how and why fluid power systems operate. General maintenance, safety, and environmental issues associated with fluid power systems are also discussed.

NOTE: Winter semester
FORMA T: Lecture 3 hours, lab 3 hours.

This course covers the theory and applications of digital electronics technology and the control of digital devices by computers and programmable logic controllers (PLCs). Digital technology is becoming the dominant method of communication, control, sensing, computation, and communication in modern society. This course will provide the foundation to better understand current and future digital systems. Digital logic circuits, data forms, and applications are studied. Complete in the laboratory are used to interface with and control a variety of digital devices such as computers, robots, cameras, scanners, lab equipment, etc. Students are introduced to Visual Basic programming interfacing with computer ports and sensors input devices. Hands-on projects are completed to control real-world applications such as traffic lights, process control and experimentation equipment.

NOTE: Winter semester
FORMA T: Lecture 3 hours, lab 3 hours.

APSC 2009.03: Metal Construction Technology II.
This is an advanced course in metal construction technologies using power machines (including CNC) and tools used in a metal fabrication shop. Advanced principles of welding and welding applications will be emphasized. Students will be required to present demonstrations on the use of various power machines, and to design and construct major metal projects using the skills learned in both Metal Construction Technology courses.

NOTE: Winter semester
FORMA T: Lecture 2 hours, lab 3 hours.
PREREQUISITE: ENGN 1003

APSC 2010.03: Wood Construction Technology II.
An advanced course in the operation and maintenance of woodworking hand and power tools, and joinery machinery. Students will learn about specialized machinery and advanced joinery technologies. The operation, maintenance, and repair of woodworking tools in the modern woodworking shop are studied, with emphasis on troubleshooting and setting up for accessibility and speed. Written work safety procedures will be reviewed. Individual projects are undertaken by students with the skills acquired in both Wood Construction Technology courses, utilizing the shop equipment.

NOTE: Fall semester
FORMA T: Lecture 2 hours, lab 3 hours.
PREREQUISITE: ENGN 1004

APSC 2011.03: Technology for Precision Agriculture.
This course will provide students with a fundamental understanding of the concepts and principles of precision agriculture. This includes the technology and use of electronic machines, sensor instrumentation, computer equipment, and machine controllers. Nutrient management systems, applications of GPS-based surveys, precision farming software (e.g., SSISoftware), geographic information systems (GIS), software utilization, and GPS hardware are examined.

NOTE: Fall semester
FORMA T: Lecture 3 hours, lab 3 hours.

APSC 2012.03: Introduction to Bioreource Science (A).
This course is an introduction to environmental science and engineering technology with a specific focus on agriculture, and consists of ENGN 2000-2002 lectures plus additional weekly tutorials and labs by the Engineering department. This combination provides an efficient means to provide the environmental science and the applied management of resources. The course is designed to provide an introduction to horizon topics in this rapidly developing field that are the subjects of specialized, upper-level courses available in the program, and it provides a solid foundation for some environmental science courses. Topics to be covered include: overviews of green-celler jobs and the new biorecources economy, and of sustainable agrosystem management; introductions to the management of sustainable water and energy resources, including alternative waste water, biosolids, and bioregulatory introductions to materials; life-sourcing, geographic information systems and precision agriculture.

NOTE: Full semester
FORMA T: Lecture 3 hours, lab 3 hours.
PREREQUISITE: ENGN 1002, CHMA 1001
EXCLUSION: Students can receive credit for either ENGN2012 or ENV A2000, but not both.

APSC 2013.03: Machinery and Building Technology (A).
Two key areas to the success of utilizing biomaterials are selection of appropriate machines and designing effective facilities to manage the production/processng system. In the first half of the course, students are introduced to the types of equipment, their productivity, and methods of selection for efficient operation. This will include machinery for soil preparation, planting, crop care, and harvesting. The machinery and their operation are analyzed with respect to functions, work rates, material flow and power usage. The importance of monitoring machine performance and its effect upon work quality and environmental effects of machine operation will be studied. The labs will emphasize safety, basic machinery maintenance, adjustment, calibration and performance testing. The second half of the course provides an introduction to the planning process of structures and various topics related to the use of building materials, particularly "green" materials. Functional layouts and valuation principles of storage and production buildings are considered. Field trips supplement the lecture material. A term paper is required.

NOTE: Full semester
FORMA T: Lecture 3 hours, lab 3 hours.
CROSS-LISTING: ENGN 2003

APSC 3001.03: Electrotechnology (A).
Electricity is integral to our society, and this course reviews application of AC and DC electricity. Safety and measurements are practiced during hands-on lab sessions. Common sensors, measurement and control systems are discussed and applied to improve energy management.

NOTE: Winter semester
FORMA T: Lecture 3 hours, lab 3 hours.
PREREQUISITE: PHYS 1000 or PHYS 1002

APSC 3013.03: Aquacultural Systems Technology (A).
Support facilities, equipment, and systems for aquatic production will be examined. Topics include: structures for confinement, protection, and growth of aquaculture species; principles of design and selection of equipment for rearing systems for aquatic animals.
70 Applied Science

APSC 3015.03: Irrigation and Drainage.
This course examines basic soil/water/plant/atmosphere relationships. It introduces students to soil and water conservation and management principles. The course covers irrigation and drainage of golf courses, athletic areas, parks, and residential landscapes.
NOTE: Winter semester.
FORMAT: Lecture 3 hours, lab 3 hours.
NOTE: Winter semester. Offered in alternate years; next offered in 2015/2016.
EXCLUSION: Students who have credit for ENGN 3015 may not take ENGN 3015 for credit.

APSC 3018.03: Technology Modules.
This course deals with the operating concepts of CNC machines, plastic forming and construction technology, and transportation technology in a modular format. Approximately 4 weeks will be allocated to the study of each module area. The students will be able to perform operations in each technology area upon completion of the appropriate module. Practical hands-on laboratory and shop experiences are emphasized, as are associated aspects of Occupational Health and Safety. Students will also make presentations to the class regarding specific features and operations of the technologies studied.
NOTE: Winter semester.
FORMAT: Lecture 5 hours.

APSC 3019.03: Communications Technology.
This course addresses issues, systems, and technology in computer-related communications technology. Among the topics studied are desktop publishing, digital photography and image editing, video production, web page design, and presentation software usage. Supplementary classes in graphic design and screen printing will be available as time allows. Emphasis is placed on practical production techniques and individual design situations.
NOTE: Full semester.
FORMAT: Lecture 3 hours, lab 2 hours.

APSC 3020.03: Energy Production and Utilization.
This lecture-based course provides an overview of the whole energy system, focusing on selected attributes of energy. The assessment, management and remediation of energy production is a global issue, which will ultimately impact all walks of life, business, industry and infrastructure. It includes an overview of the energy supply chain, transmission and distribution systems, energy use, energy policy and the environment and methods of generation. It also includes an overview of renewable energy assessment techniques and feasibility tools.
NOTE: Full semester.
FORMAT: Lecture 3 hours, lab 3 hours.
PREREQUISITE: PHYS 1000 or PHYS 1002.

APSC 4001.03: Water Quality Issues (A).
Current environmental water quality issues such as contamination of surface and groundwater are discussed. Emphasis is placed on providing solutions to the water quality problems. Agricultural water quality models will also be examined.
NOTE: Winter semester.
FORMAT: Lecture 3 hours. Offered in alternate years; next offered in 2015/2016.

APSC 4003.03: Energy Conversion and Assessment (A).
This lecture-based course focuses on selected attributes of existing and renewable energy options, including the reservoir and consumption of oil, coal and gas; fossil energy technologies for power generation; fundamental principles; applications and issues of solar energy, biomass energy, wind-energy and hydro-power; and outlook and evaluation of renewable energy.
NOTE: Winter semester.
FORMAT: Lecture 3 hours, lab 3 hours.
PREREQUISITE: APSC 3020.

APSC 4005.03: Waterscape Ecology and Management (A).
This lecture-based, non-quantitative course focuses on selected basic attributes of land-water interactions and aquatic degradation as they relate to issues of watershed and waterbody development in rural and urban environments. The course provides an introduction to a variety of aquatic principles and how they in turn are influenced by human activity, followed by an introduction to and review of the many management options available to land-use planners to mitigate development pressures. Broad latitude will be permitted in the subject areas of the assignments in order to appeal to individuals’ interests and career aspirations in environmental engineering, environmental science, horticulture, international development, and environmental governance and sociology.
NOTE: Winter semester.
FORMAT: Lecture 2 hours, lab 3 hours.

APSC 4006.03: Wastewater Management (A).
This course covers an overview of sources of water pollution, particularly in the NOE to fresh water and estuarine ecosystems. Laboratory-oriented approaches such as wetlands and filters will be discussed. Laboratory sessions will include field trips, methods of sampling, and some testing of water.
NOTE: Fall semester - Environmental Sciences.
FORMAT: Lecture 3 hours, lab 3 hours.
PREREQUISITE: At least third-year standing.

II. Technology Level Course Descriptions

APSC 0100.02: Surveying.
An introduction to surveying principles and recording techniques. Topics are given lectures and assignments to assist in understanding the principles employed in surveying, and they practise these during the labs by conducting various surveying exercises. Practice is gained in the proper use of surveying instruments (tapes, level, and transit) through exercises involving measurements of horizontal and vertical distances and angles. These include chaining, stadia, benchmark, profile and contour leveling, triangulation and traverse exercises, and construction surveying, with emphasis on their application to farm construction projects.
NOTE: Full semester.
FORMAT: Lecture 2 hours, lab 3 hours.

APSC 0101.02: Horticultural Technology.
Small gasoline engine structure and operating theory are studied, with emphasis on engine maintenance and troubleshooting. This course includes basic hydraulic theory, emphasizing the operation of common systems in use today. A wide range of horticultural machinery is studied, as well as the principles of mixing, placing, and curing concrete, fence making, and chain saw operation.
NOTE: Winter semester.
FORMAT: Lecture 2 hours, lab 3 hours.

APSC 0200.02: Environmental Management.
Students examine the major environmental issues and risks in agricultural production. The emphasis is on how agricultural activities impact the environment and how environmental issues, regulations, and programs impact the way agricultural activities are carried out. The course will enable students to identify the legal and other requirements for reducing the environmental risks associated with production activities, and to work with an environmental specialist in determining ways to minimize environmental risk.
NOTE: Full semester.
FORMAT: Lecture 3 hours, lab 2 hours.
PREREQUISITE: NOE 4008.

APSC 0201.02: Machinery and Building Technology.
Two keys to the success of utilizing horticultural products are the selection of appropriate machines and designing effective facilities to manage the production-processing system. In the first half of the course, students are introduced to the types of equipment, their productivity, and methods of selection for efficient operation. This will include machinery for soil preparation, planting, crop care, and harvesting. The machines and their unit operation are analyzed with respect to functions, work rate, material flow and power usage. The importance of monitoring machine performance relating to work quality and environmental effects of machine operation will be studied. The labs will emphasize safety, basic maintenance, adjustment, calibration and performance testing. The second half of the course provides an introduction to the planning process of structures and various topics related to the use of building materials, particularly green materials. Functional layouts, ventilation principles of storage, and production buildings are considered. Field trips supplement the lecture material. A term paper is required.
NOTE: Full semester.
FORMAT: Lecture 3 hours, lab 3 hours.
CROSS-LISTING: ENGN 2013.
Aquaculture

I. Undergraduate Degree Level Course Descriptions

AQUA 2000.03: Introduction to Aquaculture (A).
The history and the current status of world aquaculture production are discussed, with emphasis on species with potential in Atlantic Canada. Advances in freshwater or marine finfish and shellfish culture are included. Aquatic plant production is discussed. Business aspects of aquaculture are introduced. The course includes field trips to aquaculture and related facilities.
NOTE: Fall semester
FORMAT: Lecture 3 hours, lab 3 hours.

AQUA 3000.03: Fish Health (A).
This course outlines concepts of disease with special reference to fish. Diseases of various etiological types are considered, with emphasis on those in the aquaculture environment. The relationships of management and economics to disease in cultured fish are detailed, and public health concerns are addressed. Diagnostic, prophylactic, and treatment methods are outlined and practiced.
NOTE: Winter semester
FORMAT: Lecture 3 hours, lab 3 hours.
PREREQUISITE: Preparatory: BIOA 3005

AQUA 4000.03: Finfish Production.
Aspects of breeding and genetics, fish management, financial management, economics, marketing, housing systems, and water management are presented in an integrated approach to provide a sound understanding of this aspect of aquaculture. Management of fish throughout the life cycle is presented. The course includes a weekend field trip to commercial farms; attendance is obligatory.
NOTE: Fall semester
FORMAT: Lecture 3 hours, lab 3 hours.
PREREQUISITE: NUTR 3000 or NUTR 3002, AQUA 3000, BIOA 3005

AQUA 4001.03: Shellfish Production.
Factors affecting profitable production of shellfish are discussed in the context of developing a sound industry with potential to address future opportunities. A survey of culture techniques used in shellfish production is undertaken.
NOTE: Winter semester
FORMAT: Lecture 3 hours, lab 3 hours.
PREREQUISITE: NUTR 3000 or NUTR 3001, AQUA 3000, BIOA 3005

Art

I. Undergraduate Degree Level Course Description

This course will provide an introduction to the history of art forms depicting landscape, with the major focus being on landscape painting. The course will consist of art history lectures and a studio component in which drawing techniques, collage, and colour theory will be explored. Students will develop skills in composition and will gain an increased appreciation for landscape art traditions.
NOTE: Fall semester
FORMAT: Lecture/studio 3 hours per week.
Biology

Below are courses offered in Biology by the Faculty of Agriculture. Please see the Biology Section in the Faculty of Science for courses offered on the Halifax campuses.

I. Undergraduate Degree Level Course Descriptions

BIOA 1002.03: Biology I.
This is the first of a two-semester course sequence exploring various general principles common to the biological sciences. The biological significance of cell structure and function, metabolism, the cell cycle, sexual reproduction, Mendelian genetics and basic gene structure are among the topics to be considered in the lecture sessions. The labs reinforce and enhance the learning of selected topics discussed in the lectures. NOTE: Fall semester
FORMA T: Lecture 3 hours, lab 3 hours.

BIOA 1003.03: Biology II.
This is the second of a two-semester course sequence exploring various general principles common to the biological sciences. In addition to evolutionary processes and patterns, the fundamental systematics and diversity of procaryotes, protists, plants, fungi and animals are emphasized in the lecture sessions. The laboratory continues to reinforce and enhance the learning of selected topics discussed in the lectures. NOTE: Winter semester
FORMA T: Lecture 3 hours, lab 3 hours.

BIOA 2000.03: Cell Biology.
An introduction to cell biology. Topics include cell metabolism, the structure and function of organelles of the eucaryotic cell, cell growth, cell movement, and the function of organelles of the procaryotic cell. Specialized cell functions will also be discussed. NOTE: Fall semester
FORMA T: Lecture 3 hours, lab 3 hours.

BIOA 2001.03: Cell Biology Laboratory.
This course complements the lectures of BIOA 2000 with a laboratory section. Students will participate fully in BIOA 2000 and, as well, complete laboratory sessions to complement lecture material. Students may receive credit for either BIOA 2000 or BIOA 2001, but not both. NOTE: Full semester
FORMA T: Lecture 3 hours, lab 3 hours.

BIOA 2002.03: Plant Physiology.
A study of the different functions of the plants, including growth, photosynthesis, mineral nutrition, water relations and translocation of solutes, and plant orientation, development, and reproduction. NOTE: Winter semester
FORMA T: Lecture 3 hours, lab 3 hours.

BIOA 2004.03: Structural Botany.
The basic morphology and anatomy of the seed plants are presented from a developmental perspective. The structural aspects of the various modes of plant reproduction are also included. Emphasis is placed on obtaining an understanding of plant structure that will complement crop physiology, weed biology, and plant pathology. NOTE: Winter semester
FORMA T: Lecture 3 hours, lab 3 hours.

This course deals with the principles of plant pathology and the control of diseases caused by bacteria, fungi, mycoplasma-like organisms, viruses, and nematodes. Labs deal with basic techniques used in plant pathology, such as fungal, bacterial, and nematode isolation, identification, and inoculation. NOTE: Winter semester
FORMA T: Lecture 3 hours, lab 3 hours.

BIOA 2006.03: Mammalian Physiology.
An introduction to the body systems and how they function. The student should develop a basic understanding of physiological processes and how they are regulated and integrated by the nervous and endocrine systems. Topics covered include: haematology, the nervous, muscular, endocrine, cardiovascular, respiratory, renal, and digestive systems, and an introduction to environmental physiology. NOTE: Winter semester
FORMA T: Lecture 3 hours, lab 3 hours.

BIOA 2007.03: Mycology.
An introduction to the fungi, including members of the Kingdom Fungi and Chytridomycota, and the protozoan pseudofungi. The labs in this course will focus on classification of the fungus, but lecture topics will also include fungal physiology, genetics, ecology, industrial mycology, food spoilage, and medical mycology. Students will be required to submit a microbiology collection and a mushroom collection. NOTE: Fall semester
FORMA T: Lecture 3 hours, lab 3 hours. Offered in alternate years; next offered in 2015/2016.

BIOA 2008.03: Plant Diversity.
This course emphasizes the biology, evolution, and diversification of the major phyla of the Kingdom Plantae. The lectures illustrate the fundamental reproductive unity underlying the diversity of all land plants, using examples from both fossil and living species. In addition to exploring the major plant groups and their subdivisions in the laboratory, students learn to use the appropriate resources to identify specific plants. NOTE: Fall semester
FORMA T: Lecture 3 hours, lab 2 hours.

BIOA 3000.03: General Entomology (A).
An introduction to the science of entomology from an agricultural perspective. Insect anatomy, physiology, and taxonomy are considered, also included are discussions on insect behaviour, reproduction, life cycles, and population ecology. Basics of monitoring techniques and population dynamics are illustrated. Students will be required to prepare and submit an insect collection. NOTE: Full semester
FORMA T: Lecture 3 hours, lab 3 hours.

BIOA 3001.03: Ecology.
An introduction to the principles and general concepts of ecosystem structure and function is presented. The dynamics of populations and community interactions are considered in relation to various biotic and abiotic environmental influences. The laboratory sciencens topics covered in the lectures and readings by emphasizing the importance of field observation and interpretation. NOTE: Full semester
FORMA T: Lecture 3 hours, lab 3 hours.

BIOA 3002.03: Weed Science (A).
This course deals with the principles of weed science. Included are discussions on weed recognition, and chemical and non-chemical approaches to controlling weeds in various agricultural crops and in lawns and non-crop areas. The selection, safe use, handling, and storage of herbicides are stressed, along with the environmental impact of the different methods of weed control. NOTE: Full semester
FORMA T: Lecture 3 hours, lab 3 hours.

BIOA 3003.03: Insect Behavior (A).
This course deals with the principles of insect behavior. Topics include insect behavior, reproduction, life cycles, and population ecology. Basics of monitoring techniques and population dynamics are illustrated. Students will be required to prepare and submit an insect collection. NOTE: Full semester
FORMA T: Lecture 3 hours, lab 3 hours.

BIOA 3004.03: Structural Botany.
The basic morphology and anatomy of the seed plants are presented from a developmental perspective. The structural aspects of the various modes of plant reproduction are also included. Emphasis is placed on obtaining an understanding...
BIOA 3003.03: Comparative Vertebrate Anatomy.

An introduction to comparative anatomy. Emphasis is placed on analyzing vertebrate structure. Comparisons of form and function within the Vertebrae are discussed with an evolutionary perspective. This is supplemented in the laboratory by detailed dissections of representative vertebrates.

NOTE: Fall semester

FORMA T: Lecture 3 hours, lab 3 hours. Offered in alternate years; last offered in 2010-2011.

PREREQUISITE: BIOA 1003

BIOA 3004.03: Environmental Physiology (A).

A study of animals in relation to their environment. The influence of environmental factors on body processes and their relationship to productive efficiency and animal well-being are examined. Major topics include temperature regulation and body homeostasis, biological rhythms, photoperiodism, and environmental and hormonal interrelationships.

NOTE: Fall semester

FORMA T: Lecture 3 hours, lab 2 hours. Offered in alternate years; last offered in 2010-2011.

PREREQUISITE: BIOA 2006 or BIOA 3005

BIOA 3005.03: Physiology of Aquatic Animals (A).

The form, function, physiological integration, and behavior of major types of aquatic animals is considered. Emphasis is placed on Classes of organisms, using commercially important species as primary examples.

NOTE: Fall semester

FORMA T: Lecture 3 hours, lab 3 hours.

PREREQUISITE: BIOA 1003

BIOA 3006.03: Aquatic Ecology.

The biology of aquatic species in marine and freshwater environments is discussed, with emphasis on biological systems involving farmed species, and organism interdependencies and interactions are examined. An introduction to the principles of ecology at the community and ecosystem level of integration is included.

NOTE: Fall semester

FORMA T: Lecture 3 hours, lab 3 hours.

PREREQUISITE: BIOA 1003

BIOA 3008.03: Growth, Reproduction and Lactation (A).

A continuation of BIOA 3006, emphasizing physiological systems relevant to animal production. Major topics include growth and development as it applies to meat and brood animal production, and the physiology and management of reproduction and lactation in domestic species.

NOTE: Fall semester

FORMA T: Lecture 3 hours, lab 2 hours.

PREREQUISITE: BIOA 2006

BIOA 4000.03: Avian Biology (A).

This course is a study of topics in biology of special relevance to the commercial use of avian species. Physiological, biochemical, and genetic control and manipulation of such processes as reproduction, growth and development, and immunity are examined.

NOTE: Fall semester

FORMA T: Lecture 3 hours, lab 2 hours. Offered in alternate years; last offered in 2010-2011.

PREREQUISITE: ANSC 2005, CHMA 3001 (or CHMA 2005), GENE 2000

BIOA 4002.03: Conservation Biology.

This course has limited enrollment. This course will examine the ecological concepts underlying current issues in conservation biology. Topics covered include effects of agricultural habitat fragmentation on wildlife, conservation of biodiversity, stability and resilience of ecosystems, optimal design of nature reserves, and habitat heterogeneity. This is a discussion-style course concentrating on current published scientific papers chosen by the students. Students will also learn to read and critically evaluate scientific papers, and to apply this ability to writing literature reviews.

NOTE: Winter semester

FORMA T: Lecture 3 hours.

PREREQUISITE: 60 credit hours

BIOA 4003.03: Plant-Microbe Interactions.

This course is an advanced study of the interactions between plants and microorganisms, with emphasis on plant pathogenic micro-organisms but including symbiotic and other microorganisms that can provide a benefit to the plant. Students will study the biology of the infection process in relation to plant disease and symbiosis, and the impact that infection has on the physiology of the host. Responses of the plant to infection will be studied, with emphasis on Systemic Acquired Resistance and Induced Systemic Resistance.

NOTE: Fall semester

FORMA T: Lecture 3 hours, tutorial 2 hours per week.

PREREQUISITE: BIOA 3005. 45 credit hours

BIOA 4004.03: Animal Adaptation and Stress.

This is an advanced-level course in the comparative physiology of animal adaptation and stress. The concepts of allostatic, homeostasis and the physiological stress response will be reviewed, and the role of endocrine regulation in animal adaptation under changing external (environmental) and internal (life-history) demands will be discussed. Special emphasis will be placed on mammalian and avian adaptation in response to changes in the internal, physical, and social environments. Species discussed may include livestock, companion and zoo animals, and wildlife.

NOTE: Fall semester

FORMA T: Lecture 3 hours, lab 2 hours. Offered in alternate years; last offered in 2013-2014.

PREREQUISITE: At least third-year standing prerequisite: BIOA 3004

II. Technology Level Course Descriptions

BIOA 0101.02: Plant Pathology.

This course deals with the diagnosis of plant diseases caused by fungi, bacteria, phytoplasmas, viruses, and nematodes. Students will develop skills to differentiate plant diseases caused by microorganisms from those caused by abiotic factors. Principles of plant disease management will be covered. Labs deal with basic techniques used in plant pathology, such as fungal, bacterial, and nematode isolation, identification, and inoculation.

NOTE: Winter semester

FORMA T: Lecture 3 hours, lab 3 hours.

BIOA 0102.02: Plant Physiology and Stress Management.

This course is aimed at gaining an insight into various plant physiological, growth, and developmental processes and to develop a fundamental understanding and appreciation as to how various environmental factors influence growth, differentiation, and developmental processes in plants. The course also examines the impact of various abiotic stresses on plant growth and development, yield, and productivity, including acclimation and adaptation techniques. Plant diagnosis will be emphasized.

NOTE: Winter semester

FORMA T: Lecture 3 hours, lab 2 hours.

BIOA 0103.02: Weed Science.

This course deals with the principles of weed science. Included are discussions on weed recognition, and chemical and non-chemical approaches to controlling weeds in various agricultural crops and in lawns and non-crop areas. Selection, site use, handling, and storage of herbicides are stressed.

NOTE: Winter semester

FORMA T: Lecture 3 hours, lab 3 hours.

BIOA 0200.02: Entomology.

An introduction to the study of the phylum Arthropoda, with particular reference to the class Hexapoda (Insects), emphasizing insect pests of the northeast. Anatomy, physiology, taxonomy, behavior, and ecology of insects are considered during lectures and laboratory work. Discussions on the relationship of insects to humans, basics of insect control methods, and pesticidal utility are included. Students will be required to prepare and submit an insect collection.

NOTE: Full semester

FORMA T: Lecture 2 hours, lab 2 hours
Chemistry

Below are courses offered in Chemistry by the Faculty of Agriculture. Please see the Chemistry Section in the Faculty of Science for courses offered on the Halifax campuses.

I. Undergraduate Degree Level Course Descriptions

CHMA 0050.00: Preparatory Chemistry.
This non-credit course is designed for students who satisfy all other requirements for admission but lack the Grade 12 Chemistry course. The course will cover the basic material necessary for entrance into CHMA 1000, including review of the periodic table, nomenclature, chemical reactions, aqueous solutions, chemical bonding, and other topics as determined by a review of the class. CHMA 0050 is not intended to duplicate or replace Grade 12 Chemistry.
NOTE: Fall and Winter semesters
FORMA T: Lecture 3 hours, lab 3 hours.
PREREQUISITE: Approval of the Registrar.

CHMA 1000.03: General Chemistry I.
This course is designed to help students understand chemical equations, reactions, and calculations. The chemistry of natures media is highlighted (properties of water, ionization of weak electrolytes, buffers). In addition to the traditional classroom instruction, students will be exposed to problem-based learning and cooperative learning. Students will learn the proper use of various analytical equipment and apparatus. The laboratory work will focus on the development of practical lab skills applicable to the agricultural and environmental industries.
NOTE: Fall semester
FORMA T: Lecture 3 hours, lab 3 hours.
PREREQUISITE: Successful completion of academic Grade 12 Chemistry or equivalent.

CHMA 1001.03: General Chemistry II.
This second semester of General Chemistry will include a theoretical understanding of atomic and molecular structures. An understanding of physical equilibrium will be extended to practical applications of chromatographic analysis.
NOTE: Winter semester
FORMA T: Lecture 3 hours, lab 3 hours.

CHMA 2000.03: Organic Chemistry I.
This course provides an introduction to the structure and reactions of organic compounds. The course is approached from a mechanistic point of view and has particular emphasis on appropriate spectroscopy (IR and NMR). The topics covered in this course include chemical bonding, isomerism, acid-base properties and the isolation and purification of organic compounds. The classes of organic compounds covered will include alkanes, alkynes, simple aromatics, and related compounds. Laboratory work will include introductory techniques of organic chemistry and both HPLC and gas chromatography.
NOTE: Fall semester
FORMA T: Lecture 3 hours, tutorial 1 hour, lab 3 hours.
PREREQUISITE: CHMA 1001.

CHMA 2001.03: Organic Chemistry II.
This course builds on work begun in CHMA 2000. Functional groups included here will be carbonyls (aldehydes, ketones, acids, and their derivatives), more complex aromatics, simple organometallics, and bifunctional organic compounds. The emphasis on mechanistic chemistry will continue, as will the study of appropriate spectroscopy (MSR and UV-Vis). In addition, an introduction to organic synthesis and biomolecular will be undertaken.
NOTE: Winter semester
FORMA T: Lecture 3 hours. Offered in alternate years; next offered in 2015/2016.

CHMA 2003.03: Food Chemistry I (A).
An introductory study of the chemistry of food and food components. The emphasis will be on water, fats, proteins, and carbohydrates (and related compounds) with an overview of vitamins, minerals, and additives. Methods of analysis will be discussed in detail and this will be augmented by hands-on laboratory experience with these analytical procedures.
NOTE: Fall semester
FORMA T: Lecture 3 hours, lab 3 hours.
EXCLUSION: This course may not be taken for credit by students who have credit for CHMA2004.

CHMA 2004.03: Introductory Food Chemistry (A).
An introductory study of the chemistry of food and food components. The emphasis will be on water, fats, proteins, and carbohydrates (and related compounds) with an overview of vitamins, minerals, and additives. Methods used for analysis of food components will be discussed in detail.
NOTE: Fall semester
FORMA T: Lecture 3 hours.
EXCLUSION: This course may not be taken for credit by students who have credit for CHMA2004.

CHMA 3001.03: Biochemistry.
The major focus of this course will be on the biochemical pathways and activities that account for the assimilation, transformation, degradation, and synthesis of the major macromolecules in living cells. These molecules include proteins, lipids, carbohydrates, RNA and DNA. Catalytic and regulatory strategies used by living cells will also be discussed. The final topic will be to examine and understand how metabolites consist of highly interconnected biochemical pathways.
NOTE: Winter semester
FORMA T: Lecture 3 hours, lab 3 hours.

CHMA 3003.03: Advanced Integrated Chemistry Laboratory.
The course will cover advanced laboratory topics in the fields of inorganic, general, and organic chemistry. Whenever possible these topics will be chosen from the fields of environmental science or agriculture. In particular, the use of spectroscopic techniques for the identification of chemical compounds will be applied, where appropriate.
NOTE: Fall semester
FORMA T: Lab 4 hours. Offered in alternate years; next offered in 2015/2016.

CHMA 3006.03: Mammalian Biochemistry.
A study of the application of basic biochemical principles to the molecular functions of the diverse mammalian organ systems. The subject matter is divided into three parts: Body Fluids and Their Constituents, which includes such subjects as blood composition, the complement system, the immune system, and their control; Specialized Tissues, such as connective tissue, nervous tissue, and muscle tissue; and Biochemistry of the Endocrine System, with the focus on the principles of endocrine biochemistry and the mechanisms of hormone action. The topics covered include general principles and mechanisms of hormone action, prostaglandins, the thyroid gland, and the gonads, as well as the hypothalamus, hypophysis, and adrenals.
NOTE: Winter semester
FORMA T: Lecture 3 hours.

CHMA 3007.03: Food Chemistry II (A).
This course, which builds on CHMA 2003 (or CHMA 2004), will provide an in-depth study of major food components including vitamins, colorants (natural and artificial), nomenclature, and textural agents. Identical or different interactions between food components will be examined (Maillard, caramelization, rancidity, and enzymatic reactions). Recent advances in processing technology will be introduced.
NOTE: Winter semester. Note: This course may not be taken for credit by students who have credit for CHMA2004.
FORMA T: Lecture 3 hours, lab 3 hours. Offered in alternate years; next offered in 2015/2016.
CHMA 3008.03: Intermediate Food Chemistry (A).
This course, which builds on CHMA 2001 (or CHMA 2004), will provide an in-depth study of selected food components including vitamins, colorants (natural and artificial), microorganisms and natural agents. Beneficial and/or deleterious interactions between food components will be examined (Maillard, communication, toxicity, and enzymatic reactions). Recent advances in processing technology will be introduced as time permits. 
NOTE: Winter semester
FORMAT: Lecture 3 hours. Offered in alternate years; next offered in 2015/2016.
PREREQUISITE: CHMA 2003 or CHMA 2004
EXCLUSION: This course may not be taken for credit by students who have credit for CHMA 3007.

CHMA 3009.03: Environmental Chemistry.
In this course students will undertake an in-depth study of the chemical processes involved in the pollution of the environment. Chemical pollution of the atmosphere, hydro sphere, and lithosphere will each be studied in depth. In each case, chemical solutions to these problems will be considered. Chemical processes such as dissolution, coordination, ion exchanges, hydrolysis, ionization, and freezing point depression will be covered.
NOTE: Winter semester
FORMAT: Lecture 3 hours. Offered in alternate years; next offered in 2015/2016.
PREREQUISITE: CHMA 2000

CHMA 3010.03: Bio-Analytical Chemistry.
This course will equip the non-chemistry major with an understanding of HPLC (liquid chromatography), GC (gas chromatography), AAS (atomic absorption spectrophotometry), and UV-visible spectrophotometry. The course will use environmental, agricultural, and food samples in classroom examples and in student laboratories. Students will be exposed to proper sample preparation and analysis, data interpretation and proper laboratory techniques with each of these analytical instruments. 
NOTE: Fall semester
FORMAT: Lecture 3 hours, lab 3 hours.
PREREQUISITE: CHMA 2000
EXCLUSION: This course may not be taken for credit by students who have credit for CHMA 2002.

CHMA 4001.03: Directed Studies in Chemistry.
Directed studies involve a suitable combination of directed reading, written assignments, individual study or laboratory research projects in the area of chemistry. Classes are organized and scheduled by appropriate academic faculty via a course coordinator. Students should approach potential instructors directly with their inquiries.
NOTE: Fall or Winter semester
PREREQUISITE: CHMA 3000 or 60 credit hours
CROSS-LISTING: Coordinator: J. Hoyle

Communications

I. Undergraduate Degree Level Course Descriptions

CMMT 3000.03: Communication Theory and Skills (H).
This course is designed to provide students with the opportunity to enhance their communication skills and knowledge. Since a key requirement of today's job market is the ability to communicate effectively, students will be exposed to the theory and the practice of communication. An important component of the course will be the emphasis on the practical application of communication knowledge.
NOTE: Winter semester
FORMAT: Lecture 3 hours, lab 2 hours.
PREREQUISITE: At least second-year standing

CMMT 3001.03: Teaching English as a Second Language.
In cooperation with the University of Cambridge Local Examinations Syndicate (UCLES), the International Language Institute (ILI) offers an intensive class leading to a Certificate in Teaching English to Speakers of Other Languages (CELTA). The syllabus covers six major areas: language awareness; the learner, the teacher, and the teaching-learning context; planning; classroom management and teaching skills, resources and materials; and professional development. Critical feedback is provided on teaching practice, written assignments, and evidence of professional development through the class.
NOTE: Fall, Winter or Spring semester.
FORMAT: Fall, Winter or Spring semester.
PREREQUISITE: Students must obtain a Letter of Permission from the Registrar's Office to take this class for credit. Students must then apply, register, and pay fees for this class at the International Language Institute (ILI).

II. Technology Level Course Descriptions

CMMT 0020.00: Career and Employment Skills.
This course is designed to provide an introduction to job searching and hiring strategies. Through class discussion students will explore the world of work today, the hiring process, and the development of a personal career plan. Assignments will include resume and cover letter writing, a networking exercise, and interview preparation. Restricted to students in the Diploma in Business Management program.
NOTE: Winter semester. This is a Workplace Readiness course required for all options in the Diploma in Business Management program.
FORMAT: Lecture 3 hours for 6 weeks.

CMMT 0021.00: Introduction to Public Speaking.
The objective of this course is to enhance the student's ability to prepare and deliver different types of presentations: informative, persuasive, and impromptu. Topics covered will include assessing audience needs, developing a strong focus, outlining different styles of presentations, and writing effective introductions and conclusions. Students will learn how to evaluate a presentation and make recommendations on how to increase its effectiveness. Tips for presenting ideas visually will also be discussed.
NOTE: Winter semester. This is a Workplace Readiness course required for all options in the Diplomas in Business Management program.
FORMAT: Lab 2 hours for 4 weeks.

CMMT 0030.00: English for Academic Purposes.
This course will focus on enhancing English language skills (reading, writing, listening, critical thinking, and presentation skills required to be successful in an English university setting. Students who successfully complete
CMIT 0030 will be considered to have met their English language requirement and are eligible to continue full-time studies at Faculty of Agriculture.

NOTE: Fall semester

FORMAT: 15 hours per week for 180 hours.

PREREQUISITE: NSAC/FAFU 2+2 program student who meets all of the NSAC B.Sc.(Agr.) admission requirements, has achieved a minimum score of 5.5 on the IELTS (530 TOEFL), and has been recommended by the FAFU Overseas Education College as a strong candidate.

Computer Science

Below are courses offered in Computer Science by the Faculty of Agriculture. Please see the Computer Science Faculty Section for courses offered on the Halifax campus.

I. Undergraduate Degree Level Course Descriptions

CSCA 1000.03: Computer Methods.
A course to develop problem-solving and decision-making abilities and computational skills using computer software. Problems of a scientific and managerial nature will be chosen from a variety of agricultural fields. The course will cover word processing, spreadsheets, databases, programming, statistics, communications, graphics, and process control. Industry-leading software will be used.

NOTE: Fall and Winter semesters

FORMAT: Lecture 3 hours, lab 2 hours.

CROSS-LISTING: CSCA 0200

CSCA 2000.03: Computer Science.
Introduction to problem-solving methods and algorithm development. Emphasis is on designing, coding, debugging, and documenting programs, using C.

NOTE: Fall and Winter semesters

FORMAT: Lecture 3 hours, lab 2 hours.

CSCA 3000.03: Data Structures and Numerical Methods.
This course introduces the student to systems analysis and software techniques. Topics covered include objects, stacks, queues, multiple linked lists, and searching and sorting algorithms and their implementation in the C programming language. The students use linear algebra and numerical methods in engineering examples, while learning to implement properly structured solutions.

NOTE: Winter semester

FORMAT: Lecture 3 hours, lab 2 hours.

PREREQUISITE: CSCA 2000

II. Technology Level Course Description

CSCA 0200.02: Computer Methods.
A course to develop problem-solving and decision-making abilities and computational skills using computer software. Problems of a scientific and managerial nature will be chosen from a variety of agricultural fields. The course will cover word processing, spreadsheets, databases, programming, statistics, communications, graphics, and process control. Industry-leading software will be used.

NOTE: Fall and Winter semesters

FORMAT: Lecture 3 hours, lab 2 hours.

CROSS-LISTING: CSCA 1000
Economics

Below are courses offered in Economics by the Faculty of Agriculture. Please see the Economics Section in the Faculty of Science for courses offered on the Halifax campuses.

I. Undergraduate Degree Level Course Descriptions

ECOA 1000.03: Principles of Microeconomics (AH).
A course in microeconomics at the intermediate level. Topics include the theory of the firm, consumer theory, and market structures. All major concepts are presented graphically and some are studied using basic mathematics as well.
NOTE: Fall and Winter semesters.
NOTE: Fall semester
PREREQUISITE: ECOA 1000
FORMA T: Lecture 3 hours.
ECOA 1001.03: Principles of Macroeconomics (H).
A course in microeconomics at the intermediate level. Topics include the theory of the firm, consumer theory, and market structures. All major concepts are presented graphically and some are studied using basic mathematics as well.
NOTE: Fall and Winter semesters.
NOTE: Fall semester
PREREQUISITE: ECOA 1000
FORMA T: Lecture 3 hours.
ECOA 1002.03: Introduction to Economic Reasoning (INF) (H).
The macroeconomic aspect of this course is taught along with INF 1022 International Food Policy and Environment as part of the International Food Business program in Module 1: Acquiring Knowledge of International Food Systems. Students will successfully complete a series of practical tasks/assignments while learning about the global food environment. Topics will include balance of trade, production possibilities, exchange rates, and monetary policy. The macroeconomic aspect of the course will be taught along with MATH 1000 Introduction to Mathematical Programming in Module 2: Analyzing Business Processes. Topics will include resource scarcity, supply and demand, and market structures and pricing.
NOTE: Full Semester - Module 1 & 2 INF
ECOA 2000.03: Intermediate Microeconomics (H).
A course in microeconomics at the intermediate level. Topics include the theory of the firm, consumer theory, markets and market structure, and externalities and public goods. All major concepts are presented graphically and some are studied using basic mathematics as well.
NOTE: Full semester
FORMA T: Lecture 3 hours, lab 2 hours.
PREREQUISITE: ECOA 1000
This course extends the Principles of Microeconomics course to the intermediate level. Short-term, or business-cycle, macroeconomics is progressed from the introductory Keynesian income determination model to the IS-LM model, and then to the Aggregate Demand/Aggregate Supply model. The long-term macroeconomic content advances the introductory economic model in considering the relative importance of the factors determining the overall rate of economic growth. Throughout the course macroeconomic theory is related to macroeconomic policy goals, stabilizing the economy in the short term and promoting improvement in economic well-being in the long term.
NOTE: Full semester
FORMA T: Lecture 3 hours.
PREREQUISITE: ECOA 1000
ECOA 2003.03: Agricultural Futures and Options (AH).
The course begins with an introduction to agricultural futures markets. This leads into a study of fundamental and technical analysis of futures markets. The course concludes with a consideration of price risk management using futures markets. Following is an introduction to options markets and price risk management using options. The course concludes with a topic of importance when exporting or importing agricultural commodities internationally: managing exchange-rate risk using futures and options.
NOTE: Full semester
FORMA T: Lecture 3 hours.
PREREQUISITE: ECOA 1000
The course is designed as an introduction to environmental and resource economics issues and policy. Students will learn how economic analysis is applied to questions concerning use, management and conservation of natural resources, as well as market failures. Frameworks for measuring environmental costs and benefits and for exploring the efficiency of pollution control policies will also be developed. The impact of environmental and resource issues on the agri-food industry and all levels in the marketing chain will be examined. Applications include air and water pollution and global environmental problems, including climate change.
NOTE: Winter semester
FORMA T: Lecture 3 hours, lab 2 hours, tutorial 1 hour.
PREREQUISITE: MTHA 1000, ECOA 1000
ECOA 3000.03: Mathematical Economics (H).
Introduction to the frequently-used mathematical methods of economic analysis. The course provides the student with the basics required in more advanced economics courses. Areas of concentration include elements of mathematical economics models, linear models and matrix algebra, applications of calculus to economic problems, and optimization theory.
NOTE: Full semester
FORMA T: Lecture 3 hours, lab 2 hours, tutorial 1 hour.
PREREQUISITE: MTHA 1000, ECOA 1000
ECOA 3002.03: Agricultural and Food Policy (AH).
This course introduces students to the structure of the agri-food industry and the process of policy and implementation. A critical assessment of the institutions (organizations, programs, and policies) in agriculture is the main focus of the course. Through guest speakers, students' presentations, interactive class discussions, and lectures, students will learn how policies are developed and who is involved in the policy development process. An historical appreciation for agricultural policy in Canada will be provided with a critical assessment of these policies. In reviewing policy problems affecting the agri-food industry, students will examine possible solutions to these issues. Topics covered include: reasons for government intervention; historical development of agri-food policy in Canada; the policy process; players in agriculture and food policy; structures of provincial, federal, and cost-shared programs; consumers and food policy; resource and environmental policy; international agricultural and food policies; trade agreements; and agribusiness involvement in agriculture and food policy.
NOTE: Winter semester
FORMA T: Lecture 3 hours, lab 2 hours.
PREREQUISITE: ECOA 1000 and at least second-year standing
ECOA 3003.03: Mathematical Programming (AH).
An introduction to the theory and application of mathematical programming in the agri-food industry. The role of matrix algebra in determining linear programming solution procedures is developed. The information requirements, organization, and skills of model building are also introduced. The course will make extensive use of computer algorithms that generate solutions to linear programming models in the production, resource supply, and retail sectors of the agri-food industry.
NOTE: Winter semester
FORMA T: Lecture 4 hours, lab 1 hour per week.
PREREQUISITE: ECOA 3000
ECOA 3004.03: Agricultural Markets and Prices (AH).
An introduction to agricultural market and price analysis as a field of study within agricultural economics. An applied microeconomics approach is taken to studying agricultural supply and demand, price discovery, and market structure for crop and livestock products. In addition to cash (spot) markets, agricultural futures and options markets are studied, including managing agricultural commodity price risk by hedging.
NOTE: Winter semester.
PREREQUISITE: ECOA 2000

ECOA 3006.03: Statistics for Economics and Business (H).
This course is designed to train students in the application of statistical methods to business and economics problems. Emphasis will be given to the application of quantitative and qualitative methods to real-world problems in order to provide students with context in applications. Particular attention will be paid to both the art as well as the science of data analysis. Students will conduct analysis of data, using methods discussed in class, as a term project.
NOTE: Fall semester.
PREREQUISITE: ECOA 2000

ECOA 3007.03: Environmental and Resource Economics (H).
This course is designed to give students a basic introduction to the area of Resource Economics and an understanding of how economists view environmental problems. Topics of study will include public versus private goods, externalities, market failure, and the role of property rights in the economic system. The Course-themes will also be presented. Policy analysis contrasting market-based solutions for environmental problems with conventional solutions will be discussed. Specific topics will then be covered, including environmental policy surrounding water pollution, air pollution, and climate change. Issues related to nonrenewable and renewable economies and sustainable development will be discussed.
NOTE: Winter semester.
PREREQUISITE: ECOA 2000

ECOA 4000.03: Advanced Microeconomics (H).
This course is intended to give students an advanced treatment of Microeconomics. It is strongly recommended for those students wishing to undertake graduate work in economics, agricultural economics, or resource and environmental economics. Topics will include production economics, profit functions, cost functions, supply functions, and factor-demand. An advanced treatment of demand theory will also be presented, including Hicksian and Marshallian demands, derived via Horden’s equation. Both primal and dual approaches will be discussed.
NOTE: Winter semester.
EXCLUSIONS: This course may not be taken for credit by students who have credit for ECOA 3001 or ECOA 4003.

ECOA 4004.03: Trade (AH).
This course will provide students with an understanding of the factors that influence the exchange of products, with particular emphasis on trade interventions and institutions. Students will be introduced to trade theory, which they will use to evaluate trade policy issues. Students will learn how various government policy instruments and institutions affect international and interregional trade. Also, the complex set of rules and regulations governing international trade, such as the WTO, will be analyzed. The consequences of, and linkages among, international trade, the environment, and economic development will also be pursued.
NOTE: Fall semester.
PREREQUISITE: ECOA 2000 and third-year standing.

ECOA 4005.03: Advanced Macroeconomics (H).
This course provides a mathematical, mathematical coverage of classic issues in macroeconomic theory. The course starts with the classical model of a closed economy. A recreation of the labor market leads to the Keynesian model. An alternative treatment of the capital market underlies Tobin’s dynamic aggregate model. The role of inflation expectations is explored under the contracting case of economic agents having adaptive expectations and perfect foresight. By integrating macroeconomic thinking and mathematical reasoning in the context of non-stochastic models, the course is also preparatory to graduate studies in economics.
NOTE: Winter semester.
PREREQUISITE: ECOA 1000, ECOA 3000

II. Technical Level Course Descriptions

ECOA 0100.02: Introductory Microeconomics.
An introduction to the theory of the firm. The course examines the theory of demand and supply, distribution of income, forms of business organizations in Canada, and the levels of competition in the agricultural industry. Application of the various theories to explain the agricultural industry is stressed.
NOTE: Fall semester.
PREREQUISITE: ECOA 1000.

ECOA 0202.02: Production Economics.
An introduction to the study of economic principles used to analyze production and resource use in agriculture. Areas of emphasis include economic examination of the factor, factor-product, and product-product relationships of the farm production system. Practical examples and lab exercises are used to illustrate and reinforce the concepts presented in the classroom.
NOTE: Winter semester.

ECOA 3001.02: Environmental and Resource Economics (H).
An introduction to the study of economic principles used to analyze production and resource use in agriculture. Areas of emphasis include economic examination of the factor, factor-product, and product-product relationships of the farm production system. Practical examples and lab exercises are used to illustrate and reinforce the concepts presented in the classroom.
NOTE: Winter semester.

ECOA 3006.03: Statistics for Economics and Business (H).
This course is designed to train students in the application of statistical methods to business and economics problems. Emphasis will be given to the application of quantitative and qualitative methods to real-world problems in order to provide students with context in applications. Particular attention will be paid to both the art as well as the science of data analysis. Students will conduct analysis of data, using methods discussed in class, as a term project.
NOTE: Fall semester.
PREREQUISITE: ECOA 2000

ECOA 3007.03: Environmental and Resource Economics (H).
This course is designed to give students a basic introduction to the area of Resource Economics and an understanding of how economists view environmental problems. Topics of study will include public versus private goods, externalities, market failure, and the role of property rights in the economic system. The Course-themes will also be presented. Policy analysis contrasting market-based solutions for environmental problems with conventional solutions will be discussed. Specific topics will then be covered, including environmental policy surrounding water pollution, air pollution, and climate change. Issues related to nonrenewable and renewable economies and sustainable development will be discussed.
NOTE: Winter semester.
PREREQUISITE: ECOA 2000

ECOA 4000.03: Advanced Microeconomics (H).
This course is intended to give students an advanced treatment of Microeconomics. It is strongly recommended for those students wishing to undertake graduate work in economics, agricultural economics, or resource and environmental economics. Topics will include production economics, profit functions, cost functions, supply functions, and factor-demand. An advanced treatment of demand theory will also be presented, including Hicksian and Marshallian demands, derived via Horden’s equation. Both primal and dual approaches will be discussed.
NOTE: Winter semester.
EXCLUSIONS: This course may not be taken for credit by students who have credit for ECOA 3001 or ECOA 4003.

ECOA 4004.03: Trade (AH).
This course will provide students with an understanding of the factors that influence the exchange of products, with particular emphasis on trade interventions and institutions. Students will be introduced to trade theory, which they will use to evaluate trade policy issues. Students will learn how various government policy instruments and institutions affect international and interregional trade. Also, the complex set of rules and regulations governing international trade, such as the WTO, will be analyzed. The consequences of, and linkages among, international trade, the environment, and economic development will also be pursued.
NOTE: Fall semester.
PREREQUISITE: ECOA 2000 and third-year standing.

ECOA 4005.03: Advanced Macroeconomics (H).
This course provides a mathematical, mathematical coverage of classic issues in macroeconomic theory. The course starts with the classical model of a closed economy. A recreation of the labor market leads to the Keynesian model. An alternative treatment of the capital market underlies Tobin’s dynamic aggregate model. The role of inflation expectations is explored under the contracting case of economic agents having adaptive expectations and perfect foresight. By integrating macroeconomic thinking and mathematical reasoning in the context of non-stochastic models, the course is also preparatory to graduate studies in economics.
NOTE: Winter semester.
PREREQUISITE: ECOA 1000, ECOA 3000

II. Technical Level Course Descriptions

ECOA 0100.02: Introductory Microeconomics.
An introduction to the theory of the firm. The course examines the theory of demand and supply, distribution of income, forms of business organizations in Canada, and the levels of competition in the agricultural industry. Application of the various theories to explain the agricultural industry is stressed.
NOTE: Fall semester.
PREREQUISITE: ECOA 1000.

ECOA 0202.02: Production Economics.
An introduction to the study of economic principles used to analyze production and resource use in agriculture. Areas of emphasis include economic examination of the factor, factor-product, and product-product relationships of the farm production system. Practical examples and lab exercises are used to illustrate and reinforce the concepts presented in the classroom.
NOTE: Winter semester.

ECOA 3001.02: Environmental and Resource Economics (H).
An introduction to the study of economic principles used to analyze production and resource use in agriculture. Areas of emphasis include economic examination of the factor, factor-product, and product-product relationships of the farm production system. Practical examples and lab exercises are used to illustrate and reinforce the concepts presented in the classroom.
NOTE: Winter semester.
Engineering

Below are courses offered in Engineering by the Faculty of Agriculture. Please see the Faculty of Engineering Section for courses offered on the Halifax campuses.

I. Undergraduate Degree Level Course Descriptions

**ENGN 1001.03: Engineering Design I.**
- Students are introduced to the concept of Engineering Design and the design process.
- Procedures and conventions for the preparation of engineering drawings and technical reports are presented.
- Students develop skills in manual drawing and computer-aided drafting.

**ENGN 2202.03: Fundamentals of Environmental Engineering**
- This course introduces Environmental Engineering by introducing principles, applications, and design concepts pertinent to water quality and pollution, drinking and waste water treatment, solid and hazardous waste management, and air pollution and control.
- The role of process engineering for the protection of the physical environment will be stressed.

**ENGN 3001.03: Electric Circuits.**
- This course covers the fundamentals of electric circuit analysis using Kirchhoff’s current and voltage laws, Thevenin’s, Norton’s, superposition, and source transformation for AC and DC circuits.
- Circuit components include resistors, capacitors, inductors, voltage, and current sources.

**ENGN 3002.03: Thermo-fluids I.**
- Thermodynamics is a study of energy and energy transfers in the form of work and heat.
- The first and second law analyses are covered, including entropy, availability, and efficiencies.

**ENGN 3004.03: Digital Circuits.**
- This course includes an introduction to Boolean algebra, encoders, decoders, shift registers, and asynchronous and synchronous counters.
- Logical design and analysis software is used throughout the course.

**ENGN 3006.03: Engineering II.**
- This course teaches the concept of stress, strain and deformation of a solid body subjected to static forces.
- Topics considered include: stresses and strains under axial, bending, torsional and combined loadings; transformation relations for stresses and strains; Mohr’s circle for stress and strain; stress gauge; mechanical properties of materials; and failure theories.

**ENGN 3008.03: Electrical Circuits II.**
- This course covers advanced circuit analysis techniques, starting with sinusoidal excitation.
- The concepts of phase and complex impedance are fully developed.
- Mutual inductance and magnetically coupled coils are used to introduce transformer behavior and performance.

**ENGN 3011.03: Thermo-fluids II.**
- This course builds on the introduction to fluid mechanics in ENGN 3002.
- The course complements fluid statics from ENGN 3002, covers dimensional analysis, emphasizes the notion of control volume needed to properly solve thermal-fluid problems using the conservation laws presented as integral relations; treats flow in ducts, putting emphasis on head losses (friction and erosion), and presents a practical theory of turbomachinery.
- The different concepts studied during the course are brought together at the end in a series of design examples and design problems.

**ENGN 3015.03: Engineering Economy.**
- This course deals with the mathematics of decision-making.
- Techniques for making investment decisions are considered.
- The course considers enhancements in decision making.
- Risk and uncertainty analysis.
English

Below are courses offered in English by the Faculty of Agriculture. Please see the English Section in the Faculty of Arts and Social Sciences for courses offered on the Halifax campuses.

I. Undergraduate Degree Level Course Descriptions

EGLA 1000.03: Composition (H).
This course has two main objectives: to introduce what is involved in essay, literature review, and other university-level writing tasks, and to facilitate improvement of students’ critical thinking, reading, and writing skills. With these aims in mind, students are engaged in reading, research, and the processes of writing through composing, revising, editing, and proofreading. The course employs an approach that involves writing across the disciplines.
NOTE: Fall semester
INSTRUCTOR(S): Stiles
FORMAT: Lecture 3 hours

EGLA 1001.03: The Novel (H).
In this course, four to six novels will be read, discussed, and analyzed. In the process, students will acquire a vocabulary for talking about literature, and will put to use critical reading and writing skills. They will also learn how the novel can be a window into the historical age in which it is written, illuminating issues such as colonialism, gender relations, culture, race, ethnicity, or the differences between rural and urban life. Novels selected will vary from year to year, but may include those written by Chinua Achebe, Emily Brontë, Kate Chopin, Joseph Conrad, Daniel Defoe, Charles Dickens, Antonine Maillet, Toni Morrison, Gabrielle Roy, Mary Shelley, Oscar Wilde, and others.
NOTE: Winter semester
FORMAT: Lecture 3 hours.

EGLA 1002.03: Nature in Literature (H).
This course explores the ways in which nature is represented in literature through selected works by a number of authors of fiction, non fiction and poetry, including Margaret Atwood, Wendall Berry, John Clare, Dorothy Wordsworth, Henry David Thoreau, Nathanial Hawthorne, and others.
NOTE: Winter semester
INSTRUCTOR(S): Stiles
FORMAT: Lecture 3 hours.

EGLA 1003.03: Business Writing (INFB) (H).
International business writing is an essential skill in today’s business world. This course will provide opportunities to learn how and when to write effective proposals, letters, and memos. Typical business documents to be discussed include: proposals, letters, e-mail/memos, and reports. Some of the topics include: tailoring writing to the audience, selecting templates for documents, researching and presenting documentation, using word processing packages to create professional documents, and proofreading and editing.
NOTE: Fall Semester - Module #1 & #2 INFB

EGLA 1005.03: Academic Writing – International Students (H).
The objective of this course is to develop the skills necessary to write papers and reports at a university level. The course is designed specifically for students whose first language is not English, and it will focus on the process of writing from the development of a thesis or objective to the editing of the final document. Some of the topics include: selecting different types and styles of papers and reports, researching and presenting appropriate academic documentation, organizing material, preparing the initial draft, and proofreading and editing. The course will also focus on enhancing the student’s capacity to write in English.
NOTE: Full semester – Students whose first language is English are not eligible to take this course.
FORMAT: Lecture 3 hours, tutorial 2 hours per week.

EGLA 3000.03: Literature of Atlantic Canada (H).
This course focuses on the prose and poetry of the Atlantic region of Canada, looking at the works in historical, geographical, and social context, and discussing the concept of regionalism in literature. Classes will include lectures, films, videos, presentations, and discussions.
NOTE: Full semester
FORMAT: Lecture 3 hours.
PREREQUISITE: EGLA 1000 or EGLA 1001 or EGLA 1002 or any other first-year English course

II. Technical Level Course Description

EGLA 0101.02: Writing for Business.
The objective of this course is to develop the reading and writing skills necessary to write at a technical level and to develop appropriate writing strategies for business documents. The course will focus on the process of writing from the development of a thesis, researching for information, and writing the initial draft through to proofreading and editing. Typical business documents to be discussed include: proposals, letters, e-mail/memos, and reports. Some of the topics include: tailoring writing to the audience, selecting templates for documents, researching and presenting documentation, using word processing packages to create professional documents, and proofreading and editing.
NOTE: Full semester
FORMAT: Lecture 3 hours.

EGLA 0102.03: Nature in Literature (H).
This course explores the ways in which nature is represented in literature through selected works by a number of authors of fiction, non fiction and poetry, including Margaret Atwood, Wendall Berry, John Clare, Dorothy Wordsworth, Henry David Thoreau, Nathanial Hawthorne, and others.
NOTE: Winter semester
FORMAT: Lecture 3 hours.

PREREQUISITE: EGLA 1000 or EGLA 1001 or EGLA 1002 or any other first-year English course
Environmental Sciences

Below are courses offered in Environmental Sciences by the Faculty of Agriculture. Please see the Environmental Sciences Section in the Faculty of Science for courses offered on the Halifax campus.

I. Undergraduate Degree Level Course Descriptions

ENVA 2000.03: Environmental Studies I (A).
This is the first of a two-semester course sequence that deals with environmental issues from both an agricultural and a socio-economic basis. The scientific principles of each issue will first be outlined and explained, and then the agricultural and socio-economic aspects of the issue will be examined. The topics to be emphasized in this course will include issues associated with population growth, the atmosphere, and the hydrosphere. Students will be expected to show their understanding of the interplay between agriculture and environmental issues by writing a major term paper.
NOTE: Fall semester.
FORMAT: Lecture 3 hours.
PREREQUISITE: 6 technical or degree course credits.
EXCLUSION: Students can receive credit for either ENVA 2012 or ENVA 2000, but not both.

ENVA 2001.03: Environmental Studies II (A).
This is the second of a two-semester course sequence that deals with environmental issues from both an agricultural and a socio-economic basis. All aspects of the issues will be integrated to provide an overall view of each issue. The topics to be emphasized in this course will include issues associated with biodiversity, the biosphere, waste management, and legal aspects of the environment. Students will be expected to show their understanding of the interplay between agriculture and environmental issues by writing a major term paper.
NOTE: Winter semester.
FORMAT: Lecture 3 hours.

ENVA 2002.03: Composting and Compost Use (A) DE.
Composting and the utilization of organic matter produced on the farm provide the basis for soil fertility in organic systems; however, potential benefits derived from compost use are often limited by the supply and quality of compost produced on-farm. The objective of the web-based course is to teach composting primarily by providing students with the opportunity to make their own compost over a period of 13 to 15 weeks. Students learn through five stand-alone modules: Composting of Organic Materials (how the underlying principles of composting are applied when combining various feedstock materials for composting); Composting Process (how to evaluate and manage an actively working pile and troubleshoot to maintain optimum conditions for composting); On-Farm Composting (efficient and low cost composting methods for agricultural composting at various scales); Compost Quality (how to evaluate the quality of the finished compost), as well as an introduction to the requirements of various standards, markets, and end uses for compost; and Compost Utilization and Marketing (considerations and requirements for the optimal use of compost in organic greenhouse crop production and organic farming systems, as well as factors which are important in the marketing of compost).
NOTE: Fall semester. * Note: that making compost and completing all five modules will be a requirement for students who are taking the course for credit. Students who are not taking the course for credit may also decide to make compost and complete all five modules: however, this is not a requirement for non-credit students. To provide maximum flexibility for non-credit students, the modules are offered as independent (stand-alone) units.
FORMAT: DE—only offered as a web-based distance education course.

ENVA 3000.03: Environmental Impact Assessment.
An introduction to the study and assessment of environmental toxicity and ecotoxicology as they are used to predict the environmental impact of agricultural, industrial, and other xenobiotics and associated processes. The laboratory portion of the course will deal primarily with bioassay and assessment techniques.
NOTE: Winter semester.
FORMAT: Lecture 2 hours, lab 3 hours.

ENVA 3001.03: Environmental Sampling and Analysis.
This course will introduce students to the proper methods of sampling and experimental design for biological and chemical analyses, as well as for environmentally oriented surveys. Emphasis will be given to the actual collection of samples and their subsequent analysis.
NOTE: Fall semester.
FORMAT: Lecture 3 hours, lab 3 hours.
PREREQUISITE: STA 1000.

ENVA 3002.03: Waste Management and Site Remediation (A).
This course will examine the following topics: pollution from wastes, waste disposal and treatment, the use of wastes as resources, recycling, composting, waste reduction, incineration, treatment from wastes, biogas production, site remediation, and bioremediation. Agricultural wastes will be emphasized throughout the course.
NOTE: Winter semester.
FORMAT: Lecture 3 hours, lab 3 hours.
PREREQUISITE: ENVA 2001 or ENGN 2012.

ENVA 3003.03: Environmental Studies Field Course.
This 12-day course is designed to provide students with an opportunity to pursue a holistic approach to solve real environmental problems. It will be held at an environmentally significant site(s). Students will be expected to pre-plan and to perform on-site analyses to identify any environmental problems. An interim report of findings will be required during the course. After completion of the field work, students are expected to write a report of their findings with appropriate recommendations regarding solutions to identified problems. Students should contact the course instructor prior to October 15 in the preceding Fall semester for scheduling information about the course. Expenses associated with the course are the responsibility of the student. The course is offered subject to enrollment.
NOTE: Summer session.
FORMAT: 12-day course.
PREREQUISITE: 10 degree credits, including ENVA 2000 and ENVA 2001.

ENVA 3004.03: Principles of Pest Management (A).
An investigation of the philosophy of pest management. Topics will include the study of different approaches to pest management and an assessment of the use of single versus integrated pest control options. Costs of pest control from economic, social, and environmental perspectives will be discussed.
NOTE: Full semester.
FORMAT: Lecture 3 hours, seminar 3 hours per week.
PREREQUISITE: BIOM 1003.

ENVA 3021.03: Hydroecology (A).
This course deals with the emerging science and technology management tool of ecohydrology and the design of best management practices (BMPs) for water resource protection and use. Topics to be covered include: non-point source pollution, drainage and irrigation, soil erosion and deforestation, and the BMPs of buffer strips, natural vegetation, and manmade water management. Many topics for discussion will involve agricultural development in Canada and developing nations.
NOTE: Full semester.
FORMAT: Lecture 3 hours, lab 3 hours.

ENVA 4000.03: Pesticides in Agriculture (A).
A course dealing with various aspects of pesticides used in agriculture. The course will look at pesticides from their origin and development to their registration, sale, distribution, and use. Also included are discussions of safety and toxicity.
NOTE: Winter semester.
FORMAT: Lecture 2 hours, discussion period 3 hours.

ENVA 4002.03: Economic Entomology (A).
An introduction to the study of economic entomology from an agricultural perspective, covering principles of insect control (natural, mechanical, physical, cultural, biological, and legal), including chemical and biochemical control, and
Extension Education

I. Undergraduate Degree Level Course Description

EXTE 3001.03: Leadership Development and the Social Action Process (H).

Students will be looking at leadership development from a number of angles: current theories, leader identification, and leadership skills. The impact of leadership on the social action process will be analyzed in the context of rural communities. Analysis of the social action process will focus on participatory approaches to rural community development and extension. Students will have the opportunity to enhance personal leadership skills through discussion and practice.

NOTE: Fall semester
FORMAT: Lecture 3 hours
PREREQUISITE: At least third-year standing

Extension Education

I. Undergraduate Degree Level Course Description

EXTE 3001.03: Leadership Development and the Social Action Process (H).

Students will be looking at leadership development from a number of angles: current theories, leader identification, and leadership skills. The impact of leadership on the social action process will be analyzed in the context of rural communities. Analysis of the social action process will focus on participatory approaches to rural community development and extension. Students will have the opportunity to enhance personal leadership skills through discussion and practice.

NOTE: Fall semester
FORMAT: Lecture 3 hours
PREREQUISITE: At least third-year standing

ENVA 4003.03: Advanced Weed Science (A).
Deals with principles of weed science from an ecological perspective. Included are discussions on ecology and management of weeds in traditional agro-ecosystems as well as in low-input sustainable agricultural systems. The roles of biological, cultural, and chemical controls in these systems will be stressed.
NOTE: Winter semester
FORMAT: Lecture 3 hours, lab 3 hours
PREREQUISITE: BIOA 3000

ENVA 4005.03: Geographic Information Systems (GIS) (A).
The objective of this course is to provide both a theoretical and a practical understanding of GIS concepts and GIS application skills as it relates to ESRI ArcGIS© software. Practical training and application skills will be acquired during laboratory sessions, whereas GIS foundations and concepts will be provided during lectures. The application of GIS technologies will focus on data sets derived from environmental science, soil science, or agriculture generally. A component of this class will be the application of GIS technologies to a student-defined problem or issue.
NOTE: Fall semester – This course has limited enrollment.
FORMAT: Lecture 2 hours, lab 2 hours
PREREQUISITE: At least third-year standing

ENVA 4006.03: Air, Climate and Climate Change (A).
This course examines the composition of our atmosphere, how it functions to create weather and climate, and its role in agricultural production. A fundamental understanding of chemistry and physics of atmospheric processes will provide the basis for an examination of micro-, regional-, and global-scale meteorological processes. The expression of these meteorological processes will be examined over time and space as a means of examining climate and climate change. The role of weather and climate in agricultural production will be discussed. The global debate surrounding anthropogenic greenhouse gas emissions and climate change will be considered from scientific, social and political perspectives. Agricultural adaptation to climate change, both regionally and globally, will be considered. The laboratory portion of the class will examine the tools for measuring the composition of the atmosphere, the physical state of the atmosphere, the transfer of heat and mass to and within the atmosphere, and the use of weather and climate data in agricultural decision-making.
NOTE: Fall semester
FORMAT: Lecture 3 hours, lab 3 hours
PREREQUISITE: ENV A 2000

ENVA 4007.03: Directed Studies in Environmental Science.
Directed studies involve a suitable combination of directed reading, written assignments, individual study or laboratory research projects in the area of environmental sciences. Classes are organized and scheduled by appropriate faculty via a course coordinator. Students should approach potential instructors directly with their requests.
NOTE: Fall or Winter semester
FORMAT: as arranged
PREREQUISITE: ENV A 2000, ENV A 2001, and 20 degree credits

ENVA 4008.03: Directed Studies in Pest Management (A).
Directed studies involve a suitable combination of directed reading, written assignments, individual study or laboratory research projects in the area of pest management. Classes are organized and scheduled by appropriate faculty via a course coordinator. Students should approach potential instructors directly with their requests.
NOTE: Fall or Winter semester - Extension Education
FORMAT: as arranged
PREREQUISITE: One of BIOA 2005, BIOA 3000, BIOA 3002 (as per topic chosen) and 20 degree credits
Food Science

I. Undergraduate Degree Level Course Descriptions

FOOD 1000X/Y:03: Food Safety and Quality Assurance (INFB).

This course is part of Module 3 of the International Food Business program - Analyzing Food Chains. It provides students with an introduction to food safety and quality assurance issues and developments. Topics include quality assurance systems both public and private, legislation and responsibility.

NOTE: Winter Semester - Module 3 INFB.

FOOD 3000:03: Food Quality Assurance (A).

The various quality philosophies (QC, QA, TQM) will be studied with respect to their industrial applications. The course will centre on the use of control charts to monitor processes and to evaluate the quality of both incoming raw materials and the finished product. Students will gain first-hand experience in the design and implementation of ISO 9000 and HACCP systems in the commercial food industry. The application of these principles to other manufacturing processes and/or data acquisition will be discussed. Consideration will also be given to recognizing the quality criteria required by some international customers.

NOTE: Winter semester.

FORMAT: Lecture 3 hours, lab 3 hours

PREREQUISITE: CHMA 2000 and 20 degree credits; students taking FOOD 3000 are strongly encouraged to take CHMA 2003 or CHMA 2004

FOOD 3001:03: Functional Foods and Nutraceuticals (A).

Interest in functional foods and nutraceuticals is growing rapidly and it has emerged as a new frontier of the agri-food and nutrition industry worldwide. This course provides a basic scientific knowledge of bioactive plant compounds (phytochemicals) present in functional foods and nutraceuticals. Emphasis will be given to phytochemical biosynthesis, classification, distribution among food and medicinal crops, analysis, and current scientific knowledge on the potential health benefits of the bioactive phytochemicals. The course also introduces global marketing trends, government regulations, principles of designer food, and value-added food processing concepts in functional foods and nutraceuticals.

NOTE: Full semester

FORMAT: Lecture 3 hours, lab 3 hours

PREREQUISITE: CHMA 2000

FOOD 4000:03: Directed Studies in Food and Bioprocess Science (A).

Directed studies involve a suitable combination of directed reading, written assignments, individual study or laboratory research projects in the area of food and bioprocess science. Courses are organized and scheduled by appropriate faculty via a course coordinator. Students should approach potential instructors directly with their requests.

NOTE: Fall or Winter semester

FORMAT: as arranged.

PREREQUISITE: CHMA 2000 and 20 degree credits; students taking FOOD 4000 are strongly encouraged to take CHMA 2003 or CHMA 2004

II. Technical Level Course Description

FOOD 0020:00: Topics in Agriculture & Food Enterprise Management.

Students participate in an examination of the structure of agri-food industry and of the context in which individual enterprises operate. They are required to identify current issues facing the agricultural industry at all levels, and to examine their potential impact on sustainability and opportunities in the Atlantic Canadian industry.

NOTE: Winter semester – This is a Workplace Readiness course required in the Agriculture option of the Diploma in Business Management.

FORMAT: Lecture 1 hour for 12 weeks

French

Below are courses offered in French by the Faculty of Agriculture. Please see the French Section in the Faculty of Arts and Social Sciences for courses offered on the Halifax campus.

I. Undergraduate Degree Level Course Descriptions

FRNA 1000:03: French Language I (H).

This course is designed to fill the needs of students who have studied French in high school, and is intended to review grammar and provide an opportunity to polish and refine language skills. Courses will emphasize basic grammatical structures, pronunciation, listening comprehension, and speaking skills. FRNA 1000 is designed to provide the student with opportunities to use the language and enhance written, spoken, and comprehension skills. This course is not intended as an introduction to the French language. Students whose first language is French or who are fluent in the French language are not eligible to take this course.

NOTE: Full semester

FORMAT: Lecture 3 hours.

PREREQUISITE: Grade 12 French or equivalent within the last five years

FRNA 1001:03: French Language II (H).

This course is designed to fill the needs of students who have already studied French, and is intended to review grammar and provide an opportunity to refine language skills. Courses will emphasize basic grammatical structures, pronunciation, listening comprehension, and speaking skills. FRNA 1001 is designed to provide the student with opportunities to actively use the language.

This course is intended not as an introduction to French language but as a review and continuation of the major aspects of FRNA 1000. It is expected that students have a basic grasp of French grammar and some vocabulary. Students whose first language is French or who are fluent in the French language are not eligible to take this course.

NOTE: Winter semester

FORMAT: Lecture 3 hours, tutorial 2 hours per week.

PREREQUISITE: FRNA 1000

FRNA 1003: French Language III (H).

This course is designed to fill the needs of students who have already studied French, and is intended to review grammar and provide an opportunity to refine language skills. Courses will emphasize basic grammatical structures, pronunciation, listening comprehension, and speaking skills. FRNA 1003 is designed to provide the student with opportunities to actively use the language.

This course is intended not as an introduction to French language but as a review and continuation of the major aspects of FRNA 1000. It is expected that students have a basic grasp of French grammar and some vocabulary. Students whose first language is French or who are fluent in the French language are not eligible to take this course.

NOTE: Winter semester

FORMAT: Lecture 3 hours, tutorial 2 hours per week.

PREREQUISITE: FRNA 1000
Genetics

I. Undergraduate Degree Level Course Descriptions

GENE 2000.03: Genetics.
This course studies heredity and variation in plants and animals, including man, and the relationships of genetics to evolution and breeding practices.
NOTE: Fall semester
FORMAT: Lecture 3 hours, lab 2 hours.

GENE 3000.03: An Introduction to Molecular Genetics.
The objective of this course is to provide students with a general foundation in molecular genetics and recombinant DNA technology. Replication, transcription, protein synthesis, recombinant DNA, and the regulation of gene expression in prokaryotes and eucaryotes will be studied in detail. Ethical and legal issues related to the production, testing, and ownership of genetically engineered organisms will be discussed. In the laboratory, students will be exposed to a range of molecular genetic techniques, including isolation and restriction site mapping of bacterial plasmids, bacterial transformation, isolation and restriction enzyme digestion of genomic DNA, and PCR amplification. Students completing this course will be able to read original research papers in the molecular genetic literature, and will be prepared for advanced training in molecular biology, plant breeding, or animal breeding.
NOTE: Winter semester
FORMAT: Lecture 3 hours, lab 3 hours
PREREQUISITE: GENE 2000, preparatory: one course in biochemistry

GENE 3001.03: Population and Quantitative Genetics.
An introduction to population and quantitative genetics, with particular emphasis on the forces causing genetic change in populations. Applications from natural populations, conservation biology, and plant and animal breeding will be used to illustrate theories of evolution and modern breeding methods. Contemporary ideas about evolution at both the molecular and organismal levels will be explored. Laboratory sessions include discussion of concepts and use of computer simulations to model populations under natural and artificial selection.
NOTE: Winter semester
FORMAT: Lecture 3 hours, lab 2 hours. Offered in alternate years; next offered in 2014/2015
PREREQUISITE: GENE 2000, STAA 2000

GENE 4000.03: Molecular Applications to Animal Production.
This upper-level course is designed for students interested in the molecular and cellular techniques that are being applied to animal production systems and research. Topics include molecular techniques used in research, DNA fingerprinting, marker-assisted selection, embryo IVF/sexing/nuclear transfer, recombinant protein production, the use of recombinant microbes in ruminants, and stem cell and transgenic animal production.
NOTE: Fall semester
FORMAT: Lecture 3 hours. Offered in alternate years; next offered in 2013/2014.
PREREQUISITE: CIDMA 3000 (or CIDMA 2005), GENE 3000

GENE 4003.03: Biotechnology.
Biotechnology includes the generation of new medicine, generation of biofuel, new chemicals and materials, removal of pollutants, and production of better and safer foods. The objective of this course is to provide students with general information on the theory and technologies that are currently used in biotechnology. Course topics will include gene identification, transformation and expression regulations, tissue culture and cell culture techniques, and other genetics-related agricultural applications. Nutraceutical and pharmaceutical applications will be addressed.
NOTE: Fall semester
FORMAT: Lecture 3 hours

GENE 4004.03: Laboratory Techniques in Genomics.
An intensive course that provides hands-on training in manipulations used routinely in molecular labs. An exercise for both hands and mind, students will work in pairs and should be prepared to spend four hours per laboratory session as well as two hours of instruction and preparation on the day immediately preceding lab class. Laboratory reports will account for the bulk of the mark, with a participation score and a final exam rounding out the grade.
NOTE: Winter semester
FORMAT: Lab 6 hours
PREREQUISITE: GENE 3000 or GENE 4000

PREREQUISITE: GENE 2000
CROSS-LISTING: AGRI 5750
**Geography**

Below are courses offered in Geography by the Faculty of Agriculture. Please see the Geography Section in the Faculty of Science for courses offered on the Halifax campuses.

I. Undergraduate Degree Level Course Descriptions

**GEOA 1000.03: Introductory Human Geography (H).**

This course is an introduction to the field of Human Geography. The objectives of the course are to present the spatial point of view on human/land interactions. Lectures, readings, and assignments consider geographical patterns, processes, and problems in rural and urban settings. Some emphasis will be given to the Canadian and Atlantic region contexts.

NOTE: Winter semester
FORMA T: Seminar 3 hours per week.

**GEOA 3000.03: Rural Geography (H).**

This course focuses on rural geographic problems in Canada and the Atlantic region. Discussion will include, for example, rural land use issues, settlement dynamics, rural economic problems, urban/rural interaction, agricultural change, rural well-being, and rural planning. The geographic perspective emphasizes spatial variability and human/land interactions.

NOTE: Winter semester
FORMA T: Lecture 3 hours, lab 3 hours.

**Geology**

Below are courses offered in Geology by the Faculty of Agriculture. Please see the Geology Section in the Faculty of Science for courses offered on the Halifax campuses.

I. Undergraduate Degree Level Course Description

**GELA 2000.03: Introduction to Geology.**

This course introduces the student to the basic concepts of Earth Science and Physical Geology. Geology, as a subject matter area in the Earth Sciences, is closely related to soil science. This course will examine the nature of Earth materials as well as Earth processes, both internal and surface. Minerals, rocks, earthquakes, streams, and groundwater are just some of the areas investigated in this course. Many geological processes are of importance to the Environmental Sciences because an understanding of Earth processes is fundamental for the understanding of human impacts on our landscapes.

NOTE: Winter semester
FORMA T: Lecture 3 hours, lab 3 hours.

FORMA T: Lecture 3 hours, lab 3 hours.
History

Below are courses offered in History by the Faculty of Agriculture. Please see the History Section in the Faculty of Arts and Social Sciences for courses offered on the Halifax campus.

I. Undergraduate Degree Level Course Descriptions

HISA 1000.03: Introduction to Canadian History I
1000–1867 (H).
This course introduces students to the theory and practice of history through a general historical survey of Canadian history, for the period from approximately 1000 CE [Common Era] to about the mid-19th century. Historical theories and methodologies will be introduced in this course. The student will be introduced to concepts, theories, and methodologies employed in historical study.
NOTE: Winter semester
FORMAT: Lecture 3 hours.

HISA 1000.03: Introduction to Canadian History
II 1867–Present (H).
This course will examine the problems of modernity, through an exploration of Canadian history from the mid-19th century through to the present. Political, social, and cultural developments and transformations will be emphasized. In addition to the exploration of Canadian history, Canadian identity, the student will be introduced (or, in the case of those who have previously taken HISA 1000, reintroduced) to concepts, theories, and methodologies employed in historical study.
NOTE: Winter semester
FORMAT: Lecture 3 hours.

HISA 3000.03: Rural History (H).
This course will introduce students to selected problems in the study of rural history. Problems to be considered in at least two time periods may include the following: the problem of change in rural society vis à vis industrialization; the intersection of national, ethnic, and other "identity" with rurality; the changing rural context of the past. The student will be introduced to concepts, theories, and methodologies employed in historical study.
NOTE: Winter semester
FORMAT: Lecture 3 hours.

HISA 2000.03: Rural History (H).
This course will introduce students to selected problems in the study of rural history. Problems to be considered in at least two time periods may include the following: the problem of change in rural society vis à vis industrialization; the intersection of national, ethnic, and other "identity" with rurality; the changing rural context of the past. The student will be introduced to concepts, theories, and methodologies employed in historical study.
NOTE: Winter semester
FORMAT: Lecture 3 hours.

HISA 1000, 1001: Introduction to Canadian History

HISA 1000.03: Rural History (H).
This course will introduce students to selected problems in the study of rural history. Problems to be considered in at least two time periods may include the following: the problem of change in rural society vis à vis industrialization; the intersection of national, ethnic, and other "identity" with rurality; the changing rural context of the past. The student will be introduced to concepts, theories, and methodologies employed in historical study.
NOTE: Winter semester
FORMAT: Lecture 3 hours.

HISA 1000.03: History Section in the Faculty of Agriculture

Horticulture

I. Undergraduate Degree Level Course Descriptions

HORT 2000.03: Vegetable Production (A).
Study of the principles that form the basis for organic production systems. Special emphasis is given to soil fertility, organic soil amendments, compost and mulch, crop rotation, plant health, management of diseases and pests, companion planting, and produce storage and handling. Seminar topics will include making the transition to organic production, and definition and legislation of organic food in Canada.
NOTE: Fall semester
FORMAT: Lecture 2 hours, lab 2 hours.

HORT 2001.03: Principles of Organic Horticulture (A) DE.
Study of the principles that form the basis for organic production systems. Special emphasis is given to soil fertility, organic soil amendments, compost and mulch, crop rotation, plant health, management of diseases and pests, companion planting, and produce storage and handling. Seminar topics will include making the transition to organic production, and definition and legislation of organic food in Canada.
NOTE: Fall semester
FORMAT: DE - only offered as a web-based distance education course.

HORT 2003.03: The British Garden.
The history of British landscape development is studied, supported by visits to gardens that exemplify period design. Period garden features and the design philosophy that fostered the evolution of landscape development will be examined. North American and British landscape maintenance standards and techniques will be compared. Plant identification will be a component of this course.
NOTE: Summer semester - The course is offered in England, subject to enrollment. Expenses associated with the course are the responsibility of the student.
FORMAT: 4 weeks intensive.

HORT 2004.03: Introduction to Viticulture (A).
This course will introduce students to selected problems in the study of viticulture in the Atlantic region will initially examine the taxonomy, vitology, physiology, and biochemistry of grapevine growth and fruit maturation. Emphasis will be placed on the environmental regulation of grapevine growth, development, yield and composition, and management strategies to optimize grape production in cool-climate viticulture production areas. Included will be an examination of the importance of site selection, soil management, grapevine cultivars, rootstocks, clones, production systems, and vineyard establishment. Cultural management practices including pruning, training, canopy management, crop control, and mechanization will be discussed, and an overview of pest pressures and other environmental concerns including winter hardiness will be covered. Lastly, the harvesting and vinification of wine grapes will be examined with the inclusion of "hands-on" laboratory sessions at a commercial vineyard and winery. Successful completion of the course should prepare students for upper-division courses in viticulture and enology.
NOTE: Full semester
FORMAT: Lecture 3 hours, lab 3 hours.

HORT 2005.03: Design & Construction of Turf Facilities.
Includes the interpretation and implementation of design and construction plans for various facilities such as golf courses and recreational fields. Topics include understanding the basic concepts involved in golf course construction, individual
components of a golf course, design and construction of sport turf facilities, and development and maintenance of high-end facilities, including those using synthetic turfgrass. Emphasis will be placed on the special considerations needed to "grow in" a new turf in each of these situations.

NOTE: Winter semester

FORM: Lecture 2 hours, lab 3 hours

HORT 2006.03: Tree Fruit Crops (A)

Tree fruit production with emphasis on resource conservation is investigated in relation to the region. Origins, history, horticultural systems, adaptation, and culture of true fruits, including organic systems, are studied. Propagation, pruning, training, harvesting, and marketing of these crops are covered in this course.

NOTE: Winter semester

FORM: Lecture 3 hours, lab 2 hours

CROSS-LISTING: HORT 2025

HORT 2007.03: Small Fruit Crops (A)

This course remains of the study of strawberry, blueberry, raspberry, cranberry, currant, gooseberry, low, elderberry, Saskatoon berry, and grape production. Aspects of propagation through to harvesting and marketing of each crop is discussed. Some aspects of organic production of small fruits are included. Origins, adaptation, and distribution of each crop are examined. New small fruit crop development for nutraceuticals is covered.

NOTE: Fall semester – Note: Field trips to small fruit farms, small fruit crop nurseries, and research institutes are included during the term.

FORM: Lecture 3 hours, lab 2 hours

CROSS-LISTING: HORT 2002

HORT 2009.03: Landscape Plant Nursery Management (A)

Nursery crops are those plant materials generally used for outdoor landscape plantings, including trees, shrubs, vines, and other plants having persistent woody stems, and all herbaceous perennials. This course will examine the selection, propagation, growing, handling, and marketing of these materials. The course uses an entrepreneurial approach with emphasis on the importance of new plant introductions, and plant and landscaping trends analysis. The course also examines the nursery industry from the standpoint of where it fits into the bigger picture, i.e., the overall "green" industry.

NOTE: Winter semester

FORM: Lecture 3 hours, lab 2 hours

PREREQUISITE: AGRI 1000, preparatory: BIOA 2002

CROSS-LISTING: HORT 2020

HORT 2010.03: Greenhouse and Floriculture Crop Management (A)

Greenhouse and floriculture crop production is one of the most exacting specialties in the field of agriculture. It is the only type of crop production where almost complete control of plant growth is achieved with the modification of environmental conditions. This is obtained through atmosphere modification (increasing CO2 levels), temperature control, control of light, nutrition, and water; the application of growth-modifying chemical regulators; and pest control. Greenhouse management can therefore be one of the most interesting and intriguing of the agricultural sciences. This course will examine the greenhouse, its environment, and the production of crops in this environment, plus outdoor cut-flower production.

NOTE: Fall semester

FORM: Lecture 3 hours, lab 2 hours

PREREQUISITE: AGRI 1000, preparatory: BIOA 2002

CROSS-LISTING: HORT 2021

HORT 3000.03: Environmental Processes and Natural Landscape Functions.

The structure, functions, and dynamics of landscapes that are altered by human design are discussed. Key ecological processes and their disruption, landscape modification, and landscape planning and management will be examined. Students are expected to participate in field work, and to engage in self-directed study.

NOTE: Full semester

FORM: Lecture 3 hours, lab 3 hours

HORT 3001.03: Landscape Project Management.

This course is an introduction to landscape design, estimating, and construction. Principles and processes for cost estimation will be studied, using actual landscape projects and considering local building codes and regulations. Computers will be utilized in the process.

NOTE: Full semester

FORM: Lecture 3 hours, lab 3 hours

PREREQUISITE: A previous course in landscape design and construction

HORT 3008.03: Horticultural Therapy (H)

An in-depth study of the application of horticultural activities as a treatment modality, e.g., working with youth and older adults, the rehabilitation of handicapped individuals, treatment of emotional trauma, and substance abuse, and others. Attention is given to understanding problems associated with client groups and specific horticultural activities used in therapeutic programs.

NOTE: Winter semester

FORM: Lecture 3 hours, lab 3 hours

HORT 4000.03: Urban Tree Management.

This course focuses on the management of the urban forest. Tree inventory systems, planning the urban forest, forest management, site reclamation, the valuation of urban trees, and trees and the law will be included. Lab exercises will include tree assessment techniques, tree inventory exercises, use of tree inventory software, new techniques for hazard tree assessment, new techniques for managing pests and diseases in urban trees, and site assessment and remediation. Tree pruning exercises will emphasize preservation of tree structure, quality of cuts, and work efficiency and safety.

NOTE: Full semester

FORM: Lecture 3 hours, lab 3 hours

PREREQUISITE: HORT 0207 or a previous course in arboriculture, or permission of the instructor

II. Technology Level Course Descriptions

HORT 0100.02: Landscape Plants I

Herbaceous and woody plants are studied with respect to their identification, landscape value, and use. Special groups of plants to be studied include plants with fall interest, shade-loving plants, groundcovers, and vines, as well as many other plants suited to Atlantic landscapes. The lab involves the study of plant families, plant morphology, use of plant keys, plant collecting, and preparation of herbarium specimens. A plant collection is required.

NOTE: Full semester

FORM: Lecture 3 hours, lab 2 hours

HORT 0101.02: Landscape Plants II

Herbaceous, woody, and aquatic plants are studied with respect to their identification, landscape value, and use. Special plant groups studied will be deciduous trees, shrubs and vines, and ground covers. The lab covers herbaceous perennials, herbaceous and woody material for hedges, and aggressive species for the groundcover. The course is designed to train students in the use of the University of Maine Plant Information System (PIS) and to familiarize them with the many native and introduced plants that are so important to the region.

NOTE: Winter semester

FORM: Lecture 3 hours, lab 2 hours

HORT 0102.02: Turfgrass Production and Management

A study of cool-season turfgrasses, their characteristics, and proper usage. The establishment, maintenance, and renovation of turfgrass will be studied. Cultural practices employed will focus on proper fertilization, watering, and pest control.

NOTE: Full semester

FORM: Lecture 3 hours, lab 2 hours

HORT 0103.02: Landscape Horticulture I

An introduction to landscape horticulture. Plant propagation instruction and the fundamental principles governing plant growth are discussed, as well as the functional use of ornamental plants in the contemporary landscape. Laboratory exercises will concentrate on the basic skills associated with the use of plants in the landscape.

NOTE: Full semester

FORM: Lecture 3 hours, lab 3 hours

HORT 0200.02: Landscape Plant Nursery Management.

Nursery crops are those plant materials generally used for outdoor landscape plantings, including trees, shrubs, vines and other plants having persistent woody stems, and all herbaceous perennials. This course will examine the selection, propagation, growing, handling, and marketing of these materials. The course uses an entrepreneurial approach with emphasis on the importance of new plant
Horticulture

PREREQUISITE: HORT 0100, HORT 0103, HORT 0209
FORMA T: Lecture 3 hours, lab 3 hours.
NOTE: Winter semester

HORT 0201.02: Greenhouse and Floriculture Crop Management.
Greenhouse and floriculture crop production is one of the most exciting specialties in the many areas of agriculture. It is the only type of crop production where almost complete control of plant growth is achieved with the modification of environmental conditions. This is obtained through atmosphere modification (increasing CO₂ levels, temperature control, control of light, nutrition and water; the application of growth-modifying chemical regulators; and pest control. Greenhouse management can therefore be one of the most interesting and intriguing of the agricultural sciences. This course will examine the greenhouse, its environment, and the production of crops in this environment, plus outdoor cut-flower production.
NOTE: Full semester
FORMA T: Lecture 3 hours, lab 2 hours.
CROSS-LISTING: HORT 2009

HORT 0202.02: Small Fruit Crops.
The course consists of the study of strawberry, blueberry, raspberry, cranberry, currant, gooseberry, kiwif, echidnberry, Saskatoonberry, and grape production. Aspects of propagation through to harvesting and marketing of each crop is discussed. Some aspects of organic production of small fruits are included. Origins, adaptation, and distribution of each crop are examined. New small fruit crop development for nutraceuticals is covered. Origins, adaptation, and distribution of each crop are examined. New small fruit crop development for nutraceuticals is covered.
NOTE: Fall semester – Note: Field trips to small fruit farms, small fruit crop nurseries, and research institutes are included during the term.
FORMA T: Lecture 3 hours, lab 2 hours.
CROSS-LISTING: HORT 2010

HORT 0203.02: Tree Fruit Crops.
Tree fruit production with emphasis on resource conservation is investigated in relation to the region, Origins, history, biodynamics, adaptation, and culture of true fruits, including organic systems, are studied. Propagation, pruning, training, harvesting, and marketing of these crops are covered in this course.
NOTE: Winter semester
FORMA T: Lecture 3 hours, lab 2 hours.
CROSS-LISTING: HORT 2006

HORT 0204.02: Landscape Plants III.
Herbaceous, woody, and aquatic plants are studied with respect to their identification, use, and value in landscape settings. Special plant groups included in the course include woody plants, sensory plants, container plants, medicinal herbs, ornamental perennials, and biodynamics. Laboratory exercises concentrate on specific arboriculture skills and techniques.
NOTE: Fall and Winter semesters
FORMA T: Lecture 3 hours.

HORT 0205.02: Residential Landscape Design and Construction.
This course introduces a systematic process for developing residential landscape designs. Emphasis is placed upon maximizing the usefulness of the property and developing it in an environmentally sound and sustainable manner. Lab exercises will utilize the computer as a design tool as well as conventional graphic techniques.
NOTE: Winter semester
FORMA T: Lecture 3 hours, lab 3 hours.
PREREQUISITE: HORT 0100, HORT 0103, HORT 0209

HORT 0207.02: Arboriculture.
Emphasis is placed upon arboriculture theory and practice. True problems arising from pest and disease injury, as well as environmental and non-parasitic injury of trees, will be addressed. The course will focus on the tree in an urban environment. Laboratory exercises concentrate on specific arboriculture skills and techniques.
NOTE: Full semester
FORMA T: Lecture 3 hours, lab 3 hours.
PREREQUISITE: HORT 0103

HORT 0208.02: Landscape Maintenance.
Provides an overview of site management. Time studies, scheduling of horticultural work and management techniques are included. Plant healthcare strategies, including pesticides and their application, are discussed, and provincial pesticide applicator courses are written in preparation for licensing. A calendar of landscape maintenance tasks will be developed by the student.
NOTE: Winter semester
FORMA T: Lecture 3 hours, lab 2 hours.
PREREQUISITE: HORT 0100, HORT 0101

HORT 0209.02: Landscape Horticulture II.
A study of herbaceous plants and their uses in landscape. Special plant groups, gardening techniques, and styles will be examined. Both computer and conventional methods of drafting will be utilized in design.
NOTE: Full semester
FORMA T: Lecture 3 hours, lab 2 hours.
PREREQUISITE: HORT 0100. Prerequisite/Co-requisite: HORT 0103

HORT 0210.02: Landscape Installation.
This course provides theoretical and practical training in landscape construction and installation. Skills and standards identified by the Canadian Nursery and Landscape Association and tested through the Canadian Certified Horticultural Technician Program are considered minimum in levels of information presented in a modular format. Topics include plant reading, construction drawings, and site grading.
NOTE: Winter semester
FORMA T: Lecture 3 hours, lab 3 hours.
PREREQUISITE: Corequisite: ENGN 0101

HORT 0211.02: Vegetable Production.
Production technology for the major vegetable groups in the Atlantic region are studied in detail, including historical and horticultural characteristics, soil and fertility requirements, cultivar selection, pest management, and harvest and storage requirements. Commercial vegetable enterprises are visited.
NOTE: Full semester
FORMA T: Preparatory: PLSC 0100
PREREQUISITE: Corequisite: ENGN 0101
CROSS-LISTING: HORT 2000
Below are courses offered in International Development by the Faculty of Agriculture. Please see the International Development Studies Section in the Faculty of Arts and Social Sciences for courses offered on the Halifax campuses.

I. Undergraduate Degree Level Course Descriptions

IAGR 2002.03: International Rural Development (H).
This course explores the history, defining characteristics, and diversity of developing societies, with a focus on the people and issues of rural communities. Students will explore the main issues facing rural communities in developing regions, as well as the many cultural, social, political and economic factors that can impact the success of development projects and initiatives at the community level. Students will be expected to develop an understanding of a variety of perspectives on international community development and also to develop an appreciation for the opportunities and challenges of sustainable development in different societies and cultures.

NOTE: Fall semester

FORMAT: Lecture 3 hours.

The focus of the course is food production and food security in Cuba, with emphasis on animal production, urban gardens, herbal medicine, environmental protection, ecotourism, and rural development. Students will also learn about Cuba’s history, politics, economy, and culture and how these socioeconomic factors influence food production and food security. Readings, discussions and self-directed study are required during the semester.

NOTE: Winter semester– One week of the course is spent in Cuba in conjunction with the University of Cienfuegos. The week consists of volunteer work projects and tours (augmented with lectures) of urban gardens, an experimental dairy cooperative, an alternative agro-ecological farm, an herbal medicine farm, and coastal and mountain ecosystems. Additional fees for travel, meals, and accommodation apply.

FORMAT: Lecture 3 hours, plus one week in Cuba.

IAGR 2004.03: Agri - Food Systems in India.
Examines the agro-food and environmental issues of tropical and dryland farming in southern India (Tamil Nadu). Students must attend pre-departure travel at the Agricultural Campus; submit a mini-research paper prior to departure; participate actively in the agri-food tours; and write a second paper after the trip. Travel costs, in addition to tuition, are associated with this study abroad course.

NOTE: Summer Semester

FORMAT: 2 week study tour in India in August plus 30 hour pre-departure independent research and pre-departure orientation. Final paper submitted after conclusion of the study trip.

IAGR 3000.03: Tropical Agriculture (A).
This course will introduce the student to food production, storage, and handling systems in tropical and subtropical countries. The sustainability of these systems and issues that limit the use of the environment for long-term food production will be identified. Farming systems and the role of national/international research centres are examined. The instruction will include resource people from several disciplines.

NOTE: Fall semester

IAGR 3001.03: Directed Studies in International Development (A).
Independent study of topics in international development at an advanced level, with a focus on agriculture and rural development. Topics are developed through literature review, assigned readings, and discussion, and may include independent research. Students are expected to present the final project at a public seminar.

Students are encouraged to use international travel or study opportunities as a focus, but this is not required. Topics must be supervised by a faculty member in the proposed area of interest, and approved by the Department Head of Business and Social Sciences. Students must apply to the Department Head at least six weeks before the semester start date. This course would normally be taken by undergraduate students in their final year.

NOTE: Fall, Winter or Summer

FORMAT: as arranged.

PREREQUISITE: 30 degree credits or final-year standing.

IAGR 4000.03: Global Seminar on Rural Sustainability (A).
An international course which brings together students from around the world to investigate and discuss local and global issues. The course will consist of a member of case studies, and the students must choose four in which to participate. Students will work in groups to research the topic using e-mail and discussion forums, and present their findings to the class using electronic classroom technology. Together the students will participate in a truly global seminar course.

NOTE: Fall semester

FORMAT: Lecture 3 hours (either through virtual classroom or on campus).
I. Undergraduate Degree Level Course Descriptions

INFB 1000.03: International Food Policy & Environment (INFB).

This course is taught along with ECUA1002 Introduction to Economic Reasoning as part of the International Food Business program in Module 1: Acquiring Knowledge of International Food Systems. Students will successfully complete a series of practical tasks/assignments while learning about the global food environment. Topics will include study of emerging country markets, policy formulation, and multilateral agreements.

NOTE: Fall Semester - Module #1 INFB

INFB 1001.03: International Food Business Project I (INFB).

This course is part of an underlying theme of the first year of the International Food Business Program. It allows students to integrate the work of the entire first year into a series of assignments and tasks embedded in international consumer behaviour and entrepreneurship. Students will learn about consumer behaviour applied to a new food product from Iceland and be tasked with preparing a Webpage highlighting the opportunities in both Europe and North America for the product. This is a year-long project concluding in International Food Business Project II.

NOTE: Fall Semester - Module #1 & #2 INFB

INFB 1002.03: International Food Business Project II (INFB).

This course is part of an underlying theme of the first year of the International Food Business Program. It allows students to integrate the work of the entire first year into a series of assignments and tasks embedded in international consumer behaviour and entrepreneurship. Students will learn about consumer behaviour applied to a new food product from Iceland and be tasked with preparing a Webpage highlighting the opportunities in both Europe and North America for the product. This is a year-long project originating in International Food Business Project I.

NOTE: Winter Semester - Module #1 & #2 INFB

INFB 1003.03: Introductory Second Language.

This course will be offered in The Netherlands by CAH Dronten as part of the International Food Business program. It is designed for an initial competency in spoken and written language. Students are ineligible to take a language course in which they are already fluent.

NOTE: Winter semester

I. Technology Level Course Description

INTA 0100.00: Internship.

The student will be required to work under contract with an approved employer in their chosen field for a period of at least 12 weeks (480 hours). Contract details will be relevant to the student’s area of study and will be negotiated between the student, the employer, and the course coordinator. Assessment will be based on this contract and will be carried out jointly by the employer and the course coordinator.

NOTE: Spring semester – 12 weeks.

FORMAT: 12 weeks.

PREREQUISITE: Successful completion of the first year in the Diploma in Business Management, plus Workplace Readiness courses.
Management

Below are course offered in Management by the Faculty of Agriculture. Please see the Faculty of Management Section for courses offered on the Halifax campuses.

I. Undergraduate Degree Level Course Descriptions

MGTA 1000.03: Small Business Entrepreneurship

This course provides students with an overview of small business management theory and practice presented from an entrepreneurial perspective. Topics discussed include identifying and evaluating new business opportunities, financing the business, marketing management, human resources, and financial management. Upon successful completion of the course, students will understand the elements of business planning required for successful small businesses today.

NOTE: Fall and Winter semesters

CROSS-LISTING: MGTA 0101

MGTA 1001.03: Introduction to International Business (INFB)

This course is taught along with ECOA1002 Introduction to Economic Reasoning as part of the International Food Business Program in Module 2: Analyzing Business Processes. Students will successfully complete a series of practical tasks/assignments while learning about essential aspects of international management. Topics will include the business task environment, organizational behaviour and operational management.

NOTE: Fall Semester - Module 2 INFB

MGTA 1002.03: Food Supply Chain Management (INFB)

This course is a part of Module 3 of the International Food Business program – Analyzing Food Chains. It provides students with an introduction to food supply chain management issues and developments. Topics include value chain development, consumer orientation, changing actors and factors, and logistics and distribution.

NOTE: Winter Semester - Module 3 INFB

MGTA 1003.03: International Business communications (INFB)

This course is a part of Module 4 of the International Food Business program – Developing External Communications Strategies. It provides students with an introduction to global business communications issues and applications. Topics include information and communication, intercultural aspects of communication, and cultural and international media techniques.

NOTE: Winter Semester - Module 4 INFB

MGTA 2000.03: Human Resource Management

An introduction to the human side of business organizations. The course focuses on the challenges of motivation, recruitment and selection, performance evaluation, compensation, and labour management relations.

NOTE: Fall and Winter semesters

FORMAT: Lecture 3 hours

CROSS-LISTING: MGTA 0201

MGTA 2001.03: Introduction to Business Law

An introduction to general principles of law relating to the management of a business. Major issues studied are torts and contracts. Specialized topics include forms of business organizations, sale of goods, conditional sales, real property, mortgages, tenancy, and wills.

NOTE: Winter semester

FORMAT: Lecture 3 hours

CROSS-LISTING: MGTA 0103

MGTA 2002.03: Marketing

Designed to introduce basic marketing principles and their application to marketing problems. Topics such as promotion, pricing, distribution, and marketing research are examined. The course method of instruction is used extensively. Class participation is a vital component of this course.

NOTE: Full semester

FORMAT: Lecture 4 hours

MGTA 2003.03: Financial Management (A)

Principles and methods of organizing and analyzing financial businesses are examined. Practical problems associated with financial analysis, planning, capital budgeting, revenue inc., and credit acquisition are included. The role of the financial manager is identified throughout.

NOTE: Fall semester

FORMAT: Lecture 4 hours, lab 2 hours

PREREQUISITE: MGTA 0204

CROSS-LISTING: MGTA 0203

MGTA 2004.03: Financial Accounting

A study of the basic principles and procedures relevant to the accounting function of a business firm. Topics discussed include recording transactions, making adjusting entries, preparing financial statements, accounting for a merchandising concern, computerized accounting software, accounting for cash, credit sales, and accounts receivable; inventories and cost of goods sold, and plant and equipment.

NOTE: Full semester

FORMAT: Lecture 3 hours, lab 2 hours

MGTA 2006.03: Advertising and Promotion

Students examine the process of planning, implementing, and evaluating advertising and promotional strategies for small businesses. Topics include an evaluation of conventional advertising media and web-based advertising, the preparation of customer profiles and target marketing, the creation of advertising copy, and the evaluation and monitoring of the advertising program. Case studies and class projects are essential elements of the course.

NOTE: Winter semester

FORMAT: Lecture 3 hours

PREREQUISITE: MGTA 0201

CROSS-LISTING: MGTA 0202

MGTA 2007.03: Retail Sales Management

Students examine effective sales techniques for a retail business and learn to use records systems for tracking sales performance. They also explore strategies for integrating front-line sales techniques with the overall marketing and promotional strategies for the business. The course will enable the student to track and interpret sales performance for the business, and to work with sales managers or consultants in identifying ways to improve sales performance.

NOTE: Winter semester

FORMAT: Lecture 3 hours

PREREQUISITE: MGTA 0201

CROSS-LISTING: MGTA 0203

MGTA 2008.03: Managing Retail Operations and Physical Resources

This course is designed to train students in the daily office, sales, and inventory operations important in managing a small business. The course also covers the requirements for the siting and layout of a retail facility, and the factors important in designing a retail space. The maintenance, safety, and security requirements for the retail operation are also considered.

NOTE: Full semester

FORMAT: Lecture 3 hours

PREREQUISITE: MGTA 0201

CROSS-LISTING: MGTA 0204

MGTA 2009.03: Customer Relations Management

The objective of this course is to provide students with a practical approach to the provision of exceptional customer service for a small business. Students are expected to identify the various factors that affect the provision of quality service and to identify ways to ensure client satisfaction. The course also provides training in point-of-sale techniques and complaint management.

NOTE: Full semester

FORMAT: Lecture 3 hours

CROSS-LISTING: MGTA 0203
MGTA 2010.03: Innovation Management (INFB).
This course is a part of Module 5A of the International Food Business program which is taught in The Netherlands. It provides students with an introduction to innovation management from an international perspective. Topics include innovation management, managing technology and knowledge, and managing research and development projects. This course is taught in The Netherlands.

NOTE: Fall Semester - Module 5A INFB

MGTA 2011.03: International Marketing Research (INFB).
This course is a part of Module 7A of the International Food Business program - Performing Market Research. It provides students with an introduction to marketing research in an international setting. Topics include the research process, primary and secondary data collection, and analyzing data. This course is taught in The Netherlands.

NOTE: Winter Semester - Module 7A INFB

MGTA 2012.03: Fundamentals of Management (INFB).
This course is a part of Module 1A of the International Food Business program in the third year of study - Performing as a Leader and Manager. It provides students with the basic management functions and their performance as a business leader. Topics include planning, organizing, leading and controlling. This course is taught in The Netherlands.

NOTE: Fall Semester - Module 1A INFB

MGTA 3000.03: Management Accounting.
This course is a part of Module 10A of the International Food Business program - Developing Business Plans. It provides students with an introduction to business planning from an international perspective. Topics include starting a new business, alternative start-up methods, managing growth, and business succession.

NOTE: Fall Semester - Module 10A INFB

MGTA 3001.03: International Marketing.
This course provides an introduction to international marketing and the international trading system. Students will be exposed to the unique aspects of international market research, selection, entry, pricing, and communications that differentiate them from their domestic equivalents. In addition, the international trading system will be examined with an emphasis on institutions such as the WTO and IMF and on international commodity agreements, which directly impact the movement of goods and services. Cases are used extensively in the course and class participation is vital.

NOTE: Winter semester

FORMAT: Lecture 3 hours, lab 2 hours.

PREREQUISITE: MGTA 2006

MGTA 3002.03: Consumer Behaviour.
The course introduces the student to the basics of consumer behavior and then applies this knowledge to the food marketing system. Topics covered include: consumer behavior, motivation, perception, learning, and decision-making. Historical and recent trends in product marketing, pricing, and advertising also form part of the course. Cases are used extensively and class participation is vital.

NOTE: Winter semester

FORMAT: Lecture 3 hours.

PREREQUISITE: MGTA 2002

MGTA 3003.03: European Placement I (INFB).
Students will broaden their experience of European business management by participating in a planned learning experience in an approved business or entrepreneurial venture. Based on their area of interest students will find placements in suitable businesses or other organizations and submit a work plan to the course coordinator and the host organization. Students will be required to keep a journal of the placement experience and to submit a report upon completion of the placement. The host organizations will evaluate students on their development of critical skills and abilities. Placements may be volunteer or paid positions, and cover three months at the end of the second year in The Netherlands.

NOTE: Spring/Summer semester

MGTA 3004.03: European Placement II (INFB).
Students will broaden their experience of European business management by participating in a planned learning experience in an approved business or entrepreneurial venture. Based on their area of interest students will find placements in suitable businesses or other organizations and submit a work plan to the course coordinator and the host organization. Students will be required to keep a journal of the placement experience and to submit a report upon completion of the placement. The host organizations will evaluate students on their development of critical skills and abilities. Placements may be volunteer or paid positions, and cover three months at the end of the second year in The Netherlands.

NOTE: Spring/Summer semester

MGTA 3005.03: New Product Development (INFB).
This course is a part of Module 4A of the International Food Business program which is taught in The Netherlands. It provides students with an introduction to new product development from an international perspective. Topics include new product development process, packaging, and managing the development team.

NOTE: Fall Semester - Module 4A INFB

MGTA 3006.03: Retail Management (INFB).
This course is a part of Module 5A of the International Food Business program - Retail Management which is taught in The Netherlands. It provides students with an introduction to retail management from an international perspective.

NOTE: Fall Semester - Module 5A INFB

MGTA 3007.03: Quality Management (INFB).
This course is a part of Module 6A of the International Food Business program - performing as a leader and manager which is taught in Canada. It provides students with an intermediate level of study in management from an international perspective.

NOTE: Winter Semester - Module 6A INFB

MGTA 3008.03: Intermediate Marketing Research (INFB).
This course is a part of Module 7B of the International Food Business program - performing marketing research which is taught in Canada. It provides students with an intermediate level research from an international perspective.

NOTE: Winter Semester - Module 7B INFB

MGTA 4000.03: Strategic Management.
This is a capstone course that will integrate all the business disciplines (marketing, finance, accounting, etc.) and prepare the student to formulate and implement strategy in an agribusiness setting. Students will be expected to gain a full understanding of the complexity and interrelationships of modern managerial decision making and apply this knowledge to real managerial problems. Lectures, case studies, projects, and guest speakers will be utilized.

NOTE: Fall semester

FORMAT: Lecture 3 hours.

PREREQUISITE: Students will normally be Agricultural Business majors who have successfully completed the first three years of the program

MGTA 4001.03: Advanced Entrepreneurship (A).
This course will apply the concepts of entrepreneurship to creating and managing a small business. Students will investigate opportunities for new agribusinesses and develop business plans that consider management structure, financing, production, marketing, and taxation. Lectures, case studies, guest speakers, and project assignments will be utilized.

NOTE: Winter semester

FORMAT: Lecture 3 hours, lab 3 hours.

PREREQUISITE: MGTA 2002, MGTA 2003, and at least third-year degree standing

MGTA 4002.03: North American Placement I (INFB).
Students will broaden their experience of North American business management by participating in a planned learning experience in an approved business or entrepreneurial venture. Based on their area of interest students will find placements in suitable businesses or other organizations and submit a work plan to the course coordinator and the host organization. Students will be required to keep
NOTE: Winter semester members. Projects started in MGTA 0020 will be completed in this course. An opportunity to examine, in detail, enterprise management topics. Projects are discussed include identifying and evaluating new business opportunities, pricing, promotion, distribution, and preparation of financial statements. Considerable time will be spent on Canadian income tax and a computerized accounting project.

NOTE: Full semester

FORMAT: Lecture 3 hours

PREREQUISITE: MGTA 0100

MGTA 0204.02: Human Resource Management.

Introduction to the human resource management function. The course covers the challenges of motivation, recruitment and selection, performance evaluation, compensation, and labour relations.

NOTE: Full and Winter semester

FORMAT: Lecture 5 hours

MGTA 0205.02: Marketing Management.

An introduction to marketing function of a business. Topics discussed include understanding the marketplace, customer behaviour, market research, and the preparation of market plans.

NOTE: Winter semester

FORMAT: Lecture 2 hours, lab 2 hours

PREREQUISITE: MGTA 0100

MGTA 0206.02: Financial Management (A).

Financial planning and management. Topics include financial statements, internal control, ratios, and the role of the financial manager.

NOTE: Full semester

FORMAT: Lecture 3 hours

MGTA 0207.02: Advertising and Promotion.

An introduction to the process of planning, implementing, and evaluating advertising and promotional strategies for small businesses. Topics include an introduction to marketing, target market identification, market research, and the preparation of market plans.

NOTE: Winter semester

FORMAT: Lecture 3 hours

PREREQUISITE: MGTA 0100 or MGTA 0206

MGTA 0208.02: Retail Sales Management.

Students examine the process of managing a retail business. Topics include store layout, sales floor management, customer service, and the preparation of market plans.

NOTE: Winter semester

FORMAT: Lecture 3 hours

PREREQUISITE: MGTA 0206

CROSS-LISTING: MGTA 2007
Mathematics

Below are courses offered in Mathematics by the Faculty of Agriculture. Please see the Mathematics Section in the Faculty of Science for courses offered on the Halifax campuses.

I. Undergraduate Degree Level Course Descriptions

MTHA 0050.02: Functions.
This is a one-semester non-credit course designed for those who do not have the requisite skills for the first-year mathematics courses but have shown sufficient basic mathematical ability to warrant a one-semester course to make up for the deficiencies. This course will emphasize the study of the basic functions used in the sciences. Topics to be covered include linear, exponential, logarithmic, and trigonometric functions. Emphasis is placed on use of a graphing calculator. MTHA 0050 is not intended to duplicate or replace Grade 12 Pre-Calculus Mathematics.
NOTE: Fall semesters
FORMAT: Lecture 3 hours, tutorial 1 hour
PREREQUISITE: Eligibility for admission to this course by means of a mathematics diagnostic test, or approval of the Registrar

MTHA 1000.03: Introductory Calculus I.
Topics will include functions and their inverses, limits, differentiation of polynomial, trigonometric, exponential, and logarithmic functions, product and quotient rules, and implicit differentiation, with applications to curve sketching, maxima and minima problems, and velocity and acceleration problems. This course also includes an introduction to anti-derivatives and applications of the definite integral to a variety of problems. Students are required to confirm their eligibility for admission to this course by means of a mathematics diagnostic test, to be taken the day following registration. Students not admitted must take MTHA 0050.
NOTE: Fall and Winter semesters
FORMAT: Lecture 3 hours, tutorial 1 hour
PREREQUISITE: Grade 12 PreCalculus Mathematics or MTHA 0050

MTHA 1001.03: Introductory Calculus II.
A continuation of the study of calculus with topics including both the definite and indefinite integral, techniques of integration, with applications to areas, volumes, arc length, surface areas, elementary differential equations and their applications. The course may also include parametric equations and polar coordinates, and sequences and series and their applications.
NOTE: Fall and Winter semesters
FORMAT: Lecture 3 hours, tutorial 1 hour
PREREQUISITE: MTHA 1000

MTHA 1002.03: Business Math. (INFB)
This course introduces the basic mathematical skills needed to understand, analyze, and solve mathematical problems encountered in business, finance, and investment decision-making. Students are expected to be able to understand and perform arithmetic and algebraic operations.
NOTE: Full semester
FORMAT: Lecture 3 hours, tutorial 1 hour
PREREQUISITE: MTHA 1001

MTHA 2000.03: Multivariable Calculus.
This course covers functions of several variables: vectors, dot product, cross product, differentiation and integration of vector-valued functions, space curves, partial derivatives, optimization, multiple integrals and their applications, vector fields, line integrals, flux integrals, divergence and curl, Stokes Theorem, and the Divergence Theorem.
NOTE: Full semester
FORMAT: Lecture 4 hours, lab 2 hours per week
PREREQUISITE: MTHA 1001

MTHA 2001.03: Differential Equations.
This course introduces the basic theory of differential equations, considers various techniques for their solution, and looks at various applications. Topics include First-Order Linear and Non-Linear differential equations, differential equations of higher order, Laplace Transforms, series solutions, systems of equations, and Fourier Series. Topics from Linear Algebra are included as required to solve systems of differential equations. Linear Algebraic equations, matrices and vectors, eigenvalues and eigenvectors, and solutions to both homogeneous and nonhomogeneous systems.
NOTE: Winter semester
FORMAT: Lecture 4 hours, tutorial 2 hours per week.
PREREQUISITE: MTHA 1001

MTHA 3000.03: Applied Linear Algebra.
This course covers geometric vectors in three dimensions, dot product, lines and planes, complex numbers, systems of linear equations, matrix algebra, matrix inverse, determinants. Course’s role: introduction to vector spaces, linear independence and bases, rank, linear transformations, orthogonality and applications, Gram-Schmidt algorithm, eigenvalues and eigenvectors.
NOTE: Winter semester
FORMAT: Lecture 3 hours, lab 2 hours.

MTHA 4000.03: Agricultural Modelling.
The aim of the course is to teach agricultural students when and how to attempt to express their ideas mathematically, and how to solve the resulting mathematical model and compare its predictions to experimental data. Topics include techniques of creating a model, techniques of solving models, testing and evaluating models, growth models, and a directed study project of an example of a model used in the agricultural sciences.
NOTE: Winter semester
FORMAT: Lecture 6 hours, tutorial 1 hour
PREREQUISITE: MTHA 1001 and at least third-year standing

II. Technology Level Course Descriptions

MTHA 0100.02: Business Math.
This course introduces the basic mathematical skills needed to understand, analyze, and solve mathematical problems encountered in business, finance, and investment decision-making. Students are expected to be able to understand and perform arithmetic and algebraic operations.
NOTE: Full semester
FORMAT: Lecture 3 hours, tutorial 1 hour
Below are courses offered in Microbiology by the Faculty of Agriculture. Please see the Microbiology and Immunology Section in the Faculty of Science for courses offered on the Halifax campuses.

I. Undergraduate Degree Level Course Descriptions

MCRA 2000.03: Microbiology.
A general introduction to microbiology. Topics include history, morphology, structure, cultivation, reproduction, metabolism, genetics, classification, and control of microorganisms. The importance of microorganisms to soil productivity, foods, industry, veterinary science, public health, and sanitation is discussed. Students are required to have laboratory coats.

NOTE: Winter semester

FORMAT: Lecture 3 hours; Lab 3 hours

PREREQUISITE: Preparatories: BIOA 1002, BIOA 1003

MCRA 3000.03: Food Microbiology (A).
A study of microorganisms involved in the production and processing of food products. Topics will include the use of microorganisms for food production and processing, food spoilage and potential for food poisoning, and sanitation procedures, including government regulations and standards for the food industry. The use of conventional plating as well as rapid assay techniques will be discussed.

NOTE: Fall semester

FORMAT: Lecture 3 hours; Lab 3 hours

PREREQUISITE: MCRA 2000

MCRA 4000.03: Soil Microbiology (A).
A study of the biology of the various classes of microorganisms in soil, including bacteria, blue-green algae, fungi, algae, protozoa, and viruses. This course includes details of biochemical transformation of carbon, nitrogen, sulfur, and phosphorus, as well as pesticides and toxins in the environment.

NOTE: Full semester

FORMAT: Lecture 3 hours; Lab 3 hours

PREREQUISITE: MCRA 2000, SOIL 2000

CROSS-LISTING: AGRI 5230

Nutrition

I. Undergraduate Degree Level Course Descriptions

NUTR 3000.03: Animal Nutrition (A).
A study of the principles of nutrition, including the digestion, absorption, and metabolism of nutrients by domestic animals. Functions of protein, lipids, carbohydrates, vitamins, and minerals are studied.

NOTE: Full semester

FORMAT: Lecture 3 hours, lab 2 hours.

PREREQUISITE: CHMA 2000

Classification and characteristics of feeds and regulations governing their use are described. Methodology for evaluating the relative merits of typical feeds and rations is discussed. The principles of nutrition are applied in the formulation of rations for monogastric, avian, and ruminant species.

NOTE: Winter semester

FORMAT: Lecture 3 hours, lab 2 hours.

PREREQUISITE: NUTR 3000

NUTR 3002.03: Fish Nutrition (A).
Nutrients required by finfish, shellfish, crustaceans, and molluscs are discussed in context with current and future sources of these nutrients. Digestive physiology and specific feeding problems of aquatic species are addressed. Diet formulations and feeding strategies for maintenance, growth, and reproductive performance of fish are covered.

NOTE: Winter semester

FORMAT: Lecture 3 hours, lab 2 hours.

NUTR 4000.03: Ruminant Digestive Physiology and Metabolism.
This course is designed to provide an intensive study of food intake and digestion, and nutrient absorption and metabolism, in the ruminant animal. The course details current knowledge and focuses on aspects of future research interest. Students are expected to contribute to discussions and present reviews to the class on various aspects of the subject.

NOTE: Full semester

FORMAT: Lecture 3 hours, lab 2 hours. Offered in alternate years; next offered in 2015/2016.

PREREQUISITE: BIOA 2006, CHMA 3006, NUTR 3000

CROSS-LISTING: AGRI 5620
Below are courses offered in Physics by the Faculty of Agriculture. Please see the Physics Section in the Faculty of Science for courses offered on the Halifax campuses.

I. Undergraduate Degree Level Course Descriptions

PHYS 0050.00: Introductory Physics.
An introductory non-credit course for entering students who do not have the equivalent of NS Grade 12 Physics. Course topics include one-dimensional kinematics, vector theory, Newton's Laws, equilibrium, kinetic energy and work, and other topics as determined by a review of the class. PHYS 0050 is not intended to duplicate or replace Grade 12 Physics.
NOTE: Fall and Winter semesters
FORMAT: Lecture 3 hours, tutorial 1 hour
PREREQUISITE: Approval of the Registrar

PHYS 1000.03: Physics for the Life Sciences I.
In this course an understanding of physics is acquired by exploring the physical principles that underlie complex biological structures. The nature of materials and the forces that act on them is introduced through a series of topic examples taken from evolution, mammalian physiology, plant structure, and others.
NOTE: Fall and Winter semesters
FORMAT: Lecture 3 hours, lab/tutorial 1½ hours (alternating weekly).
PREREQUISITE: Grade 12 Physics or PHYS 0050, Prerequisite/Corequisite: MTHA 1000
EXCLUSION: Students may take either PHYS1000 or PHYS1002, but not both, for credit.

PHYS 1001.03: Physics for the Life Sciences II.
In this course the physical principles underlying perception throughout the animal kingdom are introduced. The examples chosen emphasize adaptation and strategies (e.g., echolocation and noctuid moths) and represent a wide range of forms (e.g., eyes of the common scallop pecten, electric location by the fish Gymnarchus niloticus).
FORMAT: Lecture 3 hours, lab/tutorial 1½ hours per week (alternating weekly).
PREREQUISITE: PHYS 1000 or PHYS 1002

PHYS 1002.03: Physics I.
Fundamental physical principles that are necessary for the understanding of the agricultural sciences form the core material of this course. Classical physics topics include vector analysis, dynamics, statics, fluid mechanics, acoustics, and heat. Concepts derived from modern physics are added in order to complete the classical theories. Weekly student laboratory sessions allow for direct investigation of the theories studied in the course. Students may take either PHYS1000 or PHYS1002, but not both, for credit.
NOTE: Fall and Winter semesters
FORMAT: Lecture 3 hours, lab 1½ hours, tutorial 1 hour
PREREQUISITE: Grade 12 Physics or PHYS 0050, Prerequisite/Corequisite: MTHA 1000

PHYS 1003.03: Physics II.
A continuation of PHYS 1002. The course mainly deals with electromagnetic theory, including such topics as electric charges, fields, potential, magnetic theory, induction, and Maxwell's Equations. Fundamental wave theory and optics are also studied, together with an introduction to nuclear physics. The laboratory provides an opportunity to investigate the theories in a hands-on environment.
NOTE: Winter semester
FORMAT: Lecture 3 hours, lab 3 hours.
PREREQUISITE: PHYS 1002

Below are courses offered in Philosophy by the Faculty of Agriculture. Please see the Philosophy Section in the Faculty of Arts and Social Sciences for courses offered on the Halifax campuses.

I. Undergraduate Degree Level Course Descriptions

PHLA 3000.03: Environmental and Agricultural Ethics (H).
This course offers a general introduction to environmental ethics with emphasis on agricultural issues. Students will be introduced to modern ethical theory and to techniques of philosophical reasoning, and will be provided with a general context for overall discussion by examining the origins of the modern world view (the rise of modern science, market economics, and liberalism). Students will be evaluated on class participation and a series of short weekly essays based upon directed readings and field experience. Essay-style midterm and final exams are required.
NOTE: Winter semester
FORMAT: one 2-hour seminar per week.
PREREQUISITE: At least third-year standing
Psychology

Below are courses offered in Psychology by the Faculty of Agriculture. Please see the Psychology Section in the Faculty of Science for courses offered on the Halifax campuses.

I. Undergraduate Degree Level Course Descriptions

**PSYC 1000.03: Introductory Psychology I (H).**
This course will introduce students to the mental processes that underlie human behaviour. Topics covered include brain function, the nervous system, sensation, perception, states of consciousness, learning, memory and cognition. The course will be taught primarily through lecture and in-class demonstrations and activities.
NOTE: Fall semester
FORMAT: Lecture 3 hours.

**PSYC 1001.03: Introductory Psychology II (H).**
This course will introduce students to important elements that describe, explain, predict, and influence human behaviour. Topics covered include human development, emotion, social influences, personality, health, psychological disorders, and therapy. The course will be taught primarily through lecture and in-class demonstrations and activities.
NOTE: Full semester
FORMAT: Lecture 3 hours.

Political Science

Below are courses offered in Political Science by the Faculty of Agriculture. Please see the Political Science Section in the Faculty of Arts and Social Sciences for courses offered on the Halifax campuses.

I. Undergraduate Degree Level Course Descriptions

**POLS 1000.03: Introduction to Political Science (H).**
An introductory study of the ideologies of modern movements. Liberal democracy, conservatism, democratic socialism, fascism, and Marxist perspectives will be covered. Analysis of such central concepts as liberty, equality, power, authority, justice, law, constitutionalism, democracy, and authoritarianism will be presented and discussed. This course provides an overview of the various institutions and policies involved in governing. There will be a focus on rural social movements.
NOTE: Fall semester
FORMAT: Lecture 3 hours.

**POLS 1001.03: Structure and Function of Government (H).**
Students will study the legislative, executive, and judicial aspects of the Canadian state, and their interactions. They will look at political processes and policy development. This course will provide students with the basic knowledge of how governments operate at all levels. It will offer insight into how and why political decisions are made about the issues that affect all Canadians: taxation, education, employment, health care, and the debt. There will be a focus on issues of interest to rural Canada.
NOTE: Winter semester
FORMAT: Lecture 3 hours.
Plant Science

I. Undergraduate Degree Level Course Descriptions

PLSC 1000.03: Farm Woodlot Management (A).
This course will focus on the importance of privately owned woodlands to the landowner, the forest industry, and the agricultural sector. It will examine forest ecology, tree identification, forest measurement, aerial photo interpretation, and forest management practices including silviculture. The course will review Christmas tree and maple syrup production. The role of appropriate equipment and machinery in the woods will also be discussed. A field lab will be held weekly. Steel-toed boots and hard hats are required.
NOTE: Fall semester – this course has limited enrollment.
FORMAT: Lecture 3 hours, lab 3 hours.
PLSC 2000.03: Specialty Crops (A).
This course will examine opportunities for specialty crop production, using an entrepreneurial approach. A core group of specialty crops will be examined.
Production requirements, production and marketing potential, and use, and value adding will be studied. Students will have optional crop choices to reflect individual interest. A major project is required.
NOTE: Winter semester.
FORMAT: Lecture 3 hours, lab 2 hours.
PLSC 3000.03: Theory and Practice of Plant Propagation (A).
This course is intended to give students an advanced knowledge in the area of biology, physiology and practical aspects of plant propagation. It is strongly recommended for students wishing to undertake graduate work in plant sciences, biotechnology, environmental sciences, and ecology. It is also recommended for managers of greenhouses and nurseries. Topics will include biology of plant propagation, propagation environment, breeding systems, seed and vegetative propagation, soil and tissue micropropagation, and propagation of selected plant species for commercial production.
NOTE: Winter semester.
FORMAT: Lecture 3 hours, lab 3 hours.
PLSC 4000.03: Plant Breeding (A).
An introduction to the principles and practices of plant breeding, including the genetics of agriculturally important traits, germplasm conservation, breeding bio-technology, and the structure of the Canadian seed industry.
NOTE: Winter semester.
FORMAT: Lecture 3 hours, lab 2 hours. Offered in alternate years; next offered in 2015/2016.
PLSC 4002.03: Plant Ecophysiology (A).
This course is designed to stimulate interest, critical thinking, and investigative processes for the understanding of growth, development, water relations, and plant structure at the cellular level. The purpose of the course is to give the student an understanding of how plants respond to their environment, both biotic and abiotic factors.
NOTE: Fall semester.
FORMAT: Lecture 3 hours, lab 3 hours.
PREREQUISITE: BIOA 2002, one crop production course.
PLSC 4003.03: Problem Solving in Plant Science (A).
The objective of this course is to review and integrate material from prerequisite courses in crop production, environment, business, soils, climate, and basic sciences into a comprehensive understanding of crop management systems. Students will work with each other and the instructor to develop group and individual study plans and learning contracts to address individual needs to fill gaps in knowledge and skills in Plant Science. Activities and assignments will be tailored to the needs of the group and the individuals.
NOTE: Winter semester.
FORMAT: Lecture 3 hours.
PREREQUISITE: Fourth-year standing in Plant Science major or minor.
PLSC 4004.03: Root Physiology Underground Secrets (A).
The objective of this course is to give students a fundamental understanding of the mysteries of the hidden half of plants roots. The architectural, physiological, metabolic and ecological significance of roots is often overlooked, frequently forgotten or ignored. Students will study the intricacies of root architecture, growth, development, physiology and the role of roots in plant defense. Attention is given to the soil ecosystem and how roots respond to their environment. Students will also learn about root derived secondary metabolites and the roles in plant and human health, and appreciate the emerging opportunities in “milking roots”.
NOTE: Winter semester.
FORMAT: Lecture 3 hours, lab 2 hours. Offered in alternate years; next offered in 2015/2016.
II. Technology Level Course Descriptions

PLSC 0100.02: Utilization of Plant Resources.
Using an integrated systems approach, students are introduced to the principles and practices involved in the sustainable production of crop plants. Practical exercises will give the students an opportunity to gain knowledge and skills involved in economic and environmental growing of agronomic and horticultural crops.
NOTE: Winter semester.
FORMAT: Lecture 3 hours, lab 2 hours.
PLSC 0200.02: Plant Propagation.
This course studies physiological and anatomical bases of plant propagation, and techniques of sexual and asexual propagation of agricultural and horticultural crops as well as landscape plant material and herbaceous perennials. Propagation structures, containers, media and sanitation, polyethylene, seed production, and in vitro techniques for micropropagation are also components of this course.
NOTE: Winter semester.
FORMAT: Lecture 2 hours, lab 3 hours.
PLSC 0201.02: Plant Science Techniques.
This course is intended to give students an advanced knowledge in the area of biology, physiology and practical aspects of plant propagation. It is strongly recommended for students wishing to undertake graduate work in plant sciences, environmental sciences, and ecology.
NOTE: Winter semester.
FORMAT: Lecture 3 hours, lab 3 hours.
PLSC 0202.02: Plant Science Techniques.
This is a Spring semester course intended for students in the Plant Science Technology program following their first year of study. Students will be required to work under contract in an area of Plant Science with an approved employer for a period of at least 12 weeks (480 hours). Contract content will be relevant to the student’s area of study and will be negotiated between the employer, the course coordinator, and the student. Assessment will be based on this contract and will be carried out jointly by the employer and the course coordinator.
NOTE: Spring semester.
FORMAT: 12 weeks.
PREREQUISITE: Completion of the first year of the Plant Science Technology program.
Research Methods/Project Seminars

I. Undergraduate Degree Level Course Descriptions

RESM 4000.03: Bio-Environmental Systems
Management Project-Seminar I (A).
Students will study an operation (information gathering) and review management of technological, human, financial, and environmental resources. A group report and individual oral and poster presentations are required.

NOTE: Winter semester
FORMAT: Seminar 3 hours per week
PREREQUISITE: Integrated Environmental Management student in third year, or consent of the coordinator

RESM 4001.03: Bio-Environmental Systems
Management Project-Seminar II (A).
This is a continuation of RESM 4000, with a study and examination of identified problems within the operation. Working with industry representatives, the course will identify alternatives to solve current problems. Written and oral reports are presented to class and industry.

NOTE: Fall semester
FORMAT: Lab 4 hours
PREREQUISITE: RESM 4000; Integrated Environmental Management student in final year or consent of the coordinator

RESM 4002.03: Animal Science Project-Seminar I (A).
In consultation with a faculty advisor, Animal Science majors select a research topic. This topic is investigated and presented orally and in a written report. Other topics of current interest are also presented and discussed in the weekly seminar period.

NOTE: Fall semester
FORMAT: Seminar 2 hours
PREREQUISITE: Animal Science major in third or fourth year of the program, or consent of the coordinator

RESM 4003.03: Animal Science Project-Seminar II (A).
The continuation and conclusion of the project selected in RESM 4002.

NOTE: Winter semester
FORMAT: Seminar 2 hours
PREREQUISITE: RESM 4002

RESM 4004.03: Research Methods for Economics and Business (A).
The lectures cover general methodological issues within business and social sciences research, as well as considering specific research techniques. Students undertaking fourth-year projects within the Department of Business and Social Sciences begin their projects, under faculty supervision, through this course’s project development process. Other students may instead write one or more papers on research methodology.

NOTE: Winter semester
FORMAT: Lecture 2 hours; lab 2 hours
PREREQUISITE: At least third-year standing, including ECOA 1000

RESM 4005.03: Project-Seminar for Economics and Business (A).
Under the supervision of faculty, students complete the research projects begun in RESM 4004. Each student is required to submit the first draft for evaluation by faculty. The student presents a final report and participates in peer evaluation of the presentations of the other students.

NOTE: Winter semester
FORMAT: Seminar 2 hours
PREREQUISITE: RESM 4004

RESM 4006.03: Environmental Sciences Project-
Seminars I (A).
A required course for all B.Sc.(Agr.) students registered in the Department of Environmental Sciences. Each student will choose a research project and faculty advisor in consultation with the course coordinator. Each student will present regular oral and written reports on their subject of investigation. Other written and seminar topics may be assigned. Topics on communication skills and the presentation of scientific information in various formats will be discussed in the weekly seminar periods.

NOTE: Full semester
FORMAT: Seminar 2 hours
PREREQUISITE: Students registered for their final year in the Department of Environmental Sciences, or consent of the coordinator

RESM 4007.03: Environmental Sciences Project-
Seminars II (A).
A required course for RESM 4006. Students will continue with their research projects. The course will culminate in the presentation of project results, in several formats. Other written and seminar topics may be assigned.

NOTE: Winter semester
FORMAT: Seminar 2 hours
PREREQUISITE: RESM 4006

RESM 4008.03: Plant Science Project-Seminar I (A).
This topic is investigated and presented both orally and in a written report. Other topics of current interest are also presented and discussed in the weekly seminar period.

NOTE: Fall semester
FORMAT: Lecture 2 hours
PREREQUISITE: RESM 4008

RESM 4009.03: Plant Science Project-Seminar II (A).
The continuation and conclusion of the subject selected in RESM 4008. This course consists of both a written and an oral presentation of the project.

NOTE: Fall semester
FORMAT: Lecture 2 hours
PREREQUISITE: RESM 4008

RESM 4010.03: Aquaculture Project-Seminar I (A).
In consultation with a faculty advisor, each student will select a research topic. This topic is investigated and presented both orally and in a written report. Other topics of current interest are also presented and discussed in the weekly seminar period.

NOTE: Full semester
FORMAT: Seminar 2 hours
PREREQUISITE: Aquaculture major in third or fourth year of the program, or consent of the coordinator

RESM 4011.03: Aquaculture Project-Seminar II (A).
The continuation and conclusion of the project selected in RESM 4010. This course consists of both a written and an oral presentation of the project.

NOTE: Winter semester
FORMAT: Seminar 2 hours
PREREQUISITE: RESM 4010
Rural Studies

I. Undergraduate Degree Level Course Descriptions

RURS 3000.03: Rural Community Economic Development (H).
This course examines the evolution of key paradigms, theories and principles in the field of rural community development studies, and explores the economic and social contexts in which rural community development has emerged. It also examines the community development process and the organizations, processes and strategies associated with rural community organization and development. A key aspect of the course will be an exploration of the defining characteristics of rural communities (e.g. co-operatives), as well as their diversity in current and historical social and economic contexts.

NOTE: Winter semester
FORMAT: Lecture 3 hours.
PREREQUISITE: At least third-year standing

Sociology

Below are courses offered in Sociology by the Faculty of Agriculture. Please see the Sociology and Social Anthropology Section in the Faculty of Arts and Social Sciences for courses offered on the Halifax campuses.

I. Undergraduate Degree Level Course Descriptions

SOCI 1000.03: Introductory Sociology (H).
An introduction to the field of modern sociology. Themes addressed in the course are sociological theory and method, social process, social organization, social institutions, social differentiation, and social change. Discussion will include social issues, e.g., rural/urban conflict, an aging society, and family changes. Some emphasis will be given to rural social problems.

NOTE: Fall semester
INSTRUCTOR(S): Prof. Dukeshire
FORMAT: Lecture 3 hours per week.

SOCI 1001.03: Introductory Sociology II (H).
The study of social issues uses sociological theory and research to examine social dynamics and social consequences associated with various current concerns. The topics covered will vary from year to year, but may well include problems such as gender and race relations, child and spousal abuse, substance abuse, poverty, work and alienation, and environmental issues. There will be a focus on issues of interest to rural Canada.

NOTE: Winter semester
INSTRUCTOR(S): Prof. Dukeshire
FORMAT: Lecture 3 hours per week.

SOCI 3000.03: Rural Sociology (H).
This course provides a focus on rural sociological themes, particularly in the Canadian and Atlantic region context. Themes addressed include: the theory and nature of rural social change; rural communities and response to forces of change; environmental issues and their links to society; the social implications of economic and political change for rural Canada.

NOTE: Fall semester
INSTRUCTOR(S): I. Landry
FORMAT: Seminar 3 hours per week.
PREREQUISITE: SOCI 1000

100 Rural Studies
I. Undergraduate Degree Level Course Descriptions

General principles of soil science relating to the origin, development, and classification of soils, and the biological, physical, and chemical properties of soils and their relation to proper soil and crop management, land use, and soil conservation.
NOTE: Fall semester
FORMA T: Lecture 3 hours, lab 3 hours.
PREREQUISITE: Corequisite: CHMA 1001

SOIL 3000.03: Soil Fertility and Nutrient Management (A).
The study of the soil chemical environment as it affects crop production. The course investigates the biogeochemical cycling of nitrogen, phosphorus, potassium, calcium, magnesium, sulphur, and micronutrients in crop production. It considers the use and management of supplemental nutrients in both conventional and certified organic production. Soil pH and other factors that influence soil fertility, directly or indirectly, are also discussed. Labs take the form of problem-solving tutorials on nutrient management.
NOTE: Winter semester
FORMA T: Lecture 3 hours, lab 3 hours.
PREREQUISITE: SOIL 2000; preparatory: BIOA 2002

SOIL 3001.03: Soil Conservation in Agriculture (A).
A study of the processes of soil degradation and its prevention or amelioration. A major part of the course concerns the erosion of agricultural soils and its control. Other topics include soil compaction and soil salinization, soil reclamation, use of soil in waste recycling, and the role of soil in water conservation. Lab periods may be used for field trips, tutorials, or seminars.
NOTE: Fall semester
FORMA T: Lecture 3 hours, lab 3 hours. Offered in alternate years; next offered in 2014/2015.
PREREQUISITE: AGRI 1000

SOIL 4000.03: Environmental Soil Chemistry.
A study of chemical composition of soils (soil acidity, oxidation-reduction, ion exchange, adsorption-desorption reactions, clay mineralogy, and organic matter transformations) in the context of environmental soil chemistry. Labs and seminar-discussions integrate basic soil chemical principles with problems in waste disposal, metal contamination, nutrient leaching, pesticide degradation, etc.
NOTE: Winter semester
FORMA T: Lecture 3 hours, lab 3 hours. Offered in alternate years; next offered in 2015/2016.
PREREQUISITE: SOIL 2000
CROSS-LISTING: AGRI 5450

SOIL 4001.03: Directed Studies in Soil Science (A).
Directed studies involve a suitable combination of directed reading, written assignments, individual study, or laboratory research projects in the area of soil science. Classes are organized and scheduled by appropriate faculty via a course coordinator. Students should approach potential instructors directly with their requests.
NOTE: Fall or Winter semester
FORMA T: as arranged.
PREREQUISITE: SOIL 2000 and 20 degree credits

II. Technology Level Course Descriptions

SOIL 0100.02: Principles of Soil Science.
Designed to form a basis for the understanding of soil productivity, the course investigates the physical, chemical, and biological properties of soil. Laboratory exercises, using soils from the Atlantic region, illustrate the lecture material and introduce methods of soil analysis.
NOTE: Full semester
FORMA T: Lecture 3 hours, lab 2 hours.

SOIL 0200.02: Soil Management.
A study of the chemical, physical, and biological properties of soil as they relate to crop production. Soil fertility and fertilizer use, tillage and water management, and biological husbandry are discussed. Labs take the form of problem-solving tutorials in soil management.
NOTE: Winter semester
FORMA T: Lecture 3 hours, lab 2 hours.
PREREQUISITE: SOIL 0100
Spanish

Below are courses offered in Spanish by the Faculty of Agriculture. Please see the Spanish Section in the Faculty of Arts and Social Sciences for courses offered on the Halifax campuses.

I. Undergraduate Degree Level Course Descriptions

SPNA 1000.03: Basic Spanish I (H).
This course is designed to offer an initial competency in spoken and written Spanish. Comprehension, reading, writing, and conversation are encouraged throughout the course. An introduction to basic grammar is offered. Anglophone, francophone, and International students are encouraged to take this course. Students whose first language is Spanish will not be eligible.
NOTE: Fall semester
FORMAT: Lecture 3 hours.

SPNA 1001.03: Basic Spanish II (H).
This course is designed for anglophone, francophone and International students. It is a continuation of SPNA 1000, with emphasis on comprehension, conversation, reading, and writing.
NOTE: Winter semester
PREREQUISITE: SPNA 1000

Special Topics

I. Undergraduate Degree Level Course Descriptions

SPEC 2000.03: Topics in Economics and Business Management (A).
An opportunity for students throughout the University to study introductory topics defined by an individual student, a group of students, or faculty. The course is conducted by classes, tutorials, assigned readings, assignments and/or other appropriate activities. Topics must be supervised by a faculty member and approved by the department head.
NOTE: Fall, Winter or Summer semester
FORMAT: as arranged.

SPEC 2001.03: Topics in International Development (A).
An opportunity for students to study introductory topics in international development, with a focus on agriculture and rural development. Topics may be defined by the individual student, a group of students, or faculty. The course is conducted by classes, tutorials, assignments, readings, and/or other appropriate activities. Students are encouraged to use international travel or study opportunities as a focus for the course, but this is not required. Topics must be supervised by a faculty member in the proposed area of interest, and approved by the Department Head of Business and Social Sciences. Students must apply to the Department Head at least six weeks before the semester start date.
NOTE: Fall, Winter or Summer semester
FORMAT: as arranged.

SPEC 4000.03: Special Topics in Animal Science or Aquaculture.
This is an opportunity to study a special topic in the area of animal science or aquaculture as defined by an individual student, group of students or faculty. The course is conducted by tutorials, assigned readings, assignments, field trips and/or other appropriate activities. The special topics would normally be supervised by a faculty or staff member associated with the Animal Science program or the Aquaculture program and approved by the department head.
NOTE: Fall or Winter semester
FORMAT: as arranged.
PREREQUISITE: Two years of full-time study at a post-secondary institution (normally 20 degree courses), and permission of the instructor

SPEC 4005.03: Special Topics in Agricultural Economics and Business I (A).
An opportunity to study a special topic in the area of agricultural economics and business as defined by an individual student, a group of students, or faculty. The course is conducted by tutorials, assigned readings, assignments, and/or other appropriate activities. Special topics must be supervised by a faculty member and approved by the department head.
NOTE: Fall, Winter or Summer semester
FORMAT: as arranged.
PREREQUISITE: 30 degree courses

SPEC 4006.03: Special Topics in Agricultural Economics and Business II (A).
A second special topics course provides additional opportunity for students to individualize their program with in-depth study of an approved topic. Although the second topic selected may be in a similar area of interest to that studied in SPEC 4005, it must be sufficiently distinct to warrant additional study. Special
topics must be supervised by a faculty member and approved by the department head.
NOTE: Fall, Winter or Summer semester
FORMA T: as arranged.
PREREQUISITE: 20 degree courses or enrollment in the B.Tech (Env. Hort.)
SPEC 4010.03: Special Topics in Plant Science I (A).
An opportunity to study a special topic in the area of plant science as defined by an individual student, a group of students, or faculty. The course is conducted by tutorials, assigned readings, writing assignments, and/or other appropriate activities. Special topics must be supervised by a faculty member and approved by the department head.
NOTE: Fall, Winter or Summer semester
FORMA T: as arranged.
PREREQUISITE: 20 degree courses or enrollment in the B.Tech (Env. Hort.)
SPEC 4012.03: Directed Studies in Agricultural Engineering I (A).
Independent studies are developed through literature review or laboratory or field research on topics pertinent to agricultural engineering. Topics must be supervised by a faculty member and approved by the department head.
NOTE: Fall or Winter semester
FORMA T: as arranged.
PREREQUISITE: 20 degree courses

Statistics

Below are courses offered in Statistics by the Faculty of Agriculture. Please see the Statistics Section in the Faculty of Science for courses offered on the Halifax campus.

I. Undergraduate Degree Level Course Descriptions

STAA 2000.03: Introduction to Statistics.
Graphical presentation of data, descriptive statistics; normal, binomial, t and F distributions; sampling distributions and the central limit theorem; estimation and hypothesis testing of a single mean and the difference between two means; and introduction to correlation, regression and analysis of variance for simple experimental designs.
NOTE: Fall and Winter semesters
FORMA T: Lecture 3 hours, tutorial 1 hour, computer lab 1 hour per week.
This calculus-based first course in probability and statistics is designed to interact with the major disciplines within engineering. Topics include descriptive statistics, mathematics of probability, random variables and probability distributions, estimation, hypothesis testing, linear regression and correlation, and introduction to analysis of variance. Problem-solving skills in material related to engineering will be emphasized.
NOTE: Winter semester
FORMA T: Lecture 3 hours, tutorial 1 hour, lab 1 hour per week.
STAA 3000.03: Introduction to Planned Studies: Surveys and Experiments.
This course is a continuation of STAA 2000. Topics covered include sampling techniques, simple and multiple linear regression, analysis of variance for completely randomized and randomized block designs, nonparametric tests, and introduction to categorical data analysis.
NOTE: Winter semester
FORMA T: Lecture 3 hours, tutorial 1 hour, computer lab 1 hour per week.
STAA 4000.03: Intermediate Statistical Methods.
Analysis of single-factor experiments, randomized blocks, latin squares, and factorial and two-level fractional factorial designs.
NOTE: Fall semester
FORMA T: Lecture 3 hours, computer lab 1 hour
Veterinary Technology

I. Technology Level Course Descriptions

VTEC 0034.02: Externship in Specialty Field. This course is designed to encourage the student to pursue the practical application of special interests in Veterinary Technology that would not be addressed in the externships in general practice or at the Atlantic Veterinary College. The externship is customized to the venue and contracted in a manner similar to the general practice externship.

NOTE: Typical institutions that sponsor this optional externship are: farm animal or exotic veterinary practices, intensive care and emergency clinics, specialty veterinary clinics, zoos, humane societies, and research facilities.

VTEC 0111.02: Animal Medicine and Nursing I. This is the first in a stream of medicine and nursing courses designed to enable the student to grasp the principles and practices of veterinary medical, surgical, and related clinical skills. In conjunction with other courses in the Veterinary Technology Program and the related internship and externships, these courses equip the graduate to perform entry-level clinic tasks in the veterinary practice workplace. Topics include animal handling and restraint, drug routes, prescription, control and narcotic drugs, vaccines and vaccination, anesthesia, surgical preparation, radiography principles and processing, and clinical calculations.

NOTE: Full semester
FORMA T: Lecture 3 hours.

VTEC 0112.02: Clinical Exercises I. This is the first in a stream of clinical exercises courses designed to enable the student to practice medical, surgical, and related clinical skills. In conjunction with other courses in the Veterinary Technology Program and the related internship and externships, these courses equip the graduate to perform entry-level clinical tasks in the veterinary practice workplace. Animal care and maintenance duties are in addition to the scheduled hours in this course. Task areas included in this course are: animal and facilities maintenance, drug administration, common clinical equipment, anesthesiology, surgical preparation, and radiography.

NOTE: Full semester
FORMA T: Lecture 1 hour, lab 4 hours

VTEC 0113.02: Veterinary Clinical Pathology I. This is the first in a stream of theory and practical clinical pathology courses designed to enable the student to perform, and cognitively grasp the principles of, essential tasks in the in-house veterinary practice laboratory. In conjunction with other courses in the Clinical Pathology stream and the related internship and externships, these courses equip the graduate to perform entry-level diagnostic tasks in the veterinary practice workplace. Task areas and topics included in this course are: microscopy, practical parasitology, urinalysis, the microhematocrit, hematocrit, and the red blood cell, and initial blood film assessment.

NOTE: Full semester
FORMA T: Lecture 3 hours, lab 3 hours

VTEC 0114.02: Fundamentals in Veterinary Technology I. This is the first in a stream of courses designed to address discrete topics in veterinary technology. These topics may not warrant full course status; they may require attention at specific times in the syllabus; they may need to be addressed at several levels. Topics in this first fundamentals course are: orientation to the profession and to the program; first aid training; WORMS; workplace safety; and an introduction to zoonotic disease, animal husbandry, cleaning and disinfection, nutrition, animal behavior, records in veterinary medicine, and veterinary medical terminology.

NOTE: Full semester
FORMA T: Lecture 3 hours

VTEC 0115.02: Anatomy–Physiology–Pathophysiology I. This is the first of two courses designed to enable the student to apply the principles of anatomy, physiology, and pathophysiology to animal nursing and medicine. Clinical applications are stressed, and progress through this course is coordinated with other courses in the semester. This course addresses the general topics of cell, tissue, organ, and system plus terms and processes in anatomy, physiology, and disease generally. It then deals with the anatomy, physiology, and typical disease processes in the major body systems. Systems in this course include musculoskeletal, cardiovascular, respiratory, and urinary/excretory.

NOTE: Full semester
FORMA T: Lecture 3 hours, lab 3 hours

VTEC 0121.02: Animal Medicine and Nursing II. This is the second in a stream of medicine and nursing courses designed to enable the student to grasp cognitively the principles and practices of veterinary medical, surgical, and related topics. In conjunction with other courses in the Veterinary Technology Program and the related internship and externships, these courses equip the graduate to perform entry-level clinical tasks in the veterinary practice workplace. Topics included in this course are: anesthesiology, surgical preparation and asepsis, radiography, exposure and positioning, clinical calculations, fluid therapy, blood sampling, common infectious diseases of companion animals, feeding in disease states, and introduction to dental disease and treatment.

NOTE: Winter semester
FORMA T: Lecture 3 hours
PREREQUISITE: VTEC 0111, VTEC 0112

VTEC 0122.02: Clinical Exercises II. This is the second in a stream of clinical exercises courses designed to enable the student to perform medical, surgical, and related clinical skills. In conjunction with other courses in the Veterinary Technology Program and the related internship and externships, these courses equip the graduate to perform entry-level clinical tasks in the veterinary practice workplace. Animal care and maintenance duties are in addition to the scheduled hours in this course. Task areas included in this course are: animal and facilities maintenance, drug administration, general nursing, anesthesiology, surgical preparation, radiography, fluid therapy, sampling for the laboratory, and dental equipment and supplies.

NOTE: Winter semester
FORMA T: Lecture 1 hour, lab 4 hours
PREREQUISITE: VTEC 0111, VTEC 0112

VTEC 0123.02: Veterinary Clinical Pathology II. This is the second in a stream of theory and practical clinical pathology courses designed to enable the student to perform, and cognitively grasp the principles of, essential tasks in the in-house veterinary practice laboratory. In conjunction with other courses in the Clinical Pathology stream and the related internship and externships, these courses equip the graduate to perform entry-level diagnostic tasks in the veterinary practice workplace. Task areas and topics included in this course are all prior topics, plus blood cell development and assessment, total white blood cell counts, the differential count, toxic white cells, CBC, CRP, ESR, eosinophil count, and other inflammatory tests, canine heartworm assays, Mycoplasma hemofelis, and clinical pathology case studies.

NOTE: Winter semester
FORMA T: Lecture 3 hours, lab 3 hours
PREREQUISITE: VTEC 0111, VTEC 0112

VTEC 0124.02: Fundamentals in Veterinary Technology II. This is the second in a stream of courses designed to address discrete topics in veterinary technology that do not warrant full course status so that there is greater attention during the semester to support other courses. Topics included in this course are communications in the veterinary practice, veterinary medical records, endurability and legislation in the veterinary professions, veterinary medical terminology, pharmacology, parasitology, and computer applications in veterinary practice, and the economics of veterinary practice.

NOTE: Winter semester
FORMA T: Lecture 5 hours
PREREQUISITE: VTEC 0114
VTEC 0125.02: Anatomy–Physiology–Pathophysiology II.

This is the second of two courses designed to enable the student to apply the principles of anatomy, physiology, and pathophysiology to animal nursing and medicine. Clinical applications are stressed, and progress through this course is coordinated with other courses in the semester. This course addresses the anatomy, physiology, and typical disease processes in the remainder of the major body systems. Systems and topics in this course include: digestive, respiratory, nervous, and endocrine systems; organs of special sense; and skin. The principles of inheritance and genetics and embryology are dealt with using examples of common congenital diseases.

NOTE: Winter semester

FORMAT: Lecture 3 hours, lab 3 hours.

PREREQUISITE: VTEC 0121

VTEC 0131.02: Internship in Veterinary Technology.

This is a co-operative course. In this course the learning objectives of all courses in the first two semesters are consolidated and re-tested. Students rotate through clinical, laboratory, and off-campus co-operative hospital experiences, with daily classroom sessions for discussion and testing. In its clinical and diagnostic laboratory sessions, students hone skills learned in the first two semesters and acquire some new ones. Completion of this course is a prerequisite for registration in VTEC 0133 and for registration in all second-year courses (Semesters 4 and 5). The approximate division of elements of this course is: Clinical: 64 hours; (2 x 8 hr per week); Clinical Pathology: 36 hours; (3 x 3 hr per week); Co-Operating Hospital: 16 hours; (2 x 8 hr per week); and Cognitive Classroom Sessions: 16 hours (4 x 4 hr per week). Animal care and maintenance duties are in addition to scheduled hours in this course. Task areas included in this course are: animal and facilities maintenance, drug administration, anaesthesiology, surgical preparation and assisting, radiography, clinical calculations, fluid therapy, blood sampling, fasting, and introduction to dental disease and treatment.

NOTE: Spring semester

FORMAT: 8 weeks.

VTEC 0132.02: Externship at the Atlantic Veterinary College.

This course is an off-campus externship delivered by the Atlantic Veterinary College (AVC). During these four weeks students are on duty with technical staff for at least one-half of their time at the Veterinary Teaching Hospital (VTH). Evening and night shifts are a large part of the AVC Externship. Day shifts allow some opportunity for the student to choose specific areas of interest. In addition, there are structured learning exercises. There is a significant livestock and companion-animal component. Students attend this externship in one or more sections. Attendance is required at all scheduled duty shifts and for being on-call, so the prerequisite for registration in VTEC 0133 and for registration in all second-year courses (Semesters 4 and 5).

NOTE: Spring semester

Cost of transportation to AVC and room and board in Charlottetown are the responsibility of the student. Staff of the Veterinary Technology Program will assist the student where possible, but the responsibility for living arrangements is the student’s.

FORMAT: 4 weeks.

VTEC 0133.02: Externship in General Veterinary Practice.

This course is an off-campus learning experience in a general veterinary practice. Students locate their externship practices from a list provided by the VT Program staff, but an unlisted practice contacted by a student may be approved. To be approved, an internship practice must have a significant companion-animal (small-animal) clientele and employ at least one graduate AHVDVE. Students may apply to complete this externship in practices outside of the Atlantic Region. A contract between the student, the practice, and the University must be completed before this externship can begin. Weekly report forms and a final report are completed by practice personnel. Student assignments must be completed before a credit can be awarded for this course.

NOTE: Spring semester

FORMAT: 8 weeks.

PREREQUISITE: VTEC 0131

VTEC 0211.02: Animal Medicine and Nursing III.

This is the third in a stream of medicine and nursing courses designed to enable the student to apply the principles and practices of veterinary medical, surgical, and related topics. In conjunction with other courses in the Veterinary Technology Program and the related internship and externships, these courses equip the graduate to perform entry-level clinical tasks in the veterinary practice workplace. Topics included in this course are: anesthesiology, pain management, surgical preparation and assisting, radiography, clinical calculations, fluid therapy, emergency procedures, blood sampling, non-infectious diseases of companion animals, feeding in disease states, and dental disease and treatment.

NOTE: Full semester

FORMAT: Lecture 8 hours per week.

PREREQUISITE: VTEC 0131, VTEC 0132

VTEC 0212.02: Clinical Experiences III.

This is the third in a stream of theory and practical clinical courses designed to enable the student to perform, and cognitively grasp the principles of, essential tasks in the in-house veterinary practice laboratory. In conjunction with other courses in the clinical pathology stream and the related internship and externships, these courses equip the graduate to perform entry-level diagnostic tasks in the veterinary practice workplace. Topics included in this course are all prior topics, plus theory of blood chemical tests, serum chemistry, large-animal parasites, bacteriology of alternate species, microbiology and antimicrobial susceptibility testing, yeast, and other fungi, advanced parasitology techniques, quality control in the laboratory, submissions to external laboratories, and clinical pathology case studies.

NOTE: Full semester

FORMAT: Lecture 1 hour, lab 4 hours.

PREREQUISITE: VTEC 0131, VTEC 0132

VTEC 0213.02: Veterinary Clinical Pathology III.

This is the third in a stream of courses designed to address discrete topics in veterinary technology that do not warrant full-course status or that require attention during the semester to support other courses. Case reports from externships are delivered and discussed. Topics included in this course are: veterinary medical terminology, pharmacology and dispensing, parasitology, clinical calculations, computer applications in veterinary practice, bookkeeping in the veterinary practice, and presentations to small groups.

NOTE: Full semester

FORMAT: Lecture 3 hours, lab 3 hours.

PREREQUISITE: VTEC 0131, VTEC 0132

VTEC 0214.02: Fundamentals in Veterinary Technology III.

This is the third in a stream of courses designed to address discrete topics in veterinary technology that do not warrant full-course status or that require attention during the semester to support other courses. Case reports from externships are delivered and discussed. Topics included in this course are: veterinary medical terminology, pharmacology and dispensing, parasitology, clinical calculations, computer applications in veterinary practice, bookkeeping in the veterinary practice, and presentations to small groups.

NOTE: Full semester

FORMAT: Lecture 3 hours

PREREQUISITE: VTEC 0131, VTEC 0132

VTEC 0215.02: Livestock and Equine Principles.

Through a mixture of classroom and field-trip exercises, this course enables the Veterinary Technology student to recognize common equine and livestock breeds; describe livestock production cycles and methods, and use appropriate terminology. Common diseases of large animals as they relate to the veterinary technicians are dealt with. Urgent and emergency clinical signs in large-animal practice are stressed. Common clinical procedures in large-animal practice are outlined.

NOTE: Full semester

FORMAT: Lecture 5 hours, lab 2 hours.

PREREQUISITE: VTEC 0131, VTEC 0132

VTEC 0221.02: Animal Medicine and Nursing IV.

This is the last course in a stream of medicine and nursing courses designed to enable the student to apply the principles and practices of veterinary medical, surgical, and related topics. Upon completion of this course and the related course VTEC 0222, the graduate is able to perform entry-level clinical tasks in the veterinary practice workplace. Problem-oriented case studies are used as models. All test areas included in prior Animal Medicine and Nursing courses are re-evaluated comprehensively.

NOTE: Winter semester

FORMAT: Lecture 4 hours per week.

PREREQUISITE: VTEC 0211, VTEC 0212
VTEC 0222.02: Clinical Exercises IV.
This is the last and capstone course in a stream of clinical exercises courses designed to enable the student to perform medical, surgical, and related clinical skills. Upon completion of this course and the related VTEC 0221, the graduate is able to perform entry-level clinical tasks in the veterinary practice workplace. All task areas included in prior Clinical Exercises courses are reviewed, some are elaborated, and students are re-evaluated.
NOTE: Winter semester
FORMAT: Lecture 1 hour, lab 4 hours
PREREQUISITE: VTEC 0211, VTEC 0212

VTEC 0223.02: Veterinary Clinical Pathology IV.
This is the last and capstone course in a stream of theory and practical clinical pathology courses designed to enable the student to perform, and cognitively grasp the principles of, essential tasks in the in-house veterinary practice laboratory. Upon completion of this course the graduate is able to perform entry-level laboratory diagnostic tasks in the veterinary practice workplace. Students are re-evaluated comprehensively. Task areas and topics included in this course are all prior topics; plus cytology of the reproductive tracts, soft tissues, and body fluids; transfusion medicine; bone marrow evaluation; semen evaluation; cerebrospinal fluid; hemodynamics; coagulation factor evaluations; quality control programs; trouble shooting problems in the laboratory; and clinical pathology case studies.
NOTE: Winter semester
FORMAT: Lecture 3 hours, lab 3 hours
PREREQUISITE: VTEC 0213

VTEC 0224.02: Fundamentals in Veterinary Technology IV.
This is the last and capstone course in a stream of courses designed to address discrete topics in veterinary technology that do not warrant full-course status or that require attention during the semester to support other courses. All topics included in prior Fundamentals courses are reviewed and some are elaborated, and students are re-evaluated comprehensively in all areas.
NOTE: Winter semester
FORMAT: Lecture 5 hours

VTEC 0225.02: Laboratory Animal and Alternative Pet Medicine.
This course enables the student to apply the principles of clinical nursing to alternate and exotic pets as well as to common laboratory animal species. It also enables the graduate to enter the research facility and, with supplemental training and experience, prepares the graduate for certification with the Canadian Association for Laboratory Animal Sciences. Topics include specialized animal sources, barriers and containment, bio-hazards, special requirements of various species, handling of and common techniques used on alternate and laboratory animal species, and the ethics of animal research and of wild animal species as pets.
NOTE: Winter semester
FORMAT: Lecture 3 hours, lab 3 hours
PREREQUISITE: VTEC 0211, VTEC 0212, VTEC 0213, VTEC 0214
Faculty of Architecture and Planning

Address: Faculty of Architecture and Planning
Dalhousie University
5410 Spring Garden Road
PO Box 15000
Halifax, NS B3H 4R2

Telephone: (902) 494-6230
Email: eric.guile@dal.ca

I. Introduction
The Faculty of Architecture and Planning includes the School of Architecture and the School of Planning. The Faculty’s degree programs are primarily for individuals who intend to become a professional architect or planner. The Faculty also offers several courses that are open to all students in the university, as well as undergraduate and graduate courses that may be taken with permission from the instructor. The professional Architecture program (BEDS/MArch) is described in the Architecture section of this calendar. The Bachelor of Community Design program is described in the Planning section of this calendar. Please see the Graduate Studies calendar for a description of all graduate Architecture and Planning programs.
Facilities

The School is housed in the original home of the Nova Scotia Technical College, built in 1909 and renamed the Ralph M. Mutch Building in 2005. Corresponding to the School’s emphasis on architectural design, one-third of the building is devoted to studio spaces that are open to students 24 hours a day. The building also has several computer labs with a wide array of equipment, a fully-equipped woodworking shop, an experimental construction lab, a digital modeling shop, photographic and GIS facilities, and a large exhibition hall. The University Library’s architecture collection is located nearby, and a student resource centre is housed within the Faculty.

Co-op Work Terms

The School’s professional degree program includes two work terms that provide students with practical experience in building design and responsible professional practice. The School’s Co-op Program has been operating since 1979, and the Faculty of Architecture and Planning’s Co-op Office assists students in finding suitable work-term placements. In recent years, Architecture students have been employed in every province and territory in Canada, and approximately one-third have chosen to work abroad - most recently, in Argentina, Austria, China, Egypt, England, Germany, Iran, Japan, Netherlands, Norway, Singapore, Switzerland, and the United States.

Accreditation

The School’s professional degree program is fully accredited by the Canadian Architectural Certification Board (CACB). The entire six-year program consists of two years of general study and a recognized university. Followed by at least two years of undergraduate study at the School of Architecture (BEDS) and two years of graduate study at the School of Architecture (MArch). In Canada, all provincial-territorial associations recommend that a student have at least one year of full-time, full-year accredited professional education. However, the pre-professional degree is not, by itself, recognition of an accredited degree.

Professional Registration

After receiving the professional degree, a graduate may fulfill additional requirements for professional registration, including a period of post-graduate practical experience and the completion of registration examinations. In Canada, these additional requirements are determined by provincial organizations that are empowered to register individuals for professional practice. An American citizen who graduates from the School’s MArch program is qualified to become an architect in the United States and to complete the examination for professional registration there. Applicants from other countries are advised to contact the national architectural organization about requirements for professional registration.

Admissions

The School of Architecture offers several courses that are open to all students in the university:

• ARCH 2025.03: Design Drawing
• ARCH 2001.03: Visual Thinking B
• ARCH 2000.03: Visual Thinking A
• ARCH 1200X/Y .06: Science of the Built Environment
• ARCH 1000X/Y .06: Introduction to Architecture
• ARCH 1200X/Y.06: Science of the Built Environment
• ARCH 2000.01: Visual Thinking A
• ARCH 2001.01: Visual Thinking B
• ARCH 2025.01: Design Drawing

Please consult the university’s academic timetable for available courses. Individuals who are not currently registered at Dalhousie University should refer to the university’s regulations in this calendar for details on Special Student status.

II. Courses Open to Non-Majors

The School of Architecture offers several courses that are open to all students in the university:

• ARCH 1000X.Y.06: Introduction to Architecture
• ARCH 1100X.Y.06: Science of the Built Environment
• ARCH 2000.01: Visual Thinking A
• ARCH 2001.01: Visual Thinking B
• ARCH 2025.01: Design Drawing

Please consult the university’s academic timetable for available courses. Individuals who are not currently registered at Dalhousie University should refer to the university’s regulations in this calendar for details on Special Student status.

III. Undergraduate Degree Program

Bachelor of Environmental Design Studies

BEDS is a two-year, full-time, pre-professional program for a student who has already completed at least two years of general studies in subjects other than architecture. It consists of four academic terms in residence and a summer work-term. The BEDS program leads to the MArch program, as well as to the Faculty’s other graduate programs in Environmental Design Studies and Planning. A BEDS graduate may also choose to continue into another related field in design, environmental studies, management, etc., at Dalhousie or elsewhere.
IV. Undergraduate Regulations

For academic regulations that apply to undergraduate students in the School of Architecture (including workload, course changes, withdrawal, transfer credits, part-time status, duration of undergraduate studies, minimum degree requirements, assessment, incomplete course work, reassessment of a grade, and academic standing), please refer to the Academic Regulations section in this calendar and the Current Students section of the School of Architecture Website. Please note that some undergraduate regulations differ from their graduate counterparts.

V. Undergraduate Courses Offered

A. Professional Degree Program

The following chart illustrates the duration of terms throughout the four years of the professional degree program in the School of Architecture. Following the two-year general studies prerequisite, the next two years are Bachelor of Environmental Design Studies and the final two years are Master of Architecture.

- ARCH 4302.01: Professional Practice
- ARCH 4302.01: Professional Practice

VI. Undergraduate Course Descriptions

Course Numbers

The first digit of an ARCH course number indicates its level: introductory courses open to all university students (1 and 2); Year 1 - BEDS (3); Year 2 - BEDS (4); or Undergraduate Co-op Work Term (5). The second digit indicates the area of study: Design (0), Humanities (1), Technology (2), Professional Practice (3), or Representation (4). Courses in the BEDS program have various credit-hour extensions (1-0.5) that indicate the approximate course hours each week and the appropriate balance of subjects for professional accreditation. Courses may be interchanged between academic terms, depending on the availability of instructors.

ARCH 1000X/Y.06: Introduction to Architecture.

This course introduces architectural theory and practice through engaging themes in the discipline. It emphasizes design as a method of study, considers the materiality of buildings, and interlaces the built environment as an expression of culture.

NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.

FORMAT: Lecture/seminar

This course introduces a broad range of scientific principles that influence the construction and environment of buildings. It studies topics such as mechanics, ecology, light, heat, and sound. The course uses a "common-sense" approach involving graphic images, practical understanding, and problem-solving: a background in science or mathematics is not required.

NOTE: Students taking this course must register in both X and Y in consecutive terms; credit will be given only if both are completed consecutively.

FORMAT: Lecture

ARCH 2000.03: Visual Thinking A.

Architects, scientists, political activists, manufacturers, and others employ a variety of visual tools to study and engage with the world. Students in this course learn to create maps, simple technical drawings, and other visual devices, and use them to analyze actual situations and to generate and present new ideas. Hands-on work is emphasized, but no prior experience in drawing or design is needed. With its focus on constructing the concrete, outer world, this course is a useful complement to ARCH 2000.03.

FORMAT: Lecture/seminar

PREREQUISITE: Completion of first year university or permission of instructor

ARCH 2001.03: Visual Thinking B.

As the world becomes more visually oriented, a critical appreciation of visual information becomes indispensable. Students use charts, diagrams and other means of externalizing, developing, and sharing ideas. In doing so, they learn to analyze the form of graphic information as well as the content. Hands-on work is emphasized, but no prior experience in drawing or design is needed. This course is a more abstract and reflective complement to ARCH 2000.03.

FORMAT: Lecture/seminar

PREREQUISITE: Completion of ARCH 2000.03 or permission of instructor

ARCH 2025.03: Design Drawing.

This course enables students to enhance their design literacy skills through attention to graphic design, layout, composition, and typography. Students will gain experience in a range of techniques in design drawing and portfolio presentation.

FORMAT: Lecture/lab

PREREQUISITE: ARCH 1000, PLAN 1002 or permission of instructor

ARCH 3001.06: Design.

This course studies basic principles of architecture through studio projects using drawings and models. Students design elementary building forms beginning with the position, on various sites. Working with basic building elements of floor, wall and roof, students consider architectural composition and materials at the three scales of detail, building, and site. The course includes historical design studies to understand how other architects have responded to similar problems.

FORMAT: Lecture/studio

RESTRICTION: Year 3 BEDS students

ARCH 3002.06: Design.

This course studies principles of architecture by focusing on the design of the house. Building on topics from ARCH 3001, it considers issues of composition (structural, volumetric, and spatial), building programs, interior environment, and relations to community context and ecological sustainability. The course includes historical design studies to understand how other architects have responded to these issues.

FORMAT: Lecture/studio

RESTRICTION: Year 3 BEDS students
ARCH 3104.03: Foundations in Architectural History and Theory.
This course introduces basic topics in architecture and interpretive methods in architectural research. It focuses on selected buildings and their roles in the development of architecture in the ancient and modern eras. To develop research skills and architectural awareness, students interpret local buildings through direct experience and study of their background and historical contexts. Taught through lectures and studio work.
FORMAT: Lecture/seminar
RESTRICTION: Year 3 BEDS students
ARCH 3105.03: Architectural History and Theory - 20th Century.
This course is a survey of late modern architecture, focusing on Europe and North America. Buildings and urban projects are situated in their social and political contexts and the theoretical constructs that influenced their development. Students are exposed to external archives and resources to research local modern buildings and their architects.
FORMAT: Lecture/seminar
RESTRICTION: Year 3 BEDS students
ARCH 3207.03: Building Technology.
This course studies principles of architecture through the design of a public building. This course builds on the principles of drawing, modeling, imaging, and architectural representation. Class work involves freehand drawing, orthographic projection, and computational modeling methods. Students complete studio assignments that challenge them to develop a project that uses building technology strategically and engages relevant issues in architectural history and theory. Emphasis is also placed on fluency in architectural representation.
FORMAT: Lecture/seminar
RESTRICTION: Year 3 BEDS students
ARCH 3301.01: Professional Practice.
This course introduces the role and place of the architect in society, with an emphasis on the development of the profession through history. It also studies representation methods employed by architects and their implications for design.
FORMAT: Lecture/seminar
RESTRICTION: Year 3 BEDS students
ARCH 3302.01: Professional Practice.
This course introduces the role and place of the architect in society, with an emphasis on the development of the profession through history. It also studies representation methods employed by architects and their implications for design.
FORMAT: Lecture/seminar
RESTRICTION: Year 3 BEDS students
ARCH 3501.03: Representation.
This course studies fundamental concepts, techniques, and applications of architectural representation. Class work involves freehand drawing, orthographic projection, and computational modeling methods. Students develop studio assignments that challenge them to develop a project that uses building technology strategically and engages relevant issues in architectural history and theory. Emphasis is also placed on fluency in architectural representation.
FORMAT: Lecture/seminar
RESTRICTION: Year 3 BEDS students
ARCH 3502.03: Representation.
This course builds on the principles of drawing, modeling, imaging, and composition studied in ARCH 3501. Topics include axonometrics, perspective, tone, color, and composition.
FORMAT: Lecture/seminar
RESTRICTION: Year 3 BEDS students
ARCH 3503.03: Design.
This course studies principles of architecture through the design of a public building. This course builds on previous courses and includes the organization of a public program and issues of context and interpretation. As an intensive studio it encourages students to focus on design intentions and to develop an awareness of design process.
FORMAT: Lecture/seminar
RESTRICTION: Year 3 BEDS students
ARCH 4004.03: Free Lab.
To complement studio-based learning, this course is an experimental hands-on workshop in design led by an instructor. Investigations of a particular architectural topic may include design-and-build, documentary work, landscape installations, community design projects and interdisciplinary work. Projects may be done locally or involve travel to a distant site.
FORMAT: Lecture/seminar
RESTRICTION: Year 4 BEDS students
ARCH 4005.06: Design.
This course studies advanced principles of architectural design through the design of a medium-sized institutional building. Elaborating on topics from the previous design course, students organize a complex program on an urban site and develop a project that uses building technology strategically and engages relevant issues in architectural history and theory. Emphasis is also placed on fluency in architectural representation.
FORMAT: Lecture/seminar
RESTRICTION: Year 4 BEDS students
ARCH 4110.03: Architectural History and Theory - 14th-15th Century.
This course studies significant buildings and the role of architecture from the Renaissance to the Enlightenment, mainly in Europe. It follows the transition from master builder to architect, and the humanist search for order and its manifestation in built form. Students analyze the design of significant buildings by studying historical documents and making interpretive drawings and models.
FORMAT: Lecture/seminar
RESTRICTION: Year 4 BEDS students
ARCH 4111.03: Architectural History and Theory - 19th Century.
This course studies the integration of building structural and enclosure systems in architectural design. Long span structural systems and lateral forces are examined, including their interaction with the enclosure system. Building enclosure studies include the performance of materials in assemblies, the performance of the building envelope, and the sequence of construction. The integration of structure and enclosure is examined through the construction detail. Students complete case studies and design projects on integrating structure and enclosure in buildings.
FORMAT: Lecture/seminar
RESTRICTION: Year 4 BEDS students
ARCH 4212.03: Building Systems Integration.
This course studies performance standards related to human activities in buildings, and the systems and configurations required to support those activities. Building systems are considered in relation to climate, urban situation, and the natural environment. Principles of systems thinking, as well as the use of physical and computational modeling methods, are applied to the comprehensive design of a building to achieve defined performance standards and to consider issues of sustainability with regard to energy balance, water conservation, and component materials.
FORMAT: Lecture/seminar
RESTRICTION: Year 4 BEDS students
ARCH 4303.01: Professional Practice.
This course introduces contemporary office practices and project delivery including marketing, contracts, project phases and contract administration. The course also introduces issues related to the co-op work term, including job placement and the role of the student in a professional office.
FORMAT: Lecture/seminar
RESTRICTION: Year 4 BEDS students
ARCH 4304.01: Professional Practice.
In this week-long module students learn about the architect in society, professional ethics; models of practice; legal aspects of practice; authorities having jurisdiction over building; finance and costing techniques; and internship. FORMAT: Lecture/sem, FORMA T: Lecture/Studio
ARCH 4501.03: Representation.
This course studies the use of manual and digital media in the expression of architectural intentions and an understanding of historical culture, history, and technology. FORMAT: Lecture/Studio
RESTRICTION: Year 4 BEEDS students
ARCH 4502.03: Representation.
This course studies advanced strategies of representation. It promotes the fluency of manual and digital media in design development, guided by architectural intentions and an understanding of historical culture, history, and technology. FORMAT: Lecture/Studio
RESTRICTION: Year 4 BEEDS students
ARCH 8893.03: Professional Practice (Co-op Work Term).
A student works in some aspect of the profession for a total of 500 hours to be accomplished in no less than 12 weeks, and completes a research report or assignment. Work placements are coordinated by the co-op coordinator for Architecture and must be approved by the School. In exceptional circumstances a student may apply to satisfy up to 500 hours of the time requirement through supervised research related to professional practice. RESTRICTION: Year 4 BEEDS students

VII. Graduate Degree Program
The Master of Architecture program description is included here in the undergraduate calendar to provide an overview of the entire professional degree program, which includes both the BEEDS and MArch degrees.

Master of Architecture
Master of Architecture is a two-year, full-time program consisting of four academic terms in residence and an eight-month work term. It includes required courses that complete the core requirements for the School's professional degree in Architecture and must be approved by the School. In exceptional circumstances a student may apply to satisfy up to 500 hours of the time requirement through supervised research related to professional practice. RESTRICTION: Year 4 BEEDS students

VIII. Graduate Courses Offered

A. Master of Architecture

Year 5 - Terms M1 and M2 (Summer and Fall)
- two core courses in Architecture (ARCH 5xxx.03)
- two core courses in Humanities (ARCH 5xxx.03)
- two core courses in Technology (ARCH 5xxx.03)
- two graduate electives (ARCH 6xxx.03 or ARCH 5xxx.03)

Year 5 - Terms M3 and M4 (Winter and Summer)
- ARCH 5309.03: Professional Practice (Co-op Work Term)
- ARCH 5308.03: Professional Practice (Co-op Work Term)

Year 6 - Term M5 (Fall)
- ARCH 5516.06: Building Systems Integration for Design Thesis
- ARCH 5500.03: Master Thesis Preparation
- one graduate elective (ARCH 6xxx.03 or ARCH 5xxx.03)

Year 6 - Term M6 (Winter)
- ARCH 5511.03: Professional Practice
- ARCH 5506.06: Master Thesis
- one graduate elective (ARCH 6xxx.03 or ARCH 5xxx.03)

B. Graduate Courses

Core Courses - Design
- ARCH 5002.06: Urban Housing Studio
- ARCH 5003.06: Adaptive Reuse Studio
- ARCH 5004.06: Urban Systems Studio
- ARCH 5005.06: Material Detail Studio
- ARCH 5006.06: Light Frame Building Studio
- ARCH 5007.06: Landscape Studio
- ARCH 5009.06: Epiphany Architecture Studio
- ARCH 5011.06: Public Architecture Studio
- ARCH 5012.06: Urban Program Studio

Core Courses - Humanities
- ARCH 5102.03: Housing Theory
- ARCH 5103.03: Residential Real Estate Development
- ARCH 5104.03: Urban Systems
- ARCH 5105.03: History and Theory of Cities
- ARCH 5106.03: International Sustainable Development
- ARCH 5107.03: Theory and the Built Environment
- ARCH 5108.03: Architectural Theory of the Enlightenment
- ARCH 5109.03: Epiphany Architecture
- ARCH 5110.03: Architectural Exhibitions
- ARCH 5112.03: Documentation and Conservation of the Modern Movement in Architecture
- ARCH 5113.03: Technology, Culture and Society
- ARCH 5116.03: Humanities Seminar

Core Courses - Technology
- ARCH 5202.03: From Timber to Lumber
- ARCH 5203.03: From Timber to Lumber
- ARCH 5204.03: Composite Materials
- ARCH 5207.03: Light and Material
- ARCH 5208.03: Acoustics
- ARCH 5209.03: Energy Efficient Design
- ARCH 5210.03: Life Cycle Analysis
- ARCH 5211.03: The Construction Detail
- ARCH 5212.03: From Principle to Detail
- ARCH 5213.03: Facades
- ARCH 5214.03: Façade Architecture
- ARCH 5215.03: Form and Material Processes
- ARCH 5216.03: Technology of Heritage Conservation
- ARCH 5217.03: Technology Seminar

Electives
- ARCH 6001.01: Design Seminar
- ARCH 6002.05: Free Lab
- ARCH 6113.01: Architecture and Archaeoastronomy
- ARCH 6114.03: Humanities Seminar
- ARCH 6190.03: Material Investigation
- ARCH 6210.03: Material Investigation in Wood
- ARCH 6211.03: Technology Seminar
- ARCH 6215.03: Earth Construction
- ARCH 6216.03: Natural Fibers
- ARCH 6304.03: Entrepreneurship
- ARCH 6305.03: Permission to Build
- ARCH 6306.03: Professional Practice Seminar
- ARCH 6401.03: Graphic Design in Architecture
- ARCH 6502.03: Drawing in Architecture
- ARCH 6503.03: Photography in Architecture
- ARCH 6504.03: Montage in Architecture
- ARCH 6505.03: Multimedia in Architecture
- ARCH 6506.03: Spatial Constructions in Digital Video
- ARCH 6507.03: Language as Representation
- ARCH 6508.03: Alternatives in Perspective
- ARCH 6509.03: Digital Form
- ARCH 6510.03: Architectural Documentation and Analysis
- ARCH 6511.03: Documentation of Historic Buildings
- ARCH 6512.03: Developments in Architectural Representation
- ARCH 6513.03: Representation Seminar
IX. Graduate Course Descriptions

ARCH 5002.06: Urban Housing Studio. This studio explores the aesthetic, historic, social-cultural and economic challenges presented by contemporary high-density, mixed-use development. The relationship of architecture to urbanism, and building to city, will be explored through exemplary precedents and the design of housing and its associated commercial, institutional, and recreational components. FORMAT: Studio RESTRICTION: Graduate Students - Architecture

ARCH 5003.06: Adaptive Reuse Studio. This studio studies architectural design through the adaptation of an existing building. It examines tensions between existing built facts (structure, enclosures, and circulation) and new ambitions (habitation, construction, and cultural representation). It also considers historical and urban contexts and the heritage value of existing buildings. FORMAT: Studio RESTRICTION: Graduate students - Architecture

ARCH 5004.06: Urban Systems Studio. This studio examines the infrastructure of the metropolis and its influence on urban form and development. Topics may include systems for transportation, energy use, water distribution, civic institutions, spaces of social exchange, and ecology. Students develop urban infrastructure propositions with reference to innovative urban projects worldwide. FORMAT: Studio RESTRICTION: Graduate students - Architecture

ARCH 5005.06: Material Detail Studio. This studio uses bricolage as a method to represent architectural ideas, observations, and intentions in a built artifact. Students interpret, modify, and project material details in architecture. The conceptual development of the work informs strategies for the development of architectural design. FORMAT: Studio RESTRICTION: Graduate students - Architecture

ARCH 5006.06: Light Frame Building Studio. This studio studies the material and constructional orders of light-weight framing building types through drawing, model, and full-scale construction, case studies of buildings by modern and contemporary designers whom design projects for a multiple residential or small institutional building. FORMAT: Studio RESTRICTION: Graduate students - Architecture

ARCH 5007.06: Landscape Studio. This studio investigates architectural responses to landscapes. It regards the land as a physical and cultural context requiring appropriate methods of visualization and representation. Referring to recent projects in land art, it considers how to engage local materials and interests while promoting the sustainable occupation of a particular site. FORMAT: Studio RESTRICTION: Graduate students - Architecture

ARCH 5009.06: Ephemeral Architecture Studio. This studio examines temporal, fleeting and ephemeral architecture, in contrast to the permanent, monumental, and timeless architecture that has been stressed through exemplary precedents. Students address concepts of alterity, the carnivalesque, the permanent, monumental, and timeless architecture that has been stressed throughout history. Students address concepts of alterity, the carnivalesque, the physical and cultural representation. It also considers historical and urban contexts and the heritage value of existing buildings. FORMAT: Studio RESTRICTION: Graduate students - Architecture

ARCH 5010.06: Public Architecture Studio. This studio explores the role of public architecture in manifesting cultural values through exemplary precedents and the design of public buildings and their associated commercial, institutional, and recreational components. FORMAT: Studio RESTRICTION: Graduate students - Architecture

ARCH 5011.06: Coastal Studio. This studio investigates building on the coast. It explores conjunctures of ecology, culture, and traditional technical knowledge. Through participatory design, students work with a coastal community to develop innovative responses to situations with sensitive ecologies, extreme climate, and local cultural traditions. FORMAT: Studio RESTRICTION: Graduate students - Architecture

ARCH 5012.06: Urban Program Studio. This studio focuses on a basic human need (eating, sleeping, etc.) and investigates the customs and institutions we have developed around it. Questioning local practices and considering distinct reference, such student formulates a program, defines a site in the city of Halifax, and designs a building with a critical and/or innovative intent. FORMAT: Studio RESTRICTION: Graduate students - Architecture

ARCH 5013.06: Design-Build Studio. This field-based studio develops architectural abilities in the realization of building innovation. It emphasizes tools and processes that professionals need for detailed design development. It focuses on building prototypes of innovative structures such as wood lamella vaults, brick timber vaults, grid shells, and cable nets. FORMAT: Studio RESTRICTION: Architecture and Planning or permission of instructor

ARCH 5102.03: Housing Theory. This course introduces the history and theory of contemporary practice in housing design and production. The focus is on the quality of housing and the residential environment. A comparative analysis of significant past and current examples is used to provide insight into the way houses and neighborhoods are designed. This understanding is placed in the context of differing economic, political and housing market situations. FORMAT: Lecture/seminar RESTRICTION: Graduate students - Architecture and Planning or permission of instructor

ARCH 5103.03: Residential Real Estate Development. This course introduces the basic issues, vocabulary, and conceptual approaches of residential real estate development. It also engages the range of design, development, financing, approval, and construction processes that are involved in the production of housing. FORMAT: Seminar RESTRICTION: Graduate students - Architecture and Planning or permission of instructor

ARCH 5104.03: Urban Systems. This course examines the infrastructure of the metropolis and its influence on urban form and development. It considers transportation, energy use, water distribution, civic institutions, spaces of social exchange, and ecological systems. It emphasizes new concepts of what is “urban” and what is “natural,” referring to innovative urban designs worldwide. FORMAT: Lecture/seminar RESTRICTION: Graduate students - Architecture and Planning or permission of instructor

ARCH 5105.03: History and Theory of Cities. This course examines selected major cities, their originating form, important buildings, and building types in their history. The primary aim is to explore the relationship between architecture and urbanism and the relationship between individual buildings and the city. FORMAT: Lecture/seminar RESTRICTION: Graduate students - Architecture and Planning or permission of instructor

ARCH 5106.03: International Sustainable Development. This course examines sustainable development in developed and developing countries. Local building practices and cultural appropriateness are studied through case studies. It considers how architects have handled materials and technology in innovative patterns of living in a reflexive and synthetic manner. FORMAT: Seminar RESTRICTION: Graduate students - Architecture

ARCH 5107.03: Theory and the Built Environment. This course is an overview of contemporary architectural theory, structured into three themes: architecture as a poetic act, moral act, and meaningful act. These
ARCH 5100.03: Architectural Theory of the Enlightenment.
This course focuses on the evolution of the Enlightenment and the search for origins. The terms “Classic” and “Romantic” are examined in depth, as are architecture, the culture of style, historiography, association theory, and the picturesque. Architectural theories are compared with selected works of architecture and architectural representation.

ARCH 5100.03: Ephemerical Architecture.
This course explores ideas of “ephemera” in the city, manifested as ephemeral or temporary constructions, and historical responses to established norms. Theories of utopia, the carnivalesque, the ephemeral and temporary are used to interpret spaces and activities in the city that are marginal, liminal, repressed, neglected, or abandoned.

ARCH 5100.03: Architectural Exhibitions.
This course introduces students to contemporary discussions in the field of exhibit design for architecture, including the role of the viewer, the use of display techniques to frame objects, and the curatorial voice. Groups of students develop an exhibition on a subject of their choice.

ARCH 5110.03: Architectural Exhibitions.
This course introduces students to contemporary discussions in the field of exhibit design for architecture, including the role of the viewer, the use of display techniques to frame objects, and the curatorial voice. Groups of students develop an exhibition on a subject of their choice.

ARCH 5112.03: Documentation and Conservation of the Modern Movement.
This course studies the documentation and conservation of buildings, sites and neighbourhoods of the Modern Movement. It examines international charters, protocols, and issues of identifications, evaluation and public awareness. Students undertake fieldwork and research on specific projects and contribute to a general register of modern works.

ARCH 5112.03: Documentation and Conservation of the Modern Movement.
This course studies the documentation and conservation of buildings, sites and neighbourhoods of the Modern Movement. It examines international charters, protocols, and issues of identifications, evaluation and public awareness. Students undertake fieldwork and research on specific projects and contribute to a general register of modern works.

ARCH 5113.03: Technology, Culture, and Society.
This course studies the technology of architecture in its broad cultural and social context. It explores the issue of technology in history, philosophy, sociology, and material culture, using contemporary and historical buildings as an example.

ARCH 5198.03/5199.03: Humanities Seminar.
This course focuses on an advanced topic in architectural humanities. The topic changes from year to year. It may emphasize history, theory, criticism, urban studies, or architecture in development.

ARCH 5200.03: From Timber to Lumber.
This course examines principles of forestry and ecology pertaining to woodland management. It considers forest ecology, wood production, and the conversion of trees into building products such as dimensional lumber and engineered wood products.

ARCH 5203.03: From Lumber to Structure.
This course focuses on the structural analysis of wood framed buildings and structures. Structural principles in simple beam theory, column design, and lateral load design are studied in traditional and contemporary wood framed buildings.

ARCH 5204.03: Composite Materials.
This course surveys the history of materials, focusing on natural and synthetic polymers, resins, and composite material systems. It studies their origins, chemical content, and manufacturing processes. These materials and their related processes are used to fabricate functional objects, with attention to structure, assembly, and environmental impact.

ARCH 5207.03: Light and Material.
This course examines the characteristics of daylight and artificial light. It analyzes experiments with how light is produced, transmitted, and interacts with various materials. By considering lighting options for a particular use, it regards light as an integral element in the design of interior and/or exterior space.

ARCH 5208.03: Acoustics.
This course studies the principles of indoor room acoustics and audio-visual design. To address acoustical requirements in various types of spaces, it considers sound projection and isolation, and the control of mechanical and environmental noise through building design and acoustical materials.

ARCH 5209.03: Energy Efficient Design.
This course focuses on sustainable building services. It studies building energy codes and rating systems—specifically LEED—in the Atlantic region. It also examines international strategies for low-energy building, passive systems in ventilation, heating, and cooling, renewable energy systems, and the integration of engineering systems into architectural design.

ARCH 5210.03: Life Cycle Analysis.
This course studies the range of environmental impacts associated with building materials and assemblies, from their raw state to the end of their useful life. It considers operating energy, embodied energy, and carbon sequestration, with particular attention to the structure and building envelope of wood framed heritage buildings.

ARCH 5211.03: The Construction Detail.
This course examines the construction detail and its relationship to the architectural whole. Case studies of details in major twentieth century buildings inform detail practice, in which students investigate material options and construction details for a project of their own design.

ARCH 5212.03: From Principle to Detail.
This course focuses on sustainable building technologies. It studies the integration of building systems (e.g., structure, construction, environmental technology). It begins with an overview of principles, followed by a self-directed material exploration, culminating in the production of a relevant building detail.

ARCH 5213.03: Facades.
This course examines the various functions of a building facade: protection from weather, interior comfort, urban sign, and potential energy producer. It considers how a facade designed for a particular program can achieve high performance through attention to detail: building materials, manufacturing processes, and construction techniques.
ARCH 5214.03: Tensile Architecture.
This course explores the design and construction of tensile structures by building and testing models and mock-ups. It also explores the theoretical potential of tensile structures by integrating technologies such as video, sound, light, sensors, and smart fabric.

FORMAT: Lecture/seminar
RESTRICTION: Graduate students - Architecture

ARCH 5215.03: Fabrication.
This course studies the sequence of trades involved in building construction. It examines the material processes of various construction industries and considers their implications for design, with an emphasis on relations between convention and innovation.

FORMAT: Seminar
RESTRICTION: Graduate students - Architecture

ARCH 5216.06: Building Systems Integration for Design Thesis.
This course parallels the MArch Thesis Preparation (ARCH 9607). Each student undertakes a technological study of his/her architectural design thesis through an ecological analysis of the site; a definition of performance criteria; an investigation of relevant building systems; and the design, construction, and testing of a significant material detail.

FORMAT: Lecture/seminar
PREREQUISITE: Completion of Year 5 MArch
RESTRICTION: MArch students

ARCH 5217.03: Innovation in Computers and Building.
This course surveys and undertakes research in computer-based architectural models and computer-assisted manufacture, logistics, and construction. After an initial survey of the state of the art, students work on a focused design or problem-solving exercise. Where possible, work will contribute to actual building projects, research competitions, and/or publication.

FORMAT: Seminar/studio

ARCH 5218.03: Site and Material Processes.
This course includes extensive field studies in Nova Scotia and the southeast United States. It introduces principles and practices of site dynamics such as ecology, and extends student understanding of building materials, manufacture, and innovative construction processes.

FORMAT: Seminar/studio
RESTRICTION: Graduate students - Architecture

ARCH 5219.03: Technology of Heritage Conservation.
This course studies issues of building technology in heritage conservation. Based on the Standards and Guidelines for the Heritage Conservation of Historic Places in Canada (2010), it considers building technology issues germane to different conservation interventions (preservation, restoration, and rehabilitation), the appropriate use of materials and details, and the integration of building systems technology.

FORMAT: Seminar
RESTRICTION: Graduate students - Architecture

ARCH 5298.03/5299.03: Technology Seminar.
This course focuses on an advanced topic in architectural technology. The topic changes from year to year. It may emphasize materials, environmental strategies, or building details.

FORMAT: Seminar
RESTRICTION: Graduate students - Architecture

ARCH 5308.03/5309.03: Professional Practice (Co-op Work-Term).
A student works in the architectural profession for 1000 hours in no less than 24 weeks and completes a research report or assignment. Work placements must be approved by the School of Architecture. A student may apply to satisfy up to 100 hours through supervised research related to Professional Practice.

FORMAT: Work term
RESTRICTION: MArch students

ARCH 5310.00: Co-op Work Term Continuation.
A student who has already registered for ARCH 5308 and ARCH 5309 may continue the co-op work term for up to three additional terms. While registered in ARCH 5310, a student's university status changes to part-time.

FORMAT: Work term
PREREQUISITE: ARCH 5308.00, ARCH 5309.00
RESTRICTION: MArch students

ARCH 5311.03: Professional Practice.
This course studies principles of professional ethics, partnerships, corporate practices, professional responsibility, and legal aspects of architectural practice. It also considers issues in practice management (contracts, reference documents, finance, costing techniques, and contract administration) with an emphasis on codes.

FORMAT: Lecture/seminar
RESTRICTION: Graduate students - Architecture

ARCH 6001.03: Design Seminar.
This seminar focuses on an advanced topic in architectural design. The topic changes from year to year. It may emphasize urbanism, landscape, building, process, program, or habitation.

FORMAT: Seminar/studio
RESTRICTION: Graduate students - Architecture

ARCH 6002.03: Free Lab.
This course complements normal studio-based learning. It pursues an architectural topic through experimental hands-on work in a group format. Topics change from year to year and may include design-build work, documentaries, landscape installations, community design projects, and interdisciplinary work. Projects may be local or involve travel to a distant site.

FORMAT: Workshop/lab
RESTRICTION: Graduate students - Architecture

ARCH 6121.03: Architecture and Archaeoastronomy.
This course studies the significance of the night sky to various ancient and non-Western cultures, including the Egyptian, Celtic, Mesoamerican, Anasazi, and First Nations. It examines how celestial features and motions guided the design of buildings and influenced cultural practices, including the measurement of time.

FORMAT: Lecture/seminar
RESTRICTION: Graduate students - Architecture and Planning or permission of instructor

ARCH 6122.03/6123.03/6124.03/6125.03: Humanities Seminar.
This course focuses on an advanced topic in architectural humanities. The topic changes from year to year. It may emphasize history, theory, criticism, urban studies, or architecture in development.

FORMAT: Seminar
PREREQUISITE: Graduate students - Architecture and Planning or permission of instructor

ARCH 6209.03: Material Investigation.
This course uses a controlled workshop environment to examine characteristics of a material (e.g., wood, ceramic, glass) and methods for forming and finishing. Using principles of material science, it considers the harvesting or processing of raw material, the testing of structural capacity and environmental behaviour, and applications in design.

FORMAT: Workshop/seminar
RESTRICTION: Graduate students - Architecture

ARCH 6210.03: Material Investigation in Wood.
This course uses a controlled workshop environment to examine characteristics of wood and methods for forming and finishing. Using principles of material science, it considers the harvesting or processing of raw material, the testing of structural capacity and environmental behaviour, and applications in design.

FORMAT: Workshop/seminar
RESTRICTION: Graduate students - Architecture

ARCH 6211.03/6212.03/6213.03/6214.03: Technology Seminar.
This course focuses on an advanced topic in architectural technology. The topic changes from year to year. It may emphasize materials, environmental strategies, or building details.

FORMAT: Seminar
RESTRICTION: Graduate students - Architecture

114 School of Architecture
ARCH 6215.03: Earth Construction.
This course studies traditional and contemporary methods of earth construction (soil, rammed earth, wattle and daub, earth bag, and adobe) as sustainable, low-impact building systems. Based on the science of soils, it considers appropriate uses of earth technology in the construction of houses.

FORMAT: Lecture/seminar
RESTRICTION: Graduate students - Architecture and Planning or permission of instructor

ARCH 6216.03: Natural Finishes.
This course examines the use of natural finishes (earth and lime plasters, paint, stone, and wood) for walls, floors, and ceilings in contemporary buildings. Natural, local, and reused materials are assessed in terms of installation cost, durability, aesthetic characteristics, and environmental impact in comparison with industrialized products.

FORMAT: Lecture/seminar
RESTRICTION: Graduate students - Architecture and Planning or permission of instructor

ARCH 6217.03: Product Development in Architecture.
This course explores the design of manufactured building components. Through field trips, factual study, and hands-on lab, students learn the essentials of conventional and emerging production processes. They apply this knowledge to designing and prototyping a component, typically selected in support of an outside research project or a thesis.

FORMAT: Seminar
RESTRICTION: Graduate students - Architecture and Planning or permission of instructor

ARCH 6304.03: Entrepreneurship.
Successful entrepreneurship requires an ability to identify opportunities, skill to calculate risks, and the knowledge and determination to promote, develop, and implement a project. This course uses a case study approach to examine entrepreneurship in the public, private, and non-profit sectors and to assess potential applications to architectural practice.

FORMAT: Seminar
RESTRICTION: Graduate students - Architecture and Planning or permission of instructor

ARCH 6305.03: Permission to Build.
Obtaining a building permit is only the last hurdle to clear before a potential architectural project can be realized. This course examines the entire process, including the various authorities, agencies, and groups that are involved, along with municipal planning regulations, building codes, material specifications, and public presentations.

FORMAT: Lecture/seminar
RESTRICTION: Graduate students - Architecture and Planning or permission of instructor

ARCH 6306.03: Professional Practice Seminar.
This course focuses on an advanced topic in architectural professional practice. The topic changes from year to year.

FORMAT: Seminar
RESTRICTION: Graduate students - Architecture and Planning or permission of instructor

ARCH 6501.03: Graphic Design in Architecture.
This course applies principles of information design and typography to architectural presentation. Using digital media, it experiments with various graphic design methods to organize text, images, and graphics in a clear, consistent way for particular presentation purposes.

FORMAT: Lecture/seminar
RESTRICTION: Graduate students - Architecture

ARCH 6502.03: Painting in Architecture.
This course examines how some architects have used painting in design development. Through studio work, students also consider how certain modes of painting may be integral into the design process for their concurrent architectural studio project. Previous experience in any paint medium (e.g., watercolor, gouache, acrylic, oil) is required.

FORMAT: Lecture/seminar
RESTRICTION: Graduate students - Architecture

ARCH 6503.03: Photography in Architecture.
This course examines the role of photography in architectural representation. It also considers how digital photography and computer technology can generate various forms of montage for analyzing and developing architectural designs.

FORMAT: Seminar/studio
RESTRICTION: Graduate students - Architecture

ARCH 6504.03: Montage in Architecture.
This course examines the history, concepts, and uses of montage in architectural representation. It also examines other digital and analog presentations of architecture that may include text, graphics, photographs, sound, voice, animation, and/or video. It also considers how architectural designs can be developed using multimedia. These topics may apply to projects in urban planning.

FORMAT: Seminar
RESTRICTION: Graduate students - Architecture and Planning or permission of instructor

ARCH 6505.03: Multimedia in Architecture.
This course examines the use of various technologies to visualize, develop, and display multimedia presentations of architecture that may include text, graphics, photographs, sound, voice, animation, and/or video. It also considers how architectural designs can be developed using multimedia. These topics may apply to projects in urban planning.

FORMAT: Seminar
RESTRICTION: Graduate students - Architecture

ARCH 6506.03: Spatial Constructions in Digital Video.
This course examines how digital audio and video can represent physical and spatial qualities of existing architectural, urban, or rural conditions. It emphasizes the use of the video camera and digital software for recording, imaging, and editing.

FORMAT: Seminar
RESTRICTION: Graduate students - Architecture and Planning or permission of instructor

ARCH 6507.03: Language as Representation.
This course examines the role of language and visual perception in architecture. It considers architectural description and criticism according to linguistic or structural models such as the theory of language games, classical rhetoric, or religious mythology.

FORMAT: Lecture
RESTRICTION: Graduate students - Architecture

ARCH 6508.03: Alternatives to Perspective.
This course examines the limitations of linear perspective as a definitive method for representing objects and spaces. It analyzes Renaissance premises of perspective and considers alternative systems that might be applied in contemporary architectural representation.

FORMAT: Seminar
RESTRICTION: Graduate students - Architecture

ARCH 6509.03: Digital Form.
This course examines the influence of emerging representational technologies on the making of architectural form. By analyzing how the design process is affected by working only in a digital environment, students learn about the limitations and possibilities of digital form.

FORMAT: Lecture/studio
PREREQUISITE: ARCH 6501.03
RESTRICTION: Graduate students - Architecture

ARCH 6510.03: Architectural Documentation and Analysis.
This course investigates techniques for documenting and analyzing existing architectural or urban conditions. Various modes of representation (drawing, model, video, and photography) are used to interpret the complex experience of physical form.

FORMAT: Lecture/seminar
RESTRICTION: Graduate students - Architecture
ARCH 6512.03: Developments in Architectural Representation.
This course studies historical developments in the graphic language of architecture and its various modes of representation. By examining works by selected architects, students consider relationships between what is drawn and what is built.

FORMAT: Lecture/studio
RESTRICTION: Graduate students - Architecture

ARCH 6513.03: Representation Seminar.
This course focuses on an advanced topic in architectural representation. The topic changes from year to year. It may emphasize medium, relation to design, or history and theory.

FORMAT: Seminar/studio
RESTRICTION: Graduate students - Architecture
RESTRICTION: MEDS students.

ARCH 9007.06: MArch Thesis Preparation.
Within a seminar group, each student formulates a thesis question and explores it through design, analytical, and interpretive studies. The student is expected to develop and demonstrate expertise in the subject area. ARCH 9007 and ARCH 9008 must be completed in consecutive terms.

FORMAT: Seminar/studio
PREREQUISITE: Completion of Year 5 MArch
RESTRICTION: MArch students

ARCH 9008.06: MArch Thesis.
Each student proposes, develops, and completes an architectural design project that investigates the thesis question. The thesis concludes with a graphic/model presentation, an oral examination, and a formal thesis document that is submitted to the university. The entire thesis requires a minimum of two consecutive terms of residence.

FORMAT: Studio
PREREQUISITE: ARCH 9007
RESTRICTION: MArch students

ARCH 9009.00: MArch Thesis Continuation.
This continuation of ARCH 9008: MArch Thesis is for students who have not completed the thesis in the minimum two terms. The maximum duration of a thesis is five terms (including ARCH 9007).

FORMAT: Studio
PREREQUISITE: ARCH 9008
RESTRICTION: MArch students

Telephone: (902) 494-3260
Fax: (902) 423-6672

Professors
Grant, J., BA (UWO), MA (McMaster), MA, PhD (Waterloo), FCIP, LPP
Palermo, F., BArch (Toronto), MArch (Harvard), MArchED (Harvard), FCIP, LPP, FRAIC

Associate Professors
Manuel, P., BA (Carleton), MSc (McGill), PhD (Dalhousie), MCIP, LPP

Assistant Professor
Hübner, M. A., BURP, MURP (Bangladesh), MASc, PhD (Toronto)

Adjunct Faculty
Alam, M. (Uppsala), BSc (Swedish University of Agricultural Sciences)
Budy, P., BArch (Dundee), MArch (TUN)
Epstein, H., BA (Carleton), LLB (Dalhousie)
Ruppin, A., BSc (Toronto), MSc (Dalhousie)
Whitcomb, C., BArch (Dalhousie), MA (Waterloo)

Cross-Appointed Faculty
Beatty, K., Resource and Environmental Studies
Beaulé, J., Major appointment as Map and Geospatial Information Librarian, Killam Library
Rainham, D., Environmental Science
Wealthy, T., Environmental Programs

I. Community Design

Community design studies the design, patterns, processes, and issues in human and natural communities. It explores the world as a system of interconnected and embedded communities linked by cultural and natural processes. Courses examine interventions by which people can work towards creating and maintaining healthy and sustainable communities.

The study of community design at Dalhousie is distinguished by:

• an emphasis on design. The School recognizes the importance of visual and spatial information and analysis, and introduces design as a method of learning, analyzing, and addressing problems. Design is comprehensive, integrative, context-sensitive, and synthetic.

• a focus on reasoned, creative, and practical outcomes. Courses will attract students eager to make changes in the world they inhabit. They will develop the knowledge and skills to allow them to analyze community issues, and to propose and implement appropriate courses of action to achieve desired outcomes.

The School of Planning offers undergraduate education in community design. Various programs are possible: the Bachelor of Community Design (BCD) is a three year program, a Double Major in Community Design and Sustainability is a four year program. Students with high academic standing may apply for the Bachelor of Community Design (Honours) program, with a Major in either Environmental Planning or Urban Design Studies (four year program). The BCD Honours program is a first professional degree recognized by the Canadian Institute of Planners. Students
considering the BCD Honours program (either Environmental Planning or Urban Design Studies Major) have the option of doing a Minor in Environmental Studies, a Minor in Geography or a Double Major with Sustainability.

The Bachelor of Community Design is a three-year general program for students interested in understanding how communities work and the principles that planners and other design professionals use in creating communities. Students with a strong commitment to sustainability may take the four-year Double Major in Community Design and Sustainability. Students who meet the requirements for admission to the Honours program take specialized fourth-year courses in either Environmental Planning or Urban Design Studies.

Students wishing to enter the program must have completed grade 12 with a 70% or greater average in five grade 12 subjects including English, Math, and one Science (Biology or Geology are recommended). Grade 12 Geography is recommended, and a background in art or design is an asset. Students who have successfully completed a full year of university or college-level studies may apply to transfer to the Bachelor of Community Design and may be considered for advanced standing. (Those admitted to transfer students should consult the Undergraduate Coordinator in Planning for advice on course selection.)

All students admitted to the BCD must meet the Dalhousie requirement for a full course or equivalent in courses with a significant writing requirement, usually completed in the first year of university study. Students must complete at least a full course or equivalent in a science subject, and a full course or equivalent in an arts, humanistic, or social sciences subject to graduate.

Students must complete at least 42 credit hours (seven full course equivalents) at the 2000 level or higher for the three year (90 credit hour) degree, or at least 72 credit hours (12 full course equivalents) at the 2000 level or above for a four year degree (120 credit hours).

**Bachelor of Community Design (three year program)**

The Bachelor of Community Design normally takes three years of full time study. It includes 15 full course equivalents, or 90 credit hours of course work. Core required courses for the program include PLAN 1001.03, 1002.03, 2001.03, 2002.03, 2003.03, 2006.03, 3001.03, 3002.03, 3003.03, 3006.03, 3025.03. In year one students take PLAN 1001.03, PLAN 1002.03, and GEOG/ERTH 1030.03. They also select either ARCH 1000.06 or ENVS 1000.06 or SUST 1001.06 (although they may take two). Students must complete six credit hours of an approved English writing requirement course (see below), six credit hours of science courses and six credit hours of courses from the humanities or social science disciplines.

Students will select six credit hours in one subject from the following courses approved by the Bachelor Community Design English writing requirement. Other writing requirement courses may be considered by the School of Planning on an individual basis:

- CLAS 1010X.Y6, CLAS 1030X/Y6, ENGL 1000X/Y6, ENGL 1101.03, ENGL 1020.03, ENGL 1040.03, ENGL 1100.03, ENGL 2100.03, ENGL 2110.03, HIST 1000.08, HIST 1400.03, HIST 1401.03, HIST 1402.03, HIST 1403.03, JOUR 1000X/Y6, POLI 1000X/Y6, PHIL 1010X/Y6, SOIA 1000.06, SUST 1000.06, THIA 1000X/Y6, TIDEA 1300X/Y6.

Program requirements are as follows:

**Year 1**

- PLAN 1001.03: Introduction to Community Design
- PLAN 1002.03: Introduction to Community Design 2
- GEOG/ERTH 1030.03: Physical Geography
- Select from among: ARCH 1000.06 or ENVS 1000.06 or SUST 1001.06
- Plus 2.5 more full courses (15 credit hours), normally including the six credit hours English writing requirement

The School of Planning recommends that students also consider taking at least one of ETHS 1000.03 or 2000.03, or GEOG 1030.03 in their first year.

**Year 2**

- PLAN 2001.03: Landscape Analysis
- PLAN 2002.03: Community Design Methods
- PLAN 2003.03: Community Design Content
- PLAN 2006.03: Space, Place and GIS
- Select one course (three credit hours) from among: core electives list (see below)
- Plus 15 more credit hours - electives of student’s choice

**Year 3**

- PLAN 3001.03: Landscape Ecology
- PLAN 3002.03: Reading the City
- PLAN 3005.03: Cities and the Environment in History
- PLAN 3006.03: Reading the Landscape
- PLAN 3025.03: Representation in Design
- Select three credit hours from among: core electives list
- Plus 15 more credit hours - electives of student’s choice

**Bachelor of Community Design, Double Major in Community Design and Sustainability (four year program)**

For complete details about the College of Sustainability see page 44. The Double Major in Community Design and Sustainability normally requires four years of full time study (120 credit hours). It includes 20 full course equivalents, or 120 credit hours of course work. Core courses required for the Community Design portion of the program include PLAN 1001.03, 1002.03, 2001.03, 2002.03, 2003.03, 2006.03, 3001.03, 3002.03, 3003.03, 3006.03, 3025.03, and GEOG 1030.03. Students also select 15 credit hours from the BCD core electives list.

Core courses required for the Sustainability portion of the program include SUST 1000.06, 1001.06, 2000.06, 2001.06, 3000.03, 3002.03, 3003.03, 4000.06. Students NOT enrolling in the BCD Honours program must also complete SUST 2002.03, SUST 4000.06 and one full credit (six credit hours) from the list of ESS electives.

Program requirements are as follows:

**Year 1**

- PLAN 1001.03: Introduction to Community Design 1
- PLAN 1002.03: Introduction to Community Design 2
- ERTH/GEOG 1030.03: Physical Geography
- SUST 1000.06: Introduction to Environment, Sustainability and Society 1
- PLAN 1006.03: Introduction to Environment, Sustainability and Society 2
- Plus 1.5 credits or nine credit hours of electives

**Year 2**

- PLAN 2001.03: Landscape Analysis
- PLAN 2002.03: Community Design Methods
- PLAN 2005.03: Community Design Content
- PLAN 2006.03: Space, Place and GIS
- SUST 2006.06: Humanity in the Natural World: An Introduction to Problem-based Learning
- SUST 2001.06: Environment, Sustainability and Governance: A Global Perspective
- Plus six credit hours of electives

**Year 3**

- PLAN 3001.03: Landscape Ecology
- PLAN 3002.03: Reading the City
- PLAN 3005.03: Cities and the Environment in History
- PLAN 3006.03: Reading the Landscape
- PLAN 3025.03: Representation in Design
- SUST 3002.03: Global Approaches to Environmental Decision Making
- SUST 3502.03: The Campus as a Living Laboratory
- Select three credit hours from among: BCD core elective list
- Plus six more credit hours - electives of student’s choice or if Honours, from list of approved ESS electives

**Year 4**

- SUST 4000.06: Environment, Sustainability and Society: Capstone (not Honours)
- SUST 3002.03: Environment and Sustainability Internship (not Honours)
- Select six credit hours from BCD core electives list (above the 2000 level)
- Plus 15 credit hours (2.5 credits) in electives of student’s choice
Bachelor of Community Design (Honours) (four year program)

The Bachelor of Community Design (Honours) normally takes four years of full-time study. Students complete the requirements for the general community design program and then complete a fourth year of specialized study. The program requires 20 full course equivalents, or 120 credit hours of course work.

The Honours programs provide opportunities for students who do well in their studies to deepen their understanding through additional course work, an internship work placement, and community-based research projects. Students participate in community design studios where learning involves working on community-centred projects. Thus, students gain practical experience to bring to bear on their academic studies. The BCD Honours is a first professional degree in planning recognized by the Canadian Institute of Planners.

Eligible students need to meet the following conditions:

- They completed the BCD not more than 10 years prior to application for study to complete the requirements for the Honours degree.
- They completed the three-year BCD with a cumulative GPA of 3.0 or greater and a calculated GPA of 3.0 or higher for mandatory Community Design courses and core electives.

Requirements for Graduation with Honours

- Students who complete the three-year BCD and graduated with the Honours degree require the following:
  - 3.0 or higher cumulative GPA, and
  - 3.0 or higher GPA calculated for mandatory planning and core elective courses completed at the time of application to the Honours program. (Where students have completed more than nine credit hours of core electives, the highest grades for the nine credit hours will be used in the calculation).

Once in the Honours program, students must maintain both a cumulative GPA of 3.0 or higher and a GPA of 3.0 or higher for mandatory Planning courses and core electives. If a student fails below either of these minimum standards, the student cannot continue in the Honours program. A student may apply for re-entry to the Honours program once the minimum standard is restored.

Students have a choice of major within the Honours program. During the Honours year, students require 30 credit hours, as follows:

Year 4 of Honours Major in Urban Design and Planning

- PLAN 4050.03: Thesis Proposal
- PLAN 4100.03: Community Design Internship
- PLAN 4500.06: Thesis Project
- six credit hours from core electives list B (Urban Design Studies) or list C (electives for either major) at 2000 level or above

Year 4 of Honours Major in Environmental Planning

- PLAN 4000.06: Environmental Planning Studies
- PLAN 4050.03: Thesis Proposal
- PLAN 3903.03: Application of Planning Law
- PLAN 4000.06: Thesis Project
- six credit hours from core electives list A (Environmental Planning) and six credit hours from core electives list A or list C (electives for either major) at 2000 level or above

Requirements for Graduation with Honours

In order to graduate with the Honours Major distinction in the BCD the student will have completed the course requirements identified above and will have a cumulative GPA of 3.0 or higher and a calculated GPA of 3.0 or higher for required Community Design courses and core electives.

BCD Honours Conversion

Students who complete the three-year BCD program and graduated with the degree may apply to convert their degree to Honours with an additional year of study to complete the requirements for the Honours degree.

Eligible students need to meet the following conditions:

- They completed the three-year BCD with a cumulative GPA of 3.0 or greater and a calculated GPA of 3.0 or higher for mandatory Community Design courses and core electives;
- They completed the BCD not more than 10 years prior to application for Honours Conversion.

Requirements for graduation

The Honours Conversion program normally involves one year of full-time study while the student completes the requirements for the Honours Major. Thirty (30) credit hours of required courses must be completed. Students must maintain a cumulative average of not less than 3.0 and a GPA of not less than 3.0 calculated for mandatory Community Design courses and core electives in the Honours program.

Conversion Year requirements for the Honours Major in Environmental Planning

- PLAN 4001.06: Environmental planning studio
- PLAN 4101.03: Community design internship
- PLAN 4051.03: Thesis proposal
- PLAN 4501.06: Thesis project
- PLAN 3015.03: Application of planning law
- six credit hours from core electives list A (Environmental Planning) and six credit hours from core electives list A or list C (electives for either major) at 2000 level or above

Conversion Year requirements for the Honours Major in Urban Design and Planning

- PLAN 4002.06: Urban design studio
- PLAN 4102.03: Community design internship
- PLAN 4101.03: History and theory of urban design
- PLAN 4052.03: Thesis proposal
- PLAN 4502.06: Thesis project
- PLAN 3015.03: Application of planning law
- six credit hours from core electives list B (Urban Design Studies) or list C (electives for either major) at 2000 level or above

Students who may have completed any required courses from the honours year as part of the 90 credit hours of the general BCD program will select alternative core elective credits from the lists to make up the credit hours to a total of 30.

Bachelor of Community Design (Honours) with a Minor in Environmental Studies

The Minor in Environmental Studies is a five credit (30 credit hour) Minor taken in conjunction with the Bachelor of Community Design Honours (it is not available within the three-year BCD program). The Minor in Environmental Studies provides students with an appreciation of the scientific, cultural, economic, historic, legal and social aspects of environmental issues. The student will have the opportunity to earn an additional credential on the degree to recognize the special concentration of courses in environmental studies. Approval for the program is required from the School of Planning and from the Coordinator of Environmental Programs. Students complete all requirements for their Honours Major in addition to those required courses for the Minor. Students may count the course ENV 1000 towards both the BCD requirements and towards the requirement for the Minor. Other courses cannot be counted towards both sets of requirements.

Required Courses

To earn the minor, students complete:

- ENV 1000: Introduction to Environmental Studies (or DSPH)
- PHIL 2401.03: Environmental Ethics
- ENV 3221.03: Environmental Law
- ENV 3501.03: Environmental Problem Solving I
- ENV 3502.03: Environmental Problem Solving II

Elective requirements

Two full credits (12 credit hours) of courses from the following list:

- BIOL 2691.03: Introduction to Marine Life of Nova Scotia
- BIOL 3611.03: Marine Conservation
- CHEM 2401.03: Environmental Chemistry I
- CHEM 4401.03: Environmental Chemistry II
- ECON 2218.03: Economics of Global Warming
- ECON 2338.03: Regional Development
- ECON 3332.03: Resource Economics
- ECON 4503.03: Environmental Economics
- ENV 3001.03: Environmental Science Internship
- ENV 3220.03: Introduction to Environmental Law
- ENV 3226.03: Economic Botany, Plants and Civilization
- ENV 3301.03: Contaminant Site Management
- ENV 3302.03: Enterprise Sustainability

118 School of Planning
among courses at the 2000 level or above in the categories “Urban design studies” (B) or “Electives for either option” (C).

In their Honours year, students earning the Bachelor of Community Design Honours, Double Major in Environmental Planning and Sustainability, must select “core electives” from among courses at the 2000 level or above in the categories “Environmental planning” (A) or “Electives for either option” (C).

In their Honours year, students earning the Bachelor of Community Design Honours, Double Major in Community Design (Urban Design and Planning) and Sustainability, must select “core electives” from among courses at the 2000 level or above in the categories “Urban design studies” (B) or “Electives for either option” (C).

Note: Students must check to ensure they meet the prerequisites for any courses they select. In some cases, courses may be full or unavailable. Some courses may require the instructor’s or department’s consent. Not all courses are offered every year.

Environmental planning option core electives (List A)

- ENV 1004.03: Introduction to Environmental Studies
- ENV 2201.03: Environmental Law
- ENV 3213.03: Administrative Law for Environmental Scientists
- ENV 3300.03: Contaminated Site Management
- ENV 3400.03: Environmental and Ecosystem Health
- ENV 3510.03: Environmental Problem Solving 1
- ENV 3520.03: Environmental Problem Solving 2
- ENV 4010.03: Environmental Impact Assessment
- BIOL 3010.03: Principles of Biology Part I
- BIOL 3011.03: Principles of Biology Part II
- BIOL 3024.03: Introductory Biology - DE
- BIOL 3025.03: Introductory Biology - DE
- OCEA/GEOG/PTHC 2800.03: Climate Change
- BIOL 2601.03: Introduction to Ecology
- BIOL 2602.03: The Flora of Nova Scotia
- BIOL 3601.03: Communities and Ecosystems
- BIOL 3601.03: Nature Conservation
- BIOL 3623.03: Applied Coastal Ecology
- BIOL 3624.03: Urban Freshwater Systems
- ERTH 1090.03: Geology I
- ERTH 1090.03: Geology II
- ERTH 2410.03: Environmental and Resource Geology
- ERTH/GEOG 3440.03: Geomorphology
- PHIL 2460.03: Environmental Ethics
- HIST 1002.03: Introduction to European History
- HIST 1501.03: Comparative Global History
- HIST 1502.03: Origins of Modern Global Society
- HIST 2006.03: The Atlantic World 1450-1600: Colonization
- HIST 2007.03: The Atlantic World 1650-1800: European Empires in the Americas
- HIST 2122.03: Social History of Canada since 1870
- HIST 2221.03: Social History of Canada since 1870
- HIST 2321.03: The Cutting Society? Welfare in Canada since 1900
- ECON 2200.03/2201.03: Intermediate Micro/Macro
- ECON 2218.03: The Canadian Economy in the New Millennium: Economic policy debates for the next decade.
- SLWK 3011.03/3012.03: Perspectives on Social Welfare Policy
- BIOL 2001.03: Social Inequality
- BIOL 3300.03: Introducing to Social Problems
- BIOL 3301.03: Social Problems and Social Policy
- PLAN 4102.03: Urban Economics

Core electives that may count for either Major (List C)

- ARCH 1200.06: Science of the Built Environment
- GEOG 1001.03: Introduction to Human Geography
- HIST/GEOG 3210.03: Canadian Cultural Landscapes

Bachelor of Community Design (Honours, Major) with a Minor in Geography

The Bachelor of Community Design (Honours, Major) requires that the student select a specified number of credit hours from the approved list of electives provided by the Undergraduate Coordinator. The following courses are approved for the Bachelor of Community Design (Honours, Major) with a Minor in Geography.

Program core electives for the Bachelor of Community Design (Honours, Major) with a Minor in Geography

Each program in Community Design requires that the student select a specified number of credit hours from the approved list of core electives. The following courses are approved for the Bachelor of Community Design (Honours, Major) with a Minor in Geography.

In their Honours year, students earning the Bachelor of Community Design Honours, Double Major in Environmental Planning and Sustainability, must select “core electives” from among courses at the 2000 level or above in the categories “Environmental planning” (A) or “Electives for either option” (C).

In their Honours year, students earning the Bachelor of Community Design Honours, Double Major in Community Design (Urban Design and Planning) and Sustainability, must select “core electives” from among courses at the 2000 level or above in the categories “Urban design studies” (B) or “Electives for either option” (C).
II. Courses Offered

Not all courses are offered every term. Please consult the university timetable for current listings.

- POLI 1002.03: Introduction to Community Design 1
- POLI 1003.03: Introduction to Community Design 2
- POLI 2001.03: Community Design Methods
- POLI 2002.03: Community Design Context
- POLI 2005.03: Community Design Process
- POLI 2006.03: Space, Place and GIS
- POLI 2009.03: Sustainable Community Design
- POLI 2012.03: Design Drawing
- POLI 3001.03: Landscape Ecology
- POLI 3002.03: Cities and the Environment in History
- POLI 3003.03: Urban Ecology
- POLI 3004.03: Site Infrastructure
- POLI 3005.03: Land Development Economics
- POLI 3006.03: Urban Economics
- POLI 3007.03: Regional Planning
- POLI 3008.03: History and Theory of Landscape Architecture
- POLI 3009.03: Housing Theory
- POLI 4020.03: Independent Study
- ARCH and PLAN (any course for which the School and the course instructor
  have given permission for the BID student to enroll)
- PLAN 1001.03: Introduction to Community Design 1
  - This course introduces community design by exploring the characteristics of
    human and natural communities, the connections between them, and the types of
    interventions designers and planners can make to help people create good living
    environments. Community design involves applying scientific and creative
    approaches to helping communities accommodate human needs while respecting
    the environment.
  - FORMAT: Lecture 3 hours (plus tutorial)

- PLAN 1002.03: Introduction to Community Design 2
  - This course builds on the lessons from Introduction to Community Design 1 by
    exploring how designers affect the form, structure, and character of human
    settlements. It examines principles of design, and helps students understand
    the processes and techniques for documenting, testing, and communicating
    ideas. Students will work on a community design project.
  - PREREQUISITE: PLAN 1001.03
  - FORMAT: Lecture 3 hours (plus tutorial)
  - PREREQUISITE: PLAN 1001.03

- PLAN 2001.03: Landscape Analysis
  - Designers and planners need to understand the influence of physical, biological,
    and cultural systems on landscape evolution, and the relevance of that information
    in analyzing land capability. Students develop inventory and analysis tools for
    understanding environmental processes and their implications for design and
    planning. There will be field trips and a lab component.
  - FORMAT: Lecture/lab 3 hours (plus tutorial)
  - PREREQUISITE: Concurrent GEOG/ERTH/SCIE 3600.03

- PLAN 2002.03: Community Design Methods
  - This course explores the design theory, processes, principles, and methods
    that inform community design. Students will develop design literacy and skills,
    and engage in problem-solving exercises and projects.
  - PREREQUISITE: Concurrent GEOG/ERTH/SCIE 3600.03
  - FORMAT: Lecture 3 hours

- PLAN 2005.03: Community Design Context
  - Our communities are shaped by a wide range of factors as varied as the way we
    organize power within our government system, the significance of the profit
    motive in our economy, and our cultural desire to separate work and home. This
    course considers various governance, economic, social, demographic, and service
    issues that influence the shape and regulation of communities and landscapes in
    the contemporary context. It examines a range of scales, from international
    through national, provincial and local.
  - FORMAT: Lecture seminar 3 hours
  - PREREQUISITE: PLAN 1001.03 or concurrent

- PLAN 3005.03: Topics in Community Design
- PLAN 3015.03: Computers in Community Design and Planning
- PLAN 3225.03: Plants in the Human Landscape
- PLAN 4001.03: Environmental Planning Studio
- PLAN 4002.03: Urban Design Studio
- PLAN 4101.03: History and Theory of Urban Design
- PLAN 4102.03: Urban Economics
- PLAN 4103.03: Land Development Economics
- PLAN 4105.03: Transportation Planning
- PLAN 4107.03: Regional Planning
- PLAN 4111.03: Housing Theory
- PLAN 4110.03: Topics in Planning
- PLAN 4002.03: Community Design Internship
- PLAN 3002.03: Community Design Methods
- PLAN 3005.03: Computers in Community Design and Planning
- PLAN 3225.03: Plants in the Human Landscape
- PLAN 4001.03: Environmental Planning Studio

- PLAN 4002.03: Urban Design Studio
- PLAN 4101.03: History and Theory of Urban Design
- PLAN 4102.03: Urban Economics
- PLAN 4103.03: Land Development Economics
- PLAN 4105.03: Transportation Planning
- PLAN 4107.03: Regional Planning
- PLAN 4111.03: Housing Theory
- PLAN 4110.03: Topics in Planning
- PLAN 4200.03: Independent Study

III. Course Descriptions

Not all courses are offered every term. Please consult the university timetable for
the current listings. Instructors may change.
PLAN 2006.03: Space, Place and Geographic Information Systems.

Planners use Geographical Information Systems (GIS) for data collection, coordination, and analysis. Properly interpreted, GIS data contribute to informed decision-making. This course explores the application of GIS in planning within a project-centric setting. Students learn to use GIS to address land use and site planning issues. The course also considers mapping standards used within the field of planning, and examines legal, privacy, and ethical implications of using GIS data in the public realm.

FORMAT: Lecture/lab 3 hours
PREREQUISITE: PLAN/GEOG 2001
CROSS-LISTING: GEOG 2006.03
EXCLUSION: PLAN 2015.03

PLAN 2010.03: Sustainable Community Design.

Through case studies and collaborative design projects, this course explores how the form of communities can change in response to new environmental awareness, shifting economic conditions, emerging technologies, and a focus on sustainable local action.

FORMAT: Lecture 3 hours
PREREQUISITE: PLAN 3001.03 and PLAN 1002.03, or SUST 1000.06

PLAN 2025.03: Design Drawing.

This course allows students to enhance their design literacy skills through attention to graphic design, layout, composition, and typography. Students will become familiar with and gain experience in a range of drawing techniques to enhance their skills in design drawing and portfolio presentation.

FORMAT: Lecture/lab 3 hours
PREREQUISITE: PLAN 3001.03 and PLAN 1002.03, or SUST 1000.06

PLAN 3001.03: Landscape Ecology.

Landscapes reflect the interaction of natural and cultural processes. This course introduces the principles of ecology to landscape analysis. It explores relationships between environmental components in the landscape to inform community design and land use planning applications.

FORMAT: Lecture/lab 3 hours
PREREQUISITE: PLAN/GEOG 2001.03, PLAN 2006.03
CROSS-LISTING: GEOG 3001.03

PLAN 3002.03: Reading the City.

Any city reflects the history of its topography, cultural traditions, and design interpretations. This course introduces the principles, theories, and methods of urban form analysis in the local urban context. Students explore the local urban environment to interpret what the city means, and how it comes to take the shape it does.

FORMAT: Lecture/lab 3 hours
CROSS-LISTING: PLAN 5012.03

PLAN 3005.03: Cities and the Environment in History.

The contemporary landscape reflects a long history of human activity on the land and design and planning interventions through time. Civilizations rise and fall, often because of their degradation of the ecosystems that support them. This course examines the relationship of cities with the environment to enhance our understanding of landscape change, urban form and patterns in human settlement through the ages.

FORMAT: Lecture 3 hours
CROSS-LISTING: PLAN 5005.03, GEOG 3003.03

PLAN 3006.03: Reading the Landscape.

Any landscape reflects its natural and cultural history. This course explores principles, theories, and methods of landscape interpretation. These approaches will be applied to community design problems in local landscapes.

FORMAT: Lecture/lab 3 hours
PREREQUISITE: PLAN 3001.03, 3002.03
CROSS-LISTING: GEOG 3006.03

PLAN 3010.03: Urban Ecology.

More than three-quarters of Canadians, and more than half the world's population, live in urban settings. This course treats the urban system as habitat made by and for people, and takes an ecological approach to the flows of energy and materials which sustain urban life possible. Students study their own behavior and surroundings, comparing their observations with data from Canada, North America, and the rest of the world. This leads to discussions about the health and sustainability of urban communities.

FORMAT: Lecture/seminar 3 hours
CROSS-LISTING: PLAN 5010.03

PLAN 3015.03: Site Infrastructure.

The course examines the role of infrastructure in community design and site planning. Students are introduced to principles of grading, access, service provision, and cost estimating. Key exercises allow students to apply theory to practical projects.

FORMAT: Lecture/lab 3 hours
PREREQUISITE: PLAN 2001.03 or permission of the instructor
CROSS-LISTING: PLAN 5015.03

PLAN 3020.03: Landscape Design.

This course introduces principles and methods of site design. It pays special attention to social, natural, and technical components as factors in adapting sites for human use. Practical projects allow students to develop deeper insight into the challenges and opportunities of landscape design.

FORMAT: Lecture/lab 3 hours
PREREQUISITE: At least one of PLAN 2002.03, PLAN 2023.03, or PLAN 2025.03
CROSS-LISTING: PLAN 5020.03

PLAN 3025.03: Representation in Design.

The course explores techniques of representation in community design work. It examines design drawing conventions such as orthographic, perspective, and perspective projections. It helps students develop their awareness of design approaches and their skills in design presentation.

FORMAT: Lecture/lab 3 hours
PREREQUISITE: PLAN 2002.03 or PLAN 2023.03 or ARCH 2025.03
CROSS-LISTING: PLAN 5025.03

PLAN 3031.03: Geology and Land Use Planning - Exploring the Connections.

This lecture and seminar course explores the influence of geology in the evolution of human settlement, geological opportunities and constraints to land and community development, the sources and formats of geophysical information available and useful to planners and community designers and how to access and use the information.

FORMAT: Lecture/seminar/field trip 2 hours weekly plus one full day field trip.
PREREQUISITE: PLAN/GEOG 2001.03 or ERTH 1080.03 and 1090.03 or 10 credits

PLAN 3035.03: Application of Planning Law.

This course explores the application of planning law to the field of community design. The course introduces students to the legal processes and statutory requirements for land use planning in Canada, with particular reference to Nova Scotia.

FORMAT: Lecture/seminar 3 hours
PREREQUISITE: PLAN 2005.03 or permission of instructor

PLAN 3040.03: Reading the Suburbs.

An increasing proportion of Canadians live in the suburbs. This course explores issues related to planning and designing the suburbs, and develops techniques for analyzing and developing community form in the suburban environment.

FORMAT: Lecture 3 hours
PREREQUISITE: PLAN 2005.03
CROSS-LISTING: PLAN 5040.03

PLAN 3045.03: Community Design Practice.

Community-building constitutes an important component of the Canadian economy. This course explores the financial, regulatory, social, and ethical issues of development practice. Using a case study approach, it examines examples of community design projects and initiatives in Canadian communities. Students gain insight into the financing, planning, and building of projects from the perspectives of the development industry.

FORMAT: Lecture 3 hours
PREREQUISITE: PLAN 3001.03 or concurrent

PLAN 3050.03: Topics in Community Design.

This course provides opportunities to examine selected topical issues in community design.

FORMAT: Lecture/seminar 3 hours
PREREQUISITE: (to be announced for each topic)
CROSS-LISTING: PLAN 5050.03
PLAN 3051.03: Topics in Community Design 2. This course provides opportunities to examine selected topical issues in community design. 
FORMA T: Lecture/seminar 3 hours 
CROSS-LISTING: PLAN 3053.03

PLAN 3052.03: Topics in Community Design 3. This course provides opportunities to examine selected topical issues in community design. 
FORMA T: Lecture/seminar 3 hours 
CROSS-LISTING: PLAN 3053.03

PLAN 3053.03: Topics in Community Design 4. This course provides opportunities to examine selected topical issues in community design. 
FORMA T: Lecture/seminar 3 hours 
CROSS-LISTING: PLAN 3053.03

PLAN 3056.03: Computers in Community Design. This course exploits the opportunities for using computers in community design and planning. Topics may include graphic presentation, business applications (e.g., spreadsheets, databases), computer assisted design, and three dimensional rendering as used in community design and planning. 
FORMA T: Lecture/lab 3 hours 
PREREQUISITE: PLAN 2001.03 or permission of instructor 
EXCLUSION: PLAN 3055.03

PLAN 3060.03: Quantitative Methods for Planners. This course introduces students to quantitative methods, including the use of statistics in planning and community design. It familiarizes students with basic statistical analysis used in the field and helps them develop the ability to evaluate and interpret quantitative data presented by experts. 
FORMA T: Lecture/lab 
PREREQUISITE: Grade 12 Math

PLAN 3225.03: Plants in the Human Landscape. The course covers use of plants for human recreation and aesthetics; in gardens, public parks and urban and suburban landscapes. Topics include: garden design, choice of plant materials, management and maintenance, edible landscaping, use of plants for recreation, and plants and human health. Course will involve field trips and group projects. Students will be expected to complete a design project as part of the coursework. 
FORMA T: Lecture/tutorial 
PREREQUISITE: BIOK 1011.03 or BIOK 1021.03 (C- or better) or DISP or PLAN 2001.03 or permission of instructor

PLAN 4001.06: Environmental Planning Studio. This course provides an applied context for analyzing landscape issues and exploring environmental planning options. Students provide a service to the community by working through projects where local community groups or agencies have identified real needs for information and advice. 
FORMA T: Studio 6 hours 
PREREQUISITE: admission to Honours or graduate program

PLAN 4002.06: Urban Design Studio. This course provides an applied project context for looking at issues related to the design of cities, especially their core areas. Students explore various urban design and planning options. Students provide a service to the local community by working through projects where local community groups or agencies have identified real needs for information and advice. 
FORMA T: Studio 6 hours (one term)

PLAN 4050.03: Thesis Proposal. Students in the honours programs in Community Design develop a thesis proposal for their honours thesis. The course will review appropriate research methods and guide the students through background research, literature synthesis, method development and proposal writing. 
NOTE: Students must achieve a B for eligibility for admission from this course into PLAN 4100.03
FORMA T: Lecture/seminar 3 hours 
PREREQUISITE: Admission to Honours programs in BCD

PLAN 4100.03: Community Design Internship. Students locate a company or organization involved in some element of community design or planning and volunteer for eight hours a week in the office. An internship in a relevant workplace allows students to reflect on the knowledge they can bring to practice. Students will keep a work journal, prepare an internship report, and make a brief presentation on the placement at the end of term. Students will meet with the course coordinator for occasional seminars. 
FORMA T: Independent study/seminar 
PREREQUISITE: PLAN 4001.06 or 4002.06 (limited to Honours BCD students)

PLAN 4101.03: History and Theory of Urban Design. This course introduces the history and theory of urban design as a distinct and evolving area of professional knowledge and skill within the spectrum of planning and design concerns and specialties. 
FORMA T: Lecture/seminar 
CROSS-LISTING: PLAN 6101.03
RESTRICTION: Honours or graduate students in the Faculty of Architecture and Planning, or permission of instructor

PLAN 4105.03: Land Development Economics. This course applies basic techniques for analyzing the financial feasibility of land development projects. Case studies focus particular attention on methods of financing and analyzing real-estate development within the planning framework. 
FORMA T: Lecture/seminar 
CROSS-LISTING: PLAN 6105.03
RESTRICTION: Honours or graduate students in the Faculty of Architecture and Planning, or permission of instructor

PLAN 4106.03: Transportation Planning. This course considers transportation trends, the transport needs associated with different activities, and the impact of transport facilities on land development to offer a critical analysis of the interplay between lands uses and transportation. Technology, the costs of supplying transport facilities and the demand outlook for different modes are examined. The emphasis is on urban transportation, mobility demands and the supply of efficient and environmentally sound transport facilities. 
FORMA T: Lecture/seminar 3 hours 
CROSS-LISTING: PLAN 6106.03

PLAN 4108.03: History and Theory of Landscape Architecture. This lecture and seminar course deals with changing landscapes and perceptions of the natural world during the past 250 years. It discusses the effects of technology and resource use on the design of landscapes as small as a private garden and as large as a bio-region, and examines the changing role of landscape architects, their writings and their collaboration with architects. 
FORMA T: Lecture/seminar 
CROSS-LISTING: PLAN 6108.03

PLAN 4120.03: Citizen Engagement and Consultation. This course examines the conceptual foundations and practice of citizen participation, especially in the context of planning and development decisions by municipal and provincial governments. The course explores how the techniques or methods of engagement can be used to more effectively involve individual citizens and stakeholder groups in community decisions. 
FORMA T: Lecture and seminar 
PREREQUISITE: Honours students in the Faculty of Architecture and Planning, or permission of instructor

PLAN 4123.03: Negotiation and Conflict Management. This course explores the world of interpersonal communication, conflict and negotiation and the variety of approaches and range of skills needed to solve problems, reach agreements and maintain relationships. It will enable participants to understand the positive and negative dimensions of conflict, analyze the dynamics of formal and informal negotiations, and interact with others with greater awareness, intention and skill. 
FORMA T: Lecture with experiential exercises 
PREREQUISITE: Honours students in the Faculty of Architecture and Planning, or permission of instructor

CROSS-LISTING: PLAN 6123.03

PLAN 4125.03: History and Theory of Urban Design. This course introduces the history and theory of urban design as a distinct area of professional knowledge and skill within the spectrum of planning and design concerns and specialties. 
FORMA T: Lecture/seminar 
CROSS-LISTING: PLAN 6125.03

PLAN 4126.03: Land Development Economics. This course applies basic techniques for analyzing the financial feasibility of land development projects. Case studies focus particular attention on methods of financing and analyzing real-estate development within the planning framework. 
FORMA T: Lecture/seminar 3 hours 
CROSS-LISTING: PLAN 6126.03

Restricrion: Honours or graduate students in the Faculty of Architecture and Planning, or permission of instructor.
PLAN 4131.03: Planning of Coastal Communities and Regions.
Land use and community planning address coastal protection and land development with planning tools that are integral to coastal zone management. This course explores the theory and application of strategic, spatial and community planning for managing the challenges of environmental change and development pressures in coastal regions and communities. FORMA T: Lecture/seminar/field trip 3 hours weekly plus one full day field trip. PREREQUISITE: PLAN/GEOG 3001.03 or 12.5 credits (75 credit hours) and permission of the instructor

PLAN 4150.03: Topics in Planning.
This course provides opportunities to examine selected topical issues in planning in a seminar discussion. FORMA T: Seminar PREREQUISITE: PLAN 2006.03, or permission of instructor CROSS-LISTING: PLAN 6150.03 RESTRICTION: Restricted to honours or graduate students in the Faculty of Architecture and Planning

PLAN 4151.03: Topics in Planning II.
This course provides opportunities to examine selected topical issues in planning in a seminar discussion. FORMA T: Seminar PREREQUISITE: Restricted to honours or graduate students in the Faculty of Architecture and Planning, or permission of instructor CROSS-LISTING: PLAN 6151.03

PLAN 4152.03: Topics in Planning III.
This course provides opportunities to examine selected topical issues in planning in a seminar discussion. FORMA T: Seminar PREREQUISITE: Restricted to honours or graduate students in the Faculty of Architecture and Planning, or permission of instructor CROSS-LISTING: PLAN 6152.03

PLAN 4153.03: Topics in Planning IV.
This course provides opportunities to examine selected topical issues in planning in a seminar discussion. FORMA T: Seminar PREREQUISITE: Restricted to honours or graduate students in the Faculty of Architecture and Planning, or permission of instructor CROSS-LISTING: PLAN 6153.03

PLAN 4200.03: Independent Study.
A student in the honours major may undertake an independent reading or research project under faculty supervision. The student will prepare a proposal that must be signed by the project supervisor and the Director of the School. The proposal will set out a work plan and projected outcomes. FORMA T: Directed study PREREQUISITE: permission of instructor and School

PLAN 4500.06: Thesis Project.
Honours students in their final semester work on advanced design or research projects related to their Major concentration. Students will be organized into advanced teams working relatively independently on coordinated topics. The course uses a project management model which simulates professional practice. Each student prepares an individual thesis project report and presents it orally. FORMA T: Studio 6 hours PREREQUISITE: PLAN 4001.06 or 4002.06 (limited to students in the Major), and PLAN 4050.03 (with a minimum grade of B)
Introduction

The College of Arts and Science, established in 1988, consists of the Faculty of Arts and Social Sciences and the Faculty of Science. The College of Arts and Science meets to discuss matters of concern common to its units, in particular those relating to academic programs and regulations. The Dean of Arts and Social Sciences and the Dean of Science alternate, year by year, as Provost of the College. The Provost chairs College meetings and prepares the agenda for those meetings. Administrative responsibility for what is decided in College meetings remains in the two Faculties. Undergraduate degrees are offered through fourteen Departments in the Faculty of Arts and Social Sciences, and ten Departments and three programs in the Faculty of Science. There are several interdisciplinary programs of instruction in the College, the responsibility for which is shared among members from different Departments.

The College of Arts and Science is responsible for the curriculum of Bachelor of Arts, Bachelor of Science, and Bachelor of Music degree programs, and for diploma programs in Meteorology and Costume Studies. The College is also responsible for the establishment of academic regulations governing students registered in its programs.

The College of Arts and Science consists of several groups: some 6,100 undergraduate students who typically spend three or four years in the College, nearly 450 full-time teaching and research faculty and staff as well as a number of part-time teachers and teaching assistants, and a support staff of administrative assistants and technicians. The student's academic role is to learn from teachers, from laboratory experience, from books, from other students, and from solitary contemplation. Students learn not only facts but concepts, and what is most important, they learn how to learn.

Through intellectual interaction with other members of the academic community, undergraduate students should gain the background knowledge, the ability and the appetite for independent discovery. Their acquisition of these components of liberal education is marked formally by the award of a Bachelor’s degree. The academic faculty has two equally important roles: to teach the facts, concepts, and methods that the student must learn, and to contribute to the advancement of human knowledge through research and through scholarly or artistic activity.

The goal of the Bachelor’s degree is to produce educated persons with competence in one or more subjects. Such competence includes not only factual knowledge but, more importantly, the ability to think critically, to interpret evidence, to raise significant questions, and to solve problems. A BA or a BSc degree often plays a second role as a prerequisite to a professional program of study.

BA and BSc degree programs in the College are of three types: the four year or 120 credit hour degree with Honours; the four year or 120 credit hour degree with a Major; and the three year or 90 credit hour degree with a minor.

The College is particularly proud of the Honours programs that it offers in most subjects to able and ambitious students. The BA or BSc with Honours is distinguished from the BA or BSc Major (120 credit hours) or the BA or BSc (90 credit hours) in that a higher standard of performance is expected, a greater degree of concentration of credit hours in one or two subjects is required, and at the conclusion of the program each student must receive a grade which is additional to those for the required 120 credit hours. Frequently, Honours students obtain this grade by successfully completing an original research project under the supervision of a faculty member. Completion of a BA or BSc with Honours is an excellent preparation for graduate study at major universities throughout the world. Dalhousie is distinguished among Canadian universities in offering BA programs with Honours in most subjects in which it also provides BSc Honours programs and in providing BA and BSc degree programs with Combined Honours in an Arts and a Science subject.
College of Arts and Science Degree Requirements

Following is a list of the faculty requirements needed to satisfy degree programs in the College of Arts and Science. Details of these requirements can be found on the pages following these lists. Departmental requirements can be found in the appropriate department/faculty listing in this calendar. Please note that students must satisfy both department and faculty requirements. Before registering for the second year, each student in the College of Arts and Science must declare a subject of concentration and obtain program advice from a faculty advisor in the appropriate department.

Requirements for degree programs other than College of Arts and Science can be found in the appropriate department/school/college/faculty listing.

1. General

The following information applies generally to all of the programs offered within the College of Arts and Science.

A. Subject Groupings

The various subjects in which instruction is offered are placed in one or more of the groups below. In the BA degree, each program must include six credit hours in subjects chosen from each of the three subject groups (1, 2, and 3 below), normally within the first 60 credit hours of any BA degree. In the BSc degree, each program must include six credit hours in subjects chosen from each of two subject groups (1 and 2).

1. Languages and Humanities

Arabic, Canadian studies, Chinese (Mandarin), classics, comparative religion, contemporary studies, creative writing, early modern studies, English, European studies, French, gender and women’s studies, German, Greek, history, history of science and technology, Italian studies, King’s Foundation Year, Latin, music, philosophy, religious studies, Russian, Spanish, theatre and the course “First Year Seminar: Arts and Social Sciences” (ASSC 1200.03).

2. Social Sciences

Anthropology, biochemistry, biology, chemistry, computer science, earth sciences, economics, gender and women’s studies, history, history of science and technology, international development studies, King’s Foundation Year, political science, psychology, sociology and social anthropology, and sustainability (for BA only).

3. Life Sciences and Physical Sciences

Botany and molecular biology, biology, chemistry, computer science, earth sciences, economics, engineering, environmental science, human physiology* (for BA only), informatics, marine biology, mathematics, microbiology and immunology, neuroscience, oceanography, physics, psychology, science, statistics, and sustainability (for BA only).

* Offered by the Faculty of Medicine. See section E, Electives, for limit on courses from other Faculties.

B. Writing Course

One of the first 30 credit hours chosen should be selected from a list of courses in which written work is considered frequently and in detail. These writing courses are approved by the Writing Across the Curriculum committee and are listed below:

- CLAS 1000X/Y.06, 1010X/Y.06
- CLAS 1000X/Y.06
- Integrated Science Program
- ENGL 1001.03
- Any two of ENGL 1010.03, 1020.03, 1040.03, 1090.03, 1100.03
- GERD 1020X/Y.06, GERD 1060.06
- HIS 1000X/Y.06, HIST 1010X/Y.06, HIST 1030.03, HIST 1060.03
- HISTC 1001.03, 1101.03 (both must be successfully completed in order to satisfy the Writing Requirement)
- JOUR 1010X/Y.06
- King’s Foundation Year
- OCLA 1000X/Y.06
- PHIL 1000X/Y.06
- POLG 1100X/Y.06
- RELS 1000X/Y.06
- RUSH 1020X/Y.06/1070X/Y.03 (both must be successfully completed in order to satisfy the Writing Requirement)
- RUSH 2010.03, 2012X/Y.03 (both must be successfully completed in order to satisfy the Writing Requirement)
- SCE 1111.03 (satisfies the requirement for BSc students only)
- SODE 1000X/Y.06
- SUET 1000.06
- THEA 1000X/Y.06, 1300X/Y.06

* Offered by the School of Journalism. See section E, Electives, for limit on courses from other Faculties.

The Writing Course may also be used to satisfy one of the subject groupings. Courses which satisfy the Writing Requirement are identified by the following symbol and notation in their formal description:

Writing Requirement

C. Mathematics Requirement (Bachelor of Science)

In order to qualify for a BSc degree candidates are required to complete successfully at least six credit hours in mathematics or statistics other than MATH 1001.03, 1002.03, 1003.03, 1101.03, 1200.03, or 1151.03. A course taken to satisfy this requirement cannot also satisfy the requirement of a course from section A, Overview.

Students may also satisfy this requirement by completing the Integrated Science Program year or passing the test which is administered by the Department of Mathematics and Statistics. Such students must nevertheless complete 90 or 120 credit hours in order to graduate.

D. Language Course (Bachelor of Arts)

Students should consider becoming fluent in French. BA students are required to obtain six credit hours from the following language courses:

- ARIC 1020X/Y.06 (Arabic)
- CANV 1000X/Y.06 (Mandarin)
- CLAS 1000X/Y.06 (Greek), 1080X/Y.06 (Latin), 1010X/Y.06 (Hebrew)
- FREN (any course taught in French)
- GERD 1010X/Y.06, 1050X/Y.06, 1090X/Y.06
- ITAL 1010X/Y.06, 1101X/Y.06
- RELS 2600X/CLAS 2600X/03 and RELS 1600X/CLAS 1600X/03 both must be completed
- RUSH 1000X/Y.06, RUSH 1002X/RUSH 1001 (both must be successfully completed in order to satisfy the Language Requirement)
- SPAN 1010X/Y.06

For students with advanced language skills, upper-level language courses may be substituted. Consult the Registrar’s Office if you require further information. A
Degree Requirements

BSc degree. The courses taken to satisfy this requirement cannot also satisfy the requirement of a course from section I.

Students may satisfy this requirement by passing one of the tests administered by the language departments. Such students must nevertheless complete 90 or 120 credit hours in order to graduate. BA students who choose to major in economics, philosophy, political science, psychology or sociology and social anthropology may substitute for a language course at least six credit hours in mathematics or statistics taught by the Department of Mathematics and Statistics, other than MATH 1001.03, 1002.03, 1003.03, 1101.03, 1102.03, or 1111.03, to meet this requirement; or they may meet it by passing the test administered by the Department of Mathematics and Statistics.

A course taken to satisfy this requirement cannot also satisfy the requirement of a course from section II.

E. Electives

Students may choose electives from any of the courses offered by teaching units within the College of Arts and Science, College of Sustainability, and the Faculty of Computer Science. In addition, without prior permission, electives are permitted as follows provided prerequisites are met and the consent of the instructor(s) is obtained when necessary:

Bachelor of Arts
- 12 credit hours from courses offered in other faculties OR
- 12 credit hours from courses offered in other faculties and 12 credit hours in Commerce OR
- 24 credit hours in Commerce

Please note that BA students registered for minors in Business, Law and Society, Health Studies, Community Design, Journalism or other minors approved for students within the College of Arts and Science are permitted to take the courses necessary to satisfy the requirements for the minor. In addition, 12 credit hours from courses offered in other faculties are permitted.

BA/BEng

Students may count as electives a total of 36 engineering credit hours. In addition 12 credit hours from courses offered in other faculties are permitted.

Bachelor of Science
- 12 credit hours from courses offered in other faculties OR
- 12 credit hours from courses offered in other faculties and 12 credit hours in Commerce OR
- 24 credit hours in Commerce OR
- 30 credit hours in Engineering or Food Science courses and 12 credit hours from courses offered in other faculties

Please note that BSc students registered for any approved minor (see pp. 132 - 143) are permitted to take the courses necessary to satisfy the requirements for the minor. In addition, 12 credit hours from courses offered in other faculties are permitted.

BSc/BEng

Students may count as electives a total of 54 engineering credit hours. In addition 12 credit hours from courses offered in other faculties are permitted.

F. Cross-listed Courses

Please note that cross-listed courses will count as one subject only for the purpose of satisfying degree requirements, e.g., ECON 2260.03 cross-listed with MATH 2000.03 may count either as a mathematics course or economics course but not both.

II. Programs

A. BA/BSc (120 Credit Hour) Programs

The 120 credit hour degree is the standard BA or BSc degree. There are a variety of programs within the 120 credit hour degree. Each is designed to develop some level of concentration of knowledge and expertise.

1. Major Programs

A major program focuses a student’s studies, but not to the extent that an honours program does. Unlike the honours degree, the major degree may not be adequate for admission to graduate programs. Students interested in a major program are advised to seek detailed information from the department in which they wish to concentrate their studies.

1.a BA (120 Credit Hour)

- First Year
  - No more than 18 credit hour equivalents of the first 30 credit hours taken may be in a single subject
  - 6 credit hours in a writing course (see page 125)
  - 6 credit hours in one or more language/humanities subjects (see section A1, page 125)
  - 6 credit hours in one or more social science subjects (see A2, page 125)
  - 6 credit hours in one or more life or physical science subjects (see A3, page 125)
- A minimum of 30, maximum of 54 credit hours in the major subject beyond the 1000 level, including 18 credit hours beyond the 2000 level.
- Within the last 90 credit hours, complete 6 credit hours in each of two subjects other than the major.
- Total credit hours required above 1000 level - 72
- Total credit hours required for degree - 120
- Required GPA for graduation - 2.00
- Graduation with distinction - 3.70
- May be combined with minor(s)

Bachelor of Arts major subjects: classics, English, European studies, French, German, gender and women’s studies, history, international development studies, music, philosophy, political science, religious studies, Russian studies, sociology and social anthropology, Spanish, theatre, or any of the BSc major subjects.

1.b BSc (120 Credit Hour)

- an approved writing course (see page 125)
- 6 credit hours in one or more language/humanities subjects (see 1, page 125)
- 6 credit hours in one or more social science subjects (see 2, page 125)
- 6 credit hours in math (see page 125)
- A minimum of 30, maximum of 60 credit hours in the major subject beyond the 1000 level, including 18 credit hours beyond the 2000 level.
- Total credit hours required above 1000 level - 72
- Total credit hours required for degree - 120
- Required GPA for graduation - 2.00
- Graduation with distinction - 3.70
- May be combined with minor(s)

Bachelor of Science major subjects: biochemistry and molecular biology, biology, chemistry, earth sciences, economics, environmental science, marine biology, mathematics, microbiology and immunology, neuroscience, ocean sciences, physics, psychology, or statistics.

1.c BSc Major (120 Credit Hour) Science Co-operative Education

Requirements are as for the major program with the addition of the following:

- A minimum of three 12-credit hour terms

Co-operative Education in Science Programs

The aim of co-op education programs is to enable students to combine their studies with work experience. The programs are thus year-round, including Summer
School, and will normally require from 48 to 52 months for completion. Co-op degree programs conform to the requirements for the major degree.

The following departments currently offer co-op programs: Biochemistry and Molecular Biology, Chemistry, Earth Sciences, Economics, Marine Biology, Mathematics and Statistics, Microbiology and Immunology, and Physics and Atmospheric Science. For details on these programs, consult the calendar entries for the departments and the Cooperative Education in Science section, page 490.

2. Double Major programs

The double major program allows study in two disciplines of equal or comparable interest.

2.a BA Double Major (120 Credit Hour)

- First Year
  - No more than 18 credit hour equivalents of the first 30 credit hours taken may be in a single subject.
  - 6 credit hours in a writing course (see page 125)
  - 6 credit hours in one or more language/humanities subjects (see section A1, page 125)
  - 8 credit hours in one or more social science subjects (see A2, page 125)
  - 6 credit hours in one or more life or physical science subjects (see A3, page 125)
  - 6 credit hours in a single-language subject for (see D, page 125)

- A minimum of 60, maximum of 84 credit hours in the major subject beyond the 1000 level are to be in the two allied subjects, with no more than 48 credit hours and no fewer than 30 credit hours in either, including at least 12 credit hours beyond the 2000 level in each of the two major subjects. The major subject with the most advanced credits appears first on the record.
  - Within the last 90 credit hours, complete six credit hours in a single subject other than the two major subjects.
  - Total credit hours required above 1000 level - 72
  - Total credit hours required for degree - 120
  - Required GPA for graduation - 2.00
  - Graduation with distinction - 3.70
  - May be combined with minor(s)

Bachelor of Arts double major subjects: Choose both subjects from the Bachelor of Arts and Bachelor of Science major subjects, or Computer Science (in a second subject only), or combine one BA major subject with Environment, Sustainability and Society. In addition to the BA major subjects listed in section 1.a, Canadian studies, music, and creative writing are also available as one of the subjects in a double major. European studies is not available in the double major program.

2.b BSc Double Major (120 Credit Hour)

- an approved writing course (see page 125)
  - 6 credit hours in one or more language/humanities subjects (see 1, page 125)
  - 6 credit hours in one or more social science subjects (see 2, page 125)
  - 6 credit hours in math (see page 125)
  - Minimum of 60 and a maximum of 84 credit hours in the two major subjects beyond the 1000 level, with no more than 44 credit hours and no fewer than 30 credit hours in either, including at least 12 credit hours beyond the 2000 level in each of the two major subjects. The major subject with the most advanced credit hours appears first on the record.
  - Total credit hours required above 1000 level - 72
  - Total credit hours required for degree - 120
  - Required GPA for graduation - 2.00
  - Graduation with distinction - 3.70
  - May be combined with minor(s)

BSc double major subjects: Choose both subjects from the Bachelor of Science major subjects listed in 1.b, or combine one of the BSc major subjects with computer science or Environment, Sustainability and Society; or, provided the larger number of major credit hours is in a science subject, one of the BSc major subjects (except European studies) or Canadian studies, creative writing, or Music.

3. Honours Programs

Honours programs require a higher quality of work than is required by the other undergraduate programs of the college (such as the 90 credit hour degree and 120 credit hours major). Able and ambitious students are urged to enter these programs. There are two types of honours programs in the BA (concentrated and combined) and three types in the BSc (concentrated, combined, and multidisciplinary). Applications for admission to honours programs must be made to the departments concerned on forms available in departments, at the Registrar’s Office or online at http://www.ualberta.ca/honours.

Students should apply in their second year. If application is made later, it may be necessary to make up some work not previously taken.

For each individual student the entire honours program, including elective credit hours, is subject to supervision and approval by the department or departments concerned, or in the case of multidisciplinary honours, by an interdisciplinary committee.

NOTE: The last day to apply to an honours program is September 19.

3.a BA Concentrated Honours (120 Credit Hour)

- First Year
  - No more than 18 credit hour equivalents of the first 30 credit hours taken may be in a single subject.
  - 6 credit hours in a writing course (see page 125)
  - 6 credit hours in one or more language/humanities subjects (see section A1, page 125)
  - 6 credit hours in one or more social science subjects (see A2, page 125)
  - 6 credit hours in one or more life or physical science subjects (see A3, page 125)
  - 6 credit hours in a single-language subject for (see D, page 125)

- A minimum of 30, maximum of 54 credit hours in the major subject beyond the 1000 level, including 18 credit hours beyond the 2000 level.
  - Within the last 90 credit hours, complete 6 credit hours in each of two subjects other than the major.
  - Total credit hours required above 1000 level - 72
  - Total credit hours required for degree - 120
  - Required GPA for graduation - 2.00
  - Graduation with distinction - 3.70
  - May be combined with minor(s)

- Honours Qualifying Examination: At the conclusion of an honours program a student’s record must show a grade which is additional to the grades for the courses taken to obtain the required 120 credit hours. This grade may be obtained through a comprehensive examination, the presentation of a research paper (which may be an extension of one of the courses), or such other method as may be determined by the committee or department supervising the student’s program. The method by which this additional grade is obtained is referred to as the Honours Qualifying Examination. Departments may elect to use a pass/fail grading system for this examination. Unless pass/fail grading is employed, the grade must be “B-“ or better for honours, and “A-“ or better for first class honors.
  - Required standing for graduation: Arts and Social Sciences subjects require a GPA of 2.70 (3.70 for first class) on courses in the honours subject.
  - Science subjects (see below) require a GPA of 3.00 (3.70 for first class) in the honours subject.
  - May be combined with minor(s)

Note: If the student has a minor, courses in the honours subject and the minor are included in the GPA.

Bachelor of Arts concentration honours subjects: classics, English, European studies, French, German, history, international development studies, music, philosophy, political science, religious studies, Russian studies, social anthropology, sociology, Spanish, and theatre or any of the BSc honours subjects.

3.b BSc Concentrated Honours (120 Credit Hour)

- an approved writing course (see page 125)
  - 6 credit hours in one or more language/humanities subjects (see 1, page 125)
  - 6 credit hours in one or more social science subjects (see 2, page 125)
  - 6 credit hours in math (see page 125)
  - Minimum of 54 credit hours with a grade of C or better, maximum of 66 credit hours beyond the 1000 level in the honours subject.
  - Total credit hours required for degree - 120
  - Total credit hours required above 1000 level - 72

- Honours Qualifying Examination: At the conclusion of an honours program a student’s record must show a grade which is additional to the grades for the courses taken to obtain the required 120 credit hours. This grade may be obtained through a comprehensive examination, the presentation of a research paper (which may be an extension of one of the courses), or such other method as may be determined by the committee or department supervising the student’s program.

- May be combined with minor(s)
Bachelor of Science combined honours subjects: biochemistry and molecular biology, chemistry, earth sciences, economics, environmental science, marine biology, mathematics, microbiology and immunology, neuroscience, ocean sciences, physics, psychology and statistics.

3.c BSc Combined Honours (120 Credit Hour)

• First Year
  No more than 18 credit hour equivalents of the first 30 credit hours taken may be in a single subject.
  • 6 credit hours in a writing course (see page 125)
  • 6 credit hours in one or more language/humanities subjects (see section A1, page 125)
  • 6 credit hours in one or more social science subjects (see A2, page 125)
  • 6 credit hours in one or more life or physical science subjects (see A3, page 125)
  • 6 credit hours in a single language subject for (see D, page 125)
• Total credit hours required for degree - 120
• Total credit hours required above 1000 level - 72
• Minimum of 66, maximum of 84 credit hours beyond the 1000 level in two allied subjects, not more than 45 credit hours nor fewer than 30 credit hours being in either of them. Grade must be "C" or better, otherwise, course will not count toward degree.

Within the last 90 credit hours, 12 to 24 depending on the number selected in the honours subjects - elective credit hours.

Honours Qualifying Examination: see concentrated honours program above for details.

Required standing for graduation:
Arts and Social Sciences subjects require a GPA of 3.00 (3.70 for First Class) on courses in the honours subjects.
Science subjects (see below) require a GPA of 3.00 (3.70 for First Class) in courses in the honours subjects.

• Required standing for graduation:
  BA Combined Honours (120 Credit Hour)
  • Honours Qualifying Examination: see concentrated honours program above for details.
  • Required standing for graduation:
  GPA of 3.00 (3.70 for First Class) on courses in the honours subjects.
  • May be combined with minor(s)

Bachelor of Science multidisciplinary honours subjects - at least 54 credit hours of the 120 selected must be from the following subjects: biochemistry, biology, chemistry, computer science, earth sciences, economics, environmental science, mathematics, microbiology and immunology, neuroscience, physics, psychology and statistics.

3.f BSc Honours Science Co-op (120 Credit Hour)

Requirements are as for appropriate honours program (described above) with the addition of the following:

• A minimum of three co-op work terms.

3.g Joint Honours: Dalhousie University - Mount Saint Vincent University

Special arrangements exist under which students may be permitted to pursue an honours program jointly at Dalhousie and Mount Saint Vincent universities. Interested applicants should consult the appropriate department of their own university at the beginning of the second year. Prospective joint honours students must be accepted by the honours departments concerned at both institutions. These departments supervise the entire program of study of accepted applicants. Students should be aware that not all courses available for credit at Mount Saint Vincent University can be given credit at Dalhousie and vice versa. In order for students to gain a joint honours degree they must satisfy all requirements of both institutions.

4. College of Sustainability Degree Programs

The College of Sustainability offers a Double Major and Combined Honours program with any subject in the College of Arts and Science. For complete details about the College, its programs, major/honours requirements and courses please see the College of Sustainability section on page 44 of the Calendar.

5. Minor Programs

Minor programs comprise a minimum of 18 and a maximum of 27 credit hours in a defined subject area, above the 1000 level. Students minoring in a Faculty of Science subject may take up to 36 credit hours in the minor subject. Minors can be added to any 120 credit hour BA or BSc degree. If a minor is added to a double major or a combined honours program, students may find that they need to take more than 120 credit hours to complete all of their degree requirements. For BA students, when a minor subject is taken in conjunction with an honours program, grades in the minor subject must be "C" or better. Please note that a course cannot be used to satisfy both the major or honours subject requirement and the minor requirement. Please refer to the list below for minor options.

5.a Minor Options - College of Arts and Science

The following minor options are available to students within the Faculty of Arts and Social Sciences and the Faculty of Science:

• Abrahamic Religions
• American Studies
At least three credit hours must be taken from each of the Judaism, Christianity of 18 credit hours to a maximum of 27 credit hours, chosen from the lists below. Students declaring a Minor in the Abrahamic Religions will complete a minimum Consult specific departmental pages for minor requirements or the list below.

5.b Minor Requirements

Consult specific departmental pages for minor requirements or the list below.

Minor in Abrahamic Religions

Students declaring a Minor in the Abrahamic Religions will complete a minimum of 18 credit hours to a maximum of 27 credit hours, chosen from the lists below. At least three credit hours must be taken from each of the Judaism, Christianity and Islam lists; RELS 3019 and 3382 may each be used to satisfy parts of this requirement.

Judaism courses

• RELS 2001.03: Judaism
• RELS 2220.01: Ancient Israel
• RELS 3018.01: Migrations between Hellenism and the East to Philo the Jew
• ARBC 3090.03: Arabic Philosophical Texts: Maimonides
Or
• RELS 4011.03: Jewish Philosophy: Maimonides
• RELS 4019.03: Philo Judensis

Christianity courses

• RELS 2281.03: Christian Beginnings: The Orthodox and Oriental Churches
• RELS 2282.03: Christian Beginnings: Catholicism
• RELS 3099.03: Christianity in the Lands of Islam
• RELS 3381.03: Medieval Philosophy from Anselm to Augustine
• RELS 3411.01: St. Augustine's Confessions I
• RELS 3412.01: St. Augustine's Confessions II
• RELS 3431.03: St. Augustine's On The Trinity Part I
• RELS 3432.01: St. Augustine's On The Trinity Part II
• CLAS 3841.03: Latin Philosophical Texts: Aquinas Texts
• CLAS 3842.03: Latin Philosophical Texts: Anselm and Bonaventure Texts
• RELS 4070.03: The Confessions in Latin
• CLAS 4400.06: Philosophy of the Church Fathers
• RELS 4014.03: Christian Theology in Islamic Lands: John of Damascus

Islam courses

• RELS 2003.01: Islam
• RELS 2052.01: Cultural Introduction to the Arab World
• ARBC 3040.03: Arabic Philosophical Texts: al-Ghazali
Or
• RELS 4010.03: Islamic Philosophy: al-Ghazali
• RELS 3001.03: Islam and the Others
• RELS 3012.01: Sulaiman
• RELS 2503.03: Classical and Medieval History of Islamic Civilization
• RELS 3380.03: Sultans and State: Polity and Religion in the Islamic Gunpowder Age
• CLAS 5002.03: Classical and Medieval History of the Persianate World

Bridging courses

• RELS 2210.01: Philosophy and God
• RELS 3000.03: Topics in Religious Studies
• RELS 3019.03: Migrations between Hellenism, Judaism, Christianity, and Islam until the Renaissance
• RELS 3382.03: Medieval Philosophy from Arabic and Jewish Thinkers to Aquinas
• RELS 3910.06: Neoplatonism: Plato and Neoplatonism
• RELS 4486.04: Medieval Interpreters of Aristotle
• CLAS 4500.06: Seminar on Neoplatonism

Note: Not all courses are offered each year. Please consult with the timetable for courses offered.

Minor in American Studies

Requirements: 18 credit hours to be selected from the list below. Student minoring in American Studies must take at least three credit hours from each of the three participating departments: ENGL, HIST, POLI. Please note that not all courses are offered each year.

ENGL 2003 American Literature
ENGL 2070 African American Literature
ENGL 3061 American Literature to 1865
ENGL 3062 American Literature 1865 - 1914
ENGL 3070 20th Century American American
ENGL 3220 American Literature of the Earlier Twentieth Century
ENGL 3221 American Literature of the Later Twentieth Century
ENGL 3245 British Literature
ENGL 4017 William Faulkner and Toni Morrison
ENGL 4022 Ellison and Everett
ENGL 4024 Hollywood Fiction
ENGL 4281 Literature and Television
ENGL 4400 Nature and American Culture
Degree Requirements

Minor in Ancient History

Students must take 18 credit hours from the following list, including the listed language courses:

- CLAS 2810.06 Latin Prose
- CLAS 2700.06 Intermediate Greek
- CLAS 2710.06 Greek Prose

Not more than six credit hours ancient language may be counted towards the minor.

Minor in Ancient Philosophy

Students must take 18 credit hours from the following list, including the listed language courses.

The courses are to be chosen from the lists below and must include at least nine credit hours chosen from:

- CLAS 2563.03 Plato and the Case of Socrates: Philosophy on Trial
- CLAS 2564.03 Gods, Beasts and the Political Animal: Plato, Aristotle, and their Legacy
- CLAS 3400.06 The Dialogues of Plato
- CLAS 3500.06 Aristotle

Philosophy courses

- CLAS 2024.03 Philosophy and God
- CLAS 2027.03 Magic, Religion and Philosophy
- CLAS 2563.03 Plato and the Case of Socrates: Philosophy on Trial
- CLAS 2564.03 Gods, Beasts and the Political Animal: Plato, Aristotle, and their Legacy
- CLAS 3016.03 Meetings between Hellenism and the East to Philo the Jew
- CLAS 3017.03 Meetings between Hellenism, Judaism, Christianity, and Islam until the Renaissance
- CLAS 3400.06 The Dialogues of Plato
- CLAS 3411.03 St. Augustine’s Confessions I
- CLAS 3412.03 St. Augustine’s Confessions II
- CLAS 3431.03 St. Augustine’s On the Trinity Part I
- CLAS 3432.03 St. Augustine’s On the Trinity Part II
- CLAS 3500.06 Aristotle
- CLAS 3590.06 The Philosophy of Aristotle
- CLAS 5010.06 Neoplatonism: Plato and Neoplatonism
- CLAS 4000.03 Dogmatism and Prosyntactic Poetry: and Prose in the Construction of Philosophy
- CLAS 4019.03 Plato’s Judgment
- CLAS 4400.06 Philosophy of the Church Fathers
- CLAS 4500.06 Seminar on Neoplatonism
- CLAS 4601.03 Hellenistic Philosophy - Stoics and Epicureans
- CLAS 4602.03 Hellenistic Philosophy - From Scepticism to Neoplatonism

Not more than six credit hours of a language course may be counted towards the minor.

- CLAS 2710.06 Greek Prose
- CLAS 2730.06 Intermediate Greek
- CLAS 2810.06 Latin Prose

Minor in Applied Ethics

Requirements

At least 18 credit hours and no more than 27 credit hours in Philosophy beyond the 1000 level, including at least three credit hours beyond the 2000 level.

Select at least three credit hours from the following:

- PHIL 2110.03 Logic: Deduction
- PHIL 2110.03 Logic: Induction
- PHIL 2110.03 Reasoning Skills
- PHIL 2110.03 How to Win an Argument
- PHIL 2110.03 Logic: Understanding Scientific Reasoning

Select:

- PHIL 2105.03 Ethics
- PHIL 2105.03 Ethics
- PHIL 2105.03 Ethics
- PHIL 2105.03 Ethics

Minor in Celtic Studies

- ENGL 4815 American Gothic
- ENGL 4400 New York in Fiction and Poetry
- ENGL 4456 American Literature of the Great Depression
- ENGL 4609 Myth and Dick in Context
- ENGL 4803 Race and Gender in American Speculative Fiction

HIST 2331 Creation of the American Republic
- HIST 2332 The American Republic, 1840-1900
- HIST 2333 Political Reform in Twentieth Century America
- HIST 2334 Modern American Culture
- HIST 2335 The American Century
- HIST 2340 The Cold War
- HIST 2358 Slavery, Gender and Power: Women in Nineteenth Century America
- HIST 3361 The American Civil War and Reconstruction
- HIST 3362 The Vietnam War
- HIST 3368 America in the 1950's
- HIST 3369 America in the 1960s
- HIST 3370 North American Landscape
- HIST 3372 The Cuban Missile Crisis
- HIST 3375 Springing on the World: The CIA in American History
- HIST 3374 The Objectionary Question in American History
- HIST 3380 Slavery and Freedom in the Americas
- HIST 4360 Slavery and American Political Culture
- HIST 4390 The Homegrown of American Foreign Relations, Post 1945

POLI 2300 Comparative Politics
- POLI 2340 Canadian-American Relations
- POLI 2394 Comparative Federalism
- POLI 3378 USA Constitution, Government and Politics
- POLI 3411 Politics Through Film and Literature
- POLI 3440 The Politics of Fear
- POLI 3522 Comparative Political System Simulation
- POLI 3574 American Foreign Policy
- POLI 4422 Politics of Reason, Passion, Biology
- POLI 4512 The Politics of North America

HIST 2340 The Cold War
- HIST 2336 The American Century
- HIST 2335 The American Century
- HIST 2334 Modern American Culture
- HIST 2333 Political Reform in Twentieth Century America
- HIST 2332 The American Republic, 1840-1900
- HIST 2331 Creation of the American Republic

Note: Not all courses are offered each year. Please consult with the timetable for courses offered.
Minor in Arab Studies

Students must take 18 credit hours from the following list:

- ARAB 2020.06
- ARAB 2030.03 Advanced Arabic I
- ARAB 3031.03 Advanced Arabic II
- ARAB 3400.03 Arabic Philosophical Texts: al-Ghazali or RELS 4010.03
- ARABIC 3500.03 Arabic Philosophical Texts: Maimonides or RELS 4011.03
- ARABIC 3501.03 Jewish Philosophy: Maimonides
- ARABIC 3100.03 Arabic Pro-Islamic Poetry
- CLAS 2201.03 Christian Beginnings: The Oriental and Eastern Churches
- CLAS 2617.03 Meetings between Hellenism, Judaism, Christianity, and Islam until the Renaissance
- CLAS 3021.03 Medieval Philosophy from Arabic and Jewish Thinkers to Aquinas
- RELS 2003.03 Islam
- RELS 3003.03 Islam and the Others
- RELS 3009.03 Christianity in the Lands of Islam
- RELS 3012.03 Judaism
- RELS 4011-03 Christian Theology in Islamic Lands: John of Damascus

Note: Not all courses are offered each year. Please consult with the timetable for offerings.

Minor in Biochemistry and Molecular Biology

A Minor in Biochemistry and Molecular Biology is available to non-Biochemistry students in a 120 credit hour degree program within the College of Arts and Science. The Minor is also available to students in some other Faculties (please consult the appropriate section for your Faculty in the Undergraduate calendar).

Departmental Requirements

- A minimum of 18 credit hours in Biochemistry (BIOC) courses at the 2000 level or higher

Please note that there are prerequisite requirements for entry into upper level Biochemistry (BIOC) courses. Some non-BIOC courses such as BIOL 2021.03, BIOL 2020.03, CHEM 2401.03 and CHEM 2402.03 are required for the Biochemistry and Molecular Biology degree program. These non-BIOC courses cannot be counted as part of the 18 credit hours in BIOC required for a minor.

Minor in Bioethics

Requirements

At least 18 credit hours and no more than 27 credit hours in Philosophy beyond the 1000 level, excluding at least three credit hours beyond the 2000 level.

Select at least three credit hours from the following:

- PHIL 2130.03 Logic: Deduction
- PHIL 2011.03 Reasoning Skills
- PHIL 2090.03 How to Win an Argument
- PHIL 2060.03 Logic: Understanding Scientific Reasoning

Select:

- PHIL 3105.03 Ethics

Select at least nine credit hours from the following:

- PHIL 2001.03 Ethics & Health Care: Patient Care
- PHIL 2010.03 Ethics & Health Care: Social Policy
- PHIL 2720.03 Ethics and the Good Life
- PHIL 4001.03 Topics in Ethics and Health Care

Minor in Business

A Minor in Business is available to students in the Faculty of Science. The Minor is also available to students in some other Faculties (please consult the appropriate section for your Faculty in the Undergraduate calendar).

A BSc or BA (90 credit hour) degree program with a Minor in Business is available to students in the Faculty of Science.

Departmental Requirements

- A minimum of 18 credit hours in Business (BIOL) courses at the 2000 level or higher

Please note that upper level Biology (BIOC) courses have prerequisite requirements.

Minor in Chemistry

The minor in Chemistry is available to students registered in the BA, BSc 120 credit hour major and honours programs. The requirements are as for the appropriate degree program with completion of the following credit hours:

- COMM 2202.03
- COMM 2303.03
- COMM 2401.03
- COMM 3511.03
- six credit hours in Chemistry at or above the 2000 level

Additionally, students are responsible for completing the following required prerequisite courses:

- COMM 1010.03
- COMM 1101.03
- COMM 1502.03
- ECON 1011.03
- ECON 1102.03
- For BA: MATH 1115.03
- For BSc: MATH 1010.03 or MATH 1011.03 or MATH 2010.03

Minor in Canadian Studies

At least 18 credit hours in French (a course in an aboriginal language may be substituted, as a transfer credit).

Required:

- A minimum of 15 and a maximum of 21 credit hours from the list of electives:
  - CANA 3000.03 and CANA 4000.03 may count towards this requirement.

Minor in Canadian Studies (BA)

A minimum of 18 credit hours in Canadian Studies above the 1000 level. Within those 18 credit hours, students must include CHIN 2030.06, and at least six credit hours above the 2000 level.

Note: Minor degree program is available until 2015/2016 academic year.

Minor in Classical Literature

Students must take 18 credit hours from the following list:

- CLAS 2100.05 Gods, Heroes, and Monsters: Ancient Mythology
- CLAS 2315.03 Myth in Film 1: the Greek World
- CLAS 2700.06 Intermediate Greek
- CLAS 2710.06 Greek Prose
- CLAS 2800.06 A Study of Latin Prose and Poetry
- CLAS 2810.06 Latin Prose
- CLAS 3511.03 Greek Tragedy
- CLAS 3513.03 Ancient Comedy
- CLAS 3523.03 Ancient Greek Epic
- CLAS 1700.06 Advanced Greek
- CLAS 3760.06 Reading and Research of Greek Texts
- CLAS 3800.06 Roman Satire
- CLAS 3810.06 A Short History of Latin
- CLAS 3820.06 Advanced Latin Literature: Augustan Poetry and Prose
- CLAS 3850.06 Reading and Research of Latin Texts

Department Requirements

- A minimum of 15 and a maximum of 21 credit hours in Latin (LATN) courses at the 2000 level or higher.
Minor in Classics

Students declaring a Minor in Classics will complete 18 credit hours in Classics at the 2000 level or higher. Students seeking a minor in Early Modern Studies must complete 18 credit hours in EMSP. Students are required to complete at least one of the three “core” courses in CTMP (CTMP 2000.06, CTMP 3000.06, CTMP 4000.06). Students must also complete at least six credit hours at the 3000 or 4000 level (CTMP 3000.06 or CTMP 4000.06 will also fulfill this requirement), and six other credit hours at the 2000 level or above.

Minor in Contemporary Studies

Requirements

Students seeking a minor in Contemporary Studies must complete 18 credit hours in CSP. Students are required to complete at least one of the three “core” courses in CSP (CSP 2000.06, CSP 3000.06, CSP 4000.06). Students must also complete at least six credit hours at the 3000 or 4000 level (CSP 3000.06 or CSP 4000.06 will also fulfill this requirement).

Minor in Early Modern Studies

Requirements

Students seeking a minor in Early Modern Studies must complete 18 credit hours in EMSP. Students are required to complete at least one of the three “core” courses in EMSP (EMSP 2000.06, EMSP 3000.06, EMSP 4000.06). Students must also complete at least six credit hours at the 3000 or 4000 level (EMSP 3000.06 or EMSP 4000.06 will also fulfill this requirement).

Minor in Earth Science

A Minor in Earth Sciences is available to non-Earth Science students in a 120 credit hour degree program within the College of Arts and Science. The Minor is also available to students in some other Faculties (please consult the appropriate section for your Faculty in the Undergraduate calendar). A BSc or BA (90 credit hour) degree program with a Minor in Earth Sciences is available to students in the Faculty of Science.

Departmental Requirements

• six credits in EHRS at the 3000 level, including EMSP 3000.03 and EMSP 4000.03 (Geology I)
• A minimum of 18 credit hours in Earth Sciences (EHRS) courses at the 2000 level or higher, must include at least six credit hours at the 3000 level or higher

Minor in Economics

A Minor in Economics is available to non-Economics students in a 120 credit hour degree program within the College of Arts and Science. The Minor is available to students in some other Faculties (please consult the appropriate section for your Faculty in the Undergraduate calendar). A BSc or BA (90 credit hour) degree program with a Minor in Economics is available to students in the Faculty of Science.

Departmental Requirements

• ECON 1101.03/ECON 1102.03
• A minimum of 18 credit hours in Economics (ECON) courses at the 2000 level or higher

Minor in English

Any 24 credit hours in English at or above the 2000 level. At least three credit hours must be 3000 level or above.
Minor in Environment, Sustainability and Society

Please see Environment, Sustainability and Society of the Faculty of Arts and Social Sciences section in this Calendar.

Minor in Environmental Science

A Minor in Environmental Science is available to non-Environmental Science students in a 120 credit hour degree program within the College of Arts and Science. The Minor is also available to students in some other Faculties (please consult the appropriate section for your Faculty in the undergraduate calendar).

Departmental Requirements
- A minimum of 18 credit hours in Environmental Science (ENVS) courses at the 2000 level or higher

Minor in Environmental Studies

BA students must complete 12 credit hours of required courses and 18 elective credit hours from the list of approved courses below. Note: In planning their programs students must take into account the prerequisites which apply to many of the elective courses listed below. The following rules apply to the selection of courses for the Minor:
- A minimum of three credit hours in the Major subject (i.e., a course beyond those required for the Major) can count instead toward the Minor.
- At least six credit hours from the Approved Electives list must be in FASS courses and at least six credit hours must be from Science Approved Electives courses.
- In addition to ENV 3200.03, at least nine credit hours must be at the 3000 level or above.

See page 185 for requirements.

BSc students must complete 18 credit hours of required courses, plus 12 credit hours from the approved list of elective courses below. Note: In planning their programs students must take into account the prerequisites which apply to many of the elective courses listed below. The following rules apply to the selection of courses for the Minor:
- No course can fulfill a requirement of both the Major or Honours subject and the Minor.
- A maximum of three credit hours in the Major/Honours subject (i.e., a course beyond those required for the Major/Honours) can count toward the Minor.
- At least three credit hours beyond the required courses must be at the 3000 level or above.

Additions to the Elective list will be made as relevant courses become available.

Required Courses
- ENV 3200.03: Introduction to Environmental Science OR Dalhousie Integrated Science Program, SCE 3538, 1520.06, 1530.01, 1540.27
- PHIL 2400.03: Environmental Ethics
- ENV 3501.03: Environmental Problem Solving I
- ENV 3502.03: Environmental Problem Solving II
- ENV 3503.03: Introduction to Environmental Law

Electives (12 credit hours from the list)
- BIOC 2601.03: The Flora of Nova Scotia
- BIOC 2605.03: Introduction to the Marine Life of Nova Scotia
- BIOC 3065.03: Resource Ecology
- BIOC 3225.03: Plants in the Human Landscape
- BIOC 3226.03: Economic Botany, Plants and Civilization
- BIOC 3401.03: Nature Conservation
- BIOC 32xx.05: Any ecology-related course at 3000-level or above
- BIOC 4065.05: Sustainability and Global Change
- BIOC 4105.05: Environmental Microbiology
- BIOC 4106.05: Political Ecology

Minor in Film Studies

Please see Environment, Sustainability and Society of the Faculty of Arts and Social Sciences section in this Calendar.
Courses within the core program survey the history of film from the late nineteenth century to the present day and introduce students to various aspects of film theory and criticism. Courses at the intermediate and advanced level provide opportunities to study specific genres, directors, national cinemas as well as interdisciplinary topics: narration and narrative in fiction and film, feminist film practices, music and film.

This is an inter-University program that allows students to obtain credit hours from any of the participating institutions.

Core Requirements
Students must complete one and a half credits of core courses, including:

- DAL THEA 2301.03: Film History I 0.5 credits or NSCAD ARTS 2300: Film History and Criticism 0.5 credits
- DAL THEA 3310.03/CHIN 3050.03: Topics in Asian Cinema 0.5 credits
- DAL THEA 3309.03: Film History II 0.5 credits or NSCAD ARTS 2310: Film History and Criticism 1940 - Present 0.5 credits
- DAL THEA 2311.03: Film Analysis 0.5 credits or SMU ENGL 2311: Reading Film 0.5 credits

Students are strongly advised to take the core courses as soon as they declare their film minor.

Elective Requirements
Students must complete two and a half credits from the following list of courses, including at least one and a half credits at the 3000 level or above:

- DAL CHID 1000.03/THEA 3300.03: Topics in Asian Cinema 0.5 credits
- DAL CTMP 3304.03/ENGL 3304.03/GWST 3304.03: Through Her Eyes: Women and the Documentary Tradition 0.5 credits
- DAL CTMP 3305.03: Modern Film and the Theory of the Gaze 0.5 credits
- DAL ENGL 2395.03: Narrative in the Cinema 0.5 credits
- DAL ENGL 3310.03: TV: Theory and Practice 0.5 credits
- DAL ENGL 3314.03/THEA 3314.03: Shakespeare and His Contemporaries on Film 0.5 credits
- DAL FREN 2301.03: Cinema: The French Phenomenon I 0.5 credits
- DAL FREN 2302.03: Cinema: The French Phenomenon II 0.5 credits
- DAL GERM 2304.03: Monsters and Madness in 20th Century German Film 0.5 credits
- DAL GWST 3304.03/CTMP 3304.03/GWST 3304.03: Through Her Eyes: Women and the Documentary Tradition 0.5 credits
- DAL GWST 3311.03/THEA 3311.03: Film Theory II: Desire in Cinema 0.5 credits
- DAL GWST 3320.03/ENGL 3320.03: Topics in Indian Culture: Indian Nationalist Cinema 0.5 credits
- DAL ITAL 3300.03: Italian National Cinema: The New Wave 0.5 credits
- DAL KJUR 3304.03/CTMP 3304.03/GWST 3304.03: Through Her Eyes: Women and the Documentary Tradition 0.5 credits
- DAL MUSC 2306.03: Topics in Music and Cinema 0.5 credits
- DAL MUSC 2317.03: Music and Cinema: Composer-Director Collaborations 0.5 credits
- DAL RUN 2316.03/ENGL 3316.03: Russian Film I 0.5 credits
- DAL RUN 2317.03/THEA 2317.03: Russian Film II 0.5 credits
- DAL RUN 2346.03/THEA 2346.03: East European Cinema: War, Love, and Revolution 0.5 credits
- DAL THEA 3314.03/THEA 3314.03: Shakespeare and He Contemporaries on Film 0.5 credits
- DAL THEA 2303.03/CTMP 2303.03/GWST 2303.03: Through Her Eyes: Women and the Documentary Tradition 0.5 credits
- DAL THEA 2313.03/THEA 2313.03: Film Theory II: Desire in Cinema 0.5 credits
- DAL THEA 2360.03: Popular Cinema 0.5 credits
- DAL THEA 2371.03: Stars and Stardom on Stage and Screen
- DAL THEA 3313.03: Documentary, Experimental and Avant-Garde Film 0.5 credits
- DAL THEA 3330.03: Film Theory I 0.5 credits
- DAL THEA 3331.03/GWST 3331.03: Film Theory II: Desire in Cinema 0.5 credits
- DAL THEA 3350.03/CHIN 3050.03: Topics in Asian Cinema 0.5 credits
- DAL THEA 3351.03: The Cinema of David Lynch 0.5 credits
- DAL THEA 4499.03: Special Topics in Film Studies 0.5 credits
- DAL THEA 4491.03: Special Topics in Popular Cinema 0.5 credits
- NSCAD ARTS 3822: Topics in Film History: Hitchcock’s Films 0.5 credits
- NSCAD ARTS 3826: Topics in Film History: Film Noir and Neo-Noir 0.5 credits
- NSCAD ARTS 3832: Topics in Film History: Canadian Cinema 0.5 credits
- NSCAD ARTS 3835: Topics in Film History: Contemporary Cinemas of Globalization 0.5 credits
- NSCAD ARTS 3836: Topics in Film History: Subjectivities in Moving Pictures 0.5 credits
- NSCAD ARTS 3837: Topics in Film History: On-screen Sex 0.5 credits
- NSCAD ARTS 3850: History and Criticism of Documentary Film 0.5 credits
- SMU ASCT 3365: Moving Images of Atlantic Canada 0.5 credits
- SMU ENGL 3313: Narrative in Film and Film 1 credit
- SMU ENGL 3315: Religions and Film 0.5 credits
- SMU ENGL 3311: Film and the City 0.5 credits
- SMU ENGL 3325: The Media in Everyday Life 0.5 credits
- SMU ENGL 3326: Contemporary Canadian Film and Television 0.5 credits
- SMU HIST 3340: Film and History 0.5 credits
- SMU SOC 3340/CRIM 3330: Crime and the Media 0.5 credits
- SMU SOC 4452: Atlantic Canadian Film and Television

Minor in Food Science

The Minor in Food Science is available to students registered in the BSc 120 Credit Hour Major and Honours programs.

Requirements

The requirements are as for the appropriate program with the completion of the following courses to fulfill the Food Science Minor:

- HPRO 1000.03: Concepts in Food Science
- 48 credit hours from the following list:
  - BIOE 3051.03: Principles of Food Engineering
  - BIOE 3241.03: Industrial Biotechnology
  - CPST 3300.03: Technical Communication
  - CPST 3320.03: Engineering in Society II
  - ENV 3000.03: Fundamentals of Environmental Engineering
  - FORC 3210.03: Food Commodities
  - FORC 3211.03: Food Chemistry
  - FORC 3212.03: Food Analysis
  - FORC 3213.03: Food Quality Assurance
  - FORC 3214.03: Food Processing
  - FORC 3215.03: Food Microbiology
  - FORC 4202.03: Chemistry - Food, Oils, Lipids
  - FORC 4301.03: Food Product Development
  - FORC 4301.03: Brewing Science
  - FORC 4301.03: Food Safety and Biotechnology
  - FORC 4500.03: Seminar in Food Science
  - FORC 4501.03: Food Product Development Project
  - HPRO 2230.03: Introduction to Class in Human Nutrition
  - Other electives as approved by the Food Science Coordinator

Minor in French

Intended to allow for a level of specialization in French in addition to students’ major degree program(s). Cannot be combined with a major or honours in French.

Requirements

- 18 credit hours above the 1000 level, including FREN 2045X/Y 0.6
- Among those 18 credit hours, six credit hours must be above the 2000 level
- Courses given in English and FREN 2045X/Y 0.6

French courses may also be counted towards the Certificate in Intercultural Communication. Students may, in addition to French, be interested in the Minor in European Studies and/or Minor in Medieval Studies; each French course at the 2000 level and above may count toward one major/minor/honours.

Minor in Gender and Women’s Studies

The BA (180 credit hour) option permits a wide range of choice in course selection. A three year degree in Gender and Women’s Studies can prepare a student for work in the residential areas described above, or it can be used as a preparatory degree for professional programs such as Law and Social Work.

The minor may also be added within other 120 credit hour degree programs.

Requirements

- 18 credit hours beyond the 1000 level in Gender and Women’s Studies
- At least three different disciplines shall be represented in a student’s selection of cross-listed Gender and Women’s Studies courses

134 Degree Requirements
NOTE: Students in the BCD program may not select PLAN cross-listed courses that are required courses for their degree program.

Other courses may be possible with departmental approval.

Minor in Hispanic Cultures

Requirements

• SPAN 2100.03
• SPAN 2101.03

And any 12 credit hours from:

• SPAN 2040.03
• SPAN 2080.03
• SPAN 2070.03
• SPAN 2105.03
• SPAN 2109.03
• SPAN 2110.03
• SPAN 2115.03
• SPAN 3099.03

Minor in Hispanic Literature

Requirements

• SPAN 2020C/2026
• SPAN 2060.03
• SPAN 2500.03
• SPAN 2510.03
• SPAN 3125.03 or SPAN 3510.03
• SPAN 3500.03 or SPAN 3525.03

Minor in History

• At least 18 and not more than 27 credit hours in History, beyond the 1000 level.
• At least 12 of these credit hours must be above the 2000 level.

Minor in History of Science and Technology

The Minor in HIST can be combined with any type of BA or BSc program (e.g., Major, Double-Major, Honours) offered by the Faculty of Science or Arts and Social Sciences at Dalhousie. If you are a Dalhousie student and include a Minor in HOST in your studies, your degree is granted by Dalhousie University and the Social Sciences at Dalhousie. If you are a Dalhousie student and include a Minor in HOST in your studies, your degree is granted by Dalhousie University and the University of King’s College or by Dalhousie in association with King’s.

In addition to the Minor in HOST with your degree is an indication of a more limited specialization in this field than the Combined Honours. Although it does not have the same academic status as the Combined Honours degree, it nevertheless will be a valuable enrichment to your transcript, and will indicate your willingness to diversify your studies and to tackle subject matter that crosses the “two cultures” divide between the sciences and the humanities.

The course requirements for the Minor in HOST are as follows:

1. Any one of the following courses:
   • HIST 2000.06
   • HIST 2070.06
   • HIST 2200.06 (or cross listed as SCIE 2000, HIST 2074 and BIOL 3103)
2. Any other 12 credit hours selected from HIST courses (or cross listed with HIST courses) numbered 2000 or above.

Minor in Hispanic Cultures

Requirements

• SPAN 2100.03
• SPAN 2101.03

And any 12 credit hours from:

• SPAN 2040.03
• SPAN 2080.03
• SPAN 2070.03
• SPAN 2105.03
• SPAN 2109.03
• SPAN 2110.03
• SPAN 2115.03
• SPAN 3099.03

Minor in Hispanic Literature

Requirements

• SPAN 2020C/2026
• SPAN 2060.03
• SPAN 2500.03
• SPAN 2510.03
• SPAN 3125.03 or SPAN 3510.03
• SPAN 3500.03 or SPAN 3525.03

Minor in History

• At least 18 and not more than 27 credit hours in History, beyond the 1000 level.
• At least 12 of these credit hours must be above the 2000 level.

Minor in History of Science and Technology

The Minor in HIST can be combined with any type of BA or BSc program (e.g., Major, Double-Major, Honours) offered by the Faculty of Science or Arts and Social Sciences at Dalhousie. If you are a Dalhousie student and include a Minor in HOST in your studies, your degree is granted by Dalhousie University and the University of King’s College or by Dalhousie in association with King’s.

In addition to the Minor in HOST with your degree is an indication of a more limited specialization in this field than the Combined Honours. Although it does not have the same academic status as the Combined Honours degree, it nevertheless will be a valuable enrichment to your transcript, and will indicate your willingness to diversify your studies and to tackle subject matter that crosses the “two cultures” divide between the sciences and the humanities.

The course requirements for the Minor in HOST are as follows:

1. Any one of the following courses:
   • HIST 2000.06
   • HIST 2070.06
   • HIST 2200.06 (or cross listed as SCIE 2000, HIST 2074 and BIOL 3103)
2. Any other 12 credit hours selected from HIST courses (or cross listed with HIST courses) numbered 2000 or above.
Minor in International Development Studies

Advanced Course Requirements:
- INTD 2001.03/2002.03
- INTD 2002.03/2003.03
- six credit hours of INTD and/or IDS approved courses at the 2000 level or above.
- three credit hours at the 3000 level or above.

In total, 18 credit hours in IDS are required.

Minor in Italian Studies

Faculty of Arts

Students seeking a Minor in Italian Studies will be expected to complete SPAN 2020X/Y.06, plus six credit hours from list A and 12 credit hours from list B.

List A: six credit hours/any two of the following:
- SPAN 2070.03
- SPAN 2093.03
- SPAN 2100.03
- SPAN 2110.03
- SPAN 2130.03
- SPAN 2260.03
- SPAN 2314.03
- SPAN 3130.03

Minor in Journalism Studies

Faculty of Arts

Students who wish to take a Minor in Journalism Studies must meet the requirements for the major or honors program in their chosen discipline and successfully complete 24 credit hours in Journalism, including JOUR 1001.06 and JOUR 2000.03 and 15 credit hours in electives.

Core Requirements:
- JOUR 1001.06 Foundations of Journalism
- JOUR 2000.03 Basic Reporting Techniques

Elective Requirements
Students must complete 15 credit hours in electives from the list below:
- JOUR 2004.03 Introduction to Radio
- JOUR 2400.03 Science and the Media
- JOUR 3003.03 Introduction to Video Reporting
- JOUR 3005.03 Broadcast Reporting
- JOUR 3122.03 Ethics of Journalism
- JOUR 3304.03 News Media & the Courts in Canada
- JOUR 3333.03 News Media & the Courts in Canada
- JOUR 3441.03 Advanced Creative-Non-Fiction
- JOUR 3540.03 Feature Writing
- JOUR 3542.03 Business Reporting for Journalists
- JOUR 3550.03 Copy Editing
- JOUR 3557.03 Intro to Online Journalism
- JOUR 3660.03 Photojournalism

Faculty of Science

Students seeking a Minor in Journalism Studies will be expected to complete JOUR 1001.06 and JOUR 2000.03 and 15 credit hours in electives.

Core Requirements:
- JOUR 1001.06 Foundations of Journalism
- JOUR 2000.03 Basic Reporting Techniques

Elective Requirements
Students must complete 15 credit hours in electives from the list below:
- JOUR 2004.03 Introduction to Radio
- JOUR 2400.03 Science and the Media
- JOUR 3003.03 Introduction to Video Reporting
- JOUR 3005.03 Broadcast Reporting
- JOUR 3122.03 Ethics of Journalism
- JOUR 3304.03 News Media & the Courts in Canada
- JOUR 3333.03 News Media & the Courts in Canada
- JOUR 3441.03 Advanced Creative-Non-Fiction

- JOUR 3542.03 Business Reporting for Journalists
- JOUR 3550.03 Copy Editing
- JOUR 3557.03 Intro to Online Journalism
- JOUR 3660.03 Photojournalism

Minor in Latin American Studies

Requirements

Students seeking a minor in Latin American Studies will be expected to complete SPAN 2020X/Y.06, plus six credit hours from list A and 12 credit hours from list B. At least three credit hours must be at the 3000 level or above.

List A: six credit hours/any two of the following:
- SPAN 2060.03
- SPAN 2070.03
- SPAN 2093.03
- SPAN 2100.03
- SPAN 2110.03
- SPAN 2130.03
- SPAN 2260.03
- SPAN 2314.03
- SPAN 3130.03

List B: 12 credit hours from the following:
- HIST 2301.03
- HIST 3003.03
- HIST 3500.03
- HIST 4003.03
- INTD 3002.03
- INTD 3303.03
- INTD 3304.03
- INTD 3310.06
- INTD 3401.03
- POLI 3360.03
- SOCS 3168.03 (or Xlist code GWST 3168.03)

Minor in Law and Society

The minor in law and society is available to students registered in the BA and BSc 120 credit hour major and honours programs. The requirements are as for the appropriate degree program with completion of the following courses:
- LAWS 2300X.Y.06 (with a minimum grade of B+)
- The equivalent of 18 credit hours from the list of approved courses. See Law and Society (FASS) for further details. To count towards the minor, a minimum grade of B- is required.

Minor in Medicine

The minor in medicine is available to students registered in all BA, BSc 120 credit hour Major and Honours programs. The requirements are as for the appropriate degree program, with the following credit hours:
- MGMT 1000.03 and MGMT 1001.03 (Managing Organizational Issues 1 and 2)
- ECON 1101.03 and ECON 1102.03 (Microeconomics and Macroeconomics)
- MGMT 1310.03 (Statistics for Managers)
- 12 credit hours chosen from:
  - MGMT 2101.03 (Financial Accounting)
  - MGMT 2301.03 (People, Work and Organizations 1)
  - MGMT 2401.03 (Introduction to Marketing)
  - MGMT 2801.03 (Government Structure)
  - MGMT 2901.03 (Healthcare Management)
  - MGMT 2701.03 (Resource and Environmental Management)
- 12 credit hours above the 2000 level in MGMT.

Please note that some MGMT courses have additional prerequisite requirements.

Minor in Marine Biology

A Minor in Marine Biology is available to all students in a 120 credit hour degree program other than Marine Biology within the College of Arts and Science. The Minor is also available to students in some other Faculties (please consult the appropriate section for your Faculty in the Undergraduate calendar).

Departmental Requirements
- A minimum of 18 credit hours in Marine Biology (MARB) courses at the 2000 level or higher

Minor in Mathematics

A Minor in Mathematics is available to all students in a 120 credit hour degree program other than Mathematics within the College of Arts and Science. The Minor is also available to students in some other Faculties (please consult the appropriate section for your Faculty in the Undergraduate calendar).

Departmental Requirements
- MATH 1000.05/MATH 1010.03 or MATH 1500.06/X/Y
- MATH 2100
- MATH 2101
- MATH 2120
Minor in Medieval Studies

Students seeking an interdisciplinary minor in Medieval Studies will be expected to take 24 credit hours beyond the 1000 level, including at least 12 credit hours in a language course at or above the 2000 level, and with courses taken from at least two of the participating departments or programs.

Requirements:

- Language work - six credit hours in one of the following languages at or above the 2000 level: Arabic, Latin, Greek, French, German, Italian, or Spanish. Courses treating texts in translation do not count. For languages other than Latin and Greek, courses taught in English do not count.

- And any 18 credit hours selected from the course list below; within these 18 credit hours, courses must be taken from at least two of the participating departments or programs.

- CLAS 3432.03 St. Augustine's On the Trinity
- CLAS 3412.03 St. Augustine's Confessions
- MUSC 4359.03 Studies in Medieval Music (topics vary; check with advisor)
- MUSC 4358.03 Studies in Medieval Music (topics vary; check with advisor)
- Early Music Analysis
- Medieval Music (topics vary; check with advisor)
- Arab and Islamic Studies
- RELS 4011.03 Jewish Philosophy: Maimonide

Minor in Microbiology and Immunology

A Minor in Microbiology and Immunology is available to non-Microbiology students in a 120 credit hour degree program within the College of Arts and Science. The Minor is also available to students in some other Faculties (please consult the appropriate section for your Faculty in the Undergraduate calendar).

Departmental Requirements

- MICT 2100.03
- A minimum of 15 additional credit hours in Microbiology (MIC) courses at the 2000 level or higher

Please note that there are prerequisite requirements for entry into upper level Microbiology (MIC) courses, including BIOL 2020 and BIOL 3031, CHEM 2401 and CHEM 2402 (or CHEM 2441).

Minor in Middle East Studies

Students minoring in Middle East Studies select 18 credit hours from the list below. Students are required to take one of the following: HIST 2502, HIST 2503, HIST 2504, RELS 2001 or RELS 2003. At least three credit hours must be at the 3000 or 4000 level. Please note that not all courses are offered each year.

Second Year

- ARBC 2100: An Introduction to the Arab World (HIST 2505, RELS 2505)
- CLAS 2215: Alexander the Great (HIST 2089)
- CLAS 2220: Ancient Israel (HIST 2310, RELS 2220)
- CLAS 2301: The Orthodox and Oriental Churches
- CLAS 2300 X: Intermediate Hebrew
- CLAS 2302: The Ottoman Empire
- HIST 2303: Classical and Medieval History of Islamic Civilization (RELS 2303)
- HIST 2304: History of the Modern Middle East
- HIST 2305: Modern History of Iraq
- RELS 2001: Judaism
- RELS 2002: Islam
- RELS 2008: Science and Medicine in Islamic Societies, 750-1500

Third Year

- ARBC 3010: Advanced Arabic
- ARBC 3011: Advanced Arabic II (Reading)
- ARBC 3040: Arabic Philosophical Texts (al-Ghazali)
- ARBC 3090: Arabic Philosophical Texts (Maimonides)
- ARBC 3100: Arabic Pre Islamic Poetry
- HIST 3014: Meetings between Islam and the East to the Philo the Jew (HIST 3014, RELS 3014)
- CLAS 3017: Meetings between Hellenism, Judaism, Christianity and Islam (HIST 3017, RELS 3017)
- CLAS 3021: Ancient Art and Architecture
- CLAS 3032: Medieval Philosophy from Arabic and Jewish Thinkers to Aquinas
- CLAS 3040: Islamic Art
- CLAS 3042: Islam
- CLAS 3050: History of Islam
- HIST 3101: Christian History of the Persian Empire (CLAS 3101)
- HIST 3102: History of the Islamic World (CLAS 3102)
- HIST 3103: The Ottoman Empire (CLAS 3103)
- RELS 3001: Islamic Studies
- RELS 3002: Islam
- RELS 3003: Christianity in the Levant and Islam
- RELS 3005: Christianity in the Levant and Islam

Fourth Year

- CLAS 4011: Jewish Philosophy: Maimonide (RELS 4011)
- HIST 4013: John of Damascus (RELS 4013)
- CLAS 4019: Philo-Isaiah

- CLAS 4521 X: The World of Heraclitus

Degree Requirements 137
Minor in Music

Students must complete 18 credit hours in Music beyond the 1000 level. The following courses may not be used to count toward this degree: MUSC 2007.06, MUSC 2022.06, MUSC 2356.06, MUSC 3190.06.

Minor in Musicology

Students must complete 18 credit hours in Musicology courses as follows:

• MUSC 2352.05: Music History III
• six credit hours chosen from:
  • MUSC 2016.03: Topics in Music and Cinema
  • MUSC 2019.03: Popular Music until 1960
  • MUSC 2020.03: The History of Jazz
  • MUSC 2353.05: Music History IV: Focuses Study
  • MUSC 3066.03: Women, Gender and Music
  • MUSC 3144.03: History of Opera
• nine credit hours chosen from 4000 level Musicology seminars as listed below:
  • MUSC 3066.03: Women, Gender and Music
  • MUSC 3144.03: History of Opera
  • MUSC 4135.03: Music since 1945
  • MUSC 4254.03: Popular Music Analysis
  • MUSC 4335.03: Narrative Strategies
  • MUSC 4365.05: Opera Studies
  • MUSC 4105.03/4305.03: Studies in Medieval Music
  • MUSC 4361.06: Advanced Seminar in Baroque Culture
  • MUSC 4361.03/4361.05: Topics in Musicology I
  • MUSC 4362.03: Topics in Canadian Music
  • MUSC 4363.03/4367.03: Topics in Musicology II
  • MUSC 4380.03/4381.05: Selected Composer Studies

Minor in Neuroscience

A Minor in Neuroscience is available to students in a 120 credit hour degree program other than Neuroscience or Psychology within the College of Arts and Science. The Minor is also available to students in some other Faculties (please consult the appropriate section for your Faculty in the Undergraduate calendar).

Departmental Requirements

• A minimum of 18 credit hours in Neuroscience (NESC) courses at the 2000 level, with no more than 9 credit hours taken in a single department.
• At least 18 credit hours and no more than 27 credit hours in Philosophy beyond the 1000 level, including at least 3 credit hours beyond the 2000 level.

Minors in Ocean Sciences

A Minor in Ocean Sciences is available to students in a 120 credit hour degree program other than Ocean Sciences within the College of Arts and Science. The Minor is also available to students in some other Faculties (please consult the appropriate section for your Faculty in the Undergraduate calendar).

Departmental Requirements

• A minimum of 18 credit hours in Ocean Sciences (SCIE) courses at the 2000 level, with no more than 9 credit hours taken in a single department.

Minors in Philosophy

Requirements

At least 18 credit hours and no more than 27 credit hours in Philosophy beyond the 1000 level, including at least 3 credit hours beyond the 2000 level.

Select at least three credit hours from the following:

PHIL 2100.03 Logic: Deduction
PHIL 2003.03 Reasoning Skills
PHIL 2009.03 How to Win an Argument
PHIL 2069.03 Logic: Understanding Scientific Reasoning

Minors in Physics

A Minor in Physics is available to students in a 120 credit hour degree program other than Physics within the College of Arts and Science. The Minor is also available to students in some other Faculties (please consult the appropriate section for your Faculty in the Undergraduate calendar).

Departmental Requirements

• A minimum of 18 credit hours in Physics (PHYS) courses at the 2000 level or higher.

Please note that these are prerequisite requirements for entry into upper level Physics courses (see Department of Physics and Atmospheric Science course listings).

Minor in Political Science

A minimum of 18 credit hours in Political Science is required.

Minor in Popular Culture Studies

Students seeking a minor in Popular Culture Studies will be expected to take 21 credit hours beyond the 1000 level, with six credit hours at or above the 1000 level, and with no more than nine credit hours taken in a single department.

Appropriate courses can be chosen from the following list:

• six credit hours from:
  • CTMP 2316/CHIN 2157.03: East Meets West in Popular Culture
  • EMSP 2131: The Vampire
  • EMSP 2330: Winchertal in Early Modern Europe
  • EMSP 2480: The Prance and Pirate
  • ENGL 2006: Cultural Studies
  • ENGL 2080: Cartoons & Comics
  • ENGL 2095: Narrative in the Cinema
  • ENGL 2231: Foundations of Science Fiction
  • ENGL 2323: Contemporary Science Fiction
  • ENGL 2355: Tolkien: Fantasy & Medieval
  • HIST 2500: Science Fiction in Film
  • MUSC 2016: Topics in Music and Cinema
  • MUSC 2018: Popular Music until 1940
  • MUSC 2019: The Rock‘n’Roll Era and Beyond
  • MUSC 2020: The History of Jazz
  • THEA 2360: Popular Cinema

• six credit hours from:
  • CTMP 3322: Representations of the Holocaust: Remembrance
  • CTMP 3305: Modern Film and the Theory of the Gaze
  • ENGL 1500: TV: Theory & Criticism
  • ENGL 1501: Graphic Novels
  • FREN 1760: Littérature industrielle, roman populaire et roman de consommation. - Popular Literature and the Rise of Mass Culture
  • FREN 1770: Le bande dessinée francophone - The Franco-Belgian Comic Strip
  • JOUR 3560: Great Journalists
  • MUSC 2353.03: Music History IV: Focuses Study
  • MUSC 2354: Popular Music Analysis
  • MUSC 2355.03: Narrative Strategies
  • MUSC 2356.03: Topics in Canadian Music
  • MUSC 2357.03/2358.03: Musical Theory
  • MUSC 2359-2360.03: Music since 1945
  • MUSC 2361-2370.03: Topics in Musicology II
  • MUSC 2371-2380.03: Selected Composer Studies

Minor in Political Science

A minor in Political Science is available to students in a 120 credit hour degree program other than Neuroscience or Psychology within the College of Arts and Science. The Minor is also available to students in some other Faculties (please consult the appropriate section for your Faculty in the Undergraduate calendar).

Departmental Requirements

• A minimum of 18 credit hours in Psychology (PSYO) courses at the 2000 level or higher.

Please note that these are prerequisite requirements for entry into upper level Psychology courses (see Department of Psychology and Atmospheric Science course listings).
OFFERED IN ANY GIVEN YEAR. Students may choose from the following:

PEACE NOTE THAT ONLY SOME OF THESE COURSES WILL BE

Minor in Sociology and Social Anthropology of Economy, Work and Development
This minor requires 18 credit hours above the 1000 level from the list below. Please note that only some of these courses will be offered in any given year. Students may choose from the following courses:

• SOSA 2001.06: Ethnography in Global Context OR SOSA 2002.06: The Sociological Perspective (only one of these two may be included in the minor)
• SOSA 2111.03: There is an Atlantic Canada
• SOSA 2140.03: Going Global: Geography, Economy, and Work in the 21st Century
• SOSA 2141.03: Good Jobs, Bad Jobs
• SOSA 2270.03: Introduction to Popular Culture
• SOSA 2271.03: Popular Culture in a Global Context
• SOSA 2401.06: Food and Eating Across Cultures
• SOSA 3003.03: Knowledge, Work and Culture in the Contemporary World
• SOSA 3004.03: Comparative Perspectives on Gender and Work
• SOSA 3014.03: Rethinking Culture and Class
• SOSA 3060.03: Social Change and Development
• SOSA 3096.03: Introduction to Demography
• SOSA 3163.03: Peoples and Cultures of the World: Selected Area Studies
• SOSA 3164.03: Issues in Latin American Society
• SOSA 3185.03: Issues in the Study of Indigenous Peoples of North America
• SOSA 3200.03: Environmental Anthropology SOSA 3211.03: Continuity and Change in Rural Societies
• SOSA 3213.03: Migration and Identity
• SOSA 3310.03: Indian Society: Change and Continuity

Minor in Sociology and Social Anthropology of Social Justice and Inequality
This minor requires 18 credit hours above the 1000 level from the list below. Please note that only some of these courses will be offered in any given year. Students may choose from the following courses:

• SOSA 2001.06: Ethnography in Global Context OR SOSA 2002.06: The Sociological Perspective (only one of these two may be included in the minor)
• SOSA 2041.03: Describing Social Inequality
• SOSA 2042.03: Explaining Social Inequality
• SOSA 2115.03: African Canadian Society, Culture and Resistance
• SOSA 2180.06: Crime and Criminal Justice
• SOSA 2181.03: Explaining Crime and Criminal Behavior
• SOSA 2182.03: Exploring Crime and Criminal Behavior
• SOSA 2190.06: Comparative Perspectives on Gender
• SOSA 2250.03: Society, Politics, and Culture
• SOSA 3002.03: Native Peoples of Canada
• SOSA 3004.03: Comparative Perspectives on Gender and Work
• SOSA 3013.03: Popular Memory
• SOSA 3015.03: Popular Memory
• SOSA 3100.03: Feminist Perspectives in Sociology and Anthropology
• SOSA 3183.03: Issues in the Study of Indigenous Peoples of North America
• SOSA 3190.03: Social Movements
• SOSA 3206.03: Ethnicity, Race and Nationalism
• SOSA 3213.03: Migration and Identity
• SOSA 3223.03: Culture, Rights and Power
• SOSA 3275.03: Crime and Public Policy
• SOSA 3283.03: Globalized Security and Justice: the Challenge of Global Crime and Terrorism
• SOSA 3284.03: Globalized Security and Justice: the Challenge of Global Crime and Terrorism
• SOSA 3285.03: Sociology of Law
• SOSA 3290.03: Security and the Police

Minor in Sociology and Social Anthropology of Critical Health Studies
This minor requires 18 credit hours above the 1000 level from the list below. Please note that only some of these courses will be offered in any given year. Students may choose any courses from the following list:

• SOSA 2001.06: Ethnography in Global Context OR SOSA 2002.06: The Sociological Perspective
• SOSA 2111.03: There is an Atlantic Canada
• SOSA 2180.06: Crime and Criminal Justice
• SOSA 2181.03: Explaining Crime and Criminal Behavior
• SOSA 2182.03: Exploring Crime and Criminal Behavior
• SOSA 2190.06: Comparative Perspectives on Gender
• SOSA 2250.03: Society, Politics, and Culture
• SOSA 3002.03: Native Peoples of Canada
• SOSA 3004.03: Comparative Perspectives on Gender and Work
• SOSA 3013.03: Popular Memory
• SOSA 3015.03: Popular Memory
• SOSA 3100.03: Feminist Perspectives in Sociology and Anthropology
• SOSA 3183.03: Issues in the Study of Indigenous Peoples of North America
• SOSA 3190.03: Social Movements
• SOSA 3206.03: Ethnicity, Race and Nationalism
• SOSA 3213.03: Migration and Identity
• SOSA 3223.03: Culture, Rights and Power
• SOSA 3275.03: Crime and Public Policy
• SOSA 3283.03: Globalized Security and Justice: the Challenge of Global Crime and Terrorism
• SOSA 3284.03: Globalized Security and Justice: the Challenge of Global Crime and Terrorism
• SOSA 3285.03: Sociology of Law
• SOSA 3290.03: Security and the Police

Minor in Spanish Language Requirements
• SPAN 2010.V:06 and SPAN 3010.03 in the same year
• SPAN 3015.03
• SPAN 3016.03
• SPAN 3020.03 or SPAN 3023.03

Minor in Statistics
A Minor in Statistics is available to all students in a 120 credit hour degree program other than Statistics within the College of Arts and Science. The Minor is also available to students in some other Faculties (please consult the appropriate section for your Faculty in the Undergraduate calendar).

A BSc or BA (90 credit hour) degree program with a Minor in Statistics is available to students in the Faculty of Science.

Departmental Requirements
• A minimum of 18 credit hours in Statistics (STAT) courses at the 2000 level or higher
• Students in Major/Honours programs other than Mathematics may count MATH 2001 and MATH 2030 among the 18 credit hours
1. With Minor

- 6 credit hours in one or more social science subjects (see A. above)
- 6 credit hours in one or more language/humanities subjects (see A. above)
- A minimum of 18, maximum of 27 credit hours in the minor subject at the 2000 level or higher.
- Within the last 90 credit hours, complete 6 credit hours in each of two subjects other than the subject of the minor.
- Total credit hours required above 1000 level - 42
- Total credit hours required for degree - 90
- Required GPA for graduation - 2.00
- Graduation with distinction - 3.70

Bachelor of Arts minor subjects: any of the approved minors in either the Faculty of Arts and Social Sciences or the Faculty of Science. See section 5.a.

C. BSc (90 Credit Hour) Programs

1. With Minor

- an approved writing course (see page 125)
- 6 credit hours in one or more language/humanities subjects (see A. above)
- 6 credit hours in one or more social science subjects (see A. above)
- Required GPA for graduation - 2.00
- Graduation with distinction - 3.70

Bachelor of Science minor subjects: any of the approved minors in the Faculty of Science. See section 5.a.

2. Upgrading of a BA or BSc (90 Credit Hour) to a BA or BSc Major (120 Credit Hour)

A person who holds a Dalhousie BA or BSc (90 credit hour) degree may apply through the Registrar’s Office for admission to a major program. On completion of the required work with proper standing, a conversion certificate will be awarded which has the effect of upgrading the degree to major status.

3. Upgrading of a BA or BSc (90 or 120 Credit Hour) to a BA or BSc Honours (120 Credit Hour)

A person who holds a Dalhousie BA or BSc (90 or 120 credit hour) degree may apply through the Registrar’s Office with the appropriate department advisor(s) approval, to an Honours program. On completion of the required work with proper standing, a certificate will be awarded which has the effect of upgrading the degree to honours status.

D. Concurrent Programs

1. BSc/BeEng

Students who meet the admission requirements for the Bachelor of Science program and the Bachelor of Engineering program are eligible to select this concurrent degree option. Students wishing specific advice should consult the Assistant Dean, Faculty of Science and the Associate Dean, Faculty of Engineering. Students accepted will normally complete the 90 credit hour BSc and the first two years of engineering studies leading to the BEng (Diploma) concurrently in a period of three calendar years. At the end of the three year period, both the degree and the diploma will be awarded to successful candidates. This opportunity should appeal to students with career objectives in multi-disciplinary fields such as biomedical engineering, environmental science, or materials science (among others). It is thus possible to complete the requirements for the Bachelor of Science and Bachelor of Engineering degrees concurrently in a time period of five years in total (or up to six years for co-op programs).

2. BA/BeEng

Students wishing to do so may complete the 90 credit hour BA degree program and the first two years of engineering studies leading to the Diploma in Engineering (Diplom) concurrently in a period of three calendar years. At the end of the three year period, both the degree and the diploma will be awarded to successful candidates. It is thus possible to complete the requirements for the Bachelor of Engineering and the Bachelor of Arts degrees concurrently in a time period of five years in total (or up to six years for co-op programs).

Students who meet the admission requirements for the Bachelor of Arts and Bachelor of Engineering programs are eligible to select this concurrent degree option. Students wishing specific advice should consult the Assistant Dean, Faculty of Engineering and the department for the BA subject of concentration. Courses in the fourth and fifth years are those required to finish the Bachelor of Engineering degree.

E. Individual Programs

In cases where students feel their academic needs are not satisfied under the above requirements, individual programs may be submitted to the Student Affairs Committee of the Faculty of Arts and Social Science and the curriculum committee of the Faculty of Science prior to or during the student’s second academic year. The Dean shall act as advisor for such students.
F. Other Degree and Diploma Programs

1. Bachelor of Music
   For the requirements of this degree, see the entry for the Department of Music.

2. Diploma in Costume Studies
   Study for this credential is entirely within the Department of Theatre. See the
   entry for this department for detailed information.

3. Diploma in Meteorology
   Details of the requirements for this diploma may be found in the entry of the
   Department of Physics and Atmospheric Science.

G. Certificate Programs

1. Certificate in Forensic Psychology
   Note: This certificate is not available in the 2013/2014 academic year.

2. Certificate in Information Technology
   All IT skills will be covered within the regular discipline-based courses of the
   Department of Computer Science.

Data Visualization
- Proficiency in developing online presentations, including object linking
- Ability to produce documents in HTML and/or XML format
- Creation of a personal website
- Ability to produce documents in HTML and/or XML format
- Proficiency in developing online presentations, including object linking

Data Processing
- Basic manipulation of multivariate data and analysis, e.g., GIS
- Manipulation of spatial data sets
- Statistical evaluation of data sets using spreadsheet functions, stats
- Standardized databases, e.g., SYSTAT, S-Plus
- Numeric modeling using spreadsheets, GIS

Data Visualization
- Graphing in 2D and 3D, time series etc.
- Surface modeling
- Fundamentals of animation

General Issues
- Intellectual property in the digital world
- Ethics and privacy
- Security (viruses, firewalls, data encryption)
- Collect and process multivariate data sets, e.g., spatial coordinate data
- Do the above with a spreadsheet
- Construct a relational database using multiple tables and data entry forms
- Examining and analyzing the use of current IT tools. Finding, retrieving, and preparing electronic documents and
- Communicating electronically become second-nature to all science students. In
- All BSc students will be provided with a basic level of competency in the use of
- Certificates in IT provide a discipline-based program to
- Certificates in IT provide a discipline-based program to

3. Certificate in Actuarial and Financial Mathematics
   For the requirements for this certification, see the Mathematics and Statistics
   departmental entry.

   For the requirements for this certification, see the Mathematics and Statistics
   departmental entry.

5. Certificate in Medicinal Chemistry
   For the requirements for this certification, see the Chemistry departmental entry.

6. Certificate in Materials Science
   For the requirements for this certificate, see the Chemistry departmental entry.

7. Certificate in Animal Behaviour
   For the requirements for this certificate, see the Biology departmental entry.

8. Certificate in Geographic Information Science
   For the requirements for this certificate, see the Biology departmental entry.

10. Certificate in Intercultural Communication
    The Certificate in Intercultural Communication is open to students from any
    Faculty at Dalhousie, and welcomes both Canadian and International students. It
    offers the globally-minded student an opportunity to combine academic and
    experiential learning in order to understand and communicate more effectively
    with people from cultures different from their own.

1. Academic component (graduate students may receive advance standing for these component)
   a) One full academic credit focusing on the understanding of culture, chosen
      from the list below
   b) Foreign/second language at or beyond the 2000 level or equivalent
      N.B. This requirement is satisfied
       i) by taking foreign/second language courses at Dalhousie at the second-
          year level
       ii) if the student is a native speaker of a language other than English and
           studying at Dal
       iii) by non-credit community-based learning of such languages as Mi'kmaq
           or American Sign Language
   OR
   a) Minimum one semester work or study abroad (or at Dalhousie for
      international students)
   b) Minimum (75 hours) volunteering or working in an intercultural context
      within Canada
   N.B. Students may satisfy this requirement by a blending of work/study abroad
   for less than one full semester and a local volunteer or work placement.
   Students wishing to satisfy this requirement by a volunteer or work placement,
   or a blend of study abroad and work/volunteer placement, need the approval of
   the advisor.

3. Theoretical and practical understanding of issues in intercultural communication (no full credit required):  ASSC 3598.03

Courses satisfying the Academic credit for the Certificate in Intercultural Communication (no credit hours, required):

- ENGL 2090.03: Literature, Migration, and Citizenship
- ENGL 3070.03: 20th Century African-American Novel
- ENGL 3086.03: Post-Colonial Literature
- FREN 3125.03: The Francophone World

I. Introduction

The Faculty of Arts and Social Sciences includes humanities, social sciences, languages, and performing arts. Within the Faculty’s departments and interdisciplinary programs, you can get involved in music and theatre at a professional level. Or you can find out how to do social surveys or archival research. Try out your language-learning abilities in French, German, Spanish, Italian, Russian, Arabic, Mandarin, or maybe Hebrew, Latin, or Greek. Study abroad for a term or a year, and you will develop your skills in cross-cultural interaction. Sharpen your reasoning powers and writing skills by taking literature and philosophy courses that teach advanced levels of reading and analysis.

By exploring various academic disciplines, you'll find that your curiosity about the world and your hopes of a career can be fulfilled in many different ways. You may find that a particular discipline exactly suits your needs. Or you may want to design a course of studies that engages you in a wider variety of departments and programs. You may find that a particular discipline exactly suits your needs. Or you may want to design a course of studies that engages you in a wider variety of departments and programs. Courses in Arabic are administered by the Classics Department, page 152.

A. Minor in Arabic Studies

See Minors in the College of Arts and Science section of this calendar (page 128).

ARBC 1020X/Y.06: Introduction to Arabic.

Introduction to Arabic is a course which focuses on the acquisition of the elementary foundation in Arabic language. It also offers basic information regarding the Arab world: ancient and modern culture and civilization, daily life, religions, literature, etc. The variety of Arabic offered by this course is Modern Standard Arabic, which represents the Arabic language nowadays used in all Arab countries in formal communications. Modern Standard Arabic is used in writing, but it is also a spoken language used in many formal situations.

This course aims to cover: writing with Arabic characters, reading simple original texts in Arabic, the basic components of Arabic grammar and basic daily vocabulary. Some elements of spoken Arabic varieties (dialects) may be offered as well in the second term.

NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term. This course fulfills the BA language requirement.

FORMAT: Lecture
PREREQUISITE: None
EXCLUSION: None

ARBC 2020X/Y.06: Intermediate Arabic.

This course aims at consolidating the grammar and vocabulary acquired at the first level (Introduction to Arabic), and to improve reading and correct use of the syntactical structures in both oral and written communication. The course will also provide the student with the foundation necessary for reading standard forms of Arabic prose (especially newspapers) and for using Modern Standard Arabic in conversation. Written and oral translations from Arabic into English and vice-versa will be frequently proposed to the students in order to attain this purpose.

NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.

FORMAT: Lecture
PREREQUISITE: ARBC 1020.06, or permission of the instructor
EXCLUSION: None

ARBC 2100.03: A Cultural Introduction to the Arab World.

This course, offered in English, aims at providing students with the basic tools for approaching the Arab world from a cultural perspective. It offers an overview of the Arabic, Islamic and Christian cultural heritage from the Classical ages through the modern and contemporary periods, with accent on literature, myths, women’s studies, etc.

FORMAT: Lecture/discussion
CROSS-LISTING: RELS 2052.03, HIST 2500.03

ARBC 3030.03: Advanced Arabic I.

This course is a continuation of Intermediate Arabic (ARBC 2020). The course is designed to: (1) consolidate the knowledge acquired in Modern Standard Arabic at the previous level(s); (2) carry reading texts without vocalization, acquiring more complex notions of grammar and vocabulary, translating from Arabic into English, and (3) add new morphological forms (especially verbal and nominal derived forms, passive of verbs, irregular forms, etc.) and more complex

Undergraduate book  Page 143  Wednesday, March 12, 2014  12:03 PM
CROSS-LISTING: CLAS 3100
FORMAT: Lecture
NOTE: This course will be offered in English and is based on English translations of the Arabic language. The required bibliography will be in English as well.
PREREQUISITE: ARBC 3010 or permission of the instructor.

ARBC 3040.03: Arabic Philosophical Texts: al-Ghazali
Also Harun al-Ghazali (1058-1111) is one of the greatest Muslim thinkers of all time. He wrote some of his major works in Arabic. This course is an introduction to his thought, based on a selection of passages from his The Guide of the Perplexed and other works in the original Arabic for advanced students of Arabic.
FORMAT: Lecture/seminar
PREREQUISITE: ARBC 3030, and an introductory level course in Classics or Religious Studies, or permission of the instructor.

ARBC 3050.03: Arabic Philosophical Texts: al-Ghazali
Maimonides, Moses Maimonides (1135-1204) is one of the greatest Jewish thinkers of all time. Though he wrote some of his legal works in Hebrew, his major philosophical works were written in Arabic. This course is an introduction to his thought, based on a selection of passages from his The Guide of the Perplexed and other works in the original Arabic for advanced students of Arabic.
FORMAT: Lecture/seminar
PREREQUISITE: ARBC 3030, and an introductory level course in Classics or Religious Studies, or permission of the instructor.

ARBC 3100.03: Arabic Pre-Islamic Poetry
This course offers an overview of the best pieces of the earliest poetry composed in Arabic language, in the Arab Peninsula, within a period which preceded the rise of Islam. It focuses on the so-called "Spilled Poems" (Al-Mu’allaqat), considered as the masterpieces of seven (or ten, according to different sources) Arab poets such as Imara’ al-Qasim, Tariq al-Ashrah, Zaydi, etc.
NOTE: This course will be offered in English and is based on English translations of the Arabic language. The required bibliography will be in English as well.
FORMAT: Lecture/seminar
CROSS-LISTING: CLAS 3100
RESTRICTION: Students must be beyond the first year of study.

Arts and Social Sciences

ASSC 1000.03: Introduction to Computing for Non-Majors
This course is designed for international students. It aims to discuss the basic elements of culture and society relative to the challenges of academic integration in a Canadian university. Students will reflect on various cultural contexts through readings and activities organized around two salient issues confronting international students: a) the internationalization of Canadian education; and b) the problems and prospects of immigrating to Canada. It will highlight cultural forms such as art, music & dance, literature, sports & film; and succinct discussions of major social institutions like the family, education, religion and state. This aims to enable students to examine critically the similarities and differences across societies and cultures where they face the challenges of social and academic adjustment to a successful learning experience.
FORMAT: Lecture/discussion & tutorial
EXCLUSION: COMP 1000.03; MGMT 1601.03, LIBS 1601.03, COMM 1501.03

ASSC 1040.03: Culture, Society & International Students
This course is designed for international students. It aims to discuss the basic elements of culture and society relative to the challenges of academic integration in a Canadian university. Students will reflect on various cultural contexts through readings and activities organized around two salient issues confronting international students: a) the internationalization of Canadian education; and b) the problems and prospects of immigrating to Canada. It will highlight cultural forms such as art, music & dance, literature, sports & film; and succinct discussions of major social institutions like the family, education, religion and state. This aims to enable students to examine critically the similarities and differences across societies and cultures where they face the challenges of social and academic adjustment to a successful learning experience.
FORMAT: Lecture/discussion & tutorial
EXCLUSION: COMP 1000.03; MGMT 1601.03, LIBS 1601.03, COMM 1501.03

ASSC 1050.03: Foundations for Learning
This course introduces participants to university culture and helps them to enhance academic performance. Course experiences build a practical understanding of the learning process at the university level, enabling students to develop strategies to be more effective learners. Topics include performance expectations, conventions of academic critical reading and writing, research methods, discipline-specific learning strategies, knowledge management, learning communities, self-evaluation methods, and effective use of university resources.
FORMAT: Lecture/seminar
PREREQUISITE: Faculty of Arts and Social Sciences students with 10 credit hours or less; and permission of Assistant Dean (Student Matters).

ASSC 1100.03: Interdisciplinary Issues in Career Development
This course examines theoretical and practical issues in career development. Participating in the portfolio process, students will apply theoretical understandings to experientially based activities. Through assessing personal environmental factors that impact decision-making, students will create a proposed context for viewing their careers. Class content will include principles, theories and practices relating to: the meaning and nature of work, self and identity, career choice and decision-making, issues and strategies in self-assessment, occupational research and the future of work. Special issues will also be considered, such as gender, culture, job loss and the management of a career portfolio. This is a half credit course that is taken as part of a regular degree program.
NOTE: A related course in occupations (OCCU 2000.03) is offered by the School of Occupational Therapy. See Occupational Therapy section and see Section 5 of the Degree Requirements section of this Calendar regarding Arts and Science electives.
FORMAT: Lecture/discussion/tutorial
EXCLUSION: MGMT 1600.03

Students of Arabic and English may continue the translation into Arabic and composition skills. This course offers an overview of the best pieces of the earliest poetry composed in Arabic, with lectures and discussions. A related course in occupations (OCCU 2000.03) is offered by the School of Occupational Therapy. See Occupational Therapy section and see Section 5 of the Degree Requirements section of this Calendar regarding Arts and Science electives.
ASSC 1200.03: First-Year Seminar: Arts & Social Sciences.

This course is a 3-credit Humanities elective for first-year students, offering a chance to explore a particular theme in a small-group format. It is ideal for anyone interested in taking this course, please contact the instructor.

Prerequisite: At least 2 courses at the 2000 level in an arts or social science.

Format: Seminar

ASSC 3100X.Y.06: Communication and Mentoring.

This course examines the fundamental principles of human communication, leadership, mentoring, and group dynamics. Through the application of theory to practice, students will develop communication, leadership, and mentoring skills.

Prerequisite: At least 2 courses at the 2000 level in an arts or social science.

Format: Lecture or seminar

ASSC 3112.03: Writing Theory.

This course provides a range of approaches to writing. Students read widely in rhetoric and composition, participate in ongoing conversations about writing, and heighten their understanding of the composition process.

Prerequisite: At least 2 courses at the 2000 level in an arts or social science.

Format: Lecture/discussion

ASSC 3113.03: Writing Practice.

This course puts writing theory into practice. As part of their class work, students gain valuable experience working as writing tutors and/or assistants editors for an academic journal. The course is ideal for anyone interested in taking this course.

Prerequisite: At least 2 courses at the 2000 level in an arts or social science.

Format: Lecture/discussion

ASSC 3150.03: Intercultural Communication.

In this highly interactive class, students will study and apply key concepts of intercultural communication through the goal of developing an empathic understanding of other cultures and an ability to communicate effectively across cultures. Topics include: Awareness of one’s own culture, verbal and nonverbal elements of communication, hierarchy (“power distance”), collectivism vs individualism, direct/indirect communication styles, conflict management styles.

Prerequisite: At least 2 courses at the 2000 level in an arts or social science.

Format: Lecture, discussion

ASSC 3311.03: Interdisciplinary Special Topics I.

This is an interdisciplinary course that offers a subject in the arts or social science which does not emerge from a particular discipline. The topic will be announced in the year prior to the course being offered.

Prerequisite: At least 2 courses at the 2000 level in an arts or social science.

Format: Lecture or seminar

ASSC 3312.03: Interdisciplinary Special Topics II.

This is an interdisciplinary course that offers a subject in the arts or social science which does not emerge from a particular discipline. The topic will be announced in the year prior to the course being offered.

Prerequisite: At least 2 courses at the 2000 level in an arts or social science.

Format: Seminar
II. Requirements

In addition to the departmental requirements listed below, students must satisfy the requirements outlined in the Degree Requirements section of this calendar (page 129).

BA (15 credit) Minor in Canadian Studies

See requirements for minor in the College of Arts and Science section of this calendar (page 129).

Minor in Canadian Studies

See Minor in the College of Arts and Science section of this calendar (page 129).

BA or BSc (20 credit) Double Major in Canadian Studies

1800 Level

One full credit course in French (a course in an aboriginal language may be substituted, as a transfer credit).

2000 - 4000 level

A minimum of five and a maximum of eight credits of Canadian Studies courses, for a total of a minimum of 10 and a maximum of 14 credits in the two major subjects.

Required:

• CANA 3000.03: Interdisciplinary Approaches to Canadian Themes
• CANA 4000.03: Canadian Studies Senior Seminar
• Further Canadian Studies electives as required. CANA 4001.03: Research Topics in Canadian Studies may count toward this requirement.

BA or BSc (20 credit) Combined Honours in Canadian Studies

1800 Level

One full credit course in French (a course in an aboriginal language may be substituted, as a transfer credit).

2000 - 4000 level

A minimum of five and a maximum of eight credits of Canadian Studies courses, with a minimum of 11 and a maximum of 14 credits beyond the 1000-level in the two honours subjects.

Required:

• CANA 3000.03: Interdisciplinary Approaches to Canadian Themes
• CANA 4000.03: Canadian Studies Senior Seminar
• CANA 4001.03: Research Topics in Canadian Studies
• Further Canadian Studies electives as required.

III. Course Descriptions

NOTE: Not all courses are offered every year. Please consult the current timetable to determine this year’s offerings.

CANA 1100X/Y.06: Halifax and the World.

Walking across the Dalhousie campus while drinking a coffee and talking on your phone connects you to people around the world and to the history and literature of Halifax, Canada and the World in ways that you probably never imagined. Knowing ourselves and understanding our place in the world as Canadians remains an urgent task for students and scholars alike.

Canadian Studies at Dalhousie University has always been based upon a very strong tradition of research and teaching in a wide range of Faculty of Arts and Social Science and Faculty of Science departments and in other associated faculties and professional schools such as the Health Professions, Law, and the King’s School of Journalism. The Dalhousie Canadian Studies Program, with its various options, allows students to deepen their understanding of Canada in an exciting and coherent interdisciplinary context. As a second field of study leading to a Minor, a Double Major or a Combined Honours BA or BSc, it provides the opportunity to enrich and enhance a student’s work on Canadian topics beyond his or her primary departmental home. To this end, Canadian Studies provides both a group of core courses that study Canada from an interdisciplinary perspective, and a long list of electives cross-listed in other departments throughout the University.

Former students of Canadian Studies have found that this interdisciplinary study has been of benefit to them in a wide range of activities and careers including journalism, public service, teaching at all levels, and graduate and professional studies.

The Canadian Studies Program

I. Introduction

Why Canadian Studies at Dalhousie? In this era of globalized exchange, and a growing sense of international citizenship and responsibilities, Canadian Studies programs are enjoying something of a renaissance. Knowing ourselves and understanding our place in the world as Canadians remains an urgent task for students and scholars alike.

Canadian Studies at Dalhousie University has always been based upon a very strong tradition of research and teaching in a wide range of Faculty of Arts and Social Science and Faculty of Science departments and in other associated faculties and professional schools such as the Health Professions, Law, and the King’s School of Journalism. The Dalhousie Canadian Studies Program, with its various options, allows students to deepen their understanding of Canada in an exciting and coherent interdisciplinary context. As a second field of study leading to a Minor, a Double Major or a Combined Honours BA or BSc, it provides the opportunity to enrich and enhance a student’s work on Canadian topics beyond his or her primary departmental home. To this end, Canadian Studies provides both a group of core courses that study Canada from an interdisciplinary perspective, and a long list of electives cross-listed in other departments throughout the University.

Former students of Canadian Studies have found that this interdisciplinary study has been of benefit to them in a wide range of activities and careers including journalism, public service, teaching at all levels, and graduate and professional studies.

II. Requirements

In addition to the departmental requirements listed below, students must satisfy the requirements outlined in the Degree Requirements section of this calendar (page 129).

BA (15 credit) Minor in Canadian Studies

See requirements for minor in the College of Arts and Science section of this calendar (page 129).

Minor in Canadian Studies

See Minor in the College of Arts and Science section of this calendar (page 129).

BA or BSc (20 credit) Double Major in Canadian Studies

1800 Level

One full credit course in French (a course in an aboriginal language may be substituted, as a transfer credit).

2000 - 4000 level

A minimum of five and a maximum of eight credits of Canadian Studies courses, for a total of a minimum of 10 and a maximum of 14 credits in the two major subjects.

Required:

• CANA 3000.03: Interdisciplinary Approaches to Canadian Themes
• CANA 4000.03: Canadian Studies Senior Seminar
• Further Canadian Studies electives as required. CANA 4001.03: Research Topics in Canadian Studies may count toward this requirement.

BA or BSc (20 credit) Combined Honours in Canadian Studies

1800 Level

One full credit course in French (a course in an aboriginal language may be substituted, as a transfer credit).

2000 - 4000 level

A minimum of five and a maximum of eight credits of Canadian Studies courses, with a minimum of 11 and a maximum of 14 credits beyond the 1000-level in the two honours subjects.

Required:

• CANA 3000.03: Interdisciplinary Approaches to Canadian Themes
• CANA 4000.03: Canadian Studies Senior Seminar
• CANA 4001.03: Research Topics in Canadian Studies
• Further Canadian Studies electives as required.

Halifax you re-trace the footsteps of key characters in the history and literature of the city and the world. This half-credit seminar course explores these and other similar connections as well as the ethical questions that they raise about our daily lives. The course will engage you in both hands-on action and academic research to learn about and confront the many connections between our daily lives, our city and the rest of the world.

NOTE: To see the course outline, meet the professors and learn more about the course, see: www.dal.ca/idc

FORMAT: Lecture/seminar/site visits

CANA 1101.03: Halifax in the World.

Walking across the Dalhousie campus while drinking a coffee and talking on your phone connects you to people around the world and to the history and literature of Halifax, Canada and the World in ways that you probably never imagined: your coffee connects you to the peasant farmers in Ethiopia or Guatemala who grew the beans. Your phone call connects you to child soldiers in Africa who fight over coltan – one of the key minerals in cell phones. Your footsteps across campus place you on what was once Mi'kmaq territory and when you walk through Halifax you retrace the footsteps of key characters in the history and literature of the city and the world.

NOTE: To see the course outline, meet the professors and learn more about the course, see: www.dal.ca/idc

FORMAT: Lecture/seminar/site visits

CANA 1100.06: The Idea of Canada: An Introduction.

This course explores an interdisciplinary approach to focused themes in Canadian history and society. Beginning with the premise that a nation is fundamentally a “narration,” it asks: What sorts of stories do Canadians tell about themselves? How is the nation constructed on important texts – novels, poems, films, songs, and political documents – that relate narrative events in Canadian history and society to new, more inclusive, directions for the future? Themes may include, but are not restricted to: First Nation’s history and culture; multiculturalism; wilderness; the, worth, national identity; and foreign policy

NOTE: Credit can only be given for this course if X. Y are completed in consecutive terms and partial credit cannot be given for a single term. 

FORMAT: Lectures/discussion

CANA 3000.03: Interdisciplinary Approaches to Canadian Themes.

This multidisciplinary seminar provides students with the opportunity to consider the structure and content of Canadian society from a variety of academic viewpoints, including the philosophical, historical, political, sociological, geographical, legal and literary. Professors discuss the study of Canada as seen from their different disciplinary perspectives, while the course co-ordinator leads a weekly tutorial.

FORMAT: Seminar

CANA 4000.03: Seminar in Canadian Studies.

The course will explore in depth a single Canadian issue, topic or theme that crosses disciplinary borders. Along with the instructor, cross-appointed faculty from different departments will share their views on the subject. Topics might include: Canada as a maritime nation, or Canadian films. 

NOTE: CANA 4000.03 is also open, as an elective course, to Faculty of Arts and Social Sciences students with an interest in Canadian Studies who may not complete the Canadian-content requirements for the Concentration, minor or joint degree.

FORMAT: Seminar/tutorial

CANA 4001.03: Research Topics in Canadian Studies.

This course will provide students with an opportunity to develop, in close consultation with a faculty member, a topic in Canadian Studies usually growing out of the work done in the seminar CANA 4000.03. Research will culminate in a project that will require two or more meetings with the chosen faculty member and progress meetings of the whole group. It is mandatory for those completing a Combined Honours in Canadian Studies and is highly recommended for those seeking the Emphasis or Double Major in Canadian Studies.

FORMAT: Seminar/tutorial

PREREQUISITE: CANA 4000.03 or permission of the instructor

IV. Canadian Studies Electives

NOTE: Some courses may not be offered every year. Please consult the current timetable to determine if these courses are offered. More detailed information can be obtained from the Canadian Studies office.

In addition to the courses listed below, appropriate courses in other departments may be taken to Canadian Studies credits, with the permission of the instructor concerned and the coordinator.

CANA 1100X/Y.06: Halifax and the World.

This half-credit summer course explores these and other similar connections as well as the ethical questions that they raise about our daily lives.

NOTE: To see the course outline, meet the professors and learn more about the course, see: www.dal.ca/idc

FORMAT: Lecture

CANA 1100X/Y.06: Halifax and the World.

This half-credit summer course explores these and other similar connections as well as the ethical questions that they raise about our daily lives.

NOTE: To see the course outline, meet the professors and learn more about the course, see: www.dal.ca/idc

FORMAT: Lecture

CANA 1100X/Y.06: Halifax and the World.

This half-credit summer course explores these and other similar connections as well as the ethical questions that they raise about our daily lives.

NOTE: To see the course outline, meet the professors and learn more about the course, see: www.dal.ca/idc

FORMAT: Lecture
CANA 2110X/Y.06: Exploring Canadian Society.
This is a course about the nature of Canadian society and how it came to be what it is. It explores the themes of the major agreements and conflicts among Canadians which have been central to our social and economic development since we became a nation. The theme of lectures will include: dilemmas in Canada's relationship with the United States; the future for the English-French relations; the role of the media in politics and social issues; the role of the media in social and economic developments; understanding the changing political power of Western Canada; and the role of the media in social and economic development. The students who have completed this course will gain a better understanding of the social and economic development of Canada and will be able to apply their knowledge to their future careers.

CANA 2111:03: Is there an Atlantic Canada?
This course will examine the historical and contemporary social issues related to the Maritime and Atlantic Provinces. The course will critically question what is meant by “Atlantic Canada” and look at its social, demographic, economic, and cultural trends in relation to the rest of the country. Attention will be given to the role of Acadia, Mi’kmaw, and African Nova Scotians as well as dominant power holders in the construction of Atlantic Canada.

CANA 2115.03: African Canadian Society, Culture, and Resistance.
This course examines African Canadian society and culture from the historical to contemporary period. The course will include a critical view of African Canadians’ life in Canada, and will include readings about the diverse Black communities across Canada. There has been a presence of African peoples in Canada for over 400 years; however, the rich histories of African-Canadian people have often been ignored. This course examines African Canadian society and culture from the historical to contemporary period. Topics will include historical analyses, slavery, patterns of immigration and settlement, family, continental African and diasporic connections, identity, arts and culture, education, employment, justice and the law, the media, diaspora debates, Black struggles and resistance, and African Canadian achievements. The course will be taught from a critical race and gender perspective, and will include readings about the diverse Black communities across Canada. This course will provide an understanding of the challenges faced by African Canadians and will help students understand why sources of unity and disunity have been central to social life in Canada.

CANA 2207.03: Canada’s Origins to 1763.
This course explores Canada’s origins to 1763. It traces the history of First Nations peoples before and after the arrival of Europeans. It addresses themes such as the role of the physical environment; the fur, fish, and timber trades; and the imperial struggle for dominance in North America. While the lectures will outline the major developments in the seventeenth and eighteenth centuries, the tutorials will focus on specific issues, such as the role of treaties in Canadian history. The course climaxes with the Conquest of Quebec and the end of the Seven Years War.

CANA 2208.03: Patriots, Rebels, Refugees: Canada’s roots in the Age of Revolution, 1763 to 1860.
As empires continued their international contest and Britain fought to maintain colonies within North America, old and new inhabitants of what would become Canada also wrestled with questions concerning what would exercise power within their communities and governing bodies. In this course we learn about the revolutionary wars, and at times, conflicting answers to old questions: what did it mean to be a patriot? who and what were they willing to fight for? who and what were they prepared to resist? Immigrants, exiles and the refugees of European and North American wars shaped new homelands, even as the First Nations peoples became refugees within their own lands. In this course we explore the related questions of loyalty and conscience through the diaries and letters of men and women defining their place in a new order.

CANA 2209.03: Making a Nation: Canada, 1860-1929.
This is the story of how British North America was transformed into a distinct nation-state in the twentieth century. We’ll see how a young Canada grappled with geographical, political, and social challenges: acquiring enormous territories amid growing provincial differences, maintaining loyalty to Empire while developing a New World identity; reconciling new and diverse cultural communities, and balancing for war.

CANA 2210.03: Many Canadas: Canada, 1930 to the present.
This course explores the making of Canada, including the shift from imperial to continental and national politics, the rise and transformation of third-party political movements, and the emergence of new ideas about the rights and responsibilities of the liberal individual subject.

PREREQUISITE: FREN 1045X/Y.06 or 1050X/Y.06, or 2000-level Placement Test result, or instructor’s permission

CROSS-LISTING: FREN 2021.03

FORMA T: Lecture/tutorial

CROSS-LISTING: FREN 2021.03

CANA 2203.03: Approches du texte littéraire/Approaches to Literary Texts.
An introduction to the critical reading of a selection of literary texts (various genres and periods) with an emphasis on Quebec literature. The critical analysis of short texts will lead to discussions of the broader nature of recurring images and myths as well as central themes. Strongly recommended for French majors and Honours students.

PREREQUISITE: FREN 1045X/Y.06 or FREN 1050X/Y.06, or 2000-level Placement Test result

CROSS-LISTING: FREN 2203.03

CANA 3106.03: Seminar in Canadian Studies

This multidisciplinary seminar provides students with the opportunity to consider the structure and content of Canadian society form a variety of academic viewpoints, including the philosophical, historical, political, sociological, geographical, and legal and literary. Professors discuss the study of Canada seen from their different disciplinary perspectives, while the course coordinator leads a weekly tutorial.

FORMAT: Seminar

PREREQUISITE: CANA 2000 or other course approved with Instructors/Coordinator approval

CANA 3109.03: Seminar in Canadian Studies

This course explores the stories behind Canada’s distinct regional landscapes. It begins with the idea that each province has a certain identity within the national framework—a “region” landscape—and this identity can be traced to a particular historical relationship with a particular place or environment. By examining the origins of these different landscapes, we can better understand how different geographies shaped both local and national histories, and also the regional tensions and differences with national borders. At the same time, we can appreciate how nature has been understood, used and transformed since the fifteenth century.

FORMAT: Lecture/discussion

CROSS-LISTING: GEOG 3210.03, HIST 3210.03

CANA 3165.03: Issues in the Study of Indigenous Peoples of North America

This seminar is concerned with the historical background of the Naive-European situation in North America and with issues arising from this background. Students will research issues which are significant to themselves and are important to Native groups. Topics covered may vary from year to year, but will normally include a combination of historical issues such as culture change and contemporary issues such as land claims, self-determination and government policy, and social conditions of Natives.

FORMAT: Lecture

PREREQUISITE: One of CANA 1000X/Y.06, 1050X/Y.06, 1100X/Y.06 or 1200X/Y.06

CROSS-LISTING: CANA 3185.03

CANA 3185.03: Issues in the Study of Indigenous Peoples of North America

CROSS-LISTING: CANA 3185.03

CANA 3220.03: Coastal Communities in the North Atlantic

Coastal communities as a social and ecological type are examined as populations, and social structures (territorial, economic, occupational, political) as they have developed in response to particular ecological and social circumstances. Various perspectives which have been applied to coastal communities are examined with regard to the contribution they may make to understanding the dynamics of these communities. The focus is on North Atlantic communities.

FORMAT: Lecture

PREREQUISITE: One of CANA 1000X/Y.06, 1050X/Y.06, 1100X/Y.06 or 1200X/Y.06

CROSS-LISTING: ENVI 5180.03, GEOG 3220.03, CROSS-LISTING: CANA 3185.03

CANA 3223.03: The Caring Society? - Welfare in Canada since 1900

A new sociology of change over the twentieth century in the ways Canadians have dealt with people’s needs, their own or others’, whether for income, housing, personal care, or other matters of survival and well-being. Both private and government forms of welfare provision will be studied, with the overall purpose of understanding why Canada came to have the kind of welfare state it does. Among the topics that may be covered are: changing views on the origins and prevention of dependency; definitions of need; religious and ethnic variations in welfare practices; connections between welfare and women’s lives; charitable fund-raising; promoters and opponents of government social programs; financing the welfare state; gender, race, constitutional, and class issues in welfare.

FORMAT: Lecture/discussion or seminar

CROSS-LISTING: HIST 3220.03, CROSS-LISTING: HIST 3220.03

CANA 3231.03: Modern Canadian Literature

The historical period covered in this course extends from the end of World War I through the decade following World War II, a period during which Canada witnessed the formation of modern literature in English. Varied aesthetic
response to ideas of the modern, the processes and technologies of modernization, and the conditions of social, cultural, economic, and political modernity will be addressed.

PREREQUISITE: ENGL 1000.06; or any two of ENGL 1010.03, 1020.03, 1040.03, 1050.03, 1100.03; or THEA 1000.06; or the King's FYP

CROSS-LISTING: HIST 3249.03
EXCLUSION: HIST 2240.03

CANA 3270.03: Contemporary Canadian Literature.
In this course, a variety of late-twentieth-century and recent Canadian fiction and poetry texts will be studied from such perspectives as the following: postcolonial, postmodern, multicultural. The politics of cultural expressions will be emphasized, as well as the relationship between ethics and aesthetic approaches to literature.

PREREQUISITE: ENGL 1000.06; or any two of ENGL 1010.03, 1020.03, 1040.03, 1050.03, 1100.03; or THEA 1000.06; or the King's FYP

CROSS-LISTING: ENGL 3270.03
EXCLUSION: ENGL 3233.03

CANA 3333.03: News Media and the Courts in Canada.
This course is an introduction to the justice system and the specific laws that govern how journalism do their jobs. The goal is to give students and working journalists an understanding of court structure, legal principles, and criminal and civil procedure. Based on publication, contempt of court, libel law, media access to the courts, confidentiality of sources and other media-law issues will be examined.

The format combines lectures with forum discussions featuring lawyers, prosecutors, judges and other players in the justice system.

PREREQUISITE: JOUR 1001.06 or CANA 2000.06 or permission of the instructor

CROSS-LISTING: JOUR 3333.03

CANA 3568.03: Canada and the World.
This course examines post-World War II Canadian Foreign Policy in two parts: (1) an analysis of "landmark" policy issues; and (2) an investigation of the general factors that help to "explain" the form and content of Canadian foreign policy, with particular reference to the institutions and processes through which policy decisions are made. Issues discussed are likely to include: the "inventories" of peacekeeping; the Mulroney government's involvement in the campaign to end apartheid in South Africa; the negotiation of the North American Free Trade; the politics of immigration and dispersal; and the place of the Arctic in Canada and international relations.

FORMAT: Seminar
PREREQUISITE: Class in international politics, Canadian politics, or Canadian history in the 20th century, or with the permission of the instructor

CROSS-LISTING: POLI 3568.03

CANA 3900.03: CANA 3901.03: La littérature canadienne française/French-Canadian Literature.
In-depth study of a few major works of French-Canadian literature with emphasis on the period from 1945 to the present day. Approved with Canadian Studies.

FORMAT: Lecture/discussion
PREREQUISITE: FREN 2201.03/2202.03

CROSS-LISTING: CANA FREN 3901.03

CANA 3910.03: Études acadiennes/Acadian Studies.
Critical investigation of the historical, socio-cultural, linguistic and literary significance of past and present Acadian writing. Approved with Canadian Studies.

FORMAT: Lecture/discussion
PREREQUISITE: FREN 2201.03/2202.03

CROSS-LISTING: FREN 3910.03

CANA 4300.03: Canadian Healthcare Delivery System.
The course is designed to provide an overview of the healthcare system in Canada, and more specifically in Nova Scotia, where the health reform process will be addressed. Issues specifically at supers, middle management, and administrators and the existing trends in healthcare from a national and provincial perspective will be reviewed. The goal of this course is to provide the student with a snapshot view of the existing healthcare system, its past development, and future direction.

CROSS-LISTING: HESA 4300.03

CANA 4500.03: Canadian Theatre to 1968: Performing the Nation.
Early Canadian theatre offers a fascinating example of a colonized nation's struggle to find its own dynamic voice in the face of powerful outside influences. This seminar course will explore the development of theatre in Canada from its roots in First Nations ritual and performance, to its encounters with British and European models and its eventual search for an independent identity via Little Theatre movement, the Workers' Theatre movement and the Dominion Drama Festival. The course will close with a consideration of the influential Musée Commission and the birth of the Stratford Festival, Canada's first 'world class' theatre. Over the course of the term, special attention will be paid to the development of diverse dramatic traditions in French and English Canada. Drama by representative playwrights will be studied alongside primary sources in Canadian theatre history to give students an integrated perspective on the complex artistic and political debates that helped to determine the character of performance in Canada.

FORMAT: Seminar/discussion
PREREQUISITE: Permission of the instructor

CROSS-LISTING: CANA 4500.03, ENGL 4500.03

CANA 4501.03: Canadian Theatre Since 1968: Interrogating Identities.
This seminar course will examine the ongoing emergence of uniquely Canadian forms of theatre in the years since the Musée Commission asserted the need to foster Canada's native talent. Topics to be considered will include: the controversial role of government subsidy and policy-making in Canadian culture; the differing models offered by the Stratford and Shaw Festivals, by the major regional theatres, and by 'alternate' and independent companies; the contrast between First Nations, English and French-Canadian traditions; and the rise of the current 'Fringe' phenomenon. Drama by representative playwrights will be considered alongside post-colonial theory and primary sources in Canadian theatre history to help students consider what a genuinely 'Canadian' theatre might look like. Above all, the course offers an opportunity to consider the complex relationship between theatre and national identity: who are 'we,' and how might our theatre express or even shape 'us'?

FORMAT: Seminar/discussion
PREREQUISITE: Permission of the instructor

I. Introduction

A minor in Chinese Studies is an excellent interdisciplinary complement to a course of studies at Dalhousie or King's in many area of arts, social sciences, sciences, or other programs. Students will attain a solid foundation for further academic, professional, and personal explorations of this fascinating country, its history, its culture, and its complex relationship to other parts of Asia as well as its role in the international community.

II. Minor Degree Program Requirements

See Minors in the Course of Arts and Science section of this calendar (page 128).

III. Course Descriptions

CHIN 1030X/Y.06: Introduction to Chinese (Mandarin).

This course aims to provide basic competence in understanding and speaking Mandarin and reading Chinese characters. It is for students who have had no exposure to Mandarin or Cantonese. This course fulfills the B.A. language requirement.

NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.

FORMAT: Lecture and lab

EXCLUSION: ASMC/HK 2053X/Y; native speakers of Chinese (any dialect)

CHIN 2030X/Y.06: Intermediate Chinese (Mandarin).

For students with some background in Mandarin Chinese, this course is a continuation of CHIN 1030.06 Introduction to Mandarin. All four language skills—listening and speaking, reading and writing—will be further developed; as well, a broader range of Chinese cultural elements will be introduced.

NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.

EXCLUSION: Native speakers of Chinese (any dialect)

CHIN 2050.03: Chinese Culture.

This course explores the historical and literary backgrounds to modern Chinese culture by looking into different cultural characteristics of Chinese culture, customs, myths, fables, social roles, folk, fashion, dance, language and religion. In order to understand what constitutes Chinese and its transformation, the course also discusses the historical contexts of Chinese diaspora (such as Chinese communities in North America, Taiwan, and Southeast Asia) and Western conceptualizations of Chinese culture in relation to other aspects of social life, i.e. economy and politics. No previous background in Chinese language or culture is required.

FORMAT: Lecture/discussion

PREREQUISITE: None

CHIN 2052.03: East Meets West in Popular Culture.

This course is devoted to examining interactions between “West” and “East” through the study of cross-cultural influences in popular literatures, cinema, music, and comics in Europe, North America, and East Asia.

CROSS-LISTING: CTMP 2052.03

CHIN 2060.03: Chinese and Japanese Religions.

An introduction to the cultural, religious, and philosophical traditions of China and Japan. Topics to be covered include: Classical Confucianism, Neo-Confucianism, Philosophical and Buddhist Taoism, Shinto, Chinese and Japanese Buddhism. The course will also examine the interaction, comparison, and overlap between these traditions.

FORMAT: Lecture/seminar

CROSS-LISTING: RELS 2060.03

CHIN 2070.03: Buddhism.

This course introduces the student to the Buddhist religious tradition, beginning with its origins and early developments in India and followed by a treatment of key themes of world Buddhism such as meditation, devotion, monasticism, and ritual. The course thus exposes students to both Buddhism’s early Indian doctrinal and institutional dimensions, and to aspects of Buddhism as practiced subsequently in China, Japan, and Tibet.

FORMAT: Lecture/seminar

CROSS-LISTING: RELS 2070.03

CHIN 2080.03: The East is Read: Early Modern Conceptions of Asian Thought.

This course explores the historical and literary backgrounds to modern Chinese culture by looking into different cultural characteristics of Chinese culture, customs, myths, fables, social roles, folk, fashion, dance, language and religion. In order to understand what constitutes Chinese and its transformation, the course also discusses the historical contexts of Chinese diaspora (such as Chinese communities in North America, Taiwan, and Southeast Asia) and Western conceptualizations of Chinese culture in relation to other aspects of social life, i.e. economy and politics. No previous background in Chinese language or culture is required.

FORMAT: Lecture/discussion

PREREQUISITE: None

CROSS-LISTING: CTMP 2080.03

CHIN 2290.03: Emerging Giants: The Economic Rise of China and India.

This course examines the economic history, current issues, and future trends of China and India, answering such questions as: What explains China’s and India’s growth? How is climate change affected by this growth? How are global labour markets affected? Must growth lead to rising inequality? Is democracy required for development?

FORMAT: Lecture

PREREQUISITE: A grade of C or better in ECON 1001.03 and ECON 1002.03

CROSS-LISTING: ECONS 2223.03

CHIN 3030X/Y.06: Advanced Chinese (Mandarin).

For students with intermediate-level background in Mandarin Chinese, this course is a continuation of CHIN 2030.06 Intermediate Chinese (Mandarin). The course aims to develop further the four language skills—listening, speaking, reading, and writing. It seeks to enhance the students’ vocabulary in commonly used characters and phrases and provide students with further understanding of Chinese grammar, abilities to read expository and narrative writings, speaking skills to cope with real life situations, writing skills of short essays, as well as further understanding of Chinese culture and society.

NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.

FORMAT: Lecture and lab

EXCLUSION: Native speakers of Chinese (any dialect)

CHIN 3050.03: Topics in Asian Cinema.

Each year will focus on specific topics as explored in the cinema of various Asian countries. Particular attention will be given to how Asian filmmakers employ different cinematic genres in their treatments of diverse aspects of Asian societies and cultures.

FORMAT: Film screening with lecture/discussion

CROSS-LISTING: THEA 3350.03
CHIN 3062.03: Modern Chinese Literature in Revolutionary Times.
A survey of representative works in modern Chinese literature, this course is designed to enhance students' understanding of modern Chinese society and culture through reading works by major Chinese authors from the Republican period, over three decades—1919 to 1949. It was a period of cultural clashes between traditional Chinese culture and Western influences, a time of wars, political and ideological struggles and changes. All readings are in English, as is the language of instruction. A background in Chinese language, culture, and/or literature is encouraged but not required.

FORMAT: Lecture and discussion

CHIN 3080.03: Literature of the Asian Diaspora.
Literature of the Asian Diaspora encompasses literature written in English by writers of Asian descent and heritage. Each year may have a specific focus, such as Asian Canadian and Asian American, Anglo-Asian, or Asian Australian literature. The course will concern itself with what constitutes Asian diasporic literature, its various historical and social contexts, as well as its narrative traditions and innovations.

FORMAT: Lecture/discussion

I. Introduction
Classics is the study of the ancient Greeks and Romans: their myths, mysteries, and, games, their epic, comedies, and tragedies, their languages, arts, and architecture, their religions, philosophies, and sciences. We examine how they constructed their relations to nature, literally created “history”, and discovered how terrible the human is. We learn their magic, blessings, and curses, their politics and laws, their social structures, and ways of making war. We look at their sex lives, how they died, and what they used for money. Classics tells the story of the rise and fall of their empires, and of what has indelibly lasted after imperial military and political forces collapsed. We investigate how what the Greeks and Romans became depended on encounters with the peoples, cultures, philosophies, technologies of war and peace, politics and religions of Egypt and North Africa, of Judea, Lebanon, and Syra, of Arabia and Persia, and of Tuscany and the Eurasian North. And Classics looks at how, out of those same meetings, new religions and philosophies evolved, giving us the literatures, arts, and politics of Greek, Latin, and Arabic Christianities, of Hebrew, Greek, and Arabic Judaisms, and of Islam.

We start from the remotest origins of human history, make a long stop at the “Classical” period, become what some regard as decadent, and go up to the end of the Middle Ages. We are at home in Athens and Rome, in Constantinople and Istanbul, in Carthage, Alexandria and Jerusalem, in Antioch, Damascus, and Baghdad, in Cordoba and Palermo, in Paris, Oxford, Fribourg, and Cologne, and we encamp at Hadrian’s Wall, once the boundary of “civilization”. Languages, chiefly Greek and Latin, are both our pleasure and our necessity, but Classics is much more than the study of languages, it study lays the foundation of self-knowledge.
G. Minor in Ancient History
See Minors in the College of Arts and Science section of this calendar (page 128).

H. Minor in Classical Literature
See Minors in the College of Arts and Science section of this calendar (page 128).

I. Minor in Classics: Ancient Philosophy

J. Minor in Classics: Medieval Philosophy
See Minors in the College of Arts and Science section of this calendar (page 128).

III. Course Descriptions

NOTES:
1. Not all courses are offered every year. Please consult the current timetable or the Classics Department (494-4800) to determine this year’s offerings.
2. The introductory courses, and the more elementary courses in Ancient History and Religion, and Classical Philosophy listed below do not require knowledge of the ancient languages. However, students who plan to do advanced work in any of these areas are advised to begin study of the appropriate languages as early as possible.
3. The Department of Classics offers courses at three levels in Arabic. Descriptions for these courses can be found on page 142 of the calendar.

CLAS 0400.00: Honours Examination
Details available from the department.

PREREQUISITE: CLAS 2700X/Y.06 or CLAS 2800X/Y.06
FORMAL: 'a' Writing Requirement, Lectures plus tutorials

CLAS 1010X/Y.06: Ancient History: God-Kings, Spartans and Caesars.
Consideration of the pre-classical Near Eastern civilizations (Mesopotamian, Egyptian, Hebrew etc.) in the first term is followed in the second by treatment of the civilizations of Greece and Rome. The course concludes with a consideration of the dissolution of Roman Imperial power and the development of the Christian and Islamic cultures. Particular attention will be paid to political, cultural and social history. As the course is intended as an introductory one, no special preparation is expected. There is no foreign language requirement. This course fulfills the first year writing requirement.

NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term. FORMAL: 'a' Writing Requirement, Lectures plus tutorials

An introductory survey of the traditional religious narratives of ancient civilizations including Mesoopotamian, Egyptian, Israel, Greece, and Rome. Of special interest: the function of myth in shaping and expressing a culture's understanding of the divine, the institutionalized human community (religion, the family, government), and the natural world; the interrelationships of the myths of these civilizations; the reception of these traditions in the origins of Christian and Islamic culture. The traditional narratives and their broader cultural contexts will be approached through study of primary sources including epic, tragic, and didactic poetry, hymnography, historiography, philosophy, the visual arts, and architecture. This course fulfills the first year writing requirement.

NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term. FORMAL: 'a' Writing Requirement, lecture plus tutorials

CLAS 1600.03: Sanskrit I.
This course provides students with all the basic tools required for the study of Sanskrit, with a particular emphasis on basic Sanskrit grammar. Students will learn the Devanagari script, several common nominal forms and the basics of the verbal system, as well as develop a competency in basic reading and imitation.

EXCLUSION: CLAS 2100X/Y.06

CLAS 1700X/Y.06: Introductory Ancient Greek.
Begin learning the language of ancient Greek poets and philosophers in this introduction to Ancient Greek, through the study of its basic grammar. The aim of the course is to bring the student by the end of the year to read basic passages of ancient Greek texts.
CLAS 1800X/Y.06: Introductory Latin.
Begins learning the language of the ancient Romans in this introduction to Latin, through study of its basic grammar. The aim of the course is to enable students to read in Latin. NOTE: Students beyond their first year of university study should register under the course code 2810X/Y.06. NOTE: Credit can only be given for one course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.
FORMATE: Lecture
EXCLUSION: CLAS 1801.03 and 1802.03

CLAS 1900X/Y.06: Introductory Classical Hebrew.
An introduction to Classical Hebrew through the study of its basic grammar. The aim of the course is to read texts in Hebrew.
NOTE: Students taking this course must register in both X and Y in consecutive terms; credit will be given only if both are completed consecutively.
FORMATE: Lecture
EXCLUSION: CLAS 1901.03 or 1902.03

CLAS 2024.03: Philosophy and God.
Does god exist? Can God be known? Have a nature? Do evil? Beginning by occupying the same ground in religion, philosophy has asked these questions. Starting with Pythagoras, Empedocles, Plato, Aristotle, Epicurus, and continuing with their pagan Jewish, Christian, and Islamic followers, we shall learn to state the answers of sages and mystics with historical accuracy and to judge their persuasive power.
FORMATE: Lecture/discussion
CROSS-LISTING: RELS 2200

CLAS 2025.03: Nature, the Human, Community and the Divine in the Pre-Modern West.
What is nature? What is the proper relationship between nature and the human being, political community, and divinity? This course will investigate ancient Greek, Roman, Jewish, Christian and Islamic answers to these questions through the study of literature, philosophy, art and architecture of the Pre-Modern West.
FORMATE: Lecture/team-taught
CROSS-LISTING: RELS 2205

CLAS 2026.03: Paganism.
"Pagan" originated as a derogatory Christian designation for ignorant conservative rustics who kept to the pre-Christian religions. We shall look at those religions in their origins, nature, and development in antiquity, their continuations in the Middle Ages and modernity, and their persistence and revival in the contemporary world.
FORMATE: Lecture/discussion
CROSS-LISTING: RELS 2206

CLAS 2027.03: Magic, Religion, and Philosophy.
Reading the Greek Magical Papyri, as well as curse tablets and binding spells from ancient sources, we will explore the interactions of, and relations between, magic, religion, and philosophy in antiquity. The focus will be on both the practical and theoretical aspects of magic in the Greek and Roman worlds.
FORMATE: Lecture
CROSS-LISTING: RELS 2207

CLAS 2100X/Y.06: Gods, Heroes, and Monsters: Ancient Mythology.
An introductory survey of the traditional religious narratives of ancient civilizations including Mesopotamia, Egypt, Israel, Greece, and Rome. Of special interest: the function of myth in shaping and expressing a culture's understanding of the divine, the institutions of human community (religion, the family, government), and the nature of the interrelationships of the myths of those civilizations, the reception of those traditions in the origins of Christian and Islamic culture, the traditional narratives and their broader cultural contexts will be approached through study of primary sources including epic, tragic, and didactic poetry, hymns, oracles, historiographic philosophy, the visual arts, and architecture.
NOTE: Credit can only be given for one course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.
FORMATE: Lecture
PREREQUISITE: Students must be beyond the first year and have completed the writing requirement.
EXCLUSION: CLAS 1800X/Y.06, RELS 1200X/Y.06

CLAS 2209.03: The Roman World from Constantine to Theodosius (312-395).
This course covers one of the most important periods of Roman history in which Christianity became the dominant religion in the empire and foreign peoples threatened the existence of the empire itself. This course is open to first-year students. There is no foreign language requirement.
FORMATE: Seminar
CROSS-LISTING: HIST 2202.03, HIST 2204.03

CLAS 2214.03: The Roots of Greek Civilization: From Crete and Troy to the Rise of Athens.
A history of Archaic Greek culture from the Bronze Age palaces of Crete and Mycenaean through the development of the Greek city-states. Topics to be discussed include prehistory, palaces and shipwrecks, art and archaeology, the world of Homer, poetry, archaic poetry and thought, colonization, and cultural interaction between the Greek world, the Near East, and Egypt. No knowledge of Greek is expected.
FORMATE: Lecture/discussion
PREREQUISITE: Students must be beyond the first year and have completed the writing requirement.

CLAS 2215.03: The Classical Greek World: Athens, Sparta, and a Century of Conflict.
A history of Classical Greek culture from the rise of Athens and Sparta as the dominant Greek city-states to the fall of Athens in the Peloponnesian Wars and the death of Socrates. Topics to be discussed include the rise of democracy, the culture and society of the Athenian "Golden Age", drama, art and architecture, empire building, and the Greeks at war, first with the Persian Empire and then with each other. No knowledge of Greek is expected.
FORMATE: Lecture/discussion
PREREQUISITE: Students must be beyond the first year and have completed the writing requirement.

CLAS 2216.03: Alexander the Great and the Hellenistic Kings: Transforming Ancient East and West.
A history of Late Classical and Hellenistic Greek culture from the end of the Peloponnesian Wars through the empire of Alexander the Great to the Hellenistic World. Topics to be discussed include relations between and among the Greek city-states and the Persian Empire, developments in art, religion, literature, and philosophy, the culture and legacy of Alexander, and the new world order of kings and kingdoms he ushered in. No knowledge of Greek is expected.
FORMATE: Lecture/discussion
PREREQUISITE: Students must be beyond the first year and have completed the writing requirement.

CLAS 2220.03: Ancient Israel.
Students will become familiar with the broad outlines of ancient Israelite history, with specific attention to Israel's relationship to its immediate neighbors and the major imperial powers from the 2nd millennium BCE to first century CE. This will entail an initial survey of biblical texts in order to lay an adequate understanding of ancient Israel's self-conception, followed by a detailed survey of Israel's interaction with other nations, including early Mesopotamia, Egypt, Assyria, Babylonia, Persia, the Seleucid empire, and Rome.
FORMATE: Lecture and seminar presentations
CROSS-LISTING: HIST 2230.03, RELS 2230.03

CLAS 2231.03: The Rise of Rome: Consuls, Classes, and World Conquest.
How did a little village conquer the world? This course follows Rome's gradual expansion across Latium, Italy, and finally the whole Mediterranean. Questionable myths, aggressive rhetoric, barely historic, and political propagandists complement the archaeological record as we trace the development and decline of Republican institutions and the Republic's descent into shattering, civil war. Class tensions, continuous foreign conflict, and still famous figures like Brutus, Cato...
Cicero, and Caesar feature prominently) in this vigorous study of a parapragmatic political and social problem: the destiny of Republican Rome. Students will be expected to familiarize themselves with both primary and secondary materials, but no knowledge of Latin is required. The material covered in this course is continued in CLAS 2232 / HIST 2091.

PREREQUISITE: Prior fulfillment of the writing requirement. CROSS-LISTING: HIST 2091.03

CLAS 2232.03: The Fall of Rome: Caesars, Saints, and Warlords.

Rome did not fall in a day, or even a century. The period of imperial power included Rome's decline. It also includes its greatest power and glory. In this chronological survey of the Roman Empire, we will trace the rise of autocracy, the causes of rare but destructive civil wars, and the transformation of Roman political institutions from Augustus to Diocletian. A lively look at the growth of urban life in the West, at the limits of Roman identity throughout the empire, at the fearful economic and military crisis of the 3rd century, at the adoption of official Christianity, and at the challenges of foreign invasion will lead us to ponder whether the "Decline and Fall" model of Roman imperial history is still valid. Students will be expected to familiarize themselves with both primary and secondary materials, but no knowledge of Latin is required. This course is a continuation of the material covered in CLAS 2231 / HIST 2090 at but that is not a prerequisite. CROSS-LISTING: HIST 2091.03

CLAS 2233.03: Roman Legions and the Barbarians.

This course examines the origins, refinement, and eventual collapse of the Roman military machine. Grand strategy, field tactics, and the analysis of specific battles complement our study of the changing relationship between the army and Roman society and the former's role in building and breaking the political order from 500 BC to 500 AD. FORMATA: Lecture CROSS-LISTING: HIST 2023.03

CLAS 2234.03: Death, Sex, and Gold in the Ancient Roman World.

We will explore ancient Roman beliefs and practices concerning the afterlife, sexuality, the social duties of men and women, marriage, family life, and slavery. We will also examine religious rituals, temples, and markets are just some of the places at which Romans defined, defended, and disdained each other's identities as men, women, and economic players. A journey into other art, always elusive, sometimes altering aspects of the pre-Christian Mediterranean. FORMATA: Lecture/tutorial CROSS-LISTING: HIST 2002.03

CLAS 2281.03: Christian Beginnings: The Orthodox and Oriental Churches.

This course traces the development of Christianity from its origin as a Jewish sect to its status as the dominant religion within the Byzantine Empire. The Christian religion was transformed by the rise of the Roman Emperors identified itself with the persecuted Christian sect of the first three centuries through the call of the martyrs, articulated in the increasing importance of relic, icon, and pilgrimage to holy places. The seven ecumenical councils (325-787) progressively defined the Orthodox faith and resulted in the rise of Oriental churches, rejecting aspects of the definitions. Through use and end-date of 843 (when the icon was finally accepted) themes will be treated by attention to historical events (including the rise of Islam), art, architecture, liturgy, and various genres of literature (including hagiography). FORMATA: Lecture CROSS-LISTING: RELS 2281.03 EXCLUSION: CLAS 3280S/9.06

CLAS 2361.03: Ancient Philosophy: From Thales to Plato.

This course covers the period in Ancient Philosophy from Thales to Plato. Pre-Socratics, Sophists, Middle Socrates, and selected Platonic dialogues. The period from Aristotle to Plotinus is covered in CLAS 2362.03. FORMATA: Lecture CROSS-LISTING: PHIL 2361.03

CLAS 2362.03: Ancient Philosophy: From Aristotle to Plotinus.

This course covers the period in Ancient Philosophy from Aristotle to Plotinus: selected texts of Scientific, Empiricism, Pyrrhonian and Academic Scepticism, Middle Platonism, Neoplatonism. FORMATA: Lecture CROSS-LISTING: PHIL 2362.03

CLAS 2365.03: Plato and the Case of Socrates: Philosophy on Trial.

Socrates (469-399 BCE) never wrote a single word, but posed such thrust to Athens that a jury put him to death for the alleged ethical corruption and impiety of his thought. This course will explore the revolutionary life and thought of Socrates, and consider whether the jury’s decision against him was justified. FORMATA: Lecture CROSS-LISTING: RELS 2365, PHIL 2365

CLAS 2366.03: Gods, Beasts and The Political Animal: Plato, Aristotle, and their Legacy.

We will study some of the most important Platonic dialogues and Aristotelian treatises, to understand the supremely influential views of Plato and Aristotle on diversity, nature, the human, and political community. We will examine the rejection of Platonic-Aristotelian idealism by Stoic, Epicurean and Skeptic schools. Subjects treated include ethics, politics, metaphysics, logic, aesthetics, and psychology. FORMATA: Lecture CROSS-LISTING: RELS 2366, PHIL 2366

CLAS 2515.03: Myth into Film I: The Greek World.

An introduction to classical myth and culture through the medium of film. Cinema has always drawn on different historical periods, yet its connection with the ancient world remains one of the most significant. This course explores cinema’s reconstruction and interpretation of the ancient world, using both ancient and modern sources. FORMATA: Lecture & discussion CROSS-LISTING: RELS 2515.03

CLAS 2600.03: Sanskrit II.

This course develops further the basic grammar and vocabulary of Introductory Sanskrit I, emphasizing the use of Sanskrit in translation of simple Sanskrit texts.

PREREQUISITE: RELS 1600.03 or CLAS 1600.03 CROSS-LISTING: RELS 2600.03

CLAS 2700X/Y.06: Intermediate Greek.

A continuation of CLAS 1700 and the normal second-year course in Greek. The work of the course is divided equally between formal grammar sessions and the reading of Greek texts from Xenophon, Lysias and Plato. In the grammar sessions a complete and systematic review of all Greek grammar is undertaken during which the student meets the more difficult forms and constructions which are omitted in CLAS 1700. The aim of the course is to prepare the student to read the philosophical and dramatic texts of the 5th century BC. NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term. FORMATA: Seminar PREREQUISITE: CLAS 1700X/Y.06 or 2700X/Y.06

CLAS 2710X/Y.06: Greek Prose.

See description under CLAS 1700X/Y.06. Students beyond their first year of university study should register under this course code (2710X/Y), instead of 1700X/Y.06 For additional information, please consult the Classics undergraduate advisor. NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term. FORMATA: Seminar EXCLUSION: CLAS 1700X/Y.06

CLAS 2800X/Y.06: A Study of Latin Prose and Poetry.

A study of the poetry and prose literature of Rome through a selection of texts. Particular attention is paid to improving the students' command of the grammar and syntax of the Latin language. NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term. FORMATA: Seminar PREREQUISITE: CLAS 1800X/Y.06 or 2810X/Y.06

CLAS 3431.03: St. Augustine’s On the Trinity Part 1.
A study of Books 6-7 of Augustine’s De Trinitate, in which he establishes what is the orthodox teaching about God through scripture and a consideration of the categories of substance, relation and act.
FORMAT: Seminar
PREREQUISITE: CLAS 3700X/Y.06 or permission of the instructor
FORMA T: Seminar
CROSS-LISTING: RELS 3431.03

CLAS 3432.03: St. Augustine’s On the Trinity Part 2.
A study of Books 8-15 of Augustine’s De Trinitate, in which he attempts to understand what has been shown in the first 7 books (the orthodox teaching about God through Scripture and a consideration of the categories of substance, relation and act) through the direction of science and speculative thought.
FORMAT: Seminar
CROSS-LISTING: RELS 3432.03

CLAS 3433.03: The Ancient Origins of Political Thought: From Homer to Aristotle.
This course will study the varied beginnings of political thought with Greek poets, historians and educators, culminating in a careful investigation of the political writings of Plato and Aristotle. We will investigate philosophical questions about the origin of the state, the purpose of political community, the different kinds of regimes or constitutions, the common good, individual freedoms, revolution, war, wealth, poverty, and slavery.
FORMAT: Lectures/tutorials
CROSS-LISTING: POLS 3434.03, PHIL 3434.03

CLAS 3500X/Y.06: Aristotle.
This seminar involves the detailed study of either Aristotle’s Metaphysics or De Anima or Physics or political and legal treatises. The choice of texts varies from year to year.
RECOMMENDED: CLAS 2561.03/2562.03
NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.
FORMAT: Seminar
PREREQUISITE: CLAS 3500X/Y.06
CROSS-LISTING: PHIL 3500X/Y.06

CLAS 3501.03: Herodotus: Father of History, Father of Lies.
This course explores the conflicts between Persia and the Greeks as narrated by the "father of history/father of lies" as a story of exotic cultures, dramatic and bizarre events, and the actions of kings, despots, demagogues, warriors (with texts in English translation).
FORMAT: Seminar
CROSS-LISTING: HIST 3501.03

CLAS 3502.03: Thucydides and the Greek World at War.
This course explores the world of warring Greek city-states, alliances and empires, building empires, and rival polities and politicians in the Mediterranean in the 5th Century BC as recounted by Thucydides (in English translation).
FORMAT: Seminar
CROSS-LISTING: HIST 3502.03

CLAS 3503.03: Aristotle.
A careful reading of an Aristotelian treatise, or selections from several treatises. The treatise studied will vary from year to year.
PREREQUISITE: CLAS/PHIL/RELS 2356 or CLAS/PHIL/RELS 2568 or CLAS/PHIL 2561 or CLAS/PHIL 2562, or permission from instructor
FORMA T: Seminar
CROSS-LISTING: HIST 3503.03

CLAS 3515.03: Greek Tragedy.
Greek tragedy was a product of the democratic society of fifth century Athens and played a vital role in the life of the community. This course explores the nature and development of the tragic genre through a study of the plays of Aeschylus, Sophocles, and Euripides in translation. The tragedies are examined as literary works and as reflections of the dramatic and artistic theories of tragedy.
FORMAT: Lectures/discussion
PREREQUISITE: Students must be beyond first year.
EXCLUSION: CLAS 3515.03/06

CLAS 3516.03: Ancient Comedy.
Ancient Comedy ranges from the bawdy and bawdy plays of Old Comedy through the domestic and romantic ‘tragocomedies’ of Euripides to the bawdy-meets-geriatric stories of Greek and Roman New Comedy. This course examines the origins and development of the comic genre in the Greek and Roman world through a study of the plays of Aristophanes, Euripides, Menander, Plautus, and Terence in translation. It considers the nature of comedy and its function within society as well as the basic techniques and conventions of the genre itself. Topics to be studied include the ‘comic hero’, comic stereotyping, types of humor, the relationship between actor & spectator.
FORMAT: Lectures/discussion
PREREQUISITE: Students must be beyond first year.
EXCLUSION: CLAS 3516.03/06

CLAS 3525.03: Ancient Greek Epic.
This course is designed to introduce students to the heroic epics of the Ancient Greek world. Texts are read in translation and will be selected from the works of Hesiod, Homer, and Apollonius of Rhodes. This course will focus on the structure of the heroic epic (etiology/symbolism of the | hero figures), the role of women in the hero’s quest, the hero’s conflict with the divine, the role of the gods in the hero’s life, the role of the goddess in the hero’s quest, and the role of all other figures in the hero’s life.
FORMAT: Lectures/seminar
PREREQUISITE: HIST 2502.03 or 2503.03 or permission of instructor
CROSS-LISTING: HIST 3510.03

CLAS 3526.03: Ancient and Medieval History of the Persianate World.
Please see description for HIST 3511.03 in the History section of this calendar.
FORMAT: Lectures/discussion
PREREQUISITE: HIST 2502.03 or 2503.03 or permission of instructor
CROSS-LISTING: HIST 3511.03

CLAS 3601.03: Arab Caliphs, Turkish Commanders, and Persian Viziers: Islamic History, 750-1200.
A study of Islamic history from the fall of the Umayyad Caliphate in 750 to the fall of the Mongol Empire in 1206. This course will focus on the development of Islamic society and culture, the role of religion in politics and society, the rise of the Islamic Empire, and the impact of the Mongol invasion on the Islamic world.
FORMAT: Seminar
PREREQUISITE: Students must be beyond first year.

FORMAT: Seminar
PREREQUISITE: CLAS 3700X/Y.06

CLAS 3800X/Y.06: Roman Satire.
This course covers the origins and development of Latin satire, the only literary genre native to the Romans. Authors to be studied will typically include Horace, Juvenal, Lucilius and Ennius.
NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.
FORMAT: Seminar
PREREQUISITE: CLAS 3700X/Y.06

CLAS 3810X/Y.06: A Study of Vergil.
A study of the development and importance of Vergil’s basic themes and ideas embodied in the Aeneid. In the first part of the course special attention is given to his early work the Bucolics, where his themes begin to appear, and their development is then followed through the relevant parts of the Georgics. The main part of the course is devoted to the reading and discussions of the chief themes of the Aeneid, especially as they illustrate Roman political, religious and social ideas which have greatly influenced our own beliefs and institutions.
NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.
FORMAT: Seminar
PREREQUISITE: CLAS 3700X/Y.06

A study of selected texts of poetry and prose with an emphasis on the Augustan period. Authors studied may include Virgil, Ovid and Livy, among others. The course is primarily intended to strengthen students’ command of Latin language, but attention is given to literary and historical matters as well.
NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.
FORMAT: Seminar
PREREQUISITE: CLAS 2800X/Y.06

CLAS 3840X/Y.06: Latin Philosophical Texts.
The purpose is to give students experience in reading philosophical Latin. The texts are normally chosen from medieval authors such as Anselm, Aquinas, and Bonaventura.
NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.
FORMAT: Seminar
PREREQUISITE: First-year Latin or its equivalent

CLAS 3841.03: Latin Philosophical Texts: Aquinas.
The purpose of this course is to give students experience in reading philosophical Latin. The texts will be chosen from the works of Aquinas.
FORMAT: Seminar
PREREQUISITE: First-year Latin or its equivalent
EXCLUSION: CLAS 3840X/Y.06

CLAS 3842.03: Latin Philosophical Texts: Anselm and Bonaventura.
The purpose of this course is to give students experience in reading philosophical Latin. The texts will be chosen from the works of Anselm and Bonaventure.
FORMAT: Seminar
PREREQUISITE: First-year Latin or its equivalent
EXCLUSION: CLAS 3840X/Y.06

CLA
CLAS 4018.03: Christian Theology in the Lands of Islam: John of Damascus.
John of Damascus (d. 749) is one of the greatest Christian theologians of the Patristic age. Though he wrote in Greek, he was a Christian Arab (his Arabic name is Mansur ibn Sarjun), who lived under Muslim rule and was employed as a public official in the Umayyad administration in Damascus. The course will focus on his theological works (especially his summa of Christian theology, entitled On the Orthodox Faith, and his three treatises in defence of the icons), their Christian sources, and their Islamic context.

PREREQUISITE: At least one of RELS 1002.03, RELS 2004.03, RELS 2281.03, RELS 2282.03 RELS 3009.03 Foundation Year Program or permission of instructor.

CROSS-LISTING: RELS 4018.03

CLAS 4019.03: Philo Judeaus.
Reconciling Jewish Scripture and Plato, Philo culminates Second Temple Jewish thought and founds the Christian treatment of Scripture. He is the most influential Jewish theologian and presents the High Priest as priest of the cosmos so he is crucial both to understand our past the to carry us into the future.

FORMAT: Seminar

PREREQUISITE: At least one course at the second year or above in CLAS or RELS

CROSS-LISTING: RELS 4019.03

CLAS 4100.03: Reading and Research in Latin Texts.
Advanced reading of a Latin author or genre with attention to secondary literature and the critical reception of the works in question.

FORMAT: Seminar

PREREQUISITE: CLAS 3810X/Y.06 or CLAS 3820X/Y.06, or permission of the instructor.

CLAS 4450X/Y.06: Medieval Interpreters of Aristotle.
The course considers Latin philosophical texts of the Middle Ages. Given alternately with CLAS 4500X/Y.06.

NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.

FORMAT: Seminar

CROSS-LISTING: RELS 4450.06

CLAS 4500X/Y.06: Seminar on Neoplatonism.
The course considers the origins and nature of Greek Neoplatonism. Given alternately with CLAS 4450X/Y.06.

NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.

FORMAT: Seminar

Selected topics from the transition from Classical to Christian culture are studied. Particular attention is paid to the connection between religious innovation and the effect of the new beliefs on literature, art and philosophy.

NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.

FORMAT: Seminar

CROSS-LISTING: CLAS 5530X/Y.06

CLAS 4540.03: Ammianus Marcellinus and his World.
This course approaches the history and culture of the fourth century AD through its most important historian, Ammianus Marcellinus. The course will focus on (but not be limited to) a careful study of Books 14-25 of the Res Gestae, which span the reigns of Ammianus’ hero, Julian the Apostate.

PREREQUISITE: CLAS 3810X/Y.06 or CLAS 3820X/Y.06 or permission of instructor.

CROSS-LISTING: CLAS 5540.03

CLAS 5613.03: Plato.
A careful reading of a selection of Platonic dialogues. The dialogues studied will vary from year to year.

FORMAT: Seminar

CROSS-LISTING: CLAS 5401.03

EXCLUSION: CLAS 5401.03, CLAS 5603.03

CLAS 5817.03: Islamic Philosophy: al-Ghazali.
Abu Hamid al-Ghazali (1058-1111) is one of the greatest Muslim thinkers of all time. This course is an introduction to his thought, focusing on al-Ghazali’s “two-tier” approach to theology – exoteric theology for the masses and esoteric theology for the select few – and on his attitude to Islamic philosophy and Islamic mysticism (Sufism).

I. The Contemporary Studies Program

The world is becoming more diverse and complex, and our assumptions about it are constantly challenged. The Contemporary Studies Program is an attempt to make sense of today's world as a whole by considering the important writers, thinkers and artists of the 19th, 20th and 21st century, both on their own terms and in relation to some of the fundamental themes of our time. The three 'core' courses give students a framework for understanding political, scientific, and aesthetic phenomena in the twentieth century. The non-required courses focus on various aspects of these often contradictory contemporary phenomena.

II. Degree Options

A. Combined Honours

The Contemporary Studies Program offers a Combined Honours B.A program. This program is designed to provide students with a broad and deep understanding of the major issues of our time, as well as to develop critical thinking skills.

1. Completion of either the King's Foundation Year Program (either the three or the four course version) or at least two appropriate first year full courses at Dalhousie.

2. Completion of either the Dalhousie/King's Combined Honours BA degree, interests, and future plans.

4. At the conclusion of an honours program a student's record must show a grade higher than that required in a 15 credit minor or 20 credit major program.

B. Minor in Contemporary Studies

The Contemporary Studies Program offers a Minor in Contemporary Studies. This minor is designed to provide students with a broad understanding of the major issues of our time, as well as to develop critical thinking skills.

1. Completion of either the King's Foundation Year Program (either the three or the four course version) or at least two appropriate first year full courses at Dalhousie.

2. Completion of either the Dalhousie/King's Combined Honours BA degree, interests, and future plans.

4. At the conclusion of an honours program a student's record must show a grade higher than that required in a 15 credit minor or 20 credit major program.

B. Minor in Contemporary Studies

The Minor in Contemporary Studies is designed to provide students with a broad understanding of the major issues of our time, as well as to develop critical thinking skills.

1. Completion of either the King's Foundation Year Program (either the three or the four course version) or at least two appropriate first year full courses at Dalhousie.

2. Completion of either the Dalhousie/King's Combined Honours BA degree, interests, and future plans.

4. At the conclusion of an honours program a student's record must show a grade higher than that required in a 15 credit minor or 20 credit major program.

C. Courses offered at the University of King's College

All courses offered in Contemporary Studies must be taken at King's. Students are encouraged to take at least one course from each of the four listed above-mentioned departments and programs, as well as from the following subjects: Early Modern Studies, and History of Science and Technology. In addition, some professors in the Dalhousie Faculty of Arts and Social Sciences are members of the Contemporary Studies teaching staff and offer courses at King's.

All students must meet the general requirements of the Faculty of Arts and Social Sciences as detailed in the Degree Requirements section of this calendar. Students who are eligible to take an honours degree are urged to apply to the Contemporary Studies Program. Because it is an honours program, the quality of work required is higher than that required in a 15 credit minor or 20 credit major program.

Applications for admission must be made to the Dalhousie department concerned and to the Contemporary Studies Office at King's on forms available from the Registrar at either Dalhousie or King's. Students normally enroll in CTMP 2000X/Y6 (the first "core" course) in their second year, and register for the Combined Honours program in either second or third year. For each individual student the entire degree program, including elective courses, is subject to supervision and approval by the Dalhousie department concerned and by the Director of Contemporary Studies.

All Contemporary Studies Program students are encouraged to acquire competence in languages through appropriate courses which are relevant to their degree, interests, and future plans.

The joint Dalhousie/King's Contemporary Studies program is based on the general requirements that the Dalhousie program outlined above. In a combined honours program, students may obtain this grade in either of them.

4. At the conclusion of an honours program a student's record must show a grade which is additional to the grades taken to complete the required 20 full courses. In a combined honours program, students may obtain this grade in either of the honours subjects. Students fulfilling this requirement in Contemporary Studies submit a research paper and defend it at an oral examination. They must enrol in the non-credit CTMP 4000.00, the Honours Thesis Seminar.

Please Note:

Students may take an Independent Readings course only when they reach their third or fourth year at King's. There are no special requirements for this course, but only one full course or the equivalent may be taken in a year. No more than two full courses of this type may be taken during a CTMP degree. The permission of a member of the teaching staff and the director is necessary in order to take these courses, and their availability is strictly limited.

B. Minor in Contemporary Studies

See Minors in the College of Arts and Science section of this calendar (page 128).

III. Courses offered at the University of King's College

All courses offered in Contemporary Studies require that students have completed at least one year of university study (minimum five full credits) prior to enrolment.
and Derrida criticize and transform structuralist interpretations of subjectivity, consider the way poststructuralist thinkers, such as Barthes, Foucault, Deleuze, French protests of May 1968, when the “students took to the streets.” We will addresses the deep structures of signs, language, political economy, cultural Saussure, Claude Levi-Strauss, Louis Althusser, and Jacques Lacan. Their work We will begin by exploring the work of structuralist thinkers such as Ferdinand de

This course will examine some of the greatest works of modern political theory, literature and philosophy. We will follow the movement in Western culture over the last 200 years from humanism to anti-humanism, and highlight the seemingly endless struggle to realize a positive vision of human freedom and equality.

NOTE: Students taking this course must register in both X and Y in consecutive terms, credit will be given only if both are completed consecutively.

FORMAT: Lecture/tutorial

CTMP 2101.03/CTMP 3011.03/CTMP 4011.03: The Lecture Series.

In some years a lecture series course is offered. Students are allowed to take up to three such courses, one for each year of upper-level study. Each course will consist of six to weekly evening lectures given by specialists from Atlantic Canada and beyond, and a weekly two-hour seminar. The lecturers will offer students reflections on a number of contemporary issues and themes. Each year a different theme will be explored.

FORMAT: Seminar evening lectures EXCLUSION: CTMP 3010.06, CTMP 4010.06

CTMP 2100.03: The Politics of Hope: From Romanticism to Anarchism and Beyond.

A look at the connection between revolutionary politics and utopianism: the course focuses on the history of Romanticism and anarchism, from Fichte to some current radical political theory. German and English and the deadly serious Russian nihilists. Our central concern is the notion of an infinite, all-powerful human freedom.

FORMAT: Lecture/tutorial

CTMP 2101.03: Apocalypse: The Revolutionary Transformation of Politics and Culture.

This course highlights the movement from revolutionary nihilism to various forms of post-revolutionary unity and integration. Beginning with Nietzsche and Dostoevsky, the course discusses how some of the great contemporary thinkers (German, French, British, American) have struggled to put modern evil in the context of a larger good.

FORMAT: Lecture/tutorial

CTMP 2115.03: The Idea of Race in Philosophy, Literature, and Art.

The course focuses on contemporary conceptions and representations of race, and on their relations to culture, history, ideology, science, and everyday lived experience. We will trace the development of the modern idea of race, in relation to European colonialism and to the development of science. We will examine contemporary debates on the concept of race in the works of philosophers, writers, artists, and social activists, considering the interrelations of race, class, and gender.

FORMAT: Lecture/tutorial

CTMP 2121.03: Structuralism and Poststructuralism.

We will begin by exploring the work of structuralist thinkers such as Ferdinand de Saussure, Claude Levi-Strauss, Louis Althusser, and Jacques Lacan. Their work addresses the deep structures of signs, language, political economy, cultural production, and the psychic. Structuralism had some surprising effects, such as the French protests of May 1968, when “the students took to the streets.” We will consider the very postmodernist thinkers, such as Bhabha, Foucault, Deleuze, and Derrida criticise and transform structuralist interpretations of subjectivity, language and the political.
CTMP 2304.03: Semiotics.

Semiotics is a philosophical discipline that studies signs, significations, and signifying systems. Because of its interest in the production of meaning, semiotics is widely applicable and has exercised a major influence on virtually every epistemological development in the second half of the twentieth century, from literary theory to critical theory. Some of its fields of study include linguistics, culture, literature, mass media, theatre, and film. Through the readings of works by de Saussure, Peirce, Morris, Jakobson, Lévi-Strauss, Barthes, Eco, and other scholars, this course will introduce students to the essential terminology and typology of semiotics. Special attention will be paid to the practical uses of semiotics as a critical and analytical tool, as well as to the variety of historical and cultural contexts in which semiotics appears.

FORMAT: Lecture/seminar

CTMP 3113.03: The Vampire: Modernity and the Undead.

Since the emergence of vampire stories in the late sixteenth century, the vampire has served as a complex symbol for forces that derive or challenge modernity. This course will examine the figure of the vampire as it appears in folklore, philosophy, fiction, poetry, film, and television. Throughout the course we will consider the works in their historical and cultural context, considering what changing ideas of the vampire tell us about early modern and contemporary views of death, sexuality, national identity, sexuality, and gender.

FORMAT: Lecture/seminar

EXCLUSION: Former CTMP 4310.06 and former CTMP 2310.06

CTMP 2322.03: The Experience of Others in Philosophy, History and Literature.

This course examines some of the contemporary theories that have addressed the issue of alterity and focuses on social mechanisms of marginalizing “the other.” We will raise questions such as what it means to live with others and to act responsibly in relation with others. The readings include philosophy (Heidegger, Levinas, Kristeva) as well as literature, political theory, and film.

FORMAT: Lecture/seminar

CTMP 2325.03: From the Postmodern to the Extreme Contemporary: 25 years of French Culture in the World.

This course considers the negotiation with post-modernity occurring within French culture and seeks to define what some now call the Extreme Contemporary. A range of texts in English translation will be considered, from philosophy to the novel, from film to poetry, from the visual arts to theatre and the cinema (France).

FORMAT: Lecture/seminar

CTMP 2330.03: Reflections on Death.

The texts in this course consist of literary and philosophical reflections on death, the “permanent and irrevocable cessation of life” (S. Freud). With references to Plato and Hegel, we will consider the ways in which death has been understood as giving meaning and structure to life. The focus will be on contemporary confrontations with “pure negativity” and on different thinkers’ attempts to articulate death as an ontological condition. We will also look at representations of death in contemporary, art, literature, and film.

FORMAT: Lecture/seminar

CTMP 2335.03: The Artist and Society.

A preoccupation of 20th century cultural life has been the relation between the creative artist and society. To what extent should the artist engage in the social and political currents of his time, or retreat into solitude? What responsibility does the artist have to society, or society to the artist? This course will examine various philosophical and artistic treatments of these themes in various social contexts. First, we will consider the question of the artist and society in terms of ancient, early modern, and 18th and 19th century aesthetic ideas. We then turn our attention to a number of 20th century reflections on this theme in such milieus as pre-war Europe, the Weimar Republic, Nazi Germany, post-war Japan, contemporary Canada, and 1970s Britain. The work of such thinkers and artists as Plato, Rousseau, Kant, Wilde, Marx, Mann, Modigliani and the Sex Pistols will be considered mainly through written texts, but also in art forms such as music and film.

FORMAT: Seminar

CTMP 2336.03: East Meets West in Popular Culture.

This course surveys the influence of Friedrich Nietzsche on Western thought and culture, from the middle of the twentieth century to the present day. We will see Nietzscheanism at work in many different schools of thought, from French existentialism and American libertarianism to various forms of contemporary anti-humanism and post-humanism.

FORMAT: Seminar

RESTRICTION: Restricted to students in their 2nd year and above.

RESTRICTION: Restricted to students in their second year and above
CTMP 3130.03: The Thought of Michel Foucault.
Historians and philosopher Michel Foucault (1926-1984) was one of the most
important and controversial thinkers of the twentieth century. He developed an
anti-ideological historical method that was indebted both to Nietzsche's,
"genological" conception of history and to structuralist accounts of language
and culture. With major works on madness, the human sciences, crime
and punishment, and sexuality, Foucault has influenced a wide range of disciplines
from history, philosophy, and literature, to sociology, political science, and law.
His work has also profoundly shaped the fields of gender studies and queer theory.
This course will examine the evolution of Foucault's approach to history, as well
as his highly original ideas about the relationship between knowledge, power, and
the constitution of subjectivity. Considerable attention will be devoted to his work
on the history of sexuality. While our focus will be on Foucault's own writings, we
will also read texts by some of his interlocutors, both critical and sympathetic.
FORMA T: Seminar
CTMP 3135.03: Reconstructing Political Modernity.
This course will examine several interpretations of early modern philosophers by
20th-century authors who are original political thinkers in their own right. These
interpretations have involved as much reconstitution of early modern thought as
faithful scholarly exegesis of the original texts. This course will critically analyze
the radical transformations of modern texts that were undertaken in the making
of these works relevant to social and political questions centuries later.
FORMA T: Seminar

CTMP 3190.03: The Thought of Simone Weil.
Simone Weil (1903-1943), a “genius” of the early 20th century, was a lifelong
student with Jean-Paul Sartre and Simone de Beauvoir. A political activist, she
taught philosophy, then worked for a year on an industrial assembly-line. She
wrote brilliantly on an extraordinary range of topics. She fled the Nazi occupation
of France, but died in London aged 34. This course will read and discuss a
selection of Weil's essays on history, politics, literature, religion, science and
philosophy.
FORMA T: Seminar/tutorial
CTMP 3192.03: The Thought of Ludwig Wittgenstein.
Ludwig Wittgenstein (1889-1951) is one of the most influential philosophers of the
20th century. His extraordinary influence is the result of his teaching
small groups of dedicated students. Published for the most part posthumously, his
writings, too, have made him a philosopher's philosopher. Nevertheless, his
influence has extended well beyond the questions about the foundations of logic
and language which preoccupied him. This course will explore some of
the broader implications of his work, touching on music, art and architecture, on
anthropology and psychology, and on ethics and religion, as well as on his central
contributions to the philosophy of language and mind.
CFMP 3201.03: Science and Religion: Contemporary Perspectives.

This course provides an introduction to the field of film theory and criticism. Students will be introduced to the tools of film analysis and will be asked to apply these tools to a variety of films. The course will focus on the following critical and theoretical methodologies: Classical Film Theory, Auteur Theory, Genre Theory, Semiotics, Psychoanalysis, Feminist Theory, Reception Theory, Star Studies, Critical Race Theory and Queer Theory.

CFMP 3304.03: Through Her Eyes: Women and the Documentary Tradition.

This course will examine the role of women in the field of documentary filmmaking. Women documentary makers have produced extensive bodies of work that challenge many societal assumptions about gender, class, race, the function of political power, sexuality and peace-war. They have worked at every level within the process as directors, cinematographers, editors, sound recordists, producers, writers and fund-raisers. A variety of documentaries made by women from diverse backgrounds will be screened and analyzed along with a close reading of selected critical texts. Students will identify the similarities and differences in subjects, themes, style, aesthetics, and approached to creation, production and distribution.

CFMP 3305.03: Modern Film and the Theory of the Gaze.

This course will examine recent approaches to the aesthetic appreciation of both contemporary and classical cinema. The course will provide an introduction to the field of film theory and criticism. Students will be introduced to the tools of film analysis and will be asked to apply these tools to a variety of films. The course will focus on the following critical and theoretical methodologies: Classical Film Theory, Auteur Theory, Genre Theory, Semiotics, Psychoanalysis, Feminist Theory, Reception Theory, Star Studies, Critical Race Theory and Queer Theory.

CFMP 3321.03: Representations of the Holocaust: Bearing Witness.

At the time when the Holocaust recedes into history, the imperative to “never forget” acquires new urgency. In this course, we focus on various modes of talking about this traumatic historical event. Can horror be accommodated in language? Is there a privileged genre that would reduce the Holocaust to suffering? These and other questions will arise from the examination of eye-witness accounts by camp survivors, excerpts from Holocaust films written in the ghetto, perpetrator testimonies, works by historians, and literary works. The course includes excerpts from films, documentaries, and other video-taped material. Guest speakers will be invited for lectures, recollection, and discussion.

CFMP 3322.03: Representations of the Holocaust : Remembrance.

Representations of the Holocaust: Bearing Witness is not required.

CFMP 3323.03: The Aesthetics of Environments.

This course will examine recent approaches to the aesthetic appreciation of both contemporary and classical cinema. The course will provide an introduction to the field of film theory and criticism. Students will be introduced to the tools of film analysis and will be asked to apply these tools to a variety of films. The course will focus on the following critical and theoretical methodologies: Classical Film Theory, Auteur Theory, Genre Theory, Semiotics, Psychoanalysis, Feminist Theory, Reception Theory, Star Studies, Critical Race Theory and Queer Theory.

CFMP 3324.03: Film Theory.

This course provides an introduction to the field of film theory and criticism. Students will be provided with the tools to interpret films using the following critical and theoretical methodologies: Classical Film Theory, Auteur Theory, Genre Theory, Semiotics, Psychoanalysis, Feminist Theory, Reception Theory, Star Studies, Critical Race Theory and Queer Theory.

CFMP 3325.00: Nature and History.

In this course, we will study texts which help us understand the role of nature in the era after the Enlightenment and consider how these ideas influenced, and were influenced by, developments in scientific thought. The seminar will consider how nature and history are related in idealism, historical materialism and the thinking of the evolutionists, and how this connection is rejected by Nietzsche, Freud and Foucault.

CFMP 3326.03: Film and Literature.

This course will provide an introduction to the field of film theory and criticism. Students will be provided with the tools to interpret films using the following critical and theoretical methodologies: Classical Film Theory, Auteur Theory, Genre Theory, Semiotics, Psychoanalysis, Feminist Theory, Reception Theory, Star Studies, Critical Race Theory and Queer Theory.

CFMP 3327.03: Feminism and Science.

This course will examine recent approaches to the aesthetic appreciation of both contemporary and classical cinema. The course will provide an introduction to the field of film theory and criticism. Students will be introduced to the tools of film analysis and will be asked to apply these tools to a variety of films. The course will focus on the following critical and theoretical methodologies: Classical Film Theory, Auteur Theory, Genre Theory, Semiotics, Psychoanalysis, Feminist Theory, Reception Theory, Star Studies, Critical Race Theory and Queer Theory.

CFMP 3328.03: The Aesthetics of Environments.

This course will examine recent approaches to the aesthetic appreciation of both contemporary and classical cinema. The course will provide an introduction to the field of film theory and criticism. Students will be introduced to the tools of film analysis and will be asked to apply these tools to a variety of films. The course will focus on the following critical and theoretical methodologies: Classical Film Theory, Auteur Theory, Genre Theory, Semiotics, Psychoanalysis, Feminist Theory, Reception Theory, Star Studies, Critical Race Theory and Queer Theory.

CFMP 3329.03: Science and Religion: Contemporary Perspectives.

This course will provide an introduction to the field of film theory and criticism. Students will be provided with the tools to interpret films using the following critical and theoretical methodologies: Classical Film Theory, Auteur Theory, Genre Theory, Semiotics, Psychoanalysis, Feminist Theory, Reception Theory, Star Studies, Critical Race Theory and Queer Theory.

CFMP 3330.03: Modern Film and the Theory of the Gaze.

This course will examine recent approaches to the aesthetic appreciation of both contemporary and classical cinema. The course will provide an introduction to the field of film theory and criticism. Students will be provided with the tools to interpret films using the following critical and theoretical methodologies: Classical Film Theory, Auteur Theory, Genre Theory, Semiotics, Psychoanalysis, Feminist Theory, Reception Theory, Star Studies, Critical Race Theory and Queer Theory.
at the current phenomenon of Holocaust denial, with emphasis on anti-Semitism and white supremacy movements in Canada. Finally, we consider the politics of Holocaust memory in comparative perspectives. The course includes excerpts from film, documents, and other video-taped material, and illustrated lectures on Holocaust art.

CTMP 3340.03: Home and Homelessness.

This course takes the current social problem of homelessness as a starting point for an exploration of the significance of definitions of home and homelessness in the contemporary world. Home is a place of comfort and belonging; it is a domestic setting, a sanctuary and a series of identifications which "place" and maintain individuals. Where I am at home, I feel content with myself. The notion of home is opposed to the legal definitions of the modern condition--a condition of displacement, estrangement, and uncertainty, for example. These definitions have been applied both to psychological conditions and to actual social phenomena of mass displacements, refugees, immigration, and exile. The social imaginary of many historically displaced groups centres around the return to or establishment of a homeland. This course will consider literary and artistic representations of "home," the phenomenology of "homelessness" and of its opposite, the uncertainty (unheimlichkeit), and the stakes that post-war philosophy has in the notion of rootedness, place, and dwelling.

FORMAT: Seminar

CTMP 3345.03: The Theory of the Gift.

Is it possible to give, freely, without expectation of return? That is, can generosity ever really exist? Or are we trapped in a world of exchange in which our actions constantly create some profit to ourselves, whether in this world or the next? The problem of the possibility of generosity and altruism is of central importance to current deliberations about ethics and economics. This seminar will read in two ways through the modern genealogy of the thinking about the gift, beginning with its foundation in anthropological studies of so-called "primitive" economies. It is of some interest that the modern concern with the gift appears in the guise of anthropological and religious studies in which the gift has again come to the fore. The seminar will read in two ways through the modern genealogy of the thinking of the gift, beginning with its foundation in anthropological studies of so-called "primitive" economies. It will begin with the literature of anthropologists and sociologists such as Mary Douglas and Marshall Sahlins, and will place special emphasis on the importance of the gift in the work of Jacques Derrida.

FORMAT: Seminar

CTMP 3350.03: Rewriting Gender.

Recent literature by women, both fiction and literary theory, has widely adopted strategies of re-reading and deconstruction in order to extend feminist views. These explorations have also allowed female authors to question the way in which women's subjectivity has been presented, interpreted, and segmented. This seminar will read in two ways through the modern genealogy of the thinking of the gift, beginning with its foundation in anthropological studies of so-called "primitive" economies. It is of some interest that the modern concern with the gift appears in the guise of anthropological and religious studies in which the gift has again come to the fore. The seminar will read in two ways through the modern genealogy of the thinking of the gift, beginning with its foundation in anthropological studies of so-called "primitive" economies. It will begin with the literature of anthropologists and sociologists such as Mary Douglas and Marshall Sahlins, and will place special emphasis on the importance of the gift in the work of Jacques Derrida.

FORMAT: Seminar

CTMP 3410.03: Studies in Contemporary Social and Political Thought in the 20th Century.

Topics vary each year.

NOTE: No more than two studies courses (one full credit) can be taken for credit towards the Contemporary Studies Program. Students can enrol only once in each course.

FORMAT: Seminar

PREREQUISITE: Students must complete at least two years of university study (minimum 10 full credits) prior to enrollment.

CTMP 3411.03: Studies in Contemporary Science and Technology.

Topics vary each year.

NOTE: No more than two studies courses (one full credit) can be taken for credit towards the Contemporary Studies Program. Students can enrol only once in each course.

FORMAT: Seminar

PREREQUISITE: Students must complete at least two years of university study (minimum 10 full credits) prior to enrollment.

CTMP 3415.03: Studies in Contemporary Aesthetic and Critical Theories.

Topics vary each year.

NOTE: No more than two studies courses (one full credit) can be taken for credit towards the Contemporary Studies Program. Students can enrol only once in each course.

FORMAT: Seminar

PREREQUISITE: Students must complete at least two years of university study (minimum 10 full credits) prior to enrollment.

CTMP 4010.03: Walter Benjamin's Materials.

Following the diversity of Benjamin's own interests--literature, philosophy, architecture--this course will explore the ways in which his texts can accommodate much-debated involvement with Nazism to try to understand the nature and impact of his "turn" from the "early" to the "late" Benjamin. This course will examine the lecture series in the context of Heidegger's other writings at this time and his "turn" from the "early" to the "late" Heidegger. This course will begin with the literary explorations of Dostoevsky and Nietzsche, and then turn to the thought of Nietzsche as the most complex expression of European nihilism. The course will conclude by considering the twentieth-century's most important commentaries on nihilism, Martin Heidegger, in particular, the course will consider Martin Heidegger's set of lectures from the late 1950s that were published as Nietzsche. This set of lectures and the intellectual analyses of Nietzsche's account of European nihilism formed, according to Heidegger's own recounting, a crucial transition in his own thought, the famous "turn" from the "early" to the "late" Heidegger. This course will examine the lecture series in the context of Heidegger's other writings at this time and his much-debated involvement with Nazism to try to understand the nature and impact of his "turn." In all of this the course will be exploring the connections between both a cultural and philosophical understanding of European nihilism and its social and political implications.

FORMAT: Seminar

EXCLUSION: CTMP 4101 for the 2004/2005 academic year only

CTMP 4124.03: Hannah Arendt: Terror, Politics, Thought.

This course we will be examining the trajectory of Hannah Arendt's long path of thinking: from her early political writings (on the state of Israel, on totalitarianism), to the more theoretically ambitious writings of the 1950s and 1960s on action, power, and the question of political space, to her later work on the life of the soul (on thinking, willing, and judging). We will attempt to understand how Arendt's overarching "love of the world" informed her thought at every stage of its development, giving rise to a powerful critique of liberal democracy and preparing the groundwork for a new "post-totalitarian" thinking of the political.

FORMAT: Seminar

EXCLUSION: CTMP 4415.03 in the 2009/2010 academic year only.

RESTRICTION: Restricted to students in their 2nd year and above.

CTMP 4125.03: Home and Homelessness.

This course will take a critical look at the current phenomenon of homelessness, with emphasis on anti-Semitism and white supremacy movements in Canada. Finally, we consider the politics of Holocaust memory in comparative perspectives. The course includes excerpts from film, documents, and other video-taped material, and illustrated lectures on Holocaust art.

CTMP 4000X/Y.06: The Deconstruction of the Tradition.

This course focuses on twentieth-century thinkers and writers who have questioned fundamental concepts of Western philosophy such as identity, selfhood, representation, truth, and origin. What they all have in common is an understanding of life in the world in the 20th Century as dominated by a totalizing model of thinking in favor of pluralistic discourses that can accommodate radical heterogeneity. The recurrent themes of the course are: relations between philosophy and literature, interactions between the philosophical domain of ethics and aesthetics, and visibility for deconstruction for political and cultural praxis. The readings include theoretical texts (Benjamin, Heidegger, Derrida, Irigaray, bell hooks, Butler, Lyotard, Levinas, Agamben, Nancy) and some works of fiction (Kafka, Borges, Camus).

NOTE: Credit only be given for one of the courses X or Y are completed in consecutive terms and partial credit cannot be given for a single term.

FORMAT: Lecture/tutorial

CTMP 4105.03: European Nihilism.

In the latter half of the nineteenth century, a number of European thinkers and writers came to share a profound loss of meaning and significance at work in their culture. The term that was coined to describe this experience was "nihilism." The purpose of this course is to explore the thought of those who gave expression to this new phenomenon. We will begin with the literary explorations of Dostoevsky and Nietzsche, and then turn to the thought of Nietzsche as the most complex expression of European nihilism. The course will conclude by considering the twentieth-century's most important commentaries on nihilism, Martin Heidegger, in particular, the course will consider Martin Heidegger's set of lectures from the late 1950s that were published as Nietzsche. This set of lectures and the intellectual analyses of Nietzsche's account of European nihilism formed, according to Heidegger's own recounting, a crucial transition in his own thought, the famous "turn" from the "early" to the "late" Heidegger. This course will examine the lecture series in the context of Heidegger's other writings at this time and his much-debated involvement with Nazism to try to understand the nature and impact of his "turn." In all of this the course will be exploring the connections between both a cultural and philosophical understanding of European nihilism and its social and political implications.

CTMP 4043.03: Seminar

CTMP 4051.03: Seminar

CTMP 4126.03: Kafka, Schollem, Benjamin: On Law and Crisis in 20th Century Jewish Thought.

In this course, we will attempt to understand how Arendt's overarching "love of the world" informed her thought at every stage of its development, giving rise to a powerful critique of liberal democracy and preparing the groundwork for a new "post-totalitarian" thinking of the political.

FORMAT: Seminar

EXCLUSION: CTMP 4415.03 in the 2009/2010 academic year only.

RESTRICTION: Restricted to students in their 2nd year and above.

This course will be examining the trajectory of Hannah Arendt's long path of thinking:

1. From her early political writings (on the state of Israel, on totalitarianism), to the more theoretically ambitious writings of the 1950s and 1960s on action, power, and the question of political space, to her later work on the life of the soul (on thinking, willing, and judging).

2. We will attempt to understand how Arendt's overarching "love of the world" informed her thought at every stage of its development, giving rise to a powerful critique of liberal democracy and preparing the groundwork for a new "post-totalitarian" thinking of the political.

3. The recurrent themes of the course are: relations between philosophy and literature, interactions between the philosophical domain of ethics and aesthetics, and visibility for deconstruction for political and cultural praxis. The readings include theoretical texts (Benjamin, Heidegger, Derrida, Irigaray, bell hooks, Butler, Lyotard, Levinas, Agamben, Nancy) and some works of fiction (Kafka, Borges, Camus).

4. NOTE: Credit only be given for one of the courses X or Y are completed in consecutive terms and partial credit cannot be given for a single term.
the social symbolic? The modern skepticism about consciousness and conscious

Is psychoanalysis a medical practice, a method of interpretation, or an account of

Psychoanalysis.

CTMP 4300.03: Technologies of Philosophy I: From Techie to Technology.

What does it mean to live in a "technological society"? In a certain sense, technology forms the very ground of what it means to be "modern." We moderns are technological beings. This course will explore the history, structure, and associated problems of our coming to be technological, beginning with technical and instrumental reasoning of Enlightenment and industrial ideology. Post-Enlightenment critiques polarizing around the place of "machine" and alienation in Heidegger's work, and together with "lifeworld" in Martin Heidegger, will then be examined, leading up to the present state of technological discourse. In this course, we shall trace the emergence of the debate by examining the actual historical evolution of technology. Weekly lectures will be devoted to presenting a social and historical background to the development of modern technologies. Student-led seminars will focus on the reading of primary texts in the field.

FORMAT: Seminar/lecture

CTMP 4201.03: Philosophies of Technology II: Questions Concerning Technology.

This topical seminar course will explore in detail the implications of present/contemporary debates concerning the meaning and place of technology. What do we mean by technology? Can there be a philosophy of technology? What are the political and cultural ramifications of the production of technology? Topics will include technological determinism in history, feminist critiques, technology and development, the meaning of expertise, technology, and the "life-world," social-construction vs. actor-network theory, Donna Haraway's concept of cyborg culture and the "modern technological sublime". The course will be introduced in seminar format with particular emphasis placed on the elucidation of historical and contemporary case-studies. Whenever possible, guest lecturers from the "real world" of technology will be invited to participate in class.

FORMAT: Seminar/lecture

CTMP 4301.03: Freud, Lacan and the Critique of Psychoanalysis.

Is psychoanalysis a medical practice, a method of interpretation, or an account of the social symbolic? The modern skepticism about consciousness and conscious

life is most thoroughly social in psychodynamic thought as first developed by Freud and pursued in the work of Jacques Lacan. This course will consider the question of the modern psyche, the nature of symbolic practices in art and literature, and the construction of ideological economies in society. The central question of the course will concern the way in which the individual subject is understood in symbolic practices. The recent attacks on Freud and Foucauldian methodologies will also be considered.

FORMAT: Seminar

CTMP 4302.03: Recent French Feminist Theory.

This course will concentrate on some of feminism's most challenging voices, though it has not emerged from any of the formal feminist movements, in the work of Lyotard and Derrida. Topics and concepts for discussion will include being-in-the-world, the nature of consciousness, the lived body, temporality, the priority of otherness and hermeneutics.

FORMAT: Seminar

CTMP 4150.03: Derrida and Deconstruction.

This course studies Derrida's thought intertextually—from the development of deconstruction, through his innovative exploration of works of art and literature, to his politically reflected late writings on the gift, forgiveness, and hospitality.

FORMAT: Seminar

CTMP 4200.03: Philosophies of Technology II: From Techie to Technology.

I. Early Modern Studies Program

What is the meaning of modernity? What are its origins? Is modernity to be embraced as a source of freedom or rejected as destructive of both nature and humanity? These provocative and challenging questions are addressed in the Early Modern Studies Program (EMSP), which explores the nature of modernity through a study of its origins and development in European culture from the 16th to early 19th centuries, a time of spectacular upheaval.

The joint Dalhousie/King’s Early Modern Studies Program is based on the general approach of the University of Toronto’s Program in Early Modern Studies. The program brings together established departmental offerings in the arts and social sciences at Dalhousie and joins these with Early Modern Studies courses - including a required ‘core’ course - to form a comprehensive degree program. This program is designed so that EMSP students are encouraged to acquire competence in languages through appropriate courses which are relevant to their degree, interests, and future plans.

EMSP students will take an active role in organizing certain events each year, including lectures, debates, and exhibitions.

II. Degree Programs

A. Combined Honours

The departmental offerings within EMSP at Dalhousie include the other honours subject and a number of possible electives. The other honours subject must be selected from the following list of Dalhousie departmental and programs: Canadian Studies, Classics, Creative Writing, English, French, Gender and Women’s Studies, German, History, International Development Studies, Italian Studies, Music, Philosophy, Political Science, Religious Studies, Sociology, and an interdisciplinary course in Anglophone, Hispanic or Slavic Studies. The departmental offerings within EMSP at King’s include the other honours subject or toward one of two minors. EMSP courses are designed so that students who are eligible to take an honours degree should apply to the EMSP and the other department or program concerned as early as possible. All students must meet the requirements of the Faculty of Arts and Sciences as detailed in the Degree Requirement section of this calendar. Because it is an honours program, the quality of work required in it is higher than that required in a 15 credit minor or 20 credit major program.

Applications for admission must be made to the Dalhousie department concerned and to the Early Modern Studies office at King’s on forms available from the Registrar at either Dalhousie or King’s. Students should apply to the program and seek advice on course selection before registering for the second year. If this is not done, it may be necessary to make up some work not previously taken. For each individual student, the entire degree program, including elective courses, is subject to supervision and approval by the Dalhousie department concerned and by a member of the Early Modern Studies teaching staff.

All EMSP students are encouraged to acquire competence in languages through appropriate courses which are relevant to their degree, interests, and future plans.

1. Completion of either the Foundation Year Program (either the three or the four credit version) or at least two appropriate first year full credits at Dalhousie which involve the study of pre-nineteenth century ideas or institutions (that is, Classics, CLAS 1000X/Y.06, CLAS 1001X/Y.06, CLAS 1500X/Y.06, CLAS 1501X/Y.06; History, HIST 1701.03, HIST 1702.03; Music, MUSC 1001X/Y.06, MUSC 1350.03, MUSC 1351.03; Philosophy, PHIL 1000X/Y.06, PHIL 1001X/Y.06; Religious Studies, RELS 1001X/03; Sociology and Social Anthropology, SOOA 1000X/Y.06, SOOA 1001X/03, SOOA 1200X/03; Spanish, SPAH 1001.03, SPAH 1002.03, SPAH 1100X/06; and Mathematics, MATH 1001.03 and MATH 1002.03).

2. A minimum of 11 and a maximum of 14 credits beyond the 1000 level in the two honours subjects, but no more than eight nor fewer than five full credits being in either of them.

3. The three ‘core’ courses in Early Modern Studies: EMSP 2000.06, EMSP 3000.06, EMSP 4000.06.

4. An honours qualifying examination (see Degree Requirement: BA, BSc, Combined Honours (4 year)). Early Modern Studies students may choose to acquire this additional grade in either honours subject. In the Early Modern Studies Program, completion of the Honours Seminar (EMSP 4500.06) fulfills the requirement of the honours qualifying examination; or, with the approval of the director, an honours thesis (in conjunction with EMSP 4505.06) may also serve to fulfill the requirement of the honours qualifying examination.

Students will be eligible to take an ‘Independent Reading’ course only when they reach their third or fourth year. There will be no options for this course, but only one full credit or the equivalent may be taken in any year. No more than two full credits of this type may be taken during an EMSP degree. The permission of a number of the teaching staff and the Director of the program is necessary in order to take one of these courses, and their availability is strictly limited.
A course offered by the EMSP that is also cross-listed to another program or
department must be taken as an EMSP course if it is to count towards the
fulfilment of the normal requirements of no fewer than four credits in each of
the two honour subjects in a combined honours degree in EMSP (see section 2
above).

B. Minor in Early Modern Studies
See Minors in the College of Arts and Science section of this calendar (page 129).

III. Courses Offered at the University of
King's College
All courses in the Early Modern Studies Program require students to have
completed at least one year of university study (minimum five credits) prior to
enrolment. Note: Not all courses are offered every year. Please consult the current
timetable.

Central to what distinguishes modernity from the ages preceding it was the
development of a new conception of self. This course traces the history of the
modern self in its cultural expressions from its beginnings in the Renaissance.
The developing and often diverse explorations of the self in the Early Modern period
will be considered through an examination of the philosophical and literary texts
as well as other aesthetic phenomena. To help provide a sense of what the modern
self implies, continual reference will be made to its relation to social and
economic developments, to a changing perception of gender, to the encounter of
Europe with the non-European world, and to institutional authority, particularly
governmental and ecclesial.
NOTE: Credit can only be given for this course if X and Y are completed in
consecutive terms and partial credit cannot be given for a single term.

PREREQUISITE: Either King's Foundation Year Programme or two first-year
credits at Dalhousie which involve the study of pre-19th century ideas or
institutions

EMSP 2011.03/EMSP 3011.03/EMSP 4011.03: The
Lecture Series.
In some years a lecture series course is offered. Students are allowed to take up to
three such courses, one for each year of upper-level study. Each course will consist
of set bi-weekly evening lectures given by specialists from Atlantic Canada and
beyond and a weekly two-hour seminar. The lectures will offer students
reflections on a number of contemporary issues and themes. Each year a different
theme will be explored.
FORMAT: Seminar/evening lectures
EXCLUSION: CTMP 2010.06, CTMP 3010.06, CTMP 4010.06

EMSP 2210.03: Deconstruction in the Renaissance:
Montaigne's Essays and their legacy.
In this course, we will read Montaigne's Essays at length. We will consider his
relationship to the Ancients, Renaissance humanism, skepticism and how his thinking
evolves throughout the long apprenticeship of the Essays. We will also look at some
of the history of Montaigne's reception by readers such as Shakespeare.

FORMAT: Seminar

EMSP 2220.03: The Voice of Satire: Rabelais, Cervantes,
Voltaire, Satire.
This course will cover several aspects of Early Modern Satire, ranging from
Cervantes' Don Quixote, to Rabelais' Gargantua and Pantagruel, to scathing works
from 1750-1800. This course will consider the important transformation of
satire in the Early Modern period. This course will consider the important transformation
of satire in the Early Modern period. This course will consider the important transformation
of satire in the Early Modern period.

PREREQUISITE: Students must complete 30 credit-hours before registering in
this course

EMSP 2230.03: Picture and Poetry in Early Modern
Culture.
Modern early modern artists and thinkers were fond of the Latin phrase, "sit picturae, 
which means, "as in painting, so in poetry." But Ronsard for example argued that
"poetry and picture are arts of a like nature, and both be busy about matters.
The object is here will be to test the vitality of such a claim with reference to early
modern visual art and literature. Are poets and painters engaged in the same field
of representation? Do they adopt parallel strategies of representation? Do they
interpret and organize social energies in similar ways?

FORMAT: Seminar

EMSP 2240.03: Themes in Early Modern Science,
Metaphysics and Epistemology.
This course covers the period from Descartes through Kant and is structured
around a study of themes in science, epistemology and metaphysics as they
have evolved in this period. Although the themes to be covered may vary somewhat,
within the philosophical and the main ones will be a selection from the following:
- theories of representation, theories of perception, theories of concepts and abstract
- ideas, theories of knowledge and the issue of scepticism (proofs of God and the
- external world), metaphysics and ontology, causality, and doctrines of logic and
- method. What makes the Early Modern period so intellectually fascinating is that
- science, empirical studies and a priori studies, are intertwined. We
- shall look at some points of the controversies that ensued, especially in the area
- of cognitive science, especially in Descartes, but also including physics and
- mathematics, and the contributions of other philosophers of the period.
- The course starts from the premise that the ideas of these philosophers be taken
- seriously as contenders for philosophical truth. Accordingly we will use the
- methods of analytic philosophy, both conceptual analysis and argument
- reconstruction, to bring these theories into the most favourable light, then use
- whatever methods are available to us to critically assess them. The amount
- of reading material will not be large but what there is will be the subject of close
- study. Written assignments, papers, class participation and term tests will be the
- method of evaluation.

FORMAT: Seminar

EMSP 2250.03: The Myth of Modernity in Goethe's
Faust.
The Faust myth can be described as the myth of modernity itself: The idea of
human self-realization and progress are under debate in the story of the German
scho- ler Dr. Faustus who in his pact with the devil transgresses the boundaries that
nature, religion and society imposed on mankind. Unquestionably the most
famous representation of this modern myth is Goethe's Faust. Written over a
period of sixty years (1772-1832), Goethe's Faust breaks the fears of the
original myth to portray the central ambiguities and controversies presented by
the modern age. His Faust is the story of modern man at large, successful,
egotistical, torn, alienated, driven, in search of truth and totality, a man who in the
course of his life becomes spectacularly guilty, and in the end is spectacularly (and
controversially) redeemed. Faust's journey through the world traces major
developments of the Western world from the sixteenth to the early nineteenth
centuries, developments that still shape today's world.

FORMAT: Seminar

EMSP 2260.03: The Philosophes, the Encyclopédie
and Enlightenment Movement.
This course explores the range, depth and commitment of the work of several
leading figures of the eighteenth-century intellectual movement that came to be
known as the Enlightenment. The course will treat the full range of the
political, social, moral and religious ideas, theories of knowledge and the issue of
scepticism (proofs of God and the external world), metaphysics and ontology, causality,
and doctrines of logic and method. What makes the eighteenth-century so intellectually
fascinating is that science, empirical studies and a priori studies, are intertwined. We
shall look at some points of the controversies that ensued, especially in the area of
cognitive science, especially in Kant, but also including physics and mathematics,
and the contributions of other philosophers of the period. The

FORMAT: Seminar

EMSP 2270.03: Endless Romance.
The great medieval genre of romance both ended and metamorphosed in the
Early Modern period. This course will consider the important transformation
of the period by concentrating on two main texts: Spenser's Don Quixote
(Rosen, and Cervantes' Don Quixote). This course will begin by looking at a few
paradigmatic late medieval romances of the fifteenth century, including portions
of Sir Thomas Malory's Le Morte D'Arthur, and the Spanish romance of Mantuano,
Tirant lo blanc. The main texts will then be considered as examples of the
extraordinary reception of the genre, as continuation, elaboration and
adaptation. The course will cover the full scope of the range of texts from
the sixteenth to the eighteenth centuries, in the case of Cervantes, Central themes such as
plot, setting, and style will be considered, though a critical method of examining
the history of meaning of these texts is also required. This course will
There will be a number of readings and talks by historians of literature, Fyte,
Bakhtin, Parkinson. In conclusion, we will briefly consider much later
manifestations of romance, the work of the romantic poets.

FORMAT: Seminar

EMSP 2280.03: The Enlightenment, the
Encyclopédie and Enlightenment Movement.
This course explores the range, depth and commitment of the work of several
leading figures of the eighteenth-century intellectual movement that came to be
known as the Enlightenment. The course will treat the full range of the
transformations of the self in the Early Modern period and the arts of the
romantic movement in the Early Modern period. This course will consider the important transformation
of the period by concentrating on two main texts: Spenser's Don Quixote
(Rosen, and Cervantes' Don Quixote). This course will begin by looking at a few
paradigmatic late medieval romances of the fifteenth century, including portions
of Sir Thomas Malory's Le Morte D'Arthur, and the Spanish romance of Mantuano,
Tirant lo blanc. The main texts will then be considered as examples of the
extraordinary reception of the genre, as continuation, elaboration and
adaptation. The course will cover the full scope of the range of texts from
the sixteenth to the eighteenth centuries, in the case of Cervantes, Central themes such as
plot, setting, and style will be considered, though a critical method of examining
the history of meaning of these texts is also required. This course will

Bakhtin, Parkinson. In conclusion, we will briefly consider much later
manifestations of romance, the work of the romantic poets.

FORMAT: Seminar
EMSP 2280.03: Friedrich Schiller's Historical Drama. 
Feudalism's five historical dramas range over Early Modern Europe from the Hundred Years War to the Thirty Years War, and find settings in medieval Switzerland and France, as well as Counter-Reformation Spain and Elizabethan England. These five plays will be analyzed according to lyrical, theatrical, historical and aesthetic criteria.
FORMAT: Seminar 
CROSS-LISTING: GERM 2280.03

EMSP 2290.03: German Romanticism: From Goethe to Hegel. 
Romanticism begins by overturning conventional literary rules and attitudes. It denounces asceticism towards received religious doctrine and practice. Genuine feeling and political liberation are enhanced by attention to classical antiquity and an emphasis on individuality, especially consciousness against the modern, from Goethe to Hegel. Romanticism manages to eclipse almost everything else.
FORMAT: Seminar 
CROSS-LISTING: GERM 2290.03

EMSP 2310.03: Women and Gender in Early Modern Science. 
This course will explore the roles of women, and questions about women's nature, in the development of Early Modern science. The course will consider several interrelated aspects of scientific culture in the sixteenth, seventeenth, and eighteenth centuries: first, we will look at the place of women in the scientific institutions of the time. Although women were, for the most part, excluded from universities and scientific academies, some women were able to do scientific work through their participation in salons and craft guilds. The second part of the course will look at the contributions of some particular women to the fields of physics, astronomy, botany, and medicine. We will then examine how science interpreted sex and gender. We will pay special attention to the biological sciences and their treatments of sex differences, conception, and generation. We will consider how these biological theories were influenced by, and at the same time used to uphold, various political and social structures. Finally, the course will explore the ways in which gender and nature were portrayed in the broader cultural context. We will, for example, discuss the ways in which women were depicted as scientific and as symbols of science in art and literature.
FORMAT: Lecture/seminar 
CROSS-LISTING: GWS 2310.03, HIST 2310.03

EMSP 2313.03: The Vampire: Modernity and the Undead. 
Since the emergence of vampire stories in the late sixteenth century, the vampire has served as a complex symbol for forces that defy or challenge modernity. This course will examine the figure of the vampire as it appears in folklore, philosophy, fiction, poetry, film, and television. Throughout the course we will consider the works in their historical and cultural context, considering what changing ideas of the vampire can tell us about early modern and contemporary views of death, morality, national identity, sexuality, and gender.
FORMAT: Seminar 
CROSS-LISTING: CTMP 2313.03

EMSP 2320.03: Witchcraft in Early Modern Europe. 
The period of European history from 1500 to 1800 saw the rise of modern science and philosophy. It was also a period in which thousands of witch trials and executions were carried out. This course will seek to understand how these seemingly contradictory developments could have occurred simultaneously. The course will examine changing conceptions of the witch and witchcraft in their historical, intellectual, cultural, religious, and political contexts. Questions that will be addressed include: How did the Renaissance interest in magic influence the Early Modern understanding of witchcraft? What impact did concerns about popular religion have on the witch trials? What continued evidence that someone was a witch? What did Early Modern scientists think about witchcraft? The course will pay special attention to Early Modern accounts of gender and sexuality and their influence on the witch-hunts and witch trials.
FORMAT: Lecture tutorials 
CROSS-LISTING: GWS 2320.03, RELS 2420.03

EMSP 2330.03: Nature Imagined: Literature and Science in Early Modern Europe. 
In 1500, literate Europeans lived in a bounded, geocentric universe. By 1800, the sun had replaced the earth at the center of a limited planetary system stranded in infinite space. These changes prompted Early Modern philosophers, scientists and artists to consider the possibility that the universe might contain a plurality of worlds. This course will explore the ways in which the "plurality" theme was developed in some of the earliest works of science fiction. We will consider this theme as it appears in stories of intergalactic voyages, utopian societies, and encounters with extraterrestrial beings, paying special attention to the ways in which Early Modern writers used these tales to speculate on philosophical, political, and scientific issues.
FORMAT: Lecture/tutorials

EXCLUSION: EMSP 2340.03

EMSP 2350.03: The Body in Early Modern Europe. 
The course will explore how the emergence of the modern self intersected with changing conceptions of the body. We will explore such topics as the rise of Renaissance anatomy, Early Modern perceptions of gender, race, and sexual difference; new explanations of madness and melancholy; monstrous and demonic bodies; representations of the diseased body, and the emergence of the modern ideal of the disciplined body.
FORMAT: Lecture/tutorial 

EMSP 2360.03: Magic, Heresy and Hermeticism: Occult Mentalities in the Scientific Revolution. 
The "Scientific Revolution" is ordinarily construed as the triumph of reason over superstition, of science over oracy. This course argues that the rhetoric of "Enlightenment" conceals a deep continuity between modern science and the occult traditions of the Middle Ages and the Renaissance. The prototypical of the experimental scientist is the Faustian mage. We investigate the role of Hermeticism, magic, and the occult in the scientific revolution and the persistence of these ancient currents in later movements, from German Naturphilosophie to Jungian psychology.
FORMAT: Lecture/tutorial 
CROSS-LISTING: HIST 2360.03, HIST 2990.03

EMSP 2410.03: Imagining the Other: The Portrait of the Non-European World in Early Modern Culture. 
Europeans' encounter with non-European cultures in the early modern period shaped national consciousness, political power, and European self-understanding. Confrontation with non-European societies reinforced hegemonic, reflective, and self-critical aspects of European culture. The course analyzes how writers and artists implicitly engaged in clarifying and criticizing European identity as they came to terms with non-Europeans. The texts and images derive from Portuguese, Italian, Spanish, English, French, and Dutch sources from the late middle ages to the end of the eighteenth century. The contexts include Southeast Asia, India, Africa, North and South America, Polynesia, and purely imaginary settings.
FORMAT: Colloquium 

EMSP 2420.03: Virtue, Vice, and the Commercial Society in Early Modern Literature. 
An important development in Early Modern Europe is the emergence of the commercial society in the seventeenth and eighteenth centuries. The increasing power of the state, the rising middle class, and growing trade within and without Europe were accompanied by significant changes in religious, social, and political thought. The course will consider literary works by authors who grappled with the moral implications of the growth of commercial society in Europe, particularly in England at the beginning of the eighteenth century. The purpose of the course is to explore these complex changes in morality and society through the close examination of texts by authors such as Daniel Defoe, Bernard Mandeville, and Jonathan Swift. These authors sought to understand and to some extent criticize the notion of a society defined by the pursuit of economic success. Furthermore, they employed literary genres such as travel literature and satire to
explore the changing conceptions of virtue and vice in Europe, thus presenting
often ambiguous treatments of commercial society. The theoretical justifications
of commercial society as the thought of Hobbes and Locke will first be considered
for providing a framework for discussion. As well, virtue will be made transparent to
other philosophical and artistic works of the period. Comparisons between the
texts will be emphasized in written assignments and seminar presentations.
FORMAT: Lecture/seminar
EMSP 2430.03: The Pursuit of Happiness in Early
Modern Culture.
A universal preoccupation in early modern European culture, particularly in the
eighteenth century, was that of the measurement of happiness in one's private life and
in society in general. Happiness was seen as the highest good by some thinkers -
as arguably reflected, on a political level, in the American constitution - while
others argued against the identification of happiness with goodness. This course
will examine various literary and philosophical texts in which the pursuit of
happiness in its diverse sense is an important theme. Depictions of the happy life
as well as philosophical and literary critiques of the primacy given to happiness
will be discussed.
FORMAT: Lecture/seminar
EMSP 2440.03: Providence, Progress, Degeneration:
Early Modern Ideas of Historical Transformation.
Against the background of works of both Renaissance historians and seventeenth-
century state-of-nature theorists, eighteenth-century authors developed new
visions of multistaged historical existence. Readings may include selections
from authors such as Vico, Rousseau, Voltaire, Smith, Gibbon, Lessing, Kant, and
Herder.
FORMAT: Lecture/seminar
EMSP 2450.03: The East is Read: Early Modern
Conceptions of Asian Thought.
This course will consider Early Modern European interpretations of key Asian
events, themes, and/or stories as the Protestant Reformation, Shakespearean
dramas, the decline of chivalry in France and Japan, French Absolutism, the wild
child phenomenon, and cross-cultural encounters in the Americas and South
America. The emphasis will be on European interpretations of Asian thought and
what these interpretations reveal about the self-consciousness of European thinkers in the
Early Modern period.
FORMAT: Seminar
CROSS-LISTING: CHIN 2080.03

Modern Stories on Film.
This course is intended to introduce students to the history and culture of
Early Modern Europe.
CROSS-LISTING: HIST 2750.03
EMSP 2470.03: Visions of Renaissance Political
Thought in Film.
Renaissance political thought has been successfully adapted to films set in various
imagined contexts. This course will examine the creative intersections between
the political ideas in Renaissance texts and film adaptations in such settings as
Renaissance England, feudal Japan, and modern-day Britain and the United
States. The films may include such titles as The Godfather I and II, Edward II, Richard III, Ran, Throne of Blood and The Revenuers Tragedy.
FORMAT: Film Screenings and Lecture/Discussion
EMSP 2480.03: The Pirate and Piracy.
This course will examine modern and pre-modern historical, philosophical, and
literary accounts of pirates and piracy. It will also trace ancient and medieval
precursors to these early modern treatments as well as consider later representations—literary
and cinematic—of early modern piracy and implications for contemporary piracy.
FORMAT: Lecture/discussion
CROSS-LISTING: HIST 2750.03
EMSP 3000X/Y.06: The Study of Nature in Early
Modern Europe.
This course provides an overview of the major changes and continuities of
representation of the natural world in the sixteenth, seventeenth and eighteenth
centuries. It seeks to move beyond the idea that the study of nature is incommensurable if isolated from new techniques and technologies and from the philosophical and artistic disciplines, for the development of the study of nature in this period are relative to institutional place and national location, the
principal elements of the social, economic, political and cultural contexts within
which scientists and philosophers of nature worked will be considered. As well, the
aesthetic representations of nature and its study will be a theme throughout the
course.
NOTE: Credit can only be given for this course if X and Y are completed in
consecutive terms and partial credit cannot be given for a single term.
FORMATT: Lectures/tutorials
EMSP 3203.03: Critiques of Modernity.
What is the status of the modern world? Is it a source of freedom and truth or
rather the deconstruction of religion, humanity and nature? The contemporary
period has defined itself in many ways through the critique of modernity. These
critiques have come from an array of perspectives: philosophic, aesthetic,
religious, moral, political. This course will provide a survey of a number of such
critiques seeking to grasp both points of community, disagreement and
development.
FORMAT: Seminar
CROSS-LISTING: CTMP 3103.03
EMSP 3210.03: The Dialectic of Enlightenment I.
In the course of criticizing tradition and integrating the experience of Renaissance
and the Reformation, in early modern thought, the study of modern natural science
and modern political institutions, Early Modern Europeans sought to reconcile
— or often conflict — various essential and fundamental understandings of
Enlightenment. By the end of the eighteenth century, science, morality, and art were seen as different
realities of activity in which questions of truth, justice, and taste could be separately
addressed. In this course, we will consider how the different conceptions of
Enlightenment have informed three major Enlightenment thinkers: Kant, Herder,
and Rousseau.
FORMATT: Seminar
CROSS-LISTING: CTMP 3103.03
EMSP 3213.03: Kant and Radical Evil.
This course will examine the roots of the modern concept of evil in the
late work of Immanuel Kant. Beginning with the traditional, pre-Kantian
concept of evil as a merely negative phenomenon - as a lack or privation of
being - we will trace the emergence of Kant’s radical innovation, the positive
concept of evil as the ineluctably “evil” at the very heart of human freedom.
We will also consider at some length the subsequent career of Kant’s doctrine in
19th and 20th Century thought.
FORMAT: Seminar
CROSS-LISTING: CTMP 3113.03
EXCLUSION: EMSP 3103.03
EMSP 3220.03: The Dialectic of Enlightenment II.
In enlightened European culture, religion, state, and society as well as science,
morality, and art were gradually separated from one another under exclusively
formal points of view, and subjected to a critical reason that took the role of a
supreme judge. By the beginning of the nineteenth century, many European
critics began to question the self-understanding evoked by the principle of critical
reason. This course will consider how Enlightenment’s critical reason moved
European philosophers and theologians, artists and social theorists, to develop and expand their self-
derstanding to the point where Enlightenment became properly defined as the
formal division of culture and make critical judgements in relation to them. Special
attention will be paid to the relationship between Enlightenment and the growing
sense of conflict between religion and secular freedom.

between religion and the demand that the unifying force in culture come from a dialectic reading in the principle of enlightened reason itself.

**FORMAT:** Seminar

**EMSP 3230.03: Impersonations: Theatre, Performance and Identity in Early Modern England.**

In the context of the Ovidian story of the Deity of Love, Pas de deux Miranda explains man’s ability to “transform himself into what he most wills, taking a character from the essence of all those things to which he is most right.” For Pas de deux Miranda, human subjects were distinguished less by preordained identities than by an active ability to fashion and perform new selves. In Early Modern England, the burgeoning commercial theatre became a focal point for cultural debates about the social and ethical ramifications of the performative construction of the self. This course will explore these debates both as they relate to the growth of the professional theatre and in terms of their wider implications for Early Modern English society. We will begin by looking at the roles traditionally played by performance in the affirmation of identities both aristocratic and plebeian. We will then go on to examine a number of plays from the main genres performed in English public theatres between 1590 and 1640. By reading these plays alongside primary sources from conduct manuals to statutes for theatre governance, and from playwrights’ celebrations of their art to Puritans’ attacks on the theatre’s degeneracy, we will explore the huge range of cultural responses to the relationship between performance and identity in a rapidly shifting social order. Special attention will be paid to the interrogations of class, gender, sexuality, and morality implied in these works, and to their far-reaching effect on English society before and after the closure of the public theatres in 1642.

**FORMAT:** Seminar

**EMSP 3240.03: Opera and the Idea of Enlightenment.**

This course explores opera’s emergence and development as a dominant Western art form during and after the Early Modern period. Through close analysis of key works, we will strive to understand how opera’s fusion of music, drama, poetry, and visual spectacle reflected and helped to shape-changing ideals of enlightenment.

**FORMAT:** Screenings/Lecture/Discussion

**EMSP 3250.03: Atheism in Early Modern Europe.**

Although atheism continues to be a source of controversy and debate, one of the most significant features of the modern world is the estrangement to which religious unbelief has become accepted as a morally and intellectually defensible position. This course will seek to understand the rise of modern atheism by examining its origins in the Early Modern world.

**FORMAT:** Lecture/tutorial

**CROSS-LISTING:** REL 3230.03

**EMSP 3310.03: Hidden Worlds: Microscopy in Early Modern Europe.**

Microscopes were introduced into Europe at the beginning of the seventeenth century. In the works of Robert Hooke, the microscope opened up a “new visible World” to the understanding—a strange new landscape populated by vast numbers of new creatures. This course will explore the influence of the microscope and the micro-world that it opened up, in the development of Early Modern science. In the first part of the course, we will take a close look at early microscopy technology and its evolution in the seventeenth, eighteenth, and early nineteenth centuries. The second part of the course will explore the role of the microscope in the evolution of Early Modern science. We will, for example, consider the central role of microscopy in the emergence of the new mechanical philosophy and the new experimental science. We will also discuss the histories of some scientific theorists (for example, of recognition and generation) that made particular use of observations made with microscopes. Finally, the microscope’s revelation of “new worlds” raised conceptual difficulties that puzzled scientists and philosophers alike. In the final part of the course we will consider the challenges that new kinds of experience raised for Early Modern philosophy, as well as the possible influence of philosophical debates on the acceptance of the new technology.

**FORMAT:** Seminar

**CROSS-LISTING:** HSTC 3300.03

**EMSP 3321.03: In Search of the Philosopher’s Stone: The History of European Alchemy.**

This course traces the development of alchemical theories and practices in the Medieval Latin West up to the emergence of early modern chemistry. It employs a multi-disciplinary approach which treats the scientific, technological, artistic and iconographic dimensions of alchemy as interdependent. The entire development of European alchemy is covered from the transmission of the Greek and Islamic alchemical traditions in the 12th century up to Newton, whose alchemical theories represent a point of transition to early modern chemistry in one direction, and to a more spiritualized occult philosophy in the other.

This course is independent of HSTC 3210.03. All students interested in the intersections of science, magic and mysticism are welcome.

**CROSS-LISTING:** HSTC 3300.03, HIST 3121.03

**EMSP 3330.03: Science and Religion: Historical Perspectives.**

Beginning with an overview of the history and methodology of the study of science and religion, encounters between science and religion are traced from the dawn of civilization to the end of the eighteenth century, with a special focus on the Early Modern period. From an examination of the biblical view of nature and ancient Babylonian astrology and divination, this course moves through a treatment of the centrality of theology to medieval science on to natural theology and the “Watchmaker” Design Argument of the seventeenth and eighteenth centuries. Models of conflict, harmony and complementarity opposed to characterizations between science and religion are explored through case studies such as Galileo’s controversy with the Church and instances where religious belief inspired scientists like Boyle and Newton. Claims that certain confessional traditions (notably Protestantism and its dissenting offshoots) facilitated the rise of modern science are also appraised. Science-religion relations are examined both from the standpoint of mainstream religion and with respect to religious heterodoxy, prophecy, alchemy, magic, and witchcraft. This course employs examples from Jewish and Islamic cultures in addition to the Judaeo-Christian tradition. Special features include a focus on primary texts and guest lectures by scientists.

**FORMAT:** Seminar

**CROSS-LISTING:** HSTC 3200.03, HST 3073.03

**EMSP 3340.03: Knowledge is Power: Francis Bacon and the Birth of Modernity.**

Modern western culture draws close connections between three facets of human experience: a) our knowledge of nature; b) our visions of what it is to be human; and c) power, or the political, social, and technological means by which we relate to the first two: nature and human nature. The Renaissance period (roughly 1400-1650) was highly influential in laying the foundations for modernity as we know it—scientifically, politically, religiously, socially, and culturally. This course will examine both sides of this development, with an emphasis on Baconian thought.

**FORMAT:** Seminar

**CROSS-LISTING:** HSTC 3200.03

**EMSP 3420.03: Religious Warfare and Political Theology in the Early Modern Period.**

The sixteenth and seventeenth centuries in Europe witnessed tremendous upheavals in society, in part caused by religiously based strife. Many thinkers responded to these events by formulating “political theologies,” i.e., interpretations of religious teachings especially as contained in scripture with a view to assessing the political consequences of religion and to harmonizing religious interpretations with a particular conception of political life. We shall examine various Continental European and British texts of the Early Modern period which are both timely and thoughtful reflections on Christian teachings as they relate to and sometimes conflict with the philosophical underpinnings of the modern state and religious freedom.

**FORMAT:** Seminar

**CROSS-LISTING:** REL 3016.03, REL 3017.03

**EMSP 3430.03: Theories of Punishment: Retribution and Social Control in Early Modern Thought.**

Among the distinctive characteristics of the Early Modern period are our new conceptions of retribution and social control. In this course, we shall examine a number of texts which reflect the diversity of philosophical and theological approaches to law and punishments, both human and divine. We begin with a consideration of pre-modern and non-Western approaches to these issues. We then explore the various Early Modern reactions to and departures from these approaches, including the writings of Protestant thinkers and political philosophers before, during, and after the Enlightenment. Finally, we shall consider Foucault’s “normalization thesis” to see if it illuminates our understanding of Early Modern thought on punishment.

**FORMAT:** Seminar

172 Early Modern Studies Program
In this course, students will explore a focused topic in an interdisciplinary context. Topics vary each year. Some of the topics are "The Quarrel of the Ancients and Moderns", "The Status of the Artist in Society", and "Storm and Stress".

Note: Not more than one of each course number can be taken for credit towards the Early Modern Studies program.

**EMSP 3440.03: Reconstructing Political Modernity.**

This course will examine several interpretations of Early Modern philosophers by twentieth-century authors who are original political thinkers in their own right. These interpretations have involved as much reconstruction of Early Modern thought as helpful scholarly commentary. Indeed, they sometimes shed more light on the interpreter than the thinkers being interpreted. Thus, we shall critically analyze the radical transformations of Early Modern texts that were undertaken in order to make these works relevant to social and political questions centuries later.

**FORMAT:** Seminar

**Prerequisites:** One of: CTMP 2000.06, CTMP 2100.03, CTMP 3100.03, EMSP 3200.06, EMSP 3400.03, EMSP 3420.03, EMSP 3510.03, EMSP 3630.03, PHIL 2210.03, PHIL 2220.03, POLI 2400.03, POLI 2401.03, POLI 2402.03, or instructor's permission.

**Cross-listing:** CTMP 3110.03

**EMSP 3450.03: Common Tragedy: Catastrophe, Loss and Ambition in Early Modern Europe.**

Modern consciousness can be defined by new visions of death, loss and ambition. As modernity emerges and "infinitism", so do writings on catastrophe. Writings from the cataclysmic fourteenth - century, the seventeenth - century plagues, and the 1755 Lisbon earthquake provide insight into shifts and continuities between late medieval and modern senses of the self.

**Format:** Lecture

**Exclusion:** EMSP 3600.03 for the 2006/07 academic year only

**EMSP 3510X/03/3511.03/3515X/Y.06/4510.03/4511.03/4515X/Y.06:** Independent Readings in Early Modern Studies.

In a reading course the student is assigned to a member of staff for regular meetings to discuss readings in a selected area. Papers and research projects are expected. Only one full credit or the equivalent may be taken in a year. No more than two full credits of this type may be taken during the course of study. Note: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.

**Format:** Individual instruction

**Prerequisites:** Honours registration in Early Modern Studies, permission of the instructor and the Director of the Programme. Restricted to students in 3rd year and above.

**EMSP 3610.03: Studies in Early Modern Subjectivities.**

In this course, students will explore a focused topic in an interdisciplinary context. Topics vary each year. Some of the topics are "Empirical Selves and Transcendental Selves in German Idealism", "Freedom and Necessity in Enlightenment Difference", "The Self in Portraiture and the Visual Arts", and "Reformation and Subjectivity in Early Modern Thought".

Note: Not more than one of each course number can be taken for credit towards the Early Modern Studies Program.

**Format:** Seminar

**EMSP 3620.03: Studies in Early Modern Natural Philosophy.**

In this course, students will explore a focused topic in an interdisciplinary context. Topics vary each year. Some of the topics are "Teleology and Early Modern Natural Philosophy", "Mathematics and Metaphysics in the Seventeenth Century".

Note: Not more than one of each course number can be taken for credit towards the Early Modern Studies Program.

**EMSP 3630.03: Studies in Early Modern Social and Political Thought.**

In this course, students will explore a focused topic in an interdisciplinary context. Topics vary each year. Some of the topics are "Nature of Nature in Early Modern Political Thought", "The Seventeenth-Century Discovery of Sovereignty", "The Concept of the State", and "Apocalyptic Thought in the Early Modern Period".

Note: Not more than one of each course number can be taken for credit towards the Early Modern Studies Program.

**Format:** Lecture/discussion

**EMSP 3640.03: Studies in Early Modern Aesthetics.**

In this course, students will explore a focused topic in an interdisciplinary context. Topics vary each year. Some of the topics are "The Quarrel of the Ancients and Moderns", "The Status of the Artist in Society", and "Storm and Stress".

Note: Not more than one of each course number can be taken for credit towards the Early Modern Studies Program.

**FORMAT:** Lecture/discussion

**EMSP 4000X/Y.06: Conceptions of State, Society, and Revolution in the Early Modern Period.**

This course involves close examination of political works by important and influential writers from the sixteenth to early nineteenth centuries. These writers reflected on historical changes and events in their day - including the discovery of Italy, the Protestant Reformation, the English civil war, the Glorious Revolution, the rise of bourgeois society, the French Revolution, and the Napoleonic wars - and sometimes formulated complex and sophisticated accounts of human society, sometimes to provide for social and political stability, sometimes to promote freedom and justice. We shall trace the development of their ideas, from philosophical and literary investigations into human nature and contractual theories of society to considerations on political life in relation to philosophy of history. Assigned texts will include works by such authors as Machiavelli, Shakespeare, Hobbes, Milton, Locke, Swift, Montesquieu, Rousseau, Lessing, Goethe, Kant, Burke, Weimar Classicists, Schiller, and Hegel.

Note: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.

**Format:** Seminar

**EMSP 4300.03: Nature and Romanticism.**

Kant’s “Copernican Revolution” in philosophy, ironically, marked a resurrection of a full-blown “idealist” philosophy of nature. This course will investigate the attempts of Kant’s followers to construct a natural philosophy and its engagement with the rival mechanical world-picture. It explores the implications of this endeavour for the growth of romanticism, and our modern picture of “nature.” It begins with an examination of the ambiguous heritage presented by Kant’s writings on nature and proceeds through the attempts to develop a complete program of idealist Natural Philosophy and its spread throughout European thought by the medium of romanticist art and natural philosophy.

**Format:** Lecture/tutorial

**Cross-listing:** HSTC 4300.03

**EMSP 4310.03: Newton and Newtonianism.**

This seminar involves a close study of the work of Isaac Newton, along with that of his supporters and detractors. Beginning with an overview of pre-Newtonian science, topics range from Newton’s rejection of Cartesianism through his contributions to mathematics, physics, astronomy and optics, along with his inductive scientific method, laws of motion, and calculus priority dispute with Leibniz. Also considered are lesser-known aspects of his career, such as his secretive pursuit of alchemy, his heretical theology, his attempts to unravel the Apocalypse, his role in British statecraft, and his autocratic rule of the Royal Society. A taxonomy of the forms of Newtonianism that emerged after Newton’s death also allows an exploration of iconographical and apologetic uses of Newton, and his differing legacies in the Britain and France. This seminar concentrates on primary readings, including Newton’s Principia (1687), Opticks (1704), alchemical treatises and unpublished theological papers, as well as the Leibnitz-Clarke correspondence (1717), anti-Newtonianisms and eighteenth-century popularizations of Newtonianism such as Voltaire’s Philosophical Letters (1731) and Machiavelli’s Account of the Sciences (1770). Attention is paid to the social, cultural, and political aspects of Newtonianism and no prior knowledge of science is required.

**Format:** Seminar

**Cross-listing:** HSTC 4490.03

**EMSP 4500X/Y.06: Honours Seminar in Early Modern Studies: The Development of Aesthetic Theory in the Early Modern Period.**

While the arts have been a topic of theoretical concern since antiquity, it is only in the Early Modern period that aesthetics emerged as an independent field of inquiry. This seminar will consider how the various understandings of the arts with which the Early Modern period began developed into the independent field of aesthetics. Throughout the course, art and literature of the period will be studied in conjunction with theoretical texts. This course may be designated as fulfilling the honours qualifying examination requirements for an EMSP Combined Honours BA (see section 6 of Degree Programs in Early Modern Studies Program 173
Program above). Students are also welcome to take this course as an elective with the permission of the instructor.

NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.

FORMA T: Seminar
PREREQUISITE: Honours registration in Early Modern Studies or permission of the instructor.

EMSP 4550X/Y:06: Honours Thesis in Early Modern Studies: Reading and Research.
In this course the student is assigned to a member of staff for regular meetings to discuss readings and present research for the purpose of completing an honour thesis in Early Modern Studies.

NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.

FORMA T: Individual instruction

EMSP 4610.03: Special Topics in Early Modern Subjectivities.
The Special Topics courses focus on one author or one particular school of thought in an interdisciplinary context. Topics vary each year. Some of the topics are "Montaigne", "Interactivity in Shakespeare", and "Jansenism and the Self".

NOTE: Not more than one of each course number can be taken for credit towards the Early Modern Studies Program.

EMSP 4620.03: Special Topics in Early Modern Natural Philosophy.
The Special Topics courses focus on one author or one particular school of thought in an interdisciplinary context. Topics vary each year. Some of the topics are "Leibniz", "Goethe's Natural Science", and "Experimentalism".

NOTE: Not more than one of each course number can be taken for credit towards the Early Modern Studies Program.

EMSP 4630.03: Special Topics in Early Modern Social and Political Thought.
The Special Topics courses focus on one author or one particular school of thought in an interdisciplinary context. Topics vary each year. Some of the topics are "Hobbes", "Muchness and Reason of State Theories", and "Milton and Early Modern Political Theory".

NOTE: Not more than one of each course number can be taken for credit towards the Early Modern Studies Program.

EMSP 4640.03: Special Topics in Early Modern Aesthetics.
The Special Topics courses focus on one author or one particular school of thought in an interdisciplinary context. Topics vary each year. Some of the topics are "Sterne and British Empiricism", "Romanticism as a European Phenomenon", and "Hegel's Aesthetics".

NOTE: Not more than one of each course number can be taken for credit towards the Early Modern Studies Program.

Senior Instructor
Choyce, L., BA (Rutgers), MA (Mountclair), MA (CUNY)
I. Introduction
The study of English includes both an analysis of texts and awareness of content. The texts provide an analysis of various English courses will range from the traditional to the contemporary. English is a discipline which can and does adjust to include writings by Simonsway, Timothee, Tsin, Morrison, and Charles Ascher alongside works by Unacc, Shakespeare, Milton, Susan, and the rest. The wide range of human experience represented in these texts can provide the student with what Kenneth Burke has called “equipment for living.” To more practical terms, the discipline of English fosters the development of various human skills. It requires the student to think, and to use language with clarity, judgment, and imagination.

But individual works of literature are also related in various ways to their social, cultural, and political contexts. For this reason, curiosity about a particular text often leads to inquiries that touch upon history, philosophy, politics, religion, biography, and the fine arts as well. The written text turns out to be a link between an individual’s sensibility and the rest of the world. The value of English studies, therefore, though difficult to measure, can be discovered both in the large semiotics of the cultures to which we belong, and in the smallest nuances of the language we use.

The calendar descriptions below describe all English courses. Not all are offered in any given year. Students should consult the English Department website for updated information about which courses are offered this year, and to get detailed descriptions of courses (with booklists). There is a variety of first-year (1000-level) English courses to suit all inclinations and needs, and all sections with a number ending in -0 can be used to fulfill the University Writing Requirement. Once the first year is complete, students may register in any course at the 2000 or 3000 level, but should ensure that they have the necessary prerequisites (most courses require a full credit in English at the 1000 level, or else Theatre 1000 or King’s Foundation Year, but a few are open to anyone with a Writing Requirement course in any discipline). The wide-ranging 2000-level courses are well suited to those comprising in their English, or studying it as a complement to their main area, or taking it as an elective. The smaller and more historically-focused 3000 courses are also open to both majors and non-majors.

More intensive seminars at the 4000 level are mainly intended for students in their third and fourth years of an English Majors or Honours program. Two of the half-credit courses (2001, 2003, 2004, 2005, 2006) and one of the half-credit theory courses (1000, 3001, 3002) are required of all English Majors and MajorsHonours students. Among the English Majors and MajorsHonours programs, these six to nine credits, they must take the following:

1. at least one of 3000.03, 3001.03 or 3002.03
2. at least one (half credit) of the six 2000 level surveys (ENGL 2001.03, 2002.03, 2003.03, 2004.03, 2005.03, 2006.03)
3. at least one full credit in each of the following two groups:
   a) Old English, Middle English, Renaissance (ENGL 2018.03, 2020.03, 2022.03, 3005.03, 3007.06, 3008.03, 3010.03, 3011.03, 3015.03)
   b) Restoration, Eighteenth-Century, Romantic, Victorian, American (pre 1914) (ENGL 3017.03, 3019.03, 3020.03, 3022.03, 3025.06, 3029.03, 3031.03, 3032.03, 3040.03, 3041.03, 3042.03)
4. 4990/4995 English Honours Capstone (for students weighing their programs towards English)
5. nine credits (or three half credits) at the 4000 level

To be considered for the Honours program, students must attain a 3.3 average GPA in upper-level English courses, and apply to the English Department Chair.

C. BA (20 credit) Major in English
Students must meet the faculty requirements, which include six to nine credits in English above the 1000 level, including three credits above the 2000 level, within these six to nine credits, they must take the following:

1. at least one of 3000.03, 3001.03 or 3002.03
2. at least one (half credit) of the six 2000 level surveys (ENGL 2001.03, 2002.03, 2003.03, 2004.03, 2005.03, 2006.03)
3. at least one full credit in each of the following two groups:
   a) Old English, Middle English, Renaissance (ENGL 2018.03, 2020.03, 2022.03, 3005.03, 3007.06, 3008.03, 3010.03, 3011.03, 3015.03)
   b) Restoration, Eighteenth-Century, Romantic, Victorian, American (pre 1914) (ENGL 3017.03, 3019.03, 3020.03, 3022.03, 3025.06, 3029.03, 3031.03, 3032.03, 3040.03, 3041.03, 3042.03)
4. 4990/4995 English Honours Capstone (for students weighing their programs towards English)
5. nine credits hours (or three half credits) at the 4000 level

To be considered for the Honours program, students must attain a 3.3 average GPA in upper-level English courses, and apply to the English Department Chair.

D. Double Major
Students must meet the requirements for the double major, which include 10 - 14 credits in each of the Major subjects above the 1000 level, including three credits above the 2000 level in each subject. Among their English courses, students must take:

1. at least one of 3000.03, 3001.03 or 3002.03
2. at least one (half credit) of the six 2000 level surveys (ENGL 2001.03, 2002.03, 2003.03, 2004.03, 2005.03, 2006.03)
3. at least three credits (or one half credit) in each of the following two groups:
   a) Old English, Middle English, Renaissance (ENGL 2018.03, 2020.03, 2022.03, 3005.03, 3007.06, 3008.03, 3010.03, 3011.03, 3015.03)
   b) Restoration, Eighteenth-Century, Romantic, Victorian, American (pre 1914) (ENGL 3017.03, 3019.03, 3020.03, 3022.03, 3025.06, 3029.03, 3031.03, 3032.03, 3040.03, 3041.03, 3042.03)
4. One half credit at the 4000 level

E. BA (15 credit) Minor in English
See requirements for minor in the College of Arts and Science section of this calendar.

F. Minor in English
See Minors in the College of Arts and Science section of this calendar.

G. Emphasis in Canadian Studies
English students interested in obtaining an emphasis in Canadian Studies along with their major in English should consult the Canadian Studies coordinate for information on requirements and for a list of English courses approved with Canadian Studies.

H. Creative Writing Program
The Creative Writing program in the Faculty of Arts and Social Sciences is not restricted to FASS students, and allows any Dalhousie student interested in writing fiction, poetry, dramatic narrative (playwriting), and narrative non-fiction to take four full credits in creative writing above the first-year level, thus combining those courses with his or her major or honours area of study. Therefore, the program
English prepares students to write analytic and research papers. The focus of this course is
on the principles and practice of composition and not on the analysis of works of
literature. In combination with any of the other 1000 level half-credit courses in English with a number ending in 0 (other than 1010, 1020, 1440, or 1040), it fulfills the Writing Requirement.

As an aid to choosing courses at the 1000 level, students should consult the
detailed description of each course available on the English Department’s web
site. Some examples of patterns of course choice that would allow fulfillment of the Writing Requirement and the humanities distribution requirement, and would allow all three half-credit courses to be counted for credit, would include 1010, 1020, and 1440; or 1010, 1020, and 1011 or 1010, 1000, 1021; and so on.

ENGL 1000/Y.06: Introduction to Literature.
This course has two broad but connected objectives: (a) to introduce students to the
advanced study of literature in English; (b) to develop students’ literary skills so that they will be more critical and responsive readers and more exact and imaginative writers. The texts to be studied will differ from section to section, but all sections will explore a variety of authors, genres, national literatures, and time periods. Students can expect to read writers from William Shakespeare to William Gibson, from George Eliot to George Elliot Clarke, and from Jane Austen to Jack Kerouac. Practice in writing is carried on throughout the year in regular essays.

For a more complete description of all sections and texts, students should consult the Departmental website.

ENGL 1000.06 will satisfy the University Writing Requirement and serve as prerequisite for entry into most upper-level courses.

NOTE: Credit can only be given for the course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.

ENGL 1010.03: Prose and Fiction: Writing Requirement.
This course shares with its complement, ENGL 1020.03, two broad but connected objectives: (a) to introduce students to the advanced study of literature; (b) to develop students’ literary skills so that they will be more critical and responsive readers and more exact and imaginative writers. Terminology and concepts central to literary studies will be introduced. This course will consider the effect of genre, and it will focus on non-fictional prose (such as essays and autobiography) and fiction (such as short stories and novels). Both recent and early examples of various genres will be explored. Please consult the full description of each section on the departmental website to find the one best suited to your interests. Explicit instruction in clear and forceful writing is an important component of this course.

NOTE: Any two of ENGL 1010.03, ENGL 1020.03, ENGL 1040.03, ENGL 1050.03, or ENGL 1100.03 will satisfy the University Writing Requirement, and serve as prerequisite for entry into most upper-level English courses.

FORMAT: Lecture/discussion. @ Writing Requirement.
EXCLUSION: ENGL 1010.03, ENGL 1020.03

ENGL 1011.03: Prose and Fiction: non-Writing Requirement.
This course shares with its complement, ENGL 1021.03, two broad but connected objectives: (a) to introduce students to the advanced study of literature; (b) to develop students’ literary skills so that they will be more critical and responsive readers and more exact and imaginative writers. Terminology and concepts central to literary studies will be introduced. This course will consider the effect of genre, and it will focus on non-fictional prose (such as essays and autobiography) and fiction (such as short stories and novels). Both recent and early examples of various genres will be explored. Please consult the full description of each section on the departmental website to find the one best suited to your interests. This is the non-Writing Requirement version of the course. For the WR version see ENGL 1010.

FORMAT: Lecture/discussion
EXCLUSION: ENGL 1000, ENGL 1010

ENGL 1020.03: Poetry and Drama: Writing Requirement.
This course shares with its complement, ENGL 1010.03, two broad but connected objectives: (a) to introduce students to the advanced study of literature; (b) to develop students’ literary skills so that they will be more critical and responsive readers and more exact and imaginative writers. Terminology and concepts central to literary studies will be introduced. This course will consider the effect of genre, and it will focus on non-fictional prose (such as essays and autobiography) and fiction (such as short stories and novels). Both recent and early examples of various genres will be explored. Please consult the full description of each section on the departmental website to find the one best suited to your interests. This is the non-Writing Requirement version of the course. For the WR version see ENGL 1010.

FORMAT: Lecture/discussion
EXCLUSION: ENGL 1000, ENGL 1010

ENGL 1020.03: Poetry and Drama: Writing Requirement.
This course shares with its complement, ENGL 1010.03, two broad but connected objectives: (a) to introduce students to the advanced study of literature; (b) to develop students’ literary skills so that they will be more critical and responsive readers and more exact and imaginative writers. Terminology and concepts central to literary studies will be introduced. This course will consider the effect of genre, and it will focus on non-fictional prose (such as essays and autobiography) and fiction (such as short stories and novels). Both recent and early examples of various genres will be explored. Please consult the full description of each section on the departmental website to find the one best suited to your interests. This is the non-Writing Requirement version of the course. For the WR version see ENGL 1010.
to your interests. Explicit instruction in clear and forceful writing is an important component of this course.

FORMAT: Lecture/discussion at Writing Requirement.
PREREQUISITE: Any two of ENGL 1010.03, ENGL 1020.03, ENGL 1040.03, ENGL 1060.03, or ENGL 1100.03 will satisfy the University Writing Requirement and serve as prerequisites for entry into more upper-level English courses.

EXCLUSION: ENGL 1000, ENGL 1021

ENGL 1021.03: Poetry and Drama: non-Writing Requirement.
This course shares an entry point, ENGL 1011.03, two broad but connected objectives: (a) to introduce students to the advanced study of literature; (b) to develop students’ literary skills further so that they will be more critical and responsive readers and more exact and imaginative writers. Terminology and concepts central to literary studies will be introduced. The course will consider the effect of genre, and focus on drama and various forms of poetry. Both recent and early examples of various genres will be explored. Please consult the full descriptions of each section on the departmental website to find the one best suited to your interests. This is the non-Writing Requirement version of the course. For the WR version see ENGL 1020.

FORMAT: Lecture/discussion
EXCLUSION: ENGL 1000, ENGL 1020

ENGL 1040.03: Reading Popular Culture: Writing Requirement.
This course introduces students to methods of analyzing forms of cultural expression. It engages students in the serious study of diverse creative media including film, television, literature, video games, electronic texts, jokes, advertising, graffiti, cartoons, song lyrics and consumer goods. Explicit instruction in clear and forceful writing is an important component of this course.

FORMAT: Lecture/discussion at Writing Requirement
EXCLUSION: ENGL 1040.03

ENGL 1041.03: Reading Popular Culture: non-Writing Requirement.
This course introduces students to methods of analyzing forms of cultural expression. It engages students in the serious study of diverse creative media including film, television, literature, video games, electronic texts, jokes, advertising, graffiti, cartoons, song lyrics and consumer goods. Explicit instruction in clear and forceful writing is an important component of this course.

FORMAT: Lecture/discussion
EXCLUSION: ENGL 1040.03

ENGL 1050.03: Pulp Fiction: Writing Requirement.
This course provides an entry point to the discussion of literature through ‘pulp’ genres such as romance, mystery, crime, horror, sports literature, and comic books. It is available to Writing-Requirement and non-Writing Requirement versions. Explicit instruction in clear and forceful writing is an important component of this course.

FORMAT: Lecture/discussion at Writing Requirement
EXCLUSION: ENGL 1051.03

ENGL 1051.03: Pulp Fiction: non-Writing Requirement.
This course provides an entry point to the discussion of literature through ‘pulp’ genres such as romance, mystery, crime, horror, sports literature, and comic books. This is the non-Writing Requirement version of the course. For the WR version see ENGL 1050.

FORMAT: Lecture/discussion
EXCLUSION: ENGL 1050.03

ENGL 1100.03: Writing for University.
An introduction to rhetoric and composition, this course is designed to prepare students to write analytic and research papers. Grammatical and rhetorical terms are addressed, and the course includes a number of assignments to hone writing skills from outline to revision.

FORMAT: Lecture/discussion at Writing Requirement

English Courses at the 2000 level.
Courses at the 2000 level (or above) in the first year, with the necessary prerequisites. They include writing-intensive surveys of historical periods, national literatures, and major fields intended as an entrance into the discipline of literary studies, as well as a colorful selection of genre-, author- and topic-oriented courses. Any two of the six half-credit surveys (2001, 2002, 2003, 2004, 2005, 2006) will fulfill the 2000-level requirements for the English minor, major, or honours programs. The following courses will accept any university Writing Requirement course as a prerequisite: ENGL 1018, 2018, 2201, 2210, 2001, 2008, 2090, 2095, 2110, 2202, 2218, 2221, 2231, 2232, 2233, 2236. As these courses are not offered every year, students are strongly encouraged to consult the detailed description of this year’s courses available on the English Department’s web site.

ENGL 2001.03: British Literature to 1800.
This course traces the course of British literature from its beginnings to the year 1800. Starting with Old English works such as Beowulf in their historical contexts, we will move on to Middle English, Chaucer, Renaissance and eighteenth-century literature, looking at writers such as Chaucer, Shakespeare, Donne, Milton, Dryden, Swift, and Pope. This course puts special emphasis on developing skills in critical thinking, literary historical research, and scholarly argumentation.

FORMAT: Lecture/discussion with tutorials
PREREQUISITE: ENGL 1000.06; or any two of ENGL 1010.03, 1020.03, 1040.03, 1050.03, 1100.03, or THEA 1000.06; or King’s FYP
EXCLUSION: ENGL 2206.06

ENGL 2002.03: British Literature after 1800.
This course studies many of the traditions and influential writers in British literature from 1800 to the present. Studying these writers will allow students to British-literary history and introduce them to key issues and concepts. This course will also emphasize developing skills in critical thinking, scholarly argumentation, and documentation.

FORMAT: Lecture/discussion with tutorials
PREREQUISITE: ENGL 1000.06; or any two of ENGL 1010.03, 1020.03, 1040.03, 1050.03, 1100.03, or THEA 1000.06; or King’s FYP
EXCLUSION: ENGL 2206.06

ENGL 2003.03: American Literature.
This course emphasizes some of the traditions and influential texts of American literature, from its colonial beginnings to the present, providing historical orientation and demonstrating the diversity of American literature. The course will also emphasize developing skills in critical thinking, scholarly argumentation, and documentation.

FORMAT: Lecture/discussion with tutorials
PREREQUISITE: ENGL 1000.06; or any two of ENGL 1010.03, 1020.03, 1040.03, 1050.03, 1100.03, or THEA 1000.06; or King’s FYP
EXCLUSION: ENGL 2206.06

ENGL 2004.03: Canadian Literature.
From early exploration narratives to contemporary fiction, this course will survey a wide range of key texts in the development of Canadian literature in English. It will consider the literary and historical contexts that inform our readings, and identify and interrogate the various myths, images, icons and institutions that structure our ideas of what it means to be Canadian. This course will also emphasize developing skills in critical thinking, scholarly argumentation, and documentation.

FORMAT: Lecture/discussion with tutorials
PREREQUISITE: ENGL 1000.06; or any two of ENGL 1010.03, 1020.03, 1040.03, 1050.03, 1100.03, or THEA 1000.06; or King’s FYP
EXCLUSION: C328.04

ENGL 2005.03: World Literature.
This course introduces students to some of the most influential writers from around the globe, with a focus on contemporary literature written in English or studied in translation. These writers raise pressing questions about the meaning of justice, the power of nations, and the value of human imagination in our global world. This course will also emphasize developing skills in critical thinking, scholarly argumentation, and documentation.

FORMAT: Lecture/discussion with tutorials
PREREQUISITE: ENGL 1000.06; or any two of ENGL 1010.03, 1020.03, 1040.03, 1050.03, 1100.03, or THEA 1000.06; or King’s FYP
EXCLUSION: ENGL 2212.03, ENGL 2213.03

ENGL 2006.03: Cultural Studies.
This course surveys notions of “culture” from both historical and theoretical perspectives and introduces students to the critical study of the multiple forms and uses of popular culture. This course will also emphasize developing skills in critical thinking, scholarly argumentation, and documentation.
ENGL 1803.06: Arthur.
This course will explore the many stories of King Arthur and his Round Table including some of Sir Thomas Malory’s *Morte d’Arthur*, earlier texts will be read in translation.

FORMAT: Lecture/discussion
PREREQUISITE: Any course or combination of courses that satisfies the College of Arts and Sciences Writing Requirement.

ENGL 2010.03: Sampling Medieval Literature.
A properly medieval title for this course would be "Medievalities." It considers works important to the medieval literary scene in England, whether written initially in Old English, Middle English, Anglo-Norman French, Welsh, Norse, or Latin, almost all will be read in translations. The works read may include sagas, riddles, lyrics, the *Breviary* of Marie de France, romances, chronicles, plays, saints’ lives, comic tales, beast fables.

FORMAT: Lecture/discussion
PREREQUISITE: ENGL 1000.06; or any two of ENGL 1010.03, 1020.03, 1040.03, 1050.03, 1100.03; or THEA 1000.06; or the King’s FYP

ENGL 2028.03: Short Poems in English.
Forms and themes in the short poem are studied by means of critical reading of poems written in English. Topics may include the following: the self in the short poem, other persons, public events, love, nature, the city, the machine, wit, myth, traditional forms, free verse, the haiku, lyric as song, spoken poetry, poetry in print, concrete poetry, and possibly other topics to suit the course.

FORMAT: Lecture/discussion
PREREQUISITE: ENGL 1000.06; or any two of ENGL 1010.03, 1020.03, 1040.03, 1050.03, 1100.03; or THEA 1000.06; or the King’s FYP

ENGL 2029.03: Framed Narratives.
This course studies framed narratives - stories within stories - focusing on the dramatic relationship between the frame and the stories within it, and what this form tells us about the nature of storytelling itself.

FORMAT: Lecture/discussion
PREREQUISITE: ENGL 1000.06; or any two of ENGL 1010.03, 1020.03, 1040.03, 1050.03, 1100.03; or THEA 1000.06; or the King’s FYP

ENGL 2030.03: Literature, Health and Healing.
This course employs selected literary texts dealing with various issues of health and healing. The texts include works by writers in different historical periods and cultural contexts. Topics addressed vary, depending upon the instructor, but possible subjects for investigation might include narratives, poems and essays on aging, death or dying; the experience of illness; trauma and recovery; possible subjects for investigation might include narratives, poems and essays on aging, death or dying; the experience of illness; trauma and recovery; representations of the body; mental illness or neurological disorders; addiction; aging, death or dying; the experience of illness; trauma and recovery; this course will explore the relation of literary art to propaganda through the study of selected writings in different genres. Among the terms and concepts that may be considered are didacticism, rhetoric, ideology, pornographic, and censorship.

FORMAT: Lecture/discussion
PREREQUISITE: ENGL 1000.06; or any two of ENGL 1010.03, 1020.03, 1040.03, 1050.03, 1100.03; or THEA 1000.06; or the King’s FYP

ENGL 2050.03: Literature and Propaganda.
This course explores the relation of literary art to propaganda through the study of selected writings in different genres. Among the terms and concepts that may be considered are didacticism, rhetoric, ideology, pornographic, and censorship.

FORMAT: Lecture/discussion
PREREQUISITE: ENGL 1000.06; or any two of ENGL 1010.03, 1020.03, 1040.03, 1050.03, 1100.03; or THEA 1000.06; or the King’s FYP

ENGL 2060.03: Sports Literature.
While material may range from Homer and Pindar to contemporary works, this course will typically focus on a specific sport, period, or subject (e.g., race, the baseball player/athlete) or genre. Students will explore the unique features of writing that deals with athletic or sporting activities and recognize how the heritage of sport is connected to the broader literary canon. Commercialism, nationalism, authority, and aesthetics are possible topics. Consult the current course description.

FORMAT: Lecture/discussion
PREREQUISITE: Any course or combination of courses that satisfies the College of Arts and Sciences Writing Requirement.

ENGL 2070.03: African American Literature.
An introduction to some major modes of writing in the African American community. Subjects of enquiry may include the "tragic comedy" narratives of the nineteenth century, or works produced by members of the Harlem Renaissance, or poetry and fiction by contemporary African American women writers.

FORMAT: Lecture/discussion
PREREQUISITE: ENGL 1000.06; or any two of ENGL 1010.03, 1020.03, 1040.03, 1050.03, 1100.03; or THEA 1000.06; or the King’s FYP

ENGL 2080.03: Cartoons and Comics.
A study of cartoons and comics from the eighteenth century to the present, addressing such issues as the history and formal conventions of the genre as well as its various cultural roles, from the political to the popular and from consumer culture to cultural capital.

FORMAT: Lecture
PREREQUISITE: Any course or combination of courses that satisfies the College of Arts and Sciences Writing Requirement.

ENGL 2085.03: Video Games: Story, World and Play.
This course introduces students to the critical study of video games and gaming culture, with a particular emphasis on how video games combine interactive gameplay, worldmaking, and storytelling.

FORMAT: Lecture/discussion
PREREQUISITE: Any course or combination of courses that satisfies the College of Arts and Sciences Writing Requirement.

ENGL 2088.03: Images and Texts.
This course will examine the interplay of art and literature, from visual and verbal treatments of the same theme (palaver, for example), to similarities in style (such as impressionism or Dadaism), to specific topics such as humor or science.

FORMAT: Lecture
PREREQUISITE: Any course or combination of courses that satisfies the College of Arts and Sciences Writing Requirement.

ENGL 2095.03: Narrative in the Cinema.
This course will provide a brief introduction to the study of film narrative. Through an examination of select films from throughout the history of the medium, this course will consider various forms and conventions of
Undergraduate book  Page 179  Wednesday, March 12, 2014  12:03 PM

ENGL 2110.03: Introduction to Professional Writing.
In this introduction to professional writing, students learn to analyze rhetorical situations, adopt appropriate conventions, and adapt the language of abstract discourse communities. They learn how to determine what constitutes "good writing" and how to improve the structure and style of their prose to fit a given professional context. This course gives students the opportunity to research and produce specialized forms of writing. Examples might include case studies, white papers, press releases, business plans, web sites, and user manuals.
FORMAT: Lecture/discussion
PREREQUISITE: Any course or combination of courses that satisfies the College of Arts and Sciences Writing Requirement.
EXCLUSION: COMM 1701.03, 1702.03, 2701.03

ENGL 2202.03: Academic Writing.
Focusing on academic discourse, this course is designed for students interested in university writing as an object of study and practice. Students will enhance their understanding of the conventions of scholarly writing, develop their command of English grammar, and hone their skills in the art of using language to persuade.
FORMAT: Lecture/discussion
PREREQUISITE: ENGL 1040.06; or any two of ENGL 1010.03, 1020.03, 1040.03, 1090.03, 1100.03; or THEA 1000.06; or King's FYP
EXCLUSION: ENGL 2200.00

ENGL 2214X/Y.06. Shakespeare.
An introduction to Shakespeare's career as a playwright, through discussion and interpretation of a dozen or more of his plays.
NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.
FORMAT: Lecture/discussion
PREREQUISITE: ENGL 1040.06; or any two of ENGL 1010.03, 1020.03, 1040.03, 1090.03, 1100.03; or THEA 1000.06; or King's FYP
CROSS-LISTING: THEA 2214.06

ENGL 2218.03: Gothic Fiction.
This course examines a selection of gothic fiction from Horace Walpole onwards. Attention is paid to the Romantic novelists (Radcliffe, Lever, Brontë and Maturin) as well as their Victorian and twentieth-century successors (e.g., Bram Stoker and Patrick McCabe). Among the many subjects that may be considered are: Jekyll/I Holme dichotomy; the nature of the gothic horror; the role of the "mad" narrator; the theme of the child; the puzzle of the "serial" killer (e.g., the Ripper murderers).
FORMAT: Lecture/discussion
PREREQUISITE: Any course or combination of courses that satisfies the College of Arts and Sciences Writing Requirement.
EXCLUSION: ENGL 2216.06, ENGL 2216.06

ENGL 2227.03: Tragedy.
The course studies a representative selection of texts from various historical periods in order to arrive at an understanding of the meaning of tragedy. Various definitions of tragedy will be encountered along with each possible question as to how it has changed over time, and what is tragically.
FORMAT: Lecture/discussion
PREREQUISITE: ENGL 1040.06; or any two of ENGL 1010.03, 1020.03, 1040.03, or THEA 1000.06; or the King's FYP
CROSS-LISTING: THEA 2227.03
EXCLUSION: ENGL 2226.06

ENGL 2230.03: Satire.
A survey of historical satire from early invective to contemporary caricature. This course closely examines conventional forms of verse and prose satire but attention is also paid to the visual and dramatic. Students are introduced to a wide range of specific modes (e.g., the character sketch, mock emperor, travesty, parody, lampoon) and satire's many uses within various national contexts (e.g., Roman, English, American, Canadian).
FORMAT: Lecture/discussion
PREREQUISITE: ENGL 1000.06; or any two of ENGL 1010.03, 1020.03, 1040.03, 1090.03, 1100.03; or THEA 1000.06; or the King's FYP
EXCLUSION: ENGL 2226.00

ENGL 2231.03: Foundations of Science Fiction.
Various genres have been offered for science fiction: from classical Greek texts, to Galileo’s “Dialogue”, to foundational, to twentieth-century pulp publications. This course will read science fiction from these various genres through to the so-called Golden Age of Science Fiction in the 1950s. Authors could include Mary Shelley, H.G. Wells, and Hugo Gernsback.
FORMAT: Lecture
PREREQUISITE: Any course or combination of courses that satisfies the College of Arts and Sciences Writing Requirement.
EXCLUSION: ENGL 2233.06

ENGL 2232.03: Contemporary Science Fiction.
This course will study science fiction from the Golden Age of the 1940s and 50s to the most recent developments. Such schools and areas as the New Wave, cyberpunk, and postcolonial SF are among the topics that could be explored, as are developments in film, television, and new media.
FORMAT: Lecture
PREREQUISITE: Any course or combination of courses that satisfies the College of Arts and Sciences Writing Requirement.
EXCLUSION: ENGL 2233.06

ENGL 2233.03: Tolkien: Fantasy and Medievalism.
This course will examine the fantasy writings of J.R.R. Tolkien. Topics could include the development of high fantasy, the question of escapes, alternate worlds, heroes and anti-heroes, Norse and medieval mythology, language creation, Tolkien's medieval scholarship, the Inklings, Tolkien and Christianity, and Tolkien's work in the context of twentieth-century wars and politics.
FORMAT: Lecture
PREREQUISITE: Any course or combination of courses that satisfies the College of Arts and Sciences Writing Requirement.
CROSS-LISTING: THEA 2233.03

ENGL 2234.03: Outlaw Tales.
This course will study science fiction from these various origins through to the so-called Golden Age of Science Fiction in the 1950s. Authors could include Mary Shelley, H.G. Wells, and Hugo Gernsback.
FORMAT: Lecture
PREREQUISITE: Any course or combination of courses that satisfies the College of Arts and Sciences Writing Requirement.
EXCLUSION: ENGL 2233.06

ENGL 2235.03: Fantasy after Tolkien.
This course will read science fiction from these various origins through to the so-called Golden Age of Science Fiction in the 1950s. Authors could include Mary Shelley, H.G. Wells, and Hugo Gernsback.
FORMAT: Lecture
PREREQUISITE: Any course or combination of courses that satisfies the College of Arts and Sciences Writing Requirement.
EXCLUSION: ENGL 2233.06

ENGL 2236.03: Fantasy after Tolkien.
This course will examine writings in the fantasy genre of the later twentieth century. Authors could include Ursula Le Guin, Guy Gavriel Kay, Charles de Lint, Susan Cooper, R. Scott Bakker, J. K. Rowling, and Philip Pullman.
FORMAT: Lecture
PREREQUISITE: Any course or combination of courses that satisfies the College of Arts and Sciences Writing Requirement.
EXCLUSION: ENGL 2233.06

ENGL 2237.03: Science Fiction.
This course will study science fiction from these various origins through to the so-called Golden Age of Science Fiction in the 1950s. Authors could include Mary Shelley, H.G. Wells, and Hugo Gernsback.
FORMAT: Lecture
PREREQUISITE: Any course or combination of courses that satisfies the College of Arts and Sciences Writing Requirement.
EXCLUSION: ENGL 2233.06

ENGL 2238.03: Outlaw Tales.
This course will study the romantic outlaw of fiction, poetry and film. Texts may range from sagas to Robin Hood ballads to highwayman tales to modern Westerns. Topics include images and tropes for the outlaw; the question of why the figure of the outlaw is appealing to law-abiding readers; the way the literary and romantic outlaw compares with the real-life outlaws of the time; or the role of the outlaw as a commentator on ‘legal’ society.
FORMAT: Lecture/discussion
PREREQUISITE: Any class or combination of classes that satisfies the College of Arts and Sciences Writing Requirement.
CROSS-LISTING: THEA 2238.03

ENGL 2239.03: Shakespeare and his Contemporaries on Film.
This course will study the adaptations of Shakespeare and his contemporaries in the medium of cinema, focusing on the differences between theatre and cinema, the process of textual adaptation, the updating of classic stories to modern settings, and the close analysis of the performer's choices.
FORMAT: Lecture/seminar
PREREQUISITE: Experience in Shakespeare at any level OR experience in Film Studies at any level.
CROSS-LISTING: THEA 2239.03

ENGL 2240.03: Science Fiction.
English Courses at the 3000 Level

Courses at the 3000 level are usually smaller than 2000-level courses, and are likewise open to any student above the first year, with the necessary prerequisites. They include a group of literary methods courses as well as a sequence of courses covering the chronological sweep of English literary history. Any one of the three methods courses offered each year (3000.03, 3001.03, 3002.03) will fulfill the requirement for the English minor, major, or honors programs. Most 3000-level courses require a first-year English credit as prerequisite, but ENGL 3112.03, ENGL 3201.03, and 3310.03 will accept any university Writing Requirement credit. As these courses are not offered every year, students should consult the English department website for detailed descriptions of this year's courses.

ENGL 3000.03: Close Reading.
This half-credit course is intended to give students the tools and vocabulary for the close reading of literary texts, both prose and poetry. FORMAT: Lecture/discussion
PREREQUISITE: ENGL 1000.06; or any two of ENGL 1010.03, 1020.03, 1040.03, 1050.03, 1100.03; or THEA 1000.06; or the King's FYP

ENGL 3001.03: History of Literary Criticism.
A survey of major statements in literary theory from Antiquity to the twentieth century. Topics to be considered may include the value of literature, the relation of fiction to reality, the nature of creativity, the function of genres and conventions, and the role of the critic. FORMAT: Lecture/discussion
PREREQUISITE: ENGL 1000.06; or any two of ENGL 1010.03, 1020.03, 1040.03, 1050.03, 1100.03; or THEA 1000.06; or the King’s FYP
EXCLUSION: ENGL 3244.06

ENGL 3002.03: Contemporary Critical Theory.
A survey of major issues and schools in recent literary theory. This course will define the merits of various critical approaches to literature, including formalism, Marxism, feminism, psychoanalysis, structuralism, deconstruction, new historicism, and cultural studies. FORMAT: Lecture/discussion
PREREQUISITE: ENGL 1000.06; or any two of ENGL 1010.03, 1020.03, 1040.03, 1050.03, 1100.03; or THEA 1000.06; or the King’s FYP
EXCLUSION: ENGL 3244.06

ENGL 3003.03: Middle English Tales.
An introduction to the study of Middle English literature in Middle English by way of Geoffrey Chaucer’s collection of tales told by a mixed crowd of people on pilgrimage, from alchemist knight and poor man to bawdy wife and drunken cook. FORMAT: Lecture/discussion
PREREQUISITE: ENGL 1000.06; or any two of ENGL 1010.03, 1020.03, 1040.03, 1050.03, 1100.03; or THEA 1000.06; or the King’s FYP
EXCLUSION: ENGL 3244.06

ENGL 3005.03: Canterbury Tales.
A survey of poetic and prose from the mid- to late-eighteenth century. This course offers students the chance to interpret poems by one of the most esoteric English writers (John Donne) and to argue about the view of human nature encoded in one of the most cherished English texts (Paradise Lost). In addition, there will be opportunities to study devotional poetry (Georges Herbert), life-writing (Sir Thomas Browne), women’s writing (Lady Mary Wortley), political writing (Andrew Marvell), or even private writing (by Siddons or Byron, for example). FORMAT: Lecture/discussion
PREREQUISITE: ENGL 1000.06; or any two of ENGL 1010.03, 1020.03, 1040.03, 1050.03, 1100.03; or THEA 1000.06; or the King’s FYP
EXCLUSION: ENGL 3244.06

ENGL 3011.03: Renaissance Poetry and Culture II: Donne to Milton.
This course will explore the richness and strangeness of some of the playwrights too often obscured by Shakespeare’s shadow. Between the opening of the first professional playhouse in London (1576) and the closing of the theatre by Parliament (1641), the Globe was only one of many venues catering to an avid theatre-going public, and the first English play by a woman was circulated in manuscript. Playwrights to be included may include Christopher Marlowe, Ben Jonson, Thomas Middleton, John Webster, Elizabeth Cary, and John Ford. FORMAT: Lecture/discussion
PREREQUISITE: ENGL 1000.06; or any two of ENGL 1010.03, 1020.03, 1040.03, 1050.03, 1100.03; or THEA 1000.06; or the King’s FYP
CROSS-LISTING: THEA 3103.03

ENGL 3017.03: English Poetry and Prose, 1660-1740.
The poetry and prose from the Restoration and early eighteenth-century contain much in the way of sex and jokes. The course studies works by authors such as Dryden, Rochester, John F. Scott, Swift, and Pope. Students are introduced to popular forms (heroic couplet, satire, conversational poems, essay, epistle, political allegory) and to the many changes that shaped the literature of the period, notably the decline of the court, the emergence of modern capitalism, and the rise of professional authorship. FORMAT: Lecture/discussion
PREREQUISITE: ENGL 1000.06; or any two of ENGL 1010.03, 1020.03, 1040.03, 1050.03, 1100.03; or THEA 1000.06; or the King’s FYP
EXCLUSION: ENGL 3244.06

ENGL 3019.03: Poetry and Prose, 1740-1789.
A survey of poetry and prose from the mid- to late-eighteenth century. This course studies the works of Samuel Johnson and his circle, the poets of sensibility, the Bluestockings, and many other authors. It covers a wide range of genres and movements (odes, imitation, sonnets, pastoral poetry, aesthetic treatises, fables) in light of contemporary social and political events, from the growth of democracy at home to historic revolutions abroad. FORMAT: Lecture/discussion
PREREQUISITE: ENGL 1000.06; or any two of ENGL 1010.03, 1020.03, 1040.03, 1050.03, 1100.03; or THEA 1000.06; or the King’s FYP
EXCLUSION: ENGL 3244.06

ENGL 3020.03: English Drama, 1660-1800.
A survey of plays produced during the Restoration and eighteenth-century. This course introduces students to the period’s various dramatic forms, the literary influences and controversies, and the many women and men who pursued for the stage. FORMAT: Lecture/discussion
PREREQUISITE: ENGL 1000.06; or any two of ENGL 1010.03, 1020.03, 1040.03, 1050.03, 1100.03; or THEA 1000.06; or the King’s FYP
CROSS-LISTING: THEA 3103.03
EXCLUSION: ENGL 3253.06

180 English
ENGL 3022.03: English Fiction to 1820. A survey of the rise of the English novel from Behn to Austen. This course will consider works by second-rate novelists, some well-known and some not so well-known, and introduce students to a wide range of early prose narratives, such as amatory fiction, the fictional memoir, the roman à clef, the epistolary novel, and various comic and sentimental works. FORMAT: Lecture/discussion

PREREQUISITE: ENGL 1000.06; or any two of ENGL 1010.03, 1020.03, 1040.03, 1050.03, 1100.03; or THEA 1000.06; or the King's FYP

EXCLUSION: ENGL 3023.03

ENGL 3023.03: Victorian Poetry. This course explores Victorian poetry in the context of the cultural, social, political, artistic and religious transformations that occurred between the 1830s and 1900. Authors studied will include Tennyson, Robert and Elizabeth Barrett Browning, Matthew Arnold, and the Pre-Raphaelite poets. Specific emphases will vary, but recurrent themes will include the poet's role in an increasingly technological and scientific culture, the challenges faced by women poets, experimentation with new poetic forms like the dramatic monologue, and the crisis of faith presented by new modes of intellectual inquiry. FORMAT: Lecture/discussion

PREREQUISITE: ENGL 1000.06; or any two of ENGL 1010.03, 1020.03, 1040.03, 1050.03, 1100.03; or THEA 1000.06; or the King's FYP

EXCLUSION: ENGL 3025.06

ENGL 3025.06: Romantic Era I: The Satanic and the Sublime. Focusing primarily on the early 19th century, this class will explore the interactions and reactions of reform and conservatism, evil and the sublime, tradition and modernity, across genres. Authors may include Jane Austen, William Blake, Byron, Samuel Taylor Coleridge, Felicia Hemans, John Keats, Letitia Landon, the Skellys, and the wordsworths. FORMAT: Lecture/discussion

EXCLUSION: ENGL 3025.06

ENGL 3027.03: Romantic Era II: The Satanic and the Sublime. Focusing primarily on the early 19th century, this class will explore the interactions and reactions of reform and conservatism, evil and the sublime, tradition and modernity, across genres. Authors may include Jane Austen, William Blake, Byron, Samuel Taylor Coleridge, Felicia Hemans, John Keats, Letitia Landon, the Skellys, and the wordsworths. FORMAT: Lecture/discussion

EXCLUSION: ENGL 3025.06

ENGL 3040.03: Irish Literature. 1700-1900: Satire, Sentiment, and the Gothic. This course will survey Irish writing in English from 1700 to 1900 and emphasize the form and the subject matter of fiction as they transformed the novel from a genre expressed and serious works. Specific emphases will vary, but recurrent themes will include the poet's role in an increasingly technological and scientific culture, the challenges faced by women poets, experimentation with new poetic forms like the dramatic monologue, and the crisis of faith presented by new modes of intellectual inquiry. FORMAT: Lecture/discussion

PREREQUISITE: ENGL 1000.06; or any two of ENGL 1010.03, 1020.03, 1040.03, 1050.03, 1100.03; or THEA 1000.06; or the King's FYP

EXCLUSION: ENGL 3040.06

ENGL 3061.03: American Literature to 1865. A survey of the major writers of the United States up to the end of the Civil War. This period includes the earliest practitioners of the modern short story, radically inventive poets, early "nature writers," experimental novelists, and various forms of autobiography. FORMAT: Lecture/discussion

PREREQUISITE: ENGL 1000.06; or any two of ENGL 1010.03, 1020.03, 1040.03, 1050.03, 1100.03; or THEA 1000.06; or the King's FYP

EXCLUSION: ENGL 3062.03

ENGL 3062.03: American Literature, 1865-1914. A survey of the major writers of the United States from the Civil War to the beginning of the First World War, with an emphasis on the realist novel. Major figures include Mark Twain, Henry James, Edith Wharton, Stephen Crane. FORMAT: Lecture/discussion

PREREQUISITE: ENGL 1000.06; or any two of ENGL 1010.03, 1020.03, 1040.03, 1050.03, 1100.03; or THEA 1000.06; or the King's FYP

EXCLUSION: ENGL 3070.03

ENGL 3070.03: Twentieth-Century African American Novel. While it is obvious that several of the novelists on this reading list might well appear in other courses, it is a worthwhile exercise for students to engage in a conversation about these and other texts by African American novelists in the context of African American novels. That context will be the focus of this course: Such a comparatively detailed focus brings with it such questions as does it matter that these novels were written by African Americans? What do we gain by considering these texts in this specific national and ethnic-cultural context? Are the texts representative, and if so, what and in what ways? Do these texts reinforce or complicate (or both) notions such as the African American experience? FORMAT: Lecture/discussion

PREREQUISITE: ENGL 1000.06; or any two of ENGL 1010.03, 1020.03, 1040.03, 1050.03, 1100.03; or THEA 1000.06; or the King's FYP

EXCLUSION: ENGL 3086.03

ENGL 3086.03: Post-Colonial Literatures. This course will allow you to read literature from the former British colonies, as well as some of the influential theorists who are helping to shape the evolving field of postcolonial studies. Our purpose will be to gain familiarity with a selection of the seminal texts, arguments, and debates that characterize this diverse and vibrant area of research and study. We will also explore how post-colonial theories and critiques complicate and reinforce or complicate (or both) notions such as the African American experience. FORMAT: Lecture

PREREQUISITE: ENGL 1000.06; or any two of ENGL 1010.03, 1020.03, 1040.03, 1050.03, 1100.03; or THEA 1000.06; or the King's FYP

EXCLUSION: ENGL 3085.06

ENGL 3087.03: Literature of the Asian Diaspora. This course will allow you to read literature from the former British colonies, as well as some of the influential theorists who are helping to shape the evolving field of postcolonial studies. Our purpose will be to gain familiarity with a selection of the seminal texts, arguments, and debates that characterize this diverse and vibrant area of research and study. We will also explore how post-colonial theories and critiques complicate and reinforce or complicate (or both) notions such as the African American experience. FORMAT: Lecture

PREREQUISITE: ENGL 1000.06; or any two of ENGL 1010.03, 1020.03, 1040.03, 1050.03, 1100.03; or THEA 1000.06; or the King's FYP

EXCLUSION: ENGL 3085.06

ENGL 3088.03: Creative Writing: Poetry I. This course is for students interested in writing poetry. Various skills will be developed through the sharing of individual and collaborative expression and the understanding of the movement from first draft to finished version of the poem. FORMAT: Writing Workshop

PREREQUISITE: ENGL 1000.06; or any two of ENGL 1010.03, 1020.03, 1040.03, 1050.03, 1100.03; or THEA 1000.06; or the King's FYP

EXCLUSION: ENGL 3098.03

ENGL 3098.03: Creative Writing: Poetry I. This course is for students interested in writing poetry. Various skills will be developed through the sharing of individual and collaborative expression and the understanding of the movement from first draft to finished version of the poem. FORMAT: Writing Workshop

PREREQUISITE: ENGL 1000.06; or any two of ENGL 1010.03, 1020.03, 1040.03, 1050.03, 1100.03; or THEA 1000.06; or the King's FYP

EXCLUSION: ENGL 3098.03

ENGL 3099.03: Creative Writing: Fiction I. This course is for students interested in writing short fiction and novels. It will include the study of literature as a basis for learning skills necessary for the craft. Some aspects of the course will involve theory but the primary focus will be on the process of writing — everything from the basics of getting started to the process
ENGL 3112.03: Writing Theory.
This course considers a range of approaches to writing. Students read widely in influential theoretical texts, and participate in ongoing conversations about writing, and heighten their understanding of the composition process. Writing assignments and writing centered, the course is ideal for anyone interested in writing and critical thinking.
FORM: Lecture/discussion
PREREQUISITE: Any course or combination of courses that satisfies the College of Arts and Sciences Writing Requirement.
CROSS-LISTING: ASST 3112.03
EXCLUSION: ASST 3110.01
ENGL 3113.03: Writing Practice.
This course puts writing theory into practice. As part of their course work, students gain valuable experience working as writing tutors and/or assistant editors for an academic journal. The course is ideal preparation for careers in teaching or publishing. Students will be expected to participate fully in the course through reading, writing, and discussion.
FORM: Writing Workshop
PREREQUISITE: ENGL 1000.06; or any two of ENGL 1010.03, 1020.03, 1040.03, 1050.03, 1100.03; or THEA 1000.06; or CRWR 2000.06; or King's FYP.
ENGL 3203.03: History of the English Language.
This course introduces students to the study of the history of English, tracing the story from the origins of the language in proto-Germanic to its current abundance of variation around the globe. Most emphasis will be placed on the development of English in our earlier literature from Old English to Early Modern English, and on its current manifestations in Canada.
FORM: Lecture/discussion
PREREQUISITE: Any course or combination of courses that satisfies the College of Arts and Sciences Writing Requirement.
EXCLUSION: ENGL 3212.03
ENGL 3220.03: American Literature of the Earlier Twentieth Century.
An introduction to American literature from the beginning of the twentieth century until the end of the second world war.
FORM: Lecture/discussion
PREREQUISITE: ENGL 1000.06; or any two of ENGL 1010.03, 1020.03, 1040.03, 1050.03, 1100.03; or THEA 1000.06; or the King's FYP.
ENGL 3221.03: American Literature of the Later Twentieth Century.
An introduction to American literature from the middle of the twentieth century until the end.
FORM: Lecture/discussion
PREREQUISITE: ENGL 1000.06; or any two of ENGL 1010.03, 1020.03, 1040.03, 1050.03, 1100.03; or THEA 1000.06; or the King's FYP.
ENGL 3231.03: Modern Canadian Literature.
The historical period covered in this course extends from the end of World War I through the decade following World War II, a period during which Canada witnessed the formation of a modern literature in English. Vowed aesthetic responses to ideas of the modern, the processes and technologies of modernization, and the conditions of social, cultural, economic, and political modernity will be addressed.
FORM: Lecture/discussion
PREREQUISITE: ENGL 1000.06; or any two of ENGL 1010.03, 1020.03, 1040.03, 1050.03, 1100.03; or THEA 1000.06; or the King's FYP.
CROSS-LISTING: CANA 3231.03
ENGL 3234.03: British Literature of the Earlier Twentieth Century.
An introduction to British literature from the beginning of the twentieth century roughly to the end of the second world war.
FORM: Lecture/discussion
PREREQUISITE: ENGL 1000.06; or any two of ENGL 1010.03, 1020.03, 1040.03, 1050.03, 1100.03; or THEA 1000.06; or the King's FYP.
ENGL 3235.03: British Literature of the Later Twentieth Century.
An introduction to British literature from the middle of the twentieth century until the end.
FORM: Lecture/discussion
PREREQUISITE: ENGL 1000.06; or any two of ENGL 1010.03, 1020.03, 1040.03, 1050.03, 1100.03; or THEA 1000.06; or the King's FYP.
ENGL 3238.03: Fiction of the Earlier Twentieth Century.
A selection of fiction from the beginning of the twentieth century to approximately the end of the second world war. Texts will be subject to the instructor's preferences.
FORM: Lecture/discussion
PREREQUISITE: ENGL 1000.06; or any two of ENGL 1010.03, 1020.03, 1040.03, 1050.03, 1100.03; or THEA 1000.06; or the King's FYP.
EXCLUSION: ENGL 3209.06
ENGL 3239.03: Fiction of the Later Twentieth Century.
An introduction to fiction in English from the middle of the twentieth century to the end. Texts will be subject to the instructor's preferences.
FORM: Lecture/discussion
PREREQUISITE: ENGL 1000.06; or any two of ENGL 1010.03, 1020.03, 1040.03, 1050.03, 1100.03; or THEA 1000.06; or the King's FYP.
EXCLUSION: ENGL 3209.06
ENGL 3240.03: Drama of the Earlier Twentieth Century.
An introduction to major developments in drama from Ibsen to Brecht. The course will explore the diversity of dramatic styles and theatrical movements, as playwrights respond to and react against the nineteenth century's traditions and their own changing times. In addition to Ibsen and Brecht, authors may include Strindberg, Chekhov, Shaw, Synge, Pirandello, and O'Neill.
FORM: Lecture/discussion
PREREQUISITE: ENGL 1000.06; or any two of ENGL 1010.03, 1020.03, 1040.03, 1050.03, 1100.03; or THEA 1000.06; or the King's FYP.
EXCLUSION: ENGL 3241.06
ENGL 3241.03: Drama of the Later Twentieth Century.
This course focuses on a selection of plays ranging from Abstract art works to present-day texts, including scripts by Canadian dramatists. The focus will be the growth of contemporary theatrical movements, such as the kitchen-sink drama of the 1950s and the “In-Yer-Face” theatre of the 1990s. Playwrights may include Beckett, Jonson, Osborne, Albee, Shepard, Churchill, Kane, and Tremblay.
FORM: Lecture/discussion
PREREQUISITE: ENGL 1000.06; or any two of ENGL 1010.03, 1020.03, 1040.03, 1050.03, 1100.03; or THEA 1000.06; or the King's FYP.
ENGL 3242.03: Poetry of the Earlier Twentieth Century.
An introduction to poetry in English from the beginning of the twentieth century until the end. Texts will be subject to the instructor's preferences.
FORM: Lecture/discussion
PREREQUISITE: ENGL 1000.06; or any two of ENGL 1010.03, 1020.03, 1040.03, 1050.03, 1100.03; or THEA 1000.06; or the King's FYP.
ENGL 3243.03: Poetry of the Later Twentieth Century.
An introduction to poetry in English from the middle of the twentieth century to the end.
FORM: Lecture/discussion
PREREQUISITE: ENGL 1000.06; or any two of ENGL 1010.03, 1020.03, 1040.03, 1050.03, 1100.03; or THEA 1000.06; or the King's FYP.
ENGL 3245.03: The Beat Generation.
This course will examine the writing of the Beat Generation. Authors to be considered could include Jack Kerouac, Allen Ginsberg, William S. Burroughs, and Dennis Lovett, among others.
FORM: Lecture and Discussion
PREREQUISITE: ENGL 1000.06; or any two of ENGL 1010.03, 1020.03, 1040.03, 1050.03, 1100.03; or THEA 1000.05/06; or the King's FYP.
ENGL 3200.03: Contemporary Women Poets.
During the last few decades, an extraordinary number of powerful new women poets have appeared on the literary scene. This course focuses on selected works written by these poets, and explores the ways in which manifest ideas of "women" have been challenged by individual poets who are positioned differently by race, sexual orientation, and national identity.
FORMAT: Lecture/discussion
PREREQUISITE: ENGL 1000.06; or any two of ENGL 1010.03, 1020.03, 1040.03, 1050.03, 1100.03 or THEA 1000.06; or the King's FYP
CROSS-LISTING: CRST 3200.03
EXCLUSION: ENGL 3080.06

ENGL 3270.03: Contemporary Canadian Literature.
In this course, a variety of late twentieth-century and recent Canadian fiction and poetry texts will be studied from diverse perspectives as the following: postcolonial, postmodern, multicultural. The politics of cultural expression will be emphasized, as well as the relationship between ethics and aesthetic approaches to literature.
PREREQUISITE: ENGL 1000.06; or any two of ENGL 1010.03, 1020.03, 1040.03, 1050.03, 1100.03; or THEA 1000.06; or the King's FYP
FORMAT: Seminar/CANA 3270.03
EXCLUSION: ENGL 3233.03

ENGL 3300.03: TV: Theory and Criticism.
This course considers television as a uniquely powerful source of cultural production, presenting students with some of the theoretical questions it raises and some of the critical methods that have developed for engaging it. The course will explore the way TV mediates cultural attempts to understand the contemporary world.
FORMAT: Lecture
PREREQUISITE: ENGL 1000.06; or any two of ENGL 1010.03, 1020.03, 1040.03, 1050.03, 1100.03; or THEA 1000.06; or the King's FYP

ENGL 3301.03: Graphic Novels.
This course explores the history and development of graphic novels from the early twentieth century to the present. It examines the history and formal conventions of various genres, and is particularly concerned with the cultural status of graphic novels and the relationship between verbal and visual forms.
PREREQUISITE: ENGL 1000.06; or any two of ENGL 1010.03, 1020.03, 1040.03, 1050.03, 1100.03; or THEA 1000.06; or the King's FYP

ENGL 3310.03: Writing in a Digital Age.
This course focuses on the analysis and production of electronic texts. Students publish their work electronically and explore emerging theories about hypertext writing and the role of visual rhetoric. Objects of study will encompass a variety of electronic genres, but will focus mainly on sites on the World Wide Web.
FORMAT: Lecture/discussion
PREREQUISITE: Any course or combination of courses that satisfies the College of Arts and Sciences Writing Requirement

ENGL 3314.03: Shakespeare and his Contemporaries on Film.
This course will study the adaptation of Shakespeare and his contemporaries to the medium of cinema. Focusing on the differences between theatre and cinema, the process of textual adaptation, and the impact of cinematic stories on modern settings, and the close analysis of the performer's choices.
FORMAT: Lecture/seminar
PREREQUISITE: Experience in Shakespeare at any level OR experience in Film Studies at any level
CROSS-LISTING: THEA 3314.03
EXCLUSION: ENGL 2133.03, ENGL 2313.03

ENGL 3501.03: The Modern Theatre 1: Realism and Modernism.
From the close of WWI to the 1960s, theatrical modernists sought new artifice forms for a rapidly changing world. This course introduces students to major forms of theatrical modernism from Dada and Theatre of Cruelty through Epic Theatre and Biomechanics to absurdism, and considers their legacy for the contemporary stage.
FORMAT: Lecture and seminar
PREREQUISITE: THEA 3501.03 or Permission of the Instructor
CROSS-LISTING: THEA 3501.03
EXCLUSION: ENGL 3509.V 0/6

ENGL 3502.03: The Modern Theatre 2: High Modernism.
During the last few decades, an extraordinary number of powerful new women poets have appeared on the literary scene. This course focuses on selected works written by these poets, and explores the ways in which manifest ideas of "women" have been challenged by individual poets who are positioned differently by race, sexual orientation, and national identity.
FORMAT: Lecture/discussion
PREREQUISITE: ENGL 1000.06; or any two of ENGL 1010.03, 1020.03, 1040.03, 1050.03, 1100.03 or THEA 1000.06; or the King's FYP
CROSS-LISTING: CRST 3502.03
EXCLUSION: ENGL 3509.V 0/6

ENGL 3509.06: English Drama: Tragedy I.
A study of the Greek tragedies, Aeschylus, Sophocles, and Euripides in English translation.
FORMAT: Seminar
EXCLUSION: CLAS 3515.03, CLAS 3730.V 0/6

ENGL 3530.03: Greek Drama: Tragedy II.
A study of the Greek tragedies, Aeschylus, Sophocles, and Euripides in English translation.
FORMAT: Seminar
EXCLUSION: CLAS 3515.03, CLAS 3730.V 0/6

ENGL 3820.03: Nabokov.
A close study of selected works by consummate twentieth century prose stylist Vladimir Nabokov - novelist, poet, critic and translator, author of notorious Lolita.
FORMAT: Lecture/discussion
CROSS-LISTING: RUSN 3820.03

ENGL 3841.03: Dante II. Purgatory and Paradise.
The course will provide a reading of the Purgatory and Paradise, the playwright's climb of the holy mountain and his ascent to the heaven up to the vision of God. This course places Dante's Divine Comedy within a critical context and furthers the study of Dante's oeuvre on the backdrop of the European Middle Ages. Each course will involve reading from the text, commentary and discussion of the readings assigned. The course is taught in English. Italian minors and majors students will be required to read the texts in Italian.
FORMAT: Lecture
PREREQUISITE: Any 2000 humanities course or instructor's permission
CROSS-LISTING: Comparative Religions 4041, ITAL 4041.03

ENGL 3916.06: Introduction to Applied Linguistics and Language Teaching.
For description of this cross-listed course, see Calendar under FREN 4016.
FORMAT: Lecture
CROSS-LISTING: FREN 4016.06

English Courses at the 4000 Level
Courses at the 4000 level are small seminars intended for third and fourth-year English majors or honours students, offering intensive, research-oriented study of special topics, particular authors or periods, national traditions, literary or cultural forms and figures. Reflecting the specialties of their instructors, their subjects change every year. Students should consult the detailed description of this year's seminars available on the English department website, and meet with an English department advisor before enrolling in one of these seminars.

Studies In Major Authors—4011—4099
Studies in Genre—4200—4299
Studies in National Literatures—4400—4499
Studies in Literary History—4600—4699
Studies in Culture and Theory—4800—4899
ENGL 4990.00: English Honours Capstone.
This course is intended for the culmination of an honours degree, to teach practices and home skills to carry forward into academic and non-academic professional realms. Emphasis will be on effective communication, both oral and written, of the student's own research, and on constructive responses, both critical and adulatory, to the research of others. The course fulfills the requirement of the College of Arts and Science at Dalhousie for an honours-qualifying examination,
with an importance equivalent to an honours thesis. It is graded pass/fail, carries no credit hours, but is a required distinguishing component of the honours degree.

**FORMAT:** Seminar

**RESTRICTION:** Admission by signature; for honours students in English

Students should consult the department website for a complete list of seminar offerings.

**IV. Creative Writing Course Descriptions**

**CRWR 2000X/Y.06: The Creative Process.**

This is a large interdisciplinary course that focuses on creativity in a wide variety of artistic and other areas of thought and expression, such as writing, painting, music, acting/directing, dancing, mathematics, medicine, and advertising.

**NOTE:** Credit can only be given for this class if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.

**PREREQUISITE:** Any course or combination of courses that satisfies the College of Arts and Sciences Writing Requirement

**CRWR 3000.03: Creative Writing: Poetry II.**

Building on the work done in English 3098.03, this seminar will involve students in the writing and assessment of poetry, their own as well as that of their peers. The process of writing poetry from the first draft to the final version will be stressed, with attention given to the developing relationship between form and content.

**FORMAT:** Workshop

**PREREQUISITE:** ENGL 3098.03

**CRWR 3001.03: Creative Writing: Fiction II.**

Following the emphasis on short story writing in English 3099.03, this course will deal with novel writing, with attention to such matters as dramatic elements, story/plot, character development, setting, point of view, revision, and publishing.

**FORMAT:** Workshop

**PREREQUISITE:** ENGL 3099.03

**CRWR 4000X/Y.06: Creative Writing Poetry.**

Students will meet in group session during the fall term to workshop their material that will lead to the production of a full manuscript of poetry. In the winter term students will meet on an individual basis with the professor to discuss and facilitate the completion of this project.

**NOTE:** Credit can only be given for this class if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.

**FORMAT:** Workshop

**PREREQUISITE:** CRWR 2000X/Y.06, ENGL 3098.03, CRWR 3000.03

**CRWR 4001X/Y.06: Creative Writing Fiction.**

Students will meet in group session during the fall term to workshop their material that will lead to the production of a full manuscript of fiction (short stories or novel). In the winter term students will meet on an individual basis with the professor to discuss and facilitate the completion of this project.

**NOTE:** Credit can only be given for this class if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.

**FORMAT:** Workshop

**PREREQUISITE:** CRWR 2000X/Y.06, ENGL 3098.03, CRWR 3000.03

**CRWR 4003X/Y.06: Advanced Narrative Non-Fiction Workshop.**

Senior Creative-Writing and/or Journalism students will write and critique narrative non-fiction, a genre which enjoys a rich history and contemporary popularity. Writing techniques from various genres (e.g., character development, metaphor, dialogue) will inform the fusion of fact and fiction, research and experience, the personal and the public etc.

**NOTE:** Credit can only be given for this class if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.

**FORMAT:** Workshop (i.e., the primary texts will be student-generated and critiqued by students and professor)

**PREREQUISITE:** Equivalent of two full credits from: CRWR 3000, CRWR 3001, THEA 3600, JOUR 3440 and 3441

**CRWR 4004.06: Advanced Creative Writing Workshop.**

Senior creative-writing students will write and critique a variety of genres, including fiction, poetry, narrative non-fiction and/or drama. A significant portion of class time will be devoted to the workshop critique of peer writing. Sustained student work on one large manuscript project will be encouraged.

**FORMAT:** Workshop (i.e., the primary texts will be student-generated and critiqued by students and professor)

**PREREQUISITE:** Equivalent of two full credits from: CRWR 3000, CRWR 3001, THEA 3600, JOUR 3440 and 3441
Environmental Studies

BA with Minor in Environmental Studies
See Minors in the College of Arts and Science section of this calendar (page 128).

Required Courses:
- ENVS 1000X/Y .06: Introduction to Environmental Studies
- PHIL 2480.03: Environmental Ethics
- ENVS 3200.03: Introduction to Environmental Law

BA Approved Electives in Environmental Studies:
Additions to the following lists will be made, as relevant courses become available.

Faculty of Science:
- BIOL 2060.03: Introductory Ecology
- BIOL 2601.03: The Flora of Nova Scotia
- BIOL 2605.03: Introduction to Marine Life in Nova Scotia
- BIOL 3060.03: Environmental Ecology
- BIOL 3061.03: Nature Conservation
- BIOL 3151.03: Methods in Ecology
- BIOL 4065.03: Sustainability and Global Change
- CHEM 2505.03: Environmental Chemistry
- ECON 2336.03: Regional Development
- ECON 3332.03: Resource Economics
- ECON 3335.03: Environmental Economics
- ERTH 2410.03: Environmental and Resource Geology I
- ERTH 3500.03: Geoscience Information Management
- GEOG 2800.03: Climate Change
- OCEA 2000.06: The Blue Planet
- OCEA 2900.03: Climate Change
- PHYS 1251.03: Astronomy I: The Sky and Planets
- PHYS 2300.05: Climate Change
- ENV 3010.03: Analytical Environmental Science and Social Responsibility
- ENV 3050.03: Environmental Science Internship
- ENV 3230.03: Material and Environmental Law for Scientists
- ENV 3231.03: Environmental Botany, Plants and Civilization
- ENV 3303.03: Geoscience Information Management
- ENV 3494.03: Human Health and Sustainability
- ENV 3501.03: Environmental Problem Solving I
- ENV 3502.03: Environmental Problem Solving II: The Campus as a Living Laboratory

Other Electives
- PLAN 2001.03: Landscape Analysis
- PLAN 3001.03: Landscape Ecology
- PLAN 3002.03: Reading the City
- PLAN 3003.03: Cities and the Environment in History
- PLAN 3103.03: Urban Ecology
- PLAN 3203.03: Landscape Design
- PLAN 4006.03: Transportation Planning

In any given year, special and variable topics courses may be approved for credit towards the minor requirements when the content warrants. See the program director for information.

I. Degree Programs

The College of Sustainability offers a BA Double Major and Combined Honours with any major/honours subject in the Faculty of Arts and Social Sciences or the Faculty of Science. For complete details about the College, its programs and courses please see the College of Sustainability section on page 44 of the Calendar.

A. BA, Double Major/Combined Honours, Environment, Sustainability and Society

i. Environment, Sustainability and Society as Subject A

Subject A: Environment, Sustainability and Society
• SUST 1000.06 (one full credit in fall term)
• SUST 1001.06 (one full credit in winter term)
• SUST 2000.06 (one full credit in fall term)
• SUST 2001.06 (one full credit in winter term)
• SUST 3000.03
• SUST 3502.03
• SUST 4000X/Y .06

For Double Major:
• three full credits from the approved list of ESS Electives (at least two credits outside Subject B)

For Combined Honours:
• two full credits from the approved list of ESS Electives (at least one credit outside Subject B)
• SUST 4900X/Y .06
• Cumulative GPA in Honours subject courses above 1000 level of 3.3, with no individual grade less than C

Subject B: Any Major/Honours subject in the Faculty of Arts and Social Sciences or the Faculty of Science
Please see subject B calendar entry and Academic Advisor for details.

ii. Environment, Sustainability and Society as Subject B

Subject A: Any Major/Honours subject in the Faculty of Arts and Social Sciences or the Faculty of Science

• SUST 1000.06 (one full credit in fall term)
• SUST 1001.06 (one full credit in winter term)
• SUST 2000.06 or SUST 2001.06
• one additional full credit in SUST at the 2000 level or above
• three full credits from the approved list (at least two credits outside Subject A)
• at least two full credits must be at the 3000 level or above

B. Minor in Environment, Sustainability and Society

• a minimum of three full credits (4.5 credit hours) and a maximum of 4.5 credits at the 2000 level or above in SUST courses.
• Prerequisites: SUST 1000.06 and SUST 1001.06

Environment, Sustainability and Society

• SUST 2001.06 (one full credit in winter term)
• SUST 3000.03
• SUST 3502.03
• SUST 4000X/Y .06

For Double Major:
• three full credits from the approved list of ESS Electives (at least two credits outside Subject B)

For Combined Honours:
• two full credits from the approved list of ESS Electives (at least one credit outside Subject B)
• SUST 4900X/Y .06
• Cumulative GPA in Honours subject courses above 1000 level of 3.3, with no individual grade less than C

Subject B: Any Major/Honours subject in the Faculty of Arts and Social Sciences or the Faculty of Science
Please see subject B calendar entry and Academic Advisor for details.

ii. Environment, Sustainability and Society as Subject B

Subject A: Any Major/Honours subject in the Faculty of Arts and Social Sciences or the Faculty of Science

• SUST 1000.06 (one full credit in fall term)
• SUST 1001.06 (one full credit in winter term)
• SUST 2000.06 or SUST 2001.06
• one additional full credit in SUST at the 2000 level or above
• three full credits from the approved list (at least two credits outside Subject A)
• at least two full credits must be at the 3000 level or above

B. Minor in Environment, Sustainability and Society

• a minimum of three full credits (4.5 credit hours) and a maximum of 4.5 credits at the 2000 level or above in SUST courses.
• Prerequisites: SUST 1000.06 and SUST 1001.06

I. Degree Programs

The College of Sustainability offers a BA Double Major and Combined Honours with any major/honours subject in the Faculty of Arts and Social Sciences or the Faculty of Science. For complete details about the College, its programs and courses please see the College of Sustainability section on page 44 of the Calendar.

A. BA, Double Major/Combined Honours, Environment, Sustainability and Society

i. Environment, Sustainability and Society as Subject A

Subject A: Environment, Sustainability and Society
• SUST 1000.06 (one full credit in fall term)
• SUST 1001.06 (one full credit in winter term)
• SUST 2000.06 (one full credit in fall term)
• SUST 2001.06 (one full credit in winter term)
• SUST 3000.03
• SUST 3502.03
• SUST 4000X/Y .06

For Double Major:
• three full credits from the approved list of ESS Electives (at least two credits outside Subject B)

For Combined Honours:
• two full credits from the approved list of ESS Electives (at least one credit outside Subject B)
• SUST 4900X/Y .06
• Cumulative GPA in Honours subject courses above 1000 level of 3.3, with no individual grade less than C

Subject B: Any Major/Honours subject in the Faculty of Arts and Social Sciences or the Faculty of Science
Please see subject B calendar entry and Academic Advisor for details.

ii. Environment, Sustainability and Society as Subject B

Subject A: Any Major/Honours subject in the Faculty of Arts and Social Sciences or the Faculty of Science

• SUST 1000.06 (one full credit in fall term)
• SUST 1001.06 (one full credit in winter term)
• SUST 2000.06 or SUST 2001.06
• one additional full credit in SUST at the 2000 level or above
• three full credits from the approved list (at least two credits outside Subject A)
• at least two full credits must be at the 3000 level or above

B. Minor in Environment, Sustainability and Society

• a minimum of three full credits (4.5 credit hours) and a maximum of 4.5 credits at the 2000 level or above in SUST courses.
• Prerequisites: SUST 1000.06 and SUST 1001.06
European Studies

I. Introduction

The European Studies program at Dalhousie is designed to guide students to a multidisciplinary understanding of contemporary Europe. It is not housed in any one department but is a combined effort of most departments in the Faculty of Arts and Social Sciences and the University of King’s College. It encourages students to develop a broad perspective on Europe as seen through history and politics, literature and ideas, and fine arts, with special emphasis placed on acquisition of language skills. There is an Honours program and a 20 credit Major. Because it is already a multidisciplinary program, European Studies cannot be combined with other subjects to form a combined honours degree.

II. Degree Programs

A. BA Honours in European Studies

Students must meet the faculty requirements for honours.

Year I

A student would normally take ten half-credit courses in the first year, meeting the distribution requirements of the BA. These courses include:

- a writing requirement course
- a history and politics course
- a language other than English
- a social sciences course
- a natural science course

Notes: Completion of the King’s College Foundation Year Program satisfies the first-year requirements for European Studies, with the exception of the language course and the natural sciences course. Some students may wish to take another “second language” course in the first year, and postpone one of the other courses until a later year.

Years II to IV

The program consists of 30 further half-credit courses including the second year core course and an Honours project. The general requirements for the program are:

- Courses in two contemporary European languages other than English are required. One of these languages is studied up to 3000/4000 level (normally two half credits each year). The minimum requirement for the other language is two half credits at the first year level, though students are strongly encouraged to take advanced courses in both languages.
- Students take 22-26 half-credit courses with significant European content. At this is a multidisciplinary program, no more than 10 half-credit courses above the 3000 level may be taken from one department. No fewer than 12 half-credit courses must be taken from two other departments. These may include courses from a language department to fulfill the language requirement, or one of the King’s Honours programs. At least six half-credit courses must be at the 3000 level or above, taken from at least two different departments. Courses taken during a study abroad year will need to be counted in the above mix.
- EURO 2101.03, EURO 2102.03
- Students should seek advice from the European Studies Coordinator, who will strive to ensure that courses are included from each of the following areas:
  1) History and Politics:
     - Approved ES courses in the departments of History, Political Science, Sociology and Social Anthropology, Economics, Commerce
  2) Literature and Ideas:
     - Approved ES courses in the departments of Classics, English, French, German, Italian, Philosophy, Religious Studies, Russian Studies, Spanish
  3) Fine Arts:
     - Approved ES courses in the departments of Music, Theatre, and the Program in Film Studies.

Approved ES courses in Contemporary Studies, Early Modern History, and Gender and Women’s Studies may fit one or more of these groupings. Please consult a European Studies advisor.

In conjunction with the Honours project a fourth year multidisciplinary seminar is required.

A term of study in the honours program at a European university, normally in a second-language environment. A summer work term in Europe is encouraged.

B. BA (20 credit) Major

Year I

A student would normally take ten half-credit courses in the first year, meeting the distribution requirements of the BA. These courses include:

1. a writing requirement course
2. HIST 1004X/Y.06 (European History), or an equivalent course in a later year
3. a language other than English
4. a social sciences course
5. a natural science course

Note: Completion of the King’s College Foundation Year Program satisfies the first-year requirements for the European Studies 20 credit Major, with the exception of the language course and the natural science course.

Year II to IV

- After the first year, students take a minimum of 18 half-credit courses from the approved list of courses with significant European content.
- No more than eight of these may be taken in any one department, and at least six must be taken in two other departments.
- At least six half-credit courses should be at the 3000 level or above, taken from at least two different departments.
- The 4000 level multidisciplinary seminar and the second year core course are also required.

Students should aim, with help from the European Studies Coordinator, for a balance in their courses to reflect the three general areas outlined above.

European Studies 187
III. Course Descriptions

EURO 2101.03: Europe: Ideas, Culture and Society to 1900
A multidisciplinary introduction to European Studies emphasizing the period to 1900. Courses look at the interconnecting themes among literature, the arts, philosophy and society in Europe.
FORMAL: Lecture/discussion
PREREQUISITE: Completion of at least two first-year courses from FASS departments, or the King's Foundation Year Program.

EURO 2102.03: Europe: Ideas, Culture and Society from 1900 to the Present
A multidisciplinary introduction to European Studies beginning in the 20th century. Courses look at the interconnecting themes among literature, the arts, philosophy and society in contemporary Europe.
FORMAL: Lecture/discussion
PREREQUISITE: Completion of at least two first-year courses from FASS departments, or the King's Foundation Year Program. Completion of EURO 2101.03 will ideally precede registration for this course.

EURO 3999.03: Independent Study
Individually directed research and writing, supervised by a faculty member. This course is taught only by special arrangement between individual students and individual instructors. Signature required.
FORMAL: Independent study with a professor
PREREQUISITE: Restricted to 3rd year European Studies Advanced Majors and Honours students.

EURO 4510.06: European Studies Seminar
Discussion of readings and presentations on European Studies topics. The topics for the seminar vary each year. The course emphasizes a broad multidisciplinary perspective on European Studies.
FORMAL: Restricted to 4th year European Studies Honours and Advanced Major students.

EURO 4512.03: European Studies Seminar
Discussion of readings and presentations on European Studies topics. The topics for the seminar vary each year. The course emphasizes a broad multidisciplinary perspective on European studies.
PREREQUISITE: Restricted to 4th year European Studies Honours and Advanced Major students.
EXCLUSION: EURO 4510.06XY

EURO 4800.06: Honours Essay in European Studies.
EURO 4801.03: Honours Essay in European Studies.
RESTRICTION: Honours Student in their final year of study

EURO 4802.03: Honours Essay in European Studies.
RESTRICTION: Honours Student in final year of study

European Studies Approved Courses
Note: Students should note that some courses may have prerequisites or other departmental restrictions, and some courses may not be offered in every year. Other courses, not on this list, may be appropriate. Please consult an ES Advisor.

I. Introduction
The Fountain School of Performing Arts provides a wide variety of programs for those whose demonstrated talent and specific pre-university training qualify them for specialization in Music studies. Certain courses and ensembles are available to the non-specialist student who wishes to increase both musical awareness as a listener and involvement as a performer.

The Bachelor of Music Program offers intensive professional music training which prepares students for careers or further study in many areas, including performance, composition, theory, musicology, music criticism or music education. It also offers excellent preparation for professional studies in other areas, such as law or journalism.

The 20 Credit BA in Music, the Honours BA in Music, and the BA or BA Honours in Music provide a strong foundation for various professions where a working knowledge of music is desirable, such as librarianship, multimedia programming and production, music industry commercial and electroacoustic work, arts management, recreational and therapeutic professions where a working knowledge of music is desirable, such as librarianship, multimedia programming and production, music industry commercial and electroacoustic work, arts management, recreational and therapeutic

Elective courses for non-majors are available, some of which require no musical background or training.

A. Elective Courses for Non-Majors

- MUSC 1021.03: Listening to Classical Music
- MUSC 1022.03: Listening Beyond the Classics
- MUSC 1001.03: Preparatory Theory and Aural Skills I
- MUSC 1004.03: Preparatory Theory and Aural Skills II
- MUSC 2018.03: Topics in Music and Cinema
- MUSC 2019.03: The Rock 'n' Roll Era and Beyond
- MUSC 2020.03: The Art and Science of Drumming
- MUSC 2600X/Y.06: Recording Studio Techniques
- MUSC 3061.03: Electroacoustic Music
- MUSC 3060.03: Introduction to Music and Sound Technology
- MUSC 3455.03: Narrative Strategies in 19th-Century Music (cross-listed with GWST 4355.03)
- MUSC 4355.03: Narrative Strategies in 19th-Century Music (cross-listed with GWST 4355.03)
- MUSC 3455.03: Narrative Strategies in 19th-Century Music (cross-listed with GWST 4355.03)
- MUSC 4355.03: Narrative Strategies in 19th-Century Music (cross-listed with GWST 4355.03)
- MUSC 4355.03: Narrative Strategies in 19th-Century Music (cross-listed with GWST 4355.03)
- MUSC 4355.03: Narrative Strategies in 19th-Century Music (cross-listed with GWST 4355.03)
- MUSC 4355.03: Narrative Strategies in 19th-Century Music (cross-listed with GWST 4355.03)
- MUSC 4355.03: Narrative Strategies in 19th-Century Music (cross-listed with GWST 4355.03)
- MUSC 4355.03: Narrative Strategies in 19th-Century Music (cross-listed with GWST 4355.03)
- MUSC 4355.03: Narrative Strategies in 19th-Century Music (cross-listed with GWST 4355.03)
- MUSC 4355.03: Narrative Strategies in 19th-Century Music (cross-listed with GWST 4355.03)
- MUSC 4355.03: Narrative Strategies in 19th-Century Music (cross-listed with GWST 4355.03)
- MUSC 4355.03: Narrative Strategies in 19th-Century Music (cross-listed with GWST 4355.03)
- MUSC 4355.03: Narrative Strategies in 19th-Century Music (cross-listed with GWST 4355.03)
- MUSC 4355.03: Narrative Strategies in 19th-Century Music (cross-listed with GWST 4355.03)
- MUSC 4355.03: Narrative Strategies in 19th-Century Music (cross-listed with GWST 4355.03)
- MUSC 4355.03: Narrative Strategies in 19th-Century Music (cross-listed with GWST 4355.03)
- MUSC 4355.03: Narrative Strategies in 19th-Century Music (cross-listed with GWST 4355.03)
- MUSC 4355.03: Narrative Strategies in 19th-Century Music (cross-listed with GWST 4355.03)
- MUSC 4355.03: Narrative Strategies in 19th-Century Music (cross-listed with GWST 4355.03)
- MUSC 4355.03: Narrative Strategies in 19th-Century Music (cross-listed with GWST 4355.03)
- MUSC 4355.03: Narrative Strategies in 19th-Century Music (cross-listed with GWST 4355.03)
- MUSC 4355.03: Narrative Strategies in 19th-Century Music (cross-listed with GWST 4355.03)
- MUSC 4355.03: Narrative Strategies in 19th-Century Music (cross-listed with GWST 4355.03)
- MUSC 4355.03: Narrative Strategies in 19th-Century Music (cross-listed with GWST 4355.03)
- MUSC 4355.03: Narrative Strategies in 19th-Century Music (cross-listed with GWST 4355.03)
- MUSC 4355.03: Narrative Strategies in 19th-Century Music (cross-listed with GWST 4355.03)
Other courses in Music may be taken by special permission. Applied study (individual studio instruction) may be taken subject to an audition and available space.

B. Admission Procedures for all Music Programs

All Music programs require that candidates (including transfer students) apply to both the university and the Fountain School of Performing Arts and audition for Applied Study. See the website at http://dal.ca/music for the full application process. Re-auditions and testing may be required if enrollment is deferred, if a program is interrupted for a year or more, or if an applied study course is not successfully completed in one academic year.

C. Ensemble Participation

All students (preparatory, major, non-majors and elective students) enrolled in an applied study course (including voice) must participate in ensembles, normally for a minimum of two per year. All wind, brass, percussion and string students will participate, as appropriate and as needed, in Wind Ensemble, Chamber Orchestra, Symphony Orchestra, Jazz Ensemble, and chamber ensembles.

All voice, piano, organ and guitar students will normally participate in the Dalhousie University Choir, and in other ensembles as appropriate to the idiom. Exceptions may be made for BMus Performance students in their fourth year of applied study. Voice students in the BMus Performance concentration may, for pedagogical reasons, with the agreement of the Voice Area, substitute chamber participation with the performance of a significant solo or chamber composition for voice.

The Fountain School of Performing Arts will monitor the number and types of ensembles for each student. Note that most ensembles require auditions.

The Ensemble requirement is specific to each year of Applied Study and appears on the student’s transcript. Students will be given a Pass/Fail grade each year and must complete all required levels with a grade of Pass in order to graduate. The ensemble requirement is non-credit and will not count toward course level, but there is NO TUITION FEE for the Ensemble requirement.

Students must attend regularly and punctually the rehearsals and performances of their required ensembles.

Students should note that ensemble participation typically requires regularly occurring rehearsals and scheduled performances. Since rehearsals and concerts are often in the evening, students are advised not to undertake evening commitments that could conflict with those program and course requirements.

Membership in the various ensembles is open to both the university and the community by auditions. Please contact the director of each ensemble (listed below) or the School for further details.

Dalhousie University Choir (M. Martin)
Dalhousie Wind Ensemble (N. Bader)
Dalhousie Chamber Orchestra (P. Dykstra)
Dalhousie Jazz Ensemble (C. Mitchell)
Dalhousie Percussion Ensemble (D. Gray)
Dalhousie Open Workshop (K. Saverio, M. Swanson)
Small Ensembles (staff coaches)
Collaborative Piano (staff coaches)
Dalhousie Symphony Orchestra (P. Allen)
Voice Chamber Ensemble (M. Swanson)

II. Degree Programs

A. Preparatory Courses

These courses are for those prospective Music-degree program students who demonstrate outstanding potential in their audition, but who require further training before entering first year Music study at the university level.

Students admitted to this level are considered to be in a BA undeclared program and may take a maximum of five full credits.

Curriculum
- MUSC 1003.03: Preparatory Theory and Aural Skills I
- MUSC 1004.03: Preparatory Theory and Aural Skills II
- MUSC 1071X/Y.03: Preparatory Keyboard Skills
- MUSC 1000X/Y.03: Preparatory Applied Study
- Required Writing Course (see Degree Requirements, page 132 for a list of writing courses)
- Arts and Social Sciences or Science elective, one full-credit
- MUSC 0622X/Y.00: Ensemble (Prep)

Special Notes:
- Preparatory Music courses MUSC 1003.03, MUSC 1004.03, MUSC 1071X/Y.03 and MUSC 1100X/Y.06, although credit courses, cannot be counted toward a Music degree program. However, they may be counted as electives in other BA or BMus degree programs.
- Students may be asked to re-test in music theory, aural skills and keyboard skills in order to enter first-year courses.
- The Fountain School of Performing Arts may count the final grade in MUSC 1100X/Y.06 as sufficient proof of readiness to enter one of the School’s degree programs, or may require a separate audition or re-audition.

Standards for Preparatory Courses

Minimum grades for advancement to your Music degree studies (see Special Notes #2 and #3 above):
- MUSC 1003.03 C-
- MUSC 1004.03 B-
- MUSC 1071X/Y.03 B-
- MUSC 1100X/Y.06 B-

B. Bachelor of Music (BMus)

The BMus is a four-year program with 16 out of 20 credits in Music. Upon successful completion of the second year, students in good standing (minimum overall average GPA of 2.7 [B-] in 1000 and 2000-level MUSC courses) may continue with studies in the BMus general degree or may apply for one of three concentrations: Composition, Musicology or Performance. Additional requirements for acceptance to the areas of concentration are listed below, including applicable standards. Please also see section 6. Standards for overall average GPA of 2.7 [B-] in 1000 and 2000-level MUSC courses) may continue with studies in the BMus general degree or may apply for one of three concentrations: Composition, Musicology or Performance. Additional requirements for acceptance to the areas of concentration are listed below, including applicable standards. Please also see section 6. Standards for overall average GPA of 2.7 [B-] in 1000 and 2000-level MUSC courses.

1. Common Curriculum

First Year
- MUSC 1100-level Applied Study (MUSC 1101X/Y.06 to MUSC 1123X/Y.06)
- MUSC 1201.03: Music Theory I
- MUSC 1222.03: Music Theory II
- MUSC 1270.03: Aural Skills I
- MUSC 1271X/Y.03: Keyboard Skills I
- MUSC 1322.03: Music History I
- MUSC 1333.03: Music History II
- Arts and Social Sciences or Science elective, one full credit (Writing Course elective)
- MUSC 0122X/Y.00: Ensemble I

Second Year
- MUSC 2000-level Applied Study (MUSC 2103X/Y.06 to MUSC 2123X/Y.06)
- MUSC 2221.03: Music Theory III
- MUSC 2222.03: Music Theory IV
- MUSC 2270X/Y.03: Aural Skills II
- MUSC 2271X/Y.03: Keyboard Skills II
- MUSC 2322.03: Music History III
- MUSC 2333.03: Music History IV: Specialized Study
- Arts and Social Sciences or Science elective, two half credits
- MUSC 0222X/Y.00: Ensemble II

All students intending to pursue a Concentration in Performance must take MUSC 2175.03 (Lyric Dictation for Singers) either in the second or third year of study, depending on the cycle of courses. If they take MUSC 2175.03 in the second year, MUSC 2353.03 (Music History IV) is deferred to year three or four, not omitted.

* Students intending to pursue a Concentration in Composition may take MUSC 2221.03 (Introduction to Composition) in the Fall semester of their second year. Students taking this option will: 1. Defeat their Fall half credit Arts and Social Sciences or Science elective in the Winter term of the same year. 2. Not take MUSC 2353.03 (Music History IV) in the Winter term of their second year. Students accepted into Composition will be exempt from 2353.03. Students who
are not accepted into Composition will take MUSC 2353.03 (Music History IV) in either their third or fourth year.

2. **BMus General Degree**

   Students in good standing (minimum overall average GPA of 2.7 [B-) in 1000 and 2000-level MUSC courses) may proceed to a BMus general degree program in their third year. This program choice allows for the greatest flexibility within the BMus program offerings. It will prepare students well for advanced degrees in Music including the Bachelor of Education, as well as for a wide range of careers in music.

   Students must submit a proposal for their intended graduation project (4993.06 or 4000-level musicology seminar) by March 1 of the third year of study, according to the Fountain School of Performing Arts guidelines. Students must achieve a minimum grade of 2.7 (B-) in this credit.

   **Third Year**
   - MUSC 1000: Applied Study (MUSC 1010.06 to MUSC 3121.06)
   - MUSC 3283.03: Modal Counterpoint OR MUSC 3284.03: Tonal Counterpoint
   - MUSC 3211.03: Form and Analysis: The Second Viennese School to the Present Day
   - One half-credit in music history beyond the 2000-level chosen from: MUSC 4231.03, MUSC 4281.03, MUSC 4133.03, MUSC 4345.03, MUSC 4319.03, MUSC 4356.03, MUSC 4346/4346.03, MUSC 4362.03, MUSC 4363/4363.03, MUSC 4367.03, MUSC 4368/4368.03, MUSC 4358/4358.03
   - 1.5 credits of Music electives
   - Arts and Social Sciences or Science elective, one full credit
   - MUSC 6322X/Y.06: Ensemble III

   **Fourth Year**
   - MUSC 1000: Applied Study (MUSC 4101.06 to MUSC 4212.06)
   - MUSC 3262.06: Orchestration
   - MUSC 4999.03: Graduation Project or 4000-level Musicology seminar (see 4. Concentration in Musicology for the list of seminars)
   - two credits of Music electives
   - Arts and Social Sciences or Science elective, one full credit
   - MUSC 6422X/Y.06: Ensemble IV

   NOTE: Those students who are interested in pursuing a career in classroom teaching of music must complete an undergraduate degree in Music and then complete a Bachelor of Education (BEd) degree at another institution. Students are advised to consult provincial regulations for teacher certification and entrance requirements for their institution of choice, and to meet with the Undergraduate Advisor in order to ensure optimal course selection within the BMus General degree program.

3. **Concentration in Composition**

   Students in good standing (minimum overall average GPA of 2.7 [B-) in 1000 and 2000-level MUSC courses), along with a minimum grade of 3.3 (B+) in their 1000 and 2000-level MUSC courses, may submit a portfolio of original music (narratively prepared in the MUSC 2210 Introduction to Composition) by March 1 of the second year to apply for admission to this concentration. Students selected for this concentration will demonstrate outstanding abilities and potential as composers. See the Fountain School of Performing Arts guidelines for admission to this concentration.

   Students who are accepted in this concentration must achieve a minimum grade of 2.7 (B-) in the graduation requirement MUSC 4399.05.

   **Third Year**
   - MUSC 1000: Applied Study (MUSC 3101.X/X to MUSC 3121.X/X)
   - MUSC 3221.03: Form and Analysis: The Second Viennese School to the Present Day
   - MUSC 3263.03: Orchestration
   - Modal Counterpoint OR MUSC 3284.03: Tonal Counterpoint
   - MUSC 4353.03: Music since 1945
   - MUSC 4354.03: Popular Music Analysis
   - MUSC 4355.03: Narrative Strategies
   - MUSC 4356.03: Opera Studies
   - MUSC 4358/4358.03: Studies in Medieval Music
   - MUSC 4359.03: Graduate Requirement (Thesis)
   - MUSC 6422X/Y.06: Ensemble IV

   Also in the third and fourth years (6 credits):
   - two credits of Music electives (any choice, but students are strongly encouraged to take MUSC 3283.03: Orchestration)
   - The equivalent of two full credits can be chosen from Musicology electives as listed below:
     - MUSC 3316.03: Women, Gender and Music
     - MUSC 3414.03: Electroacoustic Music
     - MUSC 4353.03: Music since 1945
     - MUSC 4354.03: Popular Music Analysis
     - MUSC 4355.03: Narrative Strategies
     - MUSC 4356.03: Opera Studies
     - MUSC 4358/4358.03: Studies in Medieval Music
     - MUSC 4359.03: Graduate Requirement (Thesis)
     - MUSC 4363/4363.03: Topics in Musicology II
     - MUSC 4362.03: Topics in Canadian Music
     - MUSC 4360.03/4360.03: Topics in Musicology II
     - MUSC 4360.03/4360.03: Selected Composer Studies
     - one credit of any introductory language course (X.Y.06), in a case where a student already has a second language, he or she can be directed towards a third language (at a full credit of literature courses in the second language (e.g., FREN 2021.03: Langue et culture together with FREN 2201.03: Introduction à la littérature for a French-speaking student).

   Students selected for this concentration will demonstrate outstanding abilities and potential as composers. See the Fountain School of Performing Arts guidelines for further details concerning admission procedures.

4. **Concentration in Musicology**

   Students in good standing (minimum overall average GPA of 2.7 [B-) in 1000 and 2000-level MUSC courses) must submit two writing samples by March 1 of the second year to apply for admission to this concentration.

   Students selected for this concentration will demonstrate outstanding abilities and potential as musicologists. See the Fountain School of Performing Arts guidelines for further details concerning admission procedures.

   Students who are accepted in this concentration must achieve a minimum grade of 2.7 (B-) in the graduation requirement MUSC 4399.05.

   **Third Year**
   - MUSC 1000: Applied Study (MUSC 3101.X/X to MUSC 3121.X/X)
   - MUSC 3221.03: Form and Analysis: The Second Viennese School to the Present Day
   - MUSC 3263.03: Orchestration
   - MUSC 4353.03: Music since 1945
   - MUSC 4354.03: Popular Music Analysis
   - MUSC 4355.03: Narrative Strategies
   - MUSC 4356.03: Opera Studies
   - MUSC 4358/4358.03: Studies in Medieval Music
   - MUSC 4359.03: Graduate Requirement (Thesis)
   - MUSC 6422X/Y.06: Ensemble IV

   Also in the third and fourth years (6 credits):
   - two credits of Music electives (any choice, but students are strongly encouraged to take MUSC 3283.03: Orchestration)
   - The equivalent of two full credits can be chosen from Musicology electives as listed below:
     - MUSC 4353.03: Music since 1945
     - MUSC 4354.03: Popular Music Analysis
     - MUSC 4355.03: Narrative Strategies
     - MUSC 4356.03: Opera Studies
     - MUSC 4358/4358.03: Studies in Medieval Music
     - MUSC 4359.03: Graduate Requirement (Thesis)
     - MUSC 4363/4363.03: Topics in Musicology II
     - MUSC 4362.03: Topics in Canadian Music
     - MUSC 4360.03/4360.03: Topics in Musicology II
     - MUSC 4360.03/4360.03: Selected Composer Studies
     - one credit of any introductory language course (X.Y.06), in a case where a student already has a second language, he or she can be directed towards a third language (at a full credit of literature courses in the second language (e.g., FREN 2021.03: Langue et culture together with FREN 2201.03: Introduction à la littérature for a French-speaking student).

   Students selected for this concentration will demonstrate outstanding abilities and potential as composers. See the Fountain School of Performing Arts guidelines for further details concerning admission procedures.

5. **Concentration in Performance**

   Students in good standing (minimum overall average GPA of 2.7 [B-) in 1000 and 2000-level MUSC courses), along with a minimum grade of 3.3 (B+) in their 1000 and 2000-level Applied Study may audition at the end of second year to apply for admission to this concentration.

   Students selected for this concentration will demonstrate outstanding abilities and potential as performers. See the Fountain School of Performing Arts guidelines for further details concerning admission procedures.

   Students who are accepted in this concentration must achieve a minimum grade of 3.3 (B+) in third year Performance Concentration Applied Study (MUSC 3701.06 to 3721.06) and in the Third Year performance recital (MUSC 3399.03) in order to remain in the concentration. Students must achieve a minimum grade of 2.7 (B-) in their fourth year Performance Concentration Applied Study (MUSC 4701.06 to 4721.06) and in their Fourth Year performance recital (4993.03).
Third Year
- MUSC 3000 level Performance Concentration Applied Study (MUSC 3701X/Y.06 to MUSC 3721X/Y.06)
- MUSC 1101X/1102X.03: Music Theory I
- MUSC 2101X/2102X.06: Voice I
- MUSC 2201X/2202X.06: Voice II
- MUSC 2270X/2271X.03: Aural Skills II/Keyboard Skills I
- MUSC 3101X/3102X.06: Voice III
- MUSC 3201X/3202X.03: Counterpoint and Analysis
- MUSC 3308X/3309X.03: Baroque/Classical Literature
- MUSC 3353X/3354X.03: Chamber Music Literature
- MUSC 4170X/4171X.03: Improvisation Techniques and Practices
- MUSC 4711X/4712X.03: Ensemble IV

Fourth Year
- MUSC 4199X/4200X.03: Area Graduation Requirement (Performance: Recital)
- MUSC 4000-level Performance Concentration Applied Study (MUSC 4713X/4714X.06)
- MUSC 0422X/Y.00: Ensemble IV

Although not required, students in Performance are encouraged to take MUSC 3352X.03, Orchestration, as one of their Music electives.

Also in the third and fourth years, according to idiom:

Voice (5.5 credits):
- MUSC 3117X.03: Principles of Vocal Pedagogy
- MUSC 3114X.03: History of Opera
- 3.5 Music electives, any choice

Piano (5.5 credits):
- 3.5 full credit Music electives, any choice; however, if offered, students should take:
  - MUSC 3353X.03: Chamber Music Literature
  - two full credits Arts and Social Sciences or Science electives

Strings (5.5 credits):
- 3.5 full credit Music electives, any choice; however, if offered, students should take:
  - MUSC 3160X.03: Conducting
  - MUSC 3355X.03: Chamber Music Literature
  - two full credits Arts and Social Sciences or Science electives

Guitar (5.5 credits):
- MUSC 3308X.03: Modern Guitar
- MUSC 4170X.03: Improvisation Techniques and Practices
- 2.5 full credit Music electives, any choice

Saxophone (5.5 credits):
- MUSC 4114X.03: Improvisation Techniques and Practices
- MUSC 2020X.03: The History of Jazz
- 2.5 full credit Music electives, any choice

Wind and brass instruments, percussion (5.5 credits):
- 3.5 Music electives, any choice

6. BMus Standards
Students may not enroll in the Bachelor of Music Graduation Requirement courses (MUSC 4199X-MUSC 4999) until the fourth year of the Program. Students must achieve an average minimum overall GPA of 2.7 (B-) in Music courses beyond the 1000 level in order to graduate with a BMus degree. Students must achieve a minimum grade of C+ in 1000 level applied study. Grades in MUSC courses beyond the 1000 level must be "C" or better in order to count toward the BMus degree.

See also the sections above for specific standards regarding concentrations.

C. BA with Combined Honours in Music and Theatre
The Fountain School of Performing Arts offers a highly specialized four-year BA with a Combined Honours in Music and Theatre which blends the principal courses of the Bachelor of Music in Voice with Theatre courses in Acting and Movement. A maximum of five students will be selected for entrance into the program each year. The graduate of this program will advance toward a professional career in the performing arts equipped with a foundation in music and theatre.

Students must successfully complete the audition/interview tests for the first year of the Music Program. Students must also audition for, and be accepted into, the Acting Program. The prerequisite for audition is the successful completion of THEA 1800X/Y.06.

To qualify for graduation a student must participate by having a significant role in at least one staged musical production (either an integral part of Dal Theatre Productions or the Opera Workshop).

In addition to the School requirements listed below, students must satisfy the requirements outlined in the Degree Requirements section, page 325 of this calendar.

NOTE: Students having to withdraw from this Program through failure to achieve the required standards in Theatre courses must re-apply if desiring a degree program in Music. Students having to withdraw from this Program through failure to achieve the required standards in Music courses must re-apply if desiring a degree program in Theatre.

First year
- MUSC 1101X/1102X.06: Voice I
- MUSC 1210X.03: Music Theory I
- MUSC 1222X.03: Music Theory II
- MUSC 1270X.03: Aural Skills I
- MUSC 2101X/2102X.03: Keyboard Skills I
- THEA 1000X.06: Introduction to Theatre (Writing Requirement)
- THEA 1800X.06: Introduction to Acting and Performance
- MUSC 0122X.Y.00: Ensemble I (normally Dalhousie University Chorus/Opera Workshop)

Second year
- MUSC 2101X/2102X.06: Voice II
- MUSC 2222X.03: Music Theory III
- MUSC 2270X.03: Music Theory IV
- MUSC 2353X.03: Aural Skills II
- MUSC 2271X.03: Keyboard Skills II
- THEA 2800X.03: Acting II
- THEA 2820X.Y.06: Dance & Movement II
- MUSC 0222X.Y.00: Ensemble II (normally Dalhousie University Chorus/Opera Workshop)

Third year
- MUSC 3101X/3102X.06: Voice III
- THEA 2012X.03: Early Modern Theatre
- THEA 3000X.03: Acting III
- THEA 3020X.Y.06: Dance & Movement III
- Arts and Social Science: One of 1000-level Life or Physical Science, Social Science, or Language Course Requirement (see Degree Requirements, p. 40 of this Calendar)
- MUSC 0322X.Y.00: Ensemble III (normally Dalhousie University Chorus/Opera Workshop)
- MUSC 3314X.03: History of Opera

Fourth year
- MUSC 4101X/4102X.06: Voice IV
- THEA 4000X.Y.06: Acting IV
- THEA 4400X.Y.06: Advanced Performance Techniques
- Arts and Social Science: Two remaining 1000-level Life or Physical Science, Social Science, or Language Course Requirement (see Degree Requirements, p. 40 of this Calendar)
- MUSC 0422X.Y.00: Ensemble IV (normally Dalhousie University Chorus/Opera Workshop)
Honours Music and Theatre students will be awarded the 21st credit for their satisfactory participation in a Dal Theatre or Opera Workshop production.

D. BA (20 credit) Honours in Music

In addition to the School requirements listed below, students must satisfy the requirements outlined in the College of Arts and Science Degree Requirements section, beginning on page 125 of this calendar. Students must successfully complete an audition/entrance test.

School Requirements

First year (5.0 credits):
- MUSC 1000-level Applied Study (MUSC 101X/Y.06 to 1121X/Y.06)
- MUSC 1201.03: Music Theory I
- MUSC 1222.03: Music Theory II
- MUSC 1270X/Y.03: Aural Skills I
- MUSC 1271X/Y.03: Keyboard Skills I
- One full credit Arts and Social Sciences Writing Course
- One full credit Arts and Social Sciences or Science elective
- MUSC 0122X/Y.00: Ensemble I

Second year (5.0 credits):
- MUSC 2000-level Applied Study (MUSC 210X/Y.06 to 2121X/Y.06)
- MUSC 2270X/Y.03: Aural Skills II
- MUSC 2271X/Y.03: Keyboard Skills II
- MUSC 2221.03: Music Theory III
- MUSC 2222.03: Music Theory IV
- Two full credits Arts and Social Sciences or Science electives (see Degree Requirements for the College of Arts and Science)
- MUSC 0222X/Y.00: Ensemble II

Additional School Requirements
- MUSC 1552.03: Music History I (recommended during 2nd year)
- MUSC 2521.03: Music History II
- MUSC 4509.03: Graduation Requirement (Thesis)
- Five to seven full credits Music electives, at least three above the 2000 level

E. Bachelor of Arts (Combined Honours Program) Bachelor of Science (Combined Honours Program)

Students may enrol in either of these combined honours programs with the joint approval of the Fountain School of Performing Arts and the department of the allied subject (in compliance with the Combined Honours requirements detailed in the Degree Requirements section, page 125 of this calendar). Students must successfully complete an audition/entrance test.

School Requirements

1000-level
- MUSC 1000-level Applied Study (MUSC 101X/Y.06 to 1121X/Y.06)
- MUSC 1201.03: Music Theory I
- MUSC 1222.03: Music Theory II
- MUSC 1270X/Y.03: Aural Skills I
- MUSC 1271X/Y.03: Keyboard Skills I
- MUSC 1552.03: Music History I
- MUSC 0122X/Y.00: Ensemble I

Additional School Requirements: As at least four credits in Music above the 1000 level, at least two of which must be at the 3000 or 4000 level. Among these, one half-credit additional course in Musicology must be completed (chosen from MUSC 2352.03, 2353.03, 4353.03).

NOTE: Students considering Honours programs must meet with their academic advisor in the Fountain School of Performing Arts as soon as possible in their program, and no later than their second year of studies. For Combined Honours programs, students must consult with Advisors in BOTH departments for approval of the Fountain School of Performing Arts as soon as possible in their program, and no later than their second year of studies. For Combined Honours programs, students must consult with Advisors in BOTH departments for approval of the combined BA, and for Honours BA through the University of King’s College: Bachelor of Music with King’s Foundation Year (FY) Bachelor of Journalism with Music History Option, and Bachelor of Arts combined honours in Contemporary Studies. Students may also pursue a BA (20 credit) and an honours BA through the University of King’s College. Please consult the University of King’s College (Office of the Registrar) for further information including curriculum and registration details.

F. BA (20 credit) Major in Music

In addition to the School requirements listed below, students must satisfy the requirements outlined in the College of Arts and Science Degree Requirements section, beginning on page 325 of this calendar. Students must successfully complete an audition/entrance test.

School Requirements

First year (5.0 credits):
- MUSC 1000-level Applied Study (MUSC 101X/Y.06 to 1121X/Y.06)
- MUSC 1201.03: Music Theory I
- MUSC 1222.03: Music Theory II
- MUSC 1270X/Y.03: Aural Skills I
- MUSC 1271X/Y.03: Keyboard Skills I
- One full credit Arts and Social Sciences Writing Course
- One full credit Arts and Social Sciences or Science elective
- MUSC 0122X/Y.00: Ensemble I

Second year (5.0 credits):
- MUSC 2000-level Applied Study (MUSC 210X/Y.06 to 2121X/Y.06)
- MUSC 2270X/Y.03: Aural Skills II
- MUSC 2271X/Y.03: Keyboard Skills II
- MUSC 2221.03: Music Theory III
- MUSC 2222.03: Music Theory IV
- Two full credits Arts and Social Sciences or Science electives
- MUSC 0222X/Y.00: Ensemble II

Additional School Requirements:
- MUSC 1552.03: Music History I (recommended during second year)
- MUSC 1553.03: Music History II
- MUSC 2532.03: Music History III
- Three to 5.5 full credits Music electives, at least three above the 2000 level.

G. BA or BSc (20 credit) Double Major

In addition to the Fountain School of Performing Arts requirements listed below, students must satisfy the requirements outlined in the College of Arts and Science Degree Requirements section, beginning on page 125 of this calendar. The major subject with the most advanced credits appears first on the record.

School Requirements
a. Music as First Subject: Students must satisfy the School requirements as listed for the 20 credit BA with Major in Music (section F. above), including 1000 and 2000 level applied study. Students must successfully complete an audition/entrance test. Please consult with the School for details.

b. Music as Second Subject: Students must complete one year of applied study (subject to audition) and four full Music credits above the 1000 level, including two full credits beyond the 2000 level. The following courses may not be used to count toward this degree: MUSC 2007.06, MUSC 2226.06, MUSC 2351.06, MUSC 3130.06

H. Minor Programs in Music and Musicology

See Minors in the College of Arts and Science section of this calendar.

I. Cooperative Degree Programs with the University of King’s College

The following degree programs are offered in cooperation with the University of King’s College: Bachelor of Music with King’s Foundation Year (FY), Bachelor of Journalism with Music History Option, and Bachelor of Arts combined honours in Contemporary Studies. Students may also pursue a BA (20 credit) and an Honours BA through the University of King’s College. Please consult the University of King’s College (Office of the Registrar) for further information including curriculum and registration details.

III. Course Descriptions

NOTE: Not all courses are offered every year. Please consult the current timetable for further information.
MUSC 1020.03: Listening to Classical Music. Designed for the interested listener who desires to acquire an informed response to musical experiences. Knowledge of musical notation and terminology is not a prerequisite. The course is a survey of musical styles from the late nineteenth century to the late twentieth century. We will consider music and image; music and the related arts; the art and psychology of listening. This course is for non-music majors and cannot be counted as a credit toward a degree in Music.

FORMA T: Lecture 3 hours
EXCLUSION: MUSC 1011.03

MUSC 1021.03: Listening Beyond the Classics. Designed for the interested listener who desires to acquire an informed response to musical experiences. Knowledge of musical notation and terminology is not a prerequisite. The course is a survey of musical styles and into the late nineteenth century. We will consider music and image; music and the related arts, the art and psychology of listening. This course is for non-music majors and cannot be counted as a credit toward a degree in Music.

FORMA T: Lecture 3 hours
EXCLUSION: MUSC 1010.03

MUSC 1100X/Y.06: Preparatory Applied Study. A non-credit co-requisite for students in First Year (1000-level) Applied Study (voice or instrument). The number and type of ensemble(s) are selected in accordance with instrument/program requirements and with the guidance and approval of the applied-studies instructor. Ensemble participation typically requires regularly occurring rehearsals and scheduled performances. Please see the department for specific guidelines and schedules. Refer to page 187 for further details and a list of ensembles.

MUSC 1101X/Y.06: Preparatory Applied Study. A non-credit co-requisite for students in Second Year (2000-level) Applied Study (voice or instrument). The number and type of ensemble(s) are selected in accordance with instrument/program requirements and with the guidance and approval of the applied-studies instructor. Ensemble participation typically requires regularly occurring rehearsals and scheduled performances. Please see the department for specific guidelines and schedules. Refer to page 187 for further details and a list of ensembles.

MUSC 1102X/Y.06: Preparatory Applied Study. A non-credit co-requisite for students in Third Year (3000-level) Applied Study (voice or instrument). The number and type of ensemble(s) are selected in accordance with instrument/program requirements and with the guidance and approval of the applied-studies instructor. Ensemble participation typically requires regularly occurring rehearsals and scheduled performances. Please see the department for specific guidelines and schedules. Refer to page 187 for further details and a list of ensembles.

MUSC 1103X/Y.06: Preparatory Applied Study. A non-credit co-requisite for students in Fourth Year (4000-level) Applied Study (voice or instrument). The number and type of ensemble(s) are selected in accordance with instrument/program requirements and with the guidance and approval of the applied-studies instructor. Ensemble participation typically requires regularly occurring rehearsals and scheduled performances. Please see the department for specific guidelines and schedules. Refer to page 187 for further details and a list of ensembles.

NOTE: Credit can only be given for the course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.

FORMA T: Lab 2 hours
PREREQUISITE: Permission of the instructor, on the basis of the results of the Entrance Keyboard Proficiency Test

MUSC 1081.03: Voice Clinic for the Theatre. A course in the principles of singing as applied to classical actor training. Exercises and repertoire appropriate to this training will be prepared by the students for class performance. No prior instruction in music or singing is presumed.

FORMA T: A twice weekly ensemble class: 1.5 hours plus individual tutorials
EXCLUSION: This class is offered exclusively to students in the third year of the Acting Program

MUSC 1100X/Y.06: Preparatory Applied Study. For students in the Preparatory Year. By special recommendation some music majors may be advised by the Auditioning Committee to begin individual lessons at a level prerequisite to first year Applied Study courses. NOTE: Credit can only be given for the course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.

CO-REQUISITE: MUSC 0022X/Y.00, Ensemble (Prep)

MUSC 1000 level Applied Study. Individual studio instruction. May be taken as elective course subject to audition and availability of space. Please note that all applied study courses require an audition. Please contact the Fountain School of Performing Arts for audition dates or visit the website http://dal.ca/music. Auxiliary fees apply. Co-requisite little participation is required. Students must achieve a minimum grade of C or higher in first year applied study in order to advance to second year applied study.

• MUSC 1011X/Y.06: Voice I
• MUSC 1012X/Y.06: Voice II
• MUSC 1013X/Y.06: Piano I
• MUSC 1014X/Y.06: Organ I
• MUSC 1015X/Y.06: Violin I
• MUSC 1016X/Y.06: Violin II
• MUSC 1017X/Y.06: Cello I
• MUSC 1018X/Y.06: Double Bass I
• MUSC 1100X/Y.06: Flute I
• MUSC 1101X/Y.06: Flute II
• MUSC 1102X/Y.06: Oboe I
• MUSC 1103X/Y.06: Oboe II
• MUSC 1104X/Y.06: Clarinet I
• MUSC 1112X/Y.06: Bassoon I
• MUSC 1113X/Y.06: Saxophone I
• MUSC 1114X/Y.06: French Horn I
• MUSC 1115X/Y.06: Trumpet I
• MUSC 1116X/Y.06: Trombone I
• MUSC 1117X/Y.06: Tuba I
• MUSC 1118X/Y.06: Percussion I

NOTE: Students taking any of the above courses must register in both X and Y in consecutive terms; credit will be given only if both are completed consecutively.

MUSC 1201.03: Music Theory I. To fully understand the principles and origin of common-practice tonal music, as studied in MUSC 1222, this course proposes a survey of both pre- and post-tonal music, showing how they relate to each other. The focus will be on through baroque and classical styles and into the late nineteenth century. We will consider music and image; music and the related arts, the art and psychology of listening. This course is for non-music majors and cannot be counted as a credit toward a degree in Music.

FORMA T: Lecture 3 hours
EXCLUSION: MUSC 1010.03

MUSC 1202.03: Listening to Classical Music. Designed for the interested listener who desires to acquire an informed response to musical experiences. Knowledge of musical notation and terminology is not a prerequisite. The course is a survey of musical styles from the pre-modern era through baroque, classical, and into the late nineteenth century. We will consider music and image; music and the related arts, the art and psychology of listening. This course is for non-music majors and cannot be counted as a credit toward a degree in Music.

FORMA T: Lecture 3 hours
EXCLUSION: MUSC 1011.03

MUSC 1203.03: History of Music. Designed for the interested listener who desires to acquire an informed response to musical experiences. Knowledge of musical notation and terminology is not a prerequisite. The course is a survey of musical styles from the pre-modern era through baroque, classical and into the late nineteenth century. We will consider music and image; music and the related arts, the art and psychology of listening. This course is for non-music majors and cannot be counted as a credit toward a degree in Music.

FORMA T: Lecture 3 hours
EXCLUSION: MUSC 1010.03

MUSIC - Fountain School of Performing Arts 197

BY: Arts and Social Sciences

Music - Fountain School of Performing Arts
musicology (modes, phrase structure, cadences and metric manipulation of the Middle Ages, Renaissance and early 20th century counterpoint) and contrapuntal (counterpoints in two-part species counterpoint and analysis of short 20th century contrapuntal music).

**MUSIC 1222.03: Music Theory II.**

An introduction to diatonic and chromatic harmony, developing skills in part-writing and harmonic analysis.

**Format:** Lecture 3 hours

**Prerequisite:** Permission of the instructor based on placement testing, or MUSC 1005/MUSC 1006

**Corequisite:** MUSC 1200X/Y, MUSC 1217X/Y

**MUSIC 1270X/Y.03: Aural Skills I.**

A course designed to correlate with MUSC 1201.03 and MUSC 1222.03. melodies, harmony, rhythmic, textural and stylistic factors are vocalized, performed and dictated systemically. Lab work in ear-training and sight-singing is done three times per week. Each student is a member of a small working section.

**Signature Required**

**Note:** Students taking this course must register in both X and Y in consecutive terms; credit will be given only if both are completed consecutively.

**Format:** Lab 3 hours

**Prerequisite:** Permission of the instructor based on placement testing or MUSC 1001.03/1002.03 or equivalent

**Corequisite:** MUSC 1201.03, 1222.03, and 1270X/Y

**MUSIC 1271X/Y.03: Keyboard Skills I.**

The development of basic skills in sight reading, score reading and harmonized accompaniment at the keyboard, for Music degree program students.

**Signature Required**

**Note:** Students taking this course must register in both X and Y in consecutive terms; credit will be given only if both are completed consecutively.

**Format:** Lab 3 hours

**Prerequisite:** Permission of instructor based on placement testing or MUSC 1071.03

**Corequisite:** MUSC 1201.03, 1222.03, and 1270X/Y

**MUSIC 1352.03: Music History I.**

An introduction to thinking and writing about music. This course will use well-known works to develop an understanding of musical styles and functions, and it will explore such topics as melody, harmony, rhythm, texture and timbre. One of the goals of the course is to acquire university-level research, writing, critical listening and analytical skills. The ability to read musical notation is required.

**Signature Required**

**Note:** Students taking this course must register in both X and Y in consecutive terms; credit will be given only if both are completed consecutively.

**Format:** Lecture 3 hours

**MUSIC 1353.03: Music History II.**

A survey of Western European art music from antiquity to 1750. The work required will include critical listening, writing, score study and historical research.

**Format:** Lecture 3 hours

**Prerequisite:** MUSC 1352.03 or permission of instructor

**Corequisite:** MUSC 1350.03 and MUSC 1351.03

**MUSIC 2007X/Y.06: The Guitar: History and Techniques.**

This course will introduce students to the various styles of guitar playing from classical to jazz to folk. The history of the instrument (including lute and other related plucked instruments) and an examination of the key styles and performers will be covered. Practical instruction will be provided in this course, so a guitar will be necessary. Practical instruction will attempt to accommodate the various skill levels of the students enrolled.

**Special Note:** This course is for non-music majors and cannot be counted toward a music degree.

**Note:** Students taking this course must register in both X and Y in consecutive terms; credit will be given only if both are completed consecutively.

**Format:** Lab and lecture 3 hours

**MUSIC 2008X/Y.06: Modern Guitar.**

A course for students with a serious interest in preparing for studio guitar playing. The course includes jazz, folk, rock and accompanying techniques. Students will receive instruction and participate in ensemble playing in improvisation, score reading, chordology, and arranging.

**Note:** Students taking this course must register in both X and Y in consecutive terms; credit will be given only if both are completed consecutively. Music majors must register only for MUSC 2008X/Y.06

**Format:** Lab and lecture 3 hours

**Prerequisite:** MUSC 2007.06 or permission of the instructor

**Exclusion:** MUSC 3358.03

**MUSIC 2016.03: Topics in Music and Cinema.**

This course investigates various engagements of music and cinema. Topics vary from year to year and may include: depictions of diatonic music, musical narrativity in film, representation, manipulation, genres and styles, music or sound as special effect, film-scoring and the use of notable songs/tracks.

**Format:** Lab (Screening)/lecture 4 hours

**Exclusion:** MUSC 2013X/Y.06

**MUSIC 2018.03: Popular Music Until 1960.**

This course focuses on the origins and development of popular music in the twentieth century, tracing a history of rock'n'roll from its roots in minstrelsy and music hall styles of the nineteenth century until the end of rock'n'roll era in the 1950s. While no previous background in music is required, students will be expected to listen closely to selected music and to contribute to class discussions. Students will gain greater knowledge of history, as it affects and is affected by musical activities, and they will appreciate the motives behind the debates that have always surrounded popular music. Above all, students will learn to understand the history of rock'n'roll in terms of changes in both musical techniques and social values, and to recognize music as a site of celebration and struggle.

**Format:** Lecture/discussion 3 hours

**MUSIC 2019.03: The Rock'n'Roll Era and Beyond.**

This course focuses on the many different kinds of popular music that have proliferated since the 1950s. While no previous background in music is required, students will be expected to listen closely to selected music and to contribute to class discussions. Students will gain greater knowledge of history, as it affects and is affected by musical activities, and they will appreciate the motives behind the debates that have always surrounded popular music. Above all, students will learn to understand the history of rock'n'roll in terms of changes in both musical techniques and social values, and to recognize music as a site of celebration and struggle.

**Format:** Lecture/discussion 3 hours

**MUSIC 2020.03: The History of Jazz.**

This course is an overview of the origins and development of jazz, concentrating on the historical and social contexts of music and musicians. We will discuss many of the kinds of music that have been called jazz, and we will analyze their roles in twentieth century culture. Knowledge of musical notation and terminology is not required.

**Format:** Lecture/discussion 3 hours

**Exclusion:** MUSC 2015X/Y.06

**MUSIC 2022X/Y.06: The Art and Science of Drumming.**

This course will introduce students to the art and science of modern hand drums. The history of the instrument as well as cultural context and rhythmic structure will be discussed for various music genres and styles of drumming. A significant portion of the class will be practical, where students will be taught the rudiments of reading music and playing hand drums. This means that it will be necessary for each student to bring an approved hand drum to each class.

**Note:** This course is for non-music majors only and cannot be counted as a credit in a music degree program.

**Format:** Lab and lecture 3 hours

**MUSIC 2000 level Applied Study.**

Individual studio instruction. May be taken as elective credit subject to audition and availability. Please note that all applied study courses require an audition. Please contact the Fountain School of Performing Arts for audition dates or visit website http://dal.ca/music. Auxiliary fees apply. Co-requisite ensemble participation is required.

- MUSC 2101X/Y.06: Voice II
- MUSC 2102X/Y.06: Guitar II
MUSC 2270X/Y.03: Aural Skills II.
This course provides further practice in melodic and harmonic dictation and sight-singing; it correlates with MUSC 2221.03 and 2222.03. A special component deals with rhythm skills in sight-singing.
SIGNATURE REQUIRED
NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.
FORMAT: Lab 2 hours
PREREQUISITE: MUSC 2201.03, 2202.03, 2270X/Y.03
CO-REQUISITE: MUSC 2221.03, 2222.03, 2271X/Y.03
MUSC 2271X/Y.03: Keyboard Skills II.
A continuation of MUSC 2270X/Y.03 for Music degree program students. SIGNATURE REQUIRED
NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.
FORMAT: Lab 2 hours
PREREQUISITE: MUSC 2201.03, 2202.03, 2270X/Y.03
CO-REQUISITE: MUSC 2221.03, 2222.03, 2270X/Y.03
MUSC 2352.03: Music History III.
A survey of Western European art music from 1750 to the present. The work required will include critical listening, writing, score study and historical research.
FORMAT: Lecture 3 hours
PREREQUISITE: MUSC 1352.03 and/or permission of the instructor
EXCLUSION: MUSC 2352.03 and MUSC 2351.03
MUSC 2353.03: Music History IV: Focused Study.
This course provides the opportunity for the advanced study of selected topics in music history. Its specific focus changes each year according to the instructor, but it always develops concepts and methods introduced in Music History I-III, and it challenges students with more in-depth analysis of a genre, composer, period or style. Thus, topics covered will include: the medieval lyric; the works of Beethoven; music in the 19thc. and jazz.
FORMAT: Lecture 3 hours
PREREQUISITE: MUSC 1353.03 and MUSC 2352.03 and/or permission of instructor
MUSC 2600X/Y.06: Recording Studio Techniques.
Techniques for creating and recording music in the contemporary recording studio. The course will be a foundation for contemporary musicians and sound artists to understand and work in the recording studio, both as an "instrument" in its own right, and as an extension of their own instrumental techniques. In addition to technical topics (microphone usage, console and recorder operations, etc.) there is a further emphasis on production techniques; approaches to performing and directing in the studio; proper conduct on both sides of the glass; planning, budgeting and running a session; creative use of technical resources.
NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.
FORMAT: Lab and lecture 3 hours
PREREQUISITE: MUSC 1352.03 and/or permission of instructor
MUSC 3000 level Applied Study.
Individual studio instruction. May be taken as elective course subject to audition and available space. Please note that all applied study courses require an audition. Please contact the Fountain School of Performing Arts for audition dates or visit website http://Dal.Lecture. Ancillary fees are co-operative ensemble participation is required.
• MUSC 3101X/Y.06: Voice III
• MUSC 3102X/Y.06: Tenor III
• MUSC 3103X/Y.06: Piano III
• MUSC 3104X/Y.06: Organ III
• MUSC 3105X/Y.06: Violin III
• MUSC 3106X/Y.06: Cello III
• MUSC 3107X/Y.06: Double Bass III
• MUSC 3108X/Y.06: French Horn III
• MUSC 3109X/Y.06: Flute III
• MUSC 3110X/Y.06: Oboe III
• MUSC 3111X/Y.06: Clarinet III
• MUSC 3112X/Y.06: Bassoon III
• MUSC 3113X/Y.06: Saxophone III
• MUSC 3114X/Y.06: Saxophone III
• MUSC 3115X/Y.06: French Horn III

Music - Fountain School of Performing Arts 199
MUSIC 300 level Performance Concentration Applied Study.

Individual studio instruction for students in the BMus Performance Concentration. Please note that acceptance to the Performance Concentration applied study requires a written application, audition, and permission of the Fountain School of Performing Arts. Auditions take place at the conclusion of the second year of the Bachelor of Music program. Auxilliary fees apply. Co-requisite ensemble participation is required.

MUSIC 3001.Y.06: Voice I (Performance)
MUSIC 3002.Y.06: Guitar I (Performance)
MUSIC 3003.Y.06: Piano I (Performance)
MUSIC 3004.Y.06: Organ I (Performance)
MUSIC 3005.Y.06: Viola I (Performance)
MUSIC 3006.Y.06: Cello I (Performance)
MUSIC 3007.Y.06: Double Bass I (Performance)
MUSIC 3008.Y.06: Flute I (Performance)
MUSIC 3101.Y.06: Oboe I (Performance)
MUSIC 3111.Y.06: Clarinet I (Performance)
MUSIC 3112.Y.06: Bassoon I (Performance)
MUSIC 3113.Y.06: Saxophone I (Performance)
MUSIC 3114.Y.06: French Horn I (Performance)
MUSIC 3115.Y.06: Trumpet I (Performance)
MUSIC 3116.Y.06: Trombone I (Performance)
MUSIC 3117.Y.06: Tuba I (Performance)
MUSIC 3118.Y.06: Percussion I (Performance)

MUSIC 3060.03/3660.03: Introduction to Music and Sound Technology.

An introduction to the technologies in common use in music creation, performance and teaching, with particular attention to the way these technologies shape artistic and pedagogical processes. Topics include basic electroacoustic theory, sound recording and duplication, sound synthesis, MIDI, and personal computer music applications.

NOTE: Music majors must register in MUSIC 3660.03

FORMAT: Lecture and lab 3 hours
PREREQUISITE: Permission of the instructor

MUSIC 3061.03/3661.03: Electroacoustic Music.

An introduction to techniques and strategies for the creation and performance of electroacoustic and experimental music. The emphasis is on individual student creative works, with collective critiques. Students are encouraged to explore historic, contemporary, cross-disciplinary and experimental strategies in the creation and performance of their work.

NOTE: Music majors must register in MUSIC 3661.03

FORMAT: Lab and seminar 3 hours
PREREQUISITE: MUSIC 3060.03, 3660.03, or its equivalent; permission of the instructor

MUSIC 3063.06: Women, Gender and Music.

The course explores the variety of ways in which gender shapes musical discourse. The role of gender in music will be examined through three broad topics: the history of female contributions to music in musicology; composers, patrons and listeners, gender, musical constructions of gender, race, class and sexuality; and feminist criticism in recent musical discourse. Music students will be directed to more technical literature for their assignments and research paper, and will be required to engage in more technical descriptions of the music for all written work.

FORMAT: Lecture 3 hours
PREREQUISITE: MUSIC 2222.03, 1352.03, 1353.03, 2352.03
CROSS-LISTING: GWS 2352.05

MUSIC 3130.06: Jazz Dance II (Spring Session Only).

This course is the second part of a two-part sequence exploring the history and techniques of jazz dance. The focus will be on the development of personal expression through the medium of dance. Students must have a basic foundation in dance technique.

FORMAT: Lab/demonstration/lecture

PREREQUISITE: MUSIC 2130.06 or permission of instructor (interview)

CROSS-LISTING: THEA 3020.06: Jazz Dance II (Spring session only)

MUSIC 3160.03: Conducting.

A practical introduction to the basic techniques of conducting.

SIGNATURE REQUIRED

FORMAT: Lab 2 hours
PREREQUISITE: MUSIC 2270.03 and MUSIC 2222.03 and permission of the instructor

MUSIC 3161.03: Choral Techniques.

Study of the distinctive features of conducting choral ensembles with emphasis on rehearsal technique, score preparation, interpretation and group methods of building vocal tone. Practical experience will be gained in university and community settings.

SIGNATURE REQUIRED

FORMAT: Lecture/lab 3 hours
PREREQUISITE: MUSIC 2270.03 and MUSIC 2222.03 and permission of the instructor

MUSIC 3176.03: Principles of Vocal Pedagogy.

An introduction to the classic pedagogues of the Italian, German, French and English schools of singing. Spectrograph analysis of vowel formant series and fiberoptic video analysis of laryngeal function will be studied as well. Students will apply the techniques studied through a supervised practicum.

SIGNATURE REQUIRED

FORMAT: Lecture/hands-on 3 hours
PREREQUISITE: MUSIC 2101.03 and permission of the instructor

CROSS-REQUIRED: MUSIC 3100.03/3701.03 or 4101.03/4701.03

MUSIC 3177.03: Vocal Literature.

An introductory survey of Classical song literature from the Renaissance to the modern day covering the historical context, style and vocal performance practice through listening, assigned readings and score study.

FORMAT: Lecture 3 hours
PREREQUISITE: Permission of the instructor

MUSIC 3199X.Y.03: Half - Recital.

Required for all third-year Bachelor of Music students in the Performance concentration. May also be available to exceptional students in the fourth year of either 20-credit Music degree programs, by audition. Students must have completed all 2000-level theory courses as per Calendar guidelines. Students not in BMus Performance concentration must have a co-requisite of a minimum 4000- level applied study course. Please note that additional fees will apply for students not in BMus Performance concentration. This is a solo recital only. Recital repertoire should consist of 20 to 40 minutes of music. See the Fountain School of Performing Arts for further details including audition procedures and deadlines. Exclusions: students in 15-credit degree programs are not eligible.

NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.

FORMAT: Performance
PREREQUISITE: Audition and permission of Department

MUSIC 3210X.Y.06: Composition I.

Open only to students accepted into the BMus Concentration in Composition. Techniques and approaches of today’s music studied through writing of musical works for diverse instruments and ensembles, and through analysis of important works of repertoire. Emphasis will be given to creativity and to practical aspects of musical composition: effectiveness of orchestration, playability, quality of score, and preparation of parts.

SIGNATURE REQUIRED

NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.

FORMAT: Individual lessons and group courses with other Composition students

MUSIC 3221.03: Form and Analysis: the Second Viennese School to the Present Day.

Analysis of selected 20th- and 21st-century compositions. SIGNATURE REQUIRED

FORMAT: Lecture 3 hours
PREREQUISITE: MUSIC 2222.03, MUSIC 2352.03 or permission of the Department

EXCLUSION: MUSIC 4281.03
MUSC 3282.03: Orchestration.
A survey of the development of the orchestra and the orchestral instruments with an introduction to acoustics. Techniques in the deployment of instrumental combinations is emphasized through practical exercises in scoring for small chamber ensembles and a mediumsized orchestra common in the 20th century.
SIGNATURE REQUIRED
FORMAT: Lecture 3 hours
PREREQUISITE: MUSC 2222.03

MUSC 3283.03: Modal Counterpoint.
Polyphonic techniques of the Renaissance period studied through written exercises in species and free counterpoint, as well as through analysis of works by Lassus, Palestrina, Victoria and others.
SIGNATURE REQUIRED
FORMAT: Lecture 3 hours
PREREQUISITE: MUSC 2222.03
EXCLUSION: MUSC 2280.03
NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.
MUSC 3284.03: Tonal Counterpoint.
A study of tonal counterpoint in the baroque style. A particular emphasis will be made on the instrumental music of its most representative masters, J.S. Bach, through analysis of works and writing of stylistic exercises.
SIGNATURE REQUIRED
FORMAT: Lecture 3 hours
PREREQUISITE: MUSC 2222.03
EXCLUSION: MUSC 2280.03

MUSC 3308X/Y.06: Modern Guitar (Advanced Fretboard and Harmony).
For music majors only, this course aims to give the committed guitarist a thorough grounding in fretboard harmony, progressing from the simplest structures to the most complex, and to provide resources and practical exercises for applying this content within various musical idioms. NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.
FORMAT: Lab/Lecture 3 hours
PREREQUISITE: MUSC 1102, MUSC 2102

MUSC 3314.03: History of Opera.
Consideration of the history of Opera from its origins to the present day. Concepts to be examined include: "high" and "low" styles; national styles; gender and race; and function in contemporary Western society.
FORMAT: Lecture
PREREQUISITE: MUSC 3353.03 and MUSC 2352.03, or permission of the instructor
EXCLUSION: MUSC 2011.06 and MUSC 3111.06

MUSC 3353.03: Chamber Music Literature.
A study in depth of chamber music from the Eighteenth century to contemporary schools.
FORMAT: Lecture 3 hours
PREREQUISITE: MUSC 2352.03 or permission of the instructor

MUSC 3355.03: The Piano and its Literature.
A study in depth of the evolution of the piano and its repertoire from the Eighteenth century to the contemporary.
FORMAT: Lecture 3 hours
PREREQUISITE: MUSC 2352.03 or permission of the department

MUSC 3480X/Y.03: Band Instruments.
A practical introduction to the principal band instruments. Group instruction is offered in clarinet, oboe or bassoon, saxophone, trumpet or French horn, trombone and tuba, and percussion.
SIGNATURE REQUIRED
NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.
FORMAT: Lab 2 hours
PREREQUISITE: Permission of the Department, and an interview with the Class Coordinator

MUSC 4000 level Applied Study.
Individual studio instruction. May be taken as elective course subject to audition and available space. Please note that all applied study courses require an audition.
Please contact the Fountain School of Performing Arts for audition dates or visit website http://dal.ca/music. Auxiliary fees apply. Co-requisite ensemble participation is required.
• MUSC 4011X/Y.06: Voice IV
• MUSC 4012X/Y.06: Guitar IV
• MUSC 4013X/Y.06: Piano IV
• MUSC 4014X/Y.06: Organ IV
• MUSC 4015X/Y.06: Violin IV
• MUSC 4016X/Y.06: Viola IV
• MUSC 4017X/Y.06: Cello IV
• MUSC 4018X/Y.06: Double Bass IV
• MUSC 4019X/Y.06: Flute IV
• MUSC 4020X/Y.06: Oboe IV
• MUSC 4021X/Y.06: Clarinet IV
• MUSC 4022X/Y.06: Bassoon IV
• MUSC 4023X/Y.06: Saxophone IV
• MUSC 4024X/Y.06: French Horn IV
• MUSC 4025X/Y.06: Trumpet IV
• MUSC 4026X/Y.06: Trombone IV
• MUSC 4027X/Y.06: Tuba IV
• MUSC 4028X/Y.06: Percussion IV

MUSC 4000 level Performance Concentration Applied Study.
Individual studio instruction for students in the BMus Performance Concentration.
Please note that acceptance to the Performance Concentration applied study requires a written application, audition, and permission of the Fountain School of Performing Arts. Auditions take place at the conclusion of the second year of the Bachelor of Music program. Auxiliary fees apply. Co-requisite ensemble participation is required.
• MUSC 4011X/Y.06: Voice IV (Performance)
• MUSC 4012X/Y.06: Guitar IV (Performance)
• MUSC 4013X/Y.06: Piano IV (Performance)
• MUSC 4014X/Y.06: Organ IV (Performance)
• MUSC 4015X/Y.06: Violin IV (Performance)
• MUSC 4016X/Y.06: Viola IV (Performance)
• MUSC 4017X/Y.06: Cello IV (Performance)
• MUSC 4018X/Y.06: Double Bass IV (Performance)
• MUSC 4019X/Y.06: Flute IV (Performance)
• MUSC 4020X/Y.06: Oboe IV (Performance)
• MUSC 4021X/Y.06: Clarinet IV (Performance)
• MUSC 4022X/Y.06: Bassoon IV (Performance)
• MUSC 4023X/Y.06: Saxophone IV (Performance)
• MUSC 4024X/Y.06: French Horn IV (Performance)
• MUSC 4025X/Y.06: Trumpet IV (Performance)
• MUSC 4026X/Y.06: Trombone IV (Performance)
• MUSC 4027X/Y.06: Tuba IV (Performance)
• MUSC 4028X/Y.06: Percussion IV (Performance)

MUSC 4150X/Y.06: Advanced Applied Study.
By special permission of the Fountain School of Performing Arts, a student may enroll in an advanced year of applied study, subject to enrollment quotas and budget. Individual studio instruction. Auxiliary fees apply. Co-requisite ensemble participation is required.
NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.
PREREQUISITE: MUSC 41XX or 47XX and permission of the instructor, subject to budget and current studio capacity

MUSC 4170X/Y.03: Improvisation Techniques and Practices.
A studio course in the techniques and performance skills of improvisation as related to the jazz idiom, and other contemporary and non-Western music; students will perform as soloists and in small ensembles.
NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.
FORMAT: Studio 3 hours
PREREQUISITE: 3000-level applied study course, and the approval of the instructor
MUSC 4190X/Y.06: Symphony Apprenticeship.
A student in the Bachelor of Music program who has demonstrated exceptional aptitude and ability in his/her orchestral instrument, approved by the Student Recruitment Committee and employment by Symphony Nova Scotia, will serve an apprenticeship in the Symphony, supervised by his/her Applied Study Instructor. Performance will normally be given to a fourth-year student. Normally the majority of or all of the 34-38 services will be played during the First Term. Qualification for this credit will be subject to the needs of the Symphony, nomination by the Fountain School of Performing Arts, and a successful audition for the Symphony. Artistic Director and relevant Symphony Section Principals. The student will be hired by the Symphony at the current per-service rate, and must be a Member in Good Standing of the Atlantic Federation of Musicians. The student will be guided by his/her supervising Instrument on personal observation and on receipt of a signed evaluation from the Artistic Director of the Symphony. Normally there shall be only one such apprenticeship per season, and it is not renewable.
NOTE: Credit can only be given for the course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.
FORMAT: Placement in Symphony Nova Scotia, 34-38 Services
PREREQUISITE: Nomination by the Fountain School of Performing Arts; audition with Symphony Artistic Director and relevant Symphony Section Principals.
REINSTRUCTION: Normally limited to a student in the fourth year of the BMus Program Performance Concentration.
MUSC 4199X/Y.03: Area Graduation Requirement (Performance: Recital).
Required of and restricted to all students in the Performance Concentration of the Bachelor of Music program. The recital repertoire should consist of 55 to 75 minutes of music.
NOTE: Credit can only be given for the course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.
PREREQUISITE: Permission of the department
MUSC 4210X/Y.06: Composition II.
Open only to students accepted into the BMus Concentration in Composition. Techniques and approaches of today’s music studied through writing of musical works for diverse instruments and ensembles, and through analysis of important works of repertoire. Emphasis will be given to creativity and by practical aspects of musical composition, effectiveness of orchestration, playability, quality of score, and preparation of parts.
SIGNATURE REQUIRED
NOTE: Credit can only be given for the course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.
FORMAT: Individual lessons and group courses with other Composition students
PREREQUISITE: MUSC 3210X/Y.06 and permission of the instructor
MUSC 4280.03: Contemporary Techniques.
Some of today’s most important compositional techniques will be studied in this course. These may include advanced modal and 12-tone writing, interval and texture-oriented procedures, as well as atonistic strategies. Special attention will be given to problems of notation and instrumentation raised by the above-mentioned approaches.
SIGNATURE REQUIRED
FORMAT: Lecture 3 hours
PREREQUISITE: MUSC 2222.03, 3285.03 or 3284.03
MUSC 4283.03: Early Music Analysis.
A seminar exploring the various approaches to early music analysis, covering chant, early polyphony and music by significant figures before 1600 including Machaut, Dufay and Josquin.
FORMAT: Seminar 3 hours
PREREQUISITE: MUSC 3285.03 or permission of the Instructor
MUSC 4293X/Y.03: Area Graduation Requirement (Performance Recital).
A jury-based assessment of the final requirements for the BMus, Composition Program.
NOTE: Credit can only be given for the course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.
PREREQUISITE: Permission of the composition instructor
MUSC 4353.03: Music Since 1945.
This course examines themes in music since 1945. Topics to be considered include compositional techniques, music and cultural theory, and avant garde and mainstream music.
FORMAT: Seminar 3 hours
PREREQUISITE: MUSC 2352, 2353 or permission of instructor
CROSS-LISTING: MUSC 5353
MUSC 4354.03: Popular Music Analysis.
In this course for music majors, we examine various methods and techniques for studying popular music. We consider the central debates of this relatively new field of scholarly inquiry, and we assess the contributions of popular music scholarship to the larger fields of music study.
FORMAT: Seminar 3 hours
PREREQUISITE: MUSC 2352.03, 2353.03 or permission of the instructor
CROSS-LISTING: MUSC 5354
MUSC 4355.03: Narrative Strategies in Nineteenth-Century Music: Gender, Identity, and Social Politics.
An interdisciplinary survey of nineteenth-century instrumental music, focusing on the narrative potential of nineteenth-century musical compositions and their relationship to other aspects of nineteenth-century Western culture. Representative musical works will be studied within the context of broader social and cultural issues, including gender, race, class, sexuality, nationality, ethnicity, and identity.
FORMAT: Seminar 3 hours
PREREQUISITE: Permission of the instructor
CROSS-LISTING: QWST 4535.03, MUSC 5355.03
MUSC 4356.03: Opera Studies.
An examination of current critical issues in opera studies. Specific topics may vary from year to year; examples include ‘Opera and Politics’ and ‘Operas of Mozart on Stage and Screen.’
FORMAT: Seminar 3 hours
PREREQUISITE: MUSC 2392.03. Open to non-majors by permission of instructor
CROSS-LISTING: MUSC 5356.03
MUSC 4358.03/4359.03: Studies in Medieval Music.
An advanced course analysing the role of medieval music. Specific topics will change from year to year, including the musical output and reception of Hildegard von Bingen, the poetry, music and manuscripts of Guillaume de Machaut.
FORMAT: Seminar 3 hours
PREREQUISITE: MUSC 2355 or permission of the instructor
CROSS-LISTING: MUSC 4358.06/4359.06
MUSC 4359.03: Studies in Medieval Music.
An advanced course analysing the role of medieval music. Specific topics will change from year to year, including the musical output and reception of Hildegard von Bingen, the poetry, music and manuscripts of Guillaume de Machaut.
FORMAT: Seminar 3 hours
PREREQUISITE: MUSC 2355 or permission of the instructor
CROSS-LISTING: MUSC 4358.06/4359.06
MUSC 4360X/Y.06: Advanced Seminar in Baroque Culture.
This course offers its students a survey of key aspects of seventeenth and eighteenth-century European history, society and culture along with a first-hand view of some of the most important aspects of baroque style and material culture. It takes place in the town of Coxyde Kaniëvele in the Czech Republic. The course introduces students to the socio-political conditions that led to the birth of baroque civilization before entering into an exploration of the avant garde of the seventeenth and eighteenth-century Europe. It then examines the cultural and artistic forms most characteristic of this period, with particular emphasis on opera history and on the role of the ‘theatrical’ in the Baroque arts. As the course proceeds, students will have an opportunity to consider the connections between course material and the evidence of Baroque culture to be found in the Castle Theatre’s scenographic machinery, its stock of original scenery and props, and its collection of historical costumes, as well as to witness an experimental Baroque opera performance. Finally, the course will conclude with visits to Prague and other sites of interest to add to students’ understanding of the Baroque and its legacy to subsequent periods.
NOTE: Credit can only be given for the course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.
FORMAT: Lecture/lab
PREREQUISITE: Permission of the Fountain School of Performing Arts and/or the Department of History.
CROSS-LISTING: QWST 4542.06, THEA 4755.06
RESTRUCTION: 3rd and 4th year students only.
MUSC 4361.03/4365.03: Topics in Musicology I.
These are intensive studies which make use of field consultation.
NOTE: Students should check the online university timetable or contact the department for details.
FORMAT: Seminar 3 hours
PREREQUISITE: MUSC 2353
CROSS-LISTING: MUSC 5361
MUSC 4362.03: Topics in Canadian Music.
The course focuses on one or more of the following topics: Canadian composers, performers and musical institutions. The perspective may be analytical, aesthetic and/or historical.
FORMAT: Seminar 3 hours
PREREQUISITE: Permission of instructor
CROSS-LISTING: CANA 4362.03

MUSC 4363.03/4367.03: Topics in Musicology II.
These are intensive studies of selected topics announced annually. Students should check the online university timetable or contact department for details.
FORMAT: Seminar 3 hours
PREREQUISITE: MUSC 2353

MUSC 4364.03/4368.03: Topics in Music.
These are intensive studies of selected topics announced annually.
SIGNATURE REQUIRED
PREREQUISITE: MUSC 1353.03, 2353.03, 2352.03

MUSC 4368.03/4369.03: Topics in Music.
These are intensive studies of selected topics announced annually.
SIGNATURE REQUIRED
PREREQUISITE: MUSC 2352.03

MUSC 4380.03: and MUSC 4381.03: Selected Composer Studies.
An intensive study of a single composer, focusing on works and cultural context.
FORMAT: Lecture/discussions 3 hours
PREREQUISITE: MUSC 2352, MUSC 2353

MUSC 4399X/Y.03: Graduation Requirement (Thesis).
Students must receive Fountain School of Performing Arts approval to fulfill this graduation requirement. Students must submit the required Thesis Form by March 1 of the third year of study, along with any other requirements specific to their degree program. Please see the School for guidelines and deadlines.
SIGNATURE REQUIRED
PREREQUISITE: Permission of the department

MUSC 4599X/Y.03: Graduation Project.
Students in the BMus General degree program must receive the Fountain School of Performing Arts approval to fulfill this graduation requirement. Project proposals must be submitted by students no later than March 1 of the third year of study. For more details on project options and application requirements, please consult the School.
SIGNATURE REQUIRED
PREREQUISITE: Permission of the department

I. Introduction
The Theatre Program at the Fountain School of Performing Arts offers many ways to study the theatre or some aspect of it in tandem with other disciplines offered by the university:
1. You can undertake programs that lead to a university degree: an Honours or Combined Honours BA (four years) or a BA with Major (four years)
2. You can enroll in a Diploma program in Costume Studies (two years) which combines academic study and research skills with creative design interpretation and applied skills;
3. You can complete a Minor in Theatre to enhance your degree.
4. You can select certain theatre courses to reinforce and complement your studies in other disciplines offered by the university.
The degree programs involve a curricular of Theatre courses and a selection of other courses in different disciplines. The University has Academic Regulations which specify how these programs must be arranged. These regulations are all listed earlier in this Calendar, and prospective students should refer to them to become aware of the opportunities offered. There are a surprising number of different ways to arrange one's studies; recommended here are the paths you can follow if Theatre is your primary interest.

Facilities

The Fountain School of Performing Arts is located in the Dalhousie Arts Centre. The Theatre wing is a self-sufficient unit involving one professional theatre, two studios, and supporting workshops. Teaching spaces for costume studies are currently located off-campus. The main Departmental office is in Room 9-32 of the Arts Centre.

Because of the work involved, some theatre courses have a limited enrolment. All students wishing to take any practical course in Theatre should, therefore, first consult with the department.

PLEASE NOTE: Theatre by its nature requires evening work. Students, especially in Acting, Technical Theatre and Stage Design, and Costume courses, are advised not to undertake other evening commitments.

II. Degree Programs

In addition to the departmental requirements listed below, students must satisfy the requirements outlined in the Degree Requirements section, page 125 of this calendar.

A. BA Honours in Theatre

1. Theatre Studies

This degree is designed for students who wish to follow a program of theatre studies that keeps the whole of theatre in perspective, is academically oriented, and serves as a strong foundation for graduate degrees in Theatre and Drama, or as a good preparation for a variety of professional and education degrees. Honours students must maintain an average of at least B+ in all of their advanced Theatre courses.

Year 1

• THEA 1000X/Y.06
• one other full course in THEA at 1000-level
• three courses in other subjects

Year 2

• THEA 2011.03
• THEA 2012.03
• THEA 2001.03
• THEA 2002.03
• three full courses in other subjects

Years 3 and 4

• THEA 3000X/Y.06
• THEA 3001.05
• THEA 3002.03
• three full courses in other subjects, including THEA
• two full courses in other subjects, including THEA

An additional credit (the Honours Qualifying Project) consists of fulfilling the function of a dramaturge or assistant director on one of Dal Theatre productions.

NOTE: Applications for Honours in Theatre are not considered by the Fountain School of Performing Arts until the winter term of the student’s third year. Please enquire at the School for the relevant deadline.

2. Acting

The main objective of the Acting Program is to satisfy the needs of those students who have decided to pursue a career as performers in the professional theatre. The program is progressive in nature, culminating in a company of student actors who perform in three shows in the Dal Theatre season in their fourth year, plus a course project. Third-year students in the Acting Program will participate in the third show of the Dal Theatre season. Auditions are held at the end of the first year for admission into the upper years of study. In addition to meeting degree requirements, students must achieve a B+ in all Acting Program courses, and must also be recommended by the Acting Faculty in order to advance to the next year's course of study. The program provides these students with professional training and the benefits of a liberal-arts education at a major Canadian university. Honours students must maintain an average of at least B+ in all of their advanced Theatre courses.

Year 1

• THEA 1000X/Y.06
• THEA 1001X/Y.06
• three full courses in other subjects

Year 2

• THEA 2011.03
• THEA 2012.03
• THEA 2000X/Y.06
• THEA 2010X/Y.06
• THEA 2020X/Y.06
• one full elective in other subject

Year 3

• THEA 3000X/Y.06
• THEA 3010X/Y.06
• THEA 3020X/Y.06
• THEA 3030X/Y.06
• one full elective in other subject

Year 4

• THEA 4000X/Y.06
• THEA 4010X/Y.06
• THEA 3011.03
• THEA 3012.03
• two courses in other subjects (one of these can be in THEA)

Honours Acting students will qualify for Honours with the satisfactory completion of a professional portfolio.

NOTE: Applications for Honours in Theatre are not considered by the Fountain School of Performing Arts until the winter term of the student’s third year. Please enquire at the School for the relevant deadline.

3. Technical Theatre and Stage Design

This degree is designed for students wishing to pursue careers in technical theatre and stage design. This section encompasses all areas of specialization that work together in the production of live performance. Set design, scenic carpentry, scenic painting, lighting, sound, props and stage management are taught through lectures and hands-on labs. Students in the first year of the program are required to work on one Dal Theatre production, and those in second and third years work on four Dal Theatre productions each year. All students must maintain at least a B average in all Technical Theatre and Stage Design courses to move on to the next year, and Honours students must maintain an average of at least B+ in all their advanced Theatre courses.

Year 1

• THEA 1000X/Y.06
• THEA 1010X/Y.06
• three full courses in other subjects

Year 2

• THEA 2011.03
• THEA 2012.03
• THEA 2000X/Y.06
• THEA 2010X/Y.06
• THEA 2020X/Y.06
• one full elective in other subject

Year 3

• THEA 3000X/Y.06
• THEA 3010X/Y.06
• THEA 3020X/Y.06
• THEA 3030X/Y.06
• two courses in other subjects

204 Theatre - Fountain School of Performing Arts
Undergraduate book  Page 205  Wednesday, March 12, 2014  12:03 PM

The Theatre and another subject, please consult the relevant departments’ more specific instructions on how to set up a Combined Honours degree in Theatre degrees with a number of other disciplines at the two institutions. For Dalhousie and University of King’s College students can also combine their B. BA Combined Honours School of Performing Arts until the winter term of the student’s third year. Please NOTE: Applications for Honours in Theatre are not considered by the Fountain the theatrical costume or historical dress. Project upon successful completion of a 25-page research paper on an aspect of for required courses that take place at NSCAD University.

Upon acceptance into their program, students should contact the undergraduate Undergraduate Advisors. In principle, a student who wishes to graduate with this degree must complete at least THEA 2011.03, 2012.03, 3501.03, and 3502.03, and must fulfill at least the minimal requirements for a three year BA. They must have, in the two subjects combined, the required distribution of courses.

1. Music and Theatre

The Fountain School of Performing Arts offers a highly specialized four year BA with a Combined Honours in Music and Theatre which blends the principal courses of the Bachelor of Music Minor in Voice with Theatre courses in Acting and Movement. Students must audition for both the Music and Theatre Departments: a maximum of five students will be selected for entrance into the program each year. The graduate of this program will advance toward a professional career in the performing arts equipped with a foundation in music and theatre. Please refer to “BA with Combined Honours in Music and Theatre” on page 195 for requirements.

C. BA (20 credit) Major in Theatre

A student may take a 20 credit Major program in Theatre (in Theatre Studies, Acting, Scenography and Technical Scenography or Costume Studies), following consultation with the Departmental Undergraduate Advisor. As in the case of a BA with Combined Honours, it is also possible to set up a Double Major in Theatre and another subject. In this case, a student must complete at least THEA 2011.03, 2012.03, 3501.03, and 3502.03 and fulfill at least the minimal requirements for a three year BA. They must have the required distribution of courses in the two majoring subjects as outlined in the Degree Requirements section of this Calendar.

D. BA (15 credit) Minor in Theatre

This degree is designed for students who want to take a number of courses in Theatre, would like to acquire a broad and varied knowledge of its various aspects, or are not interested in specializing. Students are advised to take THEA 1000X/Y and one other full credit in THEA at the 1000 level, although these do not count toward the minor. See Minors in the College of Arts and Science section of this calendar (page 128).

E. Minor in Theatre

See Minors in the College of Arts and Science section of this calendar (page 128).

F. Costume Studies, Diploma in two years

After successful completion of this program, students may upgrade their DCS to a BA in Theatre (Costume Studies). Students pursuing the Diploma in Costume Studies are required to combine the courses in the following manner:

Year 1
- THEA 1000X/Y.06
- THEA 1401X/Y.06
- THEA 1454.03
- THEA 1455.03
- two full courses in other subjects

Year 2
- THEA 1501.03
- THEA 1502.03
- THEA 4400X/Y.06
- THEA 4450.03
- THEA 4452.03
- two full courses in another subject

Upon acceptance into their program, students should contact the undergraduate advisor in the Fountain School of Performing Arts for information on registering for required courses that take place at NSCAD University.

Honours students in Costume Studies will be awarded the Honours Qualifying Project upon successful completion of a 25-page research paper on an aspect of theatrical costume or historical dress. NOTE: Applications for Honours in Theatre are not considered by the Fountain School of Performing Arts until the winter term of the student’s third year. Please consult the School for the relevant deadline.

B. BA Combined Honours

Dalhousie and University of King’s College students can also combine their Theatre degrees with a number of other disciplines at the two institutions. For more specific instructions on how to set up a Combined Honours degree in Theatre and another subject, please consult the relevant departments’ II. Course Descriptions

NOTE: Not all courses are offered every year. Please consult the current timetable to determine if these courses are offered in the current year.

THEA 1000X/Y.06: Introduction to Theatre.

The purpose of this course is twofold: first, to introduce students to the study of theatre through analysis of a range of plays related to the Dalh Theatre season; and second, to instruct students in the methodology of writing in the humanities. Students will learn about the theatrical production process and practice skills of
script and performance analysis. Students will address specific problems within their papers and discuss questions on an individual basis in writing tutorials. This course requires a script writing requirement of Dalhousie University and is a prerequisite for all Theatre majors.

NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.

FORMAT: Writing Requirement. Lecture/internal 3 hours

THEA 1050X/Y.06: Introduction to Theatre Organization and Stagecraft.

This course takes the student behind the scenes to understand how a play is brought to life. Scenography is discussed and explored. Students are introduced to stage design and scenic carpentry, props, sound, lighting, stage management and costume. Methods and procedures for theatre productions make up the substance of this course. Students are expected to work with power tools and are required to work on one DalTheatre production, which will include evening and weekend work outside of class time. Some supplementary equipment is required for this course.

NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.

FORMAT: Lecture 2 hours, lab 4 hours

THEA 1300X/Y.06: Introduction to Film.

This course is a general introduction to film studies. It examines film genres and history, the component elements of film, the diversity of cinema industries and institutions, and the medium's impact on society. It also instructs students in the methodology of writing in the humanities and fulfills the writing requirement of Dalhousie University.

NOTE: Students taking this course must register in both X and Y in consecutive terms, credit will be given only if both are completed consecutively.

FORMAT: Writing Requirement. Lecture/internal 3 hours

THEA 1450X/Y.06: Introduction to Costume Studies.

This course serves as an introduction to costume in its broadest context, enabling students to acquire a basic understandling of creating costume for the stage. Both modern and historical costume creation techniques are explored and mastered by students in preparation for more advanced study of costume in subsequent years of the Costume Studies Program. This course includes a theatre component. This course is a prerequisite for all other Costume Studies courses.

NOTE: Students taking this course must register in both X and Y in consecutive terms, credit will be given only if both are completed consecutively.

FORMAT: Lecture lab 3 hours

THEA 1800X/Y.06: Introduction to Acting and Performance.

This course is designed to provide the beginning acting student with an understanding of what it is to act, and to introduce some basic performance techniques. The approach will be practical, focusing on three major aspects of the craft: Space, Character, and Action. Each unit will be comprised of exercises and scene study, with scripts ranging from classical to contemporary. Exercises and exercises in class, which require commitment, concentration, and full-hearted participation, and which are central to group work and ensemble play, will strengthen communication and teamwork, and will develop and expand students' skills. Students will challenge themselves physically, vocally, and imaginatively, while working with others to create a dynamic environment.

NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms, credit will be given only if both are completed consecutively.

FORMAT: Lecture lab 3 hours

This course is designed to provide experience in performance outside the Acting Program. Through practical theatre exercises and performance assignments, students experience and discuss elements which contribute to theatre performance. This course will not serve as a prerequisite to the Acting Program, but is suitable for students who have completed THEA 1000, or any student interested in cultivating self-confidence, communication, and performance skills.

NOTE: Students taking this course must register in both X and Y in consecutive terms, credit will be given only if both are completed consecutively.

FORMAT: Lecture lab 3 hours

RESTRICTION: Students cannot register for THEA 1800 and THEA 2000 at the same time.

THEA 2011.03: Classical Theatre.

This course gives students an opportunity to study the dramatic literature, staging practices, and theoretical foundations of the early history of theatre. Specific topics covered include ancient Greek, Roman, and medieval European performance, as well as classical Indian and Japanese theatres. Although there is no formal prerequisite for the course, the course is strongly recommended for students planning to take classical drama courses in subsequent years of study. A background in theatre, history, and/or dramatic literature will be an advantage.

FORMAT: Lecture/seminar 3 hours

THEA 2012.03: Early Modern Theatre.

This course is in a sense the sequel to THEA 2011.03, though that course is not a prerequisite. It aims to study the development of dramatic literature, staging practices, and criticism from the theatres of the Italian Renaissance and of Shakespeare to European Romanticism, as well as early modern Asian theatres. There is no formal prerequisite, but students should normally be in at least the second year of study. A background in history, theatre, and/or dramatic literature will be an advantage.

FORMAT: Lecture/seminar 3 hours

THEA 2020.06: Jazz Dance I (Spring Session Only).

This course is a practical exploration into the Luigi Jazz Dance technique, incorporating the use of space, rhythm, and correct body alignment. Emphasis is on the development of personal expression through the medium of dance. Students are expected to develop an awareness of dance terminology and vocabulary.

FORMAT: Lab/demonstration lecture

CROSS-LISTING: MUSC 21010.06

THEA 2060X/Y.06: Technical Theatre I.

This course builds on the fundamentals acquired in THEA 1050 and is a supplement to Performance Technology I. Lectures and labs include theory development in the areas of props, lighting, sound, set design, scenic construction, and stage management.

NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.

FORMAT: Lecture/lab 9 hours

PREREQUISITE: THEA 1050X/Y.06

CO-REQUISITE: THEA 1450X/Y.06

THEA 2070X/Y.06: Performance Technology I.

This course is concerned with the more complex problems of the preparation of theatre production. A greater focus will be given to applying learned knowledge in a practical setting, with mandatory crew requirements in at least four Dalhousie Theatre productions. These productions will require work outside of class time on evenings and weekends. This course is the practical application of THEA 2060X/Y.06.

NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.

FORMAT: Lab 6 hours

PREREQUISITE: THEA 1050X/Y.06

THEA 2214X/Y.06: Shakespeare.

An introduction to Shakespeare's career as a playwright, through discussion and interpretation of a dozen or more of his plays.

NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.

FORMAT: Lecture/discussion

CROSS-LISTING: ENGL 2214X/Y.06

PREREQUISITE: ENGL 1000/1005X/Y.06; or any two of ENGL 1010.03, 1020.03, 1040.03, or THEA 1000X/Y.06; or the King's Foundation Year Program.

THEA 2229.03: Tragedy.

This course studies a representative selection of texts from various historical periods in order to arrive at an understanding of the meaning of tragedy. Various definitions of tragedy will be examined along with such possible questions as: how has tragedy changed over time, and what is tragicomedy.

FORMAT: Lecture/seminars

CROSS-LISTING: ENGL 2229.03

EXCLUSION: ENGL 2220.06
THEA 2301.03: Film History I.
This course surveys the history of film from its invention in the 1890s to the 1950s. Students will learn about the aesthetic, social and technological changes that affected the development of cinema. The course includes the study of silent film and the Classical Hollywood cinema, as well as artistic movements such as Expressionism and Soviet Montage.
FORMAT: Lecture/discussion
EXCLUSION: THEA 2300X/Y.06 and NSCAD AHIS 2600.03

THEA 2311.03: Film Analysis.
This course introduces students to the close textual analysis of narrative films. To this end, a few films will be studied in depth. Formal elements, such as mise-en-scène, sound, cinematography, and editing, will be analyzed and situated in social and historical context. Through screenings, readings, lectures, discussions and exercises, students will develop their technical vocabulary and skills in film interpretation.
FORMAT: Lecture/discussion

THEA 2314.03: Survey of Italian Cinema.
Course to be held in English, with part of the course work in Italian for Italian majors. Survey of the Italian Cinema from the origins onwards. Focus: the "golden age" of Italian silent movies; visual culture under fascism; Italian neo-realism; the impact of television.
FORMAT: Lecture
CROSS-LISTING: ITAL 2600.05

THEA 2336.03: Russian Film I.
The course surveys Russian film from the Silent Era to "Thaw" (1900-1960s). Its goal is to develop students' knowledge of cinema in its historical and cultural context through close watching, reading, thinking, and writing. The course will concentrate on the development of main genres and styles in Russian and official Soviet Cinema, major directors and styles. Full versions of films will be screened each Monday night. Later in the week they will be followed by a lecture, discussion, and viewing additional short clips.
FORMAT: Lecture/discussion
CROSS-LISTING: RUSN 2046.03

THEA 2337.03: Russian Film II.
This course will provide an overview of the most significant trends and periods in the development of Russian cinema, including the latest productions.
The course will concentrate on the development of main genres and styles, major directors and productions, issues of race, gender, war and violence in Soviet, post-Soviet and new Russian cinema.
FORMAT: Lecture

CROSS-LISTING: RUSN 2057.05

THEA 2346.03: East European Cinema: War, Love, and Revolutions.
This course introduces the Eastern European film into the flow of current debates on cultural identity, transnationalism, and postcolonialism. Despite the state controlled film industry of Eastern Europe, it was often more bold, honest and provocative than their Hollywood counterparts. This course will focus on key films and issues related to the development of Eastern European cinema as a cultural product.
The course will concentrate on the development of main genres and styles, major directors and productions, issues of race, gender, war and violence in Soviet, post-Soviet and new Russian cinema.
CROSS-LISTING: RUSN 2036

THEA 2350.03: Studies in Film Directors.
This course focuses on the study of individual film directors. Through the analysis of their work, students will develop their understanding of the film industry and the cultural context in which films are produced.
FORMAT: Lecture/discussion
CROSS-LISTING: RUSN 2056.06

THEA 2360.03: Popular Cinema.
This course helps students develop their critical understanding of popular cinema. It introduces different approaches to the analysis of popular film, and considers principles of production, distribution, exhibition and consumption in major industries such as Hollywood and popular Hindi and Hong Kong cinemas. Throughout, it addresses the implications of the concept of "popular cinema."
FORMAT: Lecture/discussion
EXCLUSION: THEA 2320.06

THEA 2370.03: Animated Film.
This course is an overview of different forms of animated film and key topics and debates in the field of animation studies. Emphasis is on Canadian, US American and Japanese animation, but examples will be drawn from a variety of regions, and will range from old to new and popular to experimental. The course will focus on cultural approaches, theoretical questions posed by specific types of animation, and historical developments.
FORMAT: Lecture, discussion, screening

THEA 2400X/Y.06: Cave to Café: Costume and Identity from Antiquity to 1700.
An introduction to the study of human social behavior and its relationship to the development of body coverings, this survey course begins with the earliest Mediterranean cultures, Ancient Egypt, Greece and Rome, and continues through to the end of the seventeenth century. This course may be taken by general BA students, and is also part of the Costume Studies Program.
NOTE: Credit can only be given for one of these courses (X or Y) and partial credit cannot be given for a single term.
FORMAT: Lecture/discussion 3 hours
PREREQUISITE: General BA students must have completed the writing requirement.
FOR BA in Theatre (Costume Studies) students: THEA 1000X/Y.06, THEA 1400X/Y.06
FOR Diplomas in Costume Studies: Costume Studies coursework combinations.

THEA 2406X/Y.06: The Aesthetics of Contemporary Dress.
By examining the aesthetics of contemporary dress, this course will enable the student to understand established systems used to create clothing, utilizing body image as principle means. Through the study and application of systematic principles, the student will gain a better understanding of people's need to define body image in terms of ornamental self-expression and social identification. This course is also part of the Costume Studies Program.
NOTE: Credit can only be given for one of these courses (X or Y) and partial credit cannot be given for a single term.
FORMAT: Lecture/lab 4.5 hours
PREREQUISITE: For BA in Theatre (Costume Studies) students: THEA 1000X/Y.06, THEA 1400X/Y.06
FOR Diplomas in Costume Studies: Costume Studies coursework combinations.

THEA 2411.03: Designers' Language.
This course explores components of costume design, offering a discourse on design language, color theory, structure, and decoration as they relate to costumes for the theatre. Through lecture and practical application, the student will learn how to design costumes, choose fabrics, interpret scripts and develop characters, leading to a better understanding of theatrical characterization. This course may be taken by general BA students, and is also a part of the Costume Studies Program.
FORMAT: Lecture/demonstration 3 hours
PREREQUISITE: General BA students must have completed the writing requirement.
FOR BA in Theatre (Costume Studies) students: THEA 1000X/Y.06, THEA 1400X/Y.06
FOR Diplomas in Costume Studies: Costume Studies coursework combinations.

THEA 2451.03: Costume in Performance I.
In this year the student will apply the knowledge from THEA 1400X/Y to research, illustrate and create modern and historical costume designs for the stage. In addition, students work on productions in order to understand the integral role played by costume in staging a play, in an actor's character development, and in body image and representation.
This course is part of the Costume Studies Program.
FORMAT: Lecture 3 hours
PREREQUISITE: For BA in Theatre (Costume Studies) students: THEA 1000.06, THEA 1450.06
FOR Diplomas in Costume Studies: Costume Studies coursework combinations.

THEA 2451.03: Costume in Performance II.
This year the student will apply the knowledge from THEA 1400X/Y to research, illustrate and create modern and historical costume designs for the stage. In addition, students work on productions in order to understand the integral role played by costume in staging a play, in an actor's character development, and in body image and representation.
This course is part of the Costume Studies Program.
FORMAT: Lecture 3 hours
PREREQUISITE: For BA in Theatre (Costume Studies) students: THEA 1000.06, THEA 1450.06
FOR Diplomas in Costume Studies: Costume Studies coursework combinations.
THEA 2700X/Y.06: Stage Design I.
This course is designed to acquaint the student with the language, techniques and conventions involved in the field of stage design. In the first semester, students will develop basic skills in visual composition, watermedia and drafting. In the second half, model building, text analysis, research and three-dimensional space development will be taught. Assignments will emphasize practical skills and will culminate in a full design process.

NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.
FORMAT: Lecture/lab 3 hours
PREREQUISITE: THEA 1050X/Y.06 or permission of the instructor

THEA 2800X/Y.06/THEA 2810X/Y.06/THEA 2820X/Y.06: The Discovery Year.
The purpose of the Acting Program introduces students to the fundamental principles of acting through the study of Shakespearean text, voice and movement. Emphasis is placed on the discipline and dedication that is the basis for a career in the professional theatre. In addition to meeting degree requirements, students must achieve A in all Acting Program courses, and must also be recommended by the Acting Faculty in order to advance to the next year’s class of study.

NOTE: Students taking these courses must register in both X and Y in consecutive terms; credit will be given only if both are completed consecutively.

THEA 2800X/Y.06: Acting I.
The second year of the Acting Program introduces students to classical theatre performance approaches through the exploration of the texts of William Shakespeare. Using his sonnets, soliloquies and scenes, students will discover Shakespeare’s language, techniques and conventions. The course is the continued practical exploration into the Luigi Jazz Dance Technique at the intermediate level. Emphasis is on the development of personal expression through the medium of dance. Students must have a basic foundation in dance technique.

PREREQUISITE: ENGL 1000X/Y.06; or any two of ENGL 1010.03, 1020.03, 1030.03, or THEA 1000.06; or the King’s Foundation Year Program

THEA 2901.03: Renaissance Drama.
This course will explore the richness and strangeness of some of the playwrights often obscured by Shakespeare’s shadow. Between the opening of the first professional playhouse in London (1576) and the closing of the theatre by Parliament (1641), the Globe was only one of many venues catering to an avid theatre-going public, and the first English play by a woman was circulated in manuscript. Playwrights to be studied include Christopher Marlowe, Ben Jonson, Thomas Middleton, John Webster, Elizabeth Cary and John Ford.

PREREQUISITE: ENGL 1000X/Y.06 or permission of the instructor

THEA 2902.03: Play Analysis for Directing.
This course introduces students to the director’s process in analyzing a dramatic script for performance. Working with plays from a range of periods and genres, students will explore key theoretical approaches to dramatic analysis, and will learn the director’s core vocabulary, and will apply these discoveries to practical scene study.

FORMAT: Lecture/summer 3 hours
PREREQUISITE: THEA 1000X/Y.06 or Permission of the Instructor
EXCLUSION: THEA 2900.06

THEA 2911.03: Stars and Stardom on Stage and Screen.
What makes a “star” actor? How do stars’ gifts and alieneness interact with the possibilities of their media and with market forces to create celebrity? This course explores stage and screen stardom as historical, aesthetic, and economic phenomena that illuminate shifting constructions of beauty, class, gender, sexuality, race, and ethnicity.

FORMAT: Lecture/discussion 3 hours

THEA 3015.03: Revue: Theatrical Production.
This course will explore the richness and strangeness of some of the playwrights often obscured by Shakespeare’s shadow. Between the opening of the first professional playhouse in London (1576) and the closing of the theatre by Parliament (1641), the Globe was only one of many venues catering to an avid theatre-going public, and the first English play by a woman was circulated in manuscript. Playwrights to be studied include Christopher Marlowe, Ben Jonson, Thomas Middleton, John Webster, Elizabeth Cary and John Ford.

PREREQUISITE: ENGL 1000X/Y.06 or any two of ENGL 1010.03, 1020.03, 1030.03, or THEA 1000.06; or the King’s Foundation Year Program

EXCLUSION: THEA 2900.06

CROSS-LISTING: ENGL 3105.03

THEA 3020.06: Jazz Dance II. (Spring Session only).
The course is the continued practical exploration into the Luigi Jazz Dance Technique at the intermediate level. Emphasis is on the development of personal expression through the medium of dance. Students must have a basic foundation in dance technique.

PREREQUISITE: THEA 1050X/Y.06 and audition

THEA 3020X/Y.06: Dance and Movement I.
The course is designed to develop and enhance the acting student’s practical knowledge of movement through the disciplines of dance. This is manifested through practical explorations of the Luigi jazz dance technique, incorporating the use of space, rhythm, and correct body alignment. Students are expected to develop a working vocabulary of dance terminology.

NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.
FORMAT: Lecture/lab 3 hours

THEA 3021X/Y.06: Dance and Movement II.
The course is designed to develop and enhance the acting student’s practical knowledge of movement through the disciplines of dance. This is manifested through practical explorations of the Luigi jazz dance technique, incorporating the use of space, rhythm, and correct body alignment. Students are expected to develop a working vocabulary of dance terminology.

NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.
FORMAT: Lecture 3 hours
PREREQUISITE: THEA 1050X/Y.06 and audition

THEA 3041.03: Speak With Confidence: Voice for Non-Majors.
This course is designed to enable the student to use the speaking voice effectively, to communicate freely and easily, with clarity and conviction, thereby strengthening his or her presentation skills. This course will be practical in nature. Exercises and explorations will initially be centered on group dynamics and will require commitment, concentration and full-bodied participation. Many aspects of voice use will be covered, including release of the body, alignment of the spine, breathing, resonance, pitch, volume and power, articulation, working with an intention, and care of the voice. The focus of the course will be on self-discovery as well as awareness of others. Students will also have the opportunity to make individual presentations and receive feedback accordingly. Guest speakers/actors may be invited to visit the classroom.

FORMAT: Lecture/lab 2 hours

THEA 2901.03: Production Dramaturgy.
This course introduces students to the dramaturgical work of dramaturges and directors in the theatre. Students will learn skills including the presentation of research, the preparation of playtexts, the adapting of playtexts for new theatrical contexts, and the creation of theatrical seasons and programs.

FORMAT: Lecture/discussion
PREREQUISITE: THEA 1000X/Y.06 or permission of the instructor
EXCLUSION: THEA 2900.06

THEA 2902.03: Play Analysis for Directing.
This course introduces students to the director’s process in analyzing a dramatic script for performance. Working with plays from a range of periods and genres, students will explore key theoretical approaches to dramatic analysis, and will learn the director’s core vocabulary, and will apply these discoveries to practical scene study.

FORMAT: Lecture/summer 3 hours
PREREQUISITE: THEA 1000X/Y.06 or Permission of the Instructor
EXCLUSION: THEA 2900.06

THEA 2911.03: Stars and Stardom on Stage and Screen.
What makes a “star” actor? How do stars’ gifts and alieneness interact with the possibilities of their media and with market forces to create celebrity? This course explores stage and screen stardom as historical, aesthetic, and economic phenomena that illuminate shifting constructions of beauty, class, gender, sexuality, race, and ethnicity.

FORMAT: Lecture/discussion 3 hours

THEA 3015.03: Revue: Theatrical Production.
This course will explore the richness and strangeness of some of the playwrights often obscured by Shakespeare’s shadow. Between the opening of the first professional playhouse in London (1576) and the closing of the theatre by Parliament (1641), the Globe was only one of many venues catering to an avid theatre-going public, and the first English play by a woman was circulated in manuscript. Playwrights to be studied include Christopher Marlowe, Ben Jonson, Thomas Middleton, John Webster, Elizabeth Cary and John Ford.

PREREQUISITE: ENGL 1000X/Y.06 or any two of ENGL 1010.03, 1020.03, 1030.03, or THEA 1000.06; or the King’s Foundation Year Program

EXCLUSION: THEA 2900.06

CROSS-LISTING: ENGL 3105.03

THEA 3020.06: Jazz Dance II. (Spring Session only).
The course is the continued practical exploration into the Luigi Jazz Dance Technique at the intermediate level. Emphasis is on the development of personal expression through the medium of dance. Students must have a basic foundation in dance technique.

PREREQUISITE: Lab/demonstration/lecture

THEA 3020X/Y.06: Performance Technology II.
This course is designed to supplement Performance Technology II and is a continuation of THEA 2060X/Y.06 covering the topics in greater detail.

NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.
FORMAT: Lecture/lab 3 hours
PREREQUISITE: THEA 2060X/Y.06, THEA 3070X/Y.06
CO-REQUISITE: THEA 3070X/Y.06

THEA 3070X/Y.06: Performance Technology II.
This is an advanced course in production technology. Students work intensively in the areas of scenic carpentry, scenic painting, props, lighting and sound, and stage management. Students are required to work on four (4) Dalhousie Theatre productions. These productions will require work outside of class time, on evenings and weekends.

NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.
FORMAT: Lab 6 hours
PREREQUISITE: THEA 2060X/Y.06, THEA 3070X/Y.06
CO-REQUISITE: THEA 3060X/Y.06
THEA 3200X/Y.06: The Director in the Theatre.
This course explores the theoretical and practical aspects of the various roles of the director in creating a theatrical event. Topics include the historical role of the director, conceptually scripting, working with a dramatic, relationships with actors, and the script development process. Laboratory exploration of practical problems related to the above topics will form an integral part of the course.
NOTE: Credit can only be given for the course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.
FORMAT: Lecture/lab 3 hours
PREREQUISITE: THEA 2311, THEA 2902, and permission of the instructor

THEA 3301.03: Film History II.
This course surveys the history of film from the 1950s until the present day. Students will learn about the aesthetic, social, and technological changes that affected the development of cinema. The course includes the study of radical 1960s movements such as the French New Wave, and the birth of auteur cinema in the European and Hollywood film industries. It also introduces students to the concept of national cinema with a study of global film industries, and concludes with a study of the digital revolution in contemporary cinema.
FORMAT: Lecture/discussion

THEA 3313.03: Documentary, Experimental and Animated Film.
This course introduces students to the historical, social, ethical, and aesthetic dimensions of documentary, experimental and animated cinema. The course is taught through lectures, discussions, film screenings and readings.
FORMAT: Lecture/discussion
PREREQUISITE: THEA 2311, the course instructor or permission of the instructor
EXCLUSION: THEA 2300X/Y and NSCAD AHIS 2810.03

THEA 3314.03: Shakespeare and his Contemporaries on Film.
This course will study the adaptation of Shakespeare and his contemporaries to the medium of cinema, focusing on the differences between theatre and cinema, the process of theatrical adaptation, the use of classical terms to modern settings, and the close analysis of the performer's choices.
FORMAT: Lecture/reading
PREREQUISITE: Experience in Shakespeare at any level OR experience in Film Studies at any level.
CROSS-LISTING: ENGL 3314.05
EXCLUSION: THEA 2311, ENGL 2313.03

THEA 3320.03: Italian National Cinema.
The focus of the course: the New Wave of Italian cinema, which has received international recognition since the 1960s. The aim to investigate Italian film production within the social and cultural climate of contemporary Italy.
FORMAT: Lecture/summar
PREREQUISITE: ITAL 1010
CROSS-LISTING: ITAL 3619

THEA 3330.03: Film Theory I.
This course will survey and discuss the major cinematic theories of the twentieth century: from formalism and realism to Lacanian psychoanalysis and post-structuralism, from film semiotics and feminist theory to postmodern debates and approaches which define new terminology and new methodologies for the study of the moving images.
FORMAT: Art&5570 Lecture/Discussion
PREREQUISITE: Preveiw Film Studies course or permission of the instructor

THEA 3331.03: Film Theory II: Desire in Cinema.
This course focuses on theories of gender, sexuality and desire in the cinema. It addresses debates around the representation of gender, sexuality and desire on screen, as well as theories of spectatorial desire.
FORMAT: Art&5790 Lecture/Discussion

THEA 3350.03: Topics in Asian Cinema.
Each year will focus on specific topics as explored in the cinema of various Asian countries. Particular attention will be paid to how Asian filmmakers employ different cinematic genres in their treatments of diverse aspects of Asian societies and cultures.
FORMAT: Film screening with lecture/discussion

THEA 3351.03: The Cinema of David Lynch.
David Lynch is one of the most fascinating filmmakers alive today. His work includes relatively mainstream and popular successes, such as The Elephant Man and the TV series Twin Peaks, along with more difficult film-films such as Eraserhead, Lost Highway, and Mulholland Drive. In this course, students will engage in close analysis of Lynch’s work, his cinematic style, and his imperfections.
FORMAT: Lecture/discussion
PREREQUISITE: Any of the core courses in the Film Studies Minor (THEA 2301, 2311, 3301, 3313) or permission of the instructor
EXCLUSION: THEA 3311X/Y.06

THEA 3371.03: Experimental Film.
This is a survey of experimental cinema. The films-studied attempt to revise the basic grammar of film, they do not assume that film is about narrative or even representation, but that it is a fundamentally visual art, often closer to painting or printmaking than to the novel or the theatre. The course will cover films from a range of time periods and regions, and examine a variety of experimental movements.
FORMAT: Lecture, discussion, screening
PREREQUISITE: THEA 2311

THEA 3400X/Y.06: Dress and Identity: King’s Court to Mass Culture, 1700–Present.
This is a survey course which will trace the development of dress through the eighteenth, nineteenth, and twentieth centuries, showing its evolution from the period when the fashion aesthetic was determined by the Courts, to the time of the rise of the common–man as the arbiter of taste. Concentration in this course will be placed on dress worn in England and France, but students may explore costume from other countries as individual topics of research. Emphasis will be placed on the social and cultural aspects of dress history, using studies of representative works of art, films, and artifacts as visual documentation for each period.
NOTE: Students registering in this course must register in both X and Y in consecutive terms; credit will be given only if both are completed consecutively.
FORMAT: Lecture 3 hours
PREREQUISITE: General BA students must have completed the writing requirement. For BA in Theatre (Costume Studies) students: THEA 1000X/Y.06, 1450X/Y.06, 2011.03, 2012.03, 2400X/Y.06, 2404X/Y.06, 2411.03, 2413X/Y.03.
For Diplomas in Costume Studies, see Costume Studies course combinations in calendar.
EXCLUSION: THEA 4400X/Y.06

THEA 3451X/Y.06: Costume in Performance II.
In this course students will demonstrate their fluency in costume creation with design interpretations for theatrical production. Students will examine problems related to costume as an expression and extension of theatrical character development. The Theatre Production department provides a venue for students to develop interpersonal and technical skills. Students will work as an integral part of a team. This course is part of the Costume Studies Program.
NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.
FORMAT: Lecture/lab 3 hours
PREREQUISITE: For BA in Theatre (Costume Studies) students: THEA 1000X/Y.06, 1450X/Y.06, 2011.03, 2012.03, 2400X/Y.06, 2404X/Y.06, 2411.03, 2413X/Y.03.
For Diplomas in Costume Studies, see Costume Studies course combinations.
EXCLUSION: THEA 3540.06
RESTRICTION: Costume Studies degree or diploma students only.

THEA 3544.03: Body-Shaping Through Historical Tailoring II.
This course introduces the student to the process of tailoring as it originated in the Renaissance, and its development down to the twentieth century. Emphasis is placed on the purpose of underpinnings, understructures and the techniques of fitting them in place. This course is part of the Costume Studies Program.
PREREQUISITE: For BA in Theatre (Costume Studies) students: THEA 1000X/Y.06, THEA 1450X/Y.06, THEA 2111.03, THEA 2012.03, THEA 2400X/Y.06, THEA 2404X/Y.06, THEA 2411.03, 2413X/Y.03.
For Diplomas in Costume Studies, see Costume Studies course combinations.
RESTRICTION: Costume Studies degree or diploma students only.
The "Systems" of Pattern Drafting from the early nineteenth century to the twentieth century. Utilizing traditional tailoring techniques, the process of creating professional tailored garments is studied in detail. This course is part of the Costume Studies Program.

**THEA 3455.X/Y.06: Body-Shaping Through Historical Tailoring I.**

The course will focus on historical tailoring methods from the early eighteenth century to the present day. Students will learn how to create garments that fit the body's natural contours, using traditional tailoring techniques. This course is part of the Costume Studies Program.

**THEA 3500.X/Y.06: The Modern Theatre.**

From the rise of realism in the 1870s to the emergence of postmodern performance one hundred years later, modern theatre was characterized by successive bursts of creative energy and experimentation. This course gives an opportunity to study these developments in detail and to examine several important theatrical theories and their applications. NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.

**THEA 3501.X/Y.06: The Modern Theatre 1: Realism and Expressionism.**

From the close of WW1 to the 1960s, theatrical modernists sought new artistic forms for a rapidly changing world. This course introduces students to major forms of theatrical modernism from Dada and Theatre of Cruelty through Epic Theatre and Biomechanics to Absurdism, and considers their legacy for the forms of theatrical modernism from Dada and Theatre of Cruelty through Epic Theatre and Biomechanics to Absurdism, and considers their legacy for the twentieth century. Utilizing traditional tailoring techniques, the process of creating professional tailored garments is studied in detail. This course is part of the Costume Studies Program.

**THEA 3502.X/Y.06: The Modern Theatre 2: High Modernism.**

This course aims to strengthen the actor's instrument and creative response, while further developing acting technique through practical experience in Mask, Mime and Period Study. "Actioning" is expanded upon to include Script Analysis, with materials being drawn from classical and contemporary texts, ensuring that the "inner" work of characterization feeds the "outer" work, and vice versa. NOTE: Students taking these courses must register in both X and Y in consecutive terms and partial credit cannot be given for a single term.

**THEA 3503.X/Y.06: The Modern Theatre 3: Epic Theatre.**

This course will focus on the development of epic theatre from the early twentieth century to the present day. Students will learn how to create performances that engage the audience on a large scale. This course is part of the Costume Studies Program.

**THEA 3504.X/Y.06: The Modern Theatre 4: Absurdism.**

This course will focus on the development of absurdist theatre from the early twentieth century to the present day. Students will learn how to create performances that explore the human condition in a non-traditional way. This course is part of the Costume Studies Program.

**THEA 3505.X/Y.06: The Modern Theatre 5: Deconstruction.**

This course will focus on the development of deconstructivist theatre from the early twentieth century to the present day. Students will learn how to create performances that challenge traditional notions of theatre. This course is part of the Costume Studies Program.

**THEA 3506.X/Y.06: The Modern Theatre 6: Postmodernism.**

This course will focus on the development of postmodern theatre from the late twentieth century to the present day. Students will learn how to create performances that challenge and subvert traditional theatre conventions. This course is part of the Costume Studies Program.

**THEA 3507.X/Y.06: The Modern Theatre 7: Contemporary Theatre.**

This course will focus on the development of contemporary theatre from the late twentieth century to the present day. Students will learn how to create performances that reflect and comment on current social and political issues. This course is part of the Costume Studies Program.

**THEA 3508.X/Y.06: The Modern Theatre 8: Global Theatre.**

This course will focus on the development of global theatre from the late twentieth century to the present day. Students will learn how to create performances that reflect and comment on current cultural and political issues. This course is part of the Costume Studies Program.

**THEA 3509.X/Y.06: The Modern Theatre 9: Postcolonial Theatre.**

This course will focus on the development of postcolonial theatre from the late twentieth century to the present day. Students will learn how to create performances that reflect and comment on current economic and social issues. This course is part of the Costume Studies Program.

**THEA 3510.X/Y.06: The Modern Theatre 10: Digital Theatre.**

This course will focus on the development of digital theatre from the late twentieth century to the present day. Students will learn how to create performances that utilize new technologies to explore and comment on current social and political issues. This course is part of the Costume Studies Program.

**THEA 3511.X/Y.06: The Modern Theatre 11: Ethnomusicology.**

This course will focus on the development of ethnomusicology from the late twentieth century to the present day. Students will learn how to create performances that reflect and comment on current cultural and political issues. This course is part of the Costume Studies Program.

**THEA 3512.X/Y.06: The Modern Theatre 12: Performance Art.**

This course will focus on the development of performance art from the late twentieth century to the present day. Students will learn how to create performances that reflect and comment on current social and political issues. This course is part of the Costume Studies Program.

**THEA 3513.X/Y.06: The Modern Theatre 13: Dance and Movement.**

This course will focus on the development of dance and movement from the late twentieth century to the present day. Students will learn how to create performances that reflect and comment on current cultural and political issues. This course is part of the Costume Studies Program.

**THEA 3514.X/Y.06: The Modern Theatre 14: Theatre of Memory.**

This course will focus on the development of theatre of memory from the late twentieth century to the present day. Students will learn how to create performances that reflect and comment on current cultural and political issues. This course is part of the Costume Studies Program.

**THEA 3515.X/Y.06: The Modern Theatre 15: Theatre and Film.**

This course will focus on the development of theatre and film from the late twentieth century to the present day. Students will learn how to create performances that reflect and comment on current cultural and political issues. This course is part of the Costume Studies Program.

**THEA 3516.X/Y.06: The Modern Theatre 16: Theatre and Technology.**

This course will focus on the development of theatre and technology from the late twentieth century to the present day. Students will learn how to create performances that reflect and comment on current cultural and political issues. This course is part of the Costume Studies Program.
THEA 3911.03: Gender in Theatre: A Cross-Cultural Survey.

This seminar course examines the role gender has played in the shaping of world theatre. Alongside the roles the theatre has played in the shaping of various cultural conceptions of gender. By exploring plays and performances from Europe, North America, China, Japan, India and other traditions, we will explore the ways in which various forms of representation reflect the cultures’ gendering of masculinity and femininity. In the process, we will deconstruct the historical and cultural variability of the notion of “gender” itself.

The main objective of the seminar will be to ask how gender determines performers’ choices in various cultures, and how gender itself can actually be shaped by performance.

FORMAT: Lecture/semiar. 3 hours
CROSS-LISTING: GWST 3912.02

THEA 3912.03: Gender Theory and Contemporary Performance.

This seminar course offers students an opportunity to examine some of the most provocative and challenging gender theories of recent years to relate to contemporary theatre, film, and performance art. Students will read considerations of the relationship between gender, performance, and identity by such authors as Jacques Lacan, Michel Foucault, Helene Cixous, Luce Irigaray, Julia Kristeva, Judith Butler, Peggy Phelan, and Camille Paglia, among others. Alongside these works, we will examine contemporary performances from the popular to the oppositional. Through this intertextual exploration of theory and performance, we will aim to expand our understanding of the ways in which gender roles are created, maintained, questioned, and changed in contemporary cultures.

FORMAT: Lecture/semiara. 3 hours plus bi-weekly screenings
CROSS-LISTING: GWST 3912.03

THEA 3913.03: English Drama 1660-1800.

A survey of plays produced during the Restoration and eighteenth century. Concentrating on the London scene from the first appearance of actresses on the stage to the burning of the Haymarket theatre in 1789, this course introduces students to the period’s various dramatic forms, the literary influences and contexts, and the many women and men who penned for the stage.

FORMAT: Lecture/discussion
PREREQUISITE: ENGL 1002X/06 or any two of ENGL 1011.00, 1023.00, 1043.00, or THEA 1002X/06, or the King’s Foundation Year Program.
CROSS-LISTING: ENGL 1023.01
EXCLUSION: ENGL 3252.06

THEA 3914.03: Topics in Italian Drama and Spectacle.

This course focuses on Italian drama and performance. The topics will vary from year to year and may include plays and texts such as: Italian Renaissance theatre, the Commedia dell’arte, Pirandello’s productions and contemporary Italian spectacle. The course will examine the selected topic while placing Italian theatre into a historical context.

FORMAT: Lecture
CROSS-LISTING: ITAL 3700.00

THEA 4390.XX: Special Topics in Film Studies.

This is an advanced seminar in film studies which examines one topic in-depth from formal, political, and historical perspectives. Topics may include but are not limited to: internal film, political cinema, montage, screen acting, film adaptations, the work of a particular director, or a film movement. The topic is assigned by the Department at the end of the preceding academic year and is then posted at the Departmental level in the Faculty’s timetable.

FORMAT: Seminar
PREREQUISITE: THEA 2351.03 and one other film course (1000-level or above recommended).

THEA 4391.03: Special Topics in Popular Cinema.

This advanced seminar addresses an issue in popular cinema. Topics may include but are not limited to: critical perspectives on a particular set of films; the relations between ‘independent’ cinemas and ‘mainstream’ cinemas; the social and aesthetic impact of new technologies in popular cinema. The topic is assigned by the Department at the end of the preceding academic year and is then posted at the Departmental level in the Faculty’s timetable.

FORMAT: Seminar
PREREQUISITE: THEA 2351.03 (or THEA 2360.03 or THEA 2320.06 are recommended).

THEA 4406X.Y.06: The Aesthetics of Historical Dress.

This seminar course examines the aesthetics of historical dress, tracing the evolution of changing silhouettes and historical pattern design throughout the eighteenth and nineteenth centuries. Emphasis is given to the development of dress in the eighteenth and nineteenth centuries. Students will learn the history and culture of the dress of this period and the social and historical influences that affected the development of clothing. The seminars will also include research and academic skills, with an emphasis on research techniques. Students will be provided with research skills. In the process, we will analyze the role of costume in relation to the development of dress and fashion during this period. The course will also include the study of costume design and the role of costume in the theatre. The seminar will aim to expand our understanding of the ways in which costume design is created, maintained, questioned, and changed in contemporary cultures.

FORMAT: Lecture/demonstration/lab 4.5 hours
CROSS-LISTING: ENGL 4500.03, CANA 4500.03
PREREQUISITE: Permission of the instructor
RESTRICTION: Costume Studies degree or diploma students only.

THEA 4450.03: Costume Technology.

This course extends the expertise in costume creation developed in THEA 1450X/06 or THEA 2451.03 and THEA 2452.03 to current technologies of fine art as students prepare their costume techniques. This course is part of the Costume Studies Program.

FORMAT: Lecture/discussion/lab 4.5 hours
PREREQUISITE: For BA in Theatre (Costume Studies) students: THEA 1002X/06, 1450X/06, 2451.03, 2452.03, 3401X/06, 3404.03, 3453.05
RESTRICTION: Costume Studies degree or diploma students only.

THEA 4452.03: The Sculpture of Dress.

Based on a historical framework and an interest in creativity, this course examines sculptural forms in a human context to facilitate modern and historical costume design. The student will work directly on the human body to make a garment to provide a foundation model for the study of mirrorable costume. This course is part of the Costume Studies Program.

FORMAT: Lecture/demonstration/lab 4.5 hours
PREREQUISITE: For BA in Theatre (Costume Studies) students: THEA 1002X/06, 1450X/06, 2451.03, 2452.03, 3401X/06, 3404.03, 3453.05
RESTRICTION: Costume Studies degree or diploma students only.

THEA 4500.03: Canadian Theatre to 1968: Performing the Nation.

Early Canadian theatre offers a fascinating example of a colonized nation’s struggle to find its own dramatic voice in the face of powerful outside influences. This seminar course will examine the development of theatre in Canada from its roots in the frontier and performance, to its encounters with British and European models and its eventual search for an independent identity via the Little Theatre Movement, the Workers’ Theatre Movement and the Dominion Drama Festival. The course will close with a consideration of the influential Massey Commission and the birth of the Stratford Festival. Canada’s ‘first world class’ theatre. Over the course of the term, special attention will be paid to the development of diverse national theatre in French and English Canada by representative playwrights who will be studied alongside primary sources in Canadian theatre history to give students an integrated perspective on the complex artistic and political debates that helped to determine the character of performance in Canada.

FORMAT: Seminar/discussion
PREREQUISITE: Permission of the instructor
CROSS-LISTING: ENGL 4500.03, CANA 4500.03

THEA 4501.03: Canadian Theatre Since 1968: Interrogating Identities.

This seminar course examines the ongoing emergence of uniquely Canadian forms of theatre in the years since the Massey Commission asserted the need for Canada’s native talent. Topics to be considered will include: the controversial role of government subsidy and policy-making in Canadian culture; the differing models offered by the Stratford and Shaw Festivals, by the major regional theatres, and by ‘alternative’ and independent companies; the contrast...
between First Nations, English- and French-Canadian traditions, and the rise of the current "fringe" phenomenon. Drama by representative playwrights will be considered alongside post-colonial theory and primary sources in Canadian theatre history to help students consider what a genuinely "Canadian" theatre might look like. Above all, the course offers an opportunity to consider the complex relationship between theatre and national identity who are "we," and how might our theatre express or even shape "us?"

FORM: Seminar-discussion

PREREQUISITE: Permission of the instructor

CROSS-LISTING: ENGL 4601.05, CANA 4601.05

THEA 4700X/Y.06: Special Topics I.

In this full year seminar course, students focus on a particular topic in dramatic literature, film studies, theatre history, dramatic theory, or a related interdisciplinary subject in order to investigate it in great detail. The topic is assigned by the Department in the end of the preceding year and is then posted by the Department and in the University's timetable.

NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.

FORM: Seminar 3 hours

THEA 4735.06: Advanced Seminar in Baroque Culture.

This course offers its students a survey of key aspects of seventeenth and eighteenth-century European history and society along with a first-hand view of some of the most important aspects of Baroque style and material culture. It takes place in the town of Český Krumlov in the Czech Republic. The course introduces students to the socio-political conditions that led to the birth of Baroque civilization before entering into an exploration of the court life of seventeenth and eighteenth-century Europe. It then examines the cultural and artistic forms most characteristic of this period, with particular emphasis on literary history and on the role of the "theatrical" in the Baroque arts. As the course proceeds, students will have an opportunity to consider the connections between course material and the evidence of Baroque culture to be found in the Castle Theatre's scenographic machinery, its stock of original scenery and props, and its collection of historical costumes, as well as to witness an experimental Baroque open performance.

Finally, the course will include visits to Prague and other sites of interest to add to students' understanding of the Baroque and its legacy to subsequent periods.

FORM: Lecture/lab

PREREQUISITE: Permission of the School of Performing Arts and History Department.

RESTRICTION: 3rd and 4th year students only.

THEA 4800X/Y.06/4840X/Y.06: The Interpretation and Performance Year.

In the final year of the Acting Program, students' studies are geared toward performance and entering the world of professional acting. The company of fourth year Acting Program students will be cast in three DalTheatre season shows.

speaking nations is brought to life in courses organized around a theme, a genre, or an historical period.

The Department of French urges students to practice the language as much as possible. The French Club organizes activities including films, French meals, parties and plays in which all students may participate. Participation in immersion programs and individual student travel and study are encouraged. Please consult the Department for information and see below: Studies in a Francophone Environment.

A BA degree in French with Honours, or with Honours in French and another allied subject, may lead the student to a career in education, translation or interpreting, or may provide the background for careers in many fields, including radio, television, law, social work, public relations, business, diplomacy, journalism and library science. Students considering French as a minor in a BA degree are invited to discuss the matter at any time (the earlier the better) with a departmental advisor. The focus is on the particular needs and aspirations of the individual. An Honours degree is normally required for access to graduate studies. MA and PhD degrees may be pursued in the Department (see the Calendar for Faculty of Graduate Studies).

The French Department offers a number of academic awards to students, including the Ruth Murray Scholarship, the French Department Scholarship, the Marcelle Condé Sandhu Memorial Prize, the Sahib Maitly French Scholarship, the Prof. and Mrs. Robert Llewellyn Merrick Prize, the Prix de l’Alliance Française, and Embassy and Consular book prizes. Graduating Honours and Majors students may apply to the French Embassy for an eight month internship to tutor in France. Students may, with the approval of the Department of French, take up to one year of study at a University in a francophone environment and receive credit at Dalhousie. Honours may be available for students selected to participate in the Dalhousie Studies in a Francophone Environment Program.

The language requirement exemption test in French is given in the April examination period. Students should register at the Registrar’s Office before mid-January by completing an Application for Exemption from the Language Requirement. A copy of the form must be provided to the French Department. Please note that passing the language requirement exemption test does not give a course credit.

II. Degree Programs

In addition to the departmental requirements listed below, students must satisfy the requirements outlined in the Degree Requirements section, page 125 of this calendar.

Requirements for the four degree programs are set out in the following sections. Effective from other departments, when chosen with care, can enrich and enhance the major courses. Departmental Advisors can provide information on recommended electives. All Majors and Honours Students must consult with the Undergraduate Advisor.

Students interested in a degree in European Studies should consult the European Studies section of this calendar.

Students interested in an emphasis or a combined degree in Canadian Studies should consult the Canadian Studies section of this calendar.

A. BA with Honours in French

This program offers systematic, comprehensive and individualized study of French language, literature, linguistics and other program elements both inside and outside the classroom. It is, therefore, an option which should be considered seriously by any student who, with career or personal objectives in mind, wishes to obtain a strong background in French and by those who plan to teach or earn a graduate degree in French.

Honours students are strongly encouraged to enrich their learning experience by spending at least one term in a French-speaking area. Please consult the Department for information on our Diaspora program.

Potential Honours applicants should consult the Department’s Undergraduate Advisor, preferably during their second year of study, regarding the application procedure and relevant deadlines.

1. Concentrated Honours

Departmental Requirements

2000 level
- FREN 2043.06
- FREN 2202.03

3000 level
- FREN 3021.03 or 3022.03
- FREN 3045.06
- one full credit in literature and/or culture

4000 level
- FREN 4017.03 and 4046.03
- two 4000 level full credits
- At least one other full credit: 2000 to 4000 level; for a total of nine French credits
- FREN 4933.00 (Honours Seminar)

Second year (i.e., 2000 level) courses taken during the student’s first year at Dalhousie may count towards major or honours, with the approval of the department.

An additional grade is required: either an Honours Essay or an Oral Presentation (see document entitled “French Honours Qualifying Examination” available from the Honours Advisor or the departmental secretary).

2. Combined Honours

From 11 - 14 credits in French and another subject; not fewer than five nor more than eight may be chosen in French. Minimum requirements for the Combined Honours program are as follows: 2043.06, 2202.03, 3045.06, 4017.03 and 4046.03 plus a minimum of one full credit in language, literature, culture or linguistics at the 3000 or 4000 level. When French is the primary subject, FREN 4933 (Honours Seminar) and an additional credit are required: either an Honours Essay or an Oral Presentation (see document entitled “French Honours Qualifying Examination” available from the Undergraduate Advisor or the departmental secretary).

3. Honours Conversion

The Honours Conversion is an option for continued study open to anyone who has previously completed a BA (15 credit) program at Dalhousie. Normally, it consists of five full credits of course work plus one additional credit: either an honours essay or an oral interview based on course work and or a specific topic. Requirements for the Honours Conversion are similar to those for the Concentrated Honours Program, but will vary according to individual circumstances.

20 credit degrees may also be converted to Honours degree; please consult the departmental Undergraduate Advisor.

B. BA (20 credit) Major in French

Students must take a minimum of seven and a maximum of nine credits in French. Please consult the departmental Undergraduate Advisor.

Departmental requirements

2000 level
- FREN 2043.06
- FREN 2202.03

3000 level
- FREN 3045.06
- two other 3000 level full credits in French

4000 level
- FREN 4017.03 and 4046.03
- one other 4000 level full credit in French

PLEASE NOTE: Students with proper standing wishing to change to an Honours Program may do so, in which case they should also take FREN 2043.06 and FREN 3021.03 or FREN 3022.03 (required for Honours), and consult the Chair or the Undergraduate Advisor.
Classroom work involves a grammar review, study and discussion of a wide variety of readings, reading comprehension, as well as correction of prepared translations and sight translations (from French to English-only). FREN 1004 is given in English and is not, by itself, suitable for students who plan to major in French. It may, however, be taken by those with no prior training in French or as an additional first-year option for those taking FREN 1005X/Y or FREN 1004X/Y. This course also satisfies the Bachelor of Arts Language Requirement.

NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.

PREREQUISITE: Online Placement Test

FREN 1005X/Y.06: Français fondamental/Basic French

For students with little or no previous background in French, for example students with grade 8-11 core French (online Placement Test required: www.dal.ca/frenchtest). This course presents the basic components of French grammar with an emphasis on simple sentence types, and develops all four language skills: listening, reading, writing and speaking. Selected readings will lead to the application of structures being studied and to vocabulary enrichment. Weekly tutorials are an integral part of this course. A final grade of B or above is required in this course to progress to the second-year French courses.

NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.

FORMAT: Lecture

FREN 1045X/Y.06: Français intermédiaire/Intermediate French

For students with some background in French, for example grade 11-12 core French (online Placement Test required: www.dal.ca/frenchtest), or follows FREN 1005 (for students who have achieved a final grade of B or above) or FREN 1004. Focusing on the study of more advanced grammatical structures with an introduction to grammatical analysis, this course also aims to further develop the four language skills: listening, reading, writing and speaking. Selected readings will lead to the application of structures being studied and to vocabulary enrichment. This course satisfies the Bachelor of Arts Language Requirement and is normally followed by FREN 2045 or FREN 2021 and FREN 2022.

NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.

FORMAT: Lecture

PREREQUISITE: Online Placement Test required: www.dal.ca/frenchtest

FREN 1050X/Y.06: Français pour anciens étudiants des programmes d’immersion/French for Former Immersion Students.

For students who have completed French Immersion to Grade 12 (online Placement Test required: www.dal.ca/frenchtest). Focusing on the study of more advanced grammatical structures including grammatical analysis, this course also aims to further develop the four language skills: listening, reading, writing and speaking. Selected readings will lead to the application of the structures being studied and to vocabulary enrichment. This course will enable immersion graduates to build on their strengths while working to eliminate ingrained errors. A final grade of B or above is required in this course to progress to all second-year French courses. This course satisfies the Bachelor of Arts Language Requirement and is normally followed by FREN 2045 or FREN 2021 and 2022.

NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.

FORMAT: Lecture

PREREQUISITE: Online Placement Test required: www.dal.ca/frenchtest

FREN 1070.03: Introduction to Linguistics.

Taught in English, the course focuses on core theories and methods of linguistics and its principal subfields: phonology, morphology, syntax, semantics, pragmatics and sociolinguistics.

FORMAT: Lecture

PREREQUISITE: None
FREN 1005.03: Introduction à la linguistique/Introduction to Linguistics.

Linguistics is the science of language. This course is designed to serve as an introduction to basic concepts in linguistics. The various subfields of linguistics will be introduced with a focus on the core areas of linguistics: phonetics, phonology, morphology, syntax, and semantics. Students will learn about the structure of language at different levels of organization: phonemes, syllables, words, phrases, and sentence structures. FORMAT: Lecture.

PREREQUISITE: FREN 1045X/Y.06 or 1050X/Y.06, or 2000-level Placement Test result, or instructor's permission.

FREN 2020.03: Introduction à la linguistique/Introduction to Linguistics.

Linguistics is the science of language. This course is designed to serve as an introduction to basic concepts in linguistics. The various subfields of linguistics will be introduced with a focus on the core areas of linguistics: phonetics, phonology, morphology, syntax, and semantics. Students will learn about the structure of language at different levels of organization: phonemes, syllables, words, phrases, and sentence structures. FORMAT: Lecture.

PREREQUISITE: FREN 1045X/Y.06 or 1050X/Y.06, or 2000-level Placement Test result, or instructor's permission.

EXCLUSION: FREN 2020/30.

FREN 2021.03: FREN 2022.03: Langue et culture/Language and Culture.

Normally follows FREN 1045X/Y.06 or 1050X/Y.06, and is taken in the second year of study. This course provides the opportunity to practise and improve language skills (vocabulary and grammar) already acquired. Each year sections offer topics from the options listed under FREN 2021.03. Each section focuses upon a broad cultural topic via which language skills are developed. No prior knowledge of the topic is supposed. Various readings lead to discussions and oral presentations. Descriptions for sections offered in a specific year may be obtained in April from the Department. All courses and assignments are entirely in French. A maximum of two sections may be taken under the course designation of FREN 2021.03 and 2022.03. For possible topics, see FREN 2021.03. Approved in part with Canadian Studies (topics 3 and IDS (topic 6).

FREN 2022.03: Langue et culture/Language and Culture.

Normally follows FREN 1045X/Y.06 or 1050X/Y.06. This course provides the opportunity to practise and improve language skills (vocabulary and grammar) already acquired. Each year sections offer topics from the options listed under FREN 2022.03. Each section focuses upon a broad cultural topic via which language skills are developed. No prior knowledge of the topic is supposed. Various readings lead to discussions and oral presentations. Descriptions for sections offered in a specific year may be obtained in April from the Department. All courses and assignments are entirely in French. A maximum of two sections may be taken under the course designation of FREN 2021.03 and 2022.03. For possible topics, see FREN 2021.03. Approved in part with Canadian Studies (topics 3 and IDS (topic 6).

FREN 2023.03: Phonologie/Phonology.

This course follows FREN 1005 and is designed for students who do not wish to major in French but who wish to maintain, and improve their general knowledge of French language and Francophone culture. Along with further training in basic grammatical structures, the course focuses on the practical and accurate use of French to further develop communication skills. Based on authentic audiovisual and multimedia material (films, commercials, documentaries, etc.), activities will aim at vocabulary enrichment, oral comprehension and expression development and will focus mainly on contemporary and daily life topics in a Canadian context. Successful completion of this course (final grade of B or above) leads to second year courses such as FREN 2002 or FREN 2021/22 for Non-Majors, or to FREN 1045 for students who subsequently decide to major in French. This course does not count towards a Major or Certificate of Proficiency in French.

FORMAT: Lecture/discussion.

PREREQUISITE: FREN 1005.03 (final grade of B or above) or instructor's permission.

FREN 2024/5/6: Grammaire intensive/Intensive Grammar.

This course develops a more advanced knowledge of French. A detailed study of grammar through an in-depth analysis of all components of simple, complex and marked sentences leading to paragraph and text analysis. Emphasis is placed on the correspondence between grammatical content and meaning. Various grammar, writing and translation exercises will aim at developing the ability to communicate in clear, accurate written French. This class normally follows FREN 1045/1050, and is normally followed by FREN 3045. NOTE: Credit can only be given for this class if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.

FORMAT: Lecture/material.

PREREQUISITE: FREN 1045X/Y.06 (final grade of B or above), FREN 1050X/ Y.06 (final grade of B or above), or 2000-level Placement Test result.

EXCLUSION: FREN 1005X/6.

FREN 2070.03: Le français des affaires/ French for Business I.

This course aims to introduce the basic elements of business and administrative French. While developing oral, reading and writing skills through the use of authentic economic and business documents, students will master vocabulary specific to the workplace. This course is normally followed by FREN 3070 (French for Business II).

FORMAT: Lecture/discussion.

PREREQUISITE: FREN 1045/60 or 2000-level placement test or instructor's permission.

French 215
EXCLUSION: FREN 3005X/Y
RESTRICTION: Must be taken before FREN 3070

FREN 2201.03: FREN 2202.03: Introduction à la littérature/Introduction to French Literature.
A survey of literature in French from the Middle Ages to the 20th Century, presenting selected works of prose, poetry and theatre from France, and possibly also from Québec, Acadia and other Francophone areas. Introduction to general notions of literary history and to the basic techniques involved in reading literary texts. Attention is paid to the development of both oral and written expression of ideas. FREN 2201.03 and FREN 2202.03 may be taken consecutively. Classes include group discussions and lectures.
FORMAT: Lecture
PREREQUISITE: FREN 1045X/Y.06 or FREN 1050X/Y.06, or 2000-level Placement Test result.

FREN 2275.03: French Literature in Translation: The Novel/Littérature française le cas du roman en traduction anglaise.
Given in English, this course will study key fictional works representative of different historical periods and the changing form of the novel. Approximately seven to eight works from a selection of the following authors will be studied: Chéruit de Troyes, Marguerite de Navarre, Madame de Lafuye, Rousseau, Balzac, Flaubert, Stendhal, Proust, Colette, De Beauvoir, Duras. The selection of authors and works may vary from year to year, but the "survey" nature of the course will be maintained. The language of the course will be English. This course does not satisfy the French degree program requirements. French Majors and Honours students may take this course as an elective.
FORMAT: Lecture
NOTE: Film Studies minor specialists should consult program requirements. This course does not satisfy the French degree program requirements. French Majors and Honours students may take this course as an elective.

FREN 2666.03: The End of the World, from ‘Apocalypse’ to ‘Zombies’.
Given in English, this course is an introduction to the ‘End of the World’ (the end of Mankind / of the Earth / of the whole Universe) as a topic or as an archetype in a narrative ranging from religious and prophetic writings to modern ‘apocalyptic and post-apocalyptic fiction’. The survey will be both chronological (from biblical writings to 21st c. cinema) and thematic (distinction and renewals, chronologies and predictions, war and famine, death and the undead).
FORMAT: Lecture

FREN 2800.03: Cinema: The French Phenomenon I.
From the Lumière Brothers to the New Wave.
Given in English, this course is an introduction to the ‘End of the World’ (the end of Mankind / of the Earth / of the whole Universe) as a topic or as an archetype in a narrative ranging from religious and prophetic writings to modern ‘apocalyptic and post-apocalyptic fiction’. The survey will be both chronological (from biblical writings to 21st c. cinema) and thematic (distinction and renewals, chronologies and predictions, war and famine, death and the undead).
FORMAT: Lecture

FREN 2801.03: Cinema: The French Phenomenon II.
From the New Wave to the New Millennium.
Given in English, this course is an introduction to the ‘End of the World’ (the end of Mankind / of the Earth / of the whole Universe) as a topic or as an archetype in a narrative ranging from religious and prophetic writings to modern ‘apocalyptic and post-apocalyptic fiction’. The survey will be both chronological (from biblical writings to 21st c. cinema) and thematic (distinction and renewals, chronologies and predictions, war and famine, death and the undead).
FORMAT: Lecture
FREN 3200.03: Contes et légendes du monde francophone/Tales and Legends of the Francophone World.

Students in this course will become acquainted with a variety of French folk tales, fairy tales, legends, and the "literary" short stories. Distinguishing between these sub-genres will be part of the focus of the course. The stories themselves will be drawn from a variety of periods and areas of the French-speaking world. They may include, among other sources of stories, fairy tales published by Perrault and by women writers of the 17th century, folk tales of the oral tradition collected in various parts of the francophone world, short stories by such modern writers as Balzac, Sand, Flaubert, Musset, Toisy, to mention only a few possibilities.

In addition to exams and traditional assignments requiring analysis, students will explore the oral tradition by learning to tell stories orally. Students will also write original stories and work on editing them and publishing them within the course.

FORMAT: Lecture and seminar
PREREQUISITE: Recommended: FREN 2201.03/2202.03
CROSS-LISTING: GWST 3250.03

FREN 3250.03: Écrivaines françaises/French Women writers.

This course will explore the condition of women as expressed in a selection of texts by French women writers. The choice of writers may vary from year to year, and the course may be organized around a theme or a particular time period. Students taking this course as a Gender and Women's Studies course may write their essays and exams in English.

FORMAT: Lecture/discussion
PREREQUISITE: FREN 2201.03/2202.03
CROSS-LISTING: GWST 3220.03

FREN 3325.03: L'épistolaire/Letter Writing in French Literature.

Letter writing as a literary genre: correspondences and epistolary novels. The theoretical part deals with the birth of the epistolary novel, the various letter writing styles, and types of letters. It explores the borders between letter writing and diary as well as the interaction between public and private spheres. Texts studied are epistolary novels and correspondences from the 18th century (beginning of the separation between private and public spheres), as well as extracts from 17th and 18th century correspondences.

FORMAT: Lecture and seminar
PREREQUISITE: FREN 2201.03/2202.03

FREN 3500.03: La littérature du seizième siècle/16th Century French Literature.

This course explores the evocative, flourishing and decline of the Renaissance period in literature and language through the works of Montesquieu, Voltaire, Rousseau, and their others from the baroque. The 18th century's concern with the French language provides a solid introduction to the study of the development of modern French.

FORMAT: Lecture/discussion
PREREQUISITE: FREN 2201.03/2202.03
CROSS-LISTING: GWST 3220.03

FREN 3603.03: Aspects de la francophonie/Aspects of the Francophone World.

Taught in French, this course provides an introduction to the study of the francophone world, its cultural, linguistic, and political aspects. From year to year the course may emphasize different regions: Western Countries, Sub-Saharan Africa, Pacific Islands, North America, Latin America. FORMAT: Lecture

CROSS-LISTING: INTD 3125.03

FREN 3700.03: Pratiques de soutien à l'écriture/Supporting Writing Activities.

This course introduces the critical reading of a selection of literary texts (various genres and periods) with an emphasis on French literature. The close analysis of short texts will lead to discussions of the broader nature of recurring tropes and myths as well as central themes. Strongly recommended for French majors and Honours students. Approved with Canadian Studies.

PREREQUISITE: FREN 2045X/Y.6
CROSS-LISTING: CASA 2201.03
EXCLUSION: FREN 2201.03

FREN 3850.03: Approches du texte littéraire/Approaches to Literary Texts.

An introduction to the critical reading of a selection of literary texts (various genres and periods) with an emphasis on Québec literature. The close analysis of short texts will lead to discussions of the broader nature of recurring tropes and myths as well as central themes. Strongly recommended for French majors and Honours students. Approved with Canadian Studies.

PREREQUISITE: FREN 2045X/Y.6
CROSS-LISTING: CASA 2201.03
EXCLUSION: FREN 2201.03

FREN 3225.03: La littérature du dix-neuvième siècle/19th Century French Literature.

This course offers an introduction to nineteenth century French literature with a primary focus on representative works by three major dramatists: Corneille, Molière and Racine. It explores their vision of humanity and the world and assesses their contribution to French literature and the history of ideas.

FORMAT: Lecture/discussion
PREREQUISITE: FREN 2201.03/2202.03
FREN 3600.03: La littérature du dix-huitième siècle/18th Century French Literature.
An introduction to the literature of the 18th century which includes works by such authors as Voltaire, Rousseau, Diderot and Manon. Each year the readings and class discussions will be centered on a different theme (for example: the hero, women, love, wealth and power).
FORMAT: Lecture/discussion
PREREQUISITE: FREN 2201.03/2202.03

FREN 3700.03: La littérature du dix-neuvième siècle/19th Century French Literature.
An introduction to the main literary movements of the 19th Century: Romanticism, Realism, Symbolism. Focus on representative authors and/or texts belonging to one or more of these trends.
FORMAT: Lecture/discussion
PREREQUISITE: FREN 2201.03/2202.03

FREN 3730.03: La bande dessinée francophone - The Franco-Belgian Comic Strip.
This course offers an analysis of the development of Franco-Belgian comics (bandes dessinées) from the post-war period to the present time, focusing on a number of major creators, magazines and publishers. Several theoretical approaches will be used including semiotics, socio-criticism and cultural studies.
FORMAT: Lecture/seminar
PREREQUISITE: FREN 2201.03/2202.03

FREN 3750.03: Littérature industrielle, roman populaire et roman de consommation/Popular Literature and the Rise of Mass Culture.
The second half of the 20th century witnesses the development and increasing popularization of the novel as the pre-eminent form of literary expression, concurrently with a dramatic increase and diversification of the reading public. This course will explore the evolution of the novel during this period, with a particular emphasis on the appearance of serialised novels in magazines and newspapers (le feuilleton) and on the development of "genre" fiction and the concept of "popular" literature. Books or excerpts from several representative works of the time (Alexandre Dumas père, Eugène Sue, Balzac, Frédéric Sassi, Paul Fervat, Jules Verne) will be analyzed and discussed, in the light of theoretical approaches to popular and mass culture, as well as to representative social and cultural contexts.
FORMAT: Lecture/seminar
PREREQUISITE: FREN 2201.03/2202.03

FREN 3800.03: Théâtre et poésie du vingtième siècle/French Theatre and Poetry of the 20th Century.
This course offers a study of modern poetry from Dada and Surrealism to the work of contemporary poets such as Yves Bonnefoy, Jacques Dupin and Michel Délogny; and of modern theatre from Ierly to Beckett, Ionesco and beyond.
FORMAT: Lecture/discussion
PREREQUISITE: FREN 2201.03/2202.03

FREN 3810.03: Prose et théorie littéraire du 20e siècle/ 20th Century Prose and Literary Theory.
Analysis of a broad selection of short prose by major novelists of the 20th century from Gaël to Pierre and Aragon, but with emphasis upon the more recent work of Beckett, Saramour, Simon, Duras, Louis-Girault and Colette. Parallel discussion will be centered upon the literary theory of critics such as Bachtrel, Poute, Furstendiek, Barthe and Derrida.
FORMAT: Lecture/discussion
PREREQUISITE: FREN 2201.03/2202.03

This course focuses on the evolution of African and Caribbean literature from its origins to the present day. It prepares students for upper level courses in African and Caribbean literature, for example FREN 4011 (Francophone Poetry).
PREREQUISITE: FREN 2201/2202 or permission of instructor

FREN 3900.03: FREN 3901.03: La littérature canadienne-française/French-Canadian Literature.
In-depth study of a few major works of French-Canadian literature with emphasis on the period from 1845 to the present day. Approved with Canadian Studies.
FORMAT: Lecture/discussion
PREREQUISITE: FREN 2201.03/2202.03
CROSS-LISTING: CANA 3900.03/3901.03

FREN 3910.03: Études acadiennes/Acadian Studies.
Critical investigation into the historical, socio-cultural, linguistic and literary significance of past and present Acadia. Approved with Canadian Studies.
FORMAT: Lecture/discussion
PREREQUISITE: FREN 2201.03/2202.03

FREN 3994.03: Independent Study.
This course is generally given in preparation for students studying abroad in the Winter term.

FREN 4001.03: Histoire du français - Moyen Âge/History of French - The Middle Ages.
Advanced research into selected topics in Old and Middle French - manuscript studies such as paleography, historical phonetics, morphology and syntax, and the cultural-literary context of linguistic development.
FORMAT: Seminar
PREREQUISITE: 3000-level French course

Advanced research into selected topics - the emergence of a national language, the problem of orthography, usage and the development of normative grammars, the evolution of vocabulary, episcopal phenomena (hiéronymiques, the Basque, Provençal, the Revolution, scientific French, etc.), the development of the literary and the scientific language, the relationship between language and society.
FORMAT: Seminar
PREREQUISITE: 3000-level French course

FREN 4011.03: Lexicologie/Lexicology.
How can French vocabulary be studied and structured? What is its formation (derivation, composition, metaphor, borrowing, abbreviation, etc.), its meaning, its development? Class reports, discussions and lexical assignments are important components of this course.
FORMAT: Seminar
PREREQUISITE: FREN 3020.06 or FREN 2020.03 and 3021.03 or 3022.03, or instructor's permission

FREN 4013.03: Pragmatique/Pragmatics.
FORMAT: Lecture
PREREQUISITE: FREN 3020.06 and 3021.03 or 3022.03, or instructor's permission

FREN 4014.03: Langue et société/ Language and Society.
FORMAT: Lecture
PREREQUISITE: FREN 3020.06 and 3021.03 or 3022.03, or instructor's permission

FREN 4016.06: Introduction to Applied Linguistics and Language Teaching.
Taught in English, this course provides students with a theoretical and practical introduction to issues in language teaching. It includes a survey of language teaching methods which focuses both on their theoretical underpinnings and their methodology. It will include some classic methodologies (Grammar Translation as well as some fascinating but lesser known methods (Audio-lingual method, Silent Way, Suggestopedia, Community Language Learning). Significant class time will be devoted to current trends and conflicting views (for example, various
definitions of “communicative” approach, the proficiency movement. Class time will be devoted not only to learning about these approaches, but to experiencing them via peer micro-teaching.

N.B. This course is open to senior students (or graduate students) in all language departments. French majors or honors students may not count this course towards the minimum number of credits required for their French degree, but may take it as a supplementary elective course.

NOTE: All students enrolled in the course must do a practicum of two hours per week. Normally, this will be done as volunteer tutoring for Dalhousie ESL.

FREN 4017.03: Traduction générale/General Translation.
This course normally follows FREN 3405. Students taking this course will be familiarized with essential notions of translation theory, and will be introduced to professional translation practice. Emphasis will be placed on the translation of relatively short texts in a wide variety of subjects and fields, from English into French and from French into English. Assessment will be carried out through weekly assignments, as well as in-class exams.

FORMAT: Lecture
PREREQUISITE: FREN 3405.06 or instructor's permission
EXCLUSION: FREN 4015.06

FREN 4018.03: Outils et ressources électroniques d'aide à la rédaction, la traduction et la révision en français/Electronic tools and resources for French writing, editing, and revising.
The aim of this course is to provide the student with a wide range of electronic tools and resources useful to text writing, translation and editing activities in French. The student will learn how to use these electronic tools and resources, and in particular, some of the techniques associated with them. Tools demonstrated will include grammar checkers, machine (aided) translators, concordancers and spell checkers. Resources presented will consist of on-line terminology banks, dictionaries, thesauri and grammars, etc.

FORMAT: Lecture/lab
PREREQUISITE: FREN 3405.Y.06 or equivalent or instructor's permission

FREN 4046.03: Composition avancée/Advanced Composition.
This course normally follows FREN 3405. Students in this course will hone their writing skills by learning principles of good writing and putting them into practice via writing, editing, reviewing of various kinds. They will learn the conventions that characterize good academic writing in French. They will also create some professional documents, including a French curriculum vitae and job application letter. Students may also do some less formal writing, including descriptions and narratives.

FORMAT: Lecture
PREREQUISITE: FREN 3405.06 or instructor's permission
EXCLUSION: FREN 4045.06

FREN 4300.03: Le roman courtois/Courtly Novels.
A close literary analysis of medieval French Arthurian romances. Texts in Old French/Modern French editions.

FORMAT: Seminar
PREREQUISITE: 3000-level French literature course

FREN 4301.03: La poésie courtoise/Courtly Poetry.
A stylistic and socio-cultural study of French courtly love poetry from the 9th to the 15th centuries. Early texts in modern French translations.

FORMAT: Seminar
PREREQUISITE: 3000-level French literature course

FREN 4401.03: La pensée philosophique, politique et morale de la renaissance/Renaissance Philosophical, Political and Moral Thought of the Renaissance.
An in-depth study of major currents of Renaissance thought: humanism, scientific awakening, the beginning of 'literature engagée,' and the emergence of the novel and of philosophy.

FORMAT: Seminar
PREREQUISITE: 3000-level French literature course

FREN 4500.03: L'aventure intellectuelle du grand siècle/The Intellectual Adventure of 17th-Century France.
This course examines, at an advanced level, a major writer, movement, genre or theme in 17th-century French literature. As the focus of the course may vary frequently, please consult the professor for detailed information on the topic and format.

FORMAT: Seminar
PREREQUISITE: 3000-level French literature course

FREN 4550.03: La femme de lettres au Grand Siècle/Literary Women of French Classicism.
In this course, we will explore aspects of the intellectual and social context particularly relevant to a study of literary women in 17th-century France (for example: social structures and norms, la procéziose, the salon, the libertinage of Stanislas, women's contributions as patrons of the arts), a representative selection of works, from several literary genres, written by 17th-century women (for example: novels by Mme de La Fare ouille and/or Mlle de Scudéry, Mme de Sévigné's letters, Mme d'Aulnoy's contes, Mme de Sade's novels), examples of literature written by men which contains the ambient misogyny of the period (for example: Molinier's L'Ecole des femmes and La Bréviaire de Carinates).

FORMAT: Lecture/discussion/group activities
PREREQUISITE: 3000-level French literature course or instructor's permission
CROSS-LISTING: GWST 4550.03

An in-depth study of the French Enlightenment which treats some of the larger works by major authors and introduces the student to secondary authors whose works are also of significant literary, philosophical or historical value. The study is unified by an examination of recurring philosophical ideas and literary themes important to understanding the development of new genres and styles. Please consult the professor for information on the theme treated and the works to be studied in any given semester.

FORMAT: Seminar
PREREQUISITE: 3000-level French literature course

FREN 4700.03: La révolution romantique/The Romantic Revolution.
Romanticism is viewed primarily as a rebellious and creative force which greatly contributed to the redrawing of traditional society. The origin, main themes and trends of the movement are studied with an attempt to show Romanticism as a European movement, the impact of which was felt in fields beyond the boundaries of literature. Classes are conducted as seminars. The choice of topics depends largely on the students' previous experience; they include works by Mme de Staal, Chateaubriand, Lamartine, Hugo, Vigny, G. Sand and others.

FORMAT: Seminar
PREREQUISITE: 3000-level French literature course

FREN 4701.03: Le roman du dix-neuvième siècle/ The Nineteenth-Century Novel.
Intensive study of the work of a major novelist of the 19th century: e.g. Stendhal, Flaubert, Balzac, Zola, Sand; a study of the novel and of its place in the development of the 19th-century novel and of its place in the development of the 19th-century novel and of its place in the development of the novel and of lunch in the genre.

FORMAT: Seminar
PREREQUISITE: 3000-level French literature course

FREN 4710.03: Du symbolisme au surréalisme/From Symbolism to Surrealism.
Analysis of the evolution of French literature from the various symbolist manners of Verlaine, Rimbaud, Mallarmé, Lautréamont and Lautréamont through the period of Jarry and Dada, to the aspirations and paradoxes of Surrealism viewed, principally, through the work of Breton, Eluard, Aragon and Dali.
FREN 4801.03: Le Nouveau Roman/Anti-novels of the 20th Century.
In this course we are mainly interested in fictional techniques: how the author creates his illusion. Each of the works selected for detailed study is important due to the author's rejection of conventional ideas regarding the form of the novel.
FORMA T: Seminar
PREREQUISITE: 3000-level French literature course

FREN 4811.03: La poésie francophone de Perse et Char à Senghor et Césaire/ Francophone Poetry from Perse and Char to Senghor and Césaire.
Discussion of the works of five or six major francophone poets of the modern period, chosen from: Perse, Reverdy, Claudel, Char, Frémaud, Senghor, Tchicaya, Césaire, Glissant, Miron and others.
FORMA T: Seminar
PREREQUISITE: 3000-level French literature course

FREN 4902.03: FREN 4903.03: Écrivains québécois contemporains/Contemporary Québec Writers.
In depth study of one or more contemporary Québec writers. Approved with Canadian Studies.
FORMA T: Seminar
PREREQUISITE: 3000-level French literature course

FREN 4904.03: Écrivaines québécoises/ Québec Women Writers.
This course will explore the condition of women as revealed in texts by Québec women writers. In any given year different writers and time periods will be covered, and a variety of genres may be included. Approved with Canadian Studies.
FORMA T: Lecture/discussion
PREREQUISITE: 3000-level French literature course, preferably French Canadian

CROSS-LISTING: GWST 4250.03

FREN 4933X/Y.00: Séminaire “de spécialisation”/Honours Seminar, Honours Essay.
The honours seminar is a compulsory preliminary to the honours essay or oral presentation and is given as a full term course for honours students in their graduating year writing their Honours Essay in French. The seminar prepares students to write the honours essay, beginning with a detailed outline of the work. It provides instruction, advice, and guidance on all the essential steps for producing the honours essay, from selecting and researching a topic, through planning and drafting the text, to matters of form and style. Students continue the work begun in the seminar by working individually with a supervisor during the winter term.
FORMA T: Seminar
PREREQUISITE: Only open to students in graduating year of French Honours program.

FREN 4994.03: FREN 4995.03, FREN 4996.03/FREN 4997.03, FREN 4998.03/FREN 4999.03: Recherches indépendantes/Independent Research.
May only be taken with the approval of the Chair or the Undergraduate Advisor.
FORMA T: Independent study/seminar
PREREQUISITE: 3000-level French literature or linguistics course

I. Introduction
Gender and Women's Studies is a dynamic and rapidly expanding interdisciplinary area of study. An alternative to the traditional curriculum, Gender and Women's Studies provides students with the opportunity to examine history, social structures, the sciences, language, literature, and culture from critical and illuminating perspectives.
At Dalhousie, students can currently enter the following programs in Gender and Women’s Studies: a Minor, a Major, a Double Major, or a Combined Honours program. These programs include courses in the disciplines of Economics, English, History, Music, Philosophy, Political Science, Sociology, and more.

Location: 1376 LeMarchant Street
Multidisciplinary Centre
PO Box 15000
Halifax, NS B3H 4R2

Studies than the BA (15 credit) minor in Gender and Women's Studies. Students can currently enter four programs in Gender and Women's Studies: a BA in the traditional disciplines or in other interdisciplinary programs that are cross-listed with Gender and Women's Studies core courses.

Students can combine Gender and Women's Studies courses with courses either in a traditional discipline or with another interdisciplinary program such as International Development Studies, Canadian Studies, or Contemporary Studies.

Departmental Requirements
- At least 10 and no more than 14 credits beyond the 1000 level in two allied subjects, one of which is Gender and Women's Studies, with no more than eight and no fewer than five in either
- At least two credits in each of the two subjects chosen shall be beyond the 2000 level
- At least three different disciplines shall be represented in a student's selection of cross-listed Gender and Women's Studies courses.

D. BA with Combined Honours
Four year, 20 credit program
Students can enter a BA with Combined Honours program in Gender and Women's Studies and a range of other subjects including Biology, Classics, Contemporary Studies, English, Environment, French, History, International Development Studies, Philosophy, Political Science, Psychology, Sociology, Social Anthropology, Sustainability, and Theatre. Students interested in any of these combinations or any other that involves Gender and Women's Studies and another subject should consult with the Departments concerned.

General Degree Requirements
Please read the detailed description of BA with Combined Honours Program in "Degree Requirements" section of this calendar.

Departmental Requirements
- At least three different disciplines shall be represented in a student's selection
- At least two credits in each of the two subjects chosen shall be beyond the 2000 level
- At least three different disciplines shall be represented in a student's selection of cross-listed Gender and Women's Studies courses.

II. Degree Programs
Gender and Women’s Studies programs provide preparation for careers in a variety of fields, as well as for professional schools or graduate programs. For example, graduates can work as consultants, policy analysts, and officials in government and non-governmental organizations, in business and industry, and in educational institutions. The fields they enter include employment equity, public administration, international development, health care, work place conditions, personnel relations, publishing and editorial work, and public relations.

For students interested in a preparatory degree, Gender and Women’s Studies programs provide appropriate preparation for professional schools and programs in the fields of education, social work, counselling, journalism, the health professions, and certain areas of law. They also provide suitable preparation for graduate programs in Women's Studies, Gender Studies, Interdisciplinary Studies, Cultural Studies, and studies in Social Justice. Students interested in proceeding to graduate school should enter a four-year degree program.

Students may enter Gender and Women’s Studies programs in the first, second, or third year of study. In many cases, students in second or third years may already have acquired some Gender and Women’s Studies credits through taking courses in the traditional disciplines or in other interdisciplinary programs that are cross-listed with Gender and Women’s Studies core courses.

Students can currently enter four programs in Gender and Women's Studies: a BA with Combined Honours, a 20 credit BA with Major in Gender and Women’s Studies, a 20 credit BA with Double Major in Gender and Women’s Studies with a traditional discipline or with another interdisciplinary program such as International Development Studies, Sustainability, Canadian Studies, or Contemporary Studies; and a 15 credit BA with BAr in Gender and Women’s Studies.

NOTE: In addition to the departmental requirements listed below, students must satisfy the requirements outlined in the Degree Requirements section, page 125 of this calendar.

A. Minor in Gender and Women’s Studies
See Minors in the College of Arts and Science section of this calendar (page 129).

B. BA (20 credit) Major in Gender and Women’s Studies
Four year, 20 credit program
This program provides a more comprehensive grounding in Gender and Women's Studies than the BA (15 credit) minor in Gender and Women's Studies. Students interested in applying to graduate programs should enter a four-year degree program.

Departmental Requirements
- At least an equal number of credits beyond the 1000 level in Gender and Women’s Studies of which at least three must be beyond the 2000 level
- At least three different disciplines beyond the 1000 level in Gender and Women’s Studies
- At least three different disciplines beyond the 2000 level
- At least three different disciplines beyond the 1000 level in Gender and Women’s Studies
- At least three different disciplines beyond the 2000 level

Please read the detailed description of BA with Combined Honours Program in "Degree Requirements" section of this calendar.

Departmental Requirements

a) At least one full credit from the following: GWST 2066.03, 2300.03, 2500.03, 2800.06 (Normally this requirement should be met in the second year of the program.)

b) At least one full credit 6000 level Gender and Women’s Studies course, either Directed Readings, Special Topics, or cross-listed courses (Normally this requirement should be met in the fourth year of the program.)

c) To meet the Honours Examination requirement when Gender and Women’s Studies is the major subject, students will prepare a research paper under the supervision of a Gender and Women’s Studies faculty member and will take GWST 4900E/Y.05.
III. Course Descriptions

NOTE: Some courses may not be offered every year. Please consult the current timetable to determine if these courses are offered. More detailed information can be obtained from the Gender and Women's Studies office.

In addition to the courses listed below, appropriate courses in other departments (for example, Special Topics courses on women and/or gender issues) may be taken as Gender and Women Studies credits with the permission of the Instructor concerned and the Coordinator. Students may also select Gender and Women's Studies courses at Saint Mary's or Mount Saint Vincent Universities, subject to the rules and regulations of the College of Arts and Science at Dalhousie regarding transfer credits and in consultation with the Gender and Women's Studies Coordinator.

GWST 1010.03: Introduction to Gender and Women's Studies.

Gender and Women's Studies is an interdisciplinary field aimed at developing a critical understanding of gender as a category of analysis in scholarly inquiry and social dynamics. Paying close attention to the experiences and perspectives of women, students have the opportunity to examine history, social structures, the sciences, language, literature, culture from the illuminating perspective of gender. In all these areas, Gender and Women's Studies investigates how gender intersects with other variables such as race, class, and cultural difference. This introductory course provides an overview of some of the central topics of Gender and Women's Studies, such as the sex/gender distinction, understanding sexualities, the social construction of motherhood, changing definitions of masculinity and femininity, and the place of sex and gender in the legal system.

FORMAT: Lecture/discussion

GWST 1015.03: Gender and Diversity.

This course continues from "Introduction to Gender and Women's Studies" to focus particularly on the many ways that gender as a social system interacts with other systems of power and inequality. We all make sense of our lives through multiple identities that combine in shifting ways to define our opportunities for action and the limits we face. Identities based on gender, race, ethnicity, age, class, sexuality, disability, nation, or religion are blended in varied ways for individuals, but they are also constructed and self-perpetuated. They are also elements of larger social systems. Topics may include the multiple identities of the body: race, gender, and violence; diversity and work; contemporary transformations of the family; and gender and globalization.

FORMAT: Lecture/discussion

GWST 2000.03: Directed Readings in Gender and Women's Studies.

Readings and research in Gender and Women's Studies on selected topics. In exceptional circumstances and with the permission of both the Gender and Women's Studies Coordinator and the Instructor concerned, students may arrange to take an appropriate course of study in Gender and Women's Studies that are not otherwise available as one-term courses in Gender and Women's Studies. To find out how to register in one of these courses, please see http://www.dal.ca/gwst

FORMAT: Variable

GWST 2066.03: Women, Gender, and Music.

This course explores the variety of ways in which gender shapes musical discourse. It will focus particularly on three broad topics: the history of female contributions to music as musicians, composers, patrons and listeners; musical constructions of gender, race, class and sexuality; and feminist critiques in recent musical discourse. No formal training in music is required.

FORMAT: Lecture/discussion

GWST 2217.03: Women and the Economy.

This course will provide a broad and relatively non-technical analysis of gender issues in the economic experience of women. For example, we will study questions such as: Are there feminists who are economic? How do economic conditions improve for women in Canada over the past 30 years? How do economic outcomes for women in Canada compare with those of other affluent countries? Is there a glass ceiling for women in the workplace? Is there gender discrimination in the Canadian labour market? Who does the unpaid work? What are the economic consequences of divorce? Are women more likely than men to be poor? Are there inequalities within families?

FORMAT: Lecture

PREREQUISITE: ECON 1011.03/1022.03 with a grade of C- or better

GWST 2230.03: Making Gender: Men, Sex and Gender in Pre-Modern Europe.

This course examines the diverse and fascinating ways western cultures have shaped what it means to be ''male'' and ''female'' over the centuries in the Roman Empire and continuing to the age of the French Revolution. The course examines such topics as ancillary, dating rituals, female ''popes'', changing notions of the physical differences between the sexes, and early struggles for women's rights.

FORMAT: Lecture/tutorial

GWST 2301.03: Making Gender: Male and Female from the American Revolution to the Present.

This course examines the diverse and fascinating ways western cultures have shaped what it means to be ''male'' and ''female'' over the centuries in the Roman Empire and continuing to the age of the French Revolution. The course examines such topics as ancillary, dating rituals, female ''popes'', changing notions of the physical differences between the sexes, and early struggles for women's rights.

FORMAT: Lecture/tutorial

GWST 2310.03: Women and Gender in Early Modern Science.

This course will explore the roles of women, and questions about women's nature, in the development of early modern science. The course will consider several intertwined aspects of scientific culture in the sixteenth, seventeenth, and eighteenth centuries: first, we will look at the place of women in the scientific institutions of the time. Although women were, for the most part, excluded from universities and scientific academies, some women were able to do scientific work through their participation in salons and craft guilds. The second part of the course will look at the contributions of some particular women to the fields of physics, astronomy, botany, and medicine. We will then examine how science interpreted sex and gender. We will pay special attention to the biological sciences and their treatments of sex differences, conception, and generation. We will consider how these biological theories were influenced by, and at the same time used to uphold, various political and social structures. Finally, the course will explore the ways in which gender and nature were portrayed in the broader cultural context. We will, for example, discuss the ways in which women were depicted as sciences and as symbols of science in art and literature.

FORMAT: Lecture/seminar

GWST 2320.03: Witchcraft in Early Modern Europe.

The period of European history from 1500 to 1800 saw the rise of modern science and philosophy. It was also a period in which thousands of witch trials and executions were carried out. This course will seek to understand how these seemingly contradictory developments could have occurred simultaneously. The course will examine changing conceptions of the witch and witchcraft in their historical, intellectual, cultural, religious and political contexts. The course will pay special attention to early modern notions of gender and sexuality and their influence on the witch hunts and witch trials.

FORMAT: Seminar

GWST 2412.03: Human Sexuality.

This course is concerned with biological, cultural, ethical, historical, psychological, religious and semantic aspects of human sexuality. Four themes are threaded throughout the course -- diversity in gender roles and in sexual attitudes, behaviours and customs; critical thinking; making responsible decisions; sexual health. The course is designed to support positive integration of sexuality into the lives of individuals and to foster the prevention of sexuality-related problems, at all stages of life.

FORMAT: Lecture/discussion

GWST 2500.03: Philosophical Issues of Feminism.

An exploration and examination of some of the concepts, issues, and arguments underlying feminist claims and perspectives. Such topics as pornography, rape, mothering, the nature of gender, and feminist's responses to racism will be treated.

FORMAT: Lecture

GWST 2505.03: Introduction to Gender and Women's Studies.
GWST 2800X/Y.06: Comparative Perspectives on Gender.

This course examines gender in a global perspective. Drawing upon historical and current anthropological and sociological theory the course provides a theoretically-based understanding of how gender differences are culturally produced, as well as socially, economically, politically, and spatially organized. The course begins by examining the extent to which gender experiences in society are taken for granted, perceived to be fluid in nature rather than culture. Topics in the first half of the course include evolutionary and materialist perspectives, feminism, and equality, the domestic sphere and the division of labor, masculinities, sexuality and the state. Readings are broad and include ethnographic accounts of the various ways that gender is experienced around the world. The second half of the course examines power relations and political discourse, work and gender, the politics of reproduction, gender, violence, development and the global economy, and gender and belief systems. By examining some of the contemporary struggles of both women and men cross-culturally, the course is designed to help students understand the unfathomable breadth of gendered experiences and issues therein.

NOTE: Students taking this class must register in Y and Y in consecutive terms; credit will be given only if both are completed concurrently.

FORMAT: Lecture

PREREQUISITE: One of SOSA 1000X/Y.06, 1050X/Y.06, 1100X/Y.06, 1200X/Y.06 or Gender and Women's Studies class

GWST 3000.03/3001.03/3002X/Y.06: Directed Readings in Gender and Women's Studies.

Readings and research in Gender and Women's Studies on selected topics. Students may take appropriate courses in other Departments under these numbers, with the permission of the instructor and the Gender and Women's Studies Coordinator, or they may construct their own reading list and research project in consultation with an appropriate faculty member and the Coordinator. To find out how to register in one of these courses, please see http://www.dal.ca/gwst

NOTE: Students taking GWST 3002X/Y.06 must register in X and Y in consecutive terms; credit will be given only if both are completed concurrently.

FORMAT: Variable

PREREQUISITE: Variable

GWST 3006.03: Comparative Perspectives on Gender and Work.

This course will use comparative perspectives to explore a range of topics relating to gender, race, and class. The course will deal with wage-work, household/leisure labour, the informal sector, masculinity and femininity in the work place, occupational segregation, employment policies and practices (such as affirmative action, pay equity), and unionization. The context will be the changing global economy, and gender and ethnicity and their relationship to body politics.

FORMAT: Lecture

PREREQUISITE: One of SOSA 1000X/Y.06, 1050X/Y.06, 1100X/Y.06 or Gender and Women's Studies class

GWST 3300.03: Family and Community in North America 1600-1900.

This course introduces students to key social and cultural issues therein. Students will learn the undeniable breadth of gendered experiences and issues therein. Students will learn the undeniable breadth of gendered experiences and issues therein.

NOTE: Students taking this class must register in Y and Y in consecutive terms; credit will be given only if both are completed concurrently.

FORMAT: Lecture/discussion

PREREQUISITE: Second year and above.

GWST 3304.03: Through her Eyes: Women and the Documentary Tradition.

This course will explore the various female movie-makers in the field of documentary filmmaking. Women documentary makers have produced extensive bodies of work that challenge many societal assumptions about gender, class, race, the function of political power, sexuality and peace-war. They have worked at every level within the process: as directors, cinematographers, editors, sound recordists, producers, writers and fund-raisers. A variety of documentaries made by women from diverse backgrounds will be screened and analyzed along with a close reading of selected critical texts. Students will identify the similarities and differences in subjects, themes, style, aesthetics, and approaches to creation, production and distribution.

FORMAT: Film Screening and Seminar

GWST 3331.03: Film Theory II: Desire in Cinema.

This course focuses on theories of gender, sexuality and desire in cinema. It addresses debates around the representation of gender, sexuality and desire on screen, as well as theoretical approaches to the discipline.

FORMAT: Lecture/discussion

PREREQUISITE: One of the Film Studies courses (or other exposure to the discipline)

CROSS-LISTING: THEA 3331.03
GWST 3350.03: Rewriting Gender.
Age as a widespread view that postmodernism is identical to feminism, the readings in this course demonstrate that recent literature by women, both fiction and critical theory, has widely adopted postmodern strategies in order to advance feminist views. The postmodern center has allowed female authors to question the way in which women's subjectivity has always been conformable to male-oriented processes of signification. The works of fiction covered in this course, by Judith Butler, Angela Carter, Marilynne Robinson, Octavia Butler, and others, exemplify aesthetic subversions of phallocentric discourse. Literary texts will be supplemented with theoretical works by leading feminist/post-structuralist thinkers such as Judith Butler, Drucilla Cornell, Diane Elms, and Gayatri Spivak. The course includes video-taped material and slide-shows of postmodern feminist art.
FORM: Seminar
CROSS-LISTING: CTMP 3350.03

GWST 3358.03: Slavery, Gender, and Power: Women in Nineteenth Century America.
This course studies the tangled histories of slavery and gender in nineteenth-century America. Principal topics include the lives of female slaves, the cult of domesticity, the role of early feminism, the role of women in the destruction of slavery, and the tension between gender and race.
FORM: Seminar
CROSS-LISTING: HIST 3358.03

GWST 3426.03: Sex and the State.
This course will consider the role of the state and other institutions in the social, moral and legal production and regulation of sex and gender, particularly in Western countries. It will begin with a brief historical overview of the role of religious prescriptions in the social and legal regulation of sex, and the refinement of laws and policies that have been implicated in sex and gender-based discrimination. We will also address a range of contemporary topics such as the decriminalization of homosexuality, hate crimes against sexual minorities, the politics of relationship recognition, state response to HIV/AIDS, gender-related refugee claims; and developments in the regulation of reproductive technology.
PREREQUISITE: POLI 1010, 1015, 1030, 1035, 1050, 1055, 1100, 1103, 2210, 2230, 2350, 2410, 2420, 2430, 2440, 2450, or permission from the instructor.
FORM: Seminar
CROSS-LISTING: POLI 3426.03

GWST 3500.03: Contemporary Feminist Theories.
Contemporary feminism is not a single theory but comprises multiple theoretical perspectives, often linked by some common concerns and a diversity of motivations and approaches. This course aims to present some of the richness and variety in feminist theory while offering students the opportunity for sustained critical engagement with influential feminist thinkers.
FORM: Seminar
PREREQUISITE: At least two previous classes in Gender and Women's Studies, or at least two previous classes in Philosophy, or permission of the instructor.
FORM: Seminar
CROSS-LISTING: PHIL 3170.03, PHIL 5170.03, GWST 5170.03

GWST 3600.03: Sexualization of Western Political Thought.
Representations of women and constructs of feminism are a significant part of mainstream western political thought. This course explores these topics in the work of leading western philosophers, such as Aristotle, Aquinas, Hobbes, Locke, and Rousseau, with an understanding of the relation of ideas of sexual difference to general systems of thought. The course also considers how conceptions of gender difference and equality shape contemporary political, legal and philosophical discourses and practices, including in feminist critical theory and international human rights scholarship and activism. We will consider the strategies used by men and women in the past century to address systemic discrimination and advantage.
FORM: Seminar
PREREQUISITE: POLI 1010, 1015, 1030, 1035, 1050, 1055, 1100, 1103, GWST 1010, 1015, 2080, 2085, 2086, 2200, 2217, 2300, 2301, 2310, 2320, 2350, 2410, 2420, 2430, 2440, 2450, or permission from the instructor.
FORM: Seminar
CROSS-LISTING: POLI 3600.03

GWST 3800.03: Gender and Health.
This course aims to reflect upon and challenge our taken-for-granted assumptions about the gendered dimensions of health and healthcare. Rather than take the categories of ‘women’s health’ and ‘men’s health’ as its foundation, the course revolves around two main questions: (1) how does the field of health and healthcare define and enforce the very categories of ‘women’s’ and ‘men’s’? (2) how does gender, thus defined and enforced, affect the health, healthcare, and health work of those defined as men, women, or other? We will consider these questions by examining particular health topics that have a strongly gendered component, such as sexual health, reproductive health, and disability. Throughout the course, we will explore the theoretical perspectives used in the field; the process, world and challenges to it; the gendering of particular health problems and health professional, the medicalization of femininity and, more recently, masculinities; and the relationships between gender and other forms of social classification (e.g. race, class, sexual orientation).
FORM: Lecture
PREREQUISITE: One of SOAS 1000 Y/0.06, 1010Y/0.06, 1100Y/0.06 or 1200Y/0.06.
CROSS-LISTING: SOAS 3403.03

GWST 3810.03: Women and Aging.
As women grow older the expediency of aging is generally more difficult for them than for men. Somewhere in the future, attention to the aging process exacerbates the difficulties facing women in modern society. Disempowering older women is usually accomplished in small increments. “Old woman” is a pejorative label; the older a woman becomes, the less credibility she generally has; this is especially true for women of color, poor women, latinas, and women who are physically challenged. While aging is a biological process, it can be medically constructed. Specifically, under patriarchy, older women are seen as a burden, discredited, and segregated by both men and younger women. They are usually not taken very seriously, nor seen as a threat. This course will explore the issues related to social, psychological, political and economic factors that are major determinants to the well-being of aging women based upon race, gender, sexual orientation, disabilities and class inequities.
FORM: Lecture/discussion/seminar
PREREQUISITE: SOAS 1010Y/0.06, 1010Y/0.06, 1100Y/0.06 or 1200Y/0.06, or 2 credits in Women’s Studies
CROSS-LISTING: SOAS 3810.03, NURS 4370/4800.03

GWST 3911.03: Gender in Theatre: A Cross-Cultural Survey.
This seminar course examines the roles gender has played in the shaping of world theatre alongside the roles the theatre has played in shaping of various cultural conceptions of gender. By exploring plays and performances from Europe, North America, China, Japan, India, and/or other traditions, we will attempt to understand the ways in which various forms of representation reflect their cultures’ governing images of masculinity and femininity. In the process, we will interrogate the historical and cultural variability of the notion of ‘gender’ itself. The main objective of the seminar is to introduce students to the major theoretical debates in gender studies, and to see how gender itself can actually be shaped by performance.
FORM: Lecture/seminar, 3 hours
PREREQUISITE: None, although a background in Gender and Women’s Studies, Theatre or Dramatic Literature will be an asset.
FORM: Lecture/seminar, 3 hours
CROSS-LISTING: THEA 3911.03

GWST 3912.03: Gender Theory and Contemporary Performance.
This seminar course offers students an opportunity to encounter some of the most provocative and challenging gender theory of recent years in relation to contemporary theatre, film and performance arts. Students will read considerations of the relationship between gender, performance and identity by such authors as Jacques Lacan, Michel Foucault, Helene Cixous, Luce Irigaray, Julia Kristeva, Judith Butler, Peggy Phelan and Camille Paglia, among others. Alongside these works, we will examine contemporary performances, from the popolar to the experimental. Through this intellectual exploration of theory and performance, we will aim to expand our understanding of the ways in which gender roles are created, maintained, questioned and changed in contemporary culture(s).
FORM: Lecture/seminar (3 hours plus 2-hours attendance)
CROSS-LISTING: THEA 3912.03

GWST 4000.03: 4100.03/4200X/Y.06: Directed Readings in Gender and Women’s Studies.
Advanced readings and research in Gender and Women’s Studies on selected topics. Students may take appropriate courses in other Departments under these numbers, with the permission of the Instructor and the Gender and Women’s Studies Coordinator; they may construct their own reading list and research project in consultation with an appropriate faculty member, and the Coordinator. To find out how to register in one of these courses, please see genderstudies@artsandsocialsciences.dal.ca
CROSS-LISTING: LAWS 2152.03
PREREQUISITE: This class is open to all 2nd and 3rd year Law students and all 

FORMA T: Seminar
feminist legal theories on particular areas of the law. This is followed by student 
concepts of equality under the Charter. The course then considers the impact of 
major focus is on equality rights in Canada, from the early cases to current 
GWST 4150.03: Special Topics in Gender and 
Women's Studies I.
In this seminar course, students will explore some of the current research on a 
focused topic in Gender and Women's Studies or gender theory. Topics may be drawn from such areas as queer theory, gender and embodiment, contemporary 
theory of sexuality, representations of gender, women and eating disorders, 
postcolonial feminist theory, and so on. The course will be directed to majors and 
honours students in Gender and Women's Studies, but will be open to qualified students from other disciplines.
FORMA T: Seminar
PREREQUISITE: One full credit in Gender and Women's Studies or permission 

GWST 4151.03: Special Topics in Gender and 
Women's Studies 2.
In this seminar course, students will explore some of the current research on a 
focused topic in women's studies or gender theory. Topics may be drawn from such areas as queer theory, gender and embodiment, contemporary theory of 
sexuality, representations of gender, women and eating disorders, postcolonial 

GWST 4200X/Y.06: Directed Readings in Gender and 
Women's Studies.
Readings and research in Gender and Women's Studies on selected topics. Students may take appropriate courses in other Departments under these numbers, 
with the permission of the instructor and the Gender and Women's Studies 
Coordinator, or they may construct their own reading list and research project in 
consultation with an appropriate faculty member and the Coordinator.
NOTE: Students must register in X and Y in consecutive terms; credit will be given only if both are completed 
consecutively.
FORMA T: Variable
PREREQUISITE: Variable

GWST 4300.03: Introduction to Women and the Law.
The course begins with a focus on feminist legal theory, and the integration of feminism with issues of race, class, sexual orientation, and disability. The second 
major focus is on equality rights in Canada, from the early cases to current 
concepts of equality under the Charter. The course then considers the impact of feminist legal feminism on particular areas of the law. This is followed by student class presentations on major paper topics.
FORMA T: Seminar
PREREQUISITE: This class is open to all 2nd and 3rd year Law students and all 

GWST 4315.03: Women's Suffrage From The French Revolution To World War I.
The question of women's participation in representative government first emerged 
during the French Revolution by 1792; only two European countries had 
granted women the right to vote. This seminar explores the suffrage movement in 
the nineteenth century and the obstacles in the process of women's enfranchisement.
FORMA T: Seminar
PREREQUISITE: A modern European history course above the introductory level 
CROSS-LISTING: HIST 4613.03
GWST 4330.03: Topics in the History of Sexuality.
This seminar is intended for senior undergraduates. The specific content of the 

GWST 4355.03: Narrative Strategies in Nineteenth- 
Century Music: Gender, Identity, and Social Politics.

GWST 4402.03: Recent French Feminist Theory.
The course will concentrate on some of feminism's most challenging voices, 
theses that have emerged in France in the past 50 years. Issues include: 

GWST 4500.03: Topics in Feminist Philosophy.

GWST 4500.03: Topics in Feminist Philosophy.
In this course, we shall explore some of the current research in a focused area of 
feminist philosophy. Previous topics have included feminist ethics, feminist 
epistemology, postmodern feminism, the feminist sexuality debates, and 
ecofeminism.
FORMA T: Lecture/tutorial
PREREQUISITE: Permission of the instructor 
CROSS-LISTING: MUSC 4550.03
GWST 4900X/Y.03: Honours Thesis.

Students writing an honours thesis in Gender and Women's Studies as the primary subject of a Combined Honours program must enroll in this course. The course meets five times over the course of the academic year in which the student writes her thesis. The grade for the honours thesis is assigned under this course number.

NOTE: Credit can only be given for this class if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.

FORMAT: Seminar and supervised thesis writing

PREREQUISITE: Admission to the honours program

IV. Related Courses

These courses are subject to change; consult the program office for offerings.

Courses Offered at Mount Saint Vincent University and Saint Mary's University

Courses offered within the Women's Studies programs at these universities are available to Gender and Women's Studies majors at Dalhousie. Courses offered are subject to change.

Please consult:

1. Women's Studies, Mount Saint Vincent (902) 457-6547;
2. Women's Studies, Saint Mary's University (902) 420-5842.

These courses must be taken on a letter of permission (see the Dalhousie Gender and Women's Studies Program Coordinator).

Geography

Note: There is no Geography program at Dalhousie, however several courses taught in various departments are commonly recognized as Geography courses.

Only courses which are cross-listed in Science departments may be used to meet the life or physical science subject requirement for the BA degree.

I. Minor in Geography

See Minors in the College of Arts and Science section of this calendar (page 128).

II. Course Descriptions

GEOG 1030.03: Introduction to Physical Geography.

This non-lab science course examines the nature of weather and climate, earth's surface features and processes, and internal processes that contribute to landform development. An integral component of the course is an exploration of the representation and interpretation of physical geographic data through the examination of a variety of maps.

NOTE: There are no pre-requisites for this course and students may take this class in addition to any other first year Earth Sciences class.

FORMAT: Lecture-class 3 hours each week, and 1 hour tutorial weekly. Some classes may include map work.

CROSS-LISTING: ERTH 1030.03

GEOG 1035.03: Introduction to Human Geography.

Human geography examines the ways that people perceive, use, and alter the landscapes they occupy. Two themes run throughout the class. One theme deals with the aspects of culture that characterize different social groups. These are matters of material culture as well as group behaviour, and belief systems. The second theme has to do with the systems of production, livelihood, spatial organization, and administration that societies erect. Intertwined with these themes is the interaction of human societies with each other and their environments. The class introduces the principal tools of human geographers: maps, demography, and analysis of cultural patterns.

NOTE: This class cannot be used to meet the life or physical science subject requirement for the BA degree.

FORMAT: Lecture 3 hours

GEOG 1060.03: Earthquakes, Volcanoes and Natural Disasters.

Earthquakes, meteorite impacts, rapid climate change, volcanic eruptions, hurricanes, landslides, solar flares, and floods are natural disasters that affect our economy, public policy, and safety. Where, why and how frequently do natural disasters occur? Are predictions possible? Are media portrayals of risk and damage realistic? This course, aimed at the nonspecialist, investigates these intriguing questions. Excerpts of “disaster films”, in conjunction with lectures and discussions are used to identify the causes, consequences and sometimes erroneous perceptions of natural hazards. Examples from Atlantic Canada and contemporary disasters are used to assess local risk and real-time events worldwide.

FORMAT: Lecture 3 hours

CROSS-LISTING: ERTH 1060.03

GEOG 2000.03: Cartography.

Maps, which are visual representations of our world, are essential aids to disciplines that span archaeology to zoology. Navigation is the art and science of finding one's way through both natural and built landscapes. This class primarily uses hands-on assignments to investigate how maps are constructed and interpreted (including concepts of spatial reference systems, scale, projections, symbols, and design), how maps can distort perceptions, and can influence one's decisions. Students also study navigation by compass, global positioning systems (GPS), and dead reckoning.

FORMAT: Lecture 3 hours plus occasional field trips as appropriate

PREREQUISITE: ERTH/GEOG 1030, or ERTH 1080
GEOG 2001.03: Landscape Analysis.
Describe the use and planning needed to understand the influence of physical, biological, and cultural systems in landscape evolution, and the relevance of that information in analyzing land capability. Students develop inventory and analysis tools for understanding environmental processes and their implications for design and planning. These include GIS data and a lab component.

FORMAT: Lecture/lab 3 or 4 hours
PREREQUISITE: ERTH 1030.03
CROSS-LISTING: PLAN 2001.03

GEOG 2006.03: Space, Place and Geographic Information Systems.
Students use Geographical Information Systems (GIS) for data collection, coordination, and analysis. Properly interpreted, GIS data contribute to informed decision-making. This course explores the application of GIS in planning within a project-centric setting. Students learn to use GIS to address and use site-planning issues. The course also considers mapping standards used within the field of planning, and examines legal, privacy, and ethical implications of using GIS data in the public realm.

FORMAT: Lecture/lab. Three hours weekly
PREREQUISITE: PLAN/GEOG 2001
CROSS-LISTING: PLAN 2006.03

GEOG 2070.03: Area Studies on Mexico and Central America.
Following an examination of the indigenous heritage and the colonial legacy of the conquistadors, the class deals principally with the contemporary period, examining the Mexican Revolution and its aftermath, the Somoza dynasty, the conquistadors, the class deals principally with the contemporary period, and the current period, examining the Mexican Revolution and its aftermath, the Somoza dynasty, the class deals principally with the contemporary period, and the current period, examining the Mexican Revolution and its aftermath. The course also considers the economic systems of Latin America and the ingredients of political and social change.

FORMAT: Lecture discussion 2 hours conducted in English
PREREQUISITE: No prerequisites. Open to students in all departments. No knowledge of Spanish necessary
CROSS-LISTING: HIST 2383.03

GEOG 2100X/Y/06: Environment and Culture.
Concern about the environment is a widespread phenomenon as virtually everyone is confronted with environmental issues—the global warming, the devastation of the ozone layer or the continuing problems of water pollution and soil waste disposal. Furthermore, we are becoming increasingly aware of how environmental issues affect our lives and global implications. The course examines the interaction of human culture and the environment. Resistance to change is manifested in many forms. The course explores the key concepts related to cultural and environmental sustainability. The course will examine the impact of cultural and environmental sustainability on human societies and the implications for future generations.

FORMAT: Lecture.Under 90 students. English
PREREQUISITE: One of SOSC 1050X, SOSC 1050Y, SOSC 1050A, SOSC 1050B, SOSC 1050C, SOSC 1050D
CROSS-LISTING: SOSC 2100.06

GEOG 2201.03: Introduction to Development I.
Poverty, inequality and injustice are widespread throughout the contemporary developing world. This course will examine the reasons for this situation to be. It begins by analyzing the different meanings of the terms “development” and “sustainable development” and then examines the major approaches that have shaped practical development policies on the ground in the Global South over the past 60 years. The course also examines the legacies of history for contemporary development efforts in the Global South through specific case studies.

FORMAT: Lecture/tutorial
PREREQUISITE: Completion of five full credits at the 1000 level or permission of the instructor
CROSS-LISTING: INTD 2001.03

GEOG 2202.03: Introduction to Development II.
The course builds on the approaches and the strategies they have used to promote and resist development, including governments, non-governmental organizations (NGOs), the World Bank and IMF, and popular social movements in the Global South and North.

FORMAT: Lecture/tutorial
PREREQUISITE: Completion of five full credits at the 1000 level or permission of the instructor
CROSS-LISTING: INTD 2002.03

GEOG 2206.03: Africa: An Introduction.
The course will focus on contemporary Africa. Stereotypical portrayals of Africa will be examined and critiqued with the goal of emphasizing the complexity and diversity of the continent in order to better understand the challenges and opportunities and possibilities of African development in the twenty-first century.

FORMAT: Lecture/tutorial
CROSS-LISTING: INTD 2106.03

GEOG 2336.03: Regional Development.
Most countries have richer and poorer regions. Economic development issues, policies, and theories facing more industrialized nations are analyzed with particular focus on Canada (especially the Atlantic region), the European Economic Community, U.S.A., Japan, and Australia. Approved with Canadian Studies. In addition to the prerequisites, the student is advised to take one class in Political Science and one class in Canadian History before taking ECON 3336.

FORMAT: Seminar 2.5 hours
PREREQUISITE: ECON 1103.03 and HIST 2383.03
CROSS-LISTING: ECON 2336.03

GEOG 2800.03: Climate Change.
Most models of the atmosphere predict that increasing concentrations of greenhouse gases will continue to warm the earth’s surface and the oceans in the twenty-first century. Temperature change and its consequences are still very controversial. This class will discuss, mainly from a nonmathematical viewpoint, the reasons for the greenhouse effect, the effects of increasing greenhouse gases, and the consequences of increasing greenhouse gases. This class will examine the impact of climate change on human societies and the implications for future generations.

FORMAT: Lecture
PREREQUISITE: One of SOSC 1050X, SOSC 1050Y, SOSC 1050A, SOSC 1050B, SOSC 1050C, SOSC 1050D
CROSS-LISTING: PHYH 2800.03
EXCLUSION: ECON 2800.06, PHYS 2800.06

GEOG 3001.03: Landscape Ecology.
Landscapes reflect the interaction of natural and cultural processes. This course introduces the principles of ecology to landscape analysis. It explores relationships between environmental components in the landscape to inform community design and land use planning applications.

FORMAT: Lecture/lab 3 or 4 hours
PREREQUISITE: PLAN 2001.03 or GEOG 2001.03 or permission of the instructor
CROSS-LISTING: PLAN 3001.03

GEOG 3002.03: Reading the City.
Many cities have richer and poorer regions. Economic development issues, policies, and theories facing more industrialized nations are analyzed with particular focus on Canada (especially the Atlantic region), the European Economic Community, U.S.A., Japan, and Australia. Approved with Canadian Studies. In addition to the prerequisites, the student is advised to take one class in Political Science and one class in Canadian History before taking ECON 3336.

FORMAT: Lecture/lab 3 or 4 hours
PREREQUISITE: PLAN 2001.03 or GEOG 2001.03 or permission of the instructor
CROSS-LISTING: PLAN 3002.03

GEOG 3005.03: Cities and the Environment.
Many cities have richer and poorer regions. Economic development issues, policies, and theories facing more industrialized nations are analyzed with particular focus on Canada (especially the Atlantic region), the European Economic Community, U.S.A., Japan, and Australia. Approved with Canadian Studies. In addition to the prerequisites, the student is advised to take one class in Political Science and one class in Canadian History before taking ECON 3336.

FORMAT: Lecture/lab 3 or 4 hours
PREREQUISITE: PLAN 2001.03 or GEOG 2001.03 or permission of the instructor
CROSS-LISTING: PLAN 3005.03

Geography 227
understanding of landscape change, urban forms and patterns in human settlements through the ages.

FORMAU: Lecture/seminar 3 hours
CROSS-LISTING: PLANN 3005.03

GEOG 3006.03: Reading the Landscape.
Any landscape reflects its natural and cultural history. This course explores processes, theories, and methods of landscape interpretation. These approaches will be applied to community design problems in local landscapes.

FORMAU: Lecture-lab 1-4 hours
PREREQUISITE: PLAN 3001.03, 3002.03, or GEOG 3001.03, 3002.03
CROSS-LISTING:

GEOG 3110.03: Migration and Development.
The purpose of this course is to explore and better understand the connections between migration and development in contemporary societies. Classes will introduce or further explore one main theme or issue, such as development-induced displacement, labour migration, and HIV/AIDS undermigration. Each class will center on one or more discussion questions, exchange insights from relevant experiences of class participants or focus on a case study

FORMAU: Lecture/seminar
CROSS-LISTING: INTD 3110.03

GEOG 3114.03: Environment and Development.
This course will examine the intersections between the natural environment and different forms of social and economic development with a specific focus on developing countries. Various perspectives will be used to analyze the links between environmental issues and poverty, inequality, wealth, economic globalization and the ways in which different cultures understand and interact with the environment.

FORMAU: Lecture seminar
CROSS-LISTING: INTD 3114.03

GEOG 3165.03: Peoples and Cultures of the World: Selected Area Studies.
This course examines a specific geographic and/or cultural area. The course begins with background material on geography and history. Its focus is on the people themselves, their social organization and political, economic, and cultural systems. How they relate to globalization and development will also be examined.

CROSS-LISTING: SOAS 3165.03
EXCLUSION: SOAS 2370.03

GEOG 3210.03: Canadian Cultural Landscapes.
This course explores the theme of one “signature” landscape in each province. Contact with different geographies shaped distinctive regional histories, but at the same time, the story of each place is tied to the national narrative. These landscapes also illuminate how nature has been understood, used, and transformed since the fifteenth century.

FORMAU: Lecture and discussion
CROSS-LISTING: HIST 3210.03, CANA 3020.03

GEOG 3220.03: Coastal Communities in the North Atlantic.
Coastal communities as a social-ecological type are examined as populations, and social structures (territorial, economic, occupational, political) as they have developed in response to particular ecological and social circumstances. Various perspectives which have been applied to coastal communities are examined with regard to the contribution they may make to understanding the dynamics of these communities. The focus is on North Atlantic communities.

FORMAU: Lecture
PREREQUISITE: One of SOSA 1000X/Y.06, 1050X/Y.06, 1100X/Y.06 or 1200X/Y.06
CROSS-LISTING: SOAS 3220.03

GEOG 3284.03: Living in Cities.
2000 marked the first time in history that more of the global population lived in cities than in rural areas. What perspectives to anthropology and sociology offer on cities and their inhabitants? This course explores the social dynamics that constitute ‘the city’ and surveys how social scientists have studied and engaged with cities and city-dwellers. It approached ‘the city’ both as a whole and through its constituent parts: people and places. Examples may be drawn from cities large and small, near and far – including Halifax.

FORMAU: Lecture and seminar
PREREQUISITE: One of SORA 1100.06, SOAS 1050.06, SOAS 1100.06 or SOSA 1200.06 FY/P for PLAN 2005.06
CROSS-LISTING: SOAS 3284.03

GEOG 3370.03: North American Landscapes.
Landscapes are the product of human culture ordering nature for economic, social, political, religious, aesthetic and artful purposes. Landscape history analyzes and interprets the use and design of features such as fields and woodlands, roads and waterways, settlements and buildings, towns and suburbs, and parks and cities. This class examines the use and meaning of the spatial environment among the various societies in North America from the sixteenth to the twentieth centuries. Among the topics are the meaning of resource areas for indigenous peoples, the occupation and settlement of colonial populations, transportation and continental expansion, town planning, the politics of water and land in the West, preservation movements, scenic tourism, and the history and aesthetic styles of landscapes. The class welcomes non-history students with an interdisciplinary interest in issues regarding planning and design, cultural ecology, and the governance of resources.

FORMAU: Lecture/discussion 3 hours
CROSS-LISTING: HIST 3370.03

GEOG 3400.03: Human Health and Sustainability.
This course examines the relationships between the health of populations and health determinants in the context of environmental sustainability. Weekly laboratory exercises will teach students how to use geomatics (GIS, GPS, and remote sensing technologies) and epidemiological tools to be used to assess the links between the health of human populations and the health of the environment, and how to use these tools for environmental health research.

FORMAU: Lecture 3.0 hours, Lab 1.5 hours
PREREQUISITE: Must be a third year student or have permission of instructor
CROSS-LISTING: ENVIS 3400.03

GEOG 3440.03: Geomorphology.
Geomorphology is the quantitative study of Earth’s surface processes and landforms applies to geology, civil engineering, hydrology, and environmental management. We investigate slope stability, weathering and soils, sediment production, wind-driven coastal and fluvial environments, tectonic landforms, and river, glacial and periglacial processes.

FORMAU: Lecture 3.0 hours, Lab 3.0 hours including mandatory field trips
PREREQUISITE: ERTH 1080 and one other 1st year ERTH course; 1090 recommended; or SCIE 1502.21, or 1503.21, or SCIE 1504.27, or SCIE 1510.33 or permission of the instructor AND completion or concurrent enrolment of a 1000-level mathematics class, a 1000-level physics class, and a 1000-level chemistry class.
CROSS-LISTING: ERTH 3440.03

GEOG 3500.03: Exploring Geographic Information Systems.
Geographic Information Systems (GIS) as a tool for the management of georeferenced data, have become indispensable for disciplines where location of objects and pattern of processes is important. GIS plays a significant role in a wide range of applications, from modeling, to analysis and predictions, to decision making. The course is aimed at a broad base of potential users and draws on examples of the role of GIS in global climate change, mineral exploration, preservation of biodiversity, coastal zone management, resource depletion, and many other present and future environmental issues. The course material will be of interest to those studying geoscience, environmental science, ecology, marine biology, oceanography, epidemiology, urban and rural planning, civil engineering, and any other field involving spatial data.

Laboratory exercises emphasize the principles of spatial analysis and the integration of databases and GIS (global positioning systems) data into GIS. Exercises draw on the diversity of GIS applications in a number of application areas.

FORMAU: Lecture 3.0 hours, Lab 3.0 hours
PREREQUISITE: Two years of university study or equivalent or instructor’s permission.
CROSS-LISTING: ERTH 3500, ERTH 3500, ENVIS 3500
EXCLUSION: Credit will only be given for one of GEOG 3500, SCIE 3600, ERTH 3500, ERTH 5500, ENVIS 3500

GEOG 3550.03: Exploring Geographic Information Systems.
GEOG 3633.03: Spatial Information and GIS in Ecology.
A hands-on approach to understanding and using spatial information, this class introduces students to Geographic Information Systems (GIS) as a tool to answer ecological questions. Together, students conduct a major field project, collecting data, creating maps using GIS, and interpreting spatial patterns, to address and applied problem in ecology.
NOTE: Offered in the summer through DEASIDE; an auxiliary fee is charged to cover field expenses. For dates, times and special registration procedures, see seaside.science.dal.ca.
PREREQUISITE: BIOL 2060.03
CROSS-LISTING: ENVS 3633.03, BIOL 3633.03

GEOG 4440.03: Geomorphology and Landscape Evolution
Ripple-to mountain range-scale landforms evolve under predictable internal and external forces that are modulated by the physical and chemical properties of the rock. The purpose of this course is to provide a thorough examination of the development of landscapes by tectonic and surficial processes involving weathering, mass wasting, streams, and glaciers. The concepts of equilibria, climate and vegetation change, and rock character are recurring themes throughout the course. Dating and thermochronology methods are discussed in the context of rates of landscape change. Early classic viewpoints of landform development are contrasted with the latest numerical simulations of landscape evolution. The labs are mostly field-oriented with emphasis on Quaternary stratigraphy, describing and interpreting soils, local geomorphology, and geomorphometrics.
FORMAT: Lecture 3 hours, lab 3 hours
PREREQUISITE: ERTH 1080 and one other 1st year ERTH course; 1090 recommended. Must be a 4th year Science student familiar with excel, or with instructor’s permission.
CROSS-LISTING: ERTH 4440.03

GEOG 4450.03: Introduction to Landscape Simulation.
We examine different approaches to numerical modelling of earth-surface processes such as erosion and landslides, melting permafrost, and braided rivers. Using class and/or individual projects as examples, the selection of variables, sensitivity testing, and methods for testing models against nature are discussed. We use Matlab; programming experience is useful but not essential.
FORMAT: Lecture 3 hours, lab
PREREQUISITE: ERTH 3440.03, MATH 1010 or 1400, PHYC 1280.03/1290.03x/y and three courses at the 3000-level in the physical sciences (chemistry, earth science, physics) or with consent of instructor.
CROSS-LISTING: ERTH 4450

GEOG 4520.03: GIS Applications to Environmental and Geological Sciences.
Note: This class is not offered every year. Please consult department in the spring for further information.
Geographic information systems (GIS) provide a rich set of new tools to the geologist and environmental scientist, not only to solve conventional problems, but also to explore questions not readily answered by other means. This class builds on the fundamentals of GIS taught in ERTH 3500.03 to explore analytical tools that aid in decision-making processes encountered in mineral exploration, hydrogeology, site selection, environmental assessment, and global change analysis. The class concentrates on case studies and problem solving, including those requiring multi-criteria and multi-objective decision making processes.
FORMAT: Lecture 3 hours, lab 3 hours
PREREQUISITE: GEOG 3500.03, ENVS 3500, ERTH 3500.03; ERTH 5600, or SCIE 5600.03; or consent of instructor.
CROSS-LISTING: ERTH 4520.03

GEOG 4530.03: Environmental Remote Sensing.
The goal of this class is to introduce students to the role of remote sensing as a technique to provide environmental and geologic information. Particular emphasis will be placed on examining the potential and limitations of remote sensing methods and data in this context. The lectures discuss the fundamentals of remote sensing with an emphasis on multi-spectral satellite systems. In the lab, students use computerized techniques of digital image enhancement and thematic information extraction to process images derived from optical, radar, and hyperspectral remote-sensing systems. The integration of remote-sensing information with GIS (Geographic Information Systems) is stressed in both the labs and lectures.
FORMAT: Lecture 3 hours, lab 3 hours
PREREQUISITE: ERTH 3500.03, ENVS 3500.03, ERTH 5600.03 or SCIE 5600.03 or GEOG 3500.03
CROSS-LISTING: ERTH 4530.03
German

In addition to the departmental requirements listed below, students must satisfy the requirements outlined in the Degree Requirements section, page 125 of this calendar.

The following programs are normally followed, other possibilities do exist. Students considering a degree in German are advised to consult with the undergraduate advisor of the Department.

Applications for Honours Programs should be discussed with a departmental advisor at an early stage. Late applications can also be accommodated.

A. BA with Honours in German

Beyond Beginner-level German, the Honours program requires nine additional credits in German Language, Literature and Thought at or above the 2000 level, including at least two courses in German Literature or Thought at the 3000 level or higher. It is recommended that at least four courses be completed in the last two years of the program. At the end of the program, students take an oral Honours Exam.

Honours students are strongly advised to complete some coursework in Germany, e.g., through the Canadian Year in Freiburg Program. Consult with the undergraduate advisor.

B. BA with Combined Honours

To take an Honours degree combining German with another subject, a student must consult with the academic advisors of both departments to arrange the specifics of the program. In general, a combination of 11 - 14 intermediate and advanced credits in the two subjects is required. If students intend to take the German Honours exam, they need a minimum of six credits in German, including courses in Literature and Thought, if the Honours thesis or exam is completed in the other department, a minimum of five intermediate and advanced credits in German is required.

C. BA (20 credit) Major in German

For a BA with Major in German, at least six (and up to nine) credits beyond the 1000 level must be completed, at least three of these credits must be at the 3000 level or higher. Two credits must be in courses dealing with language or thought.

D. BA (20 credit) Double Major in German

A BA with a Double Major in German and another subject requires a combination of 10 - 14 intermediate and advanced credits in the two subjects. Of these five to nine can be in German, and at least two must be at the 3000 level or higher. Two credits must be in courses dealing with literature or thought.

E. BA (15 credit) Minor in German

See requirements for minor in the College of Arts and Science section of this calendar (page 120).

I. Introduction

German, the most widely used language in Europe, is spoken by approximately 100 million people as their native tongue in Austria, Germany, Switzerland, Italy, Belgium, and some parts of Eastern Europe. The cultural, economic and scientific role of the German-speaking countries makes the knowledge of German indispensable to the study of most academic disciplines. The number of publications in the German language is second only to the number published in English.

The departmental program "German Studies" is the investigation of German culture and its place in the formation of the modern world. The program concentrates on significant aspects of the cultural traditions of the German-speaking countries. From Luther to Nietzsche, Freud, and Marx, German writers have moved people and nations to change the class of the world. The literary and intellectual development of Germany culminated around 1800 in the epoch of Classicism. The authors of this epoch (Lessing, Herder, Hegel, Goethe, Schiller) founded their writings on a thorough knowledge of the cultural tradition of Classicism. The authors of this epoch (Lessing, Herder, Hegel, Goethe, Schiller) founded their writings on a thorough knowledge of the cultural tradition of Classicism. The authors of this epoch (Lessing, Herder, Hegel, Goethe, Schiller) founded their writings on a thorough knowledge of the cultural tradition of Classicism. III. Course Descriptions

NOTE: All courses are offered every year. Please consult the current timetable to determine this year’s course offerings.

PLEASE NOTE:
- GERM 1010X/Y.06 is to be taken by students with no previous knowledge of German.
- GERM 1020X/Y.06 is to be taken by students with no previous knowledge of German.
- GERM 1030X/Y.06 is to be taken by students with no previous knowledge of German.
- GERM 1060X/Y.06 is to be taken by students with no previous knowledge of German.
- Students who have completed high school German will normally take GERM 2000X/Y.06.
- Students who have completed high school German will normally take GERM 2060X/Y.06. Intermediate German

All students with previous knowledge of German should see the Undergraduate Advisor.

Intermediate Courses

Intermediate courses are based on GERM 1010X/Y.06, 1060X/Y.06, high school German Grade 10, 11, 12 or an equivalent basic knowledge. A combination of GERM 2000X/Y.06 and GERM 2060X/Y.06 serves as an accelerated Intermediate German course and is designed for students who want to make rapid progress in the language.

Unless noted otherwise, all upper-year courses are taught in German with German texts.

GERM 1001X/Y.06: German: A Practical Course for Beginners.

This course provides the linguistic and cultural background needed to interact successfully with German speakers. The course replaces traditional grammar instruction with practical exercises reflecting the basics of communication in domestic and academic life as well as in business and tourism. This course combines a predominantly oral method based on conversation and discussion with written work. For a more traditional approach, see GERM 1010X/Y.06 or GERM 1060X/Y.06.

NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.

FORMAT: Classroom instruction/language lab and oral classes

GERM 1010X/Y.06: German for Beginners.

GERM 1010X/Y.06 is a seminar course for beginners only, and no previous knowledge is required. Its equivalent is two years of German in high school with a final mark of 75% or better. The course emphasizes the spoken language, and provides the student with a thorough knowledge of basic grammar. Conversational materials are a required part of the course.

NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.

FORMAT: Seminar

GERM 1020X/Y.06: German Fiction in Novel and Film.

This course satisfies the university’s guidelines for the Writing Requirement. It examines the conceptual transition from the printed word to the screen; classic German novels and short stories are to be read and compared with their film versions. Works by Kleist, Fontane, Kafka, Thomas Mann, Heinrich Mann, Bill and Huldtke will be included on the reading list. All texts will be read in English translation. Some of the best-known and most innovative cinematic works will be shown and discussed. Directors will include Fassbinder, Herzog, Schlöndorff, Wenders, von Trotta and Visconti. All German language films will either be “dubbed” into English or provided with English subtitles.

NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.

FORMAT: at Writing Requirement Seminar

GERM 1021X/Y.06: German Fiction in Novel & Film.

Students enrolled in GERM 1021 attend lectures along with those in GERM 1021. However, as they do not need a writing course, they are not required to complete all 8 assignments. Instead, they attend a separate tutorial and submit fewer, more detailed and fully researched essays.

NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.

EXCLUSION: GERM 1020X/Y.06

GERM 1060X/Y.06: German for Reading.

In this course, students acquire a solid foundation for comprehending and translating texts in the humanities and sciences. No previous knowledge of German is required. The course is taught in English. For purposes of admission to advanced courses in German it is equivalent to GERM 1010X/Y.06. This course satisfies the Bachelor of Arts Language Requirement. The combination of GERM 1010X/Y.06 and 2060X/Y.06 is recommended for students who desire rapid progress in the German language.

NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.

FORMAT: Seminar

GERM 1080X/Y.06: German Folk and Fairy Tales.

Beginning with the great Germanic epic of the Nibelungen, and finishing with the famous collection of fairy tales by the Brothers Grimm, this course aims to familiarize students with the most significant Germanic myths and tales. Their origins and aspects of their historical, political, social and literary importance will be discussed, through readings presenting a wide variety of critical approaches. The course encourages an interest in narrative style - in the epic, the legend and the fairy tale as literary forms. The history and essential qualities of these forms will be investigated; students will develop a greater awareness of the role and influence which the imagery of these forms has had (and continues to have) in the visual arts and music, in advertising and film, in poetry and literature. The readings for this course are in English.

NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.

FORMAT: Writing Requirement Seminar

GERM 2000X/Y.06: Intermediate German.

The main aim of this course is to develop a certain degree of speaking fluency as well as to improve reading and writing skills. Small conversation classes once a week as an aid to speaking fluency are offered.

NOTE: Students taking this course must register in both X and Y in consecutive terms; credit can be given only if both are completed consecutively.

FORMAT: Seminar

GERM 2010X/Y.06: Exercises in Translation and Composition.

English and German texts from various periods and of different types will be translated. These translations lead to the discussion of specific difficulties of grammar and construction. Students must prepare translations or compositions for each class.

NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.

FORMAT: Seminar

GERM 2020X/Y.06: Exercises in Translation and Composition.

English and German texts from various periods and of different types will be translated. These translations lead to the discussion of specific difficulties of grammar and construction, word choice and style. Students must prepare translations or compositions for each class.

NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.

FORMAT: Seminar

GERM 2021.03: Translation & Composition I.

English and German texts from various periods and of different types will be translated. These translations lead to the discussion of specific difficulties of grammar and construction, word choice and style. Students must prepare translations or compositions for each class.

NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.

FORMAT: Seminar

GERM 2022.03: Translation & Composition II.

English and German texts from various periods and of different types will be translated. These translations lead to the discussion of specific difficulties of grammar and construction, word choice and style. Students must prepare translations or compositions for each class.

NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.

FORMAT: Seminar
the Hundred Years War, and find settings in medieval Switzerland and France, as Friedrich Schiller's five historical dramas range over Early Modern Europe from

GERM 2040.03: Monsters and Madness: 20th Century German Film.

This course provides an introduction to German culture through the medium of film. Both the classical early period and the contemporary German film will be discussed. No knowledge of the German language is necessary; all films are subtitled and all discussion is in English.

FORMA T: Seminar

NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.

GERM 2050.03: German Reading I.

This is a seminar specifically intended for students who do not fit into our normal program offerings. Please consult departmental advisor.

GERM 2051.03: German Reading II.

This is a seminar specifically intended for students who do not fit into our normal program offerings. Please consult departmental advisor.

GERM 2060.03: German for Business, Economics and Tourism I.

This course introduces students to the specialized vocabulary used in business and economics. It also aims to familiarize the students with all aspects of the German economy and business world.

FORMA T: Seminar

NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.

GERM 2061.03: German for Business, Economics and Tourism II.

This course introduces students to the specialized vocabulary used in business and economics. It also aims to familiarize the students with all aspects of the German economy and business world.

FORMA T: Seminar

NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.

GERM 2090.03: Tanks and Texts: Soldiers' Cinema.

Perspectives on the Two World Wars in German

This course examines the two World Wars from a German perspective. Emphasis is put on autobiographical accounts of soldiers' experiences. Language of instruction and readings will be English. The films are subtitled.

FORMA T: Lecture/discussions

NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.

GERM 2150X/Y.06: Goethe's Faust.

A close reading of Goethe's Faust, comparing the German original and an English translation, will give rise to questions about translation techniques, the theory of drama and the reduplication of a legend. While Goethe's masterpiece stands at the centre, other German versions of the Faust legend will also be discussed in detail. Assignments will involve research into later echoes of the Faust legend as well. The language of instruction is English but the texts are in German.

NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.

GERM 2200X/Y.06: Introduction to German Literature.

A study of the leading role that German literature has played in the development of the modern novel, the short story, and the essay. The course is devoted to the study of various literary movements spanning the entire range of modern German literature. 

GERM 2280.3: Friedrich Schiller's Historical Drama.

Friedrich Schiller's five historical dramas range over Early Modern Europe from the Hundred Years War, and find settings in medieval Switzerland and France, as well as Counter-Reformation Spain and Elizabethan England. These five plays will be analyzed according to lyrical, theoretical, historical and aesthetic criteria.

FORMA T: Lecture/discussions

CROSS-LISTING: EMSP 2280

GERM 2290.3: German Romanticism: from Goethe to Hegel.

German feeling and political liberation are enhanced by attention to classical antiquity and modern folklore. Apparently a reaction against the modern, from Goethe to Hegel, Romanticism manages to eclipse almost everything else and define some six decades of German philosophy and literature in the writings of Herder, Goethe, Schiller, Novalis, A.W. and Friedrich Schlegel, Eschenhöfer, Hölderlin, Schelling, Hegel, and Nietzsche.

FORMA T: Lecture/discussions

CROSS-LISTING: EMSP 2290

GERM 2400X/Y.06: German Art and Literature.

This course gives an introduction to modern German Art and Literature. Special emphasis is on the interactions between art and literature, particularly the themes and styles shared by visual and literary expressions during the various epochs of modernity. The language of instruction is German and English, as needed. The texts are in German.

NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.

GERM 2450X/Y.06: Kant and the History of German Idealism.

This is a study of major thinkers, with emphasis on Hegel, Leibniz, Herder, Hamann, Kant and Schiller. This course is taught in English using English translations.

NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.

GERM 2500.03: In Pursuit of Freedom from Luther to Nietzsche I.

This is a study of major thinkers, with emphasis on Luther, Leibniz, Herder, Hamann, Kant and Schiller. This course is taught in English using English translations.

GERM 2515.03: In Pursuit of Freedom from Luther to Nietzsche II.

This is a study of major thinkers, with emphasis on Hegel, Schopenhauer and Nietzsche. This course is taught in English using English translations.

GERM 2600.03: 'Freiheit', Freedom in German Literature and Thought I.

In contrast to other European literatures of the 18th century with their utilitarian and moralistic aims, the German Sturm und Drang movement puts the individual into the centre. A social society demands a new conception of man (“Mensch”) liberated from God and the gods. As a consequence, the traditional view of man inherited from Aristotelian poetics is replaced by characters who shape their own destiny. A new myth of a defiant Prometheus is created by Goethe. German idealism formulates a new theory of freedom which was summed up by Kant in his categorical imperative. Goethe's lyriptic illustrates the humanism of the

GERM 2800X/Y.06: German for Business, Economics and Tourism.

This course introduces students to the specialized vocabulary used in business and economics. It also aims to familiarize the students with all aspects of the German economy and business world.

FORMA T: Seminar

NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.

GERM 2820.03: German as a Second Language.

GERM 2821.03: German as a Second Language.

GERM 2822.03: German as a Second Language.
GERM 2601.03: 'Freiheit'. Freedom in German Literature and Thought II. 19th and 20th century.
Goethe's 'Divan' opens our discussion. Goethe follows the Persian poet Hafez to the Orient. But in the limit realm of the imagination which enables free to ignore the reality of the Napoleonic wars. Goethe's avoidance of reality became the role model for the Symbolist movement. The German Romantics placed a writer's imaginative capacity ('Träumerei') and subjectivity ('Welt' and 'Innen') rather than any concerns about objective reality. New forces, like chance ('Zufall'), counteract many personalized freedoms, as is shown in the works of Heinrich von Kleist. The dependence on circumstances, social structures and natural laws becomes the great topic of Realism and Naturalism. The human being without hope, faith or the chance of salvation is manifested in Büchner's works. Finally, the existential crisis of modern man finds its most representative expression in the works of Franz Kafka.
Tests by Goethe, Gautier, Kleist, Büchner, Kafka and others will be read in the original. English translations will be provided. Language instruction: English. This course should appeal to students interested in the history of ideas. Attendance of Part I is not a prerequisite.

FORMAT: Lecture

GERM 2650X/Y.06: Modern German Philosophy. This course provides a survey of the German philosophical tradition from the enlightenment to the present. Students will gain a broad overview of the German intellectual history through focused readings of the theoretical texts. This course is taught in English using English translations.

FORMAT: Lecture/seminar
CROSS-LISTING: PHIL 2650.06

GERM 2651.03: Modern German Philosophy I. This course looks at the history of German philosophy from the Enlightenment to the End of German Idealism. Part one examines the early history of German philosophy, focusing on German Idealism. Students will gain a broad overview of German intellectual history through focused readings of key texts. The goal is to understand how the ideas formed in this tradition contributed to both the core philosophic disciplines (such as metaphysics, epistemology and moral philosophy) as well as other fields (like history, aesthetics, psychology, and political thought). Our focus will be on the construction of the free autonomous individual – the basis for our understanding of democratic institutions.

FORMAT: Lecture/seminar
CROSS-LISTING: PHIL 2651.03
EXCLUSION: GERM 2650X/Y.06

GERM 2652.03: Modern German Philosophy II. This course looks at the history of German philosophy from German Idealism onward. In particular, the focus will be on the radical-philosophical movements of the 19th and 20th centuries. Students will gain a broad overview of German intellectual history through focused readings of key texts. The goal is to understand how the ideas formed in this tradition contributed to both the core philosophic disciplines (such as metaphysics, epistemology and moral philosophy) as well as other fields (like history, aesthetics, psychology, and political thought). The focus will be on how critiques of the free autonomous individual—constructed in the context of German Idealism—offset the political institutions of the 19th and 20th centuries.

FORMAT: Lecture/seminar
CROSS-LISTING: PHIL 2652.03
EXCLUSION: GERM 2650X/Y.06
CO-REQUISITE: PHIL 2651.03

GERM 3000X/Y.06: Advanced German. Translations, readings, essays and discussions will promote fluency in the language on the advanced level.

NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.

FORMAT: Seminar
PREREQUISITE: GERM 2000X/Y.06 or equivalent

GERM 3001.03: Advanced Spoken German I. This course aims to develop the oral proficiency and fluency of advanced students. We will improve pronunciation, practice discussion skills and idiomatic expressions, build vocabulary, memorize set phrases and practice listening comprehension. Audio-visual materials will be used. Students' active participation is essential in this course (Non-native speakers only).

FORMAT: Seminar
PREREQUISITE: GERM 2000X/Y.06 or equivalent

GERM 3002.03: Advanced Spoken German II. This course builds on GERM 3001. In the first half of the course, we will continue to work on improving pronunciation and intonation, to expand vocabulary and practise sentence and conversational structures. We will especially focus on increasing fluency and confidence in conversational interaction. Students' active participation is essential in this course (Non-native speakers only).

FORMAT: Seminar
PREREQUISITE: GERM 2000X/Y.06 or equivalent

GERM 3010.03: Advanced Translation I: German - English. German texts of various kinds are used to deal with techniques and problems of translating from German into English. The course includes discussions of translation theories, elements of style and questions of authenticity and textual redundancy.

FORMAT: Seminar
PREREQUISITE: GERM 2000X/Y.06 or equivalent

GERM 3011.03: Advanced Translation II: English - German. English texts of various kinds are used to deal with the techniques and problems of translating from English into German. The course includes discussions of translation theories, elements of style and questions of authenticity and textual redundancy.

FORMAT: Seminar
PREREQUISITE: GERM 2000X/Y.06 or equivalent

FORMAT: Seminar
PREREQUISITE: Combined GERM 2200X/Y.06, GERM 2400X/Y.06 or other German literature course at the 2000-level

GERM 3120.03: Origins of Comparative Religion from Hegel to Nietzsche. Comparative Religion was an invention of lectures at the University of Berlin from 1837. Religious doctrines and ideals were re-cast according to the Chronology of German Ideologies. The beginning is Hegel's 1827 Lectures on Religion, the criticisms of Schopenhauer, D.F. Strauss, Feuerbach and Kierkegaard shall lead us to Nietzsche's, "Anti-Christ."

FORMAT: Lecture/seminar tutorial
CROSS-LISTING: RELS 3120.03

GERM 3150X/Y.06: Goethe and the Enlightenment. A study of German literature and thought of the time which preceded and witnessed the great revolutions of the 18th century.

NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.

FORMAT: Seminar
Held together with GERM 5152X/Y.06
PREREQUISITE: GERM 2200X/Y.06, GERM 2400X/Y.06 or other German literature course at the 2000-level
GERM 3200X/Y.06: Goethe and Romanticism.  
A study of Goethe, Novalis and F. Schlegel. NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term. FORMAT: Seminar. Held together with GERM 5500X/Y.06.

GERM 3250X/Y.06: Modern German Literature.  
Modern authors as witnesses of the philosophical and social changes of our century: a study of selected prose texts of Hugo von Hofmannsthal, Franz Kafka, Arthur Schnitzler and Thomas Mann. The language of instruction is English and German, as needed; the texts are in German. NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term. FORMAT: Seminar. Held together with GERM 5300X/Y.06.

GERM 3200X/Y.06: Germany and the Environment.  
In this course we will study the ever-changing ideas of nature and the environment in German culture from the 18th century to today. The seminar will be conducted in English. All readings will be in English.

GERM 3300X/Y.06: History of German Poetry.  
The poems we shall read represent the stations of the modern mind. We shall begin with the 17th Century; we shall end with the 20th Century. NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term. FORMAT: Seminar. Held together with GERM 5300X/Y.06.

GERM 3400X/Y.06: Germany and Europe: The Cultural Union.  
Modern German literature is shaped by the orient (Les mille et une nuits 1704-1775), by Winckelmann’s discovery of Greek sculpture and the reception of Shakespeare and Milton in the mid 18th Century. The Sherm and Drang movement used the works of Shakespeare as its inspiration to create a radical anti-Aristotelian concept of drama and of man. Writings of this period iznated an “open form” of drama which foreshadowed the plays of Büchner and Brecht. The new concept of man spread throughout Europe, becoming the basis for European Romanticism. German Romanticism, however, is quite different from its European counterparts; its influence is felt by European Symbolists like Baudelaire and Mallarme. This course aims to study the interconnectedness of the European national arts and literatures. A reading knowledge of German, French and English is required. NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term. FORMAT: Seminar. Held together with GERM 5400X/Y.06.

GERM 3450.03: Confronting Fascism.  
This course focuses on German writers, artists, filmmakers, and intellectuals whose work impacted and was impacted by the rise of fascism in the 20th century. Works by J.M.R. Lenz, J.W. Goethe, H.V. Kienz, G. Büchner, G. Hauptmann, E. Toller, B. Brecht and R. Breitk will be discussed. The notion of Freedom (Freiheit) and its apparent impossibility in the ninetenth and twentieth century is central. The texts are read in English translation with the German originals as back-up. NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term. FORMAT: Seminar. Held together with GERM 5600X/Y.06.

GERM 3750X/Y.06: Modern German Drama.  
This is an intensive research seminar dealing with selected topics to be announced. The seminar will be conducted in English. All readings will be in English. NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term. FORMAT: Seminar. Held together with GERM 2200X/Y.06 or GERM 2400X/Y.06 and another literature course.

GERM 3850.03: The End of the World: The Apocalypse in German Thought.  
The world, death and destruction that define European history in the 20th century can only begin to explain the obsession with the apocalypse in contemporary German thought. In this seminar we will study the secular appropriation of apocalyptic imagery from the Jewish-Christian tradition. FORMAT: Lecture/discussion.

GERM 4100X/Y.06: Aesthetic Theory.  
An historical study of the development of aesthetic theory. Hegel’s “Aesthetik”, Heidegger’s “Ursprungs des Kunstwerkes” and Gadamer’s “Wahrheit und Method” will be studied. NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term. FORMAT: Seminar. Held together with GERM 5600X/Y.06.

GERM 4250X/Y.06: Studies in German Idealism.  
An historical study of modern German Philosophy year to year, but is always related to some aspect of Idealism. NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term. FORMAT: Seminar. Held together with GERM 5600X/Y.06.

GERM 4350.03: Germany and the Environment.  
In this course we will study the ever-changing ideas of nature and the environment in German culture from the 18th century to today. The seminar will be conducted in English. All readings will be in English.

GERM 4450.03: Special Topics Class I.  
This is an intensive research seminar dealing with selected topics to be announced.

GERM 4501.03: Special Topics Class II.  
This is an intensive research seminar dealing with selected topics to be announced.

GERM 4500X/Y.06: Special Topics Class.  
This is an intensive research seminar dealing with selected topics to be announced. NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.

I. Minor in Health Studies
See Minors in the College of Arts and Social Sciences section of this calendar (Page 128).

II. Curriculum

A. Required Courses
Students must complete four full-credit or eight half-credit courses (24 credit hours) above the 1000 level from the list of approved elective courses noted below. A minimum of “B-” in these approved elective courses above the 1000 level earns credit toward the Minor.

B. Elective Requirements
Four full courses or equivalent from the approved list below, all above the 1000 level, and two full courses above the 2000 level. These four courses (or equivalents) must include courses from at least two of the following disciplines: Humanities, Social Sciences, Physical/Life Sciences, Engineering, Health Professions. Not all of these courses are offered every year. Some courses require prerequisites.

- ENGL 2030.03: Literature, Health and Healing
- HIST 3108.03: Topics in the Social and Cultural History of England: Madness and Marginality
- INTD 3115.03: Global Health: Challenges of Global Health Equity in the 21st Century
- PHIL 2502.03: Ethics and Health Care: Social Policy
- POLI 2255.03: Drugs & Drug Education
- PSYO 1011.03, 1012.03, 1021.03 or 1022.03: Introduction to Psychology
- BIOL 4001.03: Environmental Impact Assessment
- BIOL 4010.03: Political Ecology
- CHEM 1410.03: Intro to Chemistry Related to Human Health
- ECON 2231.03: Health Economics
- ENVK 2074.06: Environmental & Ecosystem Health
- PSYO 2000.03: Social Psychology
- PSYO 2009.03: Developmental Psychology
- PSYO 2170.03: Homesickness and Behaviour
- PSYO 2220.03: Alimentary Behaviour
- PSYO 3129.03: Childhood Psychopathology
- PSYO 3160.03: Psychosomatic Medicine
- PSYO 3220.03: Clinical Psychology
- PSYO 3234.03: Forensic Psychology
- PSYO 3223.03: Health Psychology
- PSYO 3237.03: Drugs and Behaviour
- PSYO 3260.03: Biological Rhythms
- PSYO 3264.03: The Science of Sleep
- PSYO 3280.03: Personality
- STAT 1060.03: Intro to Stats for Science and Health Sciences (cross-listed with MA TH 1060.03)

University of King’s College

- CTMP 2301.03: Pain
- CTMP 2303.03: Reflections on Death
- CTMP 3210.03: Intersecting Bodies, Selves, and Environments
- CTMP 3316.03: Hidden Worlds: Microscopy in Early Modern Europe (cross-listed with HISTC 3316.03)
- HISTC 2380.06: Introduction to the History of Science (cross-listed with HIST 2380.06 and BIOL 3300.06)
- HISTC 2382.03: The Beginnings of Western Medicine: Birth of the Body
- HISTC 2386.03: Bio-Politics

Note: All University of King’s College courses are open to Dalhousie students.

Faculty of Engineering

- FOSC 3010.03: Food Chemistry
- FOSC 3020.03: Food Analysis
- FOSC 3070.03: Food Processing
- FOSC 3090.03: Food Microbiology
- FOSC 4001.03: Food Product Development

Faculty of Health Professions

- DISM 3010.03: Intro to Occupational Disability Management
- DISM 3030.03: Undergraduate Occupational Injury and Disability
- DAHP 1000.03: Introduction to Health Promotion
- DAHP 1088.03: Personal Health
- DAHP 2009.03: Human Growth and Development
- DAHP 3000.03: Community Development
- HESA 4001.03: Canadian Health Care Delivery System
- HESA 4001.03: Management Roles and Competencies
- HESA 4002.03: Health Human Resource Management
- HESA 4004.03: Healthcare Planning
- HESA 4005.03: Health Care Financial Management
- HISTL 4004.03: Health Law for Non-Lawyers
- HPRO 1155.03: Introduction to Health Promotion
- HPRO 2104.03: Health Promotion Theory
- HPRO 3120.03: Health Promotion Policy
- HPRO 2250.03: Human Nutrition
- HPRO 2255.03: Drugs & Drug Education
- HPRO 2361.03: Program Planning
- HPRO 3325.03: Mental Health Promotion
- HPRO 3555.03: Introduction to Disease Prevention
- HPRO 3645.03: Epidemiological Approach to Disease
- HPRO 3651.03: Injury Prevention and Safety Education
- HPRO 3660.03: Multicultural Health Promotion Research & Policy
- HPRO 3710.03: International Health Promotion Research & Policy
- HPRO 3797.03: Community Health Promotion Strategies
- HPRO 4565.03: Health: A Biopsychosocial Approach
- HPRO 4442.03: Human Sciences
- HPRO 4442.03: Environmental Health

Faculty of Science
• HPRO 4450.03: Comprehensive School Health Promotion
• HSCE 3003.03: Culture, Diversity, and Health
• IPHE 2201.03: Introduction to Aboriginal People’s Health and Healing
• KINE 3200.03: Sociocultural Issues in Physical Activity
• LEIS 2136.03: Leisure Theory
• LEIS 2384.03: Leisure and Individuals with Disabilities
• LEIS 3296.03: Leadership and Group Dynamics
• LEIS 3360.03: Analysis of Leisure Service Delivery Settings
• LEIS 3402.03: Counselling for Health and Well-being
• OCCU 2000.03: Occupation and Daily Life

Faculty of Computer Science
• CSCI 1204.03: Computer Science I for Health Professionals

* Courses marked with an asterisk are at the 1000 level and will not count towards the Minor. Students may nevertheless wish to consider taking courses from this group because of their health content.

I. Introduction
Just as people need to know who they are and how they arrived where they are, groups, courses, states and nations need a sense of their own past as part of their culture.
The academic study of history, therefore, is concerned to discover as much as possible of the reality of the past and to interpret human behaviour in it changes through time. It is a unique subject, scientific in the way it uses evidence, but still an art because the reconstruction of the past requires a disciplined imagination and an aesthetic rhetoric for the communication of meaning.

The contemporary world is one of intense specialization, in which the varieties of human knowledge have increased well beyond the capacity of any individual to command them all. These developments have reinforced the role of history as the foundation of a person’s education, because history can never drown itself in itself to exclude any branch of human knowledge, although individual historians will want to select that portion of it especially relevant for them.

History’s field of study will always be the entirety of the human experience.

The subject of history does not have a monolithic body of knowledge. Historical understanding is a matter of interpretation, of offering explanations for events and movements which are subject to constant revision by scholars. Arguments, suspicion and controversy are thus the very stuff of history. The history student does not merely acquire a particular mass of information, but learns to think independently.

Especially in the 3000 and 4000 level courses, students gain more than sophistication about substantive areas of history. They also develop transferrable skills for oral and written communication, for presentations of findings to groups, for group and independent research, for computer literacy in the human sciences, for research skills in primary and secondary materials, and for the application of foreign languages.

A degree in history provides an appropriate background for students planning to enter professional careers in fields such as law, education and journalism, as well as those interested in pursuing graduate study in history or related social science and humanities disciplines.

II. Degree Programs

All BA programs are governed by the general requirements of the College of Arts and Science for degrees, as set out in the University Calendar. See the Degree Requirements section for complete details, particularly with respect to Distribution Requirements, the Writing Course, the Language Course, and Arts and Science Electives. Before registering for the second year, each student in the College of Arts and Science must declare a subject of concentration. Once a student has declared History as the subject of concentration, then the following degree programs apply.

Courses in the History Department are grouped numerically in several ways: by geographical, chronological, subject, and other areas: for example, Canadian, American, British, African, Medieval and Early Modern European, Modern European, Science and Technology, etc. Students are strongly encouraged to select a distribution of courses from these areas in order to experience the variety and richness of history.

Students who wish to build up a greater specialization in history than the minimum requirements outlined below may do so by taking courses of an historical nature given by the Departments of Classics, Economics, Music, Philosophy, Political Science, Spanish and Latin American Studies, Theatre, etc.

History students interested in obtaining an Emphasis in Canadian Studies along with their Major or Minor in History should consult the Canadian Studies calendar entry for information on requirements and for a list of History courses approved with Canadian Studies.

Students who wish to concentrate in a particular area of history should acquire the appropriate language skills, especially if they intend to pursue graduate study in it. The following outline presents the MINIMUM departmental requirements for each program and should be read in conjunction with the general requirements of the Faculty.

Students planning to take a minimum of five full credits in History (above the 1000 level) are required to choose at least one half credit course above the 1000 level from at least four categories (A, B, C, and D). See history.department for course selection.

(Note: This requirement applies to students who start their BA degree in Fall 2014 and after.)

A. BA (20 credit) Honours in History

The Honours degree is intended for students who plan to proceed to graduate work and for others who wish to enjoy the experience of an intensive research project, the Honours essay. Students must complete the requirements for the BA with a major in History and fulfill the following additional requirements:

• Honours students must take at least nine but not more than 11 full credits in History beyond the 1000 level.
• Honours students must take HIST 4991X/Y (the Honours essay). HIST 4996X/Y (The Varieties of History) and at least one half credit 4000 level seminar in History.
• Applicants normally should have achieved an excellent Grade Point Average of at least 3.0 in their History courses above the 1000 level to be considered for admission.
• A grade of B- or better is required on nine full History credits
• A grade of B- or better is required on the honours essay. NOTE: Applications for Honours in History are not considered by the Department until the winter term of the student’s third year. Please enquire at the Department for the relevant deadline.

B. BA (20 credit) Combined Honours including History

Besides the general requirements for all BA programs, students must meet the Faculty degree requirements for Combined Honours (20 credits). Students must take 11-14 full credits in two subjects beyond the 1000 level, with no more than eight nor fewer than five credits in either of them. Students must complete two full credits at the 3000-4000 level in both Honours subjects. A grade of B- or better is required in at least four full History credits.

C. BA (20 credit) Major in History

The 20 credit Major requires more advanced training in History than does the three year degree. Besides the general degree requirements for all BA degrees, students majoring in History are required to take at least ten but not more than nine full History credits beyond the 1000 level.

• At least three of these History credits must be above the 2000 level.
• Within the last 15 full credits, students must take at least one credit in each of two subjects other than History.
• At least 4 full History credits in History must take at least one half credit 4000 level seminar in History.

D. BA (20 credit) Double Major including History

Besides the general requirements for all BA programs, students must meet the Faculty degree requirements for the BA with Double Major, which include 10-14 full credits in the major subject beyond the 1000 level, with no more than eight nor fewer than five in either subject. Students must complete at least two full credits above the 2000 level in each major subject. Within the last 15 full credits, students must complete one full credit in a single subject other than the two major subjects. If History is the primary subject for the Double Major, students are required to take at least one full credit 4000 level seminar in History.

E. BA (15 credit) Minor in History

See requirements for minor in the College of Arts and Science section of this calendar (page 128)

F. Minor in History

See Minor in the College of Arts and Science section of this calendar (page 128).

III. Types of Courses

1000 level courses take broad geographic perspectives over long periods of history to provide a background to many subsequent History courses. 2000 level courses typically deal with countries and transnational regions over at least a couple of centuries. 1000 level courses typically use textbooks for readings and assume no prior university-equivalent preparation; second-year courses typically assign academic books and articles and assume that students have the skills typically developed in the first year of university study. At the 1000 and 2000 levels, courses are lecture format, three hours per week, with tutorials featured in some courses. 2000 level courses begin more advanced study in an area of History as a major or minor.

3000 and 4000 level courses provide opportunities for the intensive pursuit of interests developed in previous courses. The relatively small size of 3000 level courses (usually 30 students) allows intensive discussion of demanding primary
materials and secondary publications, as well as students’ presentation of their independent work. 4000 level courses are taught in a seminar format to cultivate students’ independent research skills; undergraduate enrolments are limited to 15 or less; some are cross-listed in graduate courses. These courses are particularly recommended for Honours students and prospective Honours students.

IV. Course Descriptions

NOTE: Not every course is offered every year. Please consult the current timetable to determine which courses are offered this year.

HIST 1004X/Y:06: Introduction to European History.

This course will introduce students to the major themes and events in European history, from the end of the Roman Empire to the fall of Communism in 1990. Since the course will be taught by two course directors (one in each term), the exact topics presented and approach will vary from one year to another.

NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.

FORMAT: Lecture;

EXCLUSION: HIST 1003, 1002, 1003, 1005, 06

HIST 1005X/Y:06: Introduction to European History.

This course will introduce students to the major themes and events in European history, from the end of the Roman Empire to the fall of Communism in 1990. Since the course will be taught by two course directors (one in each term), the exact topics presented and approach will vary from one year to another. History 1005 is formally designated as a writing course. Students complete a writing assignment once per month and also participate in weekly small-group discussion sessions, designed to complement lectures.

NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.

FORMAT: At Writing requirement. Lecture/discussion;

EXCLUSION: HIST 1004X/Y. 1003, 1002, 1003

HIST 1006.03: The Idea of the Past and the Making of the Present.

This course examines the influence of ‘the past’ at various moments in history. We will explore how the human past has been used historically in order to shape contemporary action. The course surveys the history of ‘history’, in a sense, considering how notions of the past informed ideas and arguments about the way things should be in the present. It encourages students to think critically about the uses and abuses of historical arguments while providing a general introduction to key events and themes in history. It will also provide students opportunities to develop their writing skills.

FORMAT: Writing requirement. Lecture/discussion.

EXCLUSION: HIST 1004, HIST 1003.

Global history — the study of change over long spans of time and large areas — allows us to examine questions not easily recognized in history conducted on smaller scales. The world order familiar to us — dominated by ‘the West’ and organized by capitalist relations — contains elements both ancient and new. By comparing different cultural zones in historical periods before Europe’s global dominance in the nineteenth century, this course will explore the diverse ways different cultures met the challenges of survival, and how patterns of connection and domination were made and undone. Select themes — including trade, transportation, ecology, and state formation — will be used to highlight pre-modern patterns of connection across the globe.

FORMAT: Writing Requirement. Lecture/tutorial.

EXCLUSION: HIST 1500.

HIST 1502.03: Origins of Modern Global Society.

Global history — the study of change over long spans of time and large areas — allows us to examine questions not easily recognized in history conducted on smaller scales. The world order familiar to us — dominated by ‘the West’ and organized by capitalist relations — contains elements both ancient and new. By comparing different cultural zones in historical periods before Europe’s global dominance in the nineteenth century, this course will explore the diverse ways different cultures met the challenges of survival, and how patterns of connection and domination were made and undone. Select themes — including trade, transportation, ecology, and state formation — will be used to highlight pre-modern patterns of connection across the globe.

FORMAT: Lecture/tutorial 3 hours

Global history — the study of change over long spans of time and large areas — allows us to examine questions not easily recognized in history conducted on smaller scales. The world order familiar to us — dominated by ‘the West’ and organized by capitalist relations — contains elements both ancient and new. By comparing different cultural zones in historical periods before Europe’s global dominance in the nineteenth century, this course will explore the diverse ways different cultures met the challenges of survival, and how patterns of connection and domination were made and undone. Select themes — including trade, transportation, ecology, and state formation — will be used to highlight pre-modern patterns of connection across the globe.

FORMAT: Writing Requirement. Lecture/tutorial.

HIST 1504.03: Origins of Modern Global Society.

This course is a parallel course to HIST 1502, a first-year introduction to the Origins of Modern Global Society and satisfies one-half of the writing requirement component for all Dalhousie undergraduate students (students will need an additional half credit in another approved course to satisfy fully the writing requirement.).

The course introduces students to the major events and developments in modern global history and how they shaped twentieth century societies, especially in the non-Western world. The course will be on colonial encounters and the subsequent developments.

FORMAT: Lecture/tutorial.

HIST 1701.03: History of the Americas: From Pre-Contact to the Revolutionary Era.

This course explores the history of the Americas from Pre-Columbian times to the early nineteenth century. The course considers indigenous people before 1492, conquest and colonization, as well as slavery, religion, gender, war and revolution. This course provides a background for understanding contemporary Canada, the United States, and Latin America.

FORMAT: Lecture.

EXCLUSION: HIST 1862X/Y.06, HIST 1867X/Y.06.

HIST 1702.03: History of the Americas: from the Revolutionary Era to the Present.

This course explores the history of the Americas from the early nineteenth century to the present. It traces the rise of new nation-states as they evolved from colonies to global powers, and the relationship between the global economy and the development of nation-states, and the interplay between nationalism and global, imperialist, capitalist developments, and the resulting conflicts. The course is designed to provide an overview of the region’s history for students who are interested in the study of the Americas.

FORMAT: Lecture.

EXCLUSION: HIST 1862X/Y.06, HIST 1867X/Y.06.

HIST 2001.03: Early Medieval Europe.

An investigation of the period between the fourth and the tenth centuries. Major themes of lectures and tutorials include the mingling and exchange of Roman traditions with the barbarian cultures in the fifth and sixth centuries, the creation of the successor states of Europe following the disintegration of the Carolingian Empire, the development of monasticism, church-state relations, the Gregorian Reform and the Investiture Controversy, the rise of papal government, the twelfth-century Renaissance, peasant life and popular culture. Original sources in translation are used to familiarize students with the medieval world view.

RECOMMENDED: HIST 1004X/Y.06

FORMAT: Lecture/tutorial.

HIST 2002.03: Later Medieval Europe.

A study of the period beginning with the crusades, and ending with the emergence of the early modern European monarchies. After a preliminary introduction to the nature of medieval society at the end of the twelfth century attention is turned to a variety of themes: urban and rural life, social and economic change, the Church and its rivalries, intellectual and cultural developments, art and architecture, international conflict, peasant life, popular culture, the Crusades, and the Hundred Years’ War.

NOTE: Credit can only be given for this course if X and Y are completed in another.

FORMAT: Lecture/tutorial.

EXCLUSION: HIST 1862X/Y.06, HIST 1867X/Y.06.

HIST 1701.03: History of the Americas: From Pre-Contact to the Revolutionary Era.
HIST 2003.03: The Fall of the Roman Republic.
See course description for CLAS 2209.03 in the Classics section of this calendar.

HIST 2005.03: Imperial Russia.
See course description for CLAS 2209.03 in the Classics section of this calendar.

HIST 2006.03: The Atlantic World, 1450-1650: Europe and the Colonialization of the Americas.
The commercial and colonial expansion of Europe into the Americas. Topics of particular interest are the relation of European and indigenous peoples; the ecological consequences of colonization; the use of slave labour, the role of technology, the establishment of settler colonies, the effect of overseas communication on European culture, and the role of colonial expansion in the development of the world economy.
RECOMMENDED: HIST 1004X/Y.06, 1501.03, 1701.03, 1702.03
FORMAT: Lecture/tutorial

The development of the European colonial societies after their initial settlement and the establishment of their staple economies in the sixteenth and seventeenth centuries. The topics of chief interest are the predominance of colonial trade in Europe’s large-scale commerce, the role of the colonies in European conflicts, the renewal of exploration, the development of the colonies’ internal economies, and their revolts against European rule.
RECOMMENDED: HIST 1004X/Y.06, 1501.03, 1701.03, 1702.03, 2006.03
FORMAT: Lecture/discussion

HIST 2012.03: Eighteenth-Century Europe: Politics, Society, and Culture.
The course explores the major political, social, intellectual and artistic developments of eighteenth-century continental Europe. Topics of special interest include: the emergence of the great powers; property, the underprivileged and reform; literacy and education; art and culture; religious observance and beliefs; the Enlightenment; and the crisis of the old order leading to the French Revolution.
RECOMMENDED: HIST 1004X/Y.06
FORMAT: Lecture/discussion
PREREQUISITE: HIST 1004X/Y.06

HIST 2015.03: War and Society in Early Modern Europe, 1550-1750.
The course deals with the presence of war in European society, and how states and societies adapted and transformed under the impact of the desire to achieve victory against an adversary. Among specific topics the course will deal with the transformation of tactics and technology on land and sea; the creation of modern tax systems; problems of supply and recruitment; ideologies of the military function; the creation of standing armies; the impact of hostilities on society.
FORMAT: Lecture/tutorial

HIST 2016.03: The Classical Greek World: Athens, Sparta and a Century of Conflict.
See course description for CLAS 2210.03 in Classics section of this calendar.

HIST 2017.03: The Roman World from Constantine to Theodosius (A.D. 313-395).
See course description for CLAS 2210.03 in Classics section of this calendar.

See course description for CLAS 2211.03 in Classics section of this calendar.

HIST 2019X/Y.06: Early Modern Europe, 1450-1650.
A detailed and comprehensive survey of the principal topics in European history from the Italian Renaissance and the Christian Reformation, to the end of the great conflicts in the mid-seventeenth century. The course will proceed in roughly chronological progression, to examine in turn Italy, Spain and Portugal, France, the Netherlands, Germany and the Empire, the Christian kingdoms of eastern and northern Europe, and the European territories of the Turkic Ottoman Empire. NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.
FORMAT: Lecture/tutorial

HIST 2021.03: Soviet Russia.
Survey of Soviet Russia from 1917 to the present. Topics discussed will include the Revolution of 1917, the Civil War and War Communism, NEP, Collectivization, the Great Purges, WWII, and the Post-Stalin era.
FORMAT: Lecture/tutorial
CROSS-LISTING: RUSN 2021X/Y.06
EXCLUSION: HIST 2020X/Y.06, RUSN 2021X/Y.06

HIST 2022.03: Imperial Russia.
Chronologically covers the imperial period of Russian history, from Peter the Great to the Revolution of 1917.
FORMAT: Lecture/discussion
CROSS-LISTING: RUSN 2022.03
EXCLUSION: HIST 2020X/Y.06, RUSN 2021X/Y.06

HIST 2023.03: Roman Legions and the Barbarians.
See course description for CLAS 2233.03 in the Classics section of this calendar.
FORMAT: Lecture
CROSS-LISTING: CLAS 2233.03

HIST 2032.03: Twentieth Century Germany.
Across two catastrophic world wars and a revolution, as empire, quasi-socialist republic, Cold War outpost, and the showdown for the end of Communism, Germany’s history has embedded in it unparalleled extremes of the “age of extremes” in the twentieth century. The course explores the historical dimensions of these events and their resonance today.
FORMAT: Lecture
EXCLUSION: HIST 2030.06X/Y

HIST 2041.03: France from the Revolution to the Great War.
The course examines the long nineteenth century in France and its interpretations. The themes include the legacy of the French Revolution, social structure and divisions, religion, education, crime and punishment, gender issues, intellectual and artistic developments. No French required.

HIST 2055.03: War and Society since 1945.
This course examines the role of war, the development of military forces, and the changes in the international balance of power since 1945. Topics of discussion will include the Cold War, decolonization, “empire”, military alliances, and the “Third World”; nuclear weapons and deterrence theory; terrorism, guerrilla warfare, and counter-insurgency developments in conventional forces; war in Algeria, Indo-China, Korea and the Middle East.
FORMAT: Lecture

HIST 2060X/Y.06: The Civilization of Baroque Italy.
A descriptive introductory survey of Italy from the late Renaissance to the French Revolution. Lectures and tutorials will feature a broad array of original sources in translation and numerous images. Taught in English.

HIST 2065.03: Soviet Russia.
Survey of Soviet Russia from 1917 to the present. Topics discussed will include the Revolution of 1917, the Civil War and War Communism, NEP, Collectivization, the Great Purges, WWII, and the Post-Stalin era.
FORMAT: Lecture/tutorial
CROSS-LISTING: RUSN 2065.03
EXCLUSION: HIST 2064.06, RUSN 2065.03

HIST 2066.03: Civilization of Baroque Italy.
This is a scaled-down version of 2060X/Y.06, and studies Italy at the time of its greatest influence on Western civilization. The course examines Italy’s politics, its vibrant urban and rural societies, the place of Catholicism in its cultural and intellectual life, and the innovative early modern economy, all before the great crisis of the 1620s. Open to first-year students.
FORMAT: Lecture/tutorial

HIST 2101.03: Medieval England.
This course examines some of the major social, political, economic and cultural themes in English history from the reign of Alfred the Great to the Wars of the Roses. Major topics of study include the development and maturation of the English church, the impact of the Norman Conquest on Anglo-Saxon government and society, the development of the common law system, English monasticism, constitutional struggles in the late medieval period and war with France and Scotland. In an effort to understand and appreciate more fully the culture of medieval England, detailed consideration is given to contemporary source, in translation.
RECOMMENDED: HIST 1004X/Y.06
FORMAT: Lecture/tutorial
EXCLUSION: HIST 2000X/Y.06

HIST 2106.03: Tudor and Stuart England, 1485-1688.
A survey of the major events, personalities, and developments in sixteenth and seventeenth century English history. Topics to be covered include the religious reformation, the achievements of the Elizabethan age, colonial expansion, the civil war, and the “Glorious Revolution.”
FORMAT: Lecture
EXCLUSION: HIST 2000X/Y.06, 2104.03, 2109.03

HIST 2111.03: Modern Britain to 1884.
A survey of the development of British society from the reign of George II to the late Victorian era. This course will examine the emergence of class society, movement of popular protest, political reform, the growth of empire, and cultural change.
FORMAT: Lecture/tutorial
EXCLUSION: HIST 2000X/Y.06

HIST 2112.03: Modern Britain from 1880 to 1980.
This course will examine the development of British society from 1880 to the present day, touching upon the experience of Britain in two world wars, the growth of the welfare state, the decline of Britain’s empire and economy, the upheavals of the 1960s and 1970s and the emergence of Thatcherism.
RECOMMENDED: HIST 2104X/Y.06
FORMAT: Lecture/tutorial
EXCLUSION: HIST 2000X/Y.06

HIST 2153.03: Scotland from the Earliest Times to the Reformation.
This course examines the factors that contributed to the making of Scotland as a British and European nation, from c. 100 to the sixteenth-century Reformation. Lectures examine a series of themes arranged in roughly chronologically fashion, including the peoples who populated the region of North Britain around the year 1000, the coming of the Normans, urban life, relations between core and peripheral regions in the kingdom, the Scottish manifestation of the European witch-hunt, the “problem” of the Highlands, and pre-Reformation religious, social and political life. Emphasis is laid on the distinct social and cultural developments of the northern kingdom in contrast to its larger neighbour, England. In an attempt to appreciate more fully the civilization of this long period the readings of contemporary documents (in translation) constitute an integral aspect of the course.
FORMAT: Lecture/tutorial
EXCLUSION: HIST 2151.03 and 2152.03

HIST 2207.03: Aboriginals and Empires: Canada’s Origins to 1763.
This course explores Canada’s origins to 1763. It covers the history of First Nations peoples before and after the arrival of Europeans. It addresses themes such as the role of the physical environment; the fur, fish, and timber trades; and the imperial struggle for dominance in North America. While the lectures will narrate the major developments in the seventeenth and eighteenth centuries, the tutorials will focus on specific issues, such as the role of treaty in Canadian history. The course climax will consider the Conquest of Quebec and the end of the Seven Years War.
FORMAT: Lecture / tutorial
CROSS-LISTING: CANA 2207.03

HIST 2208.03: Patriots, Rebels, Refugees: Canada’s Roots in the Age of Revolution, 1763 to 1860.
As empires continued their international contest and Britain fought to maintain colonies within North America, old and new inhabitants of what would become Canada also wrestled with questions concerning who would exercise power within their communities and governing bodies. In the process they gave new, and at times, conflicting answers to old questions. What did it mean to be a patriot? Who and what were they willing to defend? Who and what were they prepared to resist? Immigrants, exiles and the refugees of European and North American wars shaped new homelands, even as the First Nations peoples became refugees within their own lands. In this course we explore the related questions of loyalty and conscience through the diaries and letters of men and women defining their place in a new order.
FORMAT: Lecture / tutorial
CROSS-LISTING: CANA 2208.03

HIST 2209.03: Making a Nation: Canada, 1860-1929.
This is the story of how British North America was transformed into a distinct nation-state for the twentieth century. We’ll use as a lens how a young Canada grappled with geographical, political, and social challenges: acquiring enormous territories amid growing provincial differences, maintaining loyalty to Empire while developing a New World identity; reconciling new and diverse cultural communities; and mobilizing for war.
CROSS-LISTING: CANA 2209.03

HIST 2210.03: Many Canadas: Canada, 1930 to the present.
This course explores the remaking of Canada, including the shift from imperial to continental and nationalist politics, the rise and transformation of third-party political movements, and the emergence of new ideas about the rights and responsibilities of the liberal individudal subject.
FORMAT: Lecture / tutorial
CROSS-LISTING: CANA 2210.03

HIST 2211.03: Modern Britain to 1884.
A survey of the development of British society from the reign of George II to the late Victorian era. This course will examine the emergence of class society, movement of popular protest, political reform, the growth of empire, and cultural change.
FORMAT: Lecture/tutorial
EXCLUSION: HIST 2000X/Y.06
HIST 2211.03: Social History of Canada before 1870. This course examines the social history of Canada from the time of contact to 1870, focusing on such topics as social control, violence and protest, women and domestic life, regional and nationalist movements, and the transformation of the economy.

HIST 2212.03: Social History of Canada since 1870. This course examines the social history of Canada since Confederation through such topics as the impact of industrialization, social classes, conflict, the role of women, the state and social development, and relationships among the wide variety of social groups in Canada.

HIST 2221.03: Rough Justice - Order, Disorder and Canadian Popular Culture to the 1890s. This course investigates the character of popular culture, investigating forms of community control and ideas of order among different classes and cultures, beginning with aboriginal societies at the time of contact, through the revolutionary era, to the Victorian period and the first decades of Canada’s nationalism. The course examines frontier towns, urban society and the city, the smallest, religious and revolutionary passions, and other sources of disorder (and the evolution of the means of making order) in this exploration of Canadian history’s most dramatic passages.

HIST 2222.03: Rough Justice - Order, Disorder and Canadian Popular Culture, 1890s to the Present. This course continues the themes explored in History 2211, setting out the context within which legislation related to popular culture and leisure patterns evolved from the 1890s into the present. Included are the regulation of alcohol, drug and tobacco consumption, sexual morality, pulp fiction and comics, sporting cultures, gambling, organized crime, and the use and abuse of animals in our redefinition of appropriate forms of recreation. Approved with Canadian Studies.

HIST 2231.03: The Making of Modern Canada: Canadian Political History, 1896 to the Present. This course surveys the major political developments in Canadian history since 1896. Topics to be examined include: regionalism and the emergence of third-party movements; French-English relations; federal-provincial relations; and the transformation of the liberal state in the post-1945 era.

HIST 2232.03: Atlantic Canada since Confederation: Regionalism, Identity, and Development, 1867-2000. A survey of the history of Atlantic Canada (the Maritimes and Newfoundland) from the 1860s to the present. Emphasis is placed on how episodes such as the “age of sail”, industrialization, class and gender conflict, war, the struggle for human rights and a chronic effort to play “catch-up” with the rest of the nation have defined this region’s identity.

HIST 2331.03: Creation of an American Republic: The United States, 1580-1865. This course studies the political history of American slavery, from the formation of the United States to the American Civil War. Lectures cover the growth of American slavery, antislavery politics and abolitionism, the sectional crisis of 1850s and the complex relationship between slavery and American democracy.

HIST 2333.03: The Politics of Reform in Twentieth-Century America. This course traces the domestic political history of the United States from the turn of the century to the Reagan era. Particular emphasis is placed on broad trends of change in those years, specifically, the growth of modern reform movements on American political culture. Some of the reform movements examined in the course were Populism, Progressivism, the New Deal, the civil rights movement, the women’s movement, and the student movement.
HIST 2335.03: Modern American Culture.
America is as ubiquitous today that it seems almost timeless. But it is a long and tumultuous history, one that both reflects and challenges the modern history of the United States. Ranging from high culture to mass culture, this course focuses on how major changes in American history have affected American literature, American cinema, and the everyday lives of American people. Documentary and feature films supplement the lectures.
RECOMMENDED: HIST 1060.06
FORMAT: Lecture
HIST 2340.03: Cold War [Hi]stories.
The course is designed to introduce students to the historiography of the Cold War: The Cold War - or the period of intense conflict between the United States and the Soviet Union - manifested, some argue, in the post-World War Two era and continued unabated until approximately 1989 or 1991.
FORMAT: Lecture
EXCLUSION: HIST 2336.03
A fair and balanced look at the Right, which was published in 2004. Unlike Franken, however, who concentrates his attack on Republicans, this course takes aim at a much more reluctance beast, American Historians. By concentrating on questions of historiography and methodology this course is designed to introduce students to some of the most egregious problems in American history. The goal is to encourage students to think critically about how and why US history is written the way it is.
HIST 2381.03: Latin America.
This survey course offers an introduction to Latin America's history, peoples, and politics from pre-colonial times to the present day. The course builds a foundational understanding of Latin America and its past, focusing on a broad range of Latin American countries. We will pay particular attention to issues of race, class, faith, and gender.
FORMAT: Lecture
EXCLUSION: HIST 2380.03, HIST 2387.03
HIST 2382.03: Central America to 1979.
See course description for SPAN 2690.03 in the Spanish section of this calendar.
HIST 2383.03: Area Studies on Mexico and Central America.
See course description for SPAN 2100.03 in the Spanish section of this calendar.
HIST 2384.03: Cuba from Colonial Times.
See course description for SPAN 2100.03 in the Spanish section of this calendar.
HIST 2385.03: The Cuban Cultural Revolution.
See course description for SPAN 2110.03 in the Spanish section of this calendar.
HIST 2386.03: Colonial Latin America.
This lecture course offers an introduction to Latin America's colonial period. Stretching from pre-colonial times to independence, this course examines the peoples, politics, and cultures that comprised Latin America between the fourteenth and early nineteenth centuries. It pays particular attention to issues of race, gender, class, and faith.
FORMAT: Lecture
EXCLUSION: HIST 2381.03
HIST 2387.03: Latin America Since Independence.
This lecture course introduces Latin American post-colonial history. Moving from the independence period in the early nineteenth century through until the present day, this course considers the peoples, politics, and cultures that came to define contemporary Latin America. This course pays particular attention to issues of race, class, and gender.
FORMAT: Lecture
EXCLUSION: HIST 2381.03
HIST 2388.03: Latin American Dictators: From Fact to Fiction.
See course description for SPAN 2130.03 in the Spanish section of this calendar.
HIST 2392.03: Introduction to Caribbean History (1450 to the Present).
This course provides a survey introduction to the history of the Caribbean basin with special emphasis on Cuba, Jamaica, and St. Domingue/Haiti. It covers the period from the mid-fifteenth century to the present day. Themes covered include: European conquest, the emergence of plantation economies, African slavery, revolutionary movements, abolition and emancipation, multi-cultural and interracial relations, relations with the US, nationalism, race, religion, and music.
FORMAT: Lecture
PREREQUISITE: none, but HIST 1901.03 and HIST 1902.03 are recommended
EXCLUSION: HIST 3392.03
HIST 2425.03: Africa Before 1900.
Modern historians of Africa continually battle popular misconceptions and myths about the African past. This course explores both the contours of change within the continent and the myths by which our knowledge of these has developed. Themes of particular interest include: dynamics along the desert-indian frontier, the Atlantic and Oriental slave trades, Indian Ocean connections, the spread of Islam, and the early stages of colonial rule.
FORMAT: Lecture/tutorial
EXCLUSION: HIST 2426.03 and 3241.03
HIST 2426.03: Africa Since 1900.
This course examines the nature of African states, societies and economies from the colonial period to the present, seeking the historical context for contemporary African dynamics. Some questions of interest include: How have development projects changed Africa? What are the myths and realities of neo-colonialism? How have Africa's political traditions supported quota for national stability? How have all these affected men's and women's lives?
FORMAT: Lecture/tutorial
EXCLUSION: HIST 2422.03
HIST 2502.03: The Ottoman Empire and Its Legacy in the Middle East, 1299-1923.
This course offers a survey of Ottoman history. It pays particular attention to the last two centuries of Ottoman rule and examines movements of reform, nationalism and resistance to European imperialism. Ottomans, Pan-Islamism, Anarchism and the emergence of Zionism are some of the issues covered. The course ends with World War One and the dissolution of the Ottoman Empire; two events considered the prelude to the making of the modern Middle East.
FORMAT: Lecture/discussion
HIST 2503.03: Medieval Islamic Civilization.
This course will introduce students to the Perso-Levantine world at the time of Muhammad's prophecy in the 7th century, and how the Arab Peninsula was impacted by the creation and emergence of an Islamic society in Medina and Mecca. With the displacement of Byzantine control in the Holy Land and the collapse of the Sassanid Empire in Persia, the Arab-ethnic community of Mecca and Medina had become an empire of unprecedented size and ethnic complexity. The course will examine the respective Umayyad and Abbasid dynasties, as well as the sultanates of the Saljuqs and Mamluks. The comparative portion of the course will focus on the geographic hordes of the Ottoman, Safavid, and Moghul. The central theme of this course will be an examination of the Islamic community, or umma, from its earliest days and how it interacted over the next thousand years with different surrounding traditions and cultures in the Mediterranean, the Indian Ocean, the Indian Ocean, and Southeast Asia. Another important theme will be the study of how various Islamic societies understood and resolved the age-old dynamic between tribal normativism and hierarchical urbanism.
FORMAT: Lecture
CROSS-LISTING: RELS 2503.03
EXCLUSION: First-year students and HIST 2501.03
HIST 2504.03: A History of the Modern Middle East.
This course will focus on contemporary history of the Middle East from World War One onwards. It will pay particular attention to the Mandate period of the 1920s and 1930s, and the subsequent creation of the state of Israel in 1948. Other topics will be covered: Arab Nationalism, the Ba'ath parties, the rise of political Islam, and the Arab-Israeli wars.
FORMAT: Lecture/discussion
HIST 2505.03: Turbans and Berets: A Modern History of Iraq.
This course is a survey of the history of Iraq from late Ottoman history until the present. It focuses on the role of oil, the role of the British, the regimes of Saddam Hussein, the Gulf Wars and the American invasions of Iraq and its aftermath. It pays particular attention to the role of the different ethnic and religious groups in Iraqi politics and cultural life.
FORMA: Lecture

HIST 2510.03: Modern History of South Asia.
This course will examine the region of South Asia from the mid-19th century - the height of the British Raj - to the present. Areas of concentration will include resistance to British rule, rise of the Congress Party, the 1947 Partition, and subsequent decolonization. The respective histories of modern India, Pakistan, and Bangladesh will be examined against the backdrop of nationalism, communization, and regional conflict.
FORMA: Lecture

HIST 2520.03: Ancient Israel.
See course description for clas 2220.03 in the Classics section of this calendar.

HIST 2614.03: Making Gender: Women and Men, Sex and Gender in Pre-Modern Europe.
This course examines the diverse and fascinating ways western cultures have shaped what it meant to be a woman or a man. Beginning in the time of the Roman Empire and continuing to the age of the French Revolution, the course examines such topics as ascetics, fasting saints, female “popes”, changing notions of the physical differences between the sexes, and early struggles for women’s rights.
FORMA: Lecture/tutorial
CROSS-LISTING: GWST 2300.03

HIST 2615.03: Making Gender - Male and Female from the American Revolution to the present.
This course examines the diverse and fascinating ways western cultures have shaped the meanings of gender. The history of women informs us about the once little-known history of femininity. And, as a result, historical changes in definitions of masculinity become visible. The meanings of gender are explored in this course through topics such as: the doctrine of separate spheres, the family wage, the homo-economicus, citizenship, welfare dependency, and infanticide.
FORMA: Lecture/tutorial
CROSS-LISTING: GWST 2301.03

HIST 2711.03: Struggles that Shaped the Modern World: 1600-1900.
European expansion from the 16th century reshaped the global economy, obliging many established societies to confront new challenges. Throughout Asia, the New World and Africa, old conflicts between and within states now had to confront the additional challenge of increasingly powerful European intruders. These encounters, featuring a complex mixture of military, cultural, religious, political and economic interactions, shaped the modern world as diverse groups struggled to pursue their interests through resistance, accommodation, sources, cooperation and alliance. This course will explore the ways in which select societies navigated these encounters to better understand the intricate patterns of linkage and dissonance that mark our world in modern times.
FORMA: Lecture

After World War II, African and Asian nationalists pressed home their claims for independence from colonial rule. During the Cold War, movements for social reform in the so-called Third World combined with these nationalist traditions to create many enduring sites of conflict. This course explores the strategies, successes and failures of these movements of opposition, assessing their impact in reshaping the 20th century.
FORMA: Lecture

HIST 2750.03: The Pirate and Piracy.
See course description for EMSP 2480.03 in the Early Modern Studies section of this calendar.
FORMA: Lecture/discussion
CROSS-LISTING: EMSP 2480.03

RESTRICTION: Restricted to students in their 2nd year and above

HIST 2900.03: Introduction to the History of Art and Visual Culture.
Why have all human beings, at all times and in all places made pictures? This course will explore fundamental themes in visual production, and its role, sex, death, religion, race, knowledge, power and entertainment. Students will be encouraged to consider cross-cultural perspectives and trans-historical connections in their study of visual culture. They will also be introduced to the fundamentals of traditional art history through the chronology of western art production and stylistic movements. Students will develop the skills to describe, analyze and think critically about the visually saturated world in which they live.

HIST 2985.03: Totalitarianism and Science.
See course description for HIST 2203.03 in the History of Science and Technology section of this calendar.
FORMA: Lecture
CROSS-LISTING: HIST 2203.03

HIST 2990.03: Magic, Heresy and Hermeticism: Occult Mentalities in the Scientific Revolution.
See course description for EMSP 2300.03 in the Early Modern Studies section of this calendar.

CROSS-LISTING: HIST 2300.03

HIST 3000.03: Topics in Early Modern European History.
Topics to be studied and researched will vary from year to year. In some years, the geographical focus may be Britain, while in others it will be western Europe more generally. Topics may include the religious reformation; print culture; political protest; and popular culture.
FORMA: Lecture/discussion
PREREQUISITE: A course in European or British History

HIST 3002.03: The Medieval Church.
This course ranges far and wide over the history of the church in medieval Europe, adopting a thematic rather than a strictly chronological approach. Subjects of study include monasticism, history, education and the universities, town and cathedral, lay-clerical conflict, and “popular” concepts of religion. Each year several topics are examined in detail, with the help of original documents in translation, and using recent periodical literature and or monographs. Students prepare two versions of a well-researched paper, and class discussions are used to explore relevant materials and readings in greater depth. Some prior knowledge of medieval European history is essential.
FORMA: Lecture/discussion
CROSS-LISTING: HIST 3002.03 or HIST 2003.03 or HIST 3101.03 or HIST 3102.03 or HIST 2103.03 or REL 3003.03
EXCLUSION: HIST 3001.03 and 3002.03

HIST 3003.03: Britain and the Celtic Realms 1066-1400.
This course examines the social, political and cultural history of the Gaelic-speaking peoples of the British Isles from c. 1000 to the mid-twelfth century. With particular emphasis on the interaction between the peoples of Wales, Scotland, and Ireland on the one hand, and the culture of the English kingdom on the other. The course examines such fundamental Celtic institutions as the family, kinship, the law, and the church down to the end of the first millennium, with special focus on the various sources, written and unwritten, that inform the early history of the Gaelic-speaking peoples and their lands. Classes are conducted in the form of lectures/tutorials, that is, a single lecture once a week is followed by a tutorial in which readings relating to the lecture topic are discussed. In an attempt to appreciate more fully the civilization of the period, the reading of contemporary works (in translation) constitutes an integral part of the course.
FORMA: Lecture
CROSS-LISTING: HIST 3003.03

HIST 3006.03: Renaissance and Reformation Europe, 1348-1559.
A survey of the major themes, subjects, and personalities in western European history from the Italian Renaissance to the beginnings of the Protestant Reformation in the sixteenth century. Topics to be covered include the rise of

RESTRICTION: Restricted to students in their 2nd year and above
HIST 3045.03: The French Revolution and Its Interpretations.
The seminar examines the French Revolution, its origins and its interpretations, as well as the legacy of the French Revolution for modern political culture. Each time the seminar is offered it may focus on a specific theme related to the French Revolution.
FORMA T: Seminar
PREREQUISITE: One European history course
EXCLUSION: HIST 3041.03, HIST 3041.03
HIST 3049.03: The First World War.
Selected topics on the origins, course and consequences of the First World War, including strategic and political decision-making, the Western Front, Gallipoli and the Middle East, economic mobilization and the home fronts, the Eastern Front, the war at sea, and the peace treaties.
FORMA T: Lecture
HIST 3050.03: Europe and World War Two.
Selected topics on the origins, conflicts and aftermaths of the Second World War as this involved Europe, including Nazi foreign and occupation policies, strategic and political decision-making by the Allied and Axis powers, national resistance movements, and the wartime origins of the Cold War.
RECOMMENDED: HIST 2021.03, 2022.03, 2031X/Y.06, 2032.03, 2040X/Y.06, 2132.03
FORMA T: Lecture/discussion
PREREQUISITE: One 2000 level course in European or modern British history
HIST 3051X/Y.06: Fascist and National Socialist Movements in Europe, 1900-1945.
Fascism remains one of the most misunderstood and intriguing curiosities of modern history. At the height of its popularity and influence in the period between the World Wars, virtually every European country had one or more groups that were considered fascist or thought of themselves as such in Germany and Italy, of course, but also in France, Spain, Hungary, Romania, and elsewhere. This course, structured as lecture/discussion, offers students the opportunity to explore the ideas, experiences, aspirations and political realities of this simultaneously threatening and fascinating historical phenomenon.
NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.
FORMA T: Lecture/discussion
PREREQUISITE: One European history course or permission of instructor
HIST 3056.03: The Holocaust: The Destruction of the Jews, 1933-1945.
The destruction of most of European Jewry by Nazism and its helpers during the Second World War is studied in the context of centuries-old religious anti-Semitism, nineteenth-century Jewish emancipation and the emergence of racist ideology, the political and social situation of Jews in eastern and western Europe before the Second World War, and the consequences of mass killing at Auschwitz and other death camps, and the response of bystander nations to the perpetration of genocide.
RECOMMENDED: HIST 2021.03, 2022.03, 2031X/Y.06, 2032.03, 2040X/Y.06, 2132.03

FORMA T: Lecture/discussion
CROSS-LISTING: POLI 3400.03, GERM 3401.03
HIST 3060X/Y.06: Civilization of Baroque Italy/The Origins of Modern Italy.
A descriptive introductory survey of Italy from the late Renaissance to the French Revolution. Lectures and tutorials will feature a broad array of original sources in translation and numerous images. Taught in English.
NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.
FORMA T: Lecture/seminar
CROSS-LISTING: ITAL 3060X/Y.06
HIST 3073.03: History of Marine Sciences. 
Course description for MRES 4646.03 in the Marine Science section of this calendar.

HIST 3075.03: Science and Religion: Historical Perspectives. 
Course description for HIST 3516.03 in the History and Philosophy of Science section of this calendar.

HIST 3076.03: Science and Religion: Contemporary Perspectives. 
Course description for HIST 3803.03 in the History of Science and Technology section of this calendar.

HIST 3076.05: The Many Faces of Frederic Chopin: Problems in Modern Biography. 
The seminar examines the process of creating biographical representations in history by focusing on Frederic Chopin (1810-1849) and the appreciations of his life, personality and music that occurred both during his lifetime and after his death. By analyzing how Chopin's images were constructed—and the manner in which he fashioned himself—the course explores broader themes, such as biography in historical writing, the nineteenth-century paradigms of biography writing, politics of biography, biography and the construction of the subject, biography as a control of cultural narrative, and the limits of biographical knowledge. FORM: Seminar PREREQUISITE: One European history course, permission of instructor

HIST 3080.03: Russian Society. 
Basic institutions of 20th century Russian society are considered in their historical context, with special attention to the former role of the Party, official culture and literature, the workings of the economy, and social stratification. RECOMMENDED: BUSN 1000.06, BUSN 2000.06 FORM: Seminar PREREQUISITE: Some Russian history, Recommended HIST 2101.03 and HIST 2201.03 CROSS-LISTING: HIST 3080.03, BUSN 3080.03

HIST 3082.03: Russian Topics. 
Topics to be studied and researched will vary from year to year. They may include the work of Boris Pasternak, the doctrine of peaceful coexistence, the position of national minorities, the role of literature (official and samizdat) and the press, the Cold War, Khrushchev's "Thaw", Brezhnev, Gorbachev, and Yeltsin. RECOMMENDED: HIST 2201.X/06 or BUSN 2201.03/2003 or BUSN 2202.03/2003 FORM: Lecture/discussion CROSS-LISTING: BUSN 3082.03

HIST 3094.03: Vladimir Lenin and Leon Trotsky: Their Life and Works. 
This course examines the intellectual and political biographies of V.I. Lenin and L.D. Trotsky, the main architects of the 1917 Revolution in Russia. Among the questions to be considered are Trotsky's relationships to Lenin and Stalin, their roles in the Revolution and Civil War, their analyses of the New Economic Policy, Trotsky's leadership of the Left Opposition, and their place in the history of Marxist theory and practice: the course will look at secondary literature on Lenin and Trotsky as well as selections from their writings. FORM: Seminar CROSS-LISTING: BUSN 3094.03

HIST 3096.03: The History of Ideas in Russia - From Official Nationality to Solzhenitsyn's Neo-Slavophilism. 
This course examines some of the main currents in Russian intellectual history from the middle of the nineteenth century through the 1990s. Topics include classical Slavophilism and early Westernism, Populism and Nikolai, Anarchism, Marxism, Leninism, Socialist Realism, anti-Stalinism, Glauser, neo-Westernism (Solzhenitsyn), and neo-Slavophilism (Solzhenitsyn). RECOMMENDED: HIST 2020.V/06 or BUSN 2021.V/03 or BUSN 2202.V/03 FORM: Seminar/disussion CROSS-LISTING: BUSN 3096.03

HIST 3102.03: Seminar in Tudor History, 1485-1603. 
This course examines in depth the principal events of the sixteenth century in England. Topics include the dissolution of the monasteries, the execution of the archbishop of Canterbury, Oliver Cromwell, and the international context of the late Tudor period. RECOMMENDED: HIST 2104.03 EXCLUSION: HIST 2104.03

HIST 3103.03: Seminar in Stuart History, 1603-1688. 
This course examines in depth the principal events of the seventeenth century in England. Topics include the rise of absolutism at home and abroad, the causes and course of the civil war, including the growth of radical political thought, the Cromwellian regime, the importance of Parliament, the Restoration, and the Revolution of 1688. Class discussions will rely on detailed readings of primary sources and historiographical debates. Students will be expected to produce a major, well-researched essay. Some prior knowledge of early modern English history is essential. FORM: Seminar PREREQUISITE: One previous British history course EXCLUSION: HIST 2105.03

HIST 3105.03: The English Civil War. 
A course on one of the most tumultuous and eventful periods in British history, leading up to and including civil war and revolution 1642 to 1660. Select primary sources will be used in addition to secondary works. Topics to be studied include the social structure of early Stuart England, the Church and its critics: foreign policy; radical political: religious sectarianism; and the impact of the war and of alternative social and political identities. FORM: Lecture/discussion CROSS-LISTING: HIST 3106.03

HIST 3107.03: The English Family and Household. 
A number of commentators believe that “the family” is in crisis, its stability threatened by declining marriage rates, rising levels of divorce and childlessness, and the emergence of alternative family forms. But what does the term “the family” actually mean? This course examines the origins of the modern Western family by tracing the history of household organization, family and relationships in England from the 15th to 18th century. Students will examine the formation of the state, the reformations in religion and their broader effects, royal propaganda, political culture, and the achievements of the Elizabethan age. Class discussions will rely on detailed readings of primary sources and historiographical debates. Students will be expected to produce a major, well-researched essay. Some prior knowledge of early modern English history is essential. FORM: Seminar PREREQUISITE: One previous British history course EXCLUSION: HIST 2105.03

HIST 3108.03: Topics in the Social and Cultural History of England, c. 1500-1850: Madness and Marginality. 
“Marginality” is a sociological term that describes the situation of groups of people who are excluded or persecuted by the dominant culture. This course will examine such groups as witches, prostitutes, vagrants, and those deemed mentally ill. It will study the processes and politics of exclusion and regulation. It will ask how and why groups become labeled as beyond the boundaries of acceptable society and how such labeling affects their practice and experience. FORM: Seminar PREREQUISITE: One previous history course
HIST 3109.03: Topics in the Social and Cultural History of England, c. 1500-1850: Everyday Life. Aspects of daily life are often assumed to be "outside" of history, either unchanging or altered simply by natural forces of progress. This course will challenge such assumptions and look at the historically contingent practices surrounding such things as death, manners, sport, beauty, medicine, and education as experienced in early modern England. The course will address how and why such daily practices change, and the effects of such changes on the larger society. 

FORM: Seminar. PREQUISITE: One previous history course

HIST 3113.03: Britain in the Age of the First World War. This course examines in depth major themes in British history from 1906 to the early 1920s, including the origins of the First World War, the experience and impact of war, wartime politics and strategy, the decline of the Liberal party and the rise of Labour, and post-war reconstruction. 

FORM: Lecture/discussion. PREQUISITE: One of the following: HIST 3021.03, 2112.03; 3112.03; 3114.03; 3116.03; 209X/Y.06; 208X/Y.06.

HIST 3114.03: Britain in the Age of the Second World War. This course examines in depth major themes in British history from the early 1930s to the early post-war years, including the Great Depression, appeasement and the outbreak of the Second World War, the experience and impact of war, wartime politics and strategy, the welfare state, the post-war Labour government and the transition to peace. 

FORM: Lecture/discussion. PREQUISITE: One of the following: HIST 3021.03, 2112.03; 3112.03; 3113.03; 3116.03; 209X/Y.06; 208X/Y.06.

HIST 3210.03: Canadian Cultural Landscapes. This course explores the origins of one "signature" landscape in each province. Contact with different geographies shaped distinctive regional histories, but at the same time, the story of each place is tied to the national narrative. These landscapes also illuminate how nature has been understood, used, and transformed since the fifteenth century. 

FORM: Lecture and Discussions. CROSS-LISTING: CANA 3200.03, GEOG 3210.03

HIST 3220.03: Youth Culture in Canada, 1950s to 1970s. The 1950s and 1960s were decades of often startling social change throughout North America in general and Canada in particular. This course will attempt to understand these changes and their impact on our society. 

FORM: Lecture/tutorial. RECOMMENDED: One previous history course

HIST 3222.03: Topics in Canadian Social History, Nineteenth and Twentieth Centuries. This seminar will explore major themes in Canadian social development. The topics discussed will vary from year to year but will emphasize such themes as changing values in Canadian society; the nature of popular culture; the relationship of order and disorder; the family; gender relations; and social classes. 

FORM: Lecture/discussion or seminar. PREQUISITE: A course in Canadian History

HIST 3223.03: The Caring Society? - Welfare in Canada since 1900. This course examines changes over the twentieth century in the ways Canadians have dealt with people's needs, their own or others', whether for income, housing, personal care, or other matters of survival and well-being. Both private and government forms of welfare provision will be studied, with the overall purpose of understanding why Canada came to have the kind of welfare state it does.

FORM: Seminar. PREQUISITE: One course in Canadian history

HIST 3227.03: Criminal Law, Crime and Punishment in Canadian Society, 1890 to the present. Continuing the approach and themes of HIST 3226.03, this course studies crime, punishment, and the criminal law as they reflect social, economic, political, and ideological developments. As appropriate, these are set within their international context, and in particular linked to the American system of law and justice. We pay attention to the impact of technological change on crime, detection of crime, enforcement mechanisms, and alternative means and methods of punishment. 

FORM: Lecture/discussion. EXCLUSION: HIST 3225.03

HIST 3234.03: French Canada. This course studies the development of French-Canadian nationalist politics in their social, cultural, philosophical and economic contexts. 

FORM: Seminar or lecture/discussion. PREREQUISITE: A course in Canadian history, or instructor's consent

HIST 3260.03: History of the Canadian West. This course takes a thematic approach within a chronological framework, exploring social, economic and political topics in the development of Western Canada. Among the themes covered are the nature of New France, British North America, and the outbreak of the Second World War. 

FORM: Seminar or lecture/discussion. EXCLUSION: HIST 3256.03

HIST 3266.03: History of the Canadian West. This course explores the origins of one "signature" landscape in each province.

FORM: Lecture/discussion or seminar. PREQUISITE: A course in Canadian history

HIST 3272.03: Themes in the History of Atlantic Canada. This course provides students an opportunity to broaden their knowledge of historical trends in the region through archival research based on specific selected themes, which vary from year to year.

FORM: Seminar. PREQUISITE: One course in Canadian History

HIST 3273.03: Nova Scotia: Pre-Confederation. An exploration of character and circumstances in the history of provincial society, from the era of European "invasions" to the debate over entry into British American unions. Approved with Canadian Studies. 

FORM: Seminar. PREQUISITE: One Canadian History course or instructor's consent

EXCLUSION: HIST 3270/31.03

HIST 3277.03: Law and Justice in Canadian Society, to 1890. Dissection begins with an exploration of concepts of law and justice among Native Peoples prior to and during the occupation of the continent by the French and British. 

FORM: Seminar. PREREQUISITE: A 1000- or 2000-level course in Canadian history

HIST 3282.03: The Caring Society? - Welfare in Canada since 1900. This course examines changes over the twentieth century in the ways Canadians have dealt with people's needs, their own or others', whether for income, housing, personal care, or other matters of survival and well-being. Both private and government forms of welfare provision will be studied, with the overall purpose of understanding why Canada came to have the kind of welfare state it does.

FORM: Seminar. PREQUISITE: One previous history course

HIST 3284.03: Canadian Cultural Landscapes. This course explores the origins of one "signature" landscape in each province. Contact with different geographies shaped distinctive regional histories, but at the same time, the story of each place is tied to the national narrative. These landscapes also illuminate how nature has been understood, used, and transformed since the fifteenth century. 

FORM: Lecture and Discussions. CROSS-LISTING: CANA 3200.03, GEOG 3210.03

HIST 3290.03: History of the Canadian West. This course explores the origins of one "signature" landscape in each province.

FORM: Lecture/discussion or seminar. PREQUISITE: A course in Canadian history

HIST 3366.03: History of the Canadian West. This course explores the origins of one "signature" landscape in each province.
HIST 3274.03: Nova Scotia: Post-Confederation.
This course surveys the history of Nova Scotia from the 1860s to the present. Topics include the debate over Confederation, the nature of Victorian society, the world wars, and two upheavals of the 1930s and 1990s, Aboriginal and black communities, heritage and tourism, and Nova Scotia's political and intellectual relationship with the rest of Canada.
FORMAT: Seminar or lecture/discussion
PREREQUISITE: One Canadian History course or instructor's consent
EXCLUSION: HIST 3270.X/06
HIST 3282.03: Public History.
This course explores major issues and debates in the practice of history outside the academy. Against such theoretical concepts as theusable past and the challenge to the national narrative, we will examine critically the presentations and politics of history in the arts, media, popular history, and state policy.
FORMAT: Lecture/discussion
PREREQUISITE: One second-year course in history
EXCLUSION: HIST 3222.02 in 2005-2006
HIST 3293X/Y/06: The Political Economy of the Car: Fordism and Post-Fordism in International Perspective.
This course examines the emergence and transformation of the global economic system known as Fordism, beginning with Henry Ford's revolutionary marriage of mass production with mass consumption in 1914. Topics to be explored include: technological change in the workplace; the relationship between industrial unionism and radical political movements; the gender, racial and religious politics of Fordism; and the growth of mass culture in the era of mechanical reproduction. NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.
FORMAT: Seminar
PREREQUISITE: At least one previous History credit; second-year standing or better
EXCLUSION: HIST 3292.01
HIST 3300.03: Topics in the History of the Americas, 1450-1870.
This course examines aspects of the historical development of the Americas from the first European impact through the middle of the 19th century to the emergence of nation states in the nineteenth century. It explores topics such as relationships between Aboriginal and European peoples, religions and socio-economic development; popular culture and gender; imperialism and the slave trade; the development of slavery; the rise of revolutionary ideologies; the American and Haitian Revolutions; and the impact of civil wars.
FORMAT: Lecture/discussion
PREREQUISITE: Any one of HIST 2311.03, HIST 2006.03, HIST 2007.03, or any second-year course in History
HIST 3333.03: The American Archives.
This course is designed to introduce students to the use of American historical archives. It will be taught only as a summer course and students will spend one week working at the Kennedy Archives in Boston or the National Archives in Washington DC. During the course students will be researching a paper they have already completed on America in the Sixties. It is expected that by the end of the course students will be able to send their papers to an undergraduate journal for publication. The archives can only accommodate a maximum of 12 students at a time. Students will need to have registered for this course, purchased their tickets, and secured accommodation by April 20th. Check with instructor for a confirmation about the location to be visited before the course begins.
FORMAT: Seminar
PREREQUISITE: Students must have written a third year history paper on some aspect of America in the Sixties.
HIST 3350.03: Family and Community in North America, 1600-1900.
The family in North American society, from when the family was a model for social relations to the time when it was idealized as a private refuge. Among the topics considered are the role of the family in rural and urban communities, the demographic transition from high fertility and mortality, the role of record keeping in shaping the family's economic and educational autonomy, the role of ideology in shaping sex roles and child rearing, and the relations of family and community according to ethnic group, class and economic setting.
RECOMMENDED: A course in the sociology or social anthropology of the family
FORMAT: Lecture/discussion
CROSS-LIST: GWST 3350.03
HIST 3358.03: Slavery, Gender, and Power: Women in Nineteenth Century America.
This course studies the tangled histories of slavery and gender in nineteenth century America. Principal topics include the lives of female slaves, the cult of domesticity, the rise of early feminism, the roles of women in the expansion of slavery, and the tension between gender and race.
FORMAT: Seminar
CROSS-LIST: GWST 3358.03
HIST 3360.03: Enslavement and Emancipation: African-Americans in the U.S. South to 1900.
This course examines slavery as a system of racial subordination and economic exploitation. Attention is given to the social, familial, and cultural life of the slaves, the role of slavery in shaping southern nationalism and national racial beliefs, and to reconstruction after the Civil War.
RECOMMENDED: HIST 3321.03
FORMAT: Seminar
PREREQUISITE: One second-year United States history course
HIST 3361.03: The American Civil War and Reconstruction.
The Civil War, occasioned by the fermentation of the Southern Confederacy and the Union government's refusal to recognize the existence of a separate southern nation, was a pivotal moment in the history of the United States. This course will examine the causes of the war, the forces behind slave emancipation, the military fortunes of the two confederates, and the efforts undertaken by the victorious society to alter the legacy of the defeated South.
RECOMMENDED: HIST 3321.03
FORMAT: Seminar
HIST 3365.03: Vietnam War [Hi]stories.
This course is designed to introduce students to the impact of American involvement in the war in Vietnam. It will cover the major issues of the war including the political and social conditions in Vietnam; the reasons for American involvement; the development of United States policy toward Indo-China; the military conflict itself; and the legacy of the war. Rather than concentrating on the events as they unfolded, however, this course will focus on questions of interpretation and methodology. Toward this end, classes are designed to introduce students to both the historiography of the period under question and to some of the theories historians have used to think about and/or interpret the American experience in Vietnam.
FORMAT: Lecture/discussion
PREREQUISITE: Any 1000 or 2000 level North American history course
CROSS-LIST: 5365.03
HIST 3367.03: The History of Modern Intelligence in War and Diplomacy.
Intelligence, or accurate up-to-date information about unfolding world events, is crucial to the success of modern foreign policy. Nations survive or prosper based on their ability to gather, evaluate, understand and use information about the world. This course is designed to introduce students to the study of intelligence and how various intelligence systems function. The goal of the course is to enhance students' understanding of national intelligence communities in Britain, Canada, Russia and the United States. By examining the history of four different intelligence communities, we will begin to think critically about how intelligence fits into the policy process and how it is managed and controlled by the various governments.
FORMAT: Lecture/seminar
HIST 3369.03: America in the 1960s.
The "long sixties" – a period from the mid-sixties through the early seventies – was an extraordinary time in American history when a number of different events attempted to transform American society. In many ways they were successful, and we are still living with the legacy of the sixties today. This course is designed to introduce students to the numerous issues, conflicts, and problems that confronted Americans in the 1960s. The course will focus on the various movements of social reform that characterized this period. We will also discuss the rise of the "new left" and the "new right" and what those ideological movements meant for American political culture. The overall goal of the course is to encourage students
to think about how individuals adjust their values to fit a particular political and cultural climate. Why do some people conform to political and social values, while others do not? Students will come at these questions from a variety of perspectives. Art, film, fiction, and music will be used throughout the course.

FORMA T: Lecture/discussion
PREREQUISITE: HIST 2341.03 or HIST 3370.03 or HIST 3372.03 or instructor's permission

HIST 3370.03: North American Landscapes.
This course is an introduction to the history of landscapes in North America from the fifteenth century to the present day. Each week we will explore how nature has been understood, used, and transformed in a variety of different places across the continent, and how the history of these landscapes fits into the larger histories of Canada and the United States.

FORMAT: Lecture/seminar
CROSS-LISTING: HIST 2370.01

HIST 3372.03: The Cuban Missile Crisis.
This course is designed to introduce students to the history of the Cuban Missile Crisis. In the class students will examine both Russian and American primary and secondary sources. The goal is to provide students with the necessary skills to think critically about how scholars historicize the past.

FORMAT: Lecture

HIST 3373.03: Spying on the World: The CIA in American History.
This course is designed to introduce students to the history of the Central Intelligence Agency. Over its history the CIA developed into one of the most influential government agencies in American history. During the course students will examine the CIA's role in shaping American foreign policy, covert operations, spying, counter-intelligence and cryptography.

FORMAT: Lecture

HIST 3374.03: The Objectivity Question in American History.
This course is designed to introduce students to the historiographical trends in American history by examining some of the major historical topics of the last century including the Civil War, World War One, Progressivism, World War Two, the Holocaust, The Cold War and The Vietnam War. The course examines whether American historians have been successful in their quest for objectivity.

FORMAT: Lecture/discussion
PREREQUISITE: A second year history course

HIST 3374.03: The Objectivity Question in American History.
This course is designed to introduce students to the historiographical trends in American history by examining some of the major historical topics of the last century including the Civil War, World War One, Progressivism, World War Two, the Holocaust, The Cold War and The Vietnam War. The course examines whether American historians have been successful in their quest for objectivity.

FORMAT: Lecture/discussion
PREREQUISITE: A second year history course

HIST 3380.03: Slavery and Freedom in the Americas.
This course will take a broad perspective on slavery by examining some of the defining features of forced labor throughout the Americas over the course of four centuries (with occasional examples from elsewhere in the world). To complicate the overly simplistic slave-free dichotomy and develop a more nuanced understanding of the denial of freedom, we will investigate not only chattel slavery but other systems of free and routine labor that existed in the Americas, such as the encomienda, convict labor, debt bondage, serfdom, pariah apprenticey, postwar and prison work, indentured servitude and wage labor. We will consider definitions and manifestations of slavery (including racial ideology) that have been used by past and present humanitarians. To better understand the extent to which the working environment shaped the lives of the enslaved, we will compare the living and working conditions of laborers in a range of historical settings. We will conclude with a survey of the rise of free labor ideology, the impact of emancipation in the Americas and a glance at broad and free labor systems in the new millennium.

FORMAT: Seminar

HIST 3390.03: Latin America: Revolution and Repression.
This course explores the experiences of revolution and repression in post-colonial Latin America. Focusing on the twentieth century, this course will examine the making and unmaking of revolutionary political projects, paying particular attention to matters of race, class, and gender.

FORMAT: Lecture/discussion
PREREQUISITE: Any second-year history course or permission of the instructor
EXCLUSION: HIST 3391.03, HIST 3392.03

HIST 3393.03: Indigenous Movements in Latin America.
This course considers the historical experiences of Latin American indigenous peoples. We explore four periods in post-colonial Latin American indigenous history: the early republics (1800s-1910); the rise of pro-independence policies and activism (1920s-1930s); the submersion of indigenous issues to a class-based agenda (1940s-1970s); and the rise of indigenous movements (1975-present).

FORMAT: Lecture/discussion

HIST 3394.03: Slavery, War and Piracy in the Early Caribbean.
The Caribbean was a world of rapid riches, constant brutality and death and it was the central interest of European powers as they expanded to the Americas. This course will explore the politics, economics, societies, and cultures of the islands within the Caribbean Sea and the mainland territories bordering on it during the early modern era. It will conclude by examining how this world was changed by the dismantling of the slave system and the age of revolutions. The course will demonstrate exactly why this region became the most important, economically, within the Americas and why European powers were so intent on defining it.

FORMAT: Seminar/lecture

European colonial rulers and business interests laid out the framework of the sub-Saharan African colonial order from about 1850 to the 1920s, seeking ways to exploit African labour and natural resources. But imperial plans were limited and sometimes frustrated by African resistance, and by historical dynamics within Africa, such as the rise of new merchants and Islamic revolution. This course explores how the realities of colonial expansion, infused with European imperial ambitions, led to profound changes in African society during this early colonial period.

FORMAT: Lecture/discussion

HIST 3431.03: Struggles in The City: Labour, Migration and Urban Life in Colonial India.
There were many important urban centres in pre-colonial Africa; however, colonization and industrialization changed both the pace and nature of urbanization. Some cities grew and new cities and mining settlements were established. Africans came to labour in these colonial cities for a host of reasons - some were forced off their land, some sold themselves into indenture when settlers and colonial governments appropriated vast tracts of land, others needed to earn the cash economy to pay colonial taxes; women and men sought new opportunities and adventure. This movement to the cities transformed the lives of millions of Africans. This course will focus on the lives of these urban dwellers, the development of urban cultures, the gendered character of urbanization, the creation of new social, political, economic and criminal networks, conflict and cooperation amongst urbanites, and the nature of colonial oppression and control in the cities.

FORMAT: Lecture/discussion

HIST 3435.03: The Rise and Fall of African Slavery.
Many African societies, like pre-industrial societies elsewhere, used slaves as well as other forms of labour for a variety of purposes. The rise of external slave trades after 1700 — notably across the Atlantic and Sahara — transformed many African societies into specialized slave exporters. As external slave trades declined in the 18th century, many African economies used extensive internal slave labour to produce exports, a pattern of colonial governments were slow to change in the 20th century. This course examines these changes in African slavery, and how they affected such issues as gender relations and class structure.

FORMAT: Lecture/discussion
HIST 3451.03: Southern Africa to 1860. Examines the history of Southern Africa before the coming of the mineral revolution. The course focuses on South Africa, but with a regional perspective. Themes include the nature of Khoi and San societies, the expansion of Bantu-speakers, Dutch settlement and administration of the Cape area, the rise of the Zulu, Shaka's empire and the Zulu, the British takeover from the Dutch, the impact of the humanitarian movement and the Great Trek. African states and kingdoms in the nineteenth century, and the formation of the Boer Republics. FORMAT: Lecture/discussion

HIST 3452.03: South Africa since 1860. This course examines not only the changes in race relations and politics, but also the effects of mining and other industries on urban and rural settlement after the discoveries of diamonds and gold. Themes will include a regional perspective on Boer politics and the "imperial factor," the growth of Afrikaner and African nationalism, the Boer War and militarization, the development of apartheid and South Africa's role in the world. RECOMMENDED: HIST 3451.03

HIST 3470.03: Wars and Revolutions in Nineteenth-Century Africa. Africa in the nineteenth century was profoundly reshaped by a complex set of events. Muhammad Ali undertook to modernize Egypt. New Islamic states founded in the west developed plantation economies of internalized slave labor. On the Atlantic coast, merchant princes made their fortunes supplying topical goods for Europe's Industrial Revolution. In Central Africa the struggle for slaves and ivory both wreaked havoc and stimulated new states. In the south, the rise of Zulu power generated waves of conquest and colonization. This course assesses the extent to which Africa was reshaped in the revolutionary century before colonial partition. FORMAT: Lecture/discussion PREREQUISITE: Any 2000-level African history course or permission of the instructor

HIST 3471.03: Wars and Revolutions in Twentieth-Century Africa. Africa as portrayed in the Western media is a continent plagued by violence without end. Often these conflicts have not been carefully explained, rather than they have been written off as "tribal" or "inherently" incomprehensible episodes of history. This course will examine several types of conflicts throughout the twentieth-century and will seek answers to such questions as: Who initiated these conflicts? Why? What role do external actors play in fighting for? How did these conflicts influence wider social, economic, and political development? In what ways did colonial politics and the colonial legacy influence African conflicts? What role has the international community played in African conflicts? What role do African elites or local communities play in these conflicts? Grappling with these questions will allow us to move beyond simplistic explanations to acquire a better understanding of the history and revolutions that have so marked twentieth-century Africa. FORMAT: Lecture/discussion CROSS-LISTING: HIST 5471.03

HIST 3500.03: Topics in Global History. This is a special course dedicated to those topics that comprise multi-regional, global themes in the early modern and modern eras. Topics will vary, but possible course themes include: History of Slavery from a Global Perspective, Rise of Early Modern World-systems, and Colonialism and Ideology in Asia and Africa. FORMAT: Lecture PREREQUISITE: Instructor permission

HIST 3502.03: Thucydides and the Greek World at War. See course description for CLAS 3502.03 in the Classics section of this calendar. FORMAT: Seminar CROSS-LISTING: CLAS 3502.03

HIST 3509.03: Arab Caliphas, Turkish Commanders, and Persian Viziers: Islamic History, 750-1200. The focus of this course will be the different manifestations of Islamic civilization as it reached its zenith under a series of caliphates and sultanates across Spain, North Africa, the Levant, Iran, Central Asia, and South Asia between 750 and 1400. These states will be the beneficiaries of the rise of the caliphate and the emergence of numerous Islamic communities and movements (shias, Sunnis) as the Abbasid empire (750-1258) struggled to maintain political and doctrinal unity. There will also be a discussion of the Turkish migrations and the corresponding rise in Turkic Islamic statesmanship such as the Seljuqs and the Ghurids. This course will examine the causes of the Mongol invasions and their devastating effect on the central Islamic world. This course will also discuss the incorporation of Islamic culture during the Abbasid period and the rise of Mamluk (“slave”) thought, notably in physical sciences, political studies, and philosophy, and how this synthesis was also reflected in terms of mysticism, art, architecture, and literature in the East as Islamic culture interacted with Zoroastrian, Buddhist and Hindu cultures in Iran, Central Asia, and India. FORMAT: Lecture/discussion PREREQUISITE: HIST 2503.03 or HIST 2504.03 or CLAS 1010.06 CROSS-LISTING: CLAS 3501.03

HIST 3510.03: Sultans and Shahs: Politics and Religion in the Islamic Gunpowder Age (1500 - 1800). Until the devastating Mongol invasions of the 13th century, the principal centers of Islamic power, culture, and thought had been based in Cairo and Baghdad. This course will examine the post-Mongol Islamic world, and how politics and religion were irrevocably changed with the establishment of the Safavid Alhambra caliphate. Religious heterodoxy, combined with the power vacuum left by Chengiz Khan and his descendants, allowed for the emergence of a number of unique Turcoman states in Western Asia, the most famous being the Ottoman Turks of Anatolia. By 1500, innovators in military technology and the paper-making industry allowed for the emergence of centralized and bureaucratically-organized ‘gunpowder’ empires in eastern and western Asia. This course will address the three most significant of these: the Ottoman Turks (based in Istanbul), the Safavid Persians (based in Isfahan), and the Mogul Indians (based in Delhi). Areas of focus will include issues of political legitimacy, use of military ‘slave’ corps, orthodoxy and popular religious movements, tensions between rural and urban segments of society, innovations in cultural expression (poetry, art, architecture), scientific and philosophical development, and the penetration and impact of the Portuguese, English, Dutch, and French ‘world economies’ into Asia and the Indian Ocean. This course will also examine different debates regarding the ‘decline of the East’, and introduce the theoretical implications of how the Islamic world is approached by contemporary scholarship. FORMAT: Lecture/discussion PREREQUISITE: HIST 2501.03 or HIST 2502.03 or HIST 2503.03 or HIST 2504.03 or CLAS 1010.06 CROSS-LISTING: COM 3510.03, HIST 5505.03, RELS 3510.03

HIST 3511.03: Ancient and Medieval History of the Persianate World. This course is dedicated to studying those periods from antiquity to the medieval age when parts of Asia were influenced and defined by the Persian language and culture (i.e. Iran, the Caucasus, the Steppe, Mesopotamia, Central Asia, Anatolia, South Asia). This course will begin with examining the Achaemenid invasions of the 2nd Millennium B.C.E., and the eventual establishment of the Medes and Achaemenid empires in the 7th – 6th centuries B.C.E. The Persian Wars between the Persians and the Greeks, and the continuation with Alexander the Great's invasion and the establishment of a Hellenistic state in the 4th-3rd centuries B.C.E. will be studied along with various issues associated with ancient Iran and Central Asia (Zoroastrianism, Manichaeism, Nestorian Christianity, Buddhism) during the Achaemenid, Seleucid, Parthian, and Sasanian periods. This course will also examine the impact of the Arab Muslim invasions on Iran and Central Asia in the 7th, 8th, and 9th centuries, and the incorporation of Persian civilization into the growth and success of Islam during the Abbasid period (750-1258). Strong emphasis will be placed on examining various aspects of Persianate culture, namely poetry, literature, art, architecture, philosophy, and mysticism in the medieval period. FORMAT: Lecture/discussion PREREQUISITE: HIST 2501.03 or HIST 2503.03 or CLAS 1010.06 CROSS-LISTING: CLAS 3502.03

HIST 3512.03: Modern History of Iran. This course will examine Iran from the 19th to the 21st centuries. It will begin with an examination of the Qajar dynasty and its responses to the imperial ambitions of Russia and England in the late 19th and early 20th centuries. In terms of Iranian domestic politics, we will look at the Constitutional Revolution of 1906, the rise and establishment of the Pahlavi regime, and the emergence of Iranian politics in an era of hegemonic competition and the subsequent CIA-orchestrated coup d'état in 1953. Particular focus will be placed on Reza Shah's monarchy, and the implications of the Revolution in 1979, not only in Iran, but throughout Afghanistan, Pakistan, and the Gulf Region. This
The seminar examines the French Revolution, its origins and its interpretations, as well as the legacy of the French Revolution for modern political culture. Each term the seminar is offered it may focus on a specific theme related to the French Revolution.

CROSS-LISTING: HIST 3045.03

PREREQUISITE: One European history course

EXCLUSION: HIST 3004.03, 3009.03

HIST 4040.03: Social History Seminar.

This is an advanced seminar on the history of Soviet Russia from 1917 to 1991. We will explore the origins, mechanisms, costs, and outcomes of perhaps the most ambitious and tragic historic experiment at creating a modern yet equitable society in a country far from conducive to such an undertaking.

CROSS-LISTING: RUSN 4090.03

FORMA T: Lecture

This course explores the nature and development of the English criminal justice system during the period in which it first began to be exported to other areas, and at home had to deal with the turmoil wrought by reformation, war, and industrialization. This course will examine the uses of the law — did it act in the interests of particular people or groups, and if so, how? Historians have argued that the law had both coercive and symbolic purposes — that it served to enforce and legitimate social and economic structures. We will examine those arguments and their implications. Classes will progress thematically rather than chronologically; some will be devoted to a particular type of punishment, some to the different groups of people involved in the legal process, and others to historical debates.

CROSS-LISTING: RUSN 4090.03

FORMA T: Lecture

HIST 4030.03: Medieval Civilization.

This course will explore major themes in the history of the 9th and 20th centuries. Topics discussed will vary from year to year, but the course will involve an in-depth examination of a selected subject in modern history, and may include an historiographical, comparative, or interdisciplinary dimension.

CROSS-LISTING: HIST 3030.03

EXCLUSION: HIST 4004.03 in 2006-07

PREREQUISITE: Any course in European history course,

EXCLUSION: First-year students.

FORMA T: Lecture/discussion

HIST 4004.03: Crime and Society in Post-Conquest England.

This course explores the development of the criminal law in England between 1066 and 1300. After some introductory lectures on the legacy of Anglo-Saxon legal notions and the creation of the royal system of justice known as the “eye,” attention is given to a study of the development of a more sophisticated hierarchy of courts: the local tribunals presided over by justices of the peace and sheriffs, intermediate sessions headed by the justices of assays, and the central court of the King’s Bench. The origins and elaboration of particular offenses, including treason, felony (murder, rape, arson, burglary, and larceny), and trespass are examined. Emphasis is placed on the social aspects of crime in medieval England, and extensive use is made of recent periodical literature dealing with crime and its effect in this period (der(07)). Students are required to contribute to weekly discussions of these materials and to write one major research paper. Some prior knowledge of English history is essential.

studied include the social structure of early Stuart England; the Church and its critics; foreign policy; radical politics; the military course of the war; religious sectarianism and the impact of the war and its aftermath on the populace.

**FORMA T:** Seminar

**CROSS-LISTING:** HIST 5106.03

**HIST 4117.03:** Winston Churchill.

This course is not designed to examine every aspect of Winston Churchill's life; rather, it focuses on major events in British and world history in which Churchill was a leading actor. Subjects for discussion may include: social reform and the welfare state; the return to the gold standard; Ireland; India, empire and decolonisation; appeasement; grand strategy in the two world wars; the Anglo-American "Special Relationship"; and the Cold War. This course will also examine the historiography of these subjects and the impact of Churchill's own extensive writings in shaping the historical record.

**FORMA T:** Seminar

**PREREQUISITE:** HIST 3050.03 or permission of the instructor

**HIST 4162X/Y.06:** Advanced Seminar in Baroque Culture.

Taught at the State Castle, Cesky Krumlov in the Czech Republic, this course offers upper-level students in History, Theatre and related disciplines the opportunity to study European Baroque culture while surrounded by its material traces. Topics covered include: seventeenth- and eighteenth-century theatre and opera; Baroque court life and the history of Central Europe. NOTE: Credit can only be given for the course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.

**FORMA T:** Lecture/tutorial

**CROSS-LISTING:** THEA 4733.03, HIST 4162.03

**HIST 4370.03:** The American Revolution.

This course examines the American Revolution and the larger revolutionary era in the Atlantic World. It situates this critically important event in American history within the broader context of the Atlantic World. We will explore the origins of the Revolution and discuss its immediate impact on the British Empire and the colonies which became the new United States. We will examine the military conflict that led to American independence as well as the major ideological and social shifts that were part of the Revolution. We will try to determine the motivations of the various colonies in joining the Revolution and we will ask why not all successful colonies chose to revolt. We will conclude with the creation of the Constitution. We will explore the meaning of the revolution and American independence for the various groups of people in the colonies, including colonial officers, women, Native Americans and African-Americans. We will also examine the Loyalists and the Loyalist diaspora. Throughout the course we will try to determine how revolutionary or radical this event was.

**FORMA T:** Seminar

**CROSS-LISTING:** HIST 5255.03

**HIST 4400.03:** Topics in African History.

This course will undertake a careful, in-depth examination of a select theme in African history. The theme will vary from year to year, but the aim will be to probe the deep complexities of Africa's past that recent scholarship is bringing to light. Themes may be regional or continental, and could include such topics as witchcraft, resistance, urban history, religious change, migration, or nationalism. The core of the work will be a significant research paper and seminar presentations. Classes will also involve the reading, presentation, and discussion of selected readings.

**FORMA T:** Seminar

**PREREQUISITE:** At least one third-year African history course or permission of the instructor

**HIST 4401.03:** State Violence, Communal Conflict and Criminality in Modern South Africa.

South Africa is plagued by one of the world's highest rates of violent crime and social conflict. Despite the unprecedented level of public concern with violence,
little attention is paid to the historical origins of this phenomenon. This course explores the changing patterns of crime and violence since the 1890s.

**HIST 4404.03: Crime and Punishment in Modern Africa.**
This course will explore the extent to which state legitimacy and power can illuminate the trajectories of crime, policing and punishment from early colonial era to Africa to the present day.

**HIST 4475.03: African Intellectuals and the Modern Experience.**
African thinkers have long pondered the challenges of the modern era, and have established lines of thought with which African intellectuals now address Africa's profound problems. But this engagement with the modern world has moved through different phases, just as the social location of the African intellectuals has changed over time. This course will explore this intellectual history by setting specific writers in context, and then examining their original writings to ponder such questions as: Whose were the roots of “African Christianity?” How did African intellectuals respond to “scientific” racism? What was the appeal of Pan-Africanism? What was Negritude? How secular was African socialism? How do postmodern insights about the invention of identity affect the idea of being “African”?  

**HIST 4500.03: Topics in Modern History.**
This seminar is intended for senior undergraduate and graduate students interested in discussing how scholarship has historically approached non-Western and non-Christian areas of the globe. Dating back to Herodotus, Plato, and Isocrates, the seminar will examine the different European intellectual traditions of early modern Europe and how they laid the foundation for subsequent 19th and early 20th-century characterizations of the Islamic world. Concurrently, however, there is evidence that a discourse of “Orientalism” emerged among Muslim scholars and theorists, and the ensuing dialectic between West and East framed the introduction of a number of [Western] and religious ideologies to the Middle East, Iran, Central Asia, and India. There will be readings and discussions of a number of different scholars and theorists - Foucault, Chakrabarty, Said - who have commented on these discourses. Equal attention will be given to those Muslim scholars - Shaysghun, Soroush, al-Ahmad - who have written and commented on these dynamics between Western and Islamic civilization.

**HIST 4545.03: Scripture and Statecraft: History of Arab Intellectuals and Their Ideologies in the Modern Period.**
This course is dedicated to understanding how Arab-centric tribal relations and communities.

**HIST 4510.03: Topics in Islamic and Middle East History.**
This is a special course dedicated to a topic dealing with the Islamic world/Middle East from the medieval era to the present. Topics will vary, but possible course themes include: political thought in Islam, slavery in Islamic civilization, nationalism and ethnicity in the Middle East, and Women in the Islamic world.

**HIST 4545.03: Scripture and Statecraft: History of Islamic Political Thought.**
This course is dedicated to understanding how Arab-centric tribal relations and networks initially defined Islamic politics in 7th-century Arabia, and how these definitions were later influenced by external “Imperial” and “Karen” traditions (from Byzantines, Iranians, Indians). Muslim concepts of authority, however, were and still are defined by prophetic genealogies and charisma, and parts of this course will examine the Shi’ite discourse of imamate and the growth of millenarian thought. This course will also focus on the changes in political philosophy as a result of the violent arrival of the Mongols, and how traditional Sunnis notions of authority and state were displaced by the rise of Shi’i Iran and Safavid. Discussions will also focus on Muhammad ibn Abd al-Wahhab and Jamil al-Din al-Afghani and the extent to which Islamic political thought evolved and roused in the wake of European hegemonistic imperialism. The remainder of the course will examine the rise of Islamism, its radicalization following World War Two, and the implications of Islamism and its opponents against the backcloth of the Islamic Revolution in Iran and other religious-political movements in the Middle East, Africa, and South Asia.

**HIST 4550.03: Orientalism and Occidentalism.**
This seminar is intended for senior undergraduate and graduate students interested in discussing how scholarship has historically approached non-Western and non-Christian areas of the globe. Dating back to Herodotus, Plato, and Isocrates, the description of “the Other” has been a constant theme in European history and academic traditions. Whether or not it was the apologetically theological rivalry between Islam and Christianity in the Middle Ages, or the Humanist mantra for non-European languages and ethnography, Occidental scholarship has historically been attracted to understanding and defining the non-Occidental. This course will examine the different European intellectual traditions of early modern Europe and how they laid the foundation for subsequent 19th and early 20th-century characterizations of the Islamic world. Concurrently, however, there is evidence that a discourse of “Orientalism” emerged among Muslim scholars and theorists, and the ensuing dialectic between West and East framed the introduction of a number of [Western] and religious ideologies to the Middle East, Iran, Central Asia, and India. There will be readings and discussions of a number of different scholars and theorists - Foucault, Chakrabarty, Said - who have commented on these discourses. Equal attention will be given to those Muslim scholars - Shaysghun, Soroush, al-Ahmad - who have written and commented on these dynamics between Western and Islamic civilization.

**HIST 4555.03: A Dream Palace or a Bitter Reality: Arab Intellectuals and Their Ideologies in the Modern Period.**
From Ottoman reformists to European colonialism, from the creation of the state of Israel to the invasion of Iraq, Arab intellectuals have been constantly evaluating the weight of the past, the promise of the future. This course examines the ideas and ideals of Arab intellectuals of Muslims, Christian and Jewish background and those who reside in the Arab world as well as those who have made their careers in the West.

**HIST 4600.03: Topics in Late Nineteenth- and Twentieth-Century American and British History.**
This seminar is dedicated to understanding how Western colonialism and modernity, including the pan-American movement, the outlying political and ideological influences of the West, and the historical origins of this phenomenon. This course will examine the role of state legitimacy and power can illuminate the trajectories of crime, policing and punishment from early colonial era to Africa to the present day.

**HIST 4613.03: Women’s Suffrage from the French Revolution to World War I.**
The question of women’s participation in representative government first emerged during the French Revolution but by 1914, only two European countries had granted women the right to vote. This seminar explores the suffrage movement in the nineteenth century and the obstacles in the process of women’s enfranchisement.

**HIST 4614.03: Topics in the History of Sexuality.**
This seminar is intended for senior undergraduates. The specific content of the course varies from year to year, with a general focus on comparative, historical, and theoretical issues relating to the history of sexuality. Topics may include: the rise and fall of schools of sexology as embodied by Ellis, Freud, and Kinsey; sexual violence and harassment; the commodification of sexuality; the history of the body, sexuality and colonialism, gay and lesbian subcultures; and the intersection of class, race, and gender in sexual experiences, discourses, and communities.

**HIST 4650.03: Orientalism and Occidentalism.**
This seminar is intended for senior undergraduate and graduate students interested in discussing how scholarship has historically approached non-Western and non-Christian areas of the globe. Dating back to Herodotus, Plato, and Isocrates, the description of “the Other” has been a constant theme in European history and academic traditions. Whether or not it was the apologetically theological rivalry between Islam and Christianity in the Middle Ages, or the Humanist mantra for non-European languages and ethnography, Occidental scholarship has historically been attracted to understanding and defining the non-Occidental. This course will examine the different European intellectual traditions of early modern Europe and how they laid the foundation for subsequent 19th and early 20th-century characterizations of the Islamic world. Concurrently, however, there is evidence that a discourse of “Orientalism” emerged among Muslim scholars and theorists, and the ensuing dialectic between West and East framed the introduction of a number of [Western] and religious ideologies to the Middle East, Iran, Central Asia, and India. There will be readings and discussions of a number of different scholars and theorists - Foucault, Chakrabarty, Said - who have commented on these discourses. Equal attention will be given to those Muslim scholars - Shaysghun, Soroush, al-Ahmad - who have written and commented on these dynamics between Western and Islamic civilization.
HIST 4639.03: Britain, Appeasement, and the Origins of the Second World War.

This course examines Britain’s response to the rise of expansionist regimes in Germany, Italy, and Japan during the 1930s. Topics of discussion will include: the historical “roots” of appeasement; Neville Chamberlain and the Munich Conference; the Foreign Office; the Treasury; the armed services and British rearmament; the press and public opinion.

FORMA T: Seminar
PREREQUISITE: One previous British history course

HIST 4980.03: Reading and Writing “Postmodern” "History".

According to a number of post-modern theorists we have now reached the “end of history.” History, they argue, is as it is now taught at Dalhousie University, and many other universities around the world, is a dead or dying field of study. Taking this assumption as a starting point this course is designed to explore what alternative accounts of the “before now” could look like. The course itself consists of three parts. The first part will concentrate on some of the key ideas behind “postmodern” theory. In the second part we will examine various historical studies written by both modern and postmodern historians in order to understand the differences between the two interpretive approaches. In the third part of the course you will have the opportunity to write and present your own papers on the before now. You will do so by participating in an act of intellectual disobedience whereby you will reject many of the current rules of writing history in order to create your own "uncompromising, emancipatory message."

FORMA T: Seminar
PREREQUISITE: Fourth year history course

HIST 4988X/Y.06: The Varieties of History.

This course, reserved for fourth-year Honours students in History, is a seminar that examines questions concerning the nature and value of historical enquiry that have occupied thinkers since ancient times. Through a series of wide-ranging readings it explores the meaning of history in the context of European and non-European societies and the paradigms by which, through the ages, scholars have approached the study of the past.

NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.

FORMA T: Seminar
PREREQUISITE: Concurrent enrollment in HIST 4990X/Y, or instructor’s permission

HIST 4987.03: The Historiography of American Foreign Relations, 1776-1945.

This course is designed to introduce students to the history of American foreign policy from the Revolutionary War until World War Two. However, special emphasis will be given to events in contemporary American history, focusing on questions of interpretation and methodology. Toward this end, the seminars are designed to introduce students to both the historiography of the event under question and to some of the “theories” historians have used to interpret American foreign policy. The goal of the course is to provide students with the necessary tools to think critically about various forces at work in the development and execution of contemporary US policy.

FORMA T: Seminar
PREREQUISITE: A third-year 20th Century American History course

HIST 4988.03: The Historiography of American Foreign Relations Post-1945.

This course is designed to introduce students to the history of American foreign policy from the Origins of the Cold War to the demise of the Soviet Union. Rather than concentrating solely on the events as they unfolded, however, this course will focus on questions of interpretation and methodology. Toward this end, the seminars are designed to introduce students to both the historiography of the event under question and to some of the “theories” historians have used to interpret American foreign policy. The goal of the course is to provide students with the necessary tools to think critically about various forces at work in the development and execution of contemporary United States policy.

FORMA T: Seminar
PREREQUISITE: A third-year 20th Century American History course

HIST 4990X/Y.06: Honours Essay in History.

All History Honours students and those in combined Honours programs in which History is their principal subject must write a substantial essay on a topic to be chosen in consultation with the undergraduate coordinator and an individual faculty supervisor.

NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.

I. History of Science and Technology Program

The natural and human sciences play a central role in shaping fundamental aspects of our contemporary intellectual and material culture - how we live and the ways we think and talk about how we live. And this has been true, in varying ways, for a very long time. The History of Science and Technology (HOST) Program explores that long history and as such contributes to student’s understanding of their contemporary world through understanding this vital aspect of our intellectual past. Our program is truly interdisciplinary in that we encourage students to cut across the sciences and the humanities by drawing on historical, philosophical and sociological disciplines. HOST courses are open to any student registered either at Dalhousie University or the University of King’s College. We also welcome visiting students (attending on a Letter of Permission) from other universities.

Our three “core” courses (mandatory for the Combined Honours degree) cover in depth the key ideas, questions, figures and developments in the history of science for the historical periods of ancient and medieval, the early modern and the modern, respectively, always with an eye to how the study of nature has been situated within broader historical contexts. Our numerous electives branch out in a myriad of questions and topics throughout these periods, such as the relationship between science and religion, the representations of science in the media, and the role of technologies in shaping human experience.

HOST will be of interest to many kinds of students. In particular, students with a strong interest in the role of technologies in shaping human experience.

II. Degree Options

Students registered in the BA or BSc degree at either King’s or Dalhousie have two options for pursuing a degree in the HOST program: (a) as a Combined Honours degree, and (b) as a Minor. Students in the BJH program may pursue the Combined Honours or take electives in HOST.

A. Combined Honours

The Combined Honours BA or BSc degree in HOST is offered jointly by Dalhousie University and the University of King’s College. Pursuing an honours degree requires of students a higher quality of work than is required by the other undergraduate programs (such as the 20 credit major). Able and ambitious students are urged to take the Combined Honours in HOST; particularly if you want to leave open the possibility of doing graduate work in the future. Adjudicating holds in graduate schools (for both scholarships and program admissions) will look more favorably on students with Honours-level degrees. In some cases the Honours degree is a requirement. In any case, choosing the Combined Honours degree is a positive statement concerning your seriousness and abilities as a student.

The Dalhousie departmental-offering within the History of Science and Technology Program include the other honours subject, a number of possible electives, and certain cross-listed courses. The other honours subject must be selected from the following list of Dalhousie departments and Programs: Classics, Creative Writing, English, French, Gender and Women’s Studies, German, History, International Development Studies, Music, Philosophy, Political Science, Religious Studies, Russian Studies, Sociology, Social Anthropology, Spanish and Latin American Studies, Theatre, Biochemistry, Biology, Chemistry, Computing Science, Earth Sciences, Economics, Marine Biology, Mathematics, Microbiology and Immunology, Neuroscience, Physics, Psychology, and Statistics. Electives may be taken in any of the above-mentioned departments and programs as well as in the following: Canadian Studies, Contemporary Studies, Early Modern Studies, Music, and Oceanography.

Students who are eligible to take an honours degree should apply to the History of Science and Technology Office and the other department or program concerned as early as possible, normally before registering for the second year. All students must meet the degree requirements for the College of Arts and Sciences as detailed in the Degree Requirements section of this calendar (page 122). Because it is an honours program, the quality of work required in the program is higher than that required in a 15 credit or 20 credit major program.

Students who are eligible to take an honours degree should apply to the History of Science and Technology Office and the other department or program concerned as early as possible, normally before registering for the second year. All students must meet the degree requirements for the College of Arts and Sciences as detailed in the Degree Requirements section of this calendar (page 122). Because it is an honours program, the quality of work required in the program is higher than that required in a 15 credit or 20 credit major program.

Applications for admission must be made to the Dalhousie department concerned and to the History of Science and Technology Office at King’s on forms available from the Registrar at Dalhousie or King’s. Students should apply to the program and seek advice on course selection before registering for the second year. If this is not done, it may be necessary to make up some work not previously taken. For each individual student, the entire degree program, including elective courses, is subject to supervision and approved by the Dalhousie department concerned and by a member of the History of Science and Technology teaching staff.

The joint Dalhousie/King’s History of Science and Technology Combined Honours Program is based on the general requirement that the full credits needed to graduate include:

1. In the case of a Combined Honours BA degree, a minimum of 11 and a maximum of 14 credits beyond the 1000 level in the two honours subjects, but not more than nine and no fewer than five full credits being in either of them. The larger number of honours credits must be in the science subject.

2. In the case of a Combined Honours BSc degree, a minimum of 11 and a maximum of 14 full credits beyond the 1000 level in the two honours subjects, with no more than nine and no fewer than five credits in either.

3. Two to four - depending on the number selected in the Honours subject - elective credits.

4. The three “core” courses in History of Science and Technology: HIST 2000/06, HIST 3000/06, HIST 4000/06.

5. One credit in a single language humanities subject (Degree Requirements section 1, page 122);

6. One credit in a single social science subject (See Degree Requirements section 2, page 122);

7. One credit in a single life or physical science subject (See Degree Requirements section 3, page 122);

8. One credit in a single language for Bachelor of Arts (see Degree Requirements, page 122).
FORMA T: Writing Requirement. Lecture/tutorial and how this has shaped the roles and responsibilities of modern engineers.

Through case studies this course examines the influence of the development of social, political, and economic institutions from ancient times to the first industrial revolutions in respect to the following are treated: I. Concepts of nature, II. Mathematics and Astronomy, III. Material and Elemental theories, IV. Biology and the Soul, V. The meaning of "nature".

NOTE: Students taking this course must register in both X and Y in consecutive terms; credit will be given only if both are completed consecutively.

FORMAT: Lecture/seminar

HSTC 2011.03/HSTC 3011.03/HSTC 4011.03: The Lecture Series. In some years a lecture series course is offered. Students are allowed to take up to three courses, one for each year of upper-level study. Each course will consist of six to eight weekly evening lectures given by specialists from Atlantic Canada and beyond, and a weekly one-hour seminar. The lectures will offer students reflections on a number of contemporary issues and themes. Each year a different theme will be explored.

FORMAT: Seminar/reading lectures

HSTC 2105.03: The Life, Science and Philosophy of Albert Einstein. In 1999, Time Magazine named Albert Einstein "Person of the Century" for the impact his scientific work had not only on physics, but also on culture in general. In this course, we will explore how Einstein's proof of the existence of atoms, his belief in light particles (photons), and his application of the famous principle of relativization revolutionized both modern physics and philosophy. We will also pay attention to the main events of Einstein's life (his divorce, the rise of Nazism in Germany, etc.), Einstein's pacifism and Zionism, his attitude toward religion and his personal relationships with other scientists (Poincaré, Bohr, etc.) in order to better understand the personal, social and cultural contexts in which these revolutionary theories were developed.

NOTE: Prior knowledge of physics, mathematics, or philosophy is expected. This course is for everyone with interest in science, but is not a science course (mathematics will be kept at a minimum).

FORMAT: Lecture/seminar

HSTC 2120.03: Magic, Heresy and Hermeticism: Occult Mentalities in the Scientific Revolution. The "scientific revolution" is ordinarily construed as the triumph of reason over superstition, of science over magic. This course argues that the rhetoric of 'scientific revolution' conceals a deep continuity between modern science and the occult traditions of the Middle Ages and the Renaissance. The protéotype of the experimental scientist is the Faustian wizard. We investigate the role of Hermeticism, magic and the occult in the scientific revolution and the persistence of these current currents in later movements, from German Naturphilosophie to Jungian psychology.

FORMAT: Lecture/tutorial

CROSS-LISTING: HIST 2990.03, EMSP 2360.03

HSTC 2200X/Y.06: Ancient and Medieval Science. This course treats the study of nature in the ancient and medieval West by a combination of both thematic and chronological approaches. It considers the most general views of nature and science as well as specific developments within those general understandings. For the purposes of the course, the ancient and medieval West is divided into four time periods: the ancient, the Hellenistic, the Roman, and finally the medieval. Through the reading of selected works, developments in respect to the following are treated. 1. Concepts of nature, II. Mathematics and Astronomy, III. Material and Elemental theories, IV. Biology and the Soul, V. The meaning of "nature".

NOTE: Students taking this course must register in both X and Y in consecutive terms; credit will be given only if both are completed consecutively.

FORMAT: Lecture/tutorial

HSTC 2200X/Y.06: Ancient and Medieval Science. This course treats the study of nature in the ancient and medieval West by a combination of both thematic and chronological approaches. It considers the most general views of nature and science as well as specific developments within those general understandings. For the purposes of the course, the ancient and medieval West is divided into four time periods: the ancient, the Hellenistic, the Roman, and finally the medieval. Through the reading of selected works, developments in respect to the following are treated. 1. Concepts of nature, II. Mathematics and Astronomy, III. Material and Elemental theories, IV. Biology and the Soul, V. The meaning of "nature".

EXCLUSION: HIST 2201.05, BIOC 3502.01, HSTC 3072.01, HSTC 4006X/Y.06, SCIE 4000.03

HSTC 2202.03: The Beginnings of Western Medicine: the Birth of the Body.

This course will look at how the body was viewed in ancient scientific theory and practice. Western medicine as a rationalised scientific practice finds its origin in the ancient Greek philosophical and medical texts attributed to "Hippocrates." Through a close reading of selected ancient medical texts, this course will explore ideas of how the human body is constituted, how it relates to the Cosmos as a whole, what the role of the physician was to be, and how illness and healing were seen as causes in the balance of the components of the body.

HSTC 2204.03: The Darwinian Revolution.

Arguably, the Darwinian Revolution marks the greatest revolution in our conception of nature and our place within it, deeply challenging received views on chance, teleology, history, the soul and nature. This course opens up the historical and philosophical background to the Darwinian revolution, the main episodes of that revolution and the consequences for contemporary moral, scientific and social thought. Emphasis will be placed on reading contemporary primary texts.

FORMAT: Lecture/seminar

HSTC 2205.03: Totalitarianism and Science.

The question of who has authority over funding, direction and priorities of modern science is a central political concern. This course considers the case of totalitarian states (URSS and Nazi Germany) and consists of two parts. Part I analyses the essential features of totalitarian regimes. Part II concentrates on the fortunes of particular sciences (medicine, biology, physics) under them.

FORMAT: Lecture/tutorial

CROSS-LISTING: HIST 2905.03, CTMP 2903.01

HSTC 2206.03: Bio-Politics: Human Nature in Contemporary Thought.

To what extent do biology and culture determine what it is to be human? Drawing on themes ranging from Foucault to Steven Pinker, this course will examine the recent political, moral and existential issues raised by attempts to answer that question. Topics will include socio-biology, evolutionary psychology, the construction of human kinds and the problem of free will.

FORMAT: Lecture/seminar

CROSS-LISTING: CTMP 2903.01

HSTC 2208.03: Science and Medicine in Islamic Societies, 700–1500.

Through a combination of primary and secondary source readings, this course explores some of the major trends and debates within science and medicine in late antiquity and the early Middle Ages. A special emphasis is placed on situating these developments within the larger political, social and institutional structure of Islamic societies.

FORMAT: Seminar

CROSS-LISTING: BIES 2208.03

HSTC 2310.03: Women and Gender in Early Modern Science.

This course will explore the roles of women, and questions about women's nature, in the development of Early Modern science. The course will consider several interrelated aspects of scientific culture in the sixteenth, seventeenth, and eighteenth centuries: first, we will look at the place of women in the scientific institutions of the time. Although women were, for the most part, excluded from universities and scientific academies, some women were able to do scientific work through their participation in salons and court guilds. The second part of the course will look at the contributions of some particular women to the fields of physics, astronomy, botany, and medicine. We will first examine how science interpreted sex and gender. We will pay special attention to the biological sciences and their treatment of sex differences, conception, and generation. We will consider here, how these biological theories were influenced by, and at the same time served to uphold, various social and cultural structures. Finally, we will explore the ways in which gender and nature were portrayed in the broader cultural context. We will, for example, discuss the ways in which women appeared as scientists and as symbols of science in art and literature.

FORMAT: Film screening/Discussion

CROSS-LISTING: EMBP 2310.03, GWST 2310.03

HSTC 2340.03: The Origins of Science Fiction in Early Modern Europe.

In 1500, literate Europeans lived in a bounded, geocentric universe. By 1800, the sun had replaced the earth at the centre of a limited planetary system constrained to infinite space. These changes prompted early modern philosophers, scientists and writers to consider the possibility that the universe might contain a plurality of worlds. This course will explore the ways in which the "plurality" theme was developed in some of the earliest works of science fiction. We will consider this theme as it appears on stories of interstellar voyages, extraterrestrial visits, and encounters with extraterrestrial beings, paying special attention to the ways in which early modern writers used these tales to speculate on philosophical, political, and scientific issues.

FORMAT: Seminar

CROSS-LISTING: EMBP 2400.03

EXCLUSION: EMBP 2400.03

HSTC 2400.03: Science and the Media.

From the first Babylonian astronomical records on cuneiform to the public understanding of science on television, the various media have long been crucial to the success and spread of science. This course provides a history of science in the media from the ancient and medieval use of geometrical diagrams, astronomical figures and astronomical illustration through early modern printed texts, popular broadsheets and color historical plates all the way to the dialogues of science in literature, cinema and on the Internet. This expanding presence of science in the media is examined against the backdrop of three revolutions: literary, artistic (ancient and medieval worlds), mechanical (early modern period) and electronic (contemporary ages). Specific themes considered include the increasing scarcity of scientific illustration, the rise of scientific journals, public scientific demonstrations, science in poetry and prose fiction, science and art, radio and television documentaries, the advertising and marketing of science, scientific apocalypses and techno-utopias, biotech, Soviet era technological utopias, and science fiction as a vehicle for social and political commentary.

FORMAT: Lecture/seminar

CROSS-LISTING: SCIE 2000X/Y.06

HSTC 2500.03: Science Fiction in Film.

This course studies portrayals of science and technology in science fiction film. Themes examined include the "scary" scientist; science as malevolent versus science as salvation; the survival of humankind as a technological world and the contrary trend of dehumanisation in the face of advancing technology; scientific utopia and dystopia; science fiction as self-fulfilling prophecy; voyages into space and inter-space; time travel; computers and artificial intelligence; nuclear holocaust and environmental apocalyptic; alien life; genetic engineering and imagined technologies; and science fiction as a vehicle for social and political commentary. Films studied will include an introduction to science fiction from H.G. Wells The Time Machine (1895), H.G. Wells The War of the Worlds (1953), H.G. Wells The War of the Worlds (1953), H.G. Wells The Time Machine (1960), Solaris (1972), Blade Runner (1982) and The Matrix (1999). Film screenings will be supplemented with footage from civil defence films, government celebrations of science and technology along with science documentaries. Films will be accompanied in class by discussion and criticism and students will also read scholarly treatments of cinematic science fiction. Evaluation will be based on participation, written work and a final examination.

FORMAT: Film screening/Discussion

HSTC 3000X/Y.06: The Scientific Revolution.

This course examines the origins and meanings of the "Scientific Revolution". the term was used to describe the spectacular changes in world view in the 16th to 18th centuries when the sciences both reinterpreted and broke away from the received ancient and medieval world views. Surveying traditional and revisionist historiography, this course will explore the new conceptions of mechanism, the body, matter and motion that emerged in this period, along with the new methods of experiment and mathematical reasoning; the divergence in astronomy, biology and physics; and the rise of public and commercial science in the 18th century. The result of individual innovation, internal reform, the impact of other fields of thought and the appropriation of non-Western ideas and technologies, these shifts in outlook will be examined against the backdrop of the broader transformations that took place in culture, society, politics, religion and philosophy. Emphasis will be placed on reading the primary texts of notable figures such as Copernicus, Galileo, Descartes and Newton, as well as the activities of men and women who existed on the periphery of science, either by virtue of marginalization or by belonging to anti-scientific oppositional cultures.

NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.

FORMAT: Lecture/seminar
HSTC 3011.03: The Lecture Series.
In some years a lecture series course is offered. Students are allowed to take up to three such courses, one for each year of upper-level study. Each course will consist of thirteen bi-weekly evening lectures given by specialists from Atlantic Canada and beyond. The lectures will offer students reflections on a number of contemporary issues and themes. Each year a different theme will be explored. FORMAT: Seminar/evening lectures

HSTC 3120.03: Distilling Nature’s Secrets: The Ancient Alchemists.
This course explores the scientific and esoteric currents which contributed to the rise of alchemy in the late Ancient World. This ‘sacred science’ of transmutation was a natural synthesis of Greek natural philosophy, Egyptian mysticism, and Near Eastern metallurgical technologies. The physical processes enacted in the alchemical laboratory were intended to transmute, purify, and transform – and were experienced intensely by the alchemist himself as a spiritual drama of death and resurrection, analogous to the rites of initiation in the mystery cults. Alchemy was thus a form of ritual technology, aimed simultaneously at the purification of self and cosmos. The texts studied in the course range from technical manuals preserved on papyrus, to the highly esoteric and visionary works of the Hermetic philosopher Panutius (circa 300 CE). The relationship between these technical and occult dimensions will be of central concern.
FORMAT: Lecture/seminar

HSTC 3121.03: In Search of the Philosopher’s Stone: The History of European Alchemy.
This course traces the development of alchemical theories and practices in the Medieval Latin West up to the emergence of early modern chemistry. It employs a multi-disciplinary approach which treats the scientific, technological, esoteric and iconographic dimensions of alchemy as interdependent. The entire development of European alchemy is covered from the transmission of the Greek and Islamic alchemical traditions in the 12th century up to Newton, whose alchemical theories represent a period of transition to early modern chemistry in one direction, and to a more spiritualised occult philosophy in the other. This course is independent of HSTC 3120.03. All students interested in the history of science, magic and mysticism are welcome.
FORMAT: Lecture/seminar

HSTC 3130.03: The Origins of Chemistry: From Alchemy to Chemical Bonds.
This course explores the scientific and social development of modern chemistry from the work of 17th century alchemists to the chemical revolution of Lavoisier and Dulong, the beginnings of organic chemistry and biochemistry, the development of the periodic table, and the modern understanding of atomic structure and chemical bonds. Nature: There is no pre-requisite for the course.
FORMAT: Lecture/seminar

HSTC 3150.03: Nature and History.
In the nineteenth and twentieth centuries, the study of the natural world and historical thought have been closely linked. Participants in the seminar will read texts which helped to define ideas in the area after the Enlightenment and consider how these ideas influenced, and were influenced by, developments in scientific thought. The seminar will consider how nature and history are related in idealism, historical materialism and the thinking of the evolutionists, and how this connection is present in Nietzsche, Foucault and Foucault.
FORMAT: Lecture/seminar

HSTC 3200.03: Science and Religion: Historical Perspectives.
Beginning with an overview of the history and methodology of the study of science and religion, encounters between science and religion are traced from the dawn of civilization to the end of the eighteenth century, with a special focus on the early modern period. From an examination of the biblical view of nature, idealism, historical materialism and the thinking of the evolutionists, and how this connection is present in Nietzsche, Foucault and Foucault. The course moves through a treatment of the centrality of theology to Medieval science on to natural theology and the “Watchmaker” Design Argument of the seventeenth and eighteenth centuries. Models of conflict, harmony and complementarity offered the possibility of treatments between science and religion as explored through case studies such as Galileo’s controversy with the Church and instances where religious belief informed scientific discovery. The role of the Church (including the Inquisition) in the development of early modern science.
FORMAT: Seminar

HSTC 3201.03: Science and Religion: Contemporary Perspectives.
Beginning with an overview of the history and methodology of the study of science and religion, encounters between science and religion are traced from the rise of Darwinism in the early nineteenth century to the contemporary postmodern age. From an examination of nineteenth-century “Scientific geology” and the religious impact of Darwin’s Origin of Species (1859), this course moves on to the contemporary topic as the religious interpretations of quantum mechanics, the Big Bang, the anthropic principle, medical science, biotechnology, evolutionary psychology, chaos theory, aesthetics in nature, science fiction and extra-terrestrial life (including SETI). Case studies of “conflict” emanating from Darwinism, the Scopes Trial and the on-going Creation-Evolution debates are contrasted with examples of harmony and interdependence between science and religion in the careers of 19th and 20th century scientists, along with phenomena like the new Intelligent Design (ID) movement. The religious scope of the course in intentionally wide-ranging, and examinations of science-religion interaction within native American, African and the Near Age spirituality are added to treatments of traditional eastern and western religion. Special features include a focus on primary texts, the use of film and guest lectures by scientists.
FORMAT: Lecture/seminar

HSTC 3212.03: The Biosphere: Global Perspectives in Science and Philosophy.
Intended for both science and humanities students interested in ecology, this course will focus on the historical, philosophical and methodological aspects of the concept of the biosphere in order to provide a picture of the history and actual state of affairs in the study of global ecology. We will address both purely scientific and philosophical topics such as the holism vs. reductionism debate; the compatibility of the global approaches with the most influential versions of contemporary Darwinianism (HTU, pre-Socratic “principles” of the biosphere), modelling nature in the modern global ecology and many others. FORMAT: Lecture/seminar

HSTC 3250.03: Going Wild: Exploring the Animal Nature of Humans.
The major focus of this course is the question of how and to what extent human evolutionary sciences can explain the diversity and unity of the “animal” animals – including the current course of the Western civilization. We will discuss the evolutionary foundations of romantic (i) love, suicide, sports, diets, and sexual self-identification.
FORMAT: Seminar/EXCLUSION: HSTC 3615.03

HSTC 3310.03: Hidden Worlds: Microscopy in Early Modern Europe.
Microscopes were introduced into Europe at the beginning of the seventeenth century. In the words of Robert Hooke, the microscope opened up a “new visible World” to the understanding — a strange new landscape populated by vast numbers of new creatures. This course will explore the influence the microscope, and the notes world that it opened up, in the development of early modern science. In the first part of the course, we will take a close look at early microscopy technology and its evolution in the seventeenth, eighteenth, and early nineteenth centuries. The second part of the course will explore the role of the microscope in the evolution of early modern science. We will, for example, consider the role of microscopy in the emergence of the new mechanical.
philosophy and the new experimental science. We will also discuss the histories of some scientific theories (for example, of contagion and generation) that made particular use of observations made with microscopes. Finally, the microscope's revelation of "new worlds" caused conceptual difficulties that perplexed scientists and philosophers alike. In the final part of the course we will consider the challenges that new kinds of experience raised for early modern philosophy, as well as the possible influence of philosophical debates on the acceptance of the new technology.

FORMA:T: Lecture/seminar

HSTC 3331.03: History of the Marine Sciences.

Oceanography did not take definitive form until late in the 19th century. Its roots lie in a number of currents, partly in ancient cosmologies and geography. In this course, the history of marine sciences, including oceanography, is traced from the ancients to the 20th century. The cosmologies of the ancient world, voyages of discovery from the 15th through the 18th centuries, the scientific revolution of the 17th century, the development of biology, physics, chemistry and geology in the late 18th and 19th centuries, all contributed to a gradual enlargement and transformation of human interest in the oceans. Since the late 19th Century, biological, physical, chemical and geological aspects of the marine sciences have grown nearly independently. The scientific, institutional, and social setting in which these nearly autonomous sub-disciplines developed is emphasized.

FORMA:T: Lecture 3 hours

CRoSS-LINiNG: HST 307/03, BIOC 4664/03, MARI 4664/03, OCEA 4311/03, 3311/03, SCIE 4001/03

ReSTRICTION: Restricted to 3rd year students and above.

HSTC 3411.03: Feminism and Science.

Science has been the subject of intense scrutiny by contemporary feminist theorists. The course will examine the various feminist critiques of natural science, as well as the positive proposals that feminism has brought to science and scientific culture. Questions that will be addressed include: Is the style of science gendered? Has feminism influenced the content of various sciences? How has science contributed to gendered constructions of nature? Is there such a thing as value-free scientific research? How do feminist theories of knowledge differ from traditional understandings of scientific knowledge and scientific objectivity? The readings for the course will include works by Donna Haraway, Sandra Harding, Evelyn Fox Keller, Helen Longino, and Hilary Rose.

FORMA:T: Lecture

CRoSS-LINiNG: GWST 3215.03, CTPM 3215.03

HSTC 3412.03: Hypatia’s Daughters: Women in Science.

From Hypatia to Hildegard von Bingen, from Mary Somerville to Marie Curie, to Evelyn Fox Keller, Helen Longino, and Hilary Rose. Readings for this course will include work by Donna Haraway, Sandra Harding, Evelyn Fox Keller, Helen Longino, and Hilary Rose.

FORMA:T: Lecture

CRoSS-LINiNG: GWST 3215.03, CTPM 3215.03

HSTC 3430.03: Experiments in the Mind: Thought Experiments in Physics.

Einstein’s relativity, Schrodinger’s cat, Maxwell’s demon, the history of physics is full of these instructive fictions that are thought experiments. This course examines the historical contexts of many thought experiments in order to understand the different roles they have played in the conceptual development of physics from Antiquity to the present.

FORMA:T: Lecture/discussion/seminar

HSTC 3501.03: The Nature of Time I.

This course will consider views of time beginning with Mesopotamian notions of narrative, Egyptian conceptions, and the encounter between linear and circular time in Athens. The course will then turn to the medieval period, through the thirteenth century, in Pre-Scientific thought, in Greek historical texts. The course will treat some central texts, in Plato on the concept of time in the soul, in Aristotle, whose
HSTC 4011.03: The Lecture Series
In some years the lecture series is offered, students are allowed to take up to three such courses, one for each year of upper-level study. Each course will consist of three to six weekly evening lectures given by specialists from Atlantic Canada and beyond. The lectures will offer students reflections on a number of contemporary issues and themes. Each year a different theme will be explored. FORMAT: Seminar/evening lectures

HSTC 4102.03: Topics in Ancient Natural Philosophy.
Through the full range of one selected ancient work, this course seeks to explore fundamental problems in ancient natural philosophy, such as: How did the ancients see their place in the Cosmos? How did ancient social values affect views of nature? How did the ancients view the 'natural' in antiquity? What are the limitations to textual evidence for ancient science? How did theories about the natural world inform theancient’s view of the 'real world' of technology will be invited to participate in the class. The course will be contextualising the debate by exploring the actual historical evolution of technology. Lectures will be devoted to presenting a social and historical background to the study of modern technologies while seminars will focus on the reading of primary texts in the field. FORMAT: Seminar

CROSS-LISTING: CTMP 4200.03

HSTC 4200.03: Philosophies of Technology I. From Techne to Technology.
This half-year course will explore the history, structure and associated problems of our coming to be technological, beginning with an elaboration of the concept of “techne” in the ancients and its modification in the technical arts and instrumental reasoning of the Enlightenment and of 19th century industrial ideology. Post-Enlightenment critiques polarized around the place of the machine and automation in Karl Marx and the “question concerning technology” in Martin Heidegger will then be examined, leading up to an examination of the present state of technological discourse. In each case, we shall mark the importance of contemporary technological developments by exploring the historical evolution of technology. Lectures will be devoted to presenting a social and historical background to the study of modern technologies while seminars will focus on the reading of primary texts in the field. FORMAT: Seminar

CROSS-LISTING: CTMP 4200.03

HSTC 4201.03: Philosophies of Technology II: The Questions Concerning Technology.
This half-year seminar will explore in detail the implications of powerful contemporary debates surrounding the meaning and future of technology. What do we mean by technology? Can there be a philosophy of technology? What are the political and cultural ramifications of going technological? Topics will include: philosophical determinism in history, feminist critiques, technology and development, the meaning of expertise, technology, art, and the "futurol" social construction of science as cybernetic theory, Donna Haraway’s concept of cybernetic culture and the "modern technological sublime." The course will be conducted in seminar format with particular emphasis placed on the elucidation of historical and contemporary case studies. Whenever possible, guest lecturers from the "real world" of technology will be invited to participate in the class. FORMAT: Seminar

CROSS-LISTING: CTMP 4201.03

HSTC 4300.03: Nature and Romanticism.
Kant’s “Copernican Revolution” in philosophy, ironically, marked a resurrection of a full-blown “idealistic” philosophy of nature. This course will investigate the attempts of Kant’s followers to construct a natural philosophy and its engagement with the rival mechanical world picture. It explores the implications of this endeavour for the growth of romanticism, vitalism and our modern picture of “nature”. It begins with an examination of the ambiguous heritage presented by Kant’s writings on nature and proceeds through the attempts to develop a complete program of idealistic Naturphilosophie and its spread throughout European thought by the medium of romantic art and natural philosophy. FORMAT: Lecture/ Tutorial

CROSS-LISTING: HST 5004.03, EMSP 4300.03

HSTC 4400.03: Newton and Newtonianism.
This seminar involves a close study of the work of Isaac Newton, along with that of his supporters and detractors. Beginning with an overview of pre-Newtonian science, topics range from Newton’s rejection of Cartesianism through his contributions to mathematics, physics, astronomy and optics, along with his inductive scientific method, laws of motion and calculus priority dispute with Leibniz. Also considered are lesser-known aspects of his career, such as his secretive pursuit of alchemy, his biblical theology, his attempts to save the Apocalypse, his role in British statecraft and his autocratic rule of the Royal Society. A taxonomy of the forms of Newtonianism that emerged after Newton’s death also allows an exploration of iconographical and apologetic uses of Newton, and his differing legacies in the Britain and France. This seminar concentrates on primary readings, including Newton’s Principia (1687), Opticks (1704), his alchemical treatises and unpublished theological papers, as well as the Leibnitz-Clarke correspondence (1717), anti-Newtonian and eighteenth-century popularizations of Newtonianism such as Voltaire’s Philosophical Letters (1733) and Macaulay’s Account of Newton’s Discoveries (1748). Attention is paid to the social, cultural and political aspects of Newtonianism and our modern picture of science is required. FORMAT: Seminar

CROSS-LISTING: EMSP 4310.03

HSTC 4500X/Y.06: Honours Seminar in the History of Science and Technology.
This seminar is specifically intended for students in the Combined Honours Degree in History of Science and Technology and will meet the requirements of the 210 credit. NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.

HSTC 4510.03: Independent Readings in History of Science and Technology.
Independent reading courses will be offered annually. The student is assigned to a member of staff for regular meetings to discuss readings in a selected area. Papers and research projects are expected. FORMAT: Individual instruction

PREREQUISITE: Honours registration in History of Science and Technology, permission of instructor and Director of program. Students must complete 60 credit hours before registering in this course.

HSTC 4511.03: Independent Readings in History of Science and Technology.
Independent reading courses will be offered annually. The student is assigned to a member of the staff for regular meetings to discuss readings in a selected area. Papers and research projects are expected. FORMAT: Individual instruction

PREREQUISITE: Honours registration in the History of Science and Technology, permission of the instructor and the Director of the program. Students must complete 60 credit hours before registering in this course.

HSTC 4515.06: Independent Readings in History of Science and Technology.
Independent reading courses will be offered annually. The student is assigned to a member of the staff for regular meetings to discuss readings in a selected area. Papers and research projects are expected. FORMAT: Individual instruction

PREREQUISITE: Honours registration in the History of Science and Technology, permission of the instructor and the Director of the program. Students must complete 60 credit hours before registering in this course.

HSTC 4550X/Y.06: Honours Thesis in the History of Science and Technology.
In this course the student is assigned to a member of staff for regular meetings to discuss readings and present research for the purpose of completing an honours thesis in the History of Science and Technology. Successful completion of HSTC 4550X/Y.06 gives students both their 210 and 215 credit.

NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.

PREREQUISITE: Honours registration in the History of Science and Technology, permission of the instructor and the Director of the program.

Vellumay, R. (SMU)

I. Introduction

International Development Studies is an interdisciplinary program involving the study of poverty, inequality, social change and justice in a global context. The IDS program is structured around two broad axes: development theory/ practice, and the global local. Areas of teaching expertise among the core faculty in IDS include: development theory, gender, culture, human security, rural development, migration, health, Indigenous peoples, participatory development and global citizenship. Additional areas of expertise are drawn from over 40 cross-appointed and adjunct faculty members who teach IDS approved courses and/or supervise our honours thesis and graduate students.

The department’s areas of expertise include many of the key regions of the developing world, particularly Africa, Asia, Latin America and the Caribbean. We take a broad view of development, including development issues within Canada as well as the developing world.

We offer a diverse set of opportunities for students to participate in experiential learning in both Canadian and international contexts. Experiential learning enables students to focus on skills development in a range of areas: language development, research, writing, managerial, etc. Through our experiential learning opportunities, students can volunteer or intern in Halifax, East Africa, Cuba, and many other locations. Students are encouraged to draw upon international development experiences from our many overseas linkage programs through Dalhousie, as well as the 90 local Halifax community organizations. Halifax is the main Maritime regional centre for official and non-governmental organizations active in international development, thereby offering opportunities for students to become engaged locally in development. Students normally participate in experiential learning programs (whether locally or abroad) in their third year of study.

The IDS program offers a study abroad option in Cuba (Winter); with FALCSO (Fiscal Latino Americana de Ciencias Sociales Program Cuba) and the University of Havana as well as a summer program in Cuba.

As an interdisciplinary program, IDS recommends students consider combined degree program. Students are therefore encouraged to enter the combined honors, double major or minor programs, which provide opportunities that further integrate their IDS studies with those of an approved arts or science field, e.g., IDS and History, IDS and Biology. Double majors and combined honors degrees provide additional opportunities for students to pursue graduate studies in more than one area.
Students with backgrounds in sciences are also welcome in this program as topics in international development cut across all disciplines from anthropology to zoology.

The interdisciplinary nature of the program requires that students take a number of credits outside the IDS department as IDS approved courses in other departments. The first year of study at Dalhousie is dedicated to completing first year requirements. IDS students are encouraged to take a broad range of disciplines in their first year to prepare them for the interdisciplinary format of the program.

First year students are encouraged to participate in a range of IDS non-class offerings including the Global Development Seminar Series and numerous student-led organizations related to International Development. Other events and activities are advertised on the IDS website and information can be obtained from the IDS office.

Students are encouraged to acquire competence in a relevant language in addition to English (e.g., Arabic, French, Spanish) and Economics. Research design and basic statistics courses (e.g., POLI 3402/3403 or SOAS 3402/3403) may also be useful skills to acquire throughout the IDS degree.

II. Degree Programs

In addition to the departmental requirements listed below, students must satisfy the requirements outlined in the Degree Requirements for College of Arts and Science.

The IDS Department offers the following undergraduate degree options:

IDS as the second subject of study

1. Minor in IDS (three IDS credits required)
2. Double Major with IDS as the second subject (five IDS credits required)
3. Combined Honours with IDS as the second subject (six IDS credits required)

IDS as the primary subject of study

4. BA (15 credits) Major in IDS (three IDS credits required)
5. BA (20 credit) Double Major in IDS as the primary subject (five IDS credits required)
6. BA (20 credit) Major in IDS (six IDS credits required)
7. BA (20 credit) Combined Honours in IDS as a second subject: Thesis stream - seven IDS credits required
8. BA (20 credit) Combined Honours in IDS as a second subject: Coursework stream - nine IDS credits required
9. BA (20 credit) Concentrated Honours in IDS in Thesis stream - nine IDS credits required
10. BA (20 credit) Concentrated Honours in IDS in Coursework stream - nine IDS credits required

First Year Recommended Courses

To enter any of the IDS undergraduate degree programs, students must have completed five full credits (30 credit hours) and be strongly recommended to fulfill the first year requirements outlined in the Degree Requirement section of this calendar. Students who intend to pursue degrees in IDS are encouraged, but not required, to take five first year courses that will both fulfill their first year requirements and contribute to their broad understanding of international development issues. Students who are highly encouraged to take INTD 1100 (W/CAN 1100.06 (Dalhousie and the World), which can be used to satisfy either the first year social science or humanities requirement. Students who are considering a double major or combined honors program in IDS and another discipline are also encouraged to take any pre-requisite courses for upper level courses in the other discipline. The following courses provide background to key issues or basic skills related to International Development Studies, but are not pre-requisites for upper level IDS courses.

Social Science Requirement: INTD 1100 (W/CAN 1100.06); ECON 1101/1102; GWST 1010/1015; HIST 1501/1502; POLI 1010; POLI 1015; POLI 1020; POLI 1025; POLI 1030; POLI 1100; SOSA 1000; SOSA 1005; SOSA 1100; SOSA 1200; King's FYP.

Humanities Requirement: INTD 1100 (W/CAN 1100.06); HIST 1501/1502; HIST 1701/1702; GWST 1010/1015; RELS 1001/1002; RELS 1003; RELS 1005; RELS 1100; RELS 1105; RELS 1200; King's FYP.

Physical Science Requirement: SUST 1000; SUST 1005; ECON 1101/1102; ENVS 1000; ERTH 1060; PSYCH 1021,1022.

Language Requirement: French, Spanish, Arabic, Chinese, Italian, Russian, etc.

Writing Requirement: HIST 1005; POLI 1102; SOSA 1000; SUST 1000; PHIL 1010; ENGL 1010; ENGL 1020; ENGL 1040; ENGL 1045; ENGL 1050; ENGL 1500; King's FYP.

Degree options for IDS as the second subject of study

1. Minor in IDS
   See Minors in the College of Arts and Science section of this calendar (page 128).

2. Double Major – IDS as the second subject
   Advanced Courses Required:
   • INTD 2001.02/2002.02
   • INTD 3002.03 or 3003.03
   • One half credit IDS course with theory content at the 3000 or 4000 level: that is, any INTD course at the 3000 or 4000 level, excluding INTD 3002, INTD 3003, INTD 3101, INTD 3109 and INTD 4012.
   • One full credit of IDS and/or IDS approved courses at the 2000 level or above (See list of IDS approved courses in Section IV).
   • Two half credits of IDS and/or IDS approved courses at the 3000 level or above.
   In total, a minimum of five and a maximum of seven full credits in IDS are required, more credits are required in the first subject.

3. Combined Honours with IDS as the second subject
   Advanced Courses Required:
   • INTD 2001.02/2002.02
   • INTD 3002.03 or 3003.03
   • One half credit IDS course with theory content at the 3000 or 4000 level: that is, any INTD course at the 3000 or 4000 level excluding INTD 3002, INTD 3003, INTD 3101, INTD 3109 and INTD 4012.
   • Two full credits of IDS and/or IDS approved courses at the 2000 level or above. At least one full credit of IDS approved courses must be taken from a single department other than IDS (see list of IDS approved courses in Section IV).
   • Four half credits of IDS and/or IDS approved courses at the 3000 level or above.
   In total, six full credits in IDS are required.

Degree options for IDS as the primary subject of study

4. BA (15 credit) Minor in IDS
   See Minors in the College of Arts and Science section of this calendar (page 128).

5. BA (20 credit) Double Major in IDS
   Advanced Courses Required:
   • INTD 2001.02/2002.02
   • INTD 3002.03 or 3003.03
   • One half credit IDS course with theory content at the 3000 or 4000 level: that is, any INTD course at the 3000 or 4000 level excluding INTD 3002, INTD 3003, INTD 3101, INTD 3109 and INTD 4012.
   • Two full credits of IDS and/or IDS approved courses at the 2000 level or above. At least one full credit of IDS approved courses must be taken from a single department other than IDS (see list of IDS approved courses in Section IV).
   • Two full credits of IDS and/or IDS approved courses at the 3000 level or above.
   In total, five credits in IDS are required.

6. BA (20 credit) Major in International Development Studies
   Advanced Courses Required:
   • INTD 2001.02/2002.02
   • INTD 3002.03 or 3003.03
• One half credit INTD course with theory content at the 3000 or 4000 level; that is, any INTD course at the 3000 or 4000 level excluding INTD 3002, INTD 3003, INTD 3107, INTD 3109 and INTD 4012.
• Two full credits of IDS and/or IDS-approved courses at the 2000 level or above. At least one credit of IDS-approved courses must be taken from a single department other than IDS. (See list of IDS-approved courses in Section IV.)
• Four half credits of IDS and/or IDS-approved courses at the 3000 level or above.

In total, a minimum of six and a maximum of nine full credits in IDS are required.

IDS Honours Program
The IDS Honours program is designed for students with a demonstrated aptitude for advanced study in the field.

• Admission to the IDS Honours program is based on academic performance and, in the case of the thesis stream, a thesis proposal. Applicants normally should have achieved an overall Grade Point Average (GPA) of at least 3.50 (B+) or better and a minimum B+/A- in all IDS and IDS-approved courses to be considered for admission. In the case of a combined degree, those same requirements must be met in the second major subject.

• The deadline for Honours Applications is January 31 of a student’s third year of study. Consult the IDS Department website (www.dal.ca/ids) for information on how to apply to the honours program.

The available options within IDS Honours Program are:

7.a BA (20 credit) Combined Honours in IDS and a second subject: Thesis stream
Advanced Courses Required:
• INTD 2001.03 / INTD 2002.03
• INTD 3002.03 or INTD 3003.03
• INTD 4012 (Honours Thesis Course).
• At least one half credit INTD course with theory content at the 3000 or 4000 level; that is, any INTD course at the 3000 or 4000 level excluding INTD 3002, INTD 3003, INTD 3107, INTD 3109 and INTD 4012.
• One half credit of 4000-level INTD seminar course.
• Three full credits of INTD and/or IDS courses at the 2000 level or above. Students must take at least one full credit of IDS approved courses from at least two different departments.
• Two half credits of INTD and/or IDS approved courses at the 3000 level or above.

In total, a minimum of seven and a maximum of eight full credits in IDS are required.

7.b BA (20 credit) Combined Honours in IDS and a second subject: Coursework stream
Advanced Courses Required:
• INTD 2001.03 / INTD 2002.03
• INTD 3002.03 or INTD 3003.03
• INTD 4012 (Honours Thesis Course).
• At least one half credit INTD course with theory content at the 3000 or 4000 level; that is, any INTD course at the 3000 or 4000 level excluding INTD 3002, INTD 3003, INTD 3107, INTD 3109 and INTD 4012.
• One half credit of 4000-level INTD seminar course.
• Three full credits of INTD and/or IDS courses at the 2000 level or above. Students must take at least one full credit of IDS approved courses from at least two different departments.
• Two half credits of INTD and/or IDS approved courses at the 3000 level or above.

In total, a minimum of seven and a maximum of eight full credits in IDS are required.

8.a BA with Concentrated Honours in International Development Studies - Thesis stream
Advanced Courses Required:
• INTD 2001.03 / INTD 2002.03
• INTD 3002.03 or INTD 3003.03
• INTD 4012 (IDS Honours Thesis course).
• One half credit INTD course with theory content at the 3000 or 4000 level; that is, any INTD course at the 3000 or 4000 level excluding INTD 3002, INTD 3003, INTD 3107, INTD 3109 and INTD 4012.

• One half credit of 4000-level INTD seminar courses.
• Three full credits of INTD and/or IDS-approved courses at the 2000 level or above. Students must take at least one full credit of IDS approved courses from at least two different departments.
• Six half credits of INTD and/or IDS-approved courses at the 3000 level or above. (See list of IDS-approved courses in Section IV.)

In total, a minimum of 9 and a maximum of 11 IDS credits are required.

8.b BA with Concentrated Honours in International Development Studies - Coursework stream
Advanced Courses Required:
• INTD 2001.03 / INTD 2002.03
• INTD 3002.03 or INTD 3003.03
• One half credit INTD course with theory content at the 3000 or 4000 level; that is, any INTD course at the 3000 or 4000 level excluding INTD 3002, INTD 3003, INTD 3107, INTD 3109 and INTD 4012.
• Two half credit 4000-level INTD seminar courses.
• Three full credits of INTD and/or IDS-approved courses at the 2000 level or above. Students must take at least one full credit of IDS approved courses from at least two different departments.
• Six half credits of INTD and/or IDS-approved courses at the 3000 level or above. (See list of IDS-approved courses in Section IV.)

In total, a minimum of 9 and a maximum of 11 IDS credits are required.

Conversions
Students who have completed a 15 credit degree can upgrade to a 20 credit major or double major degree. Students who have completed a Major in IDS can upgrade to an Honours degree (pending acceptance to the IDS honours program). The requirements for conversions are as follows:

BA Major Conversion in International Development Studies
Dalhousie graduates who wish to upgrade their qualifications from a 15 credit Minor to a 20 credit Major degree may enter this program. Students must complete the full set of 20 credit Major requirements, usually by taking five additional full credits.

BA Honours Conversion in International Development Studies
Dalhousie graduates who wish to upgrade their qualifications from a 15 credit Minor or a 20 credit major or double major degree to a 20 credit Honours degree may enter this program if they meet the conditions for admission to the Honours program. Students must complete the full set of Honours requirements. Students interested in this program should consult the Undergraduate Advisor.

III. Course Descriptions

A. Core Courses

INTD 2001.03: Introduction to Development I.
Poverty, inequality and injustice are widespread throughout the contemporary developing world. This course will examine how this situation came to be. It begins by analyzing the different meanings of the term “development” and then examines the major approaches that have shaped practical development initiatives on the ground in the Global South over the past 60 years. The course also examines the legacies of history for contemporary development efforts in the Global South through specific case studies.

FORMAT: Lecture/tutorial

PREREQUISITE: Completion of five full credits at the 1000 level or instructor’s permission.

CROSS-LISTING: GEOG 2001.03

INTD 2002.03: Introduction to Development II.
This course builds upon the core concepts and approaches studied in INTD 2001 (i.e. different theoretical approaches to development and the historical creation of underdevelopment). The course examines key contemporary issues in the field of development and analyzes the connections between them: debt, global trade rules, foreign aid, hunger and malnutrition, rural and urban livelihoods, population growth. The course also examines the principles and strategies that have been used to promote and resist development, including:
EXCLUSION: INTD 3045.03

requirement.

The objective of this half-credit course is to introduce students to the society and development planning, methodologies of development practice in the field, ethical issues related to development work, fundraising, project proposal writing and project evaluation. The major assignment will involve the preparation of a development project proposal. Because this is a course in development practice, it will involve both seminar discussions and practical “hands-on” activities. Different sections of the course may include different thematic emphases – e.g. rural development, gender and community development.

FORMA T: Lecture/seminar

PREREQUISITE: Completion of five credits at the 1000 level or instructor’s permission

INTD 3003.03: Development and Activism: Methods of Organization, Manifestation and Dissent.

There are three parts to this course. In Manifestation we explore theories of activism to understand how motivated individuals managed to change their societies. In Organization we wrestle with the legalities of forming a civil-society organization. In Dissent we take up our skills to the streets by organizing lawful protests.

FORMA T: Lecture/tutorial

PREREQUISITE: INTD 2001.03 and INTD 2002.03 or instructor’s permission

INTD 4012.03: Honours Thesis Seminar.

The honours thesis course is open to only those students who have been accepted into the thesis stream of the IDS honours program. This course will support students through the writing of their honours theses, from proposals to completion. Issues of research design, method, and ethics will be addressed, and work in progress will be presented.

FORMA T: Seminar

PREREQUISITE: Admission to IDS Honours Program (Thesis Stream)

B. Additional IDS Courses

INTD 1100X/Y.06: Halifax and the World.

This course offers an introduction to both International Development Studies and Canadian Studies by exploring the connections between important global issues and your daily life as a student in Halifax. As you walk across the Dalhousie campus and go about daily life in Halifax, your actions connect you to people, the globe, and to the history of the city and world as well as to the many works of literature, art, and music that depict these connections. 

FORMA T: Lecture, discussion, tutorial and experiential learning outside the classroom

CROSS-LISTING: CANA 1100.06

EXCLUSION: INTD 1101.03/1101.01

INTD 2045.03: Indian Society: Change and Continuity.

This course is intended for Canada World Youth participants who wish to use their Canada World Youth experience as a basis for further study—leading to an academic credit. Canada World Youth participants will receive detailed written course guidelines and a reading package. CWY participants are required to keep a journal of their observations and to write a research report drawing upon their experiences on the CWY project both in Canada and overseas. Upon return to Canada, they should communicate with the International Development Studies Office at Dalhousie and should extra guidelines be sought, they inform the Course Instructor at that point. Normally, within 40 days of their return, they should submit their reports (in accordance with guidelines provided by the Instructor) for evaluation. All CWY course participants are encouraged to present talks to local high schools, youth groups, and appropriate community-campus organizations.

The degree of analysis will be more demanding the higher the level of course taken. In each case, papers may be written in English or French. 

RECOMMENDED: INTD 1012.02

NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.

FORMAT: Consult the Department for more information

RESTRICTION: Can only be taken once in a student’s program.

INTD 3000.03: Seminar in Development Studies.

This seminar course consists of an intensive examination of a selected issue within International Development Studies. Since the specific topic or research problem will vary from year to year, students are advised to consult the department prior to registration.

FORMA T: Seminar

PREREQUISITE: INTD 2001.03 and INTD 2002.03 or instructor’s permission

INTD 3001.03: Contemporary Debates in Development Theory.

This seminar course examines key contemporary theoretical debates in International Development Studies and their relevance to the real world of development practice.

FORMA T: Seminar

PREREQUISITE: INTD 2001.03 and INTD 2002.03 or instructor’s permission

INTD 3010.03: Seminar in Development Studies.

This seminar course consists of an intensive examination of a selected issue within International Development Studies. Since the specific topic or research problem will vary from year to year, students are advised to consult the department prior to registration.

FORMA T: Seminar

PREREQUISITE: INTD 2001.03 and INTD 2002.03 or instructor’s permission

INTD 3012.03: Sustainability, Development, Economy.

This course offers an introduction to principles of sustainability and equitable distribution of benefits oriented towards issues of economy. The course adopts an interdisciplinary framework of inquiry to explore challenges of appropriate scale (relative to biocapacity), efficient allocation, and inter and intra-generational equity. In addition, the course will consider how these issues apply to managing real world issues in environmental management, and will explore tools to quantify and interpret scale, efficiency, and distributive justice. This course is designed as a one-term introduction to the intersection of sustainability, economic issues and social justice for undergraduate students who have little or no prior exposure to economics, but who have completed one or more courses in international development, IDS, or economics, or related programs.

FORMAT: Online delivery

PREREQUISITE: INTD 2001.02 or SUST 2000 or permission of instructor
INTD 3107X/Y.06: Experiential Learning: Canada.
Experiential learning is an opportunity for students to reflect on the global/local and theory/practice dynamics of the world around them. Other programs and departments use terms such as internship, volunteer or co-op placements. IDS has adopted the term experiential learning because it reflects the interplay between academic and practical skills development that this program offers. Experiential learning courses are available for both local and international placements. The Canadian component of experiential learning focuses on the themes of community development and public engagement. The international component addresses questions of global citizenship. The Canadian component of experiential learning combines classroom learning with volunteer work experience in a community organization in Halifax or other parts of Canada. Students are required to volunteer for a minimum of 40 hours in each term, or approximately 3 hours/week. In addition to this work, students are required to complete a set of readings (to be developed in collaboration with the course instructor) and three academic assignments (a mid-term report, a reflective piece and an academic paper).

NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.

INTD 3109.03: Experiential Learning: Abroad.
The experiential learning abroad course is open to International Development Studies students who wish to obtain academic credit for an overseas placement. Students who have already secured a place in an overseas experiential learning program can register for this half credit. Special permission to register for this course is required and an application for this course must be submitted prior to registration. Students are required to complete course readings and to write several essays reflecting on the relevant literature and the practical work experience. One half credit is completed over the course of a full academic year.

INTD 3110.03: Migration and Development.
The purpose of this course is to explore and better understand the connections between migration and development in contemporary societies. Classes will introduce or further explore one main theme or issue, such as development-induced displacement, labour migration, and HIV/AIDS and migration. Each class will centre on one or more discussion questions, exchange insights from relevant experiences of class participants or focus on a case study.

INTD 3111.03: Popular Culture and Development.
Development does not occur in a vacuum; it is informed by a particular cultural understanding and carried out by a specific mode of politics. Similarly, culture is not a simple linear, unilateral interpretation, but is a complex, interdependent, and constantly evolving system that is shaped by other societal dimensions. This course will seek to understand the connections between culture and development by specifically exploring the dynamics of popular culture and its linkages with capitalist forms of development mainly in the South.

FORMAT: Lecture/seminar

INTD 3114.03: Environment and Development.
This seminar investigates the intersections between environmental science and development studies. Our primary focus will be to understand how the non-human environment influences and constrains development interventions, both in the past and the present. The course is organized into three distinct sections. The first focuses on informal lecture mixed in with discussion and interactive forums, including debates and small group exercises. The second component of the course revolves around student presentations, while the final component consists of a simulated negotiation.

FORMAT: Lecture/seminar

INTD 3115.03: Global Health: Challenges of Global Health Equity in the 21st Century.
By examining global inequalities that lead to health injustices, this course explores why healthcare is abundant for some and nonexistent for others. It identifies why some are born to live well, and others are doomed to die quickly. It asks, "what are we going to do about it?"

FORMAT: Lecture

INTD 3116.03: Contemporary Issues in Gender and Development.
The course critically examines how development processes affect women and men and gender relations. Many development projects and policies have had a negative impact on women. The course engages students in discussions and debates about the ways in which gender is formed and gender roles are sustained. It explores the gendered impact of policies and processes and examines issues such as governance, HIV/AIDS, and conflict.

FORMAT: Seminar

INTD 3125.03: The French-Speaking World.
Introduction to the French-speaking world from a political, cultural, social and economic perspective. Study of the organization known as la Francophonie, with an emphasis on its evolution and mandate, as well as on the bilateral and multilateral cooperation between member countries. The course is designed for students who are not specializing in French. The course format will consist of lectures and in-class discussion of print and audio-visual materials. Student assessment will be based on oral presentations, assignments, exams and written papers. The language of the course will be English.

CROSS-LISTING: FREN 3125.03

INTD 3150.03: Aspects of the francophonie/Aspects of the Francophone World.
Taught in French.

Introduction to the study of the francophone world: political, cultural, social and economic perspective. Study of the organization known as la Francophonie, with an emphasis on its evolution and mandate, as well as on the bilateral and multilateral cooperation between its member countries. The course is designed for students who are not specializing in French. The course format will consist of lectures and in-class discussion of print and audio-visual materials. Student assessment will be based on oral presentations, assignments, exams and written papers. The language of the course will be English.

CROSS-LISTING: FREN 3125.03

INTD 3401.03: Seminar in Development Studies.
This seminar course consists of an intensive examination of a selected issue within International Development Studies. Since the specific topic or research problem will vary from year to year, students are advised to consult the department prior to registration.

FORMAT: Seminar

PREREQUISITE: INTD 2001.03 and INTD 2002.03 or instructor’s permission
INTD 3406.03: Seminar in Development Studies.
This seminar course consists of an in-depth examination of a selected issue within International Development Studies. Since the specific topic or research problem will vary from year to year, students are advised to consult the department prior to registration.
FORMAT: Seminar
PREREQUISITE: INTD 2001.03 and INTD 2002.03 or instructor's permission

INTD 3408.03: The Cuban Development Model.
This course examines the evolution of the Cuban development model, from the Conquest and colonization by the Spanish to the reforms of the early 21st Century. The objective is to develop an understanding of the various development strategies employed by Cuba, particularly since the revolution of 1959. When asked about the Cuban development model, most people nowadays would say "socialism." Thirty years ago it was easier--as it had been from the beginning of the 18th Century. In fact Cuba obtains most of its hard currency from medical-related services--readily from the exportation of medical services, but also from the sale of sophisticated biotechnological products. Cuba's approach has evolved dramatically in the last two decades, and particular attention will be paid to this period.
FORMAT: Lecture and discussion
PREREQUISITE: INTD 2001.03 and INTD 2002.03

C. The Cuba Semester Program - Offered in the Winter Semester only in Cuba

INTD 3301.03: Spanish Language and Grammar: The Cuban Dialect.
NOTE: INTD 3301 - 3306 are offered as part of the Cuba Semester program. Only students enrolled in this program may take these courses.
Spanish Language and Grammar: The Cuban Dialect (prerequisite for the remaining courses).

INTD 3302.03: Social Development in Cuba.
This course examines the situation of women, the family and children in Cuba, and the educational system in theory and in practice.

INTD 3303.03: The Political Economy of Cuba.
Analysis and debate of the forms of politics practiced in the Cuban revolution, as well as with institutions, during the various stages of the revolutionary process. Study of the evolution of the Cuban economy and all its principle strategies, including the economic crisis and Cuba's transition in the international economic arena.

INTD 3304.03: Sustainable Development in Cuba.
The course examines Cuba's experience with sustainable development, including recently introduced agricultural cooperatives and communal environmental education.

INTD 3306.06: Field Research Practicum.
This course involves four-weeks of field research under the supervision of a Cuban professor, culminating in the production of a major research paper. Research will be undertaken in one of the following three areas:
* the environment and sustainable development;
* women, family and childhood in the community;
* community work and social participation.
FORMAT: Fourteen weeks - University of Havana
PREREQUISITE: Students must be, at least, functional in Spanish (SPAN 1020.06 and SPAN 2020.06).
CROSS-LISTING: SPAN 3301.03, 3302.03, 3303.03, 3304.03, 3306.06
RESTRICTION: Open to students enrolled in 3rd or 4th year of the IDS or Spanish program or comparable programs at other universities

INTD 3310.06: Cuban Culture and Society.
Through seminars, lectures and other activities, students will be introduced to Cuban society and culture. This course consists of briefening and debriefing sessions in Havana with two weeks spent in Cuba. In Cuba, there will be daily lectures in English at the University of Havana and field trips to sites in and around Havana with opportunities to meet and interact with the local population. Participants will be required to keep a journal, and prepare and present a research paper on an approved topic related to Cuban development. This course counts as a credit in IDS, or Spanish towards the IDS established discipline requirement.

INTD 4001.03: Environmental Conflict and Security.
This seminar seeks to unravel the origins of conflict in the Global South. It emphasizes the ecological dimension of conflict, by investigating the interactions between natural resources and political upheaval. We will trace the origins of a diverse set of conflicts evaluating the role the non-human environment plays in triggering upheaval, as well as possible steps to alleviate ongoing conflicts and prevent new ones.
FORMAT: Seminar
PREREQUISITE: INTD 2001.03 and INTD 2002.03 or instructor's permission

INTD 4003.03: Global Poverty and Human Rights: From Development to Global Citizenship.
This course explores contemporary debates from an interdisciplinary cadre of scholars in order to understand why our political and financial systems sequesce to world poverty. The course will run as a seminar course that will require students to contribute as active participants by generating critical debate out of the assigned readings.
FORMAT: Seminar
PREREQUISITE: Minimum of 2 years of Spanish and/or equivalent and at least one third year IDS course or instructor's permission
CROSS-LISTING: SPAN 4003.03

INTD 4006.03: Special Topics in International Development Studies.
INTD 4009.03: Topics in Cuban Development.
This course will undertake a case, in depth examination of a select theme in Cuban development. The theme will vary from year to year. These may include such topics as: Issues of Gender & Society, Economic Relations & International Policy, Sustainable Development & Social Participation in Rural Communities & Agricultural cooperatives, Family, Poverty, Social Development and Community Programs, Social Class Dynamics and Economic Strategies. The course will be taught in Spanish. Classes will involve the reading, presentation, and discussion of selected readings.
FORMAT: Seminar
PREREQUISITE: Minimum of 2 years of Spanish and/or equivalent and at least one third year IDS course or instructor's permission
CROSS-LISTING: SPAN 4006.03

INTD 4011.03: Advanced Seminar in Development Theory.
PREREQUISITE: INTD 2001.03 and INTD 2002.03 or instructor's permission

INTD 4013.03: Development & Security.
The primary aim of this course is to provide a broad foundation to some of the theoretical perspectives which have informed current thinking in gender and development. The course introduces students to key concepts in the analysis. PREREQUISITE: INTD 2001.03 and INTD 2002.03 or instructor's permission
CROSS-LISTING: GWST 4213.03

INTD 4022.03: Special Topics in IDS.
INTD 4211.03: Gender and Development: Theory, Concepts and Methods.
The primary aim of this course is to provide a broad foundation to some of the theoretical perspectives which have informed current thinking in gender and development. The course introduces students to key concepts in the analysis. PREREQUISITE: INTD 2001.03 and INTD 2002.03 or instructor's permission
CROSS-LISTING: GWST 4213.03

IV. IDS Approved Courses from Other Departments
NOTE: Some courses are not offered every year so please consult the current timetable, in addition to the calendar, when registering.

1. Arabic
   • ARIC 2100.03: A Cultural Introduction to the Arab World

2. Contemporary Studies
   • CTMP 2115.03: Conception of Race in Philosophy, Literature and Art
   • CTMP 2221.03: The Question of the Other I
   • CTMP 2222.03: The Question of the Other II
7. Environmental Studies

Most environmental scientists have primary expertise in a particular discipline and work cooperatively with specialists from other disciplines to solve environmental problems. Dalhousie offers courses in both environmental studies and science. However, current programs that also provide courses emphasizing environmental subjects include Earth Sciences (geology and hydrogeology), marine biology and POLI 3865.03.

• ENV 1220.01: International Environmental Law for Scientists
• ENV 3810.01: Environmental Problem Solving I
• ENV 3820.01: Environmental Problem Solving II: The Campus as a Living Laboratory
• ENV 4001.01: Environmental Impact Assessment
• ERTH 2410.03: Environmental and Resource Geology
• ERTH 3410.03: Enhanced Environmental Geology
• GEOG 2070.03: Area Studies on Mexico and Central America
• GEOG 2201.01: Intro to Development Studies
• GEOG 2201.01: Intro to Development Studies II
• GEOG 2203.05: Africa: An Introduction
• GEOG 2503.03: Climate Change
• GEOG 3145.03: Peoples and Cultures of the World: Selected Area Studies
• PHIL 2485.03: Environmental Ethics
• PHIL 2485.03: Technology and the Environment
• POLI 3577/XY.06: Management and Conservation of Marine Resources
• POLI 3585.01: Politics of the Environment
• POLI 3589.01: Politics of the Sea

8. Gender and Women’s Studies

It is important to recognize the implications of gender issues and to be sensitive to how these are viewed in different cultural circumstances. Hence, students are strongly encouraged to participate in at least one of the following GWST courses.

• GWST 2006.03: Women and Islam
• GWST 2040.X/XY.06: Work and Occupations in a Changing World
• GWST 2006.03: Comparative Perspectives on Gender
• GWST 3006.03: Comparative Perspectives on Gender and Work
• GWST 3105.01: Women and Religion
• GWST 3106.03: Issues in Latin American Society
• GWST 3110.03: Gender and Development in Africa
• GWST 3420.05: Sex and the State
• GWST 3642.05: Sexualization of Western Political Thought
• GWST 4116.03: Contemporary Issues in Gender and Development
• GWST 4211.03: Gender and Development: Theory, Concepts and Methods
• GWST 4520.03: Empowerment, Gender, and Development

9. History

Just as people need to know who they are and how they arrived there, groups, races, courses, states and nations need a sense of their own past as part of their culture and to guide their future development choices.

• HIST 2006.03: The Atlantic World, 1450-1650: European Colonization of the Americas
• HIST 2007.03: The Atlantic World, 1650-1800: European Empires in the Americas
• HIST 2010/2100.06: Imperial and Soviet Russia
• HIST 2101.03: Soviet Russia
• HIST 2108.03: Latin American Dictators in the Novel
• HIST 2301.03: Latin America
• HIST 2302.03: Central America to 1979
• HIST 2303.01: Area Studies on Mexico and Central America
• HIST 2304.01: Cuba: Ares Colonial Times
• HIST 2305.01: The Cuban Cultural Revolution
• HIST 2306.03: Colonial Latin America
• HIST 2307.01: Latin America since Independence
• HIST 2309.01: Introduction to Caribbean History (1480 to present)
• HIST 2423.01: Africa Before 1900
• HIST 2426.05: Africa Since 1900
• HIST 2427.03: The Ottoman Empire and Its Legacy in the Middle East, 1700-1923
• HIST 2428.03: Classical and Medieval History of Islamic Civilization
• HIST 2504.03: Modern History of Turkey, Iran, Iraq, and the Arab-Speaking lands (nineteenth-twentieth centuries)
• HIST 2505.03: Eastern Europe and the Soviet Union
• HIST 2510.03: Modern History of South Asia
• HIST 2711.03: Struggles that Shaped the Modern World: 1600 - 1900
• HIST 2722.03: Freedom Fighters or Terrorists?
• HIST 2700.03: Russian Society
• HIST 2700.03: Russian Topics
• HIST 2700.03: Russian History
• HIST 3390.03: Latin America: Revolution and Repression.
• HIST 3390.03: Indigenous Movements in Latin America
• HIST 3490.03: The Making of Colonial Africa, c. 1850-1930
• HIST 3471.03: Struggles in the City: Labour, Migration and Urban Life in Colonial Africa.
• HIST 3433.03: The Rise and Fall of African Slavery
• HIST 3433.03: Southern Africa to 1860
• HIST 3433.03: Southern Africa since 1860
• HIST 3471.03: Wars and Revolutions in Nineteenth Century Africa
• HIST 3471.03: Wars and Revolution in Twentieth Century Africa
• HIST 3390.03: Topics in Global History
• HIST 3509.03: Arab-Culpts, Turkish Communities, and Persian Viziers: Islamic History, 700-1200
• HIST 3510.03: Sultans and Slaves: Politics and Religion in the Islamic Conqueror Age (1500-1800)
• HIST 3511.03: Ancient and Medieval History of the Persianate World
• HIST 3512.03: Modern History of Iran, Central Asia, and the Caucasus
• HIST 3513.03: From Cairo to Cape Town: Religious Revival, Identity and Colonialism in Muslim Africa.
• HIST 3543.03: Food for Thought: History and the Culinary Cultures of the Islamic World
• HIST 4271.03: The Fisheries of Atlantic Canada's Society and Ecology in Historical Perspective
• HIST 4209.03: Topics in Latin American History
• HIST 4209.03: Topics in African History
• HIST 4401.03: State Violence: Communal Conflict and Cremilology in Modern South Africa
• HIST 4404.03: Crime and Punishment in Modern South Africa
• HIST 4475.03: African Intellectuals and the Modern Experience
• HIST 4510.03: Topics in Islamic and Middle East History.
• HIST 4548.03: Scripture and Strategy: History of Islamic Political Thought
• HIST 4590.03: Orientalism and Occidentalism
• HIST 4593.03: A dream Palaces or a Bitter Reality: Arab Intellectuals and their Ideologies in the Modern Period
• HIST 4641.03: Sex, Conquest and Power, Sex and Gender in Latin America - 1492 to the present.

10. Philosophy
Issues in International Development are fundamentally concerned with principles of ethics and justice. Philosophy provides students with the necessary foundation to think about these principles and apply them to international issues in an informed way.

• PHIL 2001.03: Ethics in the World of Business
• PHIL 2109.03: Philosophical Issues of Feminism
• PHIL 2109.03: Philosophy and the Black Experience
• PHIL 2409.03: Democracy, Difference and Citizenship
• PHIL 2479.03: Justice in Global Perspective
• PHIL 2480.03: Environmental Ethics
• PHIL 2486.03: Technology and the Environment
• PHIL 2479.03: Human Rights: Philosophical Issues
• PHIL 3479.03: Liberalism and Global Justice
• PHIL 4700.03: Philosophy of Race

11. Political Science
Political Science is critical for individuals who want to know more about the values, laws, institutions and policy mechanisms that govern their lives in society, and, as well, the differences between their systems of government and those in other countries.

• POLI 2300/Y:06: Comparative Politics
• POLI 2520.03: World Politics
• POLI 2520.03: Foreign Policy in Theory and Practice
• POLI 3302.03: Comparative Development Administration
• POLI 3302.03: Human Rights: Political Issues
• POLI 3311.03: Sport and Politics
• POLI 3311.03: African Politics
• POLI 3330.03: Governance and Globalization
• POLI 3346.03: Politics in Latin America
• POLI 3380.03: Politics of Climate Change
• POLI 3385.03: Politics of the Environment
• POLI 3401.03: Human Rights: Philosophical Issues
• POLI 3520.03: Building Democracy and Peace
• POLI 3520.03: Comparative Foreign Policy Simulation
• POLI 3531.03: The UN in World Politics
• POLI 3553.03: The New International Division of Labour
• POLI 3557/Y:06: Management and Conservation of Marine Resources (summer only)
• POLI 3560.03: Foreign Policies of Third World States
• POLI 3564.03: Political Economy of Southern Africa
• POLI 3560.03: Human Development/Security at the Start of the Twenty-first Century
• POLI 3567.03: International Organizations
• POLI 3570.03: Canada and the World
• POLI 3581.03: Diplomacy and Negotiation
• POLI 3588.03: Politics of the Environment
• POLI 3587.03: International Political Economy
• POLI 3596.03: Explaining Global Conflict and Violence
• POLI 3402.03: Comparative Development Administration
• POLI 3401.03: Human Rights Political Issues
• POLI 3435.03: Comparative Perspectives on the Development State
• POLI 3459.03: Canadian Foreign Policy
• POLI 4603.05: Nationalism and Statecraft
• POLI 4605.03: Oil, Natural Gas and Government: The Political Economy of Regulation

12. Religious Studies
Understanding religion and its influences on human behaviour involves grasping both the meaning of faith in the lives of participants and the critical analysis of outside observers. It has important implications for international cultures and development questions.

• RELS 2002.03: Christianity
• RELS 2013.03: Islam
• RELS 2101.03: Hinduism
• RELS 2013.04: Buddhism
• RELS 2015.03: Women and Islam
• RELS 3009.03: Christianity in the Land of Islam
• RELS 3101.03: The Self and the World in Indian Story
• RELS 3112.04: Buddhism in India and Tibet

13. Russian
Russia and the Soviet Union have been important players on the world stage for many centuries. The history and current situation of this region has had profound importance for the development of both Europe and Asia, as well as the developing regions. The study of this region is increasingly important to development theory, practice and planning.

• RUSN 2023.03: Contemporary Russian Culture - The Seven Deadly Sins
• RUSN 2081.03: Contemporary Russian Culture - The Seven Deadly Sins

14. Sociology and Social Anthropology
Sociology provides a context within which students learn to think critically about their social environment. Social Anthropology aims at generalizations by comparing structures and processes in various institutions within societies (kinship, political, economic and religious) as well as between societies.

• SOSA 2001.03: Ethnography in a Global Context
• SOSA 2002.03: Explaining Social Inequality
• SOSA 2101.03: Environment and Culture
• SOSA 2102.03: Political Ecology
• SOSA 2190/0Y:06: Comparative Perspectives on Gender
• SOSA 2200/0Y:06: The Family in Comparative Perspective
• SOSA 2201/0Y:06: Gender, Ghosts, Gods, Games
• SOSA 2400/X:010: Health and Illness Across Cultures
• SOSA 2402.03: Food Through Time and Space
• SOSA 2403.04: Food and Its Regulation
• SOSA 3002.03: Native Peoples of Canada
• SOSA 3003.03: Food in Industrial Society: The Future: Knowledge, Work and Culture in the Contemporary World
• SOSA 3006.03: Comparative Perspectives on Gender and Work

I. Introduction
Learning to read and speak Italian offers access to an important world culture. While modern Italy began to emerge in its present-day form in the 19th century, the civilizations that preceded it have exerted a strong influence on the culture of the West. Whether in religion, art, music, or science, Italy’s past offers many keys to the present. Through its tradition of global exploration and entrepreneurial endeavors, Italy has played a significant role in world history. Today, it is one of the world’s wealthiest democratic nations, and a leader in a variety of fields, including film, design, cuisine, and intellectual life. Courses in Italian literature and culture, building on courses in Italian language, will open up to the student this wide and fascinating array of topics.

II. Degree Programs
In addition to the departmental requirements listed below, students must satisfy the requirements outlined in the Degree Requirements section, page 125 of this calendar.

A. BA (20 credit) Double Major
A minimum of five full credits (24 credit hours) and a maximum of eight in Italian studies above the 1000 level, combined with one of the Major subjects in the BA program. Within those five credits, students must include ITAL 2010.06 and ITAL 3010.06, and at least one other full credit above the 2000 level.

B. BA (20 credit) Combined Honours
A minimum of five full credits (30 credit hours) in Italian studies above the 1000 level is required for the Combined Honours program, along with one of the Combined Honours subjects in the BA program. Within these five credits, students must include ITAL 2010.06 and ITAL 3010.06, at least one other full credit above the 2000 level and at least one half credit at the 4000 level.

NOTE: Italian studies can only be the second subject for the Double Major or Combined Honours. It cannot be the primary subject for those programs.
C. Minor in Italian Studies

See Minors in the Course of Arts and license section of this catalog (Page 129).

III. Course Descriptions

ITAL 1010X/Y.06: Italian for Beginners.

An introductory survey of Italian culture and the Italian language (with practical vocabulary for oral and written communication). This course aims to develop all language skills (listening, speaking, reading, writing) by integrating grammar study, oral and written exercises, and situational contexts. The course also includes an introduction to the Italian culture. This course fulfills the 180 language requirement. NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.

FORMAT: Lecture lab/tutorial

ITAL 2010X/Y.06: Intermediate Italian.

This course opens to students with a sound knowledge of the basics of the Italian language (vowels, consonants, basic high frequency vocabulary) and is designed to build on that knowledge. The objective of the course is fourfold: 1) to develop awareness of four points of output in writing Italian; 2) to provide practice in listening comprehension of material ranging from texts read aloud to spontaneous dialogue; 3) to provide the practice required for the consolidation and development of speaking skills; 4) to provide the practice required for the consolidation and development of reading skills.

NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.

FORMAT: Lecture/discussion

PREREQUISITE: ITAL 1010X/Y.06

ITAL 2061.03: Civilization of Baroque Italy.

This is a scaled-down version of 2060X/Y.06, and studies Italy at the time of its greatest influence on Western civilization. The course examines Italy’s politics, its vibrant urban and rural societies, the place of Catholicism in its cultural and intellectual life, and the innovative early modern economy, all before the great crisis of the 1620s. Open to first-year students.

FORMAT: Lecture/historical

CROSS-LISTING: HIST 2061.03

EXCLUSION: HIST 2060.06

ITAL 2101X/Y.06: The Origins of Modern Italy.

An introductory survey of Italian history from the late Renaissance to the French Revolution, and Italy’s passage from the Western world’s pilot economy and Italy’s political role in the European early twentieth century to the present, with discussion of major historical and intellectual life, and the innovative early modern economy, all before the great crisis of the 1620s. Open to first-year students.

FORMAT: Lecture/historical

CROSS-LISTING: HIST 2061.03

EXCLUSION: HIST 2060.06

ITAL 2200.03: Modern Italian Culture.

This course will focus on the transformation of modern Italian culture from the early twentieth century to the present, with discussion of major historical and social events of the period. Topics may include fascism, literature, neo-realism, the rise of media culture in Italian cinema, and Italy’s political role in the European Union.

FORMAT: Lecture

ITAL 2201.03: Survey of Italian Literature I: from the Origins to 1600.

This course will provide a survey of Italian Literature from the Middle Ages to 1600. Literature covered may include works of writers such as Dante Alighieri, Francesco Petrarca, Giovanni Boccaccio, Catherine of Siena, Niccolò Machiavelli, Benvenuto Cellini and Veronica Franco. This course will be given in English; readings for Italian major students will be in Italian.

FORMAT: Lecture

EXCLUSION: ITAL 2210

ITAL 2202.03: Survey of Italian Literature II: 1600 to Present.

This course will provide a survey of Italian Literature from 1600 to present. Literature covered may include works by Ugo Foscolo, Giacomo Leopardi, Sibilla Aleramo, the Futurists, Luigi Pirandello, Italo Svevo, Italo Calvino, Natalia Garabog, and Dacia Maraini. This course will be given in English; readings for Italian major students will be in Italian.

FORMAT: Lecture

EXCLUSION: ITAL 2210

ITAL 2210.03: Introduction to Italian Literature.

This course will focus on selected topics in Italian literature and criticism. The course will be given in English and readings for Italian minor and major students will be in Italian.

FORMAT: Lecture

ITAL 2600.03: Survey of Italian Cinema.

Class to be held in English; with part of the course work in Italian for Italian majors. Survey of the Italian Cinema from the origins onwards. Focus: the golden age of Italian silent movies; visual culture under fascism; Italian neo-realism; the impact of television.

FORMAT: Lecture

CROSS-LISTING: THEA 3320

ITAL 3010XY.06: Advanced Italian.

This course will focus on spoken and written Italian. Cultural aspects of Italy’s past and contemporary history will be the subjects of oral discussion and written composition. Topics such as fine arts, theatre, cinema, music, culinary history, and fashion will be the basis for language practice. The goal of the course is to provide students with conversational and writing skills. Attention will be given to four points of grammar, particularly Italian morphology and syntax. Students will engage in small group work and individual reporting. The material for the course will be drawn from both specialized workbooks and new articles from authentic Italian newspapers and websites. Some class time will be devoted to impromptu discussions allowing students to test their thinking and communication skills.

NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.

FORMAT: Lecture/discussion

PREREQUISITE: ITAL 2100XY/O or permission of instructor

ITAL 3300.03: Twentieth Century Italian Literature.

This course examines Italian literature in the twentieth century, with references to contemporary Italy’s social history and culture. Students will acquire first-hand knowledge of the work of key writers of the Neorealists, such as for example Sibilla Aleramo, Luigi Pirandello, Italo Svevo, Natalia Garabog, Primo Levi, Elsa Morante, Italo Calvino, Dacia Maraini, or others. The course goals are multi-fold: while strengthening their communicative skills in Italian, students will forge their own tools for critical and argumentative thinking, and use them to engage in a productive reading of the literary texts under consideration. All coursework will be done in Italian.

FORMAT: Lecture

PREREQUISITE: ITAL 2100XY/O or permission of instructor

ITAL 3500.03: Topics in Italian Culture.

This course will discuss and critically assess selected topics of Italian culture. The subjects will vary from year to year, and may range from Italy’s fine arts tradition to the history of its commodity arts, from its political and literary movement to its world-renowned filmmaking practice, from the changing role of woman in Italian society to its religious evolution, from its history of invasion and exploration to its “Made in Italy” international appeal and marketing. Topics may be added and perspectives changed as the contemporary Italian and European context evolve. The course will be conducted in a seminar setting where students may report on the specific issue and subject researched. Students will take part in reading and critical evaluation of peer work and individually prepare an oral presentation on a selected theme that elicits their interest.

FORMAT: Lecture/seminar

PREREQUISITE: ITAL 2100XY/O or permission of instructor

ITAL 3600.03: Italian National Cinema.

This course will discuss and critically assess selected topics of Italian cinema. Its aim to investigate Italian film production within the context of contemporary culture. The focus of the course: the Italian cineastes, who received international recognition since the 1960s. Its aim to investigate Italian film production within the context of contemporary culture.

FORMAT: Lecture

CROSS-LISTING: THEA 3320

Italian Studies 269
ITAL 3700.03: Topics in Italian Drama and Spectacle. 
This course focuses on Italian drama and performance. The text will vary from year to year and may include topics such as Italian Renaissance theatre, the Commedia dell’arte, Pirandello’s productions and contemporary Italian spectacle. The course will examine the selected topic while placing Italian theatre into a broader European context; students will acquire reading strategies for drama and spectacle and learn to consider the works form a theoretical perspective. The class is held in English but Italian majors will be required to read the texts in the original.
FORMAT: Lecture
CROSS-LISTING: THEA 3944.03

ITAL 4010.03: Advanced Composition.
This course addresses issues of syntax and grammar, register and style, and advanced vocabulary for both creative and academic writing. It will have both a theoretical and a practical component and will be writing intensive. Students will exercise advanced reading skills, advanced grammar skills (using sophisticated Italian syntax and morphology), and advanced composition skills (from structuring a creative piece of work to essay composition and completion). Compositions will address Italian literary and cinematic works. Students will work both in groups and individually. The course will be given in a workshop format, and student participation is essential to its success. It is recommended that students read Italian as much as possible (texts from mass media, popular fiction as well as academic material). Work in class and at home will include summaries, synopses, bullet-point schemes, writing and re-writing, peer reviewing, and related research.
FORMAT: Lecture/discussion
PREREQUISITE: ITAL 3010X or permission of instructor

ITAL 4040.03: Dante’s Inferno.
From Dante’s spiritual crisis to his descent into the pit of Hell and encounter with Satan, a journey of self-discovery, the Comedy is one of the world’s literature absolute masterworks and a summum of the medieval culture. This course offers a general knowledge of its first section, Inferno, and provides an introduction to medieval culture and history. Each class will involve reading from the text, commentary and discussions of the readings assigned. The course is taught in English. Italian minors and majors students will be required to read the texts in this course.
FORMAT: Lecture
PREREQUISITE: Any 2000 humanities course or instructor’s permission
CROSS-LISTING: CLASS 4460

ITAL 4060.03: Topics in the Civilization of Baroque Italy.
This course emphasizes the methods and sources historians employ to study Italian history, circa 1570-1740. Topics to be explored include Baroque Italian princely courts, Roman Catholicism, social interaction, social status and display, historical ecology and geography. There will be substantial use of translated and transcribed archival sources. A reading knowledge of French is recommended.
FORMAT: Lecture
CROSS-LISTING: THEA 4060.03

ITAL 4080.03: Independent Study.
Individually directed research and writing under the supervision of a member of department.
FORMAT: Seminar

ITAL 4989.03: Independent Study.
Individually directed research and writing under the supervision of a member of department.

ITAL 4999.03: Independent Study.
Individually directed research and writing under the supervision of a member of department.

Journalism

Contact Person: Director and Associate Professor, Kelly Toughill
Location: University of King’s College
Telephone: (902) 422-1271 Ext 183

I. Minor in Journalism Studies
See Minors in the College of Arts and Science section of this calendar. (Page 128)

II. Curriculum

A. Core Requirements
Students must complete one and a half full credits of core courses.

JOUR 1001X/Y.06: Foundations of Journalism.
This course gives students both a theoretical and practical introduction to journalism. In one part, students will learn how to read, listen and watch the news knowledgeably and critically. They will look at the history of journalism as it has developed in newspapers, radio, television and internet and examine how the structure of the media influence journalistic principles and practices. The other part of this course teaches students how to write imaginative and interesting prose using correct English and effective storytelling methods. Students will be required to write nearly every day and will have their work assessed by professional journalists.
NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.
JOUR 2000.03: Basic Reporting Techniques.
Successful reporters need critical thinking as much as technical skills. This course builds on JOUR 1001 as it examines how reporters find news, select sources, cut through spin, verify information and avoid errors. Students will be introduced to techniques at the leading edge of the craft.
PREREQUISITE: JOUR 1001.06

B. Elective Requirements
Students must complete 1.5 credit hours in electives from the list below:

This course will introduce students to the history of radio, major figures in radio writing and reporting, emphasizing skills particular to radio such as writing for the ear and to deadline, interviewing for tape and on-air performance. Students will visit a radio news operation and examine policy, broadcast standards and ethical issues.
PREREQUISITE: JOUR 1001.06
RESTRICTION: This course is not available to students in the B[J]IN program.

JOUR 2400.03: Science and the Media.
From the first Babylonian astronomical records on canons to the public undermining of science on television, the various media have long been crucial to the success and spread of science. This course provides a history of science in the media from the ancient and medieval age of geometrical diagrams, astronomical figures and anatomical illustration through early modern printed texts, popular broadsheets and color botanical plates all the way to the ubiquity of science in literature, cinema and on the Internet. This expanding presence of science in the media is examined against the backdrop of three revolutions: literary and artistic (ancient and medieval worlds), mechanical (early modern period) and electronic (contemporary age). Specific themes considered include the increasing accuracy of scientific illustration, the rise of scientific journals, public scientific demonstrations, science in poetry and prose fiction, science and art, radio and television documentaries, the advertising and marketing of science, scientific special podcasts and techno-mystics, biometrics. Soviet art technological iconography, environmentalism and science-religion relations in the journalistic press, science fiction from J.G. Wolfe’s ‘War of the Worlds’ to Star Wars and Jurassic Park, and science in computing and cyberspace.
FORMAT: Lecture/semnar
CROSS-LISTING: HIST 2400.03

CROSS-LISTING: CLAS 4460
JOUR 3002.03: Introduction to Radio. This course will introduce students to broadcast news writing and reporting, emphasizing skills particular to radio such as writing for the ear and to deadline, interviewing for tape and on-air performance. Students will visit a radio news operation and examine policy, broadcast standards and ethical issues. PREREQUISITE: JOUR 1001.06

JOUR 3005.03: Broadcast Reporting. This course will introduce students to best practices in video and audio in news reporting. It will build on two broad courses to emphasize skills needed in radio, television, and online journalism. These include conversational scripting, writing for sound and picture, interviewing and on-air performance. Students will research, pitch and produce basic radio and television news stories, in teams and on their own. PREREQUISITE: JOUR 2000.03 or JOUR 2001.06 or permission from the instructor.

JOUR 3122.03: Ethics of Journalism. This course will discuss the power - and responsibility - of the mass media in shaping public opinion and public policy. Students will consider the various and conflicting roles of media in contemporary society. PREREQUISITE: JOUR 1001.06 or permission of the instructor

JOUR 3304.03: Through her Eyes: Women and the Documentary Tradition. This course will explore the nearly excluded historical and contemporary involvement of women in the field of documentary filmmaking. Women documentary makers have produced extensive bodies of engaging work that challenge many societal assumptions about gender, class, race, the function of political power, sexuality and peace-war. They have worked at every level within the process: as directors, cinematographers, editors, sound recordists, producers, writers and fund-raisers. A variety of documentaries made by women from diverse backgrounds will be screened and analyzed along with a close reading of selected critical texts. Students will identify the similarities and differences in subjects, themes, style, aesthetics, and approached to creation, production and distribution. FORMAT: Film Screening and Seminar

JOUR 3333.03: News Media and the Courts in Canada. This course is an introduction to the justice system and the specific roles that journalists have in covering and reporting on the legal system. The goal is to help students understand the importance of legal and ethical issues in historical and contemporary journalism. This course will focus on the role of journalists in covering legal events, including the historic development of this relationship. PREREQUISITE: JOUR 1001.06 or permission of the instructor.

JOUR 3340.03: Creative Nonfiction. Narrative nonfiction writing includes literary journalism, memoir and essay. In this introductory course, students will learn about the historic development of this genre as well as read and discuss some of the best examples of historical and contemporary narrative nonfiction. The goal is to make students better informed readers as well as to provide them with the tools to produce this kind of writing themselves. PREREQUISITE: JOUR 1001.06 or permission of the instructor.

JOUR 3441.03: Advanced Creative Nonfiction. This is a how-to course that focuses on writing - and rewriting - a major piece of narrative nonfiction. PREREQUISITE: JOUR 3440.03 RESTRICTION: This course is not available to B(ERS) students

JOUR 3540.03: Feature Writing. This course will introduce students to more creative writing aspects of journalism - the writing of stories behind the breaking news of the day, or the small human dramas that make up the world around us. Students will study feature writing styles and techniques, and experiment with several feature formats, from concept to subhead, that can be used on a substantial background articles. Students will produce a major, term-end feature story and several smaller assignments. PREREQUISITE: JOUR 2000.03 or JOUR 2001.06 or permission from the instructor

JOUR 3542.03: Business Reporting for Journalists. This course will give students a working knowledge of how business functions. It will provide students with the tools to analyze and present complex economic situations in clear language.

JOUR 3550.03: Copy Editing. In this course, students will focus on the skills-copy editors need to perform the most basic and essential of their tasks - handling stories. Students will edit, on paper and on screen, real stories selected for their potential as well as their problems. They will work on them for tightness, polish, accuracy and style. The goal is to help students develop the copy editor's "double vision" - the ability to see the story as a whole, and line by line, as a collection of parts, to see both the forest and the trees. This course is not only for students who want to become copy editors, but also for students who want to become better editors of their own writing. PREREQUISITE: JOUR 2000.03 or JOUR 2001.06

JOUR 3557.03: Introduction to Online Journalism. The Internet is still in its infancy as a journalistic medium, which creates opportunities for innovation as well as challenges for finding the best and most appropriate ways to communicate information. Students in this course will not only learn about the recent evolution of the Internet as a journalistic medium but will also explore for themselves ways of using the Internet to tell journalistic stories. PREREQUISITE: JOUR 1001.06 or permission of the instructor

JOUR 3560.03: Great Journalists. This course provides an introduction to some of the greatest journalists of all time. Students will discover the wonderful work these journalists created, and learn how and why they did it. This course also focuses on improving students' writing. By carefully considering great journalists' work, students learn techniques that make them better writers. Amazing characters-students will meet include James Cameron, the only journalist to have a ringside seat at three atomic bomb blasts. Students get to know Ida B. Wells, who founded a newspaper exposing lynchings and races when most media were ignoring the truth. Students will consider the work of Jon Dalton, Martin Selby, Peter Grose, Jesús y María, Martha Radford and many more. By the end of the course students will have a strong understanding of journalism's honorable legacy. They will know the brilliant qualities of great journalism, how hard they work, and how they changed the world. FORMAT: Writing Requirements (36h)

JOUR 3560.03: Photожournalism. This course will explore visual perception as applied to photography. Students will be taught to "see" photographs and explore ideas visually, especially how they relate to the essence of news photography. Students will also examine the beginnings of news photography and modern developments in the business. Students must have their own digital cameras to take this course.

JOUR 3670.03: Opinion Writing. Do you want to influence people with your perceptions, insights and ideas? If so, you need to know the difference between a rant and proving your point. You need to consider the tone and flow of what you write. Writing Opinion teaches these practices and more.
I. Minor in Law and Society
See Minors in the College of Arts and Science section of this calendar (page 128).

A. Required Courses

- LAWS 2500.06: Introduction of Law passed with a minimum of B-

This course, offered by the Law School exclusively to undergraduates, is designed
to introduce students to the workings of the Canadian legal system, and to the
basics of several fundamental areas of law. The focus of the course will be the
decisions which have been made by courts in Canada. There will be discussion of
what the law should be, which will occur in a context of understanding how courts
reason, and the principles that they bring to bear in reaching their decisions. The
course will look in particular at introductory case law concerning tort law (wrongs
by one person against another), personal property, criminal law, and the law as it
relates to Aboriginal peoples.
Enrolment is limited to students in their second year of undergraduate studies and
beyond.

INSTRUCTOR(S): S. Coughlan, D. Darling

FORMAT: Lecture/discussion 3 hours

B. Elective Requirements

Three full courses (18 credit hours) or equivalent from the approved list below,
including at least one half-course (three credit hours) from your choice of three
different disciplines (e.g., history, philosophy, political science, sociology,
contemporary studies, or international development studies). To count towards the
Minor, courses must be passed with a minimum of B-

- CTMP 3321: Representations of the Holocaust I
- CTMP 3322: Representations of the Holocaust II
- HIST 2006.03: The Atlantic World 1450-1650
- HIST 2007.03: The Atlantic World 1650-1800
- HIST 2221.03: Rough Justice - to the 1890s
- HIST 2222.03: Rough Justice - 1890s to the Present
- HIST 2223.03: Law and Justice in Canadian Society, to 1890

- SOSA 3295.03: Society and the Police

*fulfills the PHIL requirement even if taken as GWST 2300
**fulfills the POLI requirement even if taken as GWST

Other Approved Electives
- COMM 2601: Legal Aspects of Business
- ENVL 3200.03: Environmental Law
- JURR 3133.03: News Media and the Courts
- LAWS 2112.03/2123.03: Canadian Legal History
- PSYJ 3224.03: Forensic Psychology
- PSYJ 4000.03: Senior Seminar (on a forensic topic)
II. Degree Programs

Although the Linguistics program is offered jointly by several universities, the degree is granted by the student’s home University. Students must meet the general requirements set by the University in which they are registered.

In addition to the departmental requirements listed below, students must satisfy the requirements outlined in the Degree Requirements section, page 125, of this calendar.

Core Program Requirements

• A two semester (full credit equivalent) Introduction to Linguistics, which can be taken at any of three institutions:
  • SMU LIN 2300.1 (Introduction to Linguistics) plus FREN 3020.1 (Introduction to French Linguistics) and FREN 3021.1 (Syntax) (taught in French);
  • Two to four of the following half-credit courses (or equivalent), depending on the specific degree:
    • SMU LIN 2310.1 (Phonology)
    • SMU LIN 2320.1 (Morphology)
    • SMU LIN 2330.1 (Syntax)
    • SMU LIN 2340.1 (Semantics)

A. BA with Honours in Linguistics

An honours degree is strongly recommended for students who plan to do graduate work in linguistics. Students must have a GPA of 3.0 or better for admission to the honours program, and must maintain a GPA of 3.0 or better in courses contributing to their honours degree in linguistics.

All Dalhousie honours programs must include Honours Qualifying Examination admission, usually taken the first year of a research paper. Consult the program coordinator.

Program Requirements

• A minimum of 10 credits. These must include:
  • Two semesters (full credit equivalent) Introduction to Linguistics, listed under Core Program Requirements (above);
  • All four of the half-credit courses (or equivalent), listed under Core Program Requirements (above);
  • One credit selected with the advice of the program coordinator. In addition to regularly scheduled courses, special topics / directed readings, computer language courses and / or intermediate level formal logic courses may be recommended here;
  • The equivalent of an one-credit second (or foreign) language course at the intermediate level; and,
  • Five credits selected from the list of linguistics courses offered at Dalhousie, and neighboring universities (see the list of options below).

B. Combined Honours in Linguistics

Combined honours programs with Linguistics may be arranged with other departments.

C. BA (20 credit) Major in Linguistics

Students who may not be eligible for the Honours Program are encouraged to enter the 20 credit Major program. Consult the program coordinator.

Program Requirements

• A minimum of six full credits, at least three credits of which must be at the 3000 level or above. These must include:
  • A two semester (full credit equivalent) Introduction to Linguistics, listed under Core Program Requirements (above);
  • Two of the half-credit courses (or equivalent), listed under Core Program Requirements (above);

• The equivalent of one full credit selected with the advice of the program coordinator. This requirement may be met by regularly scheduled courses listed or cross-listed as linguistic courses, by special topics / directed readings courses in linguistics, by second year (intermediate) courses in a language other than the student’s first language or in formal logic, or by a computer language course; and,
  • Three full credits selected from the list of options below.

II. Halifax Interuniversity Program in Linguistics

Halifax area universities offer a joint program in linguistics. Students enrolled in this program take courses from Dalhousie and Saint Mary’s University prior to enrolling in such courses. See requirements for the degree (A letter of permission to do so should be secured before doing so).

This program takes courses from Dalhousie and Saint Mary’s University prior to enrolling in such courses. See requirements for the degree (A letter of permission to do so should be secured before doing so).

D. BA (20 credit) Double Major in Linguistics

Program Requirements
A minimum of four full credits, as outlined below. At least two of the four credits must be at or above the 3000 level. These must include:
- A two semester (full-credit equivalent) Introduction to Linguistics, listed under Core Program Requirements (above);
- Two of the half-credit courses (or equivalent), listed under Core Program Requirements (above);
- The equivalent of one full credit selected with the advice of the program coordinator. This requirement may be met by regularly scheduled courses listed or cross-listed as linguistic courses, by special topics / directed readings courses in linguistics, by second year (intermediate) courses in a language other than the student’s first language or in formal logic, or by a computer language course; and,
- One full credit selected from the list of options below.

E. BA (15 credit) Concentration in Linguistics

Program requirements
A minimum of four full credits, as outlined below. At least two of the four credits must be at or above the 3000 level.
- A two semester (full-credit equivalent) Introduction to Linguistics, listed under Core Program Requirements (above);
- Two of the half-credit courses (or equivalent), listed under Core Program Requirements (above);
- The equivalent of one full credit selected with the advice of the program coordinator. This requirement may be met by regularly scheduled courses listed or cross-listed as linguistic courses, by special topics / directed readings courses in linguistics, by second year (intermediate) courses in a language other than the student’s first language or in formal logic, or by a computer language course; and,
- One full credit selected from the list of options below.

III. Options

A. Courses Offered at Dalhousie University

Contemporary Studies
- CTMP 2404.02: Semiotics
- CTMP 4115.05: Language and Politics: The Linguistic Turn in Contemporary Political Thought

English
- ENGL 2201.06: The English Language
- ENGL 3007.06: Old English

French
- Unless specifically indicated otherwise, all courses are taught in French. See CTMP 4115.05 (above) for exceptions.
- FREN 3023.03: Linguistics: Introduction to Acadia Dialectology
- FREN 4026.03: Quebec French
- FREN 4040.03: History of French: The Middle Ages
- FREN 4040.03: History of French: The Modern Period
- FREN 4041.05: Lexicology
- FREN 4041.05: Aspects of French Structure
- FREN 4041.05: Pragmatics
- FREN 4041.05: Language and Society
- FREN 4041.05: Advanced Translation into English
- FREN 4041.05: Introduction to Applied Linguistics and Language Teaching (taught in English)
- FREN 4047.05: General Translation
- FREN 4047.05: Electronic Tools and Resources for French (taught in English)

Philosophy
- PHIL 3309.03: Philosophy of Language
- PHIL 4316.03: Topics in the Philosophy of Language

Psychology
- PSYO 3002.03: Sensory Neuroscience II: Hearing and Speech
- PSYO 3093.03: Language & Literacy
- PSYO 3190.03: Psycholinguistics
- PSYO 3790.03: Neurolinguistics

Russian
- RUSE 4000.06: The Structure of Contemporary Standard Russian

Sociology
- SOCA 3081.03: Sociolinguistics

Spanish
- SPAN 3080.03: Phonetics
- SPAN 3085.03: Evolution of Spanish

B. Courses offered at Saint Mary's University (SMU)

Anthropology
- SMU ANT 3289.12: Introduction to Human Communication
- SMU ANT 3291.12: Introduction to Linguistic Anthropology
- SMU ANT 3292.12: Language, Culture and Society
- SMU ANT 3399.12: Language and Issues in Northern Canada
- SMU ANT 4409.12: Ethnography of Communication
- SMU ANT 4492.12: Anthropological Analysis of Linguistic Communities

English
- SMU EGL 2811.12: Modern English Language
- SMU EGL 3312.12: Modern English Language in Canada
- SMU EGL 3402.0: History of the English Language
- SMU EGL 2508.12: English Prose Style from 1500
- SMU EGL 4400.0: Discourse Analysis

French
- SMU FRE 3312.12: French Phonetics
- SMU FRE 3341.12: Linguistic Study of French
- SMU FRE 3360.12: Acadia Language and Culture
- SMU FRE 4440.12: Canadian French: Sociolinguistic Perspectives

Linguistics
- SMU LIN 4410.12: Directed Readings in Linguistics I
- SMU LIN 4411.12: Directed Readings in Linguistics II
- SMU LIN 4531.12: Special Topics in Linguistics I
- SMU LIN 4532.12: Special Topics in Linguistics II
- SMU LIN 3341.12: Advanced Morphology
- SMU LIN 3342.12: Comparative Linguistics

Philosophy
- SMU PHI 402.12: Philosophy of Language: Meaning
- SMU PHI 403.12: Philosophy of Language: Speech Acts

Sociology
- SMU SOC 3316.12: Language Change and Social Change
- SMU SOC 3366.12: Field Methods in Linguistics I
- SMU SOC 3375.12: Field Methods in Linguistics II
- SMU SOC 4417.0: Seminar on Endangered Languages

Women’s Studies
- SMU WMS/EGL 3427.12: Language and Gender
- SMU WMS/EGL 3427.12: Language, Gender and Power

THEA 4800X/Y:06: Acting IV

The culminating course of the Acting Program focuses on the rehearsal and performance of three DalTheatre shows and a Class Project. This course provides students with the opportunity to earn their Honours credit by preparing professional portfolios and audition pieces under the tutelage of the Acting Program faculty. The class project is directed by an Acting Program faculty member and all written requirements for both the DalTheatre season and the class project assessed by the Acting Program faculty. In its twofold function, this course is a bridge to the Acting profession.

NOTE: Students taking 4800X/Y:06 must register in both X and Y in consecutive terms; credit will be given only if both are completed consecutively.
THEA 4840X/Y.06: Advanced Performance Techniques
This fourth-year Acting course is intended to provide production-related and movement instruction that will assist students with developing skills and techniques which can be applied in the DalTheatre season as well as in the professional theatre world. Production-related instruction may vary from year to year, depending on the specific needs of each DalTheatre season.
NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.
FORMAT: Lab/lecture 3 hours
CO-REQUISITE: THEA 4840X/Y.06
THEA 4900X/Y.06: Theory and Criticism of Drama and Theatre
This is a writing intensive course that tackles the problems of evaluating theatre. It investigates critical strategies of the past and judges today’s theatre criticism. Students will practice the craft of criticism and debate the role of theatre theory for contemporary audiences.
NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.
FORMAT: Seminar 3 hours
CO-REQUISITE: Permission of the instructor
THEA 4921.03: Special Topics II
In this seminar course, students focus on a particular topic in dramatic literature, film studies, theatre history, dramatic theory, or a related interdisciplinary subject, and investigate it in great detail. The topic is assigned by the School of Performing Arts at the end of the preceding academic year and is then posted at the School and in the Faculty’s timetable.
FORMAT: Seminar 3 hours
THEA 4922.03: Topics in Theatre History
In this seminar course, students focus on a particular topic in the field of theatre history and investigate it in great detail. The topic is assigned by the School of Performing Arts at the end of the preceding academic year and it is then posted at the School and in the Faculty’s timetable.
FORMAT: Seminar/discussion
THEA 4923.03: Topics in Dramatic Literature
In this seminar course, students focus on a particular topic in the field of dramatic literature and investigate it in great detail. The topic is assigned by the Department at the end of the preceding academic year and it is then posted at the Department and in the Faculty’s timetable.
FORMAT: Seminar/discussion
PREREQUISITE: Permission of the instructor
THEA 4931.03: Contemporary Theatre
This course will deal with the most recent developments in theatre, especially with those post-1970’s trends that exercise a broad international influence. Each year, our investigation will begin with a brief look at postmodern theatre and cover topics such as performance art, physical theatre, and postdramatic theatre. The main focus of the course, however, will be dictated by what is currently happening on major stages across the world and may significantly change from one year to another. In the interests of a comprehensive and exclusive approach to the subject, both commercial and experimental theatre will be studied, and we will also examine some relevant works of criticism and theory. Since much of the material required for this course is not yet removed enough from our time to be accessible in scholarly literature, students should be prepared for alternative methods of research.
FORMAT: Lecture/seminar, 5 hours
THEA 4940X/Y.06: Theory and Criticism of Drama and Theatre
This is a writing intensive course that tackles the problems of evaluating theatre. It investigates critical strategies of the past and judges today’s theatre criticism. Students will practice the craft of criticism and debate the role of theatre theory for contemporary audiences.
NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.
FORMAT: Lecture/seminar/discussion
THEA 4922.03: Topics in Theatre History
In this seminar course, students focus on a particular topic in the field of theatre history and investigate it in great detail. The topic is assigned by the School of Performing Arts at the end of the preceding academic year and it is then posted at the School and in the Faculty’s timetable.
FORMAT: Seminar/discussion
THEA 4923.03: Topics in Dramatic Literature
In this seminar course, students focus on a particular topic in the field of dramatic literature and investigate it in great detail. The topic is assigned by the Department at the end of the preceding academic year and it is then posted at the Department and in the Faculty’s timetable.
FORMAT: Seminar/discussion
THEA 4931.03: Contemporary Theatre
This course will deal with the most recent developments in theatre, especially with those post-1970’s trends that exercise a broad international influence. Each year, our investigation will begin with a brief look at postmodern theatre and cover topics such as performance art, physical theatre, and postdramatic theatre. The main focus of the course, however, will be dictated by what is currently happening on major stages across the world and may significantly change from one year to another. In the interests of a comprehensive and exclusive approach to the subject, both commercial and experimental theatre will be studied, and we will also examine some relevant works of criticism and theory. Since much of the material required for this course is not yet removed enough from our time to be accessible in scholarly literature, students should be prepared for alternative methods of research.
FORMAT: Lecture/seminar, 5 hours
I. Beginning in Philosophy

There are many different ways of beginning in philosophy. The Dalhousie Philosophy Department offers three sorts of courses for beginners: (1) general survey introductions, which will give you a taste of a variety of questions and answers; (2) introductions to special areas; (3) logic, which is the study of the theory and techniques of good reasoning. Students wishing to major in philosophy are encouraged to begin with Introduction to Philosophy (either PHIL 1000.06, or PHIL 1010.06) in which a wide range of philosophical issues are discussed. But any student in any year may begin philosophy with a course that has no prerequisites. These include the 1000 level courses and many of the courses at the 2000 level. Although any of the 2000 level non-prequisite courses provide the student with a good introduction to philosophical thinking, by far the best introduction is provided by the fall year introduction (PHIL 1000 or 1010). Some 2000 level courses have prerequisites, which can be met either by a philosophy course or a course in another relevant discipline. The King’s College Foundation Year satisfies the requirement of a previous philosophy course. Courses at the 3000 level and beyond usually have further requirements. See the course descriptions below.

II. Degree Programs

All students planning to take a degree in philosophy are encouraged to talk to an undergraduate advisor; those planning to do an honours degree must consult with the honours advisor. Students who intend to specialize in philosophy should take an honours degree, the normal preparation for graduate study in philosophy.

In addition to the departmental requirements listed below, students must satisfy the requirements outlined in the Degree Requirements section, page 125 of this calendar.

Note: In the statement of program requirements and prerequisites, “credit” means one full credit (six credit hours).

Not all courses are offered every year. Please consult the current timetable to determine if these courses are offered.

Detailed descriptions are available from the department website at philosophy.dal.ca. The Honours application form is available online at http://www.registrar.dal.ca.

A. BA with Honours in Philosophy

See BA Concentrated Honours under Degree Requirements.

Students interested in Honours Programs are encouraged to apply by the middle of their third year. Please contact Honours Advisor. The Honours application form is available online at http://www.registrar.dal.ca.

Departmental Requirements

At least 10 credits in Philosophy of which at least nine and no more than 11 are beyond the 1000 level.

Select at least six credit hours from the following:

Philosophy (logic): 2130.03, 2660.03, 3635.03, 3640.03, 3650.03

Philosophy (history): 2350.03, 2610.03, 2620.03, 3110.03, 3115.03, 3630.03, 3650.03

Philosophy (logic): 2130.03, 2660.03

Select at least three credit hours from the following:

Philosophy (logic): 2130.03, 2660.03

Select at least three credit hours from the following:

Philosophy (history): 2350.03, 2610.03, 2620.03, 3110.03, 3115.03, 3630.03, 3650.03, 3640.03, 3600.03

At least two credits at or above the 3000 level including a half credit in epistemology (3051.03) and a half credit in ethics (3105.03)...

C. BA (20 credit) Major in Philosophy

See BA Major (20 credit) under Degree Requirements.

Departmental Requirements

At least six and no more than nine credits in Philosophy beyond the 1000 level, including three credits beyond the 2000 level.

Select at least three credit hours from the following:

Philosophy (logic): 2130.03, 2660.03

Select at least six credit hours from the following:

Philosophy (history): 2350.03, 2610.03, 2620.03, 3110.03, 3115.03, 3630.03, 3650.03, 3640.03, 3600.03

At least three credits at or above the 3000 level including a half credit in epistemology (3051.03) and a half credit in ethics (3105.03)...

D. BA (20 credit) Double Major

See BA (20 credit) Double Major under Degree Requirements.

Departmental Requirements

At least six and no more than eight credits in Philosophy beyond the 1000 level, including three credits beyond the 2000 level.

Select at least three credit hours from the following:

Philosophy (logic): 2130.03, 2660.03

Select at least six credit hours from the following:

Philosophy (history): 2350.03, 2610.03, 2620.03, 3110.03, 3115.03, 3630.03, 3650.03, 3640.03, 3600.03

At least two credits at or above the 3000 level including a half credit in epistemology (3051.03) and a half credit in ethics (3105.03)...

E. BA (15 credit) Minor in Philosophy

See Minors in the College of Arts and Science section of this calendar (page 128).

F. Minor in Philosophy

See Minors in the College of Arts and Science section of this calendar (page 128).

G. Minor in Applied Ethics

See Minors in the College of Arts and Science section of this calendar (page 128).

H. Minor in Bioethics

See Minors in the College of Arts and Science section of this calendar (page 128).

III. Course Descriptions

NOTE: Many courses are listed as being exclusionary to one another. This means that students may not take both courses as designated.

PHIL 1000XY06: Introduction to Philosophy. An introduction to a variety of philosophical problems, such as the relation of mind to body, freedom of the will, the foundations of morality, the existence of God, the nature of personal identity, and the possibility of knowledge based on reason and experience. Sections differ somewhat in approach and requirements.
PHIL 2130.03: Logic: Deduction.  
A systematic introduction to the operations of formal deductive logic, with considerable attention devoted to the relation between artificial and natural language; and to the philosophical problems that arise from the study of reasoning. (No previous study of logic is presupposed.)

PHIL 2160.03: Philosophical Issues of Feminism.  
An exploration and examination of some of the concepts, issues, and arguments underlying feminist claims and perspectives. (Note: this course does not count towards satisfying the logic requirement for the major or honours program.)

PHIL 2170.03: Philosophy of Sex and Love.  
Philosophers have long been interested in the nature of intimate human relations. This course offers an examination of key concepts and questions related to love and sexual desire. Topics will include the nature of desire, of romantic love, and of sexual orientation. We will take up questions in sexual ethics and politics, and look at selected concepts such as truth and betrayal, sexual objectification, and perversion.

PHIL 2210.03: Crisis and Consent: Foundations of Political Thought: 1651-1778.  
This course will explore a variety of ethical questions associated with the study and practice of science. Students will learn about the nature of philosophical approaches to ethics and how to apply these insights to the tasks of recognizing and reflecting on ethical issues that arise when engaging in scientific research and practice. One section of this course is offered as part of the Dalhousie Integrated Science Program, that relate to the specific scientific topics studied within that program where it serves as one-half of the writing requirement for first year students and is available to DISP students only.

PHIL 2220.03: Philosophy of Religion.  
Monothestic religions (such as Judaism, Christianity, and Islam) assert the existence of a single God. This course addresses philosophical problems posed by traditional monotheism. Why care whether monotheism is true? Why care whether belief in God is rational? Does the rationality of belief in God depend on the evidence for and against God’s existence? What is the best evidence for and against? What bearing does God have on human morality? (Note: credit can only be given for one course, either PHIL 2205 or PHIL 2220.03.)

PHIL 2205.03: Philosophy of Religion.  
Ethics in Science.  
An introduction to ethical questions that arise in the practice of science. The course will explore a variety of ethical questions associated with the study and practice of science. Students will learn about the nature of philosophical approaches to ethics and how to apply these insights to the tasks of recognizing and reflecting on ethical issues that arise when engaging in scientific research and practice. One section of this course is offered as part of the Dalhousie Integrated Science Program, that relate to the specific scientific topics studied within that program where it serves as one-half of the writing requirement for first year students and is available to DISP students only.

PHIL 2260.03: Philosophy of Art.  
This course is devoted to developing the practical skills involved in evaluating reasoning and producing convincing arguments. Note: this course does not count towards satisfying the logic requirement for the major or honors program.

PHIL 2361.03: Ancient Philosophy: from Thales to Plato.  
See course descriptions for CLAS 2561.03 in the Classics section of this Calendar.
PHIL 2472.03: Justice in Global Perspective.
In this course, we will explore answers to the central question in philosophical ethics: “How should we live our lives and interact with others?” in the context of the international community or “Global Village” in which we now live. The course will involve close reading and analysis of liberal and non-liberal theories from around the world on the subjects of: moral rights, the nature of justice, social well-being, human diversity and aqua life, and the nature of social responsibility. Specific topics may include: the impact of globalization on understanding of moral rights, human rights, labour rights, language rights, etc.; third world responses to western conceptualizations of rights; new conceptions of justice and social transformation including conceptions of restorative justice, conceptualizations of race and ethnicity and sources of personal and communal identity; the nature and importance of autonomy; the importance of different cultural conceptions of gender and the problem of sexual violence in a global perspective; and frameworks for understanding shared agency and shared responsibility for poverty and environmental degradation.

PHIL 2480.03: Environmental Ethics.
This course examines humanity’s relation to nature from a philosophical perspective. Of particular importance will be the moral or ethical obligations which humanity may have towards the natural environment. Attention will be given to the historical sources of the attitudes and values which have given rise to current ecological problems in the environment, as well as to the question of how to remediate our relationship to nature. We will read from environmental holists, biocentrics, ecofeminists, deep ecologists, and others, and discuss issues concerning animal rights, environmental justice, and activism.

PHIL 2485.03: Technology and the Environment.
What is technology and what role does it play in current environmental problems? Can technologies help us find solutions to environmental crises, or are those problems themselves a direct result of seeing the world from a technological point of view? In this course, we will assess the environmental impact of particular technologies (e.g., fossil fuel technologies, pharmaceutical and information technologies) and discuss sustainable alternatives and appropriate technologies in developing as well as developed nations.

PREREQUISITE: Permission of the instructor.
FORM: Lecture/discussion
CROSS-LISTING: ENVS 2485.03

PHIL 2490.03: Social, Ethical and Professional Issues in Computer Science.
Computers can enable people to do things that our current laws and policies were not formulated to cover (hacking, sharing files on the internet, and companies sharing data). In such cases, people need to be able to decide for themselves the best course of action, and define such decisions. This course aims at developing the ethical reasoning skills and sensitivities that computer professionals will need to make good decisions and to justify them. The course includes a general introduction to ethical theory and their use in making and justifying decisions.

We then consider various issues and case studies, illustrating the kinds of problems that can arise from the use and misuse of computers and technology: the responsibilities of computer professionals; ethics on the internet (hacking, computer crime, netiquette); privacy and information; intellectual property; social and political issues (digital divide, computers and work, the internet as a democratic technology).

PREREQUISITE: No previous knowledge of computing or of philosophy is assumed. Some familiarity with computers is an advantage.
FORM: Lecture/discussion
CROSS-LISTING: CS/CSCI 3101.03
EXCLUSION: COMP 3900.03

PHIL 2506.03: Minds and Machines: Introduction to Cognitive Science.
Could we build a robot (or program a computer) that has a mind? What is the relationship between the mind, brain, body and the world? How can technology assist cognition? In what ways are human cognitive systems similar to and different from animal cognitive systems? This course takes a philosophical approach, introducing assumptions and issues arising in research at the interactions of artificial intelligence, robotics, neuroscience, psychology, linguistics, animal cognition, evolutionary biology, and philosophy. This is a useful complement to a course in any Cognitive Science discipline, as well as a fascinating investigation of cognition for anyone who has wondered about what the human mind is and how it works.

PREREQUISITE: None.
FORM: Lecture/discussion
CROSS-LISTING: ENVS 2506.03
EXCLUSION: PHIL 3460

PHIL 2610.03: History of Philosophy: The Rationalists.
The philosophy of Descartes, Spinoza, and Leibniz.
PREREQUISITE: One previous credit in philosophy or permission of the instructor.
FORM: Lecture/discussion

PHIL 2620.03: History of Philosophy: The Empiricists.
The philosophy of Locke, Berkeley, and Hume, with an introduction to Kant.
PREREQUISITE: One previous credit in philosophy or permission of the instructor.
FORM: Lecture/discussion
PHIL 2650.X: Modern German Philosophy.
This course provides a broad survey of the major philosophical themes from the Enlightenment to the present. It focuses on the major figures of German philosophy and on the major philosophical movements of the 19th and 20th centuries. Students will gain a broad overview of the major philosophical traditions in Germany.
FORM: Lecture/tutorial
CROSS-LISTING: GERM 2650.06
PHIL 2651.03: Modern German Philosophy I.
The course will explore the major themes of German philosophy from the Enlightenment to the end of the 19th century. It will cover the major figures and movements of German philosophy from the 18th century to the 20th century. Students will gain a broad overview of German intellectual history.
FORM: Lecture/seminar
CROSS-LISTING: GERM 2651.03
EXCLUSION: GERM/PHIL 2650.06
PHIL 2652.03: Modern German Philosophy II.
The course will focus on the major figures and movements of German philosophy from the 20th century to the present. Students will gain a broad overview of the major philosophical traditions in Germany.
FORM: Lecture/seminar
CROSS-LISTING: GERM 2652.03
EXCLUSION: GERM/PHIL 2650.06
PHIL 2660.03: Logic: Understanding Scientific Reasoning.
The course is a general introduction to the methods of evaluating hypotheses, experimental tests, and reasoning in science with applications to everyday reasoning as well. The course is divided into four units of three kinds of evaluation: formal hypotheses, statistical and causal hypotheses, and decisions. No background in science or philosophy is presupposed for this course.
FORM: Lecture/discussion
EXCLUSION: PHIL 1050.03
PHIL 2680.03: Ethics in Science.
An introduction to the ethical issues involved in the practice of science. The course will explore the major ethical questions associated with the study and practice of science. Students will learn about the nature of philosophical approaches to ethics and how to apply these insights to the tasks of recognizing and reflecting on ethical issues that arise when engaged in scientific research and practice.
FORM: Lecture
EXCLUSION: PHIL 1050.03
PHIL 2710.03: Existentialism.
The existentialists focus on what is individual and unique about human lives. They emphasize the sense in which we choose projects and lives and even deaths for ourselves and find self-definition in our ways of avoiding choices. Some existentialists argue that whatever meaning our lives have must be invented. Some contend that life is absurd. This course is an introduction to the themes of existentialism through the study of the philosophy and fiction of Dostoevsky, Nietzsche, Sartre, Camus, and Simone de Beauvoir.
FORM: Lecture/discussion
PHIL 2720.03: The Good Life: Well-Being, Meaning & Happiness.
This course is a survey of various ethical views in the history of Western Philosophy, concentrating on the issues facing people who are concerned with what human beings should aim for and do if they are to lead lives that are fulfilling.
FORM: Lecture/discussion
PHIL 2805.03: Ethics & Health Care: Patient Care.
How much information must health professionals provide to patients? Can they violate a patient's expressed wishes if they judge a patient to be not fully competent? Should doctors be permitted to end the life of patients when the patient cannot make decisions? This course will explore questions of this nature through a combination of lecture and discussions. Students are encouraged to take this course in conjunction with PHIL 2810.05.
FORM: Lecture/discussion
PHIL 2810.03: Ethics & Health Care: Social Policy.
Should the state regulate medical decision making? Should the state permit all medical practices? What should the state do to regulate the use of human and animal subjects in medical research? What criteria should the state use to regulate the use of medical technology? The course will focus on the ethical issues that arise in the context of medical and health care policy.
FORM: Lecture/discussion
PHIL 3051.03: Epistemology.
A study of fundamental issues in the contemporary theory of knowledge. The course examines skepticism and explores the nature of knowledge, belief, meaning, evidence, and truth. Questions raised about perception and memory and their relation to knowledge.
FORM: Lecture/discussion
PREREQUISITE: Two of PHIL 2610.03, PHIL 2620.03, 2310.03 or permission of the instructor.
CROSS-LISTING: PHIL 3051.03
PHIL 3105.03: Ethics.
A systematic study of the foundations of morality, including readings from Kant, Foundations of Metaphysics and Morals and Hum, A Treatise of Human Nature.
FORM: Lecture/discussion
PREREQUISITE: Two previous credits in philosophy or permission of the instructor.
CROSS-LISTING: PHIL 3105.03
PHIL 3110.03: History of Ethics: Plato to Epicurus.
This course will consider Plato and the early Greek philosophers, focusing on the ethical issues that arise in the context of medical and health care policy.
FORM: Seminar
PHIL 3115.03: History of Ethics: Kant's Moral Theory.
This course will examine the moral theories of Immanuel Kant. It will explore the ethical theories of Immanuel Kant and other key figures in the history of modern philosophy.
FORM: Lecture/discussion
PREREQUISITE: Two previous credits in philosophy or permission of the instructor.
PHIL 3140.03: Logic: Logical Theory I.
An introduction to non-classical logics from a formal perspective.
FORM: Lecture/discussion
CROSS-LISTING: GNTS 3100.03, PHIL 5140.03
PREREQUISITE: Two previous credits in philosophy.
PHIL 3150.03: Contemporary Feminist Theories.
A study of feminist theories of gender and women's studies. This is an introduction to feminist theories of gender and women's studies.
FORM: Seminar
CROSS-LISTING: GNTS 3150.03, PHIL 5150.03
PREREQUISITE: Two previous credits in philosophy or permission of the instructor.
PHIL 3211.03: Philosophy of Law.
A study of the nature and scope of the field of philosophy of law, including topics such as law and morality, law and society, and law and politics.
FORM: Seminar
CROSS-LISTING: PHIL 5211.03
PREREQUISITE: Two previous credits in philosophy or permission of the instructor.
PHIL 3250.03: Modern German Philosophy.
This course provides a broad overview of the major philosophical themes from the Enlightenment to the present. Students will gain a broad overview of the major philosophical traditions in Germany.
FORM: Lecture/tutorial
CROSS-LISTING: GERM 2650.06
PHIL 3710.03: Contemporary Feminist Theories.
A study of feminist theories of gender and women's studies. This is an introduction to feminist theories of gender and women's studies.
FORM: Seminar
CROSS-LISTING: GNTS 3710.03, PHIL 5710
PREREQUISITE: Two previous credits in philosophy or permission of the instructor.
CROSS-LISTING: PHIL 5211.03
PREREQUISITE: Two previous credits in philosophy or permission of the instructor.
CROSS-LISTING: PHIL 5211.03
FORM: Seminar
PHIL 3720.03: Contemporary Feminist Theories.
A study of feminist theories of gender and women's studies. This is an introduction to feminist theories of gender and women's studies.
FORM: Seminar
CROSS-LISTING: GNTS 3720.03, PHIL 5720
PREREQUISITE: Two previous credits in philosophy or permission of the instructor.
CROSS-LISTING: PHIL 5211.03
PREREQUISITE: Two previous credits in philosophy or permission of the instructor.
CROSS-LISTING: PHIL 5211.03
FORM: Seminar
PHIL 3750.03: Modern German Philosophy.
This course provides a broad overview of the major philosophical themes from the Enlightenment to the present. Students will gain a broad overview of the major philosophical traditions in Germany.
FORM: Lecture/tutorial
CROSS-LISTING: GERM 2650.06
PHIL 3850.03: Ethics & Health Care: Social Policy.
This course provides a broad overview of the major ethical issues involved in the practice of medicine. The course will explore the major ethical questions associated with the study and practice of medicine. Students will learn about the nature of philosophical approaches to ethics and how to apply these insights to the tasks of recognizing and reflecting on ethical issues that arise when engaged in medical research and practice.
FORM: Lecture/discussion
EXCLUSION: GERM/PHIL 2650.06
PHIL 3950.03: Ethics & Health Care: Social Policy.
This course provides a broad overview of the major ethical issues involved in the practice of medicine. The course will explore the major ethical questions associated with the study and practice of medicine. Students will learn about the nature of philosophical approaches to ethics and how to apply these insights to the tasks of recognizing and reflecting on ethical issues that arise when engaged in medical research and practice.
FORM: Lecture/discussion
EXCLUSION: GERM/PHIL 2650.06
PHIL 3300.03: Philosophy of Language. What does it mean to say that the elements of language have meaning? FORMAT: Lecture/discussion
PREREQUISITE: Two previous credits in philosophy including one half credit in logic, class, half or full-year
CROSS-LISTING: PHIL 5340.03

PHIL 3361.03: Ethics, Justice, and Economics. Assumptions of Neo-classical economic theory are critically examined, with a focus on the ethical and distributional consequences of using markets as an allocation mechanism. We discuss the major conceptions of economic justice, including utilitarianism and social choice theory, Rawlsian egalitarianism, Nozickian libertarianism, Sen's capabilities approach, and equality of opportunity. FORMAT: Lecture 3 hours
PREREQUISITE: ECON 2200.03, ECON 2201.03
CROSS-LISTING: ECON 3360.03, PHIL 5363.03

PHIL 3420.03: Philosophy of Biology. This course provides an up-to-date systematic examination of central issues in the philosophy of biology. Topics typically include: How can the Darwinian paradigm be taken to explain adaptive complexity? Is there a new emphasis on developmental theory likely to revolutionize evolutionary theory? What are the most fundamental units of selection? Can the concept of biological function be understood without attributing purpose to nature? Why is the concept of species so elusive? Is there a "human nature"? Is genuine altruism possible given the forces of selection? Is there progress in evolution? How should clashes between faith and reason over the nature of our evolution be resolved?
FORMAT: Lecture/discussion
PREREQUISITE: One previous credit in philosophy or biology
CROSS-LISTING: BIOL 3310.03, PHIL 5420.03

PHIL 3434.03: The Ancient Origins of Political Thought: From Homer to Aristotle. This class will study the very beginnings of political thought with Greek poets, historians and educators, culminating in a careful investigation of the political writings of Plato and Aristotle. We will investigate philosophical questions about the origin of the state, the purpose of political community, the different kinds of regimes or governments; the common good, individual freedom, revolution, war, wealth, poverty, and slavery.
FORMAT: Lecture/terminals
CROSS-LISTING: POLI 3434.03, CLAS 3434.03

PHIL 3445.03: Philosophy of Mind: The Mind-Body Problem. This course will critically examine philosophical and scientific articles, and possibly short works of fiction, which explore various theories, problems and arguments regarding the nature and status of the mind and body in the natural world and the relationships between mind, body and world. We will explore and discuss controversies regarding the thesis that the mind is (nothing but?) the brain, and issues such as the theoretical foundations of artificial intelligence, the problem of subjectivity and consciousness, "naturalized" intentionality (how thoughts—if they are physical things or processes)—can have the property of being about other things—and animal cognition.
FORMAT: Lecture/discussion
PREREQUISITE: Two previous credits in philosophy
CROSS-LISTING: PHIL 5445.03
EXCLUSION: PHIL 3440.03
CO-REQUIRE: none

PHIL 3450.03: Philosophy of Emotions. We will concentrate on the emergence of philosophical interest in the emotions over the last twenty years. Although it is obvious that much human action is emotionally driven, traditionally many philosophers have expressed skepticism about the value of emotions to rational and ethical conduct. Recently, philosophers such as Martha Nussbaum, Amelia Rorty and Ronald De Sousa have argued powerfully that rationality requires emotions. Other philosophers have argued that we need a renewed assessment of the epistemic importance of emotion in revealing present and future values. Topics will include emotional rationality, emotion and, legal and moral motivations, emotion and forms of rationality, and the embodiment of emotions.
FORMAT: Lecture/discussion
PREREQUISITE: At least one previous credit in philosophy including one half credit above the 1000 level
CROSS-LISTING: PHIL 5450

PHIL 3470.03: Human Rights: Philosophical Issues. This course surveys the major influential theories of human rights and why the practice of human rights may be problematic. We will consider the classical formulations of empirical and metaphysical theories of human rights, as well as current debates about the moral status of human rights. We will also consider the jurisprudential and legal theories of human rights. Finally, we will briefly consider the connections between human rights theory and international politics.
FORMAT: Lecture/discussion
PREREQUISITE: PHIL 3475.03
EXCLUSION: PHIL 3475.03
CROSS-LISTING: PHIL 5470.03

PHIL 3475.03: Democratic Theory. This course surveys the major influential theories of democracy and why the practice of democracy may be problematic. We will consider the classical formulations of democratic theories, as well as current debates about the moral status of democracy. We will also consider the jurisprudential and legal theories of democracy. Finally, we will briefly consider the connections between democratic theory and international politics.
FORMAT: Lecture/discussion
PREREQUISITE: PHIL 3470.03
EXCLUSION: PHIL 3470.03
CROSS-LISTING: PHIL 5475.03

PHIL 3476.03: Liberalism and Global Justice. This is a course in modern political theory. We will critically examine some recent normative political theory, and then examine the prospects and perils of attempts to recent liberal theory to articulate a principled vision of global justice. We will consider Kant's original bended-knuckle theory of justice and examine some challenges it faces from both cosmopolitan theories of justice and proponents of nationalism. Next we'll consider rival political conceptions of liberal international justice, and Rawls' response in the form of his recent The Law of Peoples. Concluding, we will examine specific issues of applied political justice (e.g., human rights and immigration) as well as issues of economic and social justice and poverty.
FORMAT: Lecture/discussion
PREREQUISITE: PHIL 3474.03, PHIL 5474.03
CROSS-LISTING: PHIL 5476.03

PHIL 3520.03: Philosophy of Social Science. Can people from different cultures understand each other? What is it to be a member of a culture? Are societies best thought of as collections of individuals, or are individuals constituted by societies? In what sense are the social sciences "sciences"? Are societies describable by explanatory laws? What counts as an explanation of human behaviour? This course explores these and related questions through a reading of classic and contemporary philosophers and social theorists. PREREQUISITE: two full credits in philosophy
CROSS-LISTING: POLI 3434.03, PHIL 5520.03

PHIL 3530.03: Freedom, Action, and Responsibility. An investigation of the nature of action seeking criteria for individualizing, foreseeing, and explaining actions. Topics may include the roles of will, intention, motives, and reasons in actions; responsibility for actions and the concept of free actions.
FORMAT: Lecture/discussion
PREREQUISITE: Two previous credits in philosophy
CROSS-LISTING: PHIL 5530.03

PHIL 3630.03: History of Philosophy: Kant. Special attention will be given to Kant’s metaphysics.
FORMAT: Lecture/discussion
PREREQUISITE: PHIL 2400.03, PHIL 2401.03, or permission of the instructor
CROSS-LISTING: PHIL 5630.03

PHIL 3635.03: History of Philosophy: 19th-Century Philosophy. This course will study major figures in 19th-century philosophy between Kant and Russell: Feible, Hegel, Schopenhauer, Marx, Kierkegaard, Mill, Nietzsche, James and Bradley. Attention will also be paid to some important figures in related arts and sciences (e.g., Beethoven, Wagner, Ibsen, Frege, Marx, Freud, Wittgenstein, Fugger, Schiller): What is the role of the concept of species in evolutionary theory? What is the nature of consciousness? Is consciousness a physical or a mental phenomenon? Can people from different cultures understand each other? What is it to be a member of a culture? Are societies best thought of as collections of individuals, or are individuals constituted by societies? In what sense are the social sciences "sciences"? Are societies describable by explanatory laws? What counts as an explanation of human behaviour? This course explores these and related questions through a reading of classic and contemporary philosophers and social theorists. PREREQUISITE: two full credits in philosophy
CROSS-LISTING: POLI 3434.03, PHIL 5635.03

PHIL 3640.03: History of Philosophy: Twentieth-Century Philosophy. The Twentieth Century has been a period of revolutionary change in Anglophone philosophy. This course surveys the major influential theories of human rights and why the practice of human rights may be problematic. We will consider the classical formulations of empirical and metaphysical theories of human rights, as well as current debates about the moral status of human rights. We will also consider the jurisprudential and legal theories of human rights. Finally, we will briefly consider the connections between human rights theory and international politics.
FORMAT: Lecture/discussion
PREREQUISITE: PHIL 2400.03 or 2401.03
CROSS-LISTING: PHIL 5640.03

PHIL 3660.03: Post-Modern Philosophy. Modern Philosophy is a philosophical perspective in which individuals and their conscious thoughts are paramount. Post-modern philosophy rejects this...
PHIL 3670.03: Philosophy of Science.
A study of topics such as the nature of substance and change, body and mind, cause and effect, and the concept of existence.

PHIL 3851.03: Metaphysics.
A study of topics including the nature of substance and change, body and mind, cause and effect, and the concept of existence.

PHIL 4055.03: Topics in Epistemology.
In this seminar course, students focus on a particular topic in epistemology and investigate it in detail. When the course is offered, the topic is assigned by the Department at the end of the preceding academic year and is then posted at the Department and in the Faculty’s timetable on the Web.

PHIL 4200.03: Topics in Normative Theory.
In this seminar course, students focus on a particular topic in normative theory and investigate it in detail. When the course is offered, the topic is assigned by the Department at the end of the preceding academic year and is then posted at the Department and in the Faculty’s timetable on the Web.

PHIL 4220.03: Contemporary Philosophical Issues.
PHIL 4470.03: Contemporary Liberalism and Democracy.

PHIL 4105.03: Contemporary Metaethics.
This seminar course surveys contemporary work in metaethics - the branch of moral philosophy concerned with the metaphysical, epistemological, semantic and psychological commitments of the moral discourse and practice.

PHIL 4190.03: Topics in the History of Philosophy I:
Wittgenstein.
In this seminar course, students focus on a particular topic in the history of philosophy and investigate it in detail. When the course is offered, the topic is assigned by the Department at the end of the preceding academic year and is then posted at the Department and in the Faculty’s timetable on the Web.

PHIL 4191.03: Topics in the History of Philosophy II.
In this seminar course, students focus on a particular topic in Modern Philosophy (e.g., the work of Locke or Hume) and investigate it in detail. When the course is offered, the topic is assigned by the Department at the end of the preceding academic year and is then posted at the Department and in the Faculty’s timetable on the Web.

PHIL 4192.03: Topics in the History of Philosophy III.
In this seminar course, students focus on a particular topic in Modern Philosophy (e.g., the work of Locke or Hume) and investigate it in detail. When the course is offered, the topic is assigned by the Department at the end of the preceding academic year and is then posted at the Department and in the Faculty’s timetable on the Web.

PHIL 4193.03: Topics in the History of Philosophy IV.
In this seminar course, students focus on a particular topic in Modern Philosophy (e.g., the work of Locke or Hume) and investigate it in detail. When the course is offered, the topic is assigned by the Department at the end of the preceding academic year and is then posted at the Department and in the Faculty’s timetable on the Web.

PHIL 4194.03: Topics in the History of Philosophy V.
In this seminar course, students focus on a particular topic in Modern Philosophy (e.g., the work of Locke or Hume) and investigate it in detail. When the course is offered, the topic is assigned by the Department at the end of the preceding academic year and is then posted at the Department and in the Faculty’s timetable on the Web.

PHIL 4195.03: Topics in the History of Philosophy VI.
In this seminar course, students focus on a particular topic in Modern Philosophy (e.g., the work of Locke or Hume) and investigate it in detail. When the course is offered, the topic is assigned by the Department at the end of the preceding academic year and is then posted at the Department and in the Faculty’s timetable on the Web.

PHIL 4196.03: Topics in the History of Philosophy VII.
In this seminar course, students focus on a particular topic in Modern Philosophy (e.g., the work of Locke or Hume) and investigate it in detail. When the course is offered, the topic is assigned by the Department at the end of the preceding academic year and is then posted at the Department and in the Faculty’s timetable on the Web.

PHIL 4197.03: Topics in the History of Philosophy VIII.
In this seminar course, students focus on a particular topic in Modern Philosophy (e.g., the work of Locke or Hume) and investigate it in detail. When the course is offered, the topic is assigned by the Department at the end of the preceding academic year and is then posted at the Department and in the Faculty’s timetable on the Web.

PHIL 4198.03: Topics in the History of Philosophy IX.
In this seminar course, students focus on a particular topic in Modern Philosophy (e.g., the work of Locke or Hume) and investigate it in detail. When the course is offered, the topic is assigned by the Department at the end of the preceding academic year and is then posted at the Department and in the Faculty’s timetable on the Web.

PHIL 4199.03: Topics in the History of Philosophy X.
In this seminar course, students focus on a particular topic in Modern Philosophy (e.g., the work of Locke or Hume) and investigate it in detail. When the course is offered, the topic is assigned by the Department at the end of the preceding academic year and is then posted at the Department and in the Faculty’s timetable on the Web.

PHIL 4200.03: Topics in Normative Theory.
In this seminar course, students focus on a particular topic in normative theory and investigate it in detail. When the course is offered, the topic is assigned by the Department at the end of the preceding academic year and is then posted at the Department and in the Faculty’s timetable on the Web.

PHIL 4220.03: Contemporary Philosophical Issues.

PHIL 4470.03: Contemporary Liberalism and Democracy.
Liberalism takes a variety of forms and includes many topics including the rule of law, limited government, the free exchange of goods, entitlement to property, the self, and individual rights. Its philosophical and political assumptions provide the intellectual context within which its account of the individual, its vision of the community and its preferred allocation of resources will be assessed.

FORMAL: Seminar
PREREQUISITE: Two full credits in philosophy or political science or permission of the instructor

CROSS-LISTING: POLI 4479.03/5479.03, ECON 4446.03/5446.03, PHIL 5470.03

PREREQUISITE: At least two previous credits in philosophy or permission of the instructor

FORMAL: Seminar

CROSS-LISTING: PHIL 5190.03

PREREQUISITE: At least two previous credits in philosophy or permission of the instructor

CROSS-LISTING: PHIL 5191.03

PREREQUISITE: At least two previous credits in philosophy or permission of the instructor

CROSS-LISTING: PHIL 5192.03

PREREQUISITE: At least two previous credits in philosophy or permission of the instructor

CROSS-LISTING: PHIL 5193.03

PREREQUISITE: At least two previous credits in philosophy or permission of the instructor

CROSS-LISTING: PHIL 5194.03

PREREQUISITE: At least two previous credits in philosophy or permission of the instructor

CROSS-LISTING: PHIL 5195.03

PREREQUISITE: At least two previous credits in philosophy or permission of the instructor

CROSS-LISTING: PHIL 5196.03

PREREQUISITE: At least two previous credits in philosophy or permission of the instructor

CROSS-LISTING: PHIL 5197.03

PREREQUISITE: At least two previous credits in philosophy or permission of the instructor

CROSS-LISTING: PHIL 5198.03

PREREQUISITE: At least two previous credits in philosophy or permission of the instructor

CROSS-LISTING: PHIL 5199.03

PREREQUISITE: At least two previous credits in philosophy or permission of the instructor

CROSS-LISTING: PHIL 5200.03

PREREQUISITE: At least two previous credits in philosophy or permission of the instructor

CROSS-LISTING: PHIL 5201.03

PREREQUISITE: At least two previous credits in philosophy or permission of the instructor

CROSS-LISTING: PHIL 5210.03

PREREQUISITE: At least two previous credits in philosophy or permission of the instructor

CROSS-LISTING: PHIL 5215.03

PREREQUISITE: At least two previous credits in philosophy or permission of the instructor

CROSS-LISTING: PHIL 5220.03

PREREQUISITE: At least two previous credits in philosophy or permission of the instructor

CROSS-LISTING: POLI 4479.03/5479.03, ECON 4446.03/5446.03, PHIL 5470.03
PHIL 4500.03: Topics in Feminist Philosophy.

In this seminar course, students focus on a particular topic in the Philosophy of Science and investigate it in detail. When the course is offered, the topic is assigned by the Department at the end of the preceding academic year and is then posted at the Department and in the Faculty’s timetable on the Web.

FORMAT: Seminar
PREREQUISITE: At least two previous credits in Philosophy or permission of the instructor
CROSS-LISTING: PHIL 5510.03

PHIL 4680.03: Topics in the Philosophy of Science.

In this seminar course, students focus on a particular topic in the Philosophy of Science and investigate it in detail. When the course is offered, the topic is assigned by the Department at the end of the preceding academic year and is then posted at the Department and in the Faculty’s timetable on the Web.

FORMAT: Seminar
PREREQUISITE: At least two previous credits in Philosophy or permission of the instructor
CROSS-LISTING: PHIL 5510.03

PHIL 4700.03: Philosophy of Race.

This course explores the metaphysics and ethics of race. Topics covered include: what “race” means, how old the concept is, whether races exist, what kinds of things races are, whether it is valuable to acknowledge one’s racial identity, and what counts as racism.

PREREQUISITE: At least two previous credits in Philosophy or permission of the instructor
CROSS-LISTING: PHIL 5680.03

PHIL 4801.03: Topics in the Philosophy of Science.

In this seminar course, students focus on a particular topic in the Philosophy of Science and investigate it in detail. When the course is offered, the topic is assigned by the Department at the end of the preceding academic year and is then posted at the Department and in the Faculty’s timetable on the Web.

FORMAT: Seminar
PREREQUISITE: PHIL 2800.06 or 2805.03 AND 2810.03 or permission of the instructor
CROSS-LISTING: PHIL 5855.03

PHIL 4850.03: Topics in Metaphysics.

In this seminar course, students focus on a particular topic in Metaphysics and investigate it in detail. When the course is offered, the topic is assigned by the Department at the end of the preceding academic year and is then posted at the Department and in the Faculty’s timetable on the Web.

FORMAT: Seminar
PREREQUISITE: At least two previous credits in Philosophy or permission of the instructor
CROSS-LISTING: PHIL 5855.03

PHIL 4940.03/4960.03/4980.03/4990.03/4970.06/4990.06: Directed Reading.

Consult department for details. In special cases, courses to suit individual interests can be developed jointly by a student and an instructor.

NOTE: Students taking PHIL 4970.XYY OR 4990.XXY must register in both X and Y in consecutive terms; credit will only be given if both are completed consecutively.

FORMAT: Individual instruction
PREREQUISITE: At least two previous credits in Philosophy or permission of the instructor
RESTRICTION: Students may only register for this class with the written permission of the faculty member

Zaftis, R., BA (Ibogomps), MA (Oxford), PhD (Toronto)

I. What is Political Science?

Political Science has been described as “the science of politics, of who is governed, and how they are governed.” As such, it is a discipline that is concerned with the study of political institutions, processes, and outcomes. These are the issues that are most relevant to our daily lives, and they are the issues that drive the decisions of our elected officials. The study of political science is important because it helps us to understand the world around us, and it can help us to make informed decisions about the future.
and most courses emphasize government structure and policy making, including domestic public administration and foreign policy. Other courses deal with political behaviour such as public opinion or interest group activity. Courses in modern research methods, including quantitative analysis, are also offered.

The admission requirements for Political Science are listed under the Faculty of Arts and Social Sciences. There are no additional requirements for Political Science beyond those of the Faculty.

Students taking an Honours Degree in Political Science or majoring in Political Science are encouraged to seek advice from Professor Margaret Denike, the Undergraduate Advisor, in developing a program of studies. Professor Frank Harvey is the Coordinator of Graduate Studies.

For General Interest

Students who have not yet decided on a major, or are looking for an elective in Political Science, should take one of the Introductory courses. These may be taken over a single term or over the full year.

PLEASE NOTE: Students who complete the King’s Foundation Year program with a grade of ‘B’ or higher will not be required to complete an Introductory course in Political Science.

Students should take no more than the equivalent of one full credit in 1st year Political Science courses.

II. Degree Programs

Students concentrating in Political Science may take a 15 credit minor program, 20 credit major, or 20 credit honours program. The degree requirements are spelled out in University and Faculty regulations, and in departmental regulations outlined below. The specific courses to be taken in each individual program are chosen in consultation with the undergraduate advisor.

A student’s program may consist of a general selection of courses from the Department’s offerings or may emphasize one of the sub-fields of Political Science, as set out below.

Students are encouraged to develop distinctive programs tailored to their own particular interests and circumstances. They should, however, seek advice early in their program to ensure that they are consistent with University regulations.

In addition to the departmental requirements listed below, students must satisfy the requirements outlined in the Degree Requirements section, page 122, of this calendar.

In addition to introductory courses, Political Science courses are divided into four subfields:

• Canadian Government and Politics
• Comparative Government and Politics
• Political Theory and Methodology
• International Politics and Foreign Policy

Full course descriptions appear in Section III.

Introductory

• POLI 1005.03: Ideas, Politics, People
• POLI 1005.03: Government and Democracy
• POLI 1100 X/Y:00: Political Worlds: An Introduction to Government and Politics
• POLI 1101 X/Y:00: Intro to Government and Politics

Canadian Government and Politics

• POLI 2210.03: Unity and Diversity: The Dynamics of Canadian Federalism
• POLI 2220.03: Political Power and Partisan Politics: The Structures of Canadian Parliamentary Government
• POLI 2220.03: Local Government
• POLI 2230.03: Constitutional Issues in Canadian Politics
• POLI 2248.03: Canadian Provincial Policies
• POLI 3220.03: International Relations
• POLI 3224.03: Canadian Political Parties
• POLI 3231.03: The Politics and Governance of Canadian Cities
• POLI 3233.03: Politics and the Economy of Canada
• POLI 3235.03 The Politics of Regionalization
• POLI 3241.03 Canadian Political Thought
• POLI 3242 03 00: Advanced Seminar in Canadian Politics
• POLI 4207.03: Canadian Politics: Themes and Theories
• POLI 4223.03: Pressure Politics in Canada: Opportunities and Obstacles
• POLI 4240.03: Policy Formulation in Canada
• POLI 4241.03: Introduction to Policy Analysis
• POLI 4242.03: Politics of Reason, Passion, and Biology
• POLI 4249.03: Canadian Public Administration
• POLI 4260.03: The Politics of Health Care

Comparative Government and Politics

• POLI 2300X/Y:06: Comparative Politics
• POLI 2310.03: Governance and Globalization
• POLI 3304.03: Comparative Federalism
• POLI 3311.03: Sport and Politics
• POLI 3315.03: African Politics
• POLI 3320.03: European Politics
• POLI 3321.03: Politics of the European Union
• POLI 3360.03: Politics in Latin America
• POLI 3378.03: U.S. Constitution, Government, and Politics
• POLI 3383.03: Politics of the Environment
• POLI 4302.03: Comparative Development Administration
• POLI 4303.03: Human Rights: Political issues
• POLI 4322.03: The EU as a Global Actor
• POLI 4340.03: Approaches to Development
• POLI 4555.03: Comparative Perspectives on the Development State
• POLI 4580.03: Politics of Climate Change

Political Theory and Methodology

• POLI 2410.03: Crisis and Consent: Foundations of Political Thought: 1651-1776
• POLI 2420.03: Revolution and Rationality: Foundations of Political Thought, 1789-1900
• POLI 2490.03: Democracy, Difference and Citizenship: A Survey of Political Philosophy
• POLI 3401.03: Contemporary Political Thought
• POLI 3403.03: Canadian Political Thought
• POLI 3420.03: Sex and the State
• POLI 3427.03: The Sexualization of Western Political Thought
• POLI 3431.03: Politics Through Film and Literature
• POLI 3434.03: The Ancient Origins of Political Thought: From Homer to Aristotle
• POLI 3440.03: The Politics of Fear
• POLI 3450.03: Storm and Stress: Romantics and the Backlash Against Enlightenment Political Thought
• POLI 3473.03: Democratic Theory
• POLI 3492.03: Political Inquiry I
• POLI 3493.03: Political Inquiry II
• POLI 4401.03: Human Rights: Philosophical Issues
• POLI 4479.03: Liberalism
• POLI 4481.03: Theories of Violence, Persuasion, Genocide

International Politics and Foreign Policy

• POLI 2520.03: World Politics
• POLI 2530.03: Foreign Policy in Theory and Practice
• POLI 2540.03: Canadian American Relations
• POLI 3503.03: Human Rights: Foundations
• POLI 3520.03: Building Democracy and Peace
• POLI 3521.03: Comparative Foreign Policy Simulation
• POLI 3531.03: The United Nations in World Politics
• POLI 3535.03: The New International Division of Labour
• POLI 3540.03: Foreign Policy in the Third World
• POLI 3544.03: Political Economy of Southern Africa
• POLI 3550.03: Japanese Foreign Policy
• POLI 3560.03: Human Development/Security at the Start of the Twenty-first Century
• POLI 3565.03: Contemporary Security Studies
• POLI 3567.03: International Organization
• POLI 3568.03: Canada and the World
• POLI 3574.03: American Foreign Policy
• POLI 3577.03: Civil-Military Relations in Contemporary Western Society
• POLI 3580.03: Diplomacy and Negotiation
• POLI 3589.03: Politics of the Sea
• POLI 3591.03: Pirates, Pirautes and Protectors of the Sea
• POLI 3596.03: Explaining Global Conflict and Violence
• POLI 4340.03: Approaches to Development

Political Science 283
Departmental Requirements

2000 level
- Three core courses, or equivalent in half-credit courses, which must include POLI 2410.03 and 2420.03.
- Two additional Political Science credits at or above the 2000 level.
- Two Political Science credits at advanced level (third and fourth year), not including those listed below.

3000 level
- POLI 3492.03 (or equivalent)
- POLI 3493.03
- One core course in Political Science (note that the prerequisite for these courses is an introductory course in Political Science);
- POLI 3492.03 as an equivalent quantitative methods course (approved by the Department) and POLI 3490.03.
- One full credit in Political Science beyond the 2000 level, and
- Two other full-credit Political Science courses beyond the 3000 level.

To gain admission into the Combined Honours program, students must have:

1. A B+ average in their last ten credits.
2. A B+ average in a group of four Political Science courses, or equivalent, which must include:
   - Two core courses, or equivalent (which include POLI 2410.03 and 2420.03).
   - POLI 3492.03 and 3493.03.
   - One full credit, or equivalent, at the 3000 level in Political Science.

Students should complete the Honours Application Form (available from the Registrar) and submit it to the Political Science Honours coordinator at the end of their third year.

In their fourth year, honours students are encouraged to take the senior 4000 level course in addition to POLI 4204.03 and 4205.03. Permission of the instructor is required.

This programme provides fourth year honours students with the opportunity to work with graduate students at an advanced level.

The honours essay is counted as one credit. It is prepared during the fourth year under the supervision of a faculty member. The essay demonstrates the student’s ability to develop a systematic argument with reference to pertinent literature and other such data or analytical materials as may be appropriate. The credit number for the honours essay is POLI 4600.06. Arrangements are made for honours students in the last year to meet their supervisor with some regularity to discuss and ultimately present the work represented in their essay. Honours students will also be expected to participate in the Honours Seminar, which will count toward the “21st” grade required by the University.

B. Combined Honours

PLEASE NOTE: Be sure to read the Faculty of Arts and Social Sciences requirements for the Combined Honours Program listed in the Degree Requirements section of this Calendar.

Several of the more common combined honours programs are: Political Science and Philosophy; Political Science and History; Political Science and Economics; Political Science and Sociology; Political Science and Computer Science and Political Science and International Development Studies. Students interested in taking any of these combined honours programs or in discussing other possible programs should consult initially with the Honours Supervisor.

To obtain a Combined Honours, with an emphasis upon Political Science, students must have:
- Two core courses in Political Science, which must include POLI 2410.03 and POLI 2420.03 (or equivalent).
- The prerequisite for these courses is an introductory course in Political Science.
- A methods course in one of the two fields (e.g., POLI 3492.03 (or equivalent) and 3493.03).
- At least two full credits at an advanced level in Political Science (in addition to 3492.03 and 3493.03), and
- POLI 4600.06.

To gain admission into the Combined Honours program, with an emphasis upon Political Science, students must have a B+ average in a group of three Political Science courses comprised of two core courses (including POLI 2410.03 and POLI 2420.03) and 3492.03 and 3493.03.

Students who take a combined Honours, with an emphasis on a subject OTHER than Political Science, must take a minimum of:
- One core course in Political Science (note that the prerequisite for core courses is an introductory course in Political Science);
- POLI 3492.03 as an equivalent quantitative methods course approved by the Department) and POLI 3490.03.
- One full credit in Political Science beyond the 2000 level, and
- Two other full-credit Political Science courses beyond the 3000 level.

To gain admission into the Combined Honours program, with an emphasis upon a subject OTHER than Political Science, students must have a B+ average in a group of two Political Science courses, including a core course.

C. BA (20 credit) Major in Political Science

The Major program offers the opportunity for students to design a more focused study within a specific subfield of Political Science. The Major program is a 20 credit course: students must have a minimum of six and a maximum of nine Political Science courses in total above the 1000 level; three of these courses must be beyond the 2000 level.
Departmental Requirements

1000 level
- One full credit (or two half credits) from the following: POLI 1010.03, 1020.03, 1025.03, 1030.03, 1050X/0Y, 1100X/0Y

2000 level
- Two full credits in different core course fields. The core course areas are as follows:
  - POLI 2210.03 and POLI 2220.03
  - POLI 2300.X/0Y
  - POLI 2410.03 and POLI 2420.03
  - POLI 2520.03 and POLI 2530.03

Students must complete a full credit in two of these areas, for a total of two full credits.

3000 level
- Three full credits. Note: one full credit must be either POLI 3492.03 (or equivalent) or POLI 3495.03.
- One additional full credit in Political Science above the 1000 level
- Other required courses
  - A writing course or King’s Foundation Year Program.

D. BA (20 credit) Double Major in Political Science

Departmental Requirements

1000 level
- One full credit (or two half credits) from the following: POLI 1010.03, 1020.03, 1025.03, 1030.03, 1050X/0Y, 1100X/0Y

2000 level
- Two full credits in different core course fields. The core course areas are as follows:
  - POLI 2210.03 and POLI 2220.03
  - POLI 2300.X/0Y
  - POLI 2410.03 and POLI 2420.03
  - POLI 2520.03 and POLI 2530.03

Students must complete a full credit in two of these areas, for a total of two full credits.

3000 level
- Two full credits. Note: one half credit must be either POLI 3492.03 (or equivalent) or POLI 3495.03.
- One additional full credit in Political Science above the 1000 level

Other required courses
- A writing course or King’s Foundation Year Program.

E. BA (15 credit) Minor in Political Science

See Minors in the College of Arts and Science section of this calendar (page 129).

F. Minors Program

Minor in Political Science
See Minors in the College of Arts and Science section of this calendar (page 129).

Summer School Courses
The Department normally offers several second year or third year courses in the summer sessions. For details, see the University summer school calendar.

III. Course Descriptions

The full title of each course number indicates year, or level, of course. Except for 1000 level courses, the second digit denotes the sub-field within which the courses is listed.

Not all courses are offered every year. For final listings check with the Department office or the current timetable.

POLI 1050.03: Ideas, Politics, and People.
This course is an introduction to major political concepts, ideas, and debates. It provides a foundation for all further courses in political science. By reference to current political issues, we explore the ideologies of nationalism, liberalism, socialism, conservatism, fascisms, feminisms, and other political ideas. A unit on political economy elucidates what these ideologies mean in practice. Another unit on political culture examines how these ideologies work out differently in individual nation-states. POLI 1050.03 follows sequentially.
FORMAT: Lecture
EXCLUSION: POLI 1100X/0Y, 1103X/0Y, 1105X/0Y, 1105X/0Y, 1025.03

POLI 1055.03: Governments and Democracy.
What do governments do? Are we entitled to accountable and effective government? How democratic is the government? In this course, students consider these and other questions by exploring the structure of government in Canada, and in a selected country.
Examples: Canada, the United States, the United Kingdom, France, Russia, China. It is suggested that the student consult the Department to establish which governments are the focus of study.
FORMAT: Lecture

POLI 1100X/0Y: Political Worlds: An Introduction to Government and Politics.
This team-taught introductory course, you will be exposed to the diverse worlds of political life through the research and teaching interests of a diverse range of professors in the Political Science department. They will introduce you to a range of key issues and approaches that animate both their own research and contemporary politics in various parts of the world. Topics addressed will include: the nature and forms of democracy; the relationship between economic wealth and political power; the quest for human rights; the nature of diplomacy and international organization; the challenges of defining and promoting international security; the challenges of global inequality and development; forms of political participation; the politics of environmental sustainability; and the relationship between politics and sports.
NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.
FORMAT: Lecture

POLI 2210.03: Unity and Diversity: The Dynamics of Canadian Federalism.
Along with parliamentary government and the Charter of Rights and Freedoms, federalism is one of the three constitutional pillars of governance in Canada. Federalism has been central to Canada’s political, economic, social and cultural development. The course examines federalism in the last few terms, and political power. The course explores how federalism shapes the practice of democracy in Canada. It examines how federalism either facilitates or hinders the recognition, accommodation and inclusion of a variety of regional and non-regional interests and identities. It also examines how federalism shapes the evolution and implementation of public policy. The course provides an overview of the historical structures and evolution of Canadian federalism as well as the relationship between these structures and Canadian society. It engages with contemporary debates about the performance of Canadian federal institutions and explores possible reforms. Issues covered in the course include, for instance, the role of Quebec nationalism in the federalism’s evolution, the relationship between the Charter of Rights and Freedoms and federalism, debates on the “imbalances” in the federalization, the place of emerging “minorities of government” (including Quebec) in the federal system, and the nature and limits of democracy in Canada.

POLI 2420.03: Political Power and Partisan Politics: The Structures of Canadian Parliamentary Government

Canadian government is dominated by prime ministers and parties. Why this concentration of power at both the federal and provincial levels of government? Are Members of Parliament who are not in the Cabinet really “mediaries” as one recent PM characterized them? Are Cabinets themselves becoming too much like “focus groups”? Do elected partisan roles and public service advisors have more influence than the vast majority of elected representatives? Are political parties irrelevant as vehicles for citizen engagement? Are interest groups or social movements any more relevant? Do elections matter? Are the media merely the political instruments of the business elite? These are among the issues that are examined in this course in an attempt to understand the most critical factors that shape the structuring of power in contemporary Canadian government.

FORMAT: Lecture/discussion
PREREQUISITE: An introductory course in Political Science
EXCLUSION: POLI 2200X/Y/06

POLI 2300X/Y/06: Comparative Politics.

This course introduces students to the methodology and scope of comparative politics, including analysis of political institutions and behavior. General overviews and selected case studies are provided for liberal democracies, post-communist, newly industrialized, and least developed countries. Topics include theories of the state, political culture and socialization, electoral and party systems, interest groups, ethnic and regional cleavages, gender politics, policy outcomes and system performance, political participation and leadership and contemporary challenges and changes. Group presentations are used for student exploration of these themes.

NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.

FORMAT: Lecture/discussion
PREREQUISITE: Introductory political science course or instructors’ permission

POLI 2350.03: Governance and Globalization.

This seminar course provides students with an opportunity for critical evaluation of the ongoing processes of processes of globalization and increased capital mobility as well as the role in numbers and influence of NGOs and new social movements. Hence, “new” forms of governance emerging out of decentralization and/or devolution of state authority and supra-national arrangements that are broadly captured within the concept of “global governance” will be explored along with traditional concepts of governance thatcentre on the accountability and environment of governmental policy-making. A range of issues will be examined – governance of economies and environments, energy, communications, international, health, conflict and complex emergencies – within the context of debates involving the “internationalization” of the state; the role of identities – e.g., nationalist, ethnic, gender, cosmopolitan; the growing relevance of communications, human rights, health, conflict and complex emergencies – within the context of changing dynamics related to the trans-nationalisation of production and economic production goes into exports, and of that well over 80% goes to the U.S. and E.U. POLI 3206.03: Constitutional Issues in Canadian Political History

These are political issues that possess an important constitutional dimension. They include judicial review and the role of the Supreme Court of Canada, constitutional amendment, the representation formula, the Charter of Rights and Freedoms, language rights and the Charter. FORMATT: Seminar
PREREQUISITE: POLI 2240.03 and 2220.03

POLI 3208.03: Canadian Provincial Policies.

An analysis of the dynamics and structures of provincial governments. Political parties, voting behaviour, legislatures, electoral systems, bureaucracies and policy formulation will be the core of this course. Attention is also paid to interprovincial social and intergovernmental relations. FORMATT: Seminar
PREREQUISITE: POLI 2210.03 and POLI 2220.03 or instructor’s permission

POLI 3220.03: Intergovernmental Relations.

This course will examine the territorial division of political and administrative power and the nature of relations between governments which result from such a division of power, including federal-provincial-municipal or “no-level” relations. Specific topics will include the role of the courts in constitutional interpretations, the instruments of “fiscal federalism” (including equalization payments, conditional grants, tax sharing arrangements and shared-cost programs), administrative relationships and the concept of “executive federalism.” Those themes will be pursued further by each student through the preparation of a research paper. This paper will deal with a policy area selected by the student (transportation, education, health, etc.) and will provide an opportunity for a more intensive examination of the impact of intergovernmental relations, on public policy and its history. For additional information about course requirements, please consult the instructor.
FORMATT: Lecture/discussion
PREREQUISITE: POLI 2210.03 and 2220.03 or instructor’s permission

POLI 3224.03: Canadian Political Parties.

The Canadian party system, viewed as an integral part of the entire political system, presents a number of interesting questions for exploration, such as lower voter turnout, electoral reform, the role of party leaders, and the manner in which parties contribute to Canadian democracy. The particular themes emphasized will vary from year to year. Approved with Canadian Studies.
FORMATT: Lecture/discussion
PREREQUISITE: POLI 2210.03 and 2220.03 or instructor’s permission

POLI 3233.03: Politics and the Economy in Canada.

The Canadian party system, viewed as an integral part of the entire political system, presents a number of interesting questions for exploration, such as lower voter turnout, electoral reform, the role of party leaders, and the manner in which parties contribute to Canadian democracy. The particular themes emphasized will vary from year to year. Approved with Canadian Studies.
FORMATT: Lecture/discussion
PREREQUISITE: POLI 2210.03 and 2220.03 or instructor’s permission

POLI 3235.03: The Politics of Regionalism.

This course surveys the interaction between politics and economics in Canada with emphasis on the question of regional development. It will canvass competing explanations for differences in economic development among Canada’s regions with special emphasis on Maritime economic problems, highlighting both the political sources of regional disparities and continuing efforts to rectify them. Dominant Western, Quebec and Ontario concerns will also be covered. Seminars for senior undergraduates will feature student presentations and research projects. Approved with Canadian Studies.
FORMATT: Seminar
PREREQUISITE: Open to senior undergraduates who have completed courses on Canadian politics, or permission of the instructor

POLI 3304.03: Comparative Federalism.

A seminar course which examines the theory and practice of federalism within a comparative framework. The actual federations discussed depend on student interest but usually includes both established federal nations and those moving in that direction.
FORMATT: Seminar
PREREQUISITE: POLI 2210.03, 2220.03 or POLI 2300.03 or POLI 2530.03 or instructor’s permission

POLI 3311.03: Sport and Politics.

This course examines the role of sport in domestic, transnational and international politics. It addresses the gap in much of mainstream political science concerning the pervasive influence of popular cultural trends and practices on political life. Some topics include: the role of sport in political socialization and the creation of national identity; the politics of the Olympic Games; sport and globalization; and sport and the politics of gender and wealth accumulation.
FORMATT: Seminar
PREREQUISITE: POLI 2300.06 or POLI 2530.03 or POLI 2535.03 or permission of instructor

POLI 3315.03: African Politics.

The diversity of states, politics, economy and society in post-colonial sub-Saharan Africa is examined in this seminar. Topics include theoretical approaches, economic systems, governance, inequality, political institutions, civil society, and intra-regional and transnational relations, and selected aspects of policy such as economic reform, political liberalization, women’s development, drought and ecology, AIDS and health.
FORMATT: Seminar
PREREQUISITE: POLI 2300.06 or equivalent or instructor’s permission

POLI 3320.03: European Politics.

This course looks at the political systems of selected countries in Europe, including Germany, Britain, Spain, Ireland and Switzerland. Topics include political parties and elections, industrial relations, social movements, political parties and elections, the role of local government, and the role of the European Union.
FORMATT: Lecture/discussion
PREREQUISITE: An introductory course in Political Science
EXCLUSION: POLI 3230.03 and POLI 3321.03
CO-REQUISITE: POLI 2220 or POLI 2210

POLI 3321.03: Politics of the European Union.

Europe is a complex polity. Almost all countries are members of the European Union (EU), which has common government institutions and policy-making processes. The course examines these important developments in the context of theories of integration. Among topics discussed are the common currency, agricultural politics, the common foreign and security policy, social policy issues, and the role of the European Union in the world. The course examines the role of the EU in the global economy, and expansion into central and Eastern Europe, is also discussed.
FORMATT: Seminar
PREREQUISITE: POLI 2300.06 or POLI 2305.06 and POLI 2520 and POLI 2530 or instructor’s permission
EXCLUSION: POLI 3305.03

POLI 3360.03: Politics in Latin America.

This seminar for advanced undergraduates examines one of the world’s most dynamic, diverse and rapidly changing regions. It surveys Latin America’s search for democracy from colonial to contemporary times. Students examine differing perspectives on the nature of democracy and explore Latin American political history and development, including the indigenous foundations, the colonial impositions, and more recent foreign intervention. The course examines political structures and values, the authoritarian presidency, military polarization, party
Undergraduate.book Page 288 Wednesday, March 12, 2014 12:03 PM

competition and electoral politics. The course also examines state-society
relations, the immense inequality, the changing role of women and the
remobilization of indigenous peoples and the impact of liberalization and
reactions to it from civil society. The course concludes by examining prospects for
consolidation of democracy and liberalization in the contemporary era of
globalization, the significance of the revitalization of the political left, and the
implications for scholarly interpretations.

POLI 3378.03: U.S. Constitution, Government, and
Politics.
The purpose of this seminar course is to gain a thorough and critical understanding
of the American political process. To this end, a series of topics are examined,
beginning with the framing of the constitution and concluding with questions
about political culture There is considerable emphasis on formal and informal
political institutions, especially political parties and elections.
NOTE: Credit can only be given for this course if X and Y are completed in
consecutive terms and partial credit cannot be given for a single term.

PREREQUISITE: POLI 2210.03/2220.03 or POLI 2300X/Y.06 or instructor's
consent

POLI 3385.03: Politics of the Environment.
This course examines competing perspectives on the political, social, and
economic forces driving environmental degradation, as well as differing visions of
the types of political change required for ecological sustainability. Topics include:
competing perspectives on ideas of limits to growth and sustainable development;
the links between poverty, North-South inequality, and environmental
degradation; population growth; the promise and limits of technological solutions;
consumerism and ecological degradation; market-based environmentalism;
ecological modernization; and ecological critiques of capitalism.
FORMAT: Lecture/seminar
PREREQUISITE: Any Political Science course or permission of the instructor.
EXCLUSION: POLI 3585.03

POLI 3401.03: Contemporary Political Thought.

Faculty of Arts and Social Sciences

This course provides an overview of general themes and current debates within
contemporary western social and political thought. The course will profile the
work of selected authors (such as Michel Foucault, Noam Chomsky, Judith Butler,
Carole Pateman, and Charles Mills) on topics such as power, justice, community,
citizenship, property, entitlement, identity, and difference. We will also discuss the
impact of theoretical developments, such as post-colonialism, feminism,
postmodernism, and critical race studies on social, political, and legal reform.
FORMAT: Lecture/seminar
PREREQUISITE: POLI 2410 or POLI 2420 or PHIL 2210 or PHIL 2220, or
instructor's permission

POLI 3405.03: Canadian Political Thought.
This course addresses philosophical issues that play a major role in contemporary
Canadian politics. These include minority rights and multiculturalism;
nationalism, federalism, and self-determination; and citizenship and the politics of
identity. Approved with Canadian Studies.
FORMAT: Seminar
PREREQUISITE: POLI 2210.03/2220.03 or POLI 2410.03/2420.03
EXCLUSION: POLI 3205.03

POLI 3426.03: Sex and the State.
This course will consider the role of the state and other institutions in the social,
moral and legal production and regulation of sex and gender, particularly in
Western countries. It will begin with a brief historical overview of the role of
religious prescriptions in the social and legal regulation of sex, and in the
refinement of laws and policies that have been implicated in sex-and gender-based
discrimination. We will also address a range of contemporary topics such as the
decriminalization of homosexuality; hate crimes against sexual minorities; the
politics of relationship recognition; state response to HIV/AIDS; gender-related
refugee claims; and developments in the regulation of reproductive techonolgies.
FORMAT: Seminar

POLI 3427.03: The Sexualization of Western Political
Thought.
Representations of women and constructs of femininity are a significant part of
mainstream western political thought. Drawing on contemporary critical analyses,
this course examines the roles of such representations in the work of leading
philosophers, with attention to understanding the relation between ideas of sexual
difference and their general systems of thought. We will also discuss the work of
contemporary feminist political theorists on a range of social and legal issues,
through a review of recent developments in theories of knowledge, embodiment,
equality, and rights.
FORMAT: Lecture/seminar
PREREQUISITE: POLI 1010.03 OR 1015.03 OR 1030.03 OR 1035.03 OR

CROSS-LISTING: GWST 3600.03

POLI 3431.03: Politics Through Film and Literature.
Film and literature often capture the depth and texture of politics in a way that the
social scientific method cannot. This course uses contemporary novels and films
to analyze the Enlightenment, Orientalism, the frontier, and the political economy
of community.
FORMAT: Seminar
PREREQUISITE: POLI 2410.03/2420.03 or instructor's permission

POLI 3434.03: The Ancient Origins of Political
Thought: From Homer to Aristotle
This course will study the very beginnings of political thought with Greek poets,
historians and educators, culminating in a careful investigation of the political
writings of Plato and Aristotle. We will investigate philosophical questions about
the origin of the state, the purpose of political community, the different kinds of
regimes or constitutions, the common good, individual freedoms, revolution, war,
wealth, poverty, and slavery.
FORMAT: Lectures/tutorials
CROSS-LISTING: CLAS 3434.03, PHIL 3434.03

POLI 3440.03: The Politics of Fear.
This course will consider the instrumentality of fear and terror in public policy,
and its role in fostering public opinion and managing social groups and
populations. Drawing on interdisciplinary and theoretical analyses of sex and race
discrimination, it will consider various ways in which sexual and racial politics are
implicated in the production and proliferation of "terror" in contemporary western
societies, in practices perpetrated or sanctioned by both state and non-state actors.
It will look at the recent discourses of terrorism and its representation in the
media: philosophical considerations of anti-immigrant fear-mongering: and
political analyses of the economy of "security" industries. It will also address the
role of both state and corporate interest in disaster relief, epidemics, and other
social crises.
FORMAT: Seminar/lecture
PREREQUISITE: POLI 1010 or POLI 1015 OR POLI 1030 OR POLI 1035 OR
POLI 1050 OR POLI 1055 OR POLI 1100 OR POLI 1103 AND the
completion of 70 credit hours, OR by permission of the instructor.

POLI 3449.03: Confronting Fascism.
This course focuses on German writers, artists, filmmakers, and intellectuals
whose work impacted and was impacted by the rise of fascism in the 20th century.
FORMAT: Lecture/tutorial
CROSS-LISTING: GERM 3450.03

POLI 3450.03: Storm and Stress: Romanticism and
the Backlash Against Enlightenment Political
Thought.
Romanticism is generally seen as a cultural movement, with its expression in
literature, music, painting, and philosophy. Yet its effect upon politics have been
profound. Nonetheless, there has been little extensive political analysis of the
Romantic movement and its effects. This course examines the development of
Romanticism, especially in its opposition to rationalism, positivism, and
classicism, from the late eighteenth century to the present. It examines the thesis
that the early 21st century is experiencing a significant period of neo-romanticism,
with its own set of reactions against rationalism and realism. What is the political
manifestation of this neoromanticism, and what are the implications for
contemporary politics?
FORMAT: Seminar/lecture
PREREQUISITE: POLI 2410.03, POLI 2420.03 or instructor's permission


POLI 3475.03: Democratic Theory.

Democracy is an essential component of legitimacy for all western states. Few would be inclined to accept their “underdeveloped” nature. But what are the essential characteristics of democracy? What are the limits to modern democratic theory? And what extent must modern democratic theory remain grounded in nineteenth-century western liberal thought? While this course has a predominantly theoretical orientation, it will include an examination of the historical development and economic production/reallocation; as well as an examination into how democratic theory can be developed in non-Western political contexts.

FORMAT: Lecture
PREREQUISITE: Any political or moral philosophy course or instructor's consent
CROSS-LISTED: POLI 3475.01 (political science honors students only)

POLI 3482.03: Political Inquiry I.

This course is an introduction to empirical research methods in political science and the social sciences more generally. It covers a range of issues that are relevant to both qualitative and quantitative empirical research, but its emphasis is on qualitative strategies (i.e., statistical analysis). Key issues include specification of hypotheses, measurement of variables, case selection, choosing and evaluating research designs, and drawing sound inferences from research findings. The “quantitative” component of the course de-emphasizes statistical theory and math, and focuses instead on the generation and interpretation of statistical results, using the SPSS statistical software. The course is built around a series of small homework assignments, lab sessions, a formal “data analysis paper,” and a midterm and final exam.

FORMAT: Seminar
PREREQUISITE: POLI 3404.05 (political science honors students only)

POLI 3483.03: Political Inquiry II.

This course introduces the theory and practice of qualitative research methods to study political phenomena. Themes addressed in the course include the theoretical and conceptual implications of choosing a particular methodology; the philosophical assumptions behind social science research; the various qualitative research methods available to political scientists, including interviewing, participant observation, case studies, comparative analysis, and the uses of documentary/primary sources; the evaluation of academic texts in political science, focusing on the logic of their argument, their methodologies, and the relationship between the evidence presented and their argument; and the ethical issues involved in selection and method.

FORMAT: Lecture/discussion
PREREQUISITE: Introductory Political Science course or instructor's permission
EXCLUSION: POLI 2494K.030
CO-REQUISITE: POLI 3404.05 (political science honors students only)

This course examines the formation of international human rights institutions, mechanisms, practices, and related jurisprudence. It provides an overview of the development of international humanitarian law and policy; the treaty system and mechanisms, practices, and related jurisprudence. It provides an overview of the development of international humanitarian law and policy; the treaty system and related jurisprudence. It provides an overview of the development of international humanitarian law and policy; the treaty system and related jurisprudence. It provides an overview of the development of international humanitarian law and policy; the treaty system and related jurisprudence.

FORMAT: Seminar
PREREQUISITE: POLI 1010 or 1015 or 1030 or 1050 or 1055 or 1100 or 1105 OR permission from the instructor
EXCLUSION: POLI 3505.01

POLI 3520.03: Building Democracy and Peace.

Many people have long argued that there is an intimate relationship between democracy and peace. Thus, they claim, democracies are much more inclined to cooperate, including guerrilla struggles and civil societies. It emphasizes the incidence and impact of structural adjustment programs and conditionality along with the emergence of “new” issues such as safety, democracy, ecology, gender, particularly in post-conflict societies. The role of these (overlapping) elements in post-conflict societies is the practice of demarcating space to be the key. These elements are civil society, the institutional environment and refugees. This third or fourth year-level course will examine key actors and elements and processes.

FORMAT: Lecture

POLI 3525.03: Comparative Foreign Policy Simulation.

This course is designed for advanced (i.e., 3rd-4th year) undergraduate and graduate students in Political Science. Once students become familiar with the basic concepts, theories and decision-making frameworks developed within the subfields of comparative foreign policy theory (i.e., they will be expected to apply what they have learned through participation in an interactive computer simulation involving other university teams throughout North and South America and central and western Europe. As they attempt to implement policy initiatives and work in teams to resolve international disputes, students will confront foreign policy issues in a context that provides an authenticity of experience. The objective is to enable students to create and test organizational structures, to understand the interdependence of international issues, to appreciate cultural differences and approaches to world problems, and to use computers for multinational communications.

FORMAT: Seminar
PREREQUISITE: POLI 2520/2520.01

POLI 3531.03: The United Nations in World Politics.

This seminar provides an overview of the global political economy in the current post-Colonial World. It treats the New International Divisions of Labour and Power. Among the several theoretical and political perspectives, from comparative foreign policy to feminism. Issues addressed include the Newly Industrializing Countries, the Middle Powers and the New World, new functionalism, popular participation, and alternative futures.

FORMAT: Seminar
PREREQUISITE: POLI 2520 or POLI 2530 or instructor's permission

POLI 3535.03: The New International Division of Labour.

This seminar provides an overview of the global political economy in the current post-Bolshevik World and Cold War period. It treats the New International Division of Labour and Power given the demise of both the Western and Cold War global regimes. In addition to selective case studies of both large and small states from Israel, India, Indonesia, and Nigeria to Botswana, Jamaica, Kuwait, and Singapore – it treats formal and informal external relations, from regional, intergovernmental institutions to domestic and governmental coalitions. It also examines new forms of regional conflict and cooperation, including guerrilla struggles and civil societies. It emphasizes the incidence and impact of structural adjustment programs and conditionality along with the emergence of “new” issues such as safety, democracy, ecology, gender,
refugees, and technology. A range of alternative approaches is identified and evaluated appropriate to the contemporary period of revisionism.

**POLI 3544.03: Political Economy of Southern Africa.**

An introduction to the comparative politics, economic structures and international relations of Southern Africa, which provides a study of regional political economy with both empirical and theoretical significance. As well as country comparisons, the course will look at the region as a political unit, exploring the opportunities for and constraints against formal regional cooperation on economy or security as well as informal processes that constitute the basis of "new" regionalism forces.

**FORMA T: Lecture and seminar**

**PREREQUISITE:** POLI 2520 or POLI 2530 or instructor's permission

**POLI 3560.03: Issues in Global Security and Development.**

This senior undergraduate graduate seminar is designed to present current definitions and debates about human development/human security at the turn of the century. These have both analytic and policy relevance for a wide range of actors in contemporary global politics: not just states/international organizations but also civil societies & private companies, think tanks and partnerships. It is offered in semester school to attract a diverse, interdisciplinary range of registrants and to coincide with the annual weekend workshop of the "new regionalism" network which meets an issue of relevance to global development each year, such as new regionalisms in August 2000 and globalizations in 2001.

**FORMA T: Seminar**

**PREREQUISITE:** Offered as a seminar course only. Consult instructor.

**CROSS-LISTING:** POLI 5560.03

**PREREQUISITE:** POLI 2210 or POLI 2220 or POLI 2520 or POLI 2530 or HIST 2235 or HIST 2661 or permission of instructor

**POLI 3565.03: Contemporary Security Studies.**

The course examines developments in the theory and practice of international security since the end of the Cold War. The first part covers the concept of security and the main theoretical approaches that inform the contemporary security debate. The second part analyses some of the key contemporary issues in world politics and their relation with international security. Topics include: Military Security, Economic Security, Environmental Security, Migration, Health and Security.

**FORMA T: Lecture and seminar**

**PREREQUISITE:** POLI 2250.03 or POLI 2530.03

**POLI 3567.03: International Organization.**

This course will investigate the process of international organization through analysis of the role of international organizations, institutions and regimes. For the purposes of the course, international organizations as well as local and institutional structures. The course will focus on the contemporary debate between realism and constructivist theoretical approaches to analyzing international organizations. This perspective will be employed to study the role of international organizations in areas such as international security and international economic policy. Topics to be covered include democracy and international organizations, culture and intergovernmental organizations, bargaining in international organizations, political and economic integration, NGOs and global civil society, and the future of global governance.

**FORMA T: Seminar**

**PREREQUISITE:** POLI 2250.03, POLI 2530.03 or instructor's permission

**POLI 3568.03: Canada and the World.**

This course examines post-World War II Canadian Foreign Policy in two parts: (1) an analytical, landmark policy-oriented analysis; and (2) an investigation of the general factors that help to "explain" the form and content of Canadian foreign policy, with particular reference to the institutions and processes through which policy decisions are made. Issues discussed are likely to include: the "invention" of preemption; the Militant government's involvement in the campaign to end apartheid in South Africa; the negotiations of the North American free trade; the politics of immigration and diasporas; and the place of the Arctic in Canada and international relations.

**FORMA T: Seminar**

**PREREQUISITE:** POLI 2210 or POLI 2220 or POLI 2530 or POLI 2530 or HIST 2212 or HIST 2259 or HIST 2861 or permission of instructor

**CROSS-LISTING:** CANA 2560.03

**POLI 3574.03: American Foreign Policy.**

This course is a general introduction to American foreign policy, with special attention to the theoretical and policy debates of the post-Cold War period. The course begins with relatively brief introductions to the history of US foreign policy and the institutions of foreign policy-making, but most of the readings and lectures are concerned with broad theoretical debates about what does, and/or what should, drive US foreign policy decisions. In later weeks, some of these theoretical lenses are applied to some specific recent foreign policy decisions, including the signing and "un-signing" of the Kyoto Accord, the extension of Permanent Normal Trade Relations status to China, and/or the war in Iraq.

**FORMA T: Lecture**

**EXCLUSION:** POLI 3571.06

**RESTRICTION:** Course in international relations, or foreign policy, or postwar Canadian history, or instructor's permission. Restricted to students in their third year or beyond. Course in international relations, or foreign policy, or postwar Canadian history, or instructor's permission. Restricted to students in their third year or beyond.

**POLI 3577.03: Civil-Military Relations in Contemporary Western Society.**

This course will examine the influential relationship between society, government, and the military in the post-Cold War era. The content includes: changing societal values and the domestic pressures they produce; and the implications of a constantly changing strategic environment. Different perspectives will be examined to assess the implications for civil-military relations of the post-Cold War changes: legal/constitutional (Castle doctrine), military/professional (operational requirements); and political (constituency and special interest demands).

**FORMA T: Lecture**

**PREREQUISITE:** POLI 2210/2220/2530.03 or instructor's permission

**POLI 3581.03: Diplomacy and Negotiation.**

This course looks at the way states decide which diplomatic strategies to pursue, and why these succeed or fail. Among the themes considered are the evolution of diplomacy as an international institution, national power and bargaining leverage, and the effects of domestic politics, psychology, and culture on international negotiation. Specific historical cases which may be reviewed in any given year include: the Peloponnesian War, the Munich Crisis, the Cuban Missile Crisis, the negotiation of the Canada-U.S. Free Trade Agreement, NAFTA, and the Kyoto Protocol. Students participate in a negotiation-simulation exercise and write a paper on a particular historical case.

**FORMA T: Seminar**

**PREREQUISITE:** Course in international politics (POLI 2520 or POLI 2530) or instructor's permission

**POLI 3599.03: Politics of the Sea I.**

The major issues involved in the Law of the Sea, the defining moments of different countries, the developing legal framework, and the political processes of the ongoing negotiations are covered.

**FORMA T: Seminar**

**PREREQUISITE:** Preference is given to graduate students, although mature undergraduate students from other relevant disciplines are welcome.

**POLI 3591.03: Pirates, Profitiers and Protectors of the Sea.**

While the world is focused on the terrorist threat on land, piracy and other criminal activities are spreading rapidly on the seas. Youths in small boats with simple weapons are embarrassing the most powerful navies in the world, hijacking merchant ships off the coast of Somalia and getting multi-million dollar ransom for their hostages. Meanwhile, illegal immigration and smuggling are also increasing dramatically. Natural disasters are also on the rise. Is Canada ready for these challenges? Are our maritime forces properly structured for the new security era or should we be changed radically? Lots of billions will be spent soon on new ships to either perpetuate the status quo or launch in a new direction. This course shows the full range of policy options and capability options available based on the logic behind the choices that need to be made. What would you recommend?

**FORMA T: Lecture**

**PREREQUISITE:** POLI 2210 or permission of instructor
POLI 3596.03: Explaining Global Conflict and Violence.
During a 13-week period in 1994 more than 600,000 people were killed in Rwanda, the result of armed violence that continued for over a year. The root causes of this conflict are complex and include various factors such as ethnic and religious differences, political instability, and economic problems. This course seeks to understand the nature of global conflict and violence by examining the factors that contribute to it, and by developing strategies for preventing and resolving conflicts. The course will cover topics such as the role of international organizations, the impact of economic sanctions, and the role of media in shaping public opinion. SIGNATURE REQUIRED.

POLI 4228.03: Pressure Politics in Canada: Opportunities and Obstacles.
The goal of this seminar is to explore the opportunities for and obstacles to advocacy politics in Canada. We analyze the strategies that pressure groups use to engage the most important loci of power in the Canadian political system: parliament, the public service and the courts. FORMAT: Seminar.

POLI 4232.03: Urban Governance in Canada.
The objective of this course is to provide students with the empirical, analytical, theoretical, and methodological tools to understand and explain the politics and policy activities of Canada’s urban and suburban municipalities within their socio-economic, institutional, and Constitutional contexts. A major concern is to evaluate how effectively and equitably city governments in Canada have responded to contemporary urban challenges. The course adopts a critical perspective on urban governance and engages with contemporary debates concerning municipal governance reform and the evolving nature of urban governance within Canadian federalism.

POLI 4234.03: Canadian Urban Politics in Comparative Perspective.
This course examines the politics and governance of Canadian cities from a comparative perspective. More specifically, the course uses a comparative method in three ways: 1) it asks what one can learn from comparing Canadian cities with other cities (international comparisons), 2) what cross-national comparisons of Canadian cities can teach us as well as compares Canadian cities implicitly with other cities by applying theories of urban politics and development that have been developed elsewhere to Canadian cities. The objective of this course is to provide advanced political science students with the theoretical, empirical and methodological tools to understand and explain the political development of Canadian cities.

POLI 4240.03: Policy Formulation in Canada.
This course provides a general introduction to the field of policy management, for graduate and honours undergraduate students. Using British 'best practice' ideas of professional policy making and Canadian statements of generic policy competencies, it seeks to improve the policy capacity of participants. It does this first by increasing their knowledge of public policy structures, processes, and outputs, and secondly, by giving them knowledge that they can use to advocate both inside and outside government. The first section of the course examines policy definitions and professional policy making approaches in the 21st century. Section three explores vertical, horizontal and external policy relationships, such as democratic politics of policy and as practical matters of management. Section four explores, and helps participants to gain proficiency in, the most recent processes of strategic policy design and implementation. This third and fourth week will increase the policy knowledge of all participants, and equip those who are in professional programs, including the various public services, to contribute more effectively policy processes in the future. SIGNATURE REQUIRED.

POLI 4241.03: Introduction to Policy Analysis.
This course examines four aspects of policy analysis: (1) the role of the analyst in modern government; (2) the analyst’s working environment; (3) techniques used in carrying out research and preparing position papers; (4) and the analyst’s responsibilities to government and to the public in determining what information should reach policymakers. Approved with Canadian Studies. SIGNATURE REQUIRED.
POLI 4242.03: Politics of Reason, Passion, and Biology.

Does reason or passion drive politicians and citizens to act as they do? Or does the dichotomy between the mind and the heart disguise more fundamental biological bases to political behavior? Do these approaches have any room for citizens to exercise their own judgment, or is autonomy lost altogether? Normative questions of justice, equality, and freedom are deeply embedded within each approach and must be confronted as they apply in practice. Although this material is inherently global and comparative, we principally want to investigate how it applies to Canada.

FORMAT: Seminar

POLI 4250.03: Canadian Public Administration.

This course examines the organization and management of the executive-branch structures of government for the formulation and management of public policy and public services. It considers the design and operation of the cabinet system and ministerial portfolios, relations between ministries and the public service; policy and budgetary processes; and, the structural designs of departments, agencies, crown corporations and regulatory commissions. A major focus will be the effects of the new public management on public administration, as governments in Canada, as elsewhere, seek to cope with budgetary constraints, increased demands for quality services and public participation, and greater effectiveness in securing results. Approved with Canadian Studies.

FORMAT: Lecture/ discussion
PREREQUISITE: POLI 2210.03 or 2220.03 or instructor's permission.
CROSS-LISTING: POLI 5250.03, POLI 5251.03

EXCLUSION: POLI 3250.03, POLI 3251.03

POLI 4260.03: The Politics of Health Care.

Because of its nature as both a public institution and a political icon, the Canadian healthcare system is an inherently political institution which cannot be understood without a clear comprehension of both its composition and its relationship to the broader political landscape in Canada. This course will provide a survey of the political and theoretical debates within the area of healthcare in Canada, including investigations of federation, funding, and governance.

FORMAT: Seminar

EXCLUSION: POLI 3260.03, POLI 3251.03

POLI 4302.03: Comparative Development Administration.

This course examines analytical, normative and political issues of public administration in developing countries. It considers the scope of development administration as a sub-field of public administration; public sector organization and management including public services, public enterprises, decentralization and rural development, financial systems, human resource management, aspects of state economic management (with the use of case-studies) and institutional aspects of aid administration (with CIDA and World Bank cases).

FORMAT: Seminar
PREREQUISITE: POLI 2300.06 or equivalent or instructor's permission.
CROSS-LISTING: POLI 5302.03, PLAD 4790.03
EXCLUSION: POLI 5302.03

POLI 4303.03: Human Rights: Political Issues.

This course will introduce students to the evolving place of human rights in public policy both domestically and internationally. We begin by examining the historic emergence of human rights as an issue in world politics, principally since the Second World War, and their conceptual foundations. We then focus on a number of specific topics and controversies concerning human rights in world politics, including: the sources of and struggle to end human rights-abusive regimes; the multilateral politics of human rights; human rights in national foreign policies; the rights of indigenous peoples; gender; humanitarian intervention; and the responsibility to protect, and the relationship between globalization and human rights, and the Global War on Terrorism and human rights. Finally we look at the role of human rights in domestic politics, focusing on the issues of women's rights and sexual orientation.

FORMAT: Seminar

PREREQUISITE: POLI 2205.03 or 2210.03 or POLI 2530.03 or POLI 3503.03 or equivalent, or instructor's consent.
CROSS-LISTING: POLI 5303.03
EXCLUSION: POLI 5303.03

POLI 4322.03: The EU as a Global Actor.

The aim is to enable the student to analyze and understand the international roles played by the EU in both economic and political areas. Why has the EU been better able to speak with one voice in economic areas than political areas? To what extent can the member-states control the foreign policies of the EU? The introductory part will include an overview of the EU governance systems in the areas of external economic relations (first pillar) and the Common Foreign and Security Policy (the second pillar) and analyses of the most achievements in both areas. Specific topics to be selected for analysis during the second part will include the EU and the WTO, the EU and the US, the EU and the East Asia, and the EU and developing countries. Finally, in the third part of the course students study recent efforts to develop a European Security and Defence Policy.

FORMAT: Seminar
PREREQUISITE: POLI 2520.03 or 2530.03 or appropriate History course.
CROSS-LISTING: POLI 5322.03
EXCLUSION: POLI 5322.03

POLI 4340.03: Approaches to Development.

A survey of theories of and policies about development and peripheral social formations. Particular emphasis on modernization, materialists, and alternative modes of analyses, and on orthodox and radical strategies of development. Topics treated include social contradictions (e.g. class, race and ethnicity), debt, social adjustment, human development, human security, and alternative modes of analyses, and on orthodox and radical strategies of development. Topics treated include social contradictions (e.g. class, race and ethnicity), debt, social adjustment, human development, human security, gender, technology, civil society, informal sectors, democratization and ecology.

FORMAT: Seminar, 3 hours
PREREQUISITE: By permission of instructor.
EXCLUSION: POLI 3400.03

POLI 4355.03: Comparative Perspectives on the Development State.

This course examines development in a broad regional comparative context to determine whether endogenous or exogenous conditions account for the success with which the North/Southwest Asian economies have been transformed vis-a-vis Latin America and Africa. The course compares the “development state” model across the developing world, by briefly focusing on three distinct cases - South Asia, Malaysia and Brazil as “speedily mobile” late industrializers.

FORMAT: Seminar
PREREQUISITE: POLI 2300.06 or POLI 2520.03 and POLI 2530.03, or equivalent, or instructor's permission.
EXCLUSION: POLI 5355.03

POLI 4380.03: Politics of Climate Change.

This course examines the interactions between politics and a changing climate. Core questions include: What has been the role of politics in efforts to respond to climate change? What does climate change mean for various political, social, and economic projects? Topics include: the role of science and economics in climate politics; the non-“climate capitalist”; non-capitalist alternatives that question growth and consumption and the carbon market; the “climate justice” question; Canada’s particular difficulties in addressing climate change; climate politics at the personal level; international climate negotiations; and climate as a security issue.

FORMAT: Primarily seminar with some lecture time
PREREQUISITE: POLI 3385 Politics of the Environment or permission of the instructor.
EXCLUSION: POLI 3380 Politics of Climate Change

POLI 4403.03: Human Rights: Philosophical Issues.

An examination of the historical and conceptual development of human rights, this course looks specifically at normative and political issues involved in the emergence of human rights from the 13th century to present. It covers the shift from natural law to natural rights, the emergence of states, rights to sovereignty governance, and the development of specific classes of rights (including freedom of conscience, property rights, women’s rights, cultural rights, animal rights, and socio-economic rights).

FORMAT: Seminar
PREREQUISITE: POLI 2400.03 or POLI 2420.03 or POLI 3505.03, or permission of instructor.
CROSS-LISTING: POLI 5400.03 and POLI 5403.03
EXCLUSION: POLI 3403.03

POLI 4427.03: Queer Theory.

This course provides an overview of the general questions and debates — and the philosophical, political and cultural contexts — of the interdisciplinary field that is now known as “Queer Theory.” It will profile a wide selection of foundational writings by leading scholars and contributors to GLBT thought and activism.

PREREQUISITE: POLI 2005.03 or equivalent, or instructor's permission.
Exercising topics such as difference, identity, discrimination, and equality, we will address its articulations critical race theory, feminist philosophy, and critical analyses of political economy. We will also address the significance of queer theory to LGBT equality activism, attending to the relationship between political thought and legislative practice in addressing institutionalized heteronormativity and the public expressions of homophobia, transphobia, sexism, and racism and their impact on social policy.

POLI 4440.03: The Politics of Affect: Theories of Emotion and Political Life.

This course draws on recent developments in the burgeoning field of affect studies to address the relation of both conscious and non-conscious emotive experience to public and political life. Drawing on the insights and scholarship from different disciplines, we will examine the social, political and cultural theories of affect, emotion, and aesthetics to explore their role in political decision-making and public responses. Topics will include the affective logic of public threat, the cultural politics of emotion such as fear and shame, moral reactions to moralistic rhetoric; visceral responses to social groups and/or cultural practices. We will also look at how sensibility, feeling, and affect have operated in social and political movements, including a consideration of emotion such as fear, disgust, and distress, and compassion in social conflict, and in the transformative approaches to retribution and reconciliation.

POLI 4479.03: Liberalism.

Liberalism takes a variety of forms and includes many topics including the rule of law, limited government, the free exchange of goods, entitlement to property, the self, and individual rights. Its philosophical and political assumptions provide the intellectual context within which its account of the individual, its vision of the community and its preferred allocation of resources will be assessed. SIGNATURE REQUIRED.

FORMAT: Seminar

PREREQUISITE: POLI 1010 or 1015 or 1035 or 1050 or 1055 or 1100 or 1105 AND the completion of 70 credit hours, OR by permission of the instructor.

POLI 4480.03: Theories of Violence, Persecution, Genocide.

This course will provide an overview of contemporary theoretical approaches to systemic violence, particularly against racial, ethnic, and sexuality minorities. Through a selection of historical and contemporary case studies, it will assess different accounts and explanatory frameworks for understanding the integration and exacerbation of persecution and genocide. Attending to the role of the state and policies in the history of violence, it will examine the discourses and practices that have both facilitated and justified the elimination of native peoples, enslavement of racial groups, the holocaust, and ethnic cleansing in the 20th century generations. We will also consider the recent attempts of the international community to prevent, deter, and end genocidal outbreaks, and the theoretical assumptions about human behaviour that underpin them.

FORMAT: Seminar

PREREQUISITE: Any second-year Political Science course, or instructor’s permission.

POLI 4521.03: Theories of International Relations I: Security Studies.

4521 and 4522 are independent courses that are conceptually closely related. This relationship is partially based on the more general division within IR between “Security Studies” and International Political Economy (IPE). POLI 4521 sets things up by reviewing the broadest theoretical debates within the field, with an emphasis on questions of power and order, and looks at theoretical work which focuses on political/military issues like deterrence, balancing, and the meaning of “national security.” POLI 4522 begins with theoretical debates over cooperation and institutions, and is empirically anchored in various aspects of IPE, including trade, finance, and development.

FORMAT: Seminar

PREREQUISITE: Instructor’s permission

POLI 4523.03: International Relations Theory 1: Order, Conflict and Change.

This advanced seminar course is concerned with the "structure-agent" problem as it applies to Canadian foreign policy. It also assesses the relationship between "Security Studies" and International Political Economy (IPE). POLI 4521 sets things up by reviewing the broadest theoretical debates within the field, with an emphasis on questions of power and order, and looks at theoretical work which focuses on political/military issues like deterrence, balancing, and the meaning of "national security." POLI 4522 begins with theoretical debates over cooperation and institutions, and is empirically anchored in various aspects of IPE, including trade, finance, and development.

FORMAT: Seminar

POLI 4524.03: Theories of International Relations 2: Cooperation, Institutions and Development.

This advanced seminar course is concerned with the "structure-agent" problem as it applies to Canadian foreign policy. In other words, what are the structures (both material and normative) that shape and constrain the pursuit of Canadian foreign policy; what room for maneuver and initiative is there; and who are the key actors, or the "agents" who shape and implement Canada's global role? The course discusses these questions through four sections: theoretical and analytical approaches to the study of Canadian foreign policy; the external context; the domestic; and key themes and issues in Canadian foreign policy.

FORMAT: Seminar

PREREQUISITE: Course in international relations, Canadian politics, or Canadian history, or instructor’s permission.

POLI 4525.03: Canadian Foreign Policy.

This advanced seminar course is concerned with the "structure-agent" problem as it applies to Canadian foreign policy. It also assesses the relationship between "Security Studies" and International Political Economy (IPE). POLI 4521 sets things up by reviewing the broadest theoretical debates within the field, with an emphasis on questions of power and order, and looks at theoretical work which focuses on political/military issues like deterrence, balancing, and the meaning of "national security." POLI 4522 begins with theoretical debates over cooperation and institutions, and is empirically anchored in various aspects of IPE, including trade, finance, and development.

FORMAT: Seminar

PREREQUISITE: Instructor’s permission

POLI 4575.03: Nuclear Weapons and Arms Control in World Politics.

The seminar examines the technological, doctrinal, and political aspects of the nuclear weapons "problem" and the "arms control" "solution." It also assesses the fate of contemporary nuclear arms control efforts.

FORMAT: Seminar

PREREQUISITE: Course in international relations or defence policy, or with instructor’s permission.

POLI 4575.03: Nuclear Weapons and Arms Control in World Politics.

The seminar examines the technological, doctrinal, and political aspects of the nuclear weapons "problem" and the "arms control" "solution." It also assesses the fate of contemporary nuclear arms control efforts.

FORMAT: Seminar

PREREQUISITE: Course in international relations or defence policy, or with instructor’s permission.

POLI 4575.03: Nuclear Weapons and Arms Control in World Politics.

The seminar examines the technological, doctrinal, and political aspects of the nuclear weapons "problem" and the "arms control" "solution." It also assesses the fate of contemporary nuclear arms control efforts.

FORMAT: Seminar

PREREQUISITE: Course in international relations or defence policy, or with instructor’s permission.

POLI 4575.03: Nuclear Weapons and Arms Control in World Politics.

The seminar examines the technological, doctrinal, and political aspects of the nuclear weapons "problem" and the "arms control" "solution." It also assesses the fate of contemporary nuclear arms control efforts.

FORMAT: Seminar

PREREQUISITE: Course in international relations or defence policy, or with instructor’s permission.
POLI 4581.03: International Diplomacy: Institutions and Practices.
This course considers the historical evolution of international diplomacy. Among the themes reviewed are the emergence of national states, sovereignty norms, human rights and norms governing military intervention, the growth of international law and institutions, and the prospects for global governance. The course features extensive student participation, an emphasis on writing, and a negotiation simulation.

PREREQUISITE: POLI 2520.03, POLI 2530.03 or other international relations course.

POLI 4587.03: International Political Economy.
This course is composed of two overlapping constituent themes. The first theme is that of competing explanations of international political economic behaviour - behaviour affected by that diffuse political authority characteristic of the international system, the second, that of examining the basic issues in international political economy - the fundamental questions as to why international trade, international finance, unequal economic development, international organization, and the multinational enterprise. The first theme functions to create the over- all framework of analysis by which competing approaches to international political economy can be evaluated. The second theme will integrate these approaches with issue areas within the fields of international trade, international finance, and what might be termed "international production" (within which fields issues such as economic development, the multinational enterprise, and the global "division of labor" constitute the major foci). The course sessions will roughly be constituted by 50 percent lecture and 50 percent organized student contributions for seminar discussion and debate.

PREREQUISITE: POLI 2520.03 or equivalent. Students should feel comfortable with economic theory as well, otherwise by instructor's permission.

POLI 4590.03: Politics of the Sea II.
This course will examine environmental, political and economic forces which affect contemporary ocean governance and management. Contemporary issues will be used to explore the geo-political ocean on a sectoral basis (transportation, fisheries and resources, military, etc.), as well as analyzing the evolution of national and international policies and institutions.

FORMAT: Lecture/seminar.
CROSS-LISTING: POLI 5595.03, MARA 5589.03.

EXCLUSION: POLI 3590.03.

RESTRICTION: to 4th year Political Science Honours students.

POLI 4600X/Y.06: Honours Essay.
Political Science undergraduates in the Honours program are required to attend the Honours seminar as scheduled. This seminar is designed as a research seminar for Honours students.

NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.

RESTRICTION: Restricted to Political Science Honours students in their final year.

POLI 4636.03: Nationalism and Statecraft.
An examination of the sources, ingredients and consequences of contemporary nationalism, with particular reference to its implications for the conduct of international politics. In the early sessions of the course, pertinent literature from the pre World War II period will be evaluated for its relevance to our understanding of current circumstances, in which the apparent revival of nationalist impulses has coincided with intensifying manifestations of functional interdependence.

SIGNATURE REQUIRED.

FORMAT: Seminar.
CROSS-LISTING: POLI 5636.03.

EXCLUSION: POLI 3590.03.

RESTRICTION: Restricted to students in their fourth year.

POLI 4810.03: Special Topics in Political Science.
An examination of selected issues in Political Science. This course explores, for example, when a visiting scholar is on campus, a special topic that is not a regular offering of the department. It is taught as a lecture or seminar course, not as an independent studies course. Since the topics covered in these courses differ from year to year, students should seek further information from the Political Science Department before registering. The subject matter in this course will be explored in greater depth than a course offered under 3810.03/3820.03.

FORMAT: Seminar.

Treiger, Alexander, BA (Jerusalem), MPhil, PhD (Yale)

I. Introduction
Religion is a phenomenon virtually universal in human society and history. Understanding religion involves grasping simultaneously both the meaning of faith in the lives of participants, and the critical analysis of outside observers. Both the student wishing enhanced understanding of religion as an historical, social and human fact, and the student who wishes to wrestle with problems arising in academic reflection concerning the relation between the personal and the objective, can find material to engage them in the programs and courses described below.

II. Degree Programs
In addition to the departmental requirements listed below, students must satisfy the requirements outlined in the Degree Requirements section (page 125) of this calendar.

A. BA (20 credit) Major in Religious Studies

Departmental Requirements
1. At least one full course [two half courses] (six credit hours) selected from RELS 1001.03, RELS 1002.03, or RELS 1200.06. This requirement may be relaxed at the discretion of the Department. The King’s Foundation Year Program satisfies it. Students must complete a minimum of six full courses [12 half courses] (36 credit hours) or a maximum of nine full courses [18 half courses] (54 credit hours) in Religious Studies beyond the 1000 level. They must include:

   2. At least two full courses [four half courses] (12 credit hours) selected from RELS 2001.03, 2003.03, 2011.03, 2012.03, 2013.03, 2025.03, 2026.03, 2027.03, 2052.03, 2203.03, 2220.03, 2281.03, 2282.03.

   3. RELS 3000.03 Seminar in Religious Studies. This requirement may be relaxed at the discretion of the Department.
3. RELS 3000.03 Seminar in Religious Studies. This requirement may be relaxed at the discretion of the Department. The King’s Foundation Year Program satisfies it.

4. At least two full courses (four half courses) (12 credit hours) selected from RELS 2001.03, RELS 2003.03, 2011.03, 2012.03, 2013.03, 2025.03, 2026.03, 2027.03, 2032.03, 2203.03, 2221.03, 2282.03.

5. Outside Religious Studies one full course (two half courses) will be required from the following list: ARRC 1020.06 (Arabic); CHIN 1030.06 (Mandarin); CLAS 1600.03 (Sanskrit I); CLAS 1700.06 (Latin); CLAS 1800.06 (Greek); CLAS 1900.06 (Classical Hebrew); CLAS 2600.03 (Sanskrit II). Students may substitute a more advanced course in one of these languages for this requirement.

6. Completion of the Religious Studies Honours Examination (RELS 4000.06) if the first subject is Religious Studies.

E. BSc (20 credit) Combined Honours, Second Subject in Religious Studies

Students must complete the Faculty requirements for the combined honours degree. Religious Studies can be the second subject only. At least five courses (10 half courses) (30 credit hours) and no more than seven full courses (14 half courses) (42 credit hours) must be in Religious Studies above the 1000 level. At least 11 full courses (66 credit hours), to a maximum of 14 (84 credit hours) are to be in both subjects.

The Religious Studies requirements are:

1. At least one full course (two half courses) (six credit hours) selected from RELS 1001.03, RELS 1002.03, or RELS 1200.06. This requirement may be relaxed at the discretion of the Department.

2. At least two full courses (four half courses) (12 credit hours) selected from RELS 2001.03, 2003.03, 2011.03, 2012.03, 2013.03, 2025.03, 2026.03, 2027.03, 2032.03, 2203.03, 2221.03, 2282.03.

3. RELS 3000.03 Seminar in Religious Studies. This requirement may be relaxed at the discretion of the Department.

4. At least one and a half full courses (three half courses) (nine credit hours) in RELS at the 3000-level or higher. Of these nine credit hours, six must be chosen from the following: RELS 3001.03, 3008.03, 3012.03, 3014.03, 3019.03, 3100.03, 3103.03, 3111.03, 3113.03, 3120.03, 3202.03, 3241.03, 3243.03, 3361.03, 3411.03, 3412.03, 3422.03, 3423.03, 3661.03, 3662.03, 3910.03, 4010.03, 4011.03, 4018.03, 4019.03, 4590.06.

5. Students must complete the Faculty requirements for the combined honours degree. Religious Studies can only be the second subject, with no fewer than five credits (30 credit hours) and no more than five credits (30 credit hours) in each subject. Religious Studies requires:

1. At least one course (two half courses) (five credit hours) selected from RELS 1000.03, RELS 1002.03, or RELS 1200.06. This requirement may be relaxed at the discretion of the Department. The King’s Foundation Year Program satisfies it.

2. At least two full courses (four half courses) (12 credit hours) selected from RELS 2001.03, 2003.03, 2011.03, 2012.03, 2013.03, 2025.03, 2026.03, 2027.03, 2032.03, 2203.03, 2221.03, 2282.03.

3. RELS 3000.03 Seminar in Religious Studies. This requirement may be relaxed at the discretion of the Department.

4. At least one and a half full courses (three half courses) (nine credit hours) in RELS at the 3000-level or higher. Of these nine credit hours, six must be chosen from the following: RELS 3001.03, 3008.03, 3012.03, 3014.03, 3019.03, 3100.03, 3103.03, 3111.03, 3113.03, 3120.03, 3202.03, 3241.03, 3243.03, 3361.03, 3411.03, 3412.03, 3422.03, 3423.03, 3661.03, 3662.03, 3910.03, 4010.03, 4011.03, 4018.03, 4019.03, 4590.06.

6. Outside Religious Studies one full course (two half courses) will be required from the following list: ARRC 1020.06 (Arabic); CHIN 1030.06 (Mandarin); CLAS 1600.03 (Sanskrit I); CLAS 1700.06 (Latin); CLAS 1800.06 (Greek); CLAS 1900.06 (Classical Hebrew); CLAS 2600.03 (Sanskrit II). Students may substitute a more advanced course in one of these languages for this requirement.

F. Minor in Abrahamic Religions

See Minors in the College of Arts and Science section of this calendar (page 178).

G. Minor in Middle East Studies

See Minors in the College of Arts and Science section of this calendar (page 178).

III. Course Descriptions

First year students are not admitted to courses beyond the 1000 level without the consent of the instructor. Courses at the 2000 level or above require permission in general, they are available only to students in their second year or above.

Prerequisites for courses at the 3000 and 4000 levels are listed with each course at the discretion of the instructor. Courses at the 2000 level do not have prerequisites; in particular, they are available only to students in their second year or above.

See Minors in the College of Arts and Science section of this calendar (page 178).

Note: Not all courses are offered every year. Please consult the current timetable for this year’s offerings.

RELS 0400Y/700: Religious Studies Honours Examination. Details available from the department.

FORMAT: Examination administered by Religious Studies (Dept. of Classics)

PREREQUISITE: Students must be declared as BA Combined Honours Religious Studies, first subject Religious Studies

RELS 1001.03: Religions of the East. This course serves as an introduction to the history, beliefs, and practices of Hinduism, Judaism, Sikhism, Buddhism, Daoism, Shinto, and Confucianism.

FORMAT: Lecturer

EXCLUSION: RELS 1000.06
RELS 1002.03: Judaism, Christianity, and Islam: The Abrahamic Religions.
This course serves as a comparative and thematic introduction to the history, beliefs, and practices of Judaism, Christianity, and Islam. FORMAT: Lecture EXCLUSION: RELS 1000.06 REL 1000.06: Gods, Heroes, and Monsters: Ancient Mythology
An introductory survey of the traditional religious narratives of ancient civilizations including Mesopotamia, Egypt, Israel, Greece, and Rome. Of special interest: the function of myth in shaping and expressing a culture’s understanding of the divine, the institutions of human community (religion, the family, government), and the natural world; the interrelationships of the myths of those civilizations; the reception of these traditions in the origins of Christian and Islamic culture. The traditional narratives and their broader cultural currents will be approached through study of primary sources including epic, tragic, and didactic poetry, hymnography, historiography, philosophy, the visual arts, and architecture. This course fulfills the first year writing requirement. NOTE: Students taking this course must register in both X and Y in consecutive terms; credit will be given only if both are completed consecutively. FORMAT: Writing Requirement / Lecture CROSST-LISTING: CLAS 1100/X/Y EXCLUSION: CLAS 2100S/Y/Y
RELS 1600.03: Introductory Sanskrit I.
This course provides students with all the basic tools required for the study of Sanskrit, with a particular emphasis on basic Sanskrit grammar. Students will learn the Devanagari script, several common nominal forms and the basics of the verbal system, as well as develop a competency in basic reading and recitation. FORMAT: Lecture/seminar
RELS 2001.03: Judaism.
An introduction to Jewish beliefs, practices, history, and writings from the Hellenistic period to the present. Topics to be covered include: the Torah, the Tanakh, the development of the Rabbinic tradition, Jewish philosophy and mystical traditions. FORMAT: Lecture/semear
RELS 2003.03: Islam.
An introduction to Muslim beliefs, practices, history and writings from the 7th century to the present. Topics to be covered include: the Teora, the Talmud, the development of the Islamic tradition, Jewish philosophy and mystical traditions. FORMAT: Lecture/semear
RELS 2011.03: Hinduism.
An introduction to Hindu beliefs, practices, history and writings from the 7th century to the present. Topics to be covered include: the Teora, the Tanakh, the development of the Hindu tradition, and the rise of political Islam in the twentieth century. FORMAT: Lecture/semear
RELS 2012.03: Chinese and Japanese Religions.
An introduction to the cultural, religious, and philosophical traditions of China and Japan. Topics to be covered include: Classical Confucianism, Neo-Confucianism, Philosophical and Religious Daoism-Shinto, Chinese and Japanese Buddhism. The course will also examine the interaction, competition, and overlap between these traditions. FORMAT: Lecture/semear
RELS 2012.03: Chinese and Japanese Religions.
An introduction to the cultural, religious, and philosophical traditions of China and Japan. Topics to be covered include: Classical Confucianism, Neo-Confucianism, Philosophical and Religious Daoism-Shinto, Chinese and Japanese Buddhism. The course will also examine the interaction, competition, and overlap between these traditions. FORMAT: Lecture/semear
RELS 2013.03: Buddhism.
This course introduces the student to the Buddhist religious tradition, beginning with its origins and early developments in India and followed by a treatment of key themes of later world. Buddhism such as meditation, devotion, monasticism, and ritual. The course then exposes students to both Buddhism’s early Indian doctrinal and institutional dimensions, and to aspects of Buddhism as practiced subsequently in China, Japan, and Tibet. FORMAT: Lecture/semear
RELS 2005.03: Nature, the Human, Community and the Divine in the Pre-Modern West.
What is nature? What is the proper relationship between nature and the human being, political community, and divinity? This course will investigate ancient Greek, Roman, Jewish, Christian and Islamic answers, to this question through the study of Tennuro, philosophy, art and architecture of the Pre-Modern West. FORMAT: Lecture/semear
RELS 2026.03: Paganism.
"Pagan" originated as a derogatory Christian designation for ignorant conservative matris who kept to the post-Christian religions. We will look at those religions in their origins, nature, and development in antiquity, their continuations in the Middle Ages and modernity, and their persistence and revival in the contemporary world. FORMAT: Lecture/discussion CROSST-LISTING: CLAS 2026.03
RELS 2027.03: Magic, Religion and Philosophy. This course provides students with the basic tools for approaching the Arab world from a cultural perspective. The main topics are: 1) the guide marks of Arabic history; 2) a civilization “of the Word”; the Arabic language, the Koran, the Tradition of the Prophet Muhammad, and the sciences related to the Islamic age (mathematics, science, medicine, philosophy); 3) the Arab legacy in sciences, philosophy, literature, architecture, calligraphy, decoration, etc. 4) multi-cultural Arab-Islamic and the ideal of “convivencia”; 5) present nostalgia for the past; 6) traditions, modernity and effects of “Globalization” in the contemporary Arab “high culture” and “pop culture” in literature, music, arts, cinema, life style, education system, media, etc. Some lecture sessions will be accompanied by audio-visual presentations including documentary films. The course does not require background in Arabic. FORMAT: Lecture/discussion CROSST-LISTING: ARBI 2100/1/3, HIST 2500/3
RELS 2203.03: Philosophy and God.
Does God exist? Can God be known? Have a nature? Does exist? Beginning by occupying the same ground as religion, philosophy has asked these questions. Starting with Pythagoras, Empedocles, Plato, Aristotle, Epicurus, and continuing with their pagan, Jewish, Christian, and Islamic followers, we shall learn to state the answers of ages and contexts with historical accuracy and to judge their persuasive power. FORMAT: Lecture/discussion CROSST-LISTING: ARBI 2100/1/3, HIST 2500/3
RELS 2205.03: Philosophy of Religion.
Monothestic religions (such as Judaism, Christianity, and Islam) assert the existence of a single God. This course addresses philosophical problems posed by traditional monotheism: 1) why care whether monotheism is true? 2) Why care whether belief in God is rational? 3) Does the rationality of belief in God depend on the evidence for and against God’s existence? What is the best evidence for and against? What bearing does God have on human morality? CROSST-LISTING: PHIL 2205/3 EXCLUSION: PHIL 2200S/Y/Y
RELS 2208.03: Science and Medicine in Islamic Societies, 700 - 1500.
Through a combination of primary and secondary source readings, this course explores some of the major trends and debates within science and medicine in Islam from the seventh century until the early modern period. A special emphasis is placed on situating these developments within the larger political, social and institutional structure of Islamic societies. FORMAT: Seminar CROSST-LISTING: HISTC 2208/3 EXCLUSION: HISTC 3610/3 and RELS 3610/3 for the 2010/11 academic year only RESTRICTION: Restricted to students in their second year and above
Religious Studies

RELS 2209.03: The Roman World from Constantine to Theodosius (312–395).
This course covers one of the most important periods of Roman history in which Christianity became the dominant religion in the empire and foreign peoples threatened the existence of the empire itself. The course is open to first-year students. There is no foreign language requirement. FORMATT: Seminar
CROSS-LISTING: HIST 2170.03, CLASS 2290.03
EXCLUSION: CLASS 2290.07, HIST 2045K/3.06

RELS 2220.03: Ancient Israel in Her Near Eastern Context.
Israel will become familiar with the broad outlines of ancient Israelite history with specific attention to Israel's relationship to its immediate neighbors and the major imperial powers from the 3rd millennium BCE to the first century CE. This will entail an initial survey of biblical texts in order to lay an adequate understanding of ancient Israel's self-conception, followed by a detailed survey of Israel's interaction with other nations, including early Mesopotamia, Egypt, Assyria, Babylon, Persia, the Seleucid empire, and Rome. FORMATT: Lecture and seminar presentations
CROSS-LISTING: CLASS 2220.03, HIST 2251.03

RELS 2281.03: Christian Beginnings: The Orthodox and Oriental Churches.
This course traces the development of Christianity from its origin as a Jewish sect to its status as the dominant religion within the Byzantine Empire. The Christian religion as patristically by the Eastern Roman Emperors identified itself with the persecuted Christian sect of the first three centuries through the cult of the martyrs, articulated in the increasing importance of relic, icon, and pilgrimage to holy places. The seven ecumenical councils (325–787) progressively defined the Orthodox faith and resulted in the rise of Orthodox churches, rejecting aspects of the definitions. Through our end-date of 843 (when the icon was finally accepted), themes will be treated by attention to historical events (including the rise of Islam), art, architecture, liturgy, and various genres of literature (including hagiography). FORMATT: Lecture
CROSS-LISTING: CLASS 2281.03
EXCLUSION: CLASS 3280K/3.06

RELS 2365.03: Plato and the Case of Socrates: Philosophy on Trial.
Socrates (469–399 BCE) never wrote a single word, but posed such threat to Athens that a jury put him to death for the allegedly ethical corruption and impurity of his thought. This course will explore the revolutionary life and thought of Socrates, and consider whether the jury's decision against him was justified. FORMATT: Lecture
CROSS-LISTING: CLASS 2365, PHIL 2365

RELS 2420.03: Witchcraft in Early Modern Europe.
The period of European history from 1500 to 1800 are the rise of modern science and philosophy. It was also a period in which thousands of witch trials and executions were carried out. This course will seek to understand how these seemingly contradictory developments could have occurred simultaneously. The course will examine changing perceptions of the witch and witchcraft in relation to the historical, intellectual, cultural, religious, and political contexts. Questions that will be considered include: How did the Renaissance interest in magic influence the Early Modern understanding of witchcraft? What impact did concerns about popular religion have on the witch trials? What constituted evidence that someone was a witch? What did Early Modern scientists think about witchcraft? The course will pay special attention to Early Modern notions of gender and sexuality and their influence on the witch hunts and witch trials. FORMATT: Lectures/discussions
CROSS-LISTING: GWST 2210.03, EMSIP 2210.03

RELS 2503.03: Medieval Islamic Civilization.
This course will introduce students to the Post-Arabic world at the time of Muhammad's prophecy in the 7th century, and how the Arabian Peninsula was impacted by the creation and emergence of Islamic society in Medina and Mecca. With the collapse of Iranian and Byzantine empires in the Holy Land and the collapse of the Sassanid Empire in Persia, the Arab-dominated society of Mecca and Medina had become an empire of unprecedented size and ethnic complexity. The course will examine the respective Unayzyad and Abbasid Dynasties, as well as the Ottoman, Safavid, and Mughal. The central theme of this course will be an examination of the Islamic surrounding traditions and cultures in the Mediterranean, the Indian Subcontinent, the Steppe, China, and the Near Eastern and Central Asian region. Another important theme will be the study of how various Islamic societies understood and resolved the age-old dynamic between tribal nominalism and hierarchical urbanism. FORMATT: Lecture
CROSS-LISTING: HIST 2503.03
EXCLUSION: first year students and HIST 2501.03

RELS 2600.03: Introductory Sanskrit II.
This course will continue the study of ancient Sanskrit grammar, and translation of simple Sanskrit texts. PREREQUISITE: RELS 2600.03 or CLASS 1600.03
CROSS-LISTING: CLASS 2600.03

RELS 3000.03: Topics in Religious Studies.
This course treats a range of theoretical and methodological issues in the study of religion and serves to introduce students to key problems in scholarship on both Western and Eastern traditions. A variety of themes will be explored such as the relationship between philosophy and religion, the functions of doctrine and ritual, the nature of holiness and the nature of scripture; beyond a basic understanding of these and other themes; however, the course will engage students with the various — often conflicting — ways in which these themes have been treated in Religious Studies scholarship. This course is a core requirement for all students majoring in Religious Studies. FORMATT: Seminar
RESTRICTION: Students must be in their third year of study, or beyond

RELS 3001.03: Islam and the Others.
During its history, Islam has encountered numerous “others”: Christians, Jews, Zoroastrians, Hindus, and most recently the “West.” Muslim countries have had non-Muslim minorities, and conversely there have been Muslim minorities in non-Muslim countries. This course deals with Islamic perceptions of, and relations with, these “others” throughout history. FORMATT: Lectures
CROSS-LISTING: CLAS 2600.03

RELS 3008.03: The Medieval Church.
This course does not attempt to provide a chronological survey of the development of the Western church, but is an advanced seminar dealing with topics which have no strict chronological limits. Subjects of study include monasticism, heresy, education and the universities, town and cathedral, liturgical change, and “popular” concepts of religion. Each year one or more topics are examined in detail, with the help of original documents in translation, and using recent periodical literature and/or monographs. Students prepare and present one or two well-researched papers, and class discussions are used to explore related materials and theories in greater depth. Some prior knowledge of medieval European history is essential. RECOMMENDED: HIST 1000.03
FORMATT: Lecture/discussion
PREREQUISITE: HIST 2001.03 or HIST 2102.03 or HIST 2210.03
CROSS-LISTING: HIST 3002.03
EXCLUSION: Former HIST 3021.03 and 3022.03 students

RELS 3009.03: Christianity in the Lands of Islam.
After the Islamic conquest of the Middle East in the seventh century, approximately half of the world’s Christians found themselves under Islamic rule. The course tells the story of these Christians, their religious practices, their relations with the Muslims from the seventh century until today. FORMATT: Lecture
PREREQUISITE: Students must be in their third year of study, or beyond

RELS 3012.03: Mystics of the Middle East.
The course is designed as an introduction to mystical dimensions of Islamic thought and practice in their historical development and in relation to Jewish and Christian mysticism in the Middle East. Topics to be covered include: the beginnings of the Sufi tradition in relation to other varieties of Middle Eastern mysticism, orthodoxy and heresy in early Sufism, stations and states on the Sufi path, Sufism and philosophy in interaction, Sufi orders, Sufi poetry as vehicle of mystical experience. PREREQUISITE: RELS 3002.03 or RELS 3003.03 or permission of the instructor.
RELS 3018.03: Meetings Between Hellenism and the East to Philo the Jew.
We consider the constitution of Hellenism in relation to Eastern cultures as the emergence of Homer and Herodotus, the emergence of philosophy and the polis. With Alexander and the Hellenistic empires we look at the results and limits of military conquest especially in what is now Afghanistan. This course concludes with the constitution of Jewish religion and culture and its meeting with Hellenism with Philo Judaeus in Alexandria. In order to integrate the presentation of text and art the lectures are all in PowerPoint.

FORMAT: Lecture and discussion
CROSS-LISTING: CLAS 3282.03
HIST 3075.03

RELS 3019.03: Meetings between Hellenism, Judaism, Christianity and Islam until the Renaissance.
We consider the constitution of Christianity in relation to Hellenism and Judaism during the first six centuries of the Christian era. After treating the constitution of Islam, we consider its meetings with Christianity and Judaism especially in Spain and Norman Sicily. We conclude with medieval Jewish, Christian and Islamic philosophical theologians. Integrating the presentation of text and art the lectures are all in PowerPoint.

FORMAT: Lecture and discussion
CROSS-LISTING: CLAS 3017.03, HIST 3017.03

RELS 3100.03: Readings in Western Religions.
This course will focus on a single body of literature from the Jewish, Christian, or Islamic religious traditions such as the Gospels, Midrashic collections, or Talmud. The course will examine the interpretation of the literature in its original context, in traditional commentaries, and in the modern academy.

FORMAT: Lecture and seminar
PREREQUISITE: A 2000 level course or permission of instructor
EXCLUSION: RELS 3002.03

RELS 3101.03: The Self and the World in Indian Story.
Through a close reading of narrative and other forms of story literature, this course explores the two themes, fundamental to all South Asian religions, of unconstraining and absorbing the world. Reading materials will draw from Hindu, Indian Buddhist, Jain and Sikh narrative literature, and will reflect a range of religious attitudes towards worldliness within the family and society, and the pursuit of personal liberation through asceticism, renunciation and monasticism.

PREREQUISITE: A 2000 level RELS course or permission of the instructor
EXCLUSION: RELS 3002.03

RELS 3111.03: Vishnu and Krishna the Dark Lord: Popular Hindu Religion.
This course focuses on the god Vishnu and his various manifestations, particularly Krishna, the “Dark Lord.” Through an examination of traditional Sanskrit sources and popular religious traditions across India, the course treats the theological, mythic and cultic expressions of one of Hinduism’s most beloved figures.

FORMAT: Lecture with tutorial meetings
PREREQUISITE: RELS 2111 or permission of instructor

RELS 3112.03: Buddhism in India and Tibet.
This course engages the student with the Mahayana and Vajrayana traditions of Buddhism as lived and practiced initially in India and subsequently in the Tibetan cultural region. Emphasis will be placed on the philosophical schools called Madhyamika and Yogacara, and particularly on the tantric ritual and meditation practices of Tibet Buddhism.

FORMAT: Lecture with tutorial meetings
PREREQUISITE: RELS 2111 or permission of instructor

RELS 3113.03: The Mahabharata: India’s Great Epic of Strife and Salvation.
Barring perhaps the Ramayana, the Mahabharata or “Great Epic of India” is the most widely known and studied narrative in all South Asian tradition, and is one of the most important literary works of human civilization. The Sanskrit Mahabharata is enormous, complex, endlessly fascinating, and has remained for 2000 years the principal venue for the Hindu tradition’s reflection on the dark and chaotic dimensions of war, violence, civil and divine law, human identity and freedom. This course will lead students into the colourful world of India’s great Sanskrit epic, provide them with the tools for mastering this narrative track and the scholarly issues arising from its study, and provide them a taste of the Sanskrit language in which the poem is written.

FORMAT: Lecture and tutorials
PREREQUISITE: RELS 2111, RELS 3101, RELS 3111 or permission of the instructor

RELS 3200.03: Science and Religion: Historical Perspectives.
Beginning with an overview of the history and methodology of the study of science and religion, encounters between science and religion are traced from the dawn of civilization to the end of the eighteenth century, with a special focus on the early modern period. From an examination of the biblical view of nature, ancient Babylonian astrology and divination and Plato’s Timaeus, this course moves through a treatment of the centrality of Galileo to Medieval science on to natural theology and the “Watchmaker.” The course concludes with the seventeenth and eighteenth centuries. Models of science, harmony and complementary offered to characterize relations between science and religion are explored through case studies such as Galileo’s controversy with the Church and instances where religious belief inspired scientific like Boyle and Newton. Claims that certain confessional traditions (notably Protestantism and its dissenting offshoots) facilitated the rise of modern science are also appraised. Science-religion relations are examined both from the standpoint of mainstream religion and with respect to religious heterodoxy, prophecy, alchemy, magic and witchcraft. This course employs examples from Islamic cultures in addition to the Judeo-Christian traditions. Special features include a focus on primary texts and guest lectures by scientists.

FORMAT: Lecture/discussion
CROSS-LISTING: CLAS 3017.03, HIST 3017.03

RELS 3201.03: Science and Religion: Contemporary Perspectives.
Beginning with an overview of the history and methodology of the study of science and religion, encounters between science and religion are traced from the dawn of civilization to the end of the eighteenth century, with a special focus on the early modern period. From an examination of the biblical view of nature, ancient Babylonian astrology and divination and Plato’s Timaeus, this course moves through a treatment of the centrality of Galileo to Medieval science on to natural theology and the “Watchmaker.” The course concludes with the seventeenth and eighteenth centuries. Models of science, harmony and complementary offered to characterize relations between science and religion are explored through case studies such as Galileo’s controversy with the Church and instances where religious belief inspired scientific like Boyle and Newton. Claims that certain confessional traditions (notably Protestantism and its dissenting offshoots) facilitated the rise of modern science are also appraised. Science-religion relations are examined both from the standpoint of mainstream religion and with respect to religious heterodoxy, prophecy, alchemy, magic and witchcraft. This course employs examples from Islamic cultures in addition to the Judeo-Christian traditions. Special features include a focus on primary texts and guest lectures by scientists.

FORMAT: Lecture/discussion
CROSS-LISTING: HISTC 3200.03, EMSP 3300.03, HIST 3075.03

RELS 3250.03: Atheism in Early Modern Europe.
Although atheism continues to be a source of controversy and debate, one of the most significant features of the modern world is the course to which religious belief has become accepted as a morally and intellectually defensible position. This course will seek to understand the rise of modern atheism by examining its origins in the Early Modern world.

FORMAT: Lecture and seminars
CROSS-LISTING: HISTC 3200.03, CTMP 3201.03, HIST 3075.03

RELS 3282.03: Christian Beginnings: Catholicism.
This course will consider the formation of Catholicism (Latin Christianity) up to the 12th century in relation to the Greek-Roman context and the barbarian invasions. Moving from North Africa to Western Europe; and using a combination of text, music and art, architecture, and archaeological evidence, it will examine the formation of doctrine and discipline in relation to scripture, heresies and Hellenism, the origins and development of monasticism, the papacy, church and state relations, and the construction of literacy. An theme will be the interplay between the divine and the human.

FORMAT: Lecture and discussion
CROSS-LISTING: CLAS 3282.03
EXCLUSION: CLAS 3282X/06
This course presents two opposed arguments for the union of divinity with the human and human's "incarnation" and looks at one instance of how they meet: Lambichus, On the Mysteries, Anselm, Why the God-man, Bonaventure, The Journey of the Mind into God. We shall look at how these arguments bridge the gulf between science and religion. These works will normally be read in their entirety: Aristotle, Conclusio of Philosophy; Diodorus, Mystical Theology; Anselm, Proslogion. The main interest is the use and transformation of the philosophy of Plato, Aristotle, the Stoics and the Neoplatonists in this development. FORMAT: Lecture and discussion CROSS-LISTING: CLAS 3410.03

RELS 3381.03: Medieval Philosophy from Augustine to Anselm.
A study of texts, primarily within the Latin tradition from Augustine to Anselm, but including selected writings of the Pseudo-Dionysius. These works will normally be read in their entirety: Boethius, Conclusio of Philosophy; Diodorus, Mystical Theology; Anselm, Proslogion. The main interest is the use and transformation of the philosophy of Plato, Aristotle, the Stoics and the Neoplatonists in this development. FORMAT: Lecture CROSS-LISTING: CLAS 3381.03, PHIL 2381

This course will examine the first nine books of Augustine's Confessions. These 'autobiographical' books contain Augustine's account of his intellectual progress, culminating in his encounter with Platonism in book 7, followed by an account of his conversion to Christianity and his life as a Christian in books 8 and 9. FORMAT: Seminar CROSS-LISTING: CLAS 3411.03 EXCLUSION: RELS 3410.03

This course will examine the last four books of Confessions. Book 10 marks the transition from autobiography to Augustine's account of his present psychological life, undertaken in order to know himself as he is known by God. Books 11-13 are an exegesis of the beginning of the book of Genesis. FORMAT: Seminar CROSS-LISTING: CLAS 3412.03 EXCLUSION: RELS 3410.03

RELS 3432.03: St. Augustine's On the Trinity Part 2.
A study of Books 6-15 of Augustine's On the Trinity, in which he attempts to understand what has been shown in the first 7 books (the orthodox teaching about God through Scripture and a consideration of the categories of substance, relation and act) through the distinction of 40 topics. FORMAT: Seminar CROSS-LISTING: CLAS 3432.03

RELS 3510X/Y.03: Sultans and Shahs: Polity and Religion in the Islamic Gunpowder Age (1500-1800).
Until the devastating Mongol invasions of the 13th century, the principal centers of Islamic power, culture, and thought had been based in Cairo and Baghdad. This course will examine the post-Mongol Islamic world, and how politics and religion were irrevocably changed with the annihilation of the Sunni 'Abbasid caliphate. Religion became, combined with the present vacuum left by Chingiz Khan and his descendents, allowed for the emergence of a number of unique Turkmen states were irrevocably changed with the annihilation of the Sunni 'Abbasid caliphate. This course will examine the post-Mongol Islamic world, and how politics and religion were irrevocably changed with the annihilation of the Sunni `Abbasid caliphate. This course will discuss the three most significant of these: the Ottoman Turks (found in Istanbul), the Safavid Persians (found in Isfahan), and the Moghal Indians (based in Delhi). Areas of focus will include: issues of political legitimacy, use of military 'slave' corps, orthodoxy and popular religious movements, tensions between normative and subordinate segments of society, innovations in cultural expression (poetry, art, architecture), scientific and philosophical development, and the penetration and impact of the Portuguese, English, Dutch, and French 'world economies' into Asia and the Indian Ocean. This course will also examine significant debates regarding the 'decline of the East', and introduce the historical implications of how the Islamic world is approached by contemporary scholarship. NOTE: Credit cannot be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term. FORMAT: Lecture/discussion PREREQUISITES: HIST 2501.03 or 2502.03 or 2503.03 CROSS-LISTING: HIST 3510.03

RELS 3610.03: Studies in Ancient and Medieval Science.
Topics vary each year. Some of the topics are: "Creation", "History of dissection", "Mesopotamian science", "Science and cultures in antiquity", "The enigma of praxis", "Pluralism", "Ancient Method", "Embryology", "Posture analysis", etc. For descriptions of the current year's study topics, please consult the History of Science and Technology Program. NOTE: Not more than two studies courses (one full credit) and no more than one of each course number, can be taken for credit towards the History of Science and Technology Program. FORMAT: Lecture/discussion CROSS-LISTING: HIST 3610.03

RELS 3661.03: Hellenistic Philosophy: Stoics and Epicureans.
A study of philosophy in the Hellenistic Age. We will investigate the development of Greek and Roman philosophy after Aristotle, focusing on Stoicism and Epicureanism. The course covers the logic, physics, and ethics of these philosophical schools, as well as their religious dimensions. FORMAT: Seminar PREREQUISITES: CLAS 2361.03 and 2362.03 or permission of instructor CROSS-LISTING: CLAS 3661.03

RELS 3662.03: Hellenistic Philosophy: From Scepticism to Neoplatonism.
A study of philosophy in the Hellenistic Age. We will investigate the development of Greek and Roman Philosophy, focusing on Pyrrhonian and Academic Scepticism, as well as Middle Platonic Philosophy. The course covers the logic, physics, and ethics of these philosophical schools, as well as their religious dimensions. PREREQUISITE: CLAS 3411.03 or permission of instructor CROSS-LISTING: CLAS 3662.03 EXCLUSION: RELS 4610.03, RELS 4620.03

RELS 3850.03: The End of the World: The Apocalypse in German Thought.
The war, death and destruction that define European history in the 20th century can only begin to explain the obsession with the apocalypse in contemporary German thought. In this seminar we will study the secular appropriation of apocalyptic imagery from the Judeo-Christian tradition. FORMAT: Lecture/discussion CROSS-LISTING: GERM 3850.03 RESTRICTION: Restricted to students in second year or above

RELS 3910.06: Neoplatonism: Plato and Neoplatonism.
The philosophy of Plotinus and later thinkers considered the source of Greek Philosophy; in particular the role of Plato and other philosophers in the formation of Neoplatonism is a principal interest. CROSS-LISTING: CLAS 3910.06

RELS 4010.03: Islamic Philosophy: al-Ghazali.
Abu Hamid al-Ghazzali (1058-1111) is one of the greatest Muslim thinkers of all time. This course is an introduction to his thought, focusing on al-Ghazali's "truce" approach to theology – esoteric theology for the masses and esoteric theology for the select few – and on his attitude to Islamic philosophy and Islamic mysticism (Sufism). FORMAT: Seminar CROSS-LISTING: CLAS 4010.03, CLAS 5817
RELS 4011.03: Jewish Philosophy: Maimonides.

Moses Maimonides (1135-1204) is one of the greatest Jewish thinkers of all time. This course is an introduction to his philosophical and legal writings, with special emphasis on his famous treatise The Guide of the Perplexed. Maimonides’ stance on such issues as God’s incorporeality, creation, and prophecy will be compared to that of other varieties of Judaism.

FORMAT: Seminar

PREQUISITE: Students must have completed 5 full credits of university study and RELS 2001.03 or RELS 3392.03 or CLAS 3392.03 or PHIL 2392.03, or permission of the instructor.

CROSS-LISTING: CLAS 4011.03

RELS 4018.03: Christian Theology in Islamic Lands: John of Damascus.

John of Damascus (d. 744) is one of the greatest Christian theologians of the Patristic age. Though he wrote in Greek, he was probably a Christian Arab (his Arabic name is Mansur ibn Sarjun), who lived under Muslim rule and was employed as a public official in the Umayyad administration in Damascus. The course will focus on his theological works (especially his summa of Christian theology, entitled On the Orthodox Faith, and his three treatises on defence of the icons), their Christian sources, and their Islamic content.

FORMAT: Seminar

PREQUISITE: At least one of RELS 1002.03, RELS 2003.03, RELS 2301.03, RELS 2323.03, RELS 3009.03, foundation year program, or permission of the instructor.

CROSS-LISTING: CLAS 4018.03

Reconciling Jewish Scripture and Plato, Philo culminates Second Temple Jewish thought and founds the Christian treatment of Scripture. He is the most influential Jewish theologian and presents the High Priest as priest of the cosmos so he is crucial both to understand our past and to carry us into the future.

I. Introduction

The Russian Studies Department offers courses in Russian language, literature, culture and history. Since Russia plays a crucial role in today’s world and makes important contributions in a wide variety of scientific, technical, and humanitarian fields, knowledge of its linguistic and cultural backgrounds can prove advantageous in many areas of study. Recent radical shifts in the country have significantly widened opportunities for using Russian in business, law, science, and government.

In the language courses emphasis is placed on gaining a thorough grasp of Russian grammar combined with practical competence in speaking, listening, reading, and writing. Sections are small and intensive. Classroom work is supplemented by computerized audio-visual materials. Study of Russian literature begins with a general survey intended for first or second year students, followed by monograph, period, and genre courses. Literature courses are generally offered in both English and Russian in order to give as many students as possible from other disciplines the opportunity to become acquainted with this important part of Russian life.

Courses in Russian culture and civilization are intended to introduce students to art, architecture, music, religion, and other areas of Russian life which are necessary to understand the language and literature. Films, guest speakers, and evenings of Russian poetry are scheduled periodically. The Dalhousie Association of Russian Students organizes a variety of events throughout the year.

Major or honours students may, with the approval of the Russian Studies Department, take up to one semester (five half credits) of work at a university in Russia and receive credit at Dalhousie. Qualified students are urged to participate in the intensive Russian Program, founded by Dalhousie, which enables Canadian students to study for a semester at St. Petersburg State University.

II. Degree Programs

Courses in the Russian Studies Department are open to students either (1) as electives in any degree program, (2) as constituents of a major or honours degree in Russian, or (3) with courses in another discipline forming part of a combined honours degree or double major, or (4) as a minor.
All Bachelor degree programs are governed by the general Requirements for Degrees set out in the University Calendar, in addition to the departmental requirements stated below. See “Degree Requirements” section, page 125 of this calendar for complete details.

## A. BA Honours in Russian Studies

### Departmental requirements

#### 1000 level
- RUSN 1000X/Y .06
- RUSN 1020.03
- RUSN 1070.03

#### 2000 level
- RUSN 2002.03 (or 2003X/Y.06)
- RUSN 2051.03
- RUSN 2052.03
- Five other credits at or above the 2000 level and not including those listed below.

#### 3000 level
- RUSN 3002.03 and RUSN 3003.03
- One other credit at the 3000 level or higher

#### 4000 level
- RUSN 4000X/Y.06

### Other required courses
- One full credit in Russian History (normally RUSN 2022.03 and 2023.03). This requirement is included in the number of credit hours noted above.
- Honours Thesis

## B. BA Combined Honours in Russian Studies

### Departmental requirements

#### Russian Studies as first subject:

#### 1000 level
- RUSN 1000X/Y .06
- RUSN 1020.03
- RUSN 1070.03

#### 2000 level
- RUSN 2002.03 and 2003.03 (or 2003X/Y.06)
- RUSN 2051.03 or RUSN 2052.03
- Three and one half other credits at or above the 2000 level and not including those listed below.

#### 3000 level
- RUSN 3002.03 and RUSN 3003.03
- One other credit at the 3000 level or higher

#### 4000 level
- RUSN 4000X/Y.06

### Other required courses
- One half credit in Russian History (normally RUSN 2022.03 or 2023.03). This requirement is included in the number of credit hours noted above.
- Honours Thesis

#### Russian Studies as second subject:
- A minimum of five credits with at least two of those credits being language courses at or above the 2000 level or above (normally 2002.03/2003.03/3002.03/3003.03/4000X/Y.06).
- At least two of the five credits must be at the 3000 level or above.

## C. BA (20 credit) Major in Russian Studies

### Departmental requirements

#### 1000 level
- RUSN 1000X/Y.06
- RUSN 1020.03
- RUSN 1070.03

#### 2000 level
- RUSN 2002.03 and 2003.03 (or 2003X/Y.06)
- RUSN 2051.03 and 2052.03
- Two other credits at or above the 2000 level not including those listed below.

#### 3000 level
- RUSN 3002.03 and 3003.03
- Two other credits at or above the 3000 level

#### 4000 level
- RUSN 4000X/Y.06

### Other required courses
- One full credit in Russian History (normally RUSN 2022.03 and 2023.03).

## D. BA (20 credit) Double Major in Russian Studies

### Russian Studies as first major:

#### 1000 level
- RUSN 1000X/Y.06
- RUSN 1020.03
- RUSN 1070.03

#### 2000 level
- RUSN 2002.03 and RUSN 2003.03 (or 2003X/Y.06)
- RUSN 2051.03 or RUSN 2052.03
- One and a half other credits at or above the 2000 level not including those listed below.

#### 3000 level
- RUSN 3002.03
- RUSN 3003.03
- One other credit at or above the 3000 level

#### 4000 level
- RUSN 4000X/Y.06

### Other required courses
- One half credit in Russian History (normally RUSN 2022.03 and 2023.03).

### Russian Studies as second major:
- A minimum of five credits with at least two of those credits being language courses at the 2000 level or above (normally 2002.03/2003.03/3002.03/3003.03 or 4000X/Y.06).
- At least two of the five credits must be at the 3000 level or above.
**Russian Studies 303**

- RUSN 1000.06: Russian Language Today.
- two additional A-term courses in Russian history and Russian literature, language.

3. Courses at St. Petersburg State University

- **RUSN 1000X/Y.06: Elementary Russian.** For students who have little or no previous knowledge of the Russian language. Equal emphasis is placed on developing oral, listening, and reading skills with a sound grammatical basis. May be offered in a traditional classroom setting or online. EXCLUSION: RUSN 1003.03
- **RUSN 1002.03: Elementary Russian I.** For students who have little or no previous knowledge of the Russian language. Equal emphasis is placed on developing oral, listening, and reading skills with a sound grammatical basis. May be offered in a traditional classroom setting or online. PREREQUISITE: C+ in Russian 1000X/Y.06 or permission of instructor.
- **RUSN 1003.03: Elementary Russian II.** For students who have little or no previous knowledge of the Russian language. Equal emphasis is placed on developing oral, listening, and reading skills with a sound grammatical basis. May be offered in a traditional classroom setting or online.
- **RUSN 1020.03: Russian Culture and Civilization.** Conducted in English. The course traces developments in the Russian arts: painting, sculpture, theatre, music. FORMAT: Instruction, discussion, film screenings.
- **RUSN 1036.03: Russian Film I.** An overview of the history of Russian cinema from the Silent Era to “Thaw” (19000-1960s). Its goal is to develop students’ knowledge of cinema in its historical and cultural context through critical watching, reading, thinking, and writing. The course will concentrate on the development of main genres and styles in Russian and official Soviet cinema, major directors and styles. Full versions of films will be screened each Monday night. later in the week they will be followed by a lecture, discussion, and viewing additional short clips.
- **RUSN 2001.06: Intensive Second Year Russian.** The material covered in RUSN 2002 and RUSN 2003 presented in a single semester. FORMAT: Instructor-directed 8 hours
- **RUSN 2002.03: Intermediate Russian I.** A continuation of RUSN 1000X/Y.06. Oral and reading skills and a further knowledge of grammar are developed through study and discussion of Russian texts. FORMAT: Instructor-directed 4 hours
- **RUSN 2003.03: Intermediate Russian II.** A continuation of RUSN 2002.03. FORMAT: Instructor-directed 4 hours
- **RUSN 2021J/Y.06: Imperial and Soviet Russia.** See course descriptions for HIST 2020X/Y.06 in the History section of this calendar.
- **RUSN 2022.03: Imperial Russia.** Chronologically covers the imperial period of Russian history, from Peter the Great to the Revolution of 1917. FORMAT: Lecture/discussion. EXCLUSION: May not be taken by students who have completed HIST 2020X-Y.06, RUSN 2021X/Y.06
- **RUSN 2023.03: Soviet Russia.** Equivalent to the second half of HIST 2020X/Y.06. Chronologically covers the Soviet period of Russian history, from 1917 to Gorbachev. FORMAT: Lecture/discussion. EXCLUSION: May not be taken by students who have completed HIST 2020.06 or RUSN 2021X/Y.06
- **RUSN 2029.03: Conversation.** Development of conversation skills and vocabulary building. PREREQUISITE: Student must be enrolled in the 2nd year grammar course or must have permission of instructor.
- **RUSN 2034.03: History of Russian Natural Science.** Conducted in English. An overview of the history of Russian natural science from the foundation of the Russian Academy of Sciences during the reign of Peter the Great to the empires.
- **RUSN 2046.03: East European Cinema: War, Love, and Revolution.** This course brings post-Berlin Wall East European film into the fray of current debates on cultural identity, transnational cinema, and postcolonialism. Despite the state control, the filmmakers of communist Europe were often more bold, honest and provocative than their profit-driven Hollywood counterparts. By drawing on political, cultural, and philosophical discourses, the course will offer pointed analyses of some of the most significant East European films that touch upon issues of ethnicity, gender, and overcoming censorship.
- **RUSN 2045X/Y.06: How iRead the Eye-Books: Film Adaptations of World Literature.** In this course we will be reading and watching the world adaptations of international history classics and popular contemporary works. From analyzing the art of comic strips and Supermen sagas to e-books designed for iPads and Android mobile devices, during the semester students will learn to appreciate both the text and its visual renderings using theoretical frameworks of adaptation and textual fidelity, as well as have an opportunity to practice their skills in the art of film-making and constructing an ebook.

**CROSS-LISTING:** THEA 2336.03

**RUSN 2029.03: Conversation.** Development of conversation skills and vocabulary building. PREREQUISITE: Student must be enrolled in the 2nd year grammar course or must have permission of instructor.

**RUSN 2045X/Y.06: How iRead the Eye-Books: Film Adaptations of World Literature.** In this course we will be reading and watching the world adaptations of international history classics and popular contemporary works. From analyzing the art of comic strips and Supermen sagas to e-books designed for iPads and Android mobile devices, during the semester students will learn to appreciate both the text and its visual renderings using theoretical frameworks of adaptation and textual fidelity, as well as have an opportunity to practice their skills in the art of film-making and constructing an ebook.

**Form of Instruction:** Lecture/discussion.

**FORMAT:** Lecture/discussion.

**RUSN 3090.03: Russian Society Today.** The study of sociocultural and economic aspects of Russian society. Its goal is to develop students’ knowledge of cinema in its historical and cultural context through critical watching, reading, thinking, and writing. The course will concentrate on the development of main genres and styles in Russian and official Soviet cinema, major directors and styles. Full versions of films will be screened each Monday night. later in the week they will be followed by a lecture, discussion, and viewing additional short clips.

**CROSS-LISTING:** THEA 2336.03

**RUSN 3035.03: Literature - Reading and Analysis.** An overview of the history of Russian literature from the Age of Peter the Great to modern times.

**CROSS-LISTING:** THEA 2337

**RUSN 3034.03: History of Russian Natural Science.** Conducted in English. An overview of the history of Russian natural science from the foundation of the Russian Academy of Sciences during the reign of Peter the Great to the empires.

**CROSS-LISTING:** THEA 2336.03

**RUSN 3032.03: Translation;**

**RUSN 3031.03: Conversation;**

**RUSN 3012.03: Translation;**

**RUSN 3011.03: Grammar I;**

**RUSN 3010.06: Grammar II;**

3. Courses at St. Petersburg State University

- **RUSN 2002.03: Elementary Russian I.** For students who have little or no previous knowledge of the Russian language. Equal emphasis is placed on developing oral, listening, and reading skills with a sound grammatical basis. May be offered in a traditional classroom setting or online. EXCLUSION: RUSN 2003.03
- **RUSN 2003.03: Elementary Russian II.** For students who have little or no previous knowledge of the Russian language. Equal emphasis is placed on developing oral, listening, and reading skills with a sound grammatical basis. May be offered in a traditional classroom setting or online.
- **RUSN 2010.03: Russian Culture and Civilization under the Tsars.** Conducted in English. The course traces developments in the Russian arts: painting, sculpture, theatre, music. FORMAT: Lecture, discussion, film screenings.
- **RUSN 2031.03: Modern Russian Culture and Civilization.** Conducted in English. The cultural history of 20th century Russia. FORMAT: Lecture, discussion, film screenings.
- **RUSN 2046.03: East European Cinema: War, Love, and Revolution.** This course brings post-Berlin Wall East European film into the fray of current debates on cultural identity, transnational cinema, and postcolonialism. Despite the state control, the filmmakers of communist Europe were often more bold, honest and provocative than their profit-driven Hollywood counterparts. By drawing on political, cultural, and philosophical discourses, the course will offer pointed analyses of some of the most significant East European films that touch upon issues of ethnicity, gender, and overcoming censorship.

RUSN 2051.03: Survey of Russian Literature. Conducted in English. An overview of Russian literature for majors. Required for majors and honours candidates. An overview of Russian literature from its beginnings through the 19th century. FORMAT: Lecture/discussion 3 hours EXCLUSION: RUSN 2050.06

RUSN 2052.03: Survey of Russian Literature. Conducted in English with sections in Russian for majors. Required for majors and honours candidates. An overview of Russian literature from Chukovsky to the present. FORMAT: Writing Requirement (when taken in combination with RUSN 2051.03), lecture and discussion 3 hours EXCLUSION: RUSN 2050.06

RUSN 2061.03: Russian Modernism. Conducted in English. A study of trends in literature and the arts at the turn of the century. Known as “The Silver Age”, this is one of the most innovative and dynamic periods in Russian culture. FORMAT: Lecture/discussion EXCLUSION: RUSN 2480.03

RUSN 2062.03: Literature of Revolution - The 1920s in Russian Literature. Conducted in English. A study of experiment and submission during one of the most exciting, diverse, and frustrating periods in Russian literature. “Socialist realism” was not yet official doctrine; innovation in literature was tolerated. Writers openly pondered the role of the individual and culture in the new collective society. FORMAT: Lecture/discussion EXCLUSION: RUSN 2280.03

RUSN 2070.03: Russian Literature and Culture since Stalin’s Death. Conducted in English. The literary and cultural history of Russia after Stalin’s death in 1953. Among the major issues considered are the significance of Stalin’s death, the “thaw” and de-Stalinization, unarmed and literature since glasnost. FORMAT: Lecture/discussion

RUSN 2081.03: Contemporary Russian Culture - The Seven Deadly Sins. Conducted in English. The fall of the Soviet Union has allowed a deluge of once ’official’ excesses, all of which define Russia’s accelerated processes of modernization. This course investigates such vices in the following order: pride, covetousness, lust, anger, gluttony, envy and sloth. FORMAT: Lecture/discussion

RUSN 2151.03: Introduction to Russian Folklore. Conducted in English. A broad survey of traditional Russian popular beliefs and practices: proverbs, riddles, and counting rhymes; the rites and rituals of the Russian agricultural year; fairy tales and epic poems (byline); reconstruction of the Slavic pantheon and its evolution. FORMAT: Lecture/discussion

RUSN 2191.03: Survey of Russian Theatre. Conducted in English with a section in Russian for majors. An overview of Russian writing for the theatre, with emphasis on the nineteenth and twentieth centuries. FORMAT: Lecture/discussion

RUSN 2270.03: The Russian “Heroine”. Conducted in English. The strong spiritual and mental force which Russian women have exerted on their society is richly reflected in literature. The course focuses on the portrayal of several literary heroines and discusses their impact on both the literary imagination and society. FORMAT: Lecture/discussion

RUSN 2500.03: Tolstoy. Conducted in English. An introduction to the work of this enigmatic spiritual giant of Russian literature. Reading includes War and Peace, Anna Karenina, and Resurrection. FORMAT: Lecture/discussion

RUSN 2550.03: Russian and Eastern European Science Fiction. This course will provide an introduction to science fiction in the Russian and Eastern European contexts. Emphasis on the origins from fantastic elements of Russian literature, utopias, socialists, and dystopian impulses, as well as the post-Soviet experience as apocalypse. Authors will include: Gogol, Zamyatin, Capek, Bulatov, the Strugatskys, Lem, Pelevin. FORMAT: Lecture/discussion

RUSN 2750.03: Dostoevsky and the Russian Idea. Conducted in English. Dostoevsky’s novels are the highest importance in understanding the state of Russia and the thoughts of other great Russian authors and thinkers. Crime and Punishment and The Brothers Karamazov are taken as the basis for discussion. The works of F. Turgenev and Lev Tolstoy are discussed together with the ideas of such great Russian philosophers as V. Solovyov and N. Berdyaev. FORMAT: Lecture/discussion

RUSN 2760.03: Dostoevsky and Western Literature. Conducted in English. With all his love for Russia, Dostoevsky traversed the West and its literature. It is impossible to understand Dostoevsky and his main novels, including The Idiot and The Devils without Hamlet by Shakespeare and Don Quixote by Cervantes, Faust by Goethe, some plays by F. Schiller, etc. The course traces the influence of Western ideas on Dostoevsky and his influence on such Western thinkers as Nietzsche and Freud. FORMAT: Lecture/discussion

RUSN 3002.03: Advanced Russian I. Conducted in Russian. Following a thorough review, this course concentrates on expanding all aspects of the student’s knowledge of Russian grammar. Texts are read extensively and intensively. Discussion and compositions are based on the assigned readings. FORMAT: Lecture/discussion 3 hours PREREQUISITE: RUSN 2001.03 or (2002.03 and 2003.03) or equivalent EXCLUSION: RUSN 3000X/Y 03

RUSN 3003.03: Advanced Russian II. A continuation of RUSN 3002.03. FORMAT: Lecture/discussion 4 hours PREREQUISITE: RUSN 3002.03 or equivalent EXCLUSION: RUSN 3000X/Y 03

RUSN 3011.03: Grammar I. This course is offered in Russian only as part of the Intensive Russian Program in Russia. Continuation of RUSN 3001.03. FORMAT: Lecture/discussion 4 hours PREREQUISITE: RUSN 3000.06 or equivalent EXCLUSION: RUSN 3000X/Y 03

RUSN 3012.03: Grammar II. This course is offered in Russian only as part of the Intensive Russian Program in Russia. Continuation of RUSN 3001.03. FORMAT: Lecture/discussion 4 hours EXCLUSION: RUSN 3000X/Y 03

RUSN 3029.03: Conversation. Development of conversational skills and vocabulary building. FORMAT: Conversation practice PREREQUISITE: Student must be enrolled in the 3rd year grammar course or must have permission of instructor. EXCLUSION: RUSN 3001.06

RUSN 3031.03: Conversation. This course is offered in Russian only as part of the Intensive Russian Program in Russia. Conversation is the final stage of the intensive Russian Program and is aimed at the student’s development of sufficient proficiency in Russian. Conversation practice is a necessary stage in learning Russian. FORMAT: Lecture/discussion

RUSN 3032.03: Translation. This course is offered in Russian only as part of the Intensive Russian Program in Russia. Work on translation of literary, business and journalistic texts. FORMAT: Lecture/discussion

RUSN 3035.03: Literature: Reading and Analysis. This course is offered in Russian only as part of the Intensive Russian Program in Russia. Reading and analysis of literary texts.
RUSN 3090.03: Russian Society Today.
Basic institutions of Russian society are considered in their historical context, with special attention to the role of official culture and literature, the workings of the state, and mass social consciousness.
RECOMMENDED: RUSN 1000.06, 2nd year Russian (This course is part of the Fall term in Russian Program.)
FORMAT: Seminar
CROSS-LISTING: HIST 3090.03
RUSN 3091.03: Russian Intellectual History.
This course will examine intellectual developments in modern Russia, from Peter the Great to the late 20th century. Among the possible topics we will cover are: Russian thought and the West, the Russian intelligentsia and its relationship with the people and the state, Orientalism, the role of literature, arts, and music in Russian politics and society, the nature of dissent and revolutionary movements, as well as an analysis of ideological thought in Russia and culture. Throughout the course we will approach Russia as a multinational country that developed in constant and close interaction with the outside world.
FORMAT: Lecture/discussion
PREREQUISITE: Some Russian history required. Recommended are HIST 2021.03 or HIST 2022.03
CROSS-LISTING: HIST 3091.03
RUSN 3092.03: Russian Topics.
Topics to be studied and researched will vary from year to year. They may include the sources of Beloberezhnaya, the doctrine of peaceful coexistence, the position of national minorities, the role of literature (official and semiofficial) and the press, the Cult of Personality, Khlebnikov’s “Thieves,” Brezhnev, Gorbatchev, and Yeltsin.
RECOMMENDED: HIST 2020.06 or RUSN 2022.03/2023.03
FORMAT: Seminar
PREREQUISITE: One 2000-level course in History.
CROSS-LISTING: HIST 3092.03
RUSN 3096.03: The History of Ideas in Russia: From Official Nationality to Solzhenitsyn's Neo-Slavophily.
This course examines some of the main currents in Russian intellectual history from the middle of the nineteenth century through the 1990s. Topics include classical Slavophily and early Westernism, Populism and Nationalism, Anarchism, Marxism, Leninism, Socialist Realism, anti-Slavism, Glasnost, neo-Westernism (Salakho), and neo-Slavophily (Solzhenitsyn).
RECOMMENDED: HIST 2020.05 or RUSN 2022.03/2023.03
FORMAT: Lecture/discussion
CROSS-LISTING: HIST 3096.03
RUSN 3099.03: Solzhenitsyn Seminar.
Alexander I. Solzhenitsyn is one of the most controversial and influential Russian writers of the twentieth century. His life spanned the entire Soviet period and even now his creative output continues unabated. Solzhenitsyn’s books are an unique blend of literary imagination, philosophical reflections, memoirs and witness-bearing, historical conscience and chronicle. This seminar will study several of his more important historical works, those may include One Day in the Life of Ivan Denisovich, Cancer Ward, First Circle, Lenin in Zurich, Gulag Archipelago, August 1914 and subsequent volumes of the cycle.
FORMAT: Seminar
CROSS-LISTING: HIST 3099.03
RUSN 3102.03: Black Identity in Pushkin (Russian).
Conducted in Russian. Close analysis of the poetry and prose of the father of Russian literature, Aleksandr Sergeyevich Pushkin, needs to be grounded in the centrality of his Black identity for his life and oeuvre. Pushkin's unfinished work Arap Petra Velikogo serves as the window illuminating his artistic genius and struggle for a mode of expression for his own identity. The silences which shroud Pushkin's blackness are probed to reveal their ideological, historical, legal and human significance, which are then critically assessed. The major narrative and lyric poems, Eugene Onegin, the Little Tragedies, Boris Godunov, the Tales of Belkin, the Queen of Spades, as well as Pushkin's letters and critical works are revisited in this new light. Students will explore such themes as marginalization, liberty, conscience, aesthetic innovation, and the poet as political symbol and creator of a new literary language. Restoring Pushkin's identity to its proper place is a condition sine qua non – for understanding the true meaning of his work for modern literature and its ongoing influence on world culture.
FORMAT: Seminar
PREREQUISITE: RUSN 3001.03
EXCLUSION: RUSN 2001.03
RUSN 3103.03: Black Identity in Pushkin (English).
Conducted in English. FORMAT: Lecture/discussion
PREREQUISITE: RUSN 2001.03
EXCLUSION: RUSN 2001.03
RUSN 3104.03: Gogol and His Tradition.
In-depth analysis of selected masterpieces of Russian nineteenth and twentieth century fiction, including works by Pushkin, Lermontov, Gogol, Tolstoy, Solzhenitsyn, Chekhov, Babel, Nabokov, Kharms, Eppel, Dovlatov, Pelevin, and Sorokin.
CROSS-LISTING: ENGL 3800.03
RUSN 3106.03: Russian Prose and Poetry.
Conducted in Russian. Students read, translate, and critically interpret representative works of the nineteenth century. Original texts are supplied with vocabulary and grammatical notes.
FORMAT: Lecture/discussion
PREREQUISITE: Two years of Russian
EXCLUSION: RUSN 3121.03
RUSN 3109.03: Nabokov.
A close study of selected works by consummate twentieth century prose stylist Vladimir Nabokov -- novelist, poet, critic and translator, author of the notorious Lolita.
CROSS-LISTING: ENGL 3820.03
FORMAT: Lecture/discussion
PREREQUISITE: RUSN 3001.03 and 3003.03 or permission of the instructor
EXCLUSION: RUSN 2100.03
RUSN 3130.03: The History of Ideas in Russia: From Official Nationality to Solzhenitsyn's Neo-Slavophily.
This course examines some of the main currents in Russian intellectual history from the middle of the nineteenth century through the 1990s. Topics include classical Slavophily and early Westernism, Populism and Nationalism, Anarchism, Marxism, Leninism, Socialist Realism, anti-Slavism, Glasnost, neo-Westernism (Salakho), and neo-Slavophily (Solzhenitsyn).

I. Introduction
Social Anthropology and Sociology are related and overlapping disciplines. Although in some universities they are found in separate departments, this Department and many of its courses blur the distinction between them and emphasize the areas of overlap. The Department is committed to a program which stresses the areas of convergence between the two disciplines. Social Anthropology is composed of four subfields, social-cultural, archaeological, biological, and linguistic. The strength of our program is the minor upon Social Anthropology. Admission to these programs is based solely on academic and demonstrated aptitude for, advanced study in either Sociology or Social Anthropology. The BA honours degree is offered through more specialized programs of study in Sociology or in Social Anthropology. Anthropology is composed of four subfields, social-cultural, archaeological, biological, and linguistic. The strength of our program is the minor upon Social Anthropology. Admission to these programs is based solely on academic and demonstrated aptitude for, advanced study in either Sociology or Social Anthropology.

II. Degree Programs
The Department's BA degree program is offered as a 15 credit minor or a 20 credit major in Sociology and Social Anthropology. The BA honours degree is offered through more specialized programs of study in Sociology or in Social Anthropology. Although in some universities they are found in separate departments, this Department and many of its courses blur the distinction between them and emphasize the areas of overlap. The Department is committed to a program which stresses the areas of convergence between the two disciplines. Social Anthropology and Sociology are related and overlapping disciplines. Although in some universities they are found in separate departments, this Department and many of its courses blur the distinction between them and emphasize the areas of overlap. The Department is committed to a program which stresses the areas of convergence between the two disciplines. Social Anthropology is composed of four subfields, social-cultural, archaeological, biological, and linguistic. The strength of our program is the minor upon Social Anthropology. Admission to these programs is based solely on academic and demonstrated aptitude for, advanced study in either Sociology or Social Anthropology.

A. Sociology
From its inception in the nineteenth century, sociology has been concerned with understanding the growth and evolution of modern societies. Classical sociologists attempted to identify universal laws of human behavior which would help them to understand the nature of social change and of social order: the role of the individual vis-à-vis the larger society, and the production and reproduction of social inequalities. While contemporary sociologists have abandoned the search for universal laws, the discipline continues to study the social context of human action, and has contributed substantially to knowledge and understanding of our own world.

B. Social Anthropology
Anthropology is composed of four subfields, social-cultural, archaeological, biological, and linguistic. The strength of our program is the minor upon Social Anthropology. Admission to these programs is based solely on academic and demonstrated aptitude for, advanced study in either Sociology or Social Anthropology.

A. Concentrated Honours BA Program
The Department’s honours programs are designed for students with an interest in, and demonstrated aptitude for, advanced study in either Sociology or Social Anthropology. Admission to these programs is based solely on academic performance. More specifically, the Department requires a grade average of B+ (3.30) or higher on courses above 1000 in SOSA and the minor (or second major) subject. In addition, a minimum cumulative GPA of 2.70 is required. Potential applicants should consult with one of the Department’s Undergraduate Advisors, preferably during their second year of study, and should plan to take the 1000 level courses required for honours during their third year. The Advisor will assist the student to design a program of study with a minor in Social Anthropology or Sociology meeting the general Faculty requirements and the specific requirements for each program as set out below. It is important that students have a strong foundation before undertaking the honours thesis; therefore, SOSA 2001 or SOSA 2002, and two of the required 3000 level courses are pre-requisites to the departmental Honours Seminars (SOSA 4000 Y/X or SOSA 4500 Y/X). Students who, after their third year, have not taken the pre-requisite courses may still do honours, but should plan to do so part-time over two years. The honours thesis paper is produced for the course SOSA 4500 Y/X (Sociology) or SOSA 4500 Y/X (Social Anthropology). This fulfills the College of Arts and Science Honours Qualifying Examination requirement. Students with the honours concentration in Sociology may not declare Social Anthropology as their secondary subject; students with the honours concentration Social Anthropology may not declare Sociology as their secondary subject.

Departmental Requirements

Courses required in Concentrated Honours in Social Anthropology:

1000 level
- One of: SOSA 1000.06, 1050.06, 1100.06, 1200.06, both 1002.03 and 1003.03
- SOSA 1001.06 or 1002.06 (King’s Foundation Year Program)

2000 level
- SOSA 2001.06 or 2002.06
- At least one additional 2000 level credit

3000 level
- SOSA 3400.03
- SOSA 3402.03
- SOSA 3403.03

4000 level
- SOSA 4000.06
- SOSA 4003.03
- One of: SOSA 4001.03, SOSA 4002.03, SOSA 4003.03, SOSA 4004.03, SOSA 4005.03, SOSA 4006.03

In total a minimum of nine and a maximum of 11 SOSA credits beyond the 1000 level are required.

Courses required in Concentrated Honours in Sociology:

1000 level
- One of: SOSA 1000.06, 1050.06, 1100.06, 1200.06, both 1002.03 and 1003.03
- SOSA 1001.06 or 1002.06 (King’s Foundation Year Program)

2000 level
- SOSA 2001.06 or 2002.06
- At least one additional 2000 level credit

3000 level
- SOSA 3400.03
- At least one additional 2000 level credit

4000 level
- SOSA 4003.03
- SOSA 4004.03
- SOSA 4005.03
- SOSA 4006.03

In total a minimum of nine and a maximum of 11 SOSA credits beyond the 1000 level are required.
B. Combined Honours in Sociology or Social Anthropology and another field

To be admitted to any of the Combined Honours programs, students must meet the same GPA requirements as for Concentrated Honours. Specifically, the Department requires a grade average of B+ (3.30) or higher in courses above 1000 in SOSA and the other honours subject. In addition, a minimum cumulative GPA of 2.70 is required.

The requirements noted below normally apply. In some cases a variation may be allowable when approved by honours advisors in both departments, for example when a similar course is required by both departments.

Courses required in Combined Honours with Sociology as the primary subject:

1000 level
- One of: SOSA 1000.06, 1050.06, 1100.06, 1200.06, both 1002.03 and 1003.03 or King's Foundation Year Program

2000 level
- SOSA 2002.06 (recommended) or 2001.06

3000 level
- SOSA 3401.03
- SOSA 3402.03
- SOSA 3403.03
- SOSA 3405.03

4000 level
- SOSA 4001.03 (recommended) or 4003.03
- SOSA 4005.06
- In addition, one of SOSA 4001.03, SOSA 4002.03, SOSA 4003.03, SOSA 4004.01, SOSA 4005.03, SOSA 4006.03

In total, a minimum of 11 and maximum of 14 credits beyond the 1000 level in the two honours subjects with a grade of "C" or better. Of this, at least five credits must be in the other honours subject.

Courses required in Combined Honours with Social Anthropology as the primary subject:

1000 level
- One of: SOSA 1000.06, 1050.06, 1100.06, 1200.06, both 1002.03 and 1003.03 or King's Foundation Year Program

2000 level
- SOSA 2001.06 or 2002.06

3000 level
- For Sociology: one of SOSA 3401.03, 3402.03, 3403.03 or 3405.03
- For Social Anthropology: one of SOSA 3400.03, 3402.03, 3403.03

In total, a minimum of 11 and maximum of 14 credits beyond the 1000 level in the two honours subjects with a grade of "C" or better. Of this, at least five credits must be in SOSA courses.

Courses required in Combined Honours with Sociology or Social Anthropology as the secondary subject:

1000 level
- One of: SOSA 1000.06, 1050.06, 1100.06, 1200.06, both 1002.03 and 1003.03 or King's Foundation Year Program

2000 level
- SOSA 2001.06 or 2002.06

3000 level
- For Sociology: one of SOSA 3401.03, 3402.03, 3403.03 or 3405.03
- For Social Anthropology: one of SOSA 3400.03, 3402.03, 3403.03

In total, a minimum of 11 and maximum of 14 credits beyond the 1000 level in the two honours subjects with a grade of "C" or better. Of this, at least five credits must be in SOSA courses.

C. Honours Conversion in Sociology or Social Anthropology

This program permits Dalhousie graduates to undertake an additional five credits upgrading their qualifications from the 15 credit BA to Honours. Students must meet the usual conditions for admission to honours, and complete the full set of Honours requirements in either Sociology or Social Anthropology. Interested students should consult an Undergraduate Advisor. Students with a 20 credit major may also upgrade to honours.

D. BA (20 credit) Major in Sociology and Social Anthropology

Departmental requirements

1000 level
- One of: SOSA 1000.06, 1050.06, 1100.06, 1200.06, both 1002.03 and 1003.03 or King's Foundation Year Program

2000 level
- Either SOSA 2001.06 or 2002.06
- At least one additional 2000 level credit

3000/4000 level
- Total of three full SOSA credits, including at least one half credit at the 4000 level

In total a minimum of six and a maximum of nine SOSA credits beyond the 1000 level are required.

E. BA (20 credit) Double Major in Sociology and Social Anthropology

Students must obtain at least 10 and no more than 14 credits beyond the 1000 level in two allied subjects, with no fewer than five and no more than eight in either.

Departmental requirements

1000 level
- One of: SOSA 1000.06, 1050.06, 1100.06, 1200.06, both 1002.03 and 1003.03 or King's Foundation Year Program

2000 level
- Either SOSA 2001.06 or 2002.06
- At least one additional 2000 level credit

3000/4000 level
- Two full SOSA credits at the 3000 level or above

F. BA (20 credit) Major in Sociology and Social Anthropology Conversion

This program permits Dalhousie graduates to undertake an additional year of study upgrading their qualifications from the 15 credit BA to the 20 credit BA. Students must meet the full set of Major requirements.

G. BA (15 credit) Minor in Sociology and Social Anthropology

See Minors in the College of Arts and Science section of this calendar (page 128).

H. Minor in Sociology and Social Anthropology

See Minors in the College of Arts and Science section of this calendar (page 128).

I. Minor in Sociology and Social Anthropology of Critical Health Studies

See Minors in the College of Arts and Science section of this calendar (page 128).
NOTE: Credit can only be given for this class if X and Y are completed in including development, politics, economics, health, law, art, and human rights. Anthropology can be applied to a wide range of academic and practical settings artists, boardroom rituals or street gangs. Theories and methods from Contemporary studies are just as likely to focus on development, migration, institutions, stratification, and so forth. Students also explore the various dimensions of social life, either in Canada or abroad: from politics to religion, from economy to sexuality. FORMA: Lecture

EXCLUSION: SOSA 1000X/Y.06, SOSA 1002.03/1003.03, 1050X/Y.06. FORMA: Lecture

SOSA 1003.03: People and Society. This course builds on the material developed in SOSA 1002 though the latter is not a requirement for students. By making use of the basic concepts in anthropology and sociology, students examine specific empirical cases relevant for the scientific study and understanding of human activities in the world today. Topics may include: control and deviance, gender and health, racial and ethnic inequality, self and identity, work and organization, globalization, and so on. FORMA: Lecture

EXCLUSION: SOSA 1000X/Y.06, SOSA 1002.03/1003.03, 1050X/Y.06. FORMA: Lecture

SOSA 1050X/Y.06: Explorations in Culture and Society. What are culture and society? How do we study and understand them? In order to answer these questions, the class introduces students to the key concepts in sociology and anthropology. Taking examples from Canada and around the globe, we will look at such topics as beliefs, values, power, social structure, economy and more. This class fulfills the first-year writing requirement. It also satisfies the prerequisite for enrolment in upper level classes in sociology and social anthropology. NOTE: Credit can only be given for this class if X and Y are completed in consecutive terms and partial credit cannot be given for a single term. FORMA: Writing Requirement, lecture

EXCLUSION: SOSA 1000X/Y.06, 1002.03/1003.03, 1050X/Y.06, or 1200X/Y.06.

SOSA 1100X/Y.06: Introduction to Anthropology. Social anthropologists study cultural diversity in western and non-western societies. Often living among the people they study, anthropologists attempt to understand the structures that shape and constrain peoples’ lives, and the ways in which people make sense of their changing circumstances. Classic studies focused on rural people in the developing world (hunter-gatherers, peasants, pastoralists). Contemporary studies are just as likely to focus on development, migration, artists, boardroom rituals or street gangs. Theories and methods from anthropology can be applied to a wide range of academic and practical settings including development, politics, economics, health, law, art, and human rights. NOTE: Credit can only be given for this class if X and Y are completed in consecutive terms and partial credit cannot be given for a single term. FORMA: Lecture

EXCLUSION: SOSA 1000X/Y.06, 1002.03/1003.03, 1050X/Y.06 and 1200X/Y.06.

SOSA 1200X/Y.06: Introduction to Sociology. This class introduces students to basic sociological concepts, the logic of social inquiry, and major theoretical and methodological issues in the field. Substantive class contents may include the study of culture, socialization, deviance, social organizations, institutions, social roles, and demography. Emphasis is on the study of modern industrial societies with special attention given to Canadian society. NOTE: Students taking this class must register in both X and Y in consecutive terms; credit will be given only if both are completed consecutively. FORMA: Lecture

EXCLUSION: SOSA 1000X/Y.06, 1002.03/1003.03, 1050X/Y.06 and 1100X/Y.06.

SOSA 2001X/Y.06: Ethnography in a Global Context. Ethnography describes how people conduct their lives in a particular time and place. This class examines the challenge, complexity, strengths, and limitations of ethnographic knowledge and writing in Social Anthropology. Students will learn about a number of different ethnographic settings which may vary from year to year. A selection of ethnographic, oral, anthropological writing, and critical commentaries will be used to reveal how social anthropologists generate ethnographic knowledge about past and present societies, and why research priorities shift. Approval with International Development Studies. NOTE: Students taking this class must register in both X and Y in consecutive terms; credit will be given only if both are completed consecutively. FORMA: Lecture

PREREQUISITE: One of SOSA 1000X/Y.06, 1002.03 and 1003.03, 1050X/Y.06, 1100X/Y.06 or 1200X/Y.06.

SOSA 2002X/Y.06: The Sociological Perspective: Thinking and Doing Sociology. Sociology is interested in understanding the social world. They do not rely on preconceived ideas alone to enrich this understanding, but are the need to conduct studies, carry out investigations, make observations, analyze findings, formulate ideas, and construct theories and interpretations about what they find. This class looks at the ways sociologists go about their work. What are some of the dominant ways of thinking current in sociology today? What are the relationships between these ways of thinking and what are seen as questions to investigate? How do sociologists do their research? What are social surveys, interviews, theories, sociological ideas? What is distinctive about a sociological way of looking at a problem? NOTE: Students taking this class must register in both X and Y in consecutive terms; credit will be given only if both are completed consecutively. FORMA: Lecture

PREREQUISITE: One of SOSA 1000X/Y.06, 1002.03 and 1003.03, 1050X/Y.06, 1100X/Y.06 or 1200X/Y.06.

SOSA 2004.03: Current Controversies. This course will examine current social problems, puzzles and controversies. It will introduce perspectives to explore and understand social facts, critical events, and social debates. Readings and assignments will look at issues like the role of social networking media, environmental disasters, and contemporary commentaries will be used to reveal how social anthropologists generate ethnographic knowledge about past and present societies, and why research priorities shift. Approval with International Development Studies. NOTE: Students taking this class must register in both X and Y in consecutive terms; credit will be given only if both are completed consecutively. FORMA: Lecture

PREREQUISITE: One of SOSA 1000X/Y.06, 1002.03 and 1003.03, 1050X/Y.06, 1100X/Y.06 or 1200X/Y.06.

SOSA 2041.03: Describing Social Inequality. This course examines inequality in practice. The focus will be on applying understandings of inequality to empirically describe cases of injustice in order to look at measures, practices, and policies regarding inequality. The evidence used to describe inequality will be critically examined through theoretical considerations. Possible topics to be covered in readings and assignments include economic, social, cultural, political and health inequalities among other contemporary issues of social justice. FORMA: Lecture

PREREQUISITE: One of SOSA 1000X/Y.06, 1002.03 and 1003.03, 1050X/Y.06, 1100X/Y.06 or 1200X/Y.06.

EXCLUSION: SOSA 2040X/Y.06.

Sociology and Social Anthropology 309
FORMA T: Lecture

SOSA 2045.03: Indian Society: Change and Continuity.

The objective of this half-credit class is to introduce students to the society and culture of India from an interdisciplinary perspective. India presents a society of enormous complexity and an enduring living civilization of great antiquity. The focus of the class will be on selected, significant aspects of Indian society with particular emphasis on issues of current relevance. Topics discussed include: a historical background, social structure, political and social constraints to economic development, health issues, major religions and philosophy, development and foreign policy since independence, science and technology, disaster relief and development, and literature. This course counts as a half-credit in Sociology and Social Anthropology towards the IDS established discipline requirements.

FORMAT: Lecture
CROSS-LISTING: INTD 2045.03
EXCLUSION: INTD 3045.03

SOSA 2051.03: Chinese Culture.

This course explores the historical and literary backgrounds to modern Chinese culture by looking into different cultural characteristics of Chinese values, customs, myths, fables, society and social roles, food, fashion, dance, language and religion. In order to understand what constitutes Chineseeness and its transformation, the course also discusses the international contexts of Chinese diasporas (such as Chinese communities in North America, Taiwan, and Southeast Asia) and Western conceptualizations of Chinese culture in relation to other aspects of social life, i.e. economy and politics. No previous background in Chinese language or culture is required.

FORMAT: Lecture
PREREQUISITE: None

SOSA 2090X/Y.06: Youth and Society.

Events of enormous future consequences occur in the period between childhood and early adulthood. This course critically examines the arguments, with special focus on assessing the empirical evidence that might be used to support or refute them. That is, the context of youth will be used to illustrate the connections between argument and evidence, theory and data. Although the emphasis is on youth in Canadian society, a comparative perspective will be employed.

NOTE: Credit can only be given for the class if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.

FORMAT: Lecture

SOSA 2101.03: Environment and Culture.

Concerns about the environment are an increasingly global phenomenon as more people contribute to the problem and recognize the relationship to a changing ecology. Environmental issues like pollution, global warming, or resource depletion have global as well as personal implications. The efforts of cities to deal with environmental pollution, for example, may lead to conflicts with rural regions, and changes in consumption patterns in one country may have consequences for the environment of other countries. This course will explore key relationships between human culture and the physical environment. Topics to be examined may include: environmental knowledge, food and agriculture, environmental ethics, health, resource management, and conservation.

FORMAT: Lecture
PREREQUISITE: One of SOSA 1000X/Y.06, (1002.03 and 1003.03), 1003X/ Y.06, 1100X/Y.06 or 1200X/Y.06
EXCLUSION: SOSA 2100.06

SOSA 2102.03: Political Ecology.

Environmental issues, like climate change and human societies, are always political issues. Whether we are talking about who gets to use a resource, or who has to clean it up afterwards, there are always have consequences for other aspects of people’s lives, and therefore the possibility for disagreement. The course will examine those phenomena where traditionally political questions about the distribution of resources or power within a society overlap with environmental questions, and where questions of environmental protection or regulation interact with struggles to control property. Topics covered may include competition over resources, the politics of environmental regulation, and the social and historical conditions that give rise to environmental disagreements, or the ways in which different plans for mitigating climate change affect global power dynamics.

FORMAT: Lecture
PREREQUISITE: One of SOSA 1000X/Y.06, (1002.03 and 1003.03), 1003X/ Y.06, 1100X/Y.06 or 1200X/Y.06
EXCLUSION: SOSA 2100.06

SOSA 2111.03: Is there an Atlantic Canada?

This course will examine the historical and contemporary social issues related to the Maritimes and Atlantic Province. The course will critically assess what is meant by “Atlantic Canada” and look at its social, demographic, economic, and cultural trends in relation to the rest of the country. Attention will be given to the role of Acadia, Mi’kmaq, and African Nova Scotians as well as dominant power holders in the construction of Atlantic Canada.

FORMAT: Lecture
PREREQUISITE: One of SOSA 1000X/Y.06, (1002.03 and 1003.03), 1003X/ Y.06, 1100X/Y.06 or 1200X/Y.06
CROSS-LISTING: CANA 2111.03

SOSA 2115.03: African Canadian Society, Culture, and Resistance.

There has been a presence of African peoples in Canada for over 400 years; however, the rich histories of African-Canadian people have been often ignored. This course examines African-Canadian society and culture from the historical to contemporary period. Topics will include historical analyses, slavery, patterns of immigration and settlement, family, continental African and diasporic connections, identity, arts, culture, education, employment, migration and the law, the media, diasporic debates, Black struggles and resistance, and African Canadian achievements. This course will be taught from a critical race and gender perspective, and will include readings about the diverse Black communities across Canada. There has been a presence of African peoples in Canada for over 400 years; however, the rich histories of African-Canadian people have been often ignored. This course examines African-Canadian society and culture from the historical to contemporary period. Topics will include historical analyses, slavery, patterns of immigration and settlement, family, continental African and diasporic connections, identity, arts, culture, education, employment, migration and the law, the media, diasporic debates, Black struggles and resistance, and African Canadian achievements. PREREQUISITE: One of SOSA 1000X/Y.06, (1002.03 and 1003.03), 1003X/ Y.06, 1100X/Y.06 or 1200X/Y.06
CROSS-LISTING: CANA 2115.03

SOSA 2140.03: Going Global; Geography, Economy, and Work in the 21st Century.

This course will explore the economic, industrial and organizational transformations which have affected world economies since the 1980s. The spatial reorganization of the international division of labour has led to “world cities”, and rapid concentration and dislocation, as well as exploitative economic enclosures as enclaves in global commodity chains. The emergence of an increasingly integrated international economic order are associated, in the advanced economies, with a shift in manufacturing, for which automobile production has been the standard example, to a service-dominated economy. This industrial transformation has been accompanied by shifts in organizational structures, whether the emphasis has been on increased operational flexibility, or downsizing, one is continuously faced with the impact of new information technologies on the workplace. Does the electronic storage and transmission of information cease to be acceptable, or do they represent new methods for controlling and exploiting an increasingly vulnerable workforce, particularly lower-class women and/or immigrants? This
course will employ the relevant portions of a standard Canadian sociological text to evaluate main tendencies, while selected anthropological case studies from different places will help understand the specific dynamics of a new, world economy.

FORMA: Lecture

PREREQUISITE: One of SOSA 1000X/Y.06, (1002.03 and 1003.03), 1050X/Y.06, 1100X/Y.06 or 1200X/Y.06

SOSA 2141.03: Good Jobs, Bad Jobs.

The central task facing the new form of paid manual work are at the core of the advanced economies. While traditional jobs in the primary sector (fishing, farming, forestry), and in manufacturing are still components of contemporary societies, the attractive new work in the information economy, as well as the loss of desirable employment, available to the low end service jobs, are the new prospects we face. In addition, the intensified use of information technology has stripped away employment prospects, and is associated with increasing levels of unemployment, or with the double-edged transfer of paid work to the home. Higher rates of unemployment challenge the notion of increased leisure time in a materially abundant system, while changing gender relations reshape the meaning of unpaid work in the household.

FORMA: Lecture

PREREQUISITE: One of SOSA 1000X/Y.06, (1002.03 and 1003.03), 1050X/Y.06, 1100X/Y.06 or 1200X/Y.06

SOSA 2181.03: Explaining Crime and Criminal Behavior.

What is crime, why do rates of crime vary, why do people commit crimes and how do social, cultural, psychological and biological theories and research findings explain crime as social and behavior phenomenon? Criminology is an interdisciplinary attempt to answer these questions through the social scientific study and analysis of crime and criminal behavior. This class introduces students to a broad variety of critical thinking, disciplinary theories, research studies and social policies, in order to help you understand and explain crime and show how these understandings inform the policies and politics designed to manage and prevent crime. This class provides a general but primarily sociological understanding of crime.

FORMA: Lecture

PREREQUISITE: One of SOSA 1000X/Y.06, (1002.03 and 1003.03), 1050X/Y.06, 1100X/Y.06 or 1200X/Y.06

SOSA 2182.03: Exploring Crime and Criminal Behavior.

Though this is a stand-alone course it builds on the exploration of theories of crime addressed in 2181.03 and applies them to various “types” of crime and criminal behavior. Crime and crime behavior. This course pulls together various sources of knowledge to provide description and analysis of various patterns and types of crime and examines how this knowledge is applied in specific policies and practices aimed at managing and preventing crimes: typically by the criminal justice system. The course content covers Violent crimes such as murder, sexual assault, domestic violence, robbery and gang violence. Property crimes such as theft and motor vehicle theft, Organized crime, White Collar and Corporate crime and new forms of Global crime such as narco trafficking, human and organ smuggling and money laundering.

NOTE: Approved with Law and Society Minor.

FORMA: Lecture

PREREQUISITE: One of SOSA 1000X/Y.06, (1002.03 and 1003.03), 1050X/Y.06, 1100X/Y.06 or 1200X/Y.06

SOSA 2190X/Y.06: Comparative Perspectives on Gender.

Applying theoretical perspectives drawn from anthropology and sociology, this class considers the underlying conditions for and consequences of gender inequalities in different historical and cultural contexts. The course begins with an overview of the study of gender relations in anthropology and sociology. Themes around which the class will be organized include the relationship between gender and the following: culture and difference, sexuality and reproduction; Labor; gender politics; power relations and political discourse; and gender in the global political economy. Approved with International Development Studies.

NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.

FORMA: Lecture

PREREQUISITE: One of SOSA 1000X/Y.06, (1002.03 and 1003.03), 1050X/Y.06, 1100X/Y.06 or 1200X/Y.06

CROSS-LISTING: GWST 2190X/Y.06

SOSA 2221X/Y.06: Society and the Self.

Groups influence individuals and individuals react to those influences. This is the field of Social Psychology. The processes involved in such person-group relationships are examined in a number of different settings, such as the family, mental hospitals, and universities. The class will focus on a critical review of research and theorizing.

NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.

FORMA: Lecture

PREREQUISITE: One of SOSA 1000X/Y.06, (1002.03 and 1003.03), 1050X/Y.06, 1100X/Y.06 or 1200X/Y.06

EXCLUSION: SOSA 2237.03

SOSA 2260.03: Society, Politics, and Culture.

You may not think of yourself as political but power is a process of everyday life. Although it is often assumed to be located in economic and political institutions, it is also important to consider that “the personal is political” and this too contributes to the negotiation of power. This course will explore how social processes affect and are shaped by material, institutional, and interactive processes. Contemporary examples of the interactions of these social forces will show how society and social anthropology can be used to identify otherwise hidden relationships.

FORMA: Lecture

PREREQUISITE: One of SOSA 1000X/Y.06, (1002.03 and 1003.03), 1050X/Y.06, 1100X/Y.06 or 1200X/Y.06

SOSA 2270.03: Introduction to Popular Culture.

In this course, we will examine and discuss the various approaches and theories of popular culture in anthropology and sociology. Popular culture has been defined in multiple ways and attached to multiple objects and activities in society. We will consider how human beings take part in popular culture on one hand and how popular culture affects the rest of their lives on the other hand. Related themes include consumption, media, technology, communication, identity, ideology, stratification.

FORMA: Lecture

PREREQUISITE: One of SOSA 1000X/Y.06, (1002.03 and 1003.03), 1050X/Y.06, 1100X/Y.06 or 1200X/Y.06

SOSA 2271.03: Popular Culture in a Global Context.

The course explores many different theories and manifestations of popular culture in a wide range of contexts. Popular culture as it intersects with films, television, the Internet, magazines, comics, cartoons, fashion, sports, music, etc., provides a rich tapestry in which social forces such as economic change, migration, globalization, and are shaped by material, institutional, and normative pressures. Contemporary examples of the intersection of these social forces will show how society and social anthropology can be used to identify otherwise hidden relationships.

FORMA: Lecture

PREREQUISITE: One of SOSA 1000X/Y.06, (1002.03 and 1003.03), 1050X/Y.06, 1100X/Y.06 or 1200X/Y.06

SOSA 2291X/Y.06: Goblins, Ghosts, Gods, Gurus.

Societies and groups within societies differ in terms of what their members believe, how they view the world and their place within it, the sources of knowledge, attitudes toward the supernatural and the sacred, the status and authority of different sources of knowledge and what it all means. What makes religion different from science? What makes them similar? What is authority of different sources of knowledge and what it all means. What makes religion different from science? What makes them similar? What is authority of different sources of knowledge and what it all means. What makes religion different from science? What makes them similar? What is authority of different sources of knowledge and what it all means. What makes religion different from science? What makes them similar? What is authority of different sources of knowledge and what it all means. What makes religion different from science? What makes them similar? What is authority of different sources of knowledge and what it all means. What makes religion different from science? What makes them similar? What is authority of different sources of knowledge and what it all means.

NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.

FORMA: Lecture

PREREQUISITE: One of SOSA 1000X/Y.06, (1002.03 and 1003.03), 1050X/Y.06, 1100X/Y.06 or 1200X/Y.06

CROSS-LISTING: RELS 2291.06

SOSA 2300X/Y.06: Introduction to Social Problems.

The study of social problems uses sociological theory and research to examine the social dynamics and consequences of a variety of contemporary issues. Though the class content will vary year by year, students can expect to deal with social problems such as poverty, drug abuse, gender and race relations, work and alienation, and environmental issues.

NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.
SOSA 2400X/Y.06: Health and Illness Across Cultures.

This course provides an introduction to the anthropology and sociology of health. It will examine illness and the experience of receiving medical care. We will cover such topics as: the biomedial model; medical school; the experience of chronic illness; medical science and technology; models of the doctor-patient relationship; and medical files. 

FORMAT: Lecture
PREREQUISITE: One of SOSA 1000X/Y.06, (1002.03 and 1003.03), 1050X/Y.06, 1100X/Y.06 or 1200X/Y.06

SOSA 2402.03: Food Through Time and Space.

We will examine the concept of "food" through time and space so as to understand nutritional science, health, belifical systems, oral/lectural histories, ancient productive systems, foods and flora domestication techniques and their ongoing relevance to food entitlements in the contemporary world. Topics will be on non-European societies, communal tenure systems and a glance at the productive systems, flora and fauna domestication techniques and their ongoing relevance to food entitlements in the contemporary world. 

FORMAT: Lecture
PREREQUISITE: One of SOSA 1000X/Y.06, (1002.03 and 1003.03), 1050X/Y.06, 1100X/Y.06 or 1200X/Y.06
EXCLUSION: MISC 2403.05

SOSA 2403.03: Food Activism.

In this course we will explore food movements and alternative food practices, especially in relation to the modern food system. We will discuss the key characteristics and critiques of the food system and focus on case studies of cultural practices and food activism from around the world which challenges or provides alternatives to the current food system. 

FORMAT: Lecture
PREREQUISITE: One of SOSA 1000X/Y.06, (1002.03 and 1003.03), 1050X/Y.06, 1100X/Y.06 or 1200X/Y.06
EXCLUSION: MISC 2403.05

SOSA 2502.03: Biomedicine and the Illness Experience.

This course provides an introduction to the sociology of medicine, patienthood, and practitioner-patient relationships. The course is organized into two sections. The first section analyzes the theory and practice of medicine, our society's dominant system for addressing health problems. In the second section, we examine illness and the experience of receiving medical care. We will cover such topics as: the biomedical model; medical school; the experience of chronic illness; medical science and technology; models of the doctor-patient relationship; and medical files. 

FORMAT: Lecture
EXCLUSION: MISC 2503X/Y.06, SOSA 2503.03

SOSA 2503.03: Health and Society.

This course examines the social foundations of health and illness, community responses to health problems, and the structure of health care in Canada and internationally. Topics to be covered include: mortality and health, social inequality and the political economy of health and health care; the multinational pharmaceutical industry; environmental health; and the development of and 'crisis' in the Canadian Medicare system. 

EXCLUSION: SOSA 2503.01

SOSA 2933.03: Health and Culture.

This course explores health as it changes through culture and time with a focus on ancient and pre-capitalist societies in South Asia, Latin America, Africa, Middle East and Asia. The course will provide an overview of the course's specific topics vary from year to year but we will invariably explore global sensibilities of feeling healthy and "well" through an exploration of case studies highlighting ancient science and medicine, health taxonomies, oral history, ethnography, literature, poetry, music, oral genres, pregnancy; birth and caring of children; sense of disease and death. The weaknesses and strengths of Canada's increasingly privatized selective healthcare system become clear when compared it with the achievements made in societies that provided healthcare as a basic right. 

FORMAT: Lecture
PREREQUISITE: One of SOSA 1000X/Y.06, (1002.03 and 1003.03), 1050X/Y.06, 1100X/Y.06 or 1200X/Y.06
EXCLUSION: SOSA 2933.01

SOSA 2966.03: Health and Illness through Culture and Space.

Every culture has its own concepts of health and nutrition, its own treatments and practices. This course explores health anthologies through contemporary culture and space. Topics may vary from year to year but we invariably will learn about contemporary cultures around the world in relation to sensibilities of what it means to feel healthy and "well" in the context of rapid economic and social change. We will explore religions, culture and efficacy; cultures of cuisines, smells; taste and health and wellness (proxemics; kinetics; how wellness; health and illness are embodied through time, space and culture); narratives of health (poets; music; oral genres); pregnancy; birth and caring of children; sense and death; the content of public health systems and the extent to which they incorporate these practices and beliefs. The weaknesses and strengths of our own system become clear when medical anthropologists compare it with the science and health systems of other societies. 

FORMAT: Lecture
PREREQUISITE: One of SOSA 1000X/Y.06, (1002.03 and 1003.03), 1050X/Y.06, 1100X/Y.06 or 1200X/Y.06
EXCLUSION: SOSA 2966.03

SOSA 3002.03: Native Peoples of Canada.

This class uses an ecological perspective to describe the cultures and peoples occupying Canada at the time Europeans came to this continent. At time permits, some other cultures and the culture of contemporary Native peoples will be discussed. Films will be used to supplement lectures and readings. Approved with International Development Studies. 

FORMAT: Lecture
PREREQUISITE: One of SOSA 1000X/Y.06, (1002.03 and 1003.03), 1050X/Y.06, 1100X/Y.06 or 1200X/Y.06
EXCLUSION: SOSA 2403X/Y.06

SOSA 3065.03: Knowledge, Work and Culture in the Contemporary World.

Since the publication of Daniel Bell's book, The Coming of Postindustrial Society, studies of the economic structure of the advanced societies have addressed the question of the extent to which we are living through a transition to a new, knowledge-driven economy which may be qualitatively distinguished from the system of industrial capitalism which has characterized North America and western Europe for most of this century. Whether one uses terms like "postindustrialism", "postmodernism" or "postmodernism", debates have centered on the question of fundamental alterations in the economic, cultural and political organization of technologically advanced societies. Are we witnessing the creation of an "information economy", are we observing the emergence of a new "knowledge class", which rules by virtue of its educational skills and credentials, is there a newunderclass being excluded from paid employment of any form, and is government being privatized to facilitate new forms of global economic integration? Are new types of social movements arising in response to basic changes in our society? This class will address the above questions, with particular emphasis being devoted to discuss issues in contemporary political economy. 

FORMAT: Lecture
SOSA 3006.03: Comparative Perspectives on Gender and Work.

This course is comparative in perspective to explore a range of topics relating to the gendering of work–wage work, household-based labour, the informal sector, masculinity and femininity at the workplace, occupational segregation, employment policies directed at changing the status quo (such as affirmative action, pay equity), and mini-work. The context will be the changing global political economy and its consequences for the strategies of different groups (such as unionized, but also trade union, female groups and employer groups). Approved with International Development Studies.

FORMAT: Lecture

PREREQUISITE: One of SOSA 1000X/Y.06, (1002.03 and 1003.03), 1005X-Y.06, 1100X/Y.06 or 1200X/Y.06

SOSA 3008.03: Canadian Society and Politics.

This class about the nature of Canadian society has its focus on the study of structures and events which shape social and political organizations in Canada. There is not only one way to understand Canadian society—generations of historians, political scientists and economists have provided valuable insights as to why Canadians have believed or acted in one way or another. Sociology and Social Anthropology have helped to understand Canada in terms of contexts and conditions of life which have shaped the evolution of society as we know it. This class explores issues, events, discourses and groups which have produced the recurrent themes that underlie social life in Canada.

FORMAT: Lecture

PREREQUISITE: One of SOSA 1000X/Y.06, (1002.03 and 1003.03), 1005X-Y.06, 1100X/Y.06 or 1200X/Y.06

RECOMMENDED: SOSA 2101 or another course on Canadian society and/ or politics.

CROSS-LISTING: CANA 1008.03

SOSA 3009.03: Public Opinion in Canada.

This class will introduce students to the study of public opinion in Canada and impact on informed decision making. In particular, the focus will be upon open ideas and issues which have been held by groups and been influenced by the media. The lectures will explore the basis of our knowledge about the formation and change of public opinion relative to other forms of collective behaviour. We will present and analyze data relating to the role of public opinion in explaining and predicting political events.

FORMAT: Lecture

PREREQUISITE: One of SOSA 1000X/Y.06, (1002.03 and 1003.03), 1005X-Y.06, 1100X/Y.06 or 1200X/Y.06

CROSS-LISTING: CANA 1009.03

SOSA 3013.03: Religion in Contemporary Society.

Religion is alive and well in society today; some religious organizations are in decline but others appear to be flourishing. How can these tendencies be accounted for? Do we live in a secular age or is that just a flip expression? What is the connection between societies and religions in terms of contexts and conditions of life which have shaped the evolution of society as we know it? This class explores issues, events, discourses and groups which have produced the recurrent themes that underlie social life in Canada.

FORMAT: Lecture

PREREQUISITE: One of SOSA 1000X/Y.06, (1002.03 and 1003.03), 1005X-Y.06, 1100X/Y.06 or 1200X/Y.06

CROSS-LISTING: CANA 1009.03

SOSA 3014.03: Rethinking Culture and Class.

Critical cultural studies has become a vigorous focus of interdisciplinary scholarship drawing on the fields of history, anthropology, sociology, geography, and literary criticism. Researchers in all of these areas are reconsidering the significance of cultural aspects of social life and how the collective representations of cultural forms is related to changes in capitalism and modernity. For example, what is the significance of popular music in different class, gender, and ethnic contexts? How do commitments to kin and community relate to expressions of culture and class consciousness? Are boundaries between work and leisure mutable in terms of class, gender and ethnic processes? Approved with International Development Studies.

FORMAT: Lecture

PREREQUISITE: One of SOSA 1000X/Y.06, (1002.03 and 1003.03), 1005X-Y.06, 1100X/Y.06 or 1200X/Y.06

SOSA 3015.03: Popular Memory.

This class considers history-writing as a social and cultural process operating at personal, group and national levels. It examines theoretical, methodological and political questions raised in work on popular memory. Readings and films address the problems of: official history, public history (museums, national monuments), memory from below, and memory from above. We will learn from across the globe and in Canada.

FORMAT: Lecture

PREREQUISITE: One of SOSA 1000X/Y.06, (1002.03 and 1003.03), 1005X-Y.06, 1100X/Y.06 or 1200X/Y.06

SOSA 3031.03: Social Problems and Social Policy.

This class focuses on the nature of social problems and social policy in advanced industrial societies. It utilizes a social movement perspective, exploring the processes whereby action on behalf of undesirable but remedial social conditions leads to changes in social policy. Among the areas treated in depth are crime prevention, the quality of work life, race relations, deviance, and poverty and inequality.

FORMAT: Lecture

PREREQUISITE: One of SOSA 1000X/Y.06, (1002.03 and 1003.03), 1005X-Y.06, 1100X/Y.06 or 1200X/Y.06

SOSA 3060.03: Social Change and Development.

This class considers theories of social change and development; approaches to the analysis of rural and urban livelihoods at the micro level, and the examination of community, class, patronage and gender relations in both their economic and cultural aspects. The constructive uses of social analysis in the support and design of development initiatives are also discussed.

FORMAT: Lecture

PREREQUISITE: One of SOSA 1000X/Y.06, (1002.03 and 1003.03), 1005X-Y.06, 1100X/Y.06 or 1200X/Y.06; or INTD 2001.03 or INTD 2002.03

SOSA 3071.03: Human Nature and Anthropology/ Sociology.

Do social anthropology and sociology suffer from "biophobia"? Can evolutionists explain why we feel sexual jealousy or why we tend to follow a dominant leader in times of stress? Can the theories that explain why we have fingerprints and flat nails account for why we are cultural animals? This class reviews theory and data on the evolution of human society and culture in order to construct a model of human nature and to argue that ethnographers vastly exaggerate the extent to which human societies differ from one another. Its perspective and content include much of what some have categorized as "Human Sociobiology," "Ethnobiology," "Darwinian Anthropology," "Darwinian Psychology," and "Darwinian Medicine."

FORMAT: Lecture

PREREQUISITE: One of SOSA 1000X/Y.06, (1002.03 and 1003.03), 1005X-Y.06, 1100X/Y.06 or 1200X/Y.06; or an introductory class in either Psychology or Biology.

SOSA 3085.03: Self and Society.

This class explores the relationship between the self and the larger social context. It considers the interaction of personality experiences, interpersonal relations, group affiliation, and larger socio-cultural conditions. It examines how such interactions and institutions shape our concepts of who we should be, who we are, or who we might become. In addition the relationship between changes in society and changes in the self are explored. The course may consider these questions cross-culturally.

FORMAT: Lecture

PREREQUISITE: One of SOSA 1000X/Y.06, (1002.03 and 1003.03), 1005X-Y.06, 1100X/Y.06 or 1200X/Y.06; or an introductory class in either Psychology or Biology.

SOSA 3091.03: The Sociology of Culture.

Does culture pervade all aspects of social life or are there specialized social domains which are "cultural"? What is the connection between societies and "cultures" and the "culture" of music or art? This course explores the question of how one can sociologically study culture. The course reviews classical and contemporary theoretical approaches to the social production, distribution and reception of culture. Broad themes include the discussion of cultural consumption, cultural identity, cultural change, and notions of cultural resistance. Specific "cultural objects" of study may include fashion, sport, class, and social problems.
The course concludes with analysis of the interaction of the fields of sociology and cultural studies.

FORMAL: Lecture
PREREQUISITE: One of SOSA 1000X/Y.06, (1002.03 and 1003.03), 1005X-Y.06, 1100X.Y.06 or 1200X.Y.06

SOSA 3096.03: Introduction to Demography.
This class will explore the demographic techniques and theory used to describe the demographic structure and behavior of human populations. This course will cover the demographic transition, population growth, and aging in society. Students are expected to complete a project using primary sources.

FORMAL: Lecture
PREREQUISITE: One of SOSA 1000X/Y.06, (1002.03 and 1003.03), 1005X-Y.06, 1100X.Y.06 or 1200X.Y.06

SOSA 3105.03: Media and Society.
This course provides an introductory overview to the theoretical and practical issues that concern media and society. It examines contemporary theories of mass communications and popular culture and engages the political economy of media, their impact on audiences, and the role they play in the political process.

FORMAL: Lecture
PREREQUISITE: One of SOSA 1000X/Y.06, (1002.03 and 1003.03), 1005X-Y.06, 1100X.Y.06 or 1200X.Y.06

SOSA 3116.03: Issues in Social Research.
This course consists of the intensive examination of a selected area in social research. Since the specific topic which will receive special attention will differ from year to year, students are advised to consult the department prior to registration.

FORMAL: Lecture
PREREQUISITE: One of SOSA 1000X/Y.06, (1002.03 and 1003.03), 1005X-Y.06, 1100X.Y.06 or 1200X.Y.06

SOSA 3129.03: Social Conflict.
This class introduces students to the various analytical perspectives sociologists have employed to understand the patterns and consequences of conflict in society. In this regard particular attention is devoted to the functional, conflict, and Marxist theories of conflict. This class is also concerned with conflict in contemporary society, with special reference to patterns of conflict and change in Canada.

FORMAL: Lecture
PREREQUISITE: One of SOSA 1000X/Y.06, (1002.03 and 1003.03), 1005X-Y.06, 1100X.Y.06 or 1200X.Y.06

SOSA 3135.03: The Social Organization of Health Care.
The social organization of medicine and the politics of health are examined. Particular attention is paid to environmental and occupational health issues in light of technological and social change. Epidemiological patterns of morbidity and mortality are examined. Students are responsible for seminar presentations in areas of interest.

FORMAL: Lecture
PREREQUISITE: One of SOSA 1000X/Y.06, (1002.03 and 1003.03), 1005X-Y.06, 1100X.Y.06 or 1200X.Y.06

SOSA 3143.03: Health, Illness and the World System.
Placing the political economic bases of health and illness in ethnographic context, this course is concerned with the ways that affluences of poverty become naturalized as biomedical experiences. Core questions pursued are as follows: 1) how is relative health affected by the world market processes in diverse global contexts? 2) how do afflictions of poverty become naturalized as biomedical experiences? 3) how do patients and communities activate alternative health infrastructures as they resist their marginalization in neo-liberal political agendas? 4) what kinds of illnesses do charismatic curative practitioners and wage labor migration (e.g. HIV/AIDS, SARS)? 5) how have market processes and profit seeking retarded the progress of scientific inquiry into modern illness? We will elucidate these questions by looking at case studies from Canada, South Africa, Sri Lanka, Spain and Israel.

FORMAL: Lecture
PREREQUISITE: One of SOSA 1000X/Y.06, (1002.03 and 1003.03), 1005X-Y.06, 1100X.Y.06 or 1200X.Y.06

SOSA 3145.03: Gender and Health.
This course will explore the health implications of gender, race, and class. We will look at the ways in which gender, race, and class shape health outcomes, as well as the ways in which health outcomes shape gender, race, and class identities. We will examine the ways in which gender, race, and class intersect to shape health outcomes, as well as the ways in which health outcomes shape gender, race, and class identities.

CROSS-LISTING: GWST 3800.03

SOSA 3147.03: Aging Cross Culturally.
This online class will explore the array of beliefs and practices of aging and the life course cross-culturally. We will explore the enormous diversity in the aging experience around the world as well as the universals of human aging. Case studies will be examined to provide a substantive evidence of concepts examined in the course. This course will be useful for students in the social science and humanities as well as health professionals, nursing, gerontologists, to provide adequate knowledge and skills for culturally appropriate geriatric care.

FORMAL: Lecture
PREREQUISITE: One of SOSA 1000X/Y.06, (1002.03 and 1003.03), 1005X-Y.06, 1100X.Y.06 or 1200X.Y.06

CROSS-LISTING: HLTH 4900.03

SOSA 3148.03: The Sociology of Addiction: Drugs, Health and Society.
This course explores how the meaning and significance of various drug-taking practices and addictive experiences are shaped by the social, cultural, political and economic contexts in which they take place. We will examine how perceptions of different drugs and addictions have changed over time, and how complex and competing political, cultural and economic forces shape drug law and policy. The general aim of the course is to de-individualize and de-pharmacological drug use and addiction, to better understand and address health consequences.

FORMAL: Lecture
PREREQUISITE: One of SOSA 1000X/Y.06, (1002.03 and 1003.03), 1005X-Y.06, 1100X.Y.06 or 1200X.Y.06

SOSA 3149.03: Childhood in Cross Cultural Perspective.
This course explores childhood as an important reflection of socialization and thus a nexus of cultural and social values, ideas, and histories. In examining pregnancy, birth, infant development and socialization patterns, we ask: "What is involved? What is near universal, and what is indisputably variable?" The course tries to maintain a balance among three perspectives: those of the infant, those of the parents, and relevant cultural and historical factors that shape both of these. The course also seeks to maintain a balance between the biological, cultural and social nature of human behavior. Approved with International Development Studies.

FORMAL: Lecture
PREREQUISITE: One of SOSA 1000X/Y.06, (1002.03 and 1003.03), 1005X-Y.06, 1100X.Y.06 or 1200X.Y.06
SOSA 3150.03: Sociology and Anthropology of the Body.
This class will consist of a micro-sociological examination of the human body as a socio-cultural construction. Topics include: bodily self-image, cultural definitions of physical attractiveness, stigmatization, prosaic behavior, non-verbal communications, body hygiene and pollution taboos, and cultural aspects of human reproduction and sexuality. Special attention will be paid to class, gender and ethnicity and their relationship to body politics.
FORMAT: Lecture
PREREQUISITE: One of SOSA 1000X/Y.06, (1002.03 and 1003.03), 1093X/Y.06, 1100X/Y.06 or 1200X/Y.06
CROSS-LISTING: GWST 3150.03

SOSA 3165.03: Peoples and Cultures of the World: Selected Area Studies.
This class examines a specific geographic and/or culture area. The class begins with background material on geography and history. Its focus is on the people themselves, their social organization and political, economic, and cultural systems. How they relate to globalization and development will also be examined. Consult the Department to find which region is to be covered in a given year. Approved with International Development Studies.
FORMAT: Lecture
PREREQUISITE: One of SOSA 1000X/Y.06, (1002.03 and 1003.03), 1093X/Y.06, 1100X/Y.06 or 1200X/Y.06
CROSS-LISTING: GEOG 3165.03

SOSA 3168.03: Issues in Latin American Society.
This course introduces students to case studies on contemporary Latin America. The goal of the course is to familiarize students with key social and cultural issues in the region. The focus of the course will change from year to year, and may include a particular country or region, or a theme or topic. Students should contact the department for details on the specific theme of the course in a given year. Approved with International Development Studies.
FORMAT: Lecture
PREREQUISITE: One of SOSA 1000X/Y.06, (1002.03 and 1003.03), 1093X/Y.06, 1100X/Y.06 or 1200X/Y.06

SOSA 3175.03: Sociology of Education.
This course is intended to develop students’ knowledge about the relationship between schooling and other aspects of society. We will achieve this, in part, by examining the theoretical perspectives and practical implications of knowledge in and outside of schooling as a basis for the development of autonomous and confident individuals. Topics may include: social stratification, culture, and constraints, relations between family, community and educational attainment, and the changing social conditions that have had an impact on educational institutions.
FORMAT: Lecture
PREREQUISITE: One of SOSA 1000X/Y.06, (1002.03 and 1003.03), 1093X/Y.06, 1100X/Y.06 or 1200X/Y.06

SOSA 3180.03: Special Topics in Sociology and Social Anthropology.
This course consists of an intensive examination of a selected substantive issue within Sociology and Social Anthropology. Since the specific topic or research problem will vary from year to year, students are advised to consult the department prior to registration.
FORMAT: Lecture
PREREQUISITE: One of SOSA 1000X/Y.06, (1002.03 and 1003.03), 1093X/Y.06, 1100X/Y.06 or 1200X/Y.06

SOSA 3181.03: Special Topics in Sociology and Social Anthropology.
This course consists of an intensive examination of a selected substantive issue within Sociology and Social Anthropology. Since the specific topic or research problem will vary from year to year, students are advised to consult the department prior to registration.
FORMAT: Lecture
PREREQUISITE: One of SOSA 1000X/Y.06, (1002.03 and 1003.03), 1093X/Y.06, 1100X/Y.06 or 1200X/Y.06

SOSA 3182.03: Special Topics in Sociology and Social Anthropology.
This course consists of an intensive examination of a selected substantive issue within Sociology and Social Anthropology. Since the specific topic or research problem will vary from year to year, students are advised to consult the department prior to registration.

PREREQUISITE: One of SOSA 1000X/Y.06, (1002.03 and 1003.03), 1093X/Y.06, 1100X/Y.06 or 1200X/Y.06

SOSA 3185.03: Issues in the Study of Indigenous Peoples of North America.
This seminar is concerned with the historical background of the Native-European situation in North America and with issues arising from this background. Students will research issues which are significant to themselves and important to Native groups. Topics covered may vary from year to year, but will normally include a combination of historical issues such as culture change and contemporary issues such as land claims, self-determination and government policy, and social conditions of Natives. Approved with International Development Studies and Law and Society minor.
FORMAT: Lecture
PREREQUISITE: One of SOSA 1000X/Y.06, (1002.03 and 1003.03), 1093X/Y.06, 1100X/Y.06 or 1200X/Y.06
CROSS-LISTING: CANA 3185.03

SOSA 3186.03: Special Topics in Sociology and Social Anthropology.

SOSA 3174.03: Living in a Globalized World.
SOSA 3211.03: Social Movements.
SOSA 3250.03: Beyond Genes and Circuits: The Anthropology and Sociology of Technoscience

This course uses the tools of the social sciences to understand the cultural and institutional practices of science and technology. Technology and science both drive and are driven by socioeconomic and cultural change. Little of our lives is unaffected by "technoscience" - the toys children play with, the scale of habitats and identity, the substances we eat, entertainment spots, the distribution of our friendships and the sources of our entertainment, the illnesses we get and the treatments we receive, how we make love and how we make war.

FORMAT: Lecture

SOSA 3275.03: Crime and Public Policy

This class deals with the dynamics of change in the criminal justice system that reflect three major factors namely social movements (e.g., the victim movement, the women's movement), social forces (e.g., aging, multiculturalism), and internal processes (e.g., professionalism, rationalization). The class focuses on how outside pressures modify, and are channelled by, the criminal justice system. Approved with Law and Society minor.

FORMAT: Lecture
PREREQUISITE: One of SOSA 1000X-Y, (1002.03 and 1003.03), 1090X-Y, 1100X-Y or 1200X-Y.

SOSA 3281.03: Youth Crime

This class deals with criminal offenses committed by young persons. Ethologic dunes from various disciplines are examined and evaluated. A secondary focus concerns the criminal justice system as it applies to young offenders. Approved with Law and Society minor.

FORMAT: Lecture
PREREQUISITE: One of SOSA 1000X-Y, (1002.03 and 1003.03), 1090X-Y, 1100X-Y or 1200X-Y.

SOSA 3283.03: Globalized Security and Justice: the Challenge of Global Crime and Terrorism

Since the terrorist attacks of 9/11, the relationship between global processes and the local crime and violence has become more explicit. As new or enhanced global economic, political, cultural and environmental processes facilitate, protect and social and cultural values, there appears opportunity for both traditional and new kinds of crime and various forms of political and religious violence are being created. This course examines how globalization influences the various global and local conditions that create these new kinds crime and violence by exposing empirical explanations, and more empirically based case studies of different global crimes and terrorism movements. In addition we will look at how social and domestic crime and terrorism challenges the ability of western societies and states to ensure political order and security and examine how they are reconceptualizing both the rhetoric and reality of state governance and justice.

SOSA 3284.03: Living in Cities.

2008 marked the first time in history that more of the global population lived in cities than in rural areas. What perspectives to anthropology and sociology offer on this and their inhabitants? This course explores the social dynamics that constitute the "city" and surveys how social scientists have studied and engaged with cities and city-dwellers. It approaches "the city" both as a whole and through its constituent parts: people and places. Examples may be drawn from cities large and small, near and far - including Hobbiton.

FORMAT: Lecture and seminar
PREREQUISITE: One of SOSA 1000X-Y, (1002.03 and 1003.03), 1090X-Y, 1100X-Y or 1200X-Y or FYP or PLAN 2005.03
CROSS-LISTING: GEOG 3284.03

SOSA 3285.03: Sociology of Law.

This course is a sociological examination of law both as a mechanism of social regulation and as a field of knowledge. It explores classical and contemporary approaches to law and its contexts. Emphasis is placed on the relationship of theory to the choice of methodology. Students are exposed to basic tools and procedures which will help them to analyze the numerical tables and graphs they may come across in sociological or anthropological journals. Other relevant issues will be included, such as, whether it is possible to achieve objectivity when analysing human behaviour. It is assumed students are enrolled in this class possess basic computer skills.

FORMAT: Lecture/lab as required
PREREQUISITE: One of SOSA 1000X-Y, (1002.03 and 1003.03), 1090X-Y, 1100X-Y or 1200X-Y; and SOSA 2001x-Y or 2002X-Y.

SOSA 3290.03: Society and the Police.

The police play an increasingly powerful role in the maintenance of social order in contemporary Canadian society. This class introduces students to sociological theory and research on: (a) the role of police in social development and social control; (b) the historical and political development of public policing; (c) the nature and structure of police work; (d) control and accountability and (e) selected issues in policing such as, policing the family, minorities and the police, community based policing and police discretion. Approved with Law and Society minor.

FORMAT: Lecture
PREREQUISITE: One of SOSA 1000X-Y, (1002.03 and 1003.03), 1090X-Y, 1100X-Y or 1200X-Y.

SOSA 3310.03: Indian Society: Change and Continuity.

The objective of this class is to introduce students to the society and culture of India from an interdisciplinary perspective. India presents a society of enormous complexity and an unforeseen living civilization. Approved with International Development Studies.

FORMAT: Lecture and seminar
PREREQUISITE: Second-year Arts and Science class

SOSA 3400.03: History of Anthropological Theory.

This class considers the foundations and development of social anthropology. Major theoretical schools and the work of prominent anthropologists in those schools are considered, including Cultural Evolution, Historical Particularism, Functionalism, Culture and Personality, Structuralism, Symbolism, Cultural Materialism, and the directions in which contemporary sociocultural anthropological point.

FORMAT: Lecture
PREREQUISITE: One of SOSA 1000X-Y, (1002.03 and 1003.03), 1090X-Y, 1100X-Y or 1200X-Y; and SOSA 2001X-Y or 2002X-Y.

SOSA 3401.03: History of Sociological Thought.

Towards the middle of the nineteenth century a novel way of thinking about human existence began to emerge. Primary was given to the understanding that humans are social beings, their lives and thoughts bound and patterned by their social environments. This approach formed the basis for a new discipline of analysis-empirically named Sociology. This class considers some of the main ideas of the earlier contributors to the new way of thinking: Comte, Marx, Mead, Durkheim, Weber, Simmel, Meadman and, more recently, Parsons and Schatz. Sociology is a science largely on the intellectual legacy of these thinkers. This class will ask questions and formulate answers to them which remain relevant to the sociological enterprise today.

FORMAT: Lecture
PREREQUISITE: One of SOSA 1000X-Y, (1002.03 and 1003.03), 1090X-Y, 1100X-Y or 1200X-Y; and SOSA 2001X-Y or 2002X-Y.

SOSA 3402.03: Figuring Out Society.

This course provides an introduction to issues of research design, including the relationship of theory to the choice of methodology. Students are exposed to basic tools and procedures which will help them to analyze the numerical tables and graphs they may come across in sociological or anthropological journals. Other relevant issues will be included, such as, whether it is possible to achieve objectivity when analysing human behaviour. It is assumed students are enrolled in this class possess basic computer skills.

FORMAT: Lecture/lab as required
PREREQUISITE: One of SOSA 1000X-Y, (1002.03 and 1003.03), 1090X-Y, 1100X-Y or 1200X-Y; and SOSA 2001X-Y or 2002X-Y.

SOSA 3403.03: Qualitative and Field Methods.

Research is a craft requiring many skills. This class focuses on skills relevant issues will be included, such as, whether it is possible to achieve objectivity when analysing human behaviour. It is assumed students are enrolled in this class possess basic computer skills.

FORMAT: Lecture/lab as required
PREREQUISITE: One of SOSA 1000X-Y, (1002.03 and 1003.03), 1090X-Y, 1100X-Y or 1200X-Y; and SOSA 2001X-Y or 2002X-Y.

SOSA 3405.03: Contemporary Social Theory.

A variety of approaches constitutes theory in contemporary sociology. Among them are those called interactionist, ethnomethodological, structuralist, critical, feminist, rational choice, and post-modernist. This class considers the contributions of these approaches to the enterprise of modern sociology. What are
the main premises of particular sociological theories? What are their implications for the study and understanding of the social world? What are the issues that evoke debate between different schools of theory?

FORMAT: Seminar
PREREQUISITE: One of SOSA 1000X/Y.06, 1002.03 and 1003.03, 1005X/Y.06, 1000X/Y.06 or 1200X/Y.06; and SOSA 2001X/Y.06 or 2002X/Y.06

SOSA 4000X/Y.06: Honours Seminar in Social Anthropology
This seminar provides an opportunity for students to engage in sustained investigative scholarship through independent research initiatives. The first term concentrates on locating the student's work within a broader set of theoretical and methodological debates in the discipline, while the second term is devoted to students' research and writing activities in preparing the thesis required for honours graduation. In the second term, class time is used for students to outline "in progress" reports and presentations about their chosen topics. The class carries two separate grades, one for the class and the other for the thesis, appearing on the transcript as "honours--qualifying examination" (a University requirement for all honours students SOSA 8880.00).

NOTE: Credit can only be given for this class if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.

FORMAT: Seminar
PREREQUISITE: Honours registration in Social Anthropology and SOSA 2001 (recommended) or SOSA 2002, and two of SOSA 3400, SOSA 3402 and 3403, or permission of the instructor

SOSA 4001.03: Quantitative Analysis for the Social Sciences I
This class will introduce quantitative analysis. It will engage issues of research design, the relationship between sample and populations, statistics and inference, as well as basic tests of statistical significance. The course will also introduce tabular, graphical, and bivariate linear analysis, using computer software. It will encourage secondary data analysis of available datasets, evaluation of surveys, and develop skills through a series of class projects.

FORMAT: Seminar
PREREQUISITE: SOSA 3402.03 and fourth year Major or Honours standing in Sociology and/or Social Anthropology
CROSS-LISTING: SOSA 3801.03

SOSA 4002.03: Quantitative Analysis for the Social Sciences II
This course will focus on the use of quantitative methods in social science research. It will introduce students to regression techniques and concentrate on the assumptions motivating quantitative analysis. The course will also look at regression diagnostics and critical weight options available to researchers when "normal" assumptions are broken. The class will be split into lectures and computer labs using statistical software. The labs will apply methods covered in class and explore potential secondary data resources. The class will develop these skills through a series of class projects.

FORMAT: Seminar
PREREQUISITE: SOSA 3402.03, SOSA 4001.03 and fourth year Major or Honours standing in Sociology and/or Social Anthropology
CROSS-LISTING: SOSA 3802.03

SOSA 4003.03: Contemporary Perspectives in Ethnography
Ethnographies and critical writings which grapple with questions of theory and representation in a range of contexts – near and far, familiar and strange, local and global – will be examined in this class. Approved with International Development Studies.

FORMAT: Seminar
PREREQUISITE: One of SOSA 1000X/Y.06, 1002.03, 1003.03, 1005X/Y.06, 1100X/Y.06 or 1200X/Y.06; and SOSA 2001X/Y.06 or 2002X/Y.06; and fourth year Honours standing in Sociology and/or Social Anthropology
CROSS-LISTING: SOSA 3803.03

SOSA 4004.03: Issues in Economy, Work and Development
Commenting on a review of the multiple meanings of neoliberalism, this course will examine changing relationships to employment and "home" under conditions of economic insecurity. Such conditions have long been prevalent in what is termed the "global south" but are now more obviously present in class-divided northern societies, including Canada included. How do people, men and women, young and old, react to increasingly precarious conditions of employment and uncertain futures? Is employment-related mobility becoming an accepted pattern of living, even in stable communities where people had previously relied on secure livelihoods shared between generations? How does migration and immigration shape new understandings of community? How are people's sense of themselves and others, their subjectivities, being reshaped through new political and economic realities? In addition to some key theoretical readings, we will explore these issues through a close reading of several critical ethnographies.

FORMAT: Seminar
PREREQUISITE: One of SOSA 1000X/Y.06, 1002.03, 1003.03, 1005X/Y.06, 1100X/Y.06 or 1200X/Y.06; and fourth year Honours standing in Sociology and/or Social Anthropology

SOSA 4005.03: Issues in Social justice and Inequality
Each year, the "issues" class focuses on a different specific topic within the general area. In past years topics have addressed the social and moral problems of social inequalities of various kinds viewed in the context of global changes. Sample topics include but are not restricted to: gender, minority and class inequalities; struggles over rights; social movements; social scenarios surrounding citizenship, migration and immigration; multiculturalism; and border and security studies. Consult Department for specific topic.

FORMAT: Seminar
PREREQUISITE: One of SOSA 1000X/Y.06, 1002.03, 1003.03, 1005X/Y.06, 1100X/Y.06 or 1200X/Y.06; and fourth year Honours standing in Sociology and/or Social Anthropology

SOSA 4006.03: Issues in Critical Health Studies
Each year, this "issues" class focuses on a different specific topic within the general area. In past years topics have addressed how health is socially and culturally constructed, the differential social and cultural affects of health and illness, the role of health care, the knowledge and power relationships, and how various perspectives on health are challenged from within and beyond the health professions. Consult Department for specific topic.

FORMAT: Seminar
PREREQUISITE: One of SOSA 1000X/Y.06, 1002.03, 1003.03, 1005X/Y.06, 1100X/Y.06 or 1200X/Y.06; and fourth year Honours standing in Sociology and/or Social Anthropology

SOSA 4012.03: 4013.03: Issues in Sociology and Social Anthropology
This seminar consists of an intensive examination of selected substantive issues within Sociology and Social Anthropology. Since the specific topic or research problem which arouses special treatment will differ from year to year, students are advised to consult the department prior to registration.

FORMAT: Lecture and seminar
PREREQUISITE: One of SOSA 1000X/Y.06, 1002.03, 1003.03, 1005X/Y.06, 1100X/Y.06 or 1200X/Y.06; and fourth year Honours standing in Sociology and/or Social Anthropology

SOSA 4014.03: Special Topics
This course consists of an intensive examination of a selected substantive issue within Sociology and Social Anthropology. Since the specific topic or research problem will vary from year to year, students are advised to consult the department prior to registration.

FORMAT: Lecture and seminar
PREREQUISITE: One of SOSA 1000X/Y.06, 1002.03, 1003.03, or SOSA 1050; or SOSA 1100 or SOSA 1200 AND SOSA 2001 or 2002

SOSA 4015.03: Special Topics
This course consists of an intensive examination of a selected substantive issue within Sociology and Social Anthropology. Since the specific topic or research problem will vary from year to year, students are advised to consult the department prior to registration.

FORMAT: Lecture and seminar
PREREQUISITE: One of SOSA 1000X/Y.06, 1002.03, 1003.03, or SOSA 1050; or SOSA 1100 or SOSA 1200 AND SOSA 2001 or 2002

SOSA 4016.03: Special Topics
This course consists of an intensive examination of a selected substantive issue within Sociology and Social Anthropology. Since the specific topic or research problem will vary from year to year, students are advised to consult the department prior to registration.

FORMAT: Lecture and seminar
PREREQUISITE: One of SOSA 1000X/Y.06, 1002.03, 1003.03, or SOSA 1050; or SOSA 1100 or SOSA 1200 AND SOSA 2001 or 2002

318 Sociology and Social Anthropology
SOSA 4017.03: Special Topics.
The course consists of an in-depth examination of a selected substantive issue within Sociology and Social Anthropology. Since the specific topic or research problem will vary from year to year, students are advised to consult the department prior to registration.

SOSA 4031.03: Social Policy Research Seminar.
One of the distinctive features of the social sciences has been the use of social research as a basis for the development and reform of social policy. Through the relationship of social research to social policy has changed and evolved with changes in the politics and process of policy making, it still remains a core activity for many social scientists. Using a variety of academic and applied research sources, the seminar will examine the politics of policy research, uses of social research knowledge, policy research models and research strategies and the policy outcomes of social research. In addition to reviewing the critical literature on social policy research, students will do case study analyses of the formulation of major policy research projects. The course will selectively draw on faculty, government and private sector policy analysts and policy makers to help ground discussion and research in actual policy research experience.

FORMA T: Seminar
PREREQUISITE: SOSA 2000X/Y.06, 1002.03, 1003.03, 1050X/Y.06, 1100X/Y.06, 1200X/Y.06 and fourth-year Major or Honours standing in Sociology and/or Social Anthropology.
CROSS-LISTING: SOSA 5001.03

SOSA 4205.03: Moral Panics as a Social Phenomenon.
If we relied solely on mass reports emanating from the mass media, we might well form the impression that every few years a particular form of allegedly immoral and/or undesirable behavior becomes so widespread as to endanger the very foundation of society. Where such socially shared fears and concerns are exaggerated — i.e., all out of proportion to the actual threat when judged from a rational or empirical perspective — social scientists refer to them as "moral panics." This class will apply sociological analysis to documented case studies of such panics, both past and present. Examples would include public anxiety about communist infiltration of the U.S. government in the 1950s or, more recently, popularized scares over child sexual abuse, satanism, or serial killing. Particular attention will be paid to the social processes that generate, sustain, and erode adherence to such beliefs.

FORMA T: Seminar
PREREQUISITE: One of SOSA 1000X/Y.06, 1002.03, 1003.03, 1005X/Y.06, 1100X/Y.06 or 1200X/Y.06 and fourth-year Major or Honours standing in Sociology and/or Social Anthropology.
NOTE: Credit can only be given for this class if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.

SOSA 4210.03: Tourism and Development.
Tourism is now the most lucrative industry in the world. Around the globe, countries frame the tourist dollar offering the best deals on wide range of destinations tailored to a variety of different experiences from sex tourism to eco-tourism. This class will explore the relationship between tourism and development. Topics under discussion will include the definitions of hosts and guests, the commercialization of tourist sites and the tourist experience, and the relationship of tourism to sustainability, environmentalism, and globalization. Approvals with International Development Studies.

FORMA T: Seminar
PREREQUISITE: One of SOSA 1000X/Y.06, 1002.03, 1003.03, 1005X/Y.06, 1100X/Y.06 or 1200X/Y.06 and fourth-year Major or Honours standing in Sociology and/or Social Anthropology.
CROSS-LISTING: SOSA 5007.03

SOSA 4211.03: Embodying the Body: The Human Body for Anatomists and Humanists.
This course explores the form and function of the human body and how these relate to broader issues associated with what it means to be human. The course begins with an anatomical exploration of the body, then expands into contemporary issues about the body and embodiment, including gender identity, beauty, etc. (This course does not fulfill the 4000 level elective requirement for Sociology and Social Anthropology honour students.)

FORMA T: Lecture/lab
PREREQUISITE: SOSA 2500X/Y or SOSA 5150, permission of the instructor required.
CROSS-LISTING: ANANT 5555

SOSA 4400X/Y.06: Applying Sociology and Social Anthropology Inside, Outside, and Beyond University.
This is a "capstone" class for SOSA majors and double majors in their fourth and final year of undergraduate studies. The class should be especially relevant to students hoping to enter social work, law, business administration, counseling, community organizing, public service, occupational therapy, medicine or other health professions. The primary focus in the first term will be to introduce, reflect upon, and discuss students' university and life experiences, vocational plans beyond university, and responsibilities as a citizen in democratic society. Work in the second term of the class will revolve around the choosing, planning, execution, and analysis of an experiential learning project. This project might involve volunteering at a community service agency, serving as a tutor or mentor to first-year Dalhousie students, or doing a piece of applied social research for a campus or community organization. This project will culminate in the preparation and presentation of a major essay outlining what students have learned from this exercise. Throughout the year every effort will be made to improve students' abilities for introspection, written and oral communication, critical thinking, and group leadership.

The class will be strictly limited to a maximum of 20 students. Enrollment in the class requires instructor's permission.

NOTE: Credit can only be given for this class if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.

FORMA T: Seminar
PREREQUISITE: SOSA 2001X/Y.06 or 2002X/Y.06 and fourth-year standing in the SOSA 20-credit major double major program.
EXCLUSION: SOSA 4000X/Y.06, 4005X/Y.06

SOSA 4500X/Y.06: Honours Seminar in Sociology.
This seminar provides an opportunity for students to engage in sustained investigative scholarship through independent research initiative. The first term concentrates on locating the student's work within a broader set of theoretical and methodological debates in the discipline, while the second term is devoted to students' research and writing activities in preparing the thesis required for honours graduation. In the second term, class time is used for students to make "in progress" reports and presentations about their chosen topics. The class cuts two separate grades, one for the class and the other for the thesis, appearing on the transcript as "honours-qualifying examination" (a University requirement for all honours students SOSA 8880.00).

NOTE: Credit can only be given for this class if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.

FORMA T: Seminar
PREREQUISITE: Honours registration in Sociology and SOSA 2002 (recommended) or SOSA 2001 and two of SOSA 3401, 3402, 3403 and 3405 or permission of the instructor.

SOSA 4510.03: 4520.03: Readings in Sociology/Social Anthropology.
In a reading class the student is assigned to a member of staff for regular meetings to discuss readings in assigned area. Papers and research projects are expected.

FORMA T: Individual instruction
PREREQUISITE: Honours registration in Sociology or Social Anthropology, permission of the instructor and permission of the Undergraduate Coordinator.
Spanish and Latin American Studies

I. Introduction

Spanish opens the door for you into exciting and diverse cultures in more than 20 countries - it is the first language of over 400 million people, and the second most widely spoken language in the world (after Chinese). The Spanish-speaking world is home to fascinating people, traditions and institutions, and the Department of Spanish and Latin American Studies is your gateway into this vibrant world.

We warmly welcome students interested in starting Spanish as well as those who already have some experience with the language. Our degree options for the study of the language, literatures and cultures of the Spanish-speaking world are highly practical choices, and also complement studies in such diverse disciplines as political science, sociology and social anthropology, literature, linguistics, history, international development studies, intercultural communication, economics, commerce, and many others.

Fluency in Spanish will be useful to all students seeking careers in the foreign service and NGOs, in business and banking, as entrepreneurs, interpreters, translators, teachers, professors, editors, journalists, and many others. Our language courses emphasize skills acquisition and communicative competence; once you have mastered the fundamentals, a whole world of diverse interests is open to you to engage with: history, politics, social issues, international development, literature, films, art, business and many others.

II. Diplomas of Spanish as a foreign Language (DELEs)

The Diploma of Spanish as a foreign Language (DELE) is the official accreditation of the degree of fluency of the Spanish language, issued and recognized by the Spanish Ministry of Education, Culture and Sport. The Instituto Cervantes is in charge of organizing the exams, while the University of Salamanca is in charge of the preparation, correction and final evaluation of all the tests. The exams test your ability to read, write, speak and understand Spanish. There are six levels of DELEs offered that match the divisions determined by the Common European Framework of Reference for Languages:

- Diploma de Español A1: Beginner level: You can understand and use daily expressions frequently used in any part of the Spanish-speaking world, aimed at satisfying immediate needs-asking and giving basic personal information about yourself and daily life, and interacting on a basic level with speakers, whenever they are speaking slowly and clearly, and are willing to cooperate.
- Diploma de Español A2: Intermediate level: You have the necessary knowledge of the language to allow control in situations which require a basic use of the language.
- Diploma de Español B1: Elementary level: You are capable of understanding daily phrases and expressions frequently used related to areas of experience that are particularly relevant to your basic information about yourself and your family, shopping, places of interest, occupations, etc.
- Diploma de Español B2: Upper intermediate/proficiency level: You have the ability to cope in common situations of daily life which require a specialized use of the language.
- Diploma de Español C1: Mastery/advanced level: You are able to communicate in all situations requiring a specialized use of the language and knowledge of cultural background.
- Diploma de Español C2: Upper intermediate/proficiency level: You have the ability to cope in common situations of daily life which require a specialized use of the language.

The exams are offered in November and May in more than 50 countries around the world. The Department of Spanish and Latin American Studies organizes the examinations at Dalhousie every spring.

For more information about the format of the exam, dates and application deadlines, contact the Spanish Department DELE coordinator.

III. Degree Programs

In addition to the departmental requirements listed below, students must satisfy the requirements outlined in the Degree Requirements section, page 125 of this calendar.

A. BA (15 credit) Minor in Spanish Language

See Minors in the College of Arts and Science section of this calendar (page 128).

B. BA (20 credit) BA Major in Spanish Language

(Minimum of six full credits, a maximum of nine full credits in Spanish. At least three of these full credits MUST be at the 3000 level.)

Requirements:

- SPAN 2025.V0.03 full credit (this does not constitute your language requirement)
- SPAN 3020.03 half credit or SPAN 3025.03 half credit
- SPAN 3035.03
- SPAN 3036.03
- A full credit in Spanish and Spanish-American Literature
- Any two half credits of Spanish Civilization, Spanish-American Civilization or Hispanic Culture (this includes SPAN 2048, 2090, 2070, 2091, 2100, 2105, 2150, 2151)
- One additional full Spanish credit at the 3000 or 4000 level

320 Spanish and Latin American Studies
C. BA (20 credit) Double Major in Spanish

(A combination of 10 full credits, with a minimum of five full credits in Spanish.)

Requirements:
- SPAN 2020X/Y.06 full credit or equivalent
- SPAN 2069.03 half credit (this does not constitute your literature requirement)
- SPAN 3036.03
- SPAN 3035.03
- SPAN 3020.03 half credit or SPAN 3025.03 half credit
- SPAN 2090.03 half credit (this does not constitute your literature requirement)
- One additional full Spanish credit at the 3000 or 4000 level.

D. BA with Honours in Spanish

Potential Honours applications are encouraged to consult the Department’s Undergraduate Advisor during their second year of study. Deadline for application should be three semesters before your graduation. (A minimum of nine full credits in Spanish.)

Requirements:
- SPAN 2020X/Y.06 full credit or equivalent
- SPAN 2069.03 half credit (this does not constitute your literature requirement)
- SPAN 3036.03
- SPAN 3035.03
- SPAN 3020.03 half credit or SPAN 3025.03 half credit
- SPAN 2090.03 half credit (this does not constitute your literature requirement)
- Two full credits in Spanish and/or Spanish-American Literature
- Any two half credits of Spanish Civilization, Spanish-American Civilization or Hispanic Culture (this includes SPAN 2069, 2070, 2109, 2110, 2105, 2150, 2200)
- 3.5 optional full Spanish credits. At least one full credit at the 3000 or 4000 level
- SPAN 4980.03 Student must complete an Honours Thesis in Spanish.

E. BA with Combined Honours

(A combination of 11 full credits):

- If Spanish is your primary major, a minimum six credits Spanish and an honour’s thesis completed in Spanish and Latin American Studies Department.
- If Spanish is your secondary major, a minimum of five credits in Spanish.

Requirements (if Spanish is your primary major):
- SPAN 2020X/Y.06 full credit or equivalent
- SPAN 2069.03 half credit (this does not constitute your literature requirement)
- SPAN 3036.03
- SPAN 3035.03
- SPAN 3020.03 half credit or SPAN 3025.03 half credit
- SPAN 2090.03 half credit (this does not constitute your literature requirement)
- Two full credits in Spanish and/or Spanish-American Literature
- Any two half credits of Spanish Civilization, Spanish-American Civilization or Hispanic Culture (this includes SPAN 2069, 2070, 2109, 2110, 2105, 2150, 2200)
- Half a credit in Spanish at the 3000 or 4000 level
- SPAN 4980.03 Student must complete an Honours Thesis in Spanish.

Requirements (if Spanish is your secondary major):
- SPAN 2020X/Y.06 full credit or equivalent
- SPAN 2069.03 half credit (this does not constitute your literature requirement)
- SPAN 3036.03
- SPAN 3035.03
- SPAN 3020.03 half credit or SPAN 3025.03 half credit
- SPAN 2090.03 half credit (this does not constitute your literature requirement)
- Two full credits in Spanish and/or Spanish-American Literature
- Any two half credits of Spanish Civilization, Spanish-American Civilization or Hispanic Culture (this includes SPAN 2069, 2070, 2109, 2110, 2105, 2150, 2200)
- Half a credit in Spanish at the 3000 or 4000 level
- SPAN 4980.03 Student must complete an Honours Thesis in Spanish.

F. Minor in Spanish Language

See Minors in the College of Arts and Science section of this calendar (page 128)

G. Minor in Hispanic Literature

See Minors in the College of Arts and Science section of this calendar (page 129)

IV. Programs and Courses Abroad

A. The Salamanca Program at the Universidad de Salamanca

The Salamanca Program is a special inter-disciplinary program of instruction designed to allow Dalhousie students to undertake an intensive study of the Spanish language and courses in Spanish culture. Students must have completed SPAN 2010X/Y.06 with at least a standing of B-. The program takes place during the fall, winter, spring or summer term, and is offered at the Universidad de Salamanca in Salamanca, Spain. Dalhousie University will grant three credits to those students who successfully complete their courses in Spain. Enquiries and applications should be addressed to the coordinator of the Program. Students will register via Letter of Permission and will receive grades on a Pass/Fail basis. The courses will be noted on the student’s academic record as a transfer credit.

Students must take the equivalent of three full courses.

Compulsory courses:
- Lengua española (1.5 credit)
- Students will then select ONE course from each of the following three Options.

Option 1
- Conversación y reducción (5 credit)
- Historia de la España contemporánea (5 credit)

Option 2
- Cultura española (5 credit)
- Historia de la España contemporánea (5 credit)
- Historia de la España contemporánea (5 credit)

Option 3
- Historia del arte español (5 credit)
- Español de los negocios (3 credit)
- Cine español e hispanoamericano (5 credit)
B. The Cuba Program at FLACSO/Havana

This program, designed for students with a minimum of two years’ university-level Spanish, is located at the Universidad Autónoma de Campeche, in the southwest of the Yucatán peninsula, in Mexico. Students must have completed SPAN 2020.06 with at least a standing of B-. Students who have previously studied in Cuba can request a waiver of this requirement. Students will complete their classes in Cuba. The program is offered in the first semester only.

Students who are taking or have taken any language course at Dalhousie do NOT need to take this test.

EXCLUSION: SPAN 1020X/Y.06

SPAN 1200X/Y.06: Spanish for Reading.

This course is given by FLACSO/Havana and generally takes place in the fall term. Students who wish to acquire reading knowledge of Spanish for general academic purposes. Overview of fundamental of Spanish grammar and vocabulary, with emphasis on reading for comprehension of texts in the arts, humanities and social sciences. Students are administered a final exam to assess their ability to read Spanish texts. Students who have completed SPAN 1020X/Y.06 in the fall semester will be placed in SPAN 1025X/Y.06 in the spring semester.

PREREQUISITE: None. Open to students in all departments. No prior knowledge of Spanish is necessary.

C. The Mexico Program at the University of Campeche

This program, designed for students with a minimum of two years’ university-level Spanish, is located at the Universidad Autónoma de Campeche, in the southwest of the Yucatán peninsula, in Mexico. Students must have completed SPAN 3310.06 with at least a standing of B-. Students who have previously studied in Mexico can request a waiver of this requirement. Students will complete their classes in Peru. Students will register via Letter of Permission and stay at Peruvian families’ homes where they will find every amenity they need and Lima and enrich the learning experience of the Spanish language. Students will have a PUCP buddy service to participate in the discussion in the language course. Students will have four visits to the main cultural attractions in Lima to provide the subject of the course better suited to your needs. Students who wish to register for a language course before taking this test may do so, but care should be taken in choosing it. Please read the course descriptions below carefully and try not to underestimate your knowledge.

This test is administered online. Please contact our Academic Advisor (spanish.advising@dal.ca) to register for the test. Scores from this test are normally available within a day, and are considered valid for up to a year from the date it was taken.

Students who are taking or have taken any language course at Dalhousie do NOT need to take this test.

Not all courses are offered every year. Please consult the current timetable.

SPAN 1020X/Y.06: Beginning Spanish.

In SPAN 1020 students will acquire a general knowledge of Spanish by engaging in communicative and task based activities that focus on developing speaking, listening, reading and writing skills. This course follows the A1/A2 levels of the Common European Framework of Reference for Languages (CEFR). Students will gain competence in grammatical structures, vocabulary, pronunciation and cultural awareness.

NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.

FORMAT: Lecture 3 hours

SPAN 1025X/Y.06: Advanced Beginning Spanish.

Students with prior knowledge of Spanish will join SPAN 2020 X/Y.06 at midyear for the winter semester only. This course follows the A2 level of the Common European Framework of Reference for Languages (CEFR). Students will gain competence in grammatical structures, vocabulary, pronunciation and cultural awareness.

FORMAT: Discussion, conversation, tutorial, language lab and computer assisted language learning so on.

PREREQUISITE: Knowledge of Spanish to the equivalent of first half of SPAN 1020X/Y.06.

EXCLUSION: SPAN 1020X/Y.06

Unulaual

SPAN 1200X/Y.06: Spanish for Reading.

This course is given by FLACSO/Havana and generally takes place in the fall term. Students who wish to acquire reading knowledge of Spanish for general academic purposes. Overview of fundamental of Spanish grammar and vocabulary, with emphasis on reading for comprehension of texts in the arts, humanities and social sciences. Students do not satisfy the Bachelor of Arts Language Requirement (see SPAN 1020X/Y.06).

NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.

FORMAT: Lecture/discussion, conducted in English

PREREQUISITE: None. Open to students in all departments. No prior knowledge of Spanish is necessary.

SPAN 2020X/Y.06: Intermediate Spanish.

In SPAN 2020 students will acquire an intermediate knowledge of Spanish equivalent to a B1 level, by adopting an action oriented approach and engaging in communicative and task based activities. This course follows the system for learning, teaching and assessing languages established by the Common European Framework of Reference for Languages (CEFR) that defines the competencies the students need to master in the following categories: Comprehension (Listening and Reading) and Expression (Interpretation, Oral and Writing). Students who have completed SPAN 1020 X/Y.06 are eligible for this course.

NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.

FORMAT: Lecture 3 hours

PREREQUISITE: SPAN 1025X/Y.06

SPAN 2025X/06: Advanced Intermediate Spanish.

Students whose level of Spanish is higher than the first semester of Span 2020 but lower than Span 3035 will join the Span 2020 class for the second semester. Students will acquire an intermediate knowledge of Spanish equivalent to a B2 level, by adopting an action oriented approach and engaging in communicative and task based activities. This course follows the system for learning, teaching and assessing languages established by the Common European Framework of Reference for Languages (CEFR) that define the competencies the students need to master in the following categories: Comprehension (Listening and Reading) and Expression (Interaction, Oral and Writing).

FORMAT: Lecture 3 hours
SPAN 2030.03: Españo lí Práctico.
The objective of this course is to continue developing the four language skills in a practical setting. This course is required for the Minor in Spanish Language and should be taken in the same academic year as SPAN 2020XY.06. Students planning to take any of our programs abroad or the Diplomas of Spanish as a Foreign Language (DELE)(B1) level will find the course particularly useful.
FORMAT: Lecture 3 hours
PREREQUISITE: SPAN 2020XY.06 or SPAN 2025.03
RESTRICTION: May only be taken after SPAN 2020XY.06 or any Spanish 3000 level language course.

SPAN 2040.03: Spanish for Business.
Spanish for business and institutional trade. Introduction to the Spanish of international business and to the social-cultural norms of negotiation in Spanish-speaking countries.
FORMAT: Lecture/discussion
PREREQUISITE: SPAN 2020.06

SPAN 2069.03: Mexico and Central America to 1979. From Conquest to Revolution.
Events in Central America are frequently covered in our media, causing people to believe that “the unrest” there is recent. This course seeks to examine the historical roots of the conflict from the colonial period until the 1970s. The aim of the course is to provide students with a background knowledge of this area, so that they can better understand current developments there.
FORMAT: Lecture/discussion/conducted in English
PREREQUISITE: No prerequisite. Open to students in all departments. No knowledge of Spanish necessary
CROSS-LISTING: HIST 2382.03

SPAN 2070.03: Mexico and Central America since 1979: The Search for Stability.
Following an examination of the indigenous heritage, and the colonial legacy of the conquistadors, the course deals principally with the contemporary period, especially the Mexican Revolution and its aftermath, the Mexican economy, Mexico under the Sandinistas, the impact of NAFTA, the “democracy” of Mexico, the U.S. role in the region, the human rights situation in Central America, and Central America in the region. The course is designed to provide an understanding of the contemporary reality of this volatile region, in many ways a microcosm of the crucial situation of Latin America as a whole.
FORMAT: Lecture/discussion/conducted in English
PREREQUISITE: No prerequisite. Open to students in all departments. No knowledge of Spanish necessary
CROSS-LISTING: HIST 2383.03

SPAN 2090.03: Introduction to Hispanic Literary Study.
This course will introduce students to literary analysis and critical writing in Spanish. Readings will include works from a variety of periods, genres and languages.
NOTE: Does not fulfill the literature requirement for any Spanish degree program.
FORMAT: Lecture
PREREQUISITE: SPAN 2020XY.06

SPAN 2100.03: Evolving Spain: History, Culture, Society.
This course provides an overview of the major sociopolitical and cultural elements of the Middle Ages to the present, that formed contemporary Spain. 
FORMAT: Lecture/discussion/conducted in English
PREREQUISITE: No prerequisite. Open to students in all departments. No knowledge of Spanish necessary
CROSS-LISTING: HIST 2385.03

SPAN 2105.03: Catalan Language and Culture.
Introduction to Catalan, the Romance language spoken by some 8 million people in northeastern Spain-Iberia and Catalonia - southern France, the Baléaric Islands and Sardinia. Elementary Catalan language and an introduction to Catalan culture.
watching the news. Students will have opportunities for group and class discussions. The aim of the course is to provide students with a general view of the mechanics of translation to then encourage the creative aspects of the process.

FORMAT: Lecture/discussion/conducted in Spanish
PREREQUISITE: SPAN 3035.03 or equivalent

SPAN 3090.03: Spanish Phonetics and Pronunciation.

This course seeks to introduce students to the analysis of the sound system of Spanish. Students will learn to identify and adjust non-native patterns of pronunciation through contrastive analysis, transcriptions and pronunciation practice. Students will master basic concepts and techniques of phonetic analysis and the general phonological characterization of Spanish dialects. The course will focus on the attributes of Spanish sounds, differences between the English and the Spanish sound systems, and the main differences among varieties of Spanish.

FORMAT: Lecture/discussion/conducted in Spanish
PREREQUISITE: SPAN 2090.03

SPAN 3095.03: Evolution of Spanish.

This course offers a panoramic study of the evolution of spoken Latin into modern Spanish (no prior knowledge of Latin required). Topics covered will include the major historical events that influenced the evolution of Spanish: phonological change; morphological and cometic change; lexical borrowings from other languages; and semantic change.

FORMAT: Lecture/discussion/conducted in Spanish
PREREQUISITE: SPAN 2090.03

SPAN 3190.03: Conversation & Expression.

This course is conducted in Spanish and engages students in conversation in a variety of formats toward the goal of further developing oral proficiency. We will aim to improve oral expression, conversion, and listening comprehension. Short essays or videos on topics of current interest are prepared outside of class and serve as the basis for general class discussions. Although the course deals mostly with conversation, many of the exercises will be directed toward oral practice of both structures and topics learned in the previous courses. Activities include improvisations and focus on small group and pair work as well as individual production of language. The emphasis will be on practical use of oral skills and build vocabulary through practice in different types of discourse, including narration, description, critical commentary, debate, role play, listening to music, reading newspapers and watching the news.

FORMAT: Seminar/Discussion
PREREQUISITE: SPAN 3035.03

SPAN 3215.03: Seminario de literatura latinoamericana.

This course examines the evolution of the Cuban development model, from the Conquest and colonization by the Spanish to the reforms of the early 21st Century. The objective is to develop an understanding of the various development strategies employed by Cuba, particularly since the revolution of 1959. When asked about the Cuban development model, most people nowadays would say "socialism." Thirty years ago it was sugar--as it had been from the beginning if the 16th Century. In fact Cuba obtains most of its hard currency from medical-related services—mainly from the exportation of medical services, but also from the sale of sophisticated biotechnological products. Cuba's approach has evolved dramatically in the last two decades, and particular attention will be paid to this period.

FORMAT: Lecture and discussion
CROSS-LISTING: INTD 3408.03

SPAN 3500.03: Historia e historias: la literatura como crítica de la historia. This is a panoramic course that studies Latin American literature from the "boom" to the present. It is divided into five sections, each of which will focus on a literary genre: short stories, essays, journalism, theatre and novels.

FORMAT: Lecture/discussion/conducted in Spanish
PREREQUISITE: SPAN 3035.03

SPAN 3520.03: Topics in Culture & Identity in the Spanish-Speaking World.

This course is designed for advanced students who have taken the available courses at the 2000 level or equivalent. During this course students will explore representative periods and authors, spanning from pre-Colombian times to the twentieth century.

FORMAT: Lecture/discussion/conducted in Spanish
PREREQUISITE: SPAN 2090.03
EXCLUSION: SPAN 2510.03

SPAN 3525.03: Traducción: Inglés-Español.

The objective of this course is to develop basic translation skills through the practice of translating English texts into Spanish. The approach would be methodological and practical: theoretical issues will be discussed to solve translation problems. After establishing the fundamental concepts, the course will progress to examine a series of important aspects of translation: cultural transposition, poetic and prosodic problems, grammatical and lexical issues, language variety in texts, etc. Each aspect outlined will have a practical component in which students will give a concrete translation task to solve. Group and class discussions will follow.

FORMAT: Lecture/discussion/conducted in Spanish
PREREQUISITE: SPAN 2090.03

SPAN 3310.06: Cuban Culture and Society.

This course is designed for advanced students who have taken the available courses at the 2000 level or equivalent. During this course students will explore representative periods and authors, spanning from pre-Colombian times to the twentieth century.

FORMAT: Lecture/discussion/conducted in Spanish
PREREQUISITE: SPAN 2090.03

SPAN 3408.03: The Cuban Development Model.

This course examines the evolution of the Cuban development model, from the Conquest and colonization by the Spanish to the reforms of the early 21st Century. The objective is to develop an understanding of the various development strategies employed by Cuba, particularly since the revolution of 1959. When asked about the Cuban development model, most people nowadays would say "socialism." Thirty years ago it was sugar--as it had been from the beginning if the 16th Century. In fact Cuba obtains most of its hard currency from medical-related services—mainly from the exportation of medical services, but also from the sale of sophisticated biotechnological products. Cuba's approach has evolved dramatically in the last two decades, and particular attention will be paid to this period.

FORMAT: Lecture and discussion
CROSS-LISTING: INTD 3408.03

SPAN 3530.03: Literatura hispanoamericana contemporánea.

This is a panoramic course that studies Latin American literature from the "boom" to the present. It is divided into five sections, each of which will focus on a literary genre: short stories, essays, journalism, theatre and novels.

FORMAT: Lecture/discussion/conducted in Spanish
PREREQUISITE: SPAN 3035.03
SPAN 3905.06: Estudios hispánicos avanzados.
This course offers the student an opportunity to study aspects of Hispanic culture not already included in other language offerings or in literature courses more narrowly defined by period, genre, etc. It takes advantage of special research interest of staff or the unique expertise of visiting faculty to provide instruction not regularly available here.

FORMAT: Lecture/conducted in Spanish

SPAN 3920.03: Experiential Learning.
Experiential learning combines formal learning with practical experience using the Spanish language. Students are required to volunteer/intern for a minimum of 60 hours over the term, or approximately 4-5 hours per week. Students will also compile a portfolio under the supervision of the course instructor, to include relevant readings and assignments (these may include reading responses, reports, presentations, essays).

FORMAT: Discussion, conducted in Spanish
PREREQUISITE: SPAN 2020.06

SPAN 3970.03: Lecturas dirigidas de literatura Hispanoamericana.
SPAN 3975.03: Estudios hispánicos dirigidos.
SPAN 3980.03: Lecturas para especialistas.
SPAN 4985.03: Lecturas para estudiantes de honores.
SPAN 4990.03: Honours Reading.

I. Introduction

Computer Science is a fundamental multi-disciplinary, high-technology discipline. Computer Science forms an integral and indispensable part of higher education. The Faculty of Computer Science provides high-quality education to our students in all areas of Computer Science and Informatics and conducts excellent research in specific areas of Computer Science, emphasizing major research programs with the support and participation of Industry and Government.

Our modern award-winning Computer Science building and state-of-the-art equipment permit Computer Science to conduct primary research in Algorithms, Bioinformatics, Data Mining, Health Informatics, Human Computer Interaction, Information Retrieval, Network Centred Computing, Privacy and Security and Visualization.

The Faculty of Computer Science was formed on April 1, 1997, following the amalgamation of the Technical University of Nova Scotia (TUNS) and Dalhousie University. Its members came from the School of Computer Science at TUNS and the Computing Science Division of the Department of Mathematics, Statistics, and Computing Science at Dalhousie.

Significant growth has occurred in our formative early years. Our graduate and undergraduate programs include imaginative multi-disciplinary programs such as Electronic Commerce, Health Informatics, and Bioinformatics. The most up-to-date information on ongoing programs, ongoing curriculum revision, and general information about the Faculty can be found on our website: http://www.cs.dal.ca.

II. Academic Regulations

In addition to the regulations below, please see the Academic Regulations section of the calendar.

Workload
A normal course load is five courses during each study term.

Course Selection
The content of every course that students take to meet degree requirements must represent new material: students may not take courses whose content is largely repetitive of, or more elementary than, a course taken earlier on the same topic, without permission of the Faculty.

Of the 40 half-credits required to complete any CS undergraduate degree, at least 20 must be taken from Dalhousie University.

Computer courses in other departments
Computer courses offered by other departments (e.g., COMM 1502.03, MGMT 1601.03) cannot be taken for credit in the Faculty’s degree programs without explicit permission of the Faculty of Computer Science.

Grades
a. Course instructors will describe methods of student evaluation during the first week of each course.
b. Supplementary examinations are not given in Computer Science courses.
c. A grade of at least C- is required for a course to satisfy a prerequisite condition for a CSCI/INFX course.
d. A grade of at least C- is required in all Computer Science CSCI/INFX core courses to graduate with any Computer Science degree.

Dismissal
A student who meets the conditions for dismissal as outlined in Section 20, Academic Dismissal, of the Academic Regulations will be dismissed from the program. A student who fails more than one co-op work term will be dismissed from the co-op program.

An application for readmission to the program may be considered two terms after dismissal. A student who has been dismissed and who has been required to withdraw from the university for one term or more may be readmitted to a program in the Faculty of Computer Science only once. A readmitted student is considered to be on probation.
Adjunct Assistant Professors
Abdel, S., MEng (Dorost, MSc (Dublin), PhD (Dublin)
Bandoli, T., BSc (Queen’s), MSc (Dalhousie), PhD (Toronto)
Lucic, V., BEng (Nj), MSc, PhD (Waterloo)
Marchand, Y., MSc (Pars, D.E.A. (Can), PhD (Compiègne)
McIntyre, A., BSc (McGill), PhD (Dalhousie)
Song, X., BSc (Tsinghua), MSc (Chinese Academy of Science), PhD (UNE), MCS (Dalhousie)
Vauxin, P., IIBA, MA (Guelph), MD (McMaster), MPhil (Johns Hopkins)
Wilson, G., BA, MSc, PhD (Dalhousie)
Yu, Q., BSc, MEng (Harbin), PhD (Albem)

Senior Instructor
Brookly, A., BMath (Waterloo), MSc, PhD (UBC)
Kalynovitch, N., BSc (Bournemouth), MSc, PhD (Rennes)

Instructor
Flaming, J., BComm, BA (SMU), MA (Dalhousie)

I. General Interest Courses
The Faculty offers eight courses that should be of interest to students whose major field of study while at Dalhousie will not be Computer Science.

CSCI 1106.03: Animated Computing.
