This course is a hands-on introduction to two areas of computing: robotics and game design. Students will learn how to program simple robots and will use empirical methods to investigate various aspects of robotics, such as sensors and actuators, uncertainty, knowledge representation, and failure detection and recovery. Students will also learn how to design and develop simple games and will investigate aspects of game design, such as collision detection and game-play behavior. Students will use empirical methods to investigate the gameplay-centric aspects of game design. Students work in groups to complete small robotics and game design projects.

CSCI 1107.03: Social Computing.
A hands-on course on technologies and the underlying infrastructure for social computing, including digital collaboration media, social network visualization, and social software. Students will learn about social media, computer networks and web services that facilitate their execution.

CSCI 1200.03: Introduction to Computing for Non-Majors.
This is a course of technical computer literacy. Students can expect to learn about computers in a general way and how computers affect the way we live and work. Students will be given an opportunity to become familiar with typical applications software such as word processors, spreadsheets and database applications. Other topics will include the use of the internet, creation of web pages, and simple programming concepts. No previous computer experience is required. This course is open to Arts and Social Sciences and Health Education students only. NOTE: This course cannot be counted towards the Bachelor of Commerce or a Minor in Business.

CROSS-LISTING: ASSC 1003

INFX 1606.03: Introduction to Web site creation.
This course introduces students to key web concepts and skills for creating and maintaining websites. This course is intended for students with no formal computer training. Topics include introduction to the Web, hypermedia markup languages such as HTML, style sheets, client side programming, multimedia foundations, dynamic content and website organization and maintenance.
CROSS-LISTING: CSCI 1206.03
EXCLUSION: INFX 1605.18

INFX 1615.03: Concepts of Computing.
This course introduces some key concepts in computing and places them in context with a survey of applications. The skills developed in this course include research, reduction, problem solving and abstraction. The themes covered are the following: Data and storage, operating systems, networking and the Internet, database systems, artificial intelligence and computer graphics. This course is eligible to partially cover the writing requirement for students in the Bachelor of Computer Science, Bachelor of Informatics and Bachelor of Science, Computer Science.
II. Degree Programs

A. Academic Regulations
For all variations of the Bachelor of Computer Science degree:
- of the 19 half-credit CSCI courses required at all levels, at least 10 must be chosen from Dalhousie CSCI course offerings, and
- of the 11 half-credit CSCI courses required at the 3000 and 4000 level, at least six must be chosen from Dalhousie CSCI course offerings.

B. Bachelor of Computer Science

1. Bachelor of Computer Science

The following regulations apply to students starting the program in September 2010 or after.

Faculty Requirements

3000 Level
- CSCI 3100.03: Communication Skills: Oral and Written
- CSCI 2110.03: Computer Science III
- CSCI 2121.03: Computer Organization with Assembly Language
- CSCI 2122.03: Software Development
- CSCI 2141.03: Introduction to Database Systems

2000 Level
- CSCI 1100.03: Computer Science I
- CSCI 2112.03: Computer Organization with Assembly Language
- CSCI 2113.03: Discrete Structures II

1900 Level Courses
- MATH 1000.03: Differential and Integral Calculus I
- MATH 1010.03: Differential and Integral Calculus II or CSCI 2133.03 Discrete Structures II
- MATH 2010.03: Matrix Theory and Linear Algebra I
- STAT 2003.03: Introduction to Probability and Statistics I

One full credit or two half credits of a science course with a list from a list provided by the Faculty of Computer Science

One full credit to satisfy the writing requirement

One full credit course in humanities or social science at or above the 1000 level

Two full credit courses, or one full credit in business, science, or engineering at or above the 1000 level

One half credit course in business, science or engineering at or above the 2000 level

Two half credit electives of computer science at or above the 3000 level

Three half-credit electives of computer science at or above the 4000 level

Two free half-credit electives at or above the 1000 level

Seven free half-credit electives at or above the 2000 level

2. Bachelor of Computer Science Honours

The purpose of the Honours program is to provide a more challenging degree program for graduate school. The program provides greater rigor and more analytic content than the Bachelor of Computer Science degree.

To enter the Honours program a student must consult with the Honours Faculty Advisor and obtain the approval of the Faculty of Computer Science.

Each computer science course at or above the 3000 level must be passed with a grade of at least 2.0 (C). The cumulative GPA across all courses must be at least 3.0 (B).

The Honours program may be combined with co-op education.

Faculty Requirements

In addition to the normal requirements of the Bachelor of Computer Science degree, course selection must include six courses chosen as follows:
- five half-credit courses of computer science at or above the 4000 level chosen in consultation with the thesis supervisor to ensure that the student has the appropriate background
- CSCI 8873.03 (i.e., successfully complete and present an Honours Thesis)

Students must meet these requirements and who obtain a GPA of 3.7 (A-) or higher in all computer science courses will receive the degree Bachelor of Computer Science with First Class Honours.

3. Minors for the Bachelor of Computer Science

Honours students in the Bachelor of Computer Science program may add a Minor in many subjects from the Faculties of Arts and Social Sciences, Management, Science and the College of Sustainability. Available minors are listed in the College of Arts and Sciences section of the undergraduate calendar.

Students are seeking the requirements for a minor should consult the corresponding department's section of the undergraduate calendar. The minor requirements are in addition to the normal Bachelor of Computer Science requirements. Students wishing to pursue a minor should consult their relevant department and a Faculty of Computer Science academic advisor.

4. Co-operative Education Programs

All programs in Computer Science have a Co-operative Education option. This requires the completion of three Co-op work terms.

The Co-op office receives requests from employers for Co-op placements and advertises these to qualifying students. Students apply for these positions and are interviewed by the employer.

Students interested in the Co-op program should apply to register for CSCI 8890.00 in their second year.

5. Specializations

The following specializations have been approved for the following Bachelor of Computer Science programs: BESC, BESC Co-op, BESC Honours, BESC Honours with Co-op, BESC Honours Conversion, BESC Honours Conversion with Co-op:
- Graphics, Gaming, and Media
- Artificial Intelligence and Intelligent Systems
- Communication Technologies and Cyber Security
- Data Science

The specializations have the following requirements:
- Graphics, Gaming, and Media specialization requires a student to take three compulsory and two electives from a list of elective courses. Required courses are:
  - CSCI 3161: Introduction to Computer Graphics with Animation
  - CSCI 3162: Digital Media
  - CSCI 4166: Game Design and Development

Elective courses are:
  - CSCI 3154: AI and Games
  - CSCI 4166: Computer Graphics
  - CSCI 4166: Visualisation
  - CSCI 4167: Advanced Computer Animation

Artificial Intelligence and Intelligent Systems specialization requires a student to take two compulsory and two electives at the fourth year level from a list of elective courses. Required courses are:
  - CSCI 3151: Web Intelligence
  - CSCI 3154: AI with Gaming Applications

Elective courses are:
  - CSCI 4141: Information Retrieval
• CSCI 4144: Data Mining and Data Warehousing
• CSCI 4152: Natural Language Processing
• CSCI 4155: Machine Learning with Robots

Communication Technologies and Cyber Security: specialisation requires a student to take two required courses and three electives from a set of elective courses. Required courses are:
• CSCI 3120: Operating Systems
• CSCI 3171: Network Computing

Elective courses are:
• CSCI 3172: Web-Centric Computing
• CSCI 4116: Cryptography
• CSCI 4171: Networks and Communications
• CSCI 4174: Network Security
• CSCI 4176: Mobile Computing

Data Science specialisation requires a student to take three compulsory courses and three electives from a list of elective courses. Required courses are:
• CSCI 4146: The Process of Data Science
• CSCI 4148: Visual Computing
• One of CSCI 3151 Web Intelligence or CSCI 4125 High Performance Computing

Elective courses are:
• Either CSCI 3151 Web Intelligence or CSCI 4125 High Performance Computing, not taken as a required course
• CSCI 3154 Introduction to Artificial Intelligence with Gaming Applications
• CSCI 4140 Information Retrieval
• CSCI 4144 Introduction to Data Mining and Data Warehousing
• CSCI 4152 Natural Language Processing
• CSCI 4155 Machine Learning with Robotics
• CSCI 4165 Visualization
• STAT 2000 Statistical methods for Data Analysis and Inference
• STAT 3140 Regression and Analysis of Variance

Degree Requirements and Specialization Requirements

Note that to obtain a degree, the degree requirements must be satisfied. To obtain a specialization certificate, requirements for the specialization, in addition to the degree requirements, must be satisfied. Students need to contact the Undergraduate Administrator to request a certificate and a note on their transcript. Additional information on the specializations is available at http://www.cs.dal.ca/undergraduate specialization.

6. Entry Points to Bachelor of Computer Science

There are multiple entry points into the Bachelor of Computer Science program. First-Year Entry: Students are advised to apply directly to the Faculty of Computer Science but may take their courses within the BSc first year and transfer to Computer Science at the beginning of their second year.

Students who wish to transfer to the Bachelor of Computer Science program from other disciplines may be able to do so, but will have to make up any required courses that are missing. See also the Academic Regulations section for the Faculty of Computer Science on page 37.

7. Accreditation and the Profession

Of particular importance to the Faculty is the accreditation of the undergraduate program by the Computer Science Accreditation Council (CSAC), which is responsible for accreditation of computer science programs in Canada. Accreditation provides our graduates with an accelerated path towards achieving the professional designation of Information Systems Professional of Canada (IS.P.).

The Bachelor of Computer Science, Bachelor of Computer Science with Co-op, Bachelor of Computer Science with Honours, and Bachelor of Computer Science with Honours and Co-op are accredited by CSAC.

The co-operative program offers work terms to our students, thus providing an additional link between the Faculty and the Profession.

C. Bachelor of Science and Bachelor of Arts with Computer Science

1. Bachelor of Science Major in Computer Science

The Faculty of Computer Science offers a Bachelor of Science degree with a Major in Computer Science. The program of studies is similar to the Bachelor of Computer Science, but with more flexibility in selection of elective courses. The program may be of benefit for students who want to use it as a basis to enter other professional programs such as Education, Medicine, or Law. However, unlike the Bachelor of Computer Science degree, it does not meet CSAC accreditation requirements. Students interested in this degree option will find further information on the Faculty website at http://www.cs.dal.ca and should consult with a Faculty advisor.

2. Double Majors and Combined Honours

The following degree programs are available to students interested in interdisciplinary studies where the larger number of majors credits in Computer Science: Bachelor of Science (20 credit) with Double Major, Bachelor of Science (20 credit) with Combined Honours, Bachelor of Arts (20 credit) Double Major and Bachelor of Arts (20 credit) Combined Honours.

Combined Honours

Students interested in taking honours in Computer Science and another subject as a combined program should consult the honours advisor and have suitable courses arranged.

A combined honours program may well be an appropriate choice for many students. If a student is contemplating graduate work, it should be borne in mind that the work in either subject of a combined honours program may be insufficient for entry to a regular graduate program and that a qualifying year may be necessary.

Students who wish to arrange interdisciplinary programs (with fields such as Mathematics, Physics, Psychology, and others) are invited to discuss their interests with the appropriate department and the Undergraduate Chair of the Faculty of Computer Science.

D. Scholarships

Scholarships and bursaries are available to both new and returning students. See the Awards and Financial Aid section of this calendar.

E. Minor in Computer Science for Non-Computer Science Major BSc

The Minor in Computer Science is available to students registered in the BSc 20 credit major and honours programs offered by the Faculty of Science. The requirements are as for the appropriate program with the completion of the following courses to fulfill the Computer Science Minor:
• CSCI 1100.03
• CSCI 1101.03
• CSCI 2100.03
• CSCI 2101.03
• CSCI 3120.03
• CSCI 3130.03 and CSCI 3136.03

Combined Honours

(20 credit) with Combined Honours, Bachelor of Arts (20 credit) Double Major and Bachelor of Arts (20 credit) Combined Honours.

III. Course Descriptions

CSCI 1100.03: Computer Science I.

This course provides a general introduction to computer science and the hardware and software of computers. The main focus is on programming skills and how to apply these skills in solving a variety of problems. Algorithmic concepts are included.

PREREQUISITE: Nova Scotia PreCalculus or Calculus Math or equivalent

EXCLUSION: CSCI 1202.03

CSCI 1101.03: Computer Science II.

This course is a continuation of CSCI 1100.03. It focuses on programming and linear data structures. PREREQUISITE: CSCI 1100.03 or INFX 1600.03 or INFX 1604.03
Majors.

CSCI 1106.03: Animated Computing.
This course provides an introduction to the areas of computing: robotics and game design. Students will learn how to program simple robots and will use empirical methods to investigate various aspects of robotics, such as sensors and actuators, uncertainty, knowledge representation, and failure detection and recovery. Students will also learn how to design and develop simple games and will investigate aspects of game design, such as event-driven frameworks and collision detection. Students will use empirical methods to investigate the physics-centric aspects of game design. Students work in groups to complete small robotics and game design projects.

CSCI 1107.03: Social Computing.
A hands-on course on technologies and the underlying infrastructure for social computing, including digital collaboration media, social networks and visualization, and their social impact. Students will use various applications, such as Twitter, Yik Yak, and wikis to examine their functionalities, and explore infrastructure technologies including databases, computer networks and Web-servers that facilitate their execution.

CSCI 1200.03: Introduction to Computing for Non-Majors.
This is a course of technical computer literacy. Students can expect to learn about computers in a general way and how computers affect the way we live and work. Students will be given an opportunity to become familiar with typical applications of software such as word processors, spreadsheets and database applications. Other topics will include the use of the internet, creation of web pages, and simple programming concepts. No previous computer experience is required. This course is open to Arts and Social Sciences and Health Education students only. NOTE: This course cannot be counted towards the Bachelor of Commerce or a Minor in Business.

CROSS-LISTING: ASCI 1000.03

CSCI 2100.03: Communication Skills: Oral and Written.
The course is designed to help students become more successful communicators by examining the communication process from both a theoretical and practical viewpoint. It teaches students to formulate sound arguments as well as to present persuasive arguments. In examining their audience and to deliver accurate, effective messages. Written assignments and oral presentation will enable students to apply the skills they have learned in class as well as to develop a useful set of practical tools that will allow them to communicate effectively and with confidence in a variety of settings.
PREREQUISITE: It is recommended that students have completed their Writing Requirement.
CROSS-LISTING: ENGL 2100.03
EXCLUSION: COMM 2701.03, COMM 1701.03, COMM 1702.03, MGMT 3602.03

CSCI 2110.03: Computer Science III.
This course provides a comprehensive introduction to data structures and algorithms, including their design, analysis, and implementation. In discussing design and analysis there is a strong emphasis on abstraction. In discussing implementations, general approaches that are applicable in a wide range of programming languages are emphasized, in addition to a focus on the details of implementations. Topics include an introduction to asymptotic analysis and a review of basic data structures (stacks, queues, lists, vectors), trees, priority queues, dictionaries, hashing, search trees, sorting (MergeSort, QuickSort, RadixSort) and sorts, and graphs (traversals, spanning trees, shortest paths).
PREREQUISITE: CSCI 1101.03

CSCI 2112.03: Discrete Structures I.
See the course description for MATH 2112.03 in the Mathematics section of this calendar.
CROSS-LISTING: MATH 2112.03

CSCI 2113.03: Discrete Structures II.
See the course description for MATH 2113.03 in the Mathematics section of this calendar.
CROSS-LISTING: MATH 2113.03

CSCI 2121.03: Computer Organization with Assembly
Language.
This course deals with the fundamentals of computer organization; assembly language is used as an aid to studying computer organization. Topics include digital logic, ALU and CPU design, object code, microprogramming, CISC, RISC, and parallel computers.
PREREQUISITE: CSCI 1101.03
CO-REQUISITE: CSCI 2112.03 and CSCI 2132.03

CSCI 2123.02: Software Development.
This course presents techniques for programming and software development in a procedural language. It reviews the basics of procedural programming and introduces students to source code management, testing strategies, debugging, and basic scripting techniques.
PREREQUISITE: CSCI 1102.03 or suitable prior programming experience.

CSCI 2141.03: Introduction to Database Systems.
The course introduces students to the concepts of database management systems and database design. Topics include: Database (DB) components, DB design using entity-relationship (relational and object oriented), SQL, and transactional properties and techniques to support them. The concepts will be reinforced using one or more Database Management Systems.
PREREQUISITE: CSCI 1108.03
CROSS-LISTING: INF/CS 2640.03
EXCLUSION: CSCI 2140.03

CSCI 3101.03: Social, Ethical and Professional Issues
in Computer Science.
Computers can enable people to do things that our present laws and policies were not formulated to cover (hacking, sharing data on the internet, and computers sharing data). In such cases, people need to be able to decide for themselves the best course of action, and explain their decision. This course aims at developing the ethical reasoning skills and sensitivities that computer professionals will need to make good decisions and to justify them. The course includes a general introduction to ethical theories and their use in making and justifying decisions. We then consider various issues and case studies, illustrating the kinds of problems that can arise from the use and misuse of computers and technology; the responsibilities of computing professionals; ethics on the internet (hacking, computer crime, netiquette); privacy and information; intellectual property; social and political issues (digital divide, computers and work, the internet as a democratic technology).
CROSS-LISTING: PHIL 2460.03

CSCI 3110.03: Design and Analysis of Algorithms I.
This course covers techniques for the design and analysis of efficient algorithms and data structures. Topics include asymptotic analysis, divide and conquer algorithms, greedy algorithms, dynamic programming, data structure design, optimization algorithms, and amortized analysis. The techniques are applied to problems such as sorting, searching, identifying graph structure, and manipulating sets.
PREREQUISITE: CSCI 2110.03 and CSCI 2112.03
CROSS-LISTING: MATH 3170.03
EXCLUSION: CSCI 3110.03

CSCI 3111.03: Introduction to Numerical Linear
Algebra.
Floating-point arithmetic. Numerical solution of linear systems of equations. Gauss elimination methods and iterative methods; condition number of problems and of algorithms; estimation of condition numbers. Numerical calculation of eigenvalues; QR and LR algorithms; singular value decomposition; Gram Schmid orthogonalization. Use is made of program libraries such as Linpack, Eisspack and Matlab.
PREREQUISITE: MATH 2301.03 and CSCI 1101.03
CROSS-LISTING: MATH 3170.03

CSCI 3120.03: Operating Systems.
The course is an introduction to modern operating systems. Topics include dynamic process activation, system structure and evaluation, memory management, process management, process scheduling, recovery procedures, concurrency, deadlocks, resource allocation, protection, and operating systems implementation.
PREREQUISITE: CSCI 2110.03, CSCI 2121.03, and CSCI 2132.03
CSCI 3121.03: Computer Systems Architecture. The primary objective of this course is to give a comprehensive understanding of the structure and function of a computer system from an architecture and implementation viewpoint. The course focuses on the design of the processor, memory systems, input/output systems, networking, and operating systems. The course also provides students with a basic understanding of the role of computer architecture in the design of computer systems. PREREQUISITE: CSCI 2120.03 EXCLUSION: ECS 3020.03

CSCI 3130.03: Introduction to Software Engineering. This course examines the process of software development, from initial planning through implementation and maintenance. A brief survey of available tools and techniques will be presented. The course will focus on the topics of analysis, planning, estimating, project management, design, testing, and evaluation. This course will emphasize the role of software engineering in the development process. PREREQUISITE: CSCI 2106.03, CSCI 2132.03, or INFX 3600.03 CROSS-LISTING: INFX 3600.03

CSCI 3132.03: Object Orientation and Generic Programming. This course covers the fundamental concepts of object-oriented programming: behavior, inheritance, encapsulation, and polymorphism. There is a discussion of the history of object-oriented programming, and introduction to some currently used object-oriented programming languages. PREREQUISITE: CSCI 2108.03 and CSCI 2132.03

CSCI 3136.03: Principles of Programming Languages. This course provides a comparative study of advanced programming languages and features. Topics include statement types, data types, variable binding, and parameter passing mechanisms. Formal methods for syntax and semantic description of programming languages are examined. PREREQUISITE: CSCI 2108.03 and CSCI 2132.03

CSCI 3151.03: Web Intelligence. The Web and on-line digital libraries constitute the largest repository of interconnected local knowledge ever created. Search engines have made this knowledge accessible to the lay person. Social networks further enhance the exchange of knowledge among individual Web users. Mining the Web and associated digital libraries is the next challenge that promises to change the nature of scientific discovery, and to dramatically impact the way business is conducted. This course will focus on core Artificial Intelligence concepts and algorithms in the context of Web and text mining: machine learning, natural language processing, semantic web, social networks, and Web mining. PREREQUISITE: CSCI 2122.03, CSCI 2141.03, and STAT 2600.03 and MATH 2010.03

CSCI 3154.03: Introduction to Artificial Intelligence with Gaming Application. This course covers the breadth of Artificial Intelligence techniques and as such is divided into roughly two parts: Symbolic AI and Machine Learning. Throughout the course the problem of decision making for Non-Play Characters in computer games will form the case study and application examples used to illustrate the AI techniques studied. Symbolic AI will cover First-order Logic, Forward/Backward chaining, Rule-based systems, and Fuzzy Logic. The relative trade-offs in the application of such architectures to NPC decision making will be developed. The role of Learning systems in Goal-oriented decision making will also be introduced; where this also make use of search based problem solving and the A* algorithm. Search and its utility in evaluation of next move in turn-wise games will also be specifically investigated as well its introduction to Bayesian Decision making will be made, where this leads to causal reasoning and adaptation. The second half of the course will introduce Machine Learning from the basic design decisions of Representation, Credit assignment and Cost Function. Two paradigms will be investigated in particular: - Gradient descent Neural Networks and Evolutionary computation - where these illustrate the relative trade-offs implicit in the three ML design decisions. Case studies and laboratories illustrating these properties include learning to play checkers, recognizing Poker hands, learning NPC behaviors through evolution. PREREQUISITE: CSCI 2108.03, CSCI 2132.03, and CSCI 2132.05 EXCLUSION: CSCI 4684.03

CSCI 3160.03: Designing User Interfaces. This course covers the concepts and techniques underlying the design of interfaces for computer systems. Both human factors and the technical methods of user interface design are covered. Students will learn how to apply various techniques through the design, creation, and testing of a prototype system. PREREQUISITE: CSCI 2125.03 or INFX 2616.03 or INFX 2620.03 CO-REQUISITE: CSCI 2140.03 or CSCI 2141.03

CSCI 3161.03: Computer Animation. This course introduces students to higher-level computer animation programming. Through the development of a significant project using industry standard graphics libraries, students will learn proven techniques that have become common currency in the field of computer animation. PREREQUISITE: CSCI 2108.03, CSCI 2132.03 and MATH 2010.03

CSCI 3162.03: Digital Media. This course covers technical aspects of digital media, including images, videos, and sound. Topics covered include digital representation, compression, decomposition, and multimedia generation. PREREQUISITE: MATH 1000.03, MATH 2010.03, CSCI 2110.03 EXCLUSION: CSCI 4164.03

CSCI 3171.03: Network Computing. This course gives students a foundation in computer networks. It presents a top-down view of the layered architectural elements of communication systems, focusing on the Internet and TCP/IP. Topics include client/server systems, packet switching, protocol stacks, queuing theory, application protocols, socket programming, remote service calls, reliable transport, UDP, TCP, and security. PREREQUISITE: CSCI 2108.03, CSCI 2132.03 and STAT 2600.03

CSCI 3172.03: Web-Centric Computing. This course provides a solid grasp of core WWW technologies and a conceptual framework for understanding the development of the WWW and its applications. The course explores interactive and non-interactive applications with a special emphasis on content management systems, e-commerce, and e-commerce applications. PREREQUISITE: CSCI 2140.03 or CSCI 2141.03) and CSCI 3117, or INFX 2601.03 and INFX 2601.03

CSCI 3190.03: Community Outreach. This is a project-oriented course where the result of the project is a real-world implementation that meets the requirements of a community group such as a charity, non-profit organization, or educational institution. Students work in teams on the entire application development life cycle from requirements analysis through to maintenance. A library of course-related project requirements and guidelines will be provided. The course also provides students with the opportunity to apply requirements analysis, systems design, and database design methodologies in a real-world context. CO-REQUISITE: CSCI 3171.03 may be taken as a co-requisite

CSCI 3191.03: Community Outreach II. This course provides an overview of current research in the area of computer science, focusing on the development of new technologies and their impact on society. Students will work on projects related to real-world applications. PREREQUISITE: CSCI 2108.03, CSCI 2132.03, and (CSCI 3190.03 or CSCI 2141.03)

CSCI 4112.03: Theory of Computation. This is a course on formal languages and computational models. Topics covered include finite automata, pushdown automata, Turing machines, undecidability and recursively enumerable languages. Some applications to computer science are also discussed such as compiler design and text processing. PREREQUISITE: CSCI 2125.03 and CSCI 3186.03 CROSS-LISTING: MATH 4686.03

CSCI 4113.03: Design and Analysis of Algorithms II. This course covers advanced algorithms and their applications. Students will learn how to analyze various algorithms through the design, creation, and testing of a prototype system. PREREQUISITE: CSCI 2125.03 or INFX 2616.03 or INFX 2620.03
### 332 Computer Science

**CSCI 4114.03: Formal Aspects of Software Engineering.**

This course deals with formal specifications of software, techniques for verification of computer programs and software testing.

**PREREQUISITE:** CSCI 3100.03

**CROSS-LISTING:** MATH 4130.03

---

**CSCI 4115.03: Topics in Graph Theory.**

See the course description for MATH 4150 in the Mathematics section of this calendar.

**PREREQUISITE:** See Mathematics section

**CROSS-LISTING:** MATH 4150.03

---

**CSCI 4116.03: Cryptography.**

See the course description for MATH 4160 in the Mathematics section of this calendar.

**PREREQUISITE:** See Mathematics section

**CROSS-LISTING:** MATH 4161.03

---

**CSCI 4117.03: Advanced Data Structures.**

Data structures play a central role in many modern applications, and are essential building blocks of efficient algorithms. This course covers classical results and recent advances on data structures. Topics covered include the (O(log n) bound in sorting and searching, online optimization of search structures, fast text retrieval, space efficient data structures for large data sets, and persistent data structures.

**PREREQUISITE:** CSCI 3100.03

---

**CSCI 4121.03: Advanced Computer Architecture.**

This course will focus on the basic principles of computer architecture with an emphasis on quantitative analysis of the effect of architectural design decisions on system performance and the price-performance trade-offs necessary in real computer designs. This includes instruction set design issues (CISC vs. RISC), instruction level parallelism, implementation methods, pipelining, pipeline hazards, interrupts, the relationship with compiler technology, and memory system design. Several representative architectures will be used as examples, with emphasis on modern RISC processors.

**PREREQUISITE:** CSCI 3121.03

---

**CSCI 4122.03: Software Design Methods for Real Time Systems.**

This course will include the following topics: real-time executive, architectures for real time systems, design methods, concurrency and synchronization, resource allocation, error handling and safety issues.

**PREREQUISITE:** The CSCI 3120.03, CSCI 3110.03 and permission of the instructor

---

**CSCI 4125.03: High Performance Computing.**

This course explores the design, implementation, and evaluation of computer programs for applications in which performance is a central issue. In the sequential computing setting, it explores topics such as profiling, cache effects, I/O performance, floating-point issues, compiler directives and performance tuning. In the parallel computing setting, it explores topics such as profiling, cache effects, I/O performance, floating-point issues, compiler directives and performance tuning.

**PREREQUISITE:** CSCI 3120.03, CSCI 3130.03 and permission of the instructor

---

**CSCI 4126.03: Ubiquitous Computing.**

Ubiquitous Computing moves computing off the desktop and into the fabric of our everyday lives. This course explores both systems and human–computer interaction. Students will design and implement a Ubiquitous computing application prototype.

**PREREQUISITE:** CSCI 3121.03

---

**CSCI 4131.03: Compiler Construction.**

An introduction to the major methods used in compiler implementation. Topics include lexical analysis and parsing methods, symbol table construction, run-time storage management, and code optimization.

**PREREQUISITE:** CSCI 2100.03, CSCI 2121.03, CSCI 2132.03 and CSCI 3136.03

---

**CSCI 4134.03: Software Architecture.**

Software Architecture is an important discipline for designers of software systems. It describes the abstractions, classifies the alternatives, enables tool support, and offers guidance when making choices appropriate to the software system design process. As software systems grow larger, good architectural design will play a major role in determining the success of a software system. This course covers four areas in software architecture: foundations of software architectures, tools for architectural design, analysis of software architectures, and "industry-rich" case studies.

**PREREQUISITE:** CSCI 3120.03 and CSCI 3115.03

---

**CSCI 4136.03: Software Testing and Quality Assurance.**

This course addresses systematic testing for software defects. The purpose of this kind of testing is risk reduction. The course explores risks and techniques for reducing them. Topics include software testing processes in practice, including use, integration and system testing; as well as exploratory, and regression testing; software testing methods and deliverables; software test tools; managing test technology; and other approaches to software quality assurance.

**PREREQUISITE:** CSCI 2132.03 and CSCI 3130.03

---

**CSCI 4137.03: Software Deployment, Maintenance, and Evolution.**

This course addresses issues arising after the Factory Acceptance Test: deployment, field support, and upgrades. Commercial software products (especially product lines) are delivered to many sites in many versions and are subject to an ongoing schedule of enhancements. Enterprise applications with many users must evolve, may run on different sites, and may require different versions. Topics include technical challenges of rollout, technical challenges of maintenance and evolution, and technical challenges of upgrading fielded systems.

**PREREQUISITE:** CSCI 3130.03

---

**CSCI 4138.03: Empirical Performance Modelling.**

This course addresses the testing of actual or simulated systems for quantitative measurement and prediction from empirical models. Topics include motivations for quantitative assessment; methodologies, point and performance models; pipeline hazards, interrupts, the relationship with compiler technology, and memory system design. Several representative architectures will be used as examples, with emphasis on modern RISC processors.

**PREREQUISITE:** CSCI 3110.03 and either ENG3 2032.03 or STAT 2060.03

---

**CSCI 4140.03: Advanced Database Systems.**

This course covers advanced database (DB) topics including, but not limited to: distributed and parallel systems, transaction processing, concurrency control and recovery, and distributed databases.

Additional topics may include object-oriented databases, multi-databases, data integration and data warehousing.

**PREREQUISITE:** CSCI 2441.03

**EXCLUSION:** CSCI 3140.03

---

**CSCI 4141.03: Information Retrieval.**

This course examines information retrieval within the context of full text databases. Topics include the major models of information retrieval, evaluation, searching and clustering, and hypertext.

**PREREQUISITE:** CSCI 2100.03 and (CSCI 2140.03 or CSCI 2141.03)

---

**CSCI 4144.03: Introduction to Data Mining and Data Warehousing.**

This course reviews main concepts in data mining and data warehouses including objectives, architectures, algorithms, implementations, and applications. The course covered includes operational information process, decision-oriented information process, data warehousing and On-Line Analytical Processing (OLAP), characterization mining, association rule mining, classification and prediction, and clustering. Selected system tools for data mining and data warehousing are introduced.

**PREREQUISITE:** CSCI 2441.03 or CSCI 3460.03

---

**CSCI 4145.03: Cloud Computing.**

Cloud computing provides users with the ability to access and use computational, storage, and interconnect resources as services offered by cloud providers. This course provides the students with the theoretical foundations of the cloud computing as well as with hands-on experience in using various cloud technologies. Topics covered are related to the types of cloud services, cloud...
animation. known kinematic techniques, physically based modelling, motion capture, and character algorithms in Computer Animation. Topics include interpolation based and The course introduces students to fundamental and advanced techniques and concepts, algorithms, data structures and the role of human perception.

Applications of visualization are broad, including computer science, geography, the social sciences, mathematics, science and medicine, as well as architecture and design. The course will cover all aspects of visualization including fundamental concepts, algorithms, data structures and the role of human perception.

The course introduces students to fundamental and advanced techniques and algorithms in Computer Animation. Topics include interpolation-based and kinematic techniques, physically-based modeling, motion capture, and character animation.

PREREQUISITE: CSCI 3161.03

CSCI 4163.03: Game Design and Development. This course covers the fundamentals of digital game design with an emphasis on team-based development. In this course students will produce a significant game using techniques and principles derived from established state-of-the-art industry practices. Topics include an examination of game design theories, programming architectures, audio-visual design and game production.

PREREQUISITE: CSCI 2100.03 and CSCI 3171.03

CSCI 4169.03: Usable Security. Human factors play an integral role in the effectiveness of security and privacy solutions, and it is important for security and privacy experts to understand how people will interact with the systems they develop. This course is designed to introduce students to a variety of usability and user interface problems related to privacy and security, and to give them experience in designing studies aimed at helping to evaluate usability issues in security and privacy systems.

Topics include human threat identification, security warning design, location privacy, privacy policies, web browser privacy and security, phishing, passwords, and secure communication.

PREREQUISITE: CSCI 3160.03

CSCI 4171.03: Networks and Communication. The primary objective of this course is to give the student a comprehensive understanding and specialized knowledge in the field of computer networks and communications. The course teaches through a systems approach to networks by examining the hardware and protocol components that comprise a network. The course also examines the interactions and interdependencies between protocols. Topics covered in this course include network protocols and concepts, transmission protocols, network architecture, routing and routing protocols, direct link networks, wireless networks, internetworking, and emerging network technologies.

PREREQUISITE: CSCI 2321.03 and CSCI 3171.03

CSCI 4174.03: Network Security. Security stands out as a critical issue in the design and deployment of information systems in general, and networks in particular. This course will deal with the design of secure information systems with emphasis on secure networking and secure information transfer. It will also include topical and emerging areas in security such as the establishment of an organization-wide security plan and biomorphic identification systems.

PREREQUISITE: CSCI 3160.03

CSCI 4176.03: Mobile Computing. This course covers the principles of mobile computing and the concepts and techniques underlying the development and deployment of mobile computing applications. Mobile computing is discussed from technological, application, and user perspectives. Topics are arranged along the lines of mobile technologies, development environments, application design for resource-limited devices, human-computer interaction, security, and mobile commerce.

PREREQUISITE: CSCI 2121.03 and CSCI 3171.03

CSCI 4180.03: Introduction to Computational Biology and Bioinformatics. This course introduces biology-related applications of computer science. No background in biology is assumed. The topics covered include the following: introductory molecular biology and evolution, genomics, similarity and homology, multiple sequence alignments, phylogenetics, structural bioinformatics and gene expression. The emphasis is on the applications of computer science to biology.

PREREQUISITE: CSCI 2312 and STAT 2600

CSCI 4181.03: Bioinformatics Algorithms. The discipline of bioinformatics applies sophisticated computational and statistical techniques to problems in the biological domain. This course will focus on a few bioinformatics-related challenges in depth, examining the complexity and efficiency of different approaches, the relationship between statistical optimality and biological reality, and the consistency (or lack thereof) among methods.

PREREQUISITE: CSCI 3110.03

CSCI 4190.03: Special Topics in Computer Science. This course examines topics determined by the interests of the students and the instructor.

PREREQUISITE: Permission of the instructor
CSCI 4191.03: Application Development Project. This is a project-oriented course for students to participate in distributed software development projects, such as the Undergraduate Capstone Open Source Project (www.ucosp.ca) initiative. Students work as part of a development team on new or existing projects for real-world applications. In this course students learn how to work in large development teams, which may be geographically distributed. Students implement portions of a large software project and give a public presentation on their work. Students work under supervision of a faculty member. A specific development project must be approved by the undergraduate chair in consultation with the instructor. PREREQUISITE: (CSCI 3120.03, CSCI 3104.03 and CSCI 3171.03) or INFX 4600.03.

CSCI 4192.03: Directed Studies. This course is a study of specific academic subject area not covered in another course offered at Dalhousie University, under close supervision of a faculty member. It typically consists of predetermined readings, discussions with the instructor, and a term paper summarizing the studied material. A specific directed studies course must be approved by the undergraduate chair in consultation with the instructor. PREREQUISITE: CSCI 3101.03, CSCI 3120.03, CSCI 3110.03, CSCI 3116.03, CSCI 3171.03.

CSCI 8873.03: Honours Seminar. This is a course through which students complete their Honours Thesis requirements. Honours students in Computer Science must register for this course or CSCI 8871/72. In this course, students complete their thesis research, write their honours thesis, and give public presentations of their work. In a normal course sequence, the student should have taken CSCI 4192 under the direction of their thesis supervisor. During this course, the student should have acquired the necessary background knowledge for their thesis research and formulated a research plan for their thesis work. Deviations from this sequence are possible. PREREQUISITE: Permission of the Honours Coordinator.

CSCI 8890.00: Co-Op Seminar. Students in the Bachelor of Computer Science Co-operative Education Program must register for this course, which orient students to the co-op system. Pass/fail grading applies to this course. PREREQUISITE: Permission of the Faculty of Computer Science.

CSCI 8891.00: Co-op Work Term 1. This course is the first work term for students in the Bachelor of Computer Science Co-operative Education Program. Pass/fail grading applies to this course. PREREQUISITE: CSCI 8890.00.

CSCI 8892.00: Co-op Work Term 2. This course is the second work term for students in the Bachelor of Computer Science Co-operative Education Program. Pass/fail grading applies to this course. PREREQUISITE: CSCI 8891.00.

CSCI 8893.00: Co-op Work Term 3. This course is the third work term for students in the Bachelor of Computer Science Co-operative Education Program. Pass/fail grading applies to this course. PREREQUISITE: CSCI 8892.00.

Informatics

I. Introduction
Informatics is the multidisciplinary study of how people transform technology, and how technology transforms us. It lies at the intersection of people, technology and information systems and focuses on the expanding relationship between information systems and the daily lives of people, both at home and at work. Informatics helps develop new uses for information technology in order to design solutions that reflect the way people create, use and find information, and it takes into account the social, cultural and organizational settings in which those solutions will be used.

Informatics professionals have very diverse jobs. Some typical activities include:
- assess information needs of organizations
- manage information projects
- solve organizational information flow problems
- make software package talks to each other
- model the information flows among a group of people
- design innovative user interfaces
- track health care resources
- design professional websites
- improve health care information systems
- develop business solutions

II. Degree Programs
A. Bachelor of Informatics

1. Program Structure
There is a choice of majors: Environment, Sustainability and Society, Specializations of your own design and Software Systems. Students should consult with the Faculty of Computer Science for details on other options that are being developed.

Elective courses are any courses of your own choosing, although no more than four may be at the 1000 level. The electives allow you to explore possible specializations and to follow personal interests.

A minor in Management is available to students registered in the BInf program. For further information, please see page 454 in the Management section of this calendar. Note: This increases the program requirements by one course.

The co-operative education program is a mandatory component of the Bachelor of Informatics. Students are required to complete three co-op work terms as part of their bachelor degree.

The co-op office receives requests from employers for co-op placements and advertises these to qualifying students. Students apply for these positions and are interviewed by the employer.

Co-op work terms are scheduled after terms 5, 6 and 7.

The normal academic sequence of terms follows:

<table>
<thead>
<tr>
<th>Yr/Term</th>
<th>Fall</th>
<th>Winter</th>
<th>Summer</th>
</tr>
</thead>
<tbody>
<tr>
<td>Year 1</td>
<td>A1</td>
<td>A2</td>
<td>FREE</td>
</tr>
<tr>
<td>Year 2</td>
<td>A3</td>
<td>A4</td>
<td>WT1</td>
</tr>
<tr>
<td>Year 3</td>
<td>A5</td>
<td>WT2</td>
<td>A6</td>
</tr>
<tr>
<td>Year 4</td>
<td>WT3</td>
<td>A7</td>
<td>A8</td>
</tr>
</tbody>
</table>

AT = Academic study term
WT = Co-op work term

2. General Requirements
- STAT 1060.03 Introduction to Statistics
- CSCI 3100.03 Computer Science I
- CSCI 3101.03 Computer Science II
See also the Academic Regulation section for the Faculty of Computer Science.

- Students who wish to transfer in to the Bachelor of Informatics program from
- First-Year Entry-Students are advised to apply directly to the Faculty of
There are multiple entry points in to the Bachelor of Informatics program.

6. Entry Points to Bachelor of Informatics

- At least five full credits must be at the 2000 level or higher.
- Your proposal must include career goals, a list of courses, a timeline, and a
- It is your responsibility to develop and submit to the Faculty a written proposal

5. Specialization of Your Own Design

- The Specialization of your own design follows the general Bachelor of Informatics requirements and must include the following:
  - CSCI 2110.03: Computer Science III
  - CSCI 2132.03: Software Development
  - CSCI 3113.03: Object Orientation and Generic Programming
  - CSCI 3160.03: User Interface Design
  - INFX 3172.03: Web-Centric Computing
  - INFX 4601.03: Project 4
  - INFX 4601.03: Project 5
  - six full credits in credits specified by the major
  - two full credits of free electives at or above the 1000 level
  - 1.5 full credits of free electives at or above the 2000 level
  - Completion of three co-op work terms

* Neither CSCI 3190.03 nor CSCI 3191.03 can be counted towards a Bachelor of Informatics degree.

3. Major in Software Systems

The Major in Software Systems follows the general Bachelor of Informatics requirements and must include the following courses:
  - CSCI 2110.03: Computer Science III
  - CSCI 2132.03: Software Development
  - CSCI 3113.03: Object Orientation and Generic Programming
  - CSCI 3160.03: User Interface Design
  - CSCI 3172.03: Web-Centric Computing
  - INFX 4601.03: Project 4
  - INFX 4601.03: Project 5
  - six full credits in credits specified by the major

4. Major in Environment, Sustainability and Society

The College of Sustainability offers a Major in Environment, Sustainability and Society in the BInf program. For complete details about the College, its programs and courses please see the College of Sustainability section on page 35 of the Calendar.

The Major in Environment, Sustainability and Society follows the general Bachelor of Informatics requirements and must include the following courses:
  - SUST 1000.06 (one full credit in fall term)
  - SUST 1901.06 (one full credit in winter term)
  - SUST 2000.06 or SUST 2100.06
  - three full credits from the approved list (at least two credits above 2000 level)

5. Specialization of Your Own Design

The Specialization of your own design follows the general Bachelor of Informatics requirements and must include the following:

- It is your responsibility to develop and submit to the Faculty a written proposal for these 14 courses.
- The 14 courses must be chosen from at least two disciplines other than Computer Science. Two of the disciplines must account for at least four credits each and at least 10 courses together.
- Your proposal must be developed in consultation with an undergraduate adviser from each of the disciplines.
- Your proposal must include career goals, a list of courses, a timeline, and a coherent justification for the proposal. It must be approved by the Faculty.
- At least five full credits must be at the 2000 level or higher.
- At least three full credits must be at the 1000 level or higher.

6. Entry Points to Bachelor of Informatics

There are multiple entry points in to the Bachelor of Informatics program:
  - First-Year Entry-Students are advised to apply directly to the Faculty of Computer Science.
  - Students who wish to transfer in to the Bachelor of Informatics program from other disciplines may be able to do so, but will have to make up any required prerequisites that are missing.

See also the Academic Regulation section for the Faculty of Computer Science.

7. Minor in Informatics Non-Computer Science Major BSc

The Minor in Informatics is available to students registered in the BSc-20 credit major and honours programs offered by the Faculty of Science. The requirements are for the appropriate program with the completion of the following courses to fulfill the Informatics Minor:

- INFX 2601.05
- 5. additional credits of INFX/CSCI at the 2000+ level, excluding CSCI 2100.03 and CSCI 3100.03

III. Course Descriptions

INFX 1606.03: Introduction to Web site creation.

This course introduces students to key web concepts and skills for creating and maintaining websites. This course is intended for students with no formal computer training. Topics include introduction to the Web, hyper-text markup languages such as HTML, style sheets, client-side programming, multimedia foundations, dynamic content and website organization and maintenance.

EXCLUSION: INFX 1600.18

INFX 1615.03: Concepts of Computing.

This course introduces some key concepts in computing and places them in context with a survey of applications. The skills developed in this course include research, reduction, problem solving and abstraction. The themes covered are the following: Data and storage, operating systems, networking and the Internet, database systems, artificial intelligence and computer graphics. This course is eligible to partially cover the writing requirement for students in the Bachelor of Computer Science, the Bachelor of Informatics and Bachelor of Science, Computer Science.

INFX 1616.03: Applications of Computing.

This course covers professional aspects of the computing industry. The main themes are: project management, software engineering and computer languages. It explores how technological advances impact the workplace for non-technical people. It also includes a module on proofreading and editing. This course is eligible to partially cover the writing requirement for students in the Bachelor of Computer Science, the Bachelor of Informatics and Bachelor of Science, Computer Science.

INFX 1690.03: Project Management Theory and Practice.

This course provides the basics of Informatics and technology project management. This course teaches both the theory required and allows for practical experience. Students work in project teams to solve practical informatics problems. This course is the first in a series of project courses that gives students the opportunity to develop technical and professional skills. Students are expected to take this course in their first year of study.

EXCLUSION: INFX 1600.18

INFX 2601.03: Introduction to Information Security.

Information security is becoming increasingly important in today's networked world, and is impacting every aspect of our lives including finance, healthcare, government, education, arts and entertainment. The objective of this course is to teach the basic principles of information security from the perspective of providing security assurances and its best practices for the real world. Topics include encryption, firewalls, viruses, operating system security, secure communications and authentication, virus protection, secure credit card and bank transactions, wireless security, computer forensics, identity theft, and protection, and phishing and biometric security.

EXCLUSION: INFX 2201.03

INFX 2640.03: Introduction to Database Systems.

This course introduces students to the concepts of database management systems and database design. Topics include: Database (DB) components, DB design using entity-relationship (relational and object oriented), SQL, and transactional properties and techniques to support them. The concepts will be reinforced using one or more Database Management Systems.

EXCLUSION: CSCI 2141.03
INFX 2670.03: Introduction to Server Side Scripting.
A server side scripting language is used to create web pages with dynamic content. The course provides the technology necessary for connecting client web pages to web servers and processing and storing information obtained using forms during web sessions.
PREREQUISITE: CSCI 1100.03 and INFX 1606.03
CROSS-LISTING: CSCI 2170.03
CO-REQUISITE: INFX 2640.03 or CSCI 2141.03

INFX 2690.03: Integrated Studies 1.
Students work in project teams to solve a practical informatics problem. Team members are drawn from all years of study. This project gives students an opportunity to develop their technical and professional skills.
PREREQUISITE: First year writing requirement

INFX 2691.03: Integrated Studies 2.
This course is a continuation of INFX 2690.03
PREREQUISITE: INFX 2690.03, INFX 1606.03, CSCI 1100.03

INFX 3600.03: Integrated Studies 3.
This course is a continuation of INFX 2691.03 with the development of leadership skills.
PREREQUISITE: INFX 2640.03, INFX 2670.03, INFX 2691.03

INFX 3601.03: Integrated Studies 4.
This course is a continuation of INFX 3600.03
PREREQUISITE: INFX 3600.03

INFX 3630.03: Introduction to Software Engineering.
See the course description for CSCI 3130.03 in the Computer Science section of this calendar.
PREREQUISITE: CSCI 2101.03, CSCI 2132.03, or INFX 3600.03
CROSS-LISTING: CSCI 3130.03

INFX 3690.03: Research Methods.
Organizational needs for information may not be known a priori, and may need to be established by surveys. This course prepares students to conduct research requiring measurement, sampling, and data analysis and reporting. It also deals with ethical issues and research design.

INFX 4600.03: Integrated Studies 5.
Continuation of INFX 3690.03
PREREQUISITE: CSCI 3130.03, INFX 2690.03, and (INFX 3601.03 or CSCI 3191.03)

INFX 4601.03: Integrated Studies 6.
Continuation of INFX 4600.03
PREREQUISITE: INFX 4600.03
Faculty of Engineering

I. Engineering as a Profession

Engineering is an important profession. Virtually all aspects of modern life are involved with this fascinating discipline. Engineering education at Dalhousie is demanding, because the engineering profession is demanding. Society expects its technical problem-solving skills to offer answers to some of the most difficult questions around, questions related to the environment, productivity, information technology, communications, transportation, and more. In general, the engineering enterprise contributes not only to human welfare, but also to the sustainable development of our resources. Engineering education provides great rewards for the engineer of the future. Specifically, there is the personal satisfaction of following a career where one’s personal expertise can benefit fellow humans and contribute to the making of a better world.

The Faculty of Engineering at Dalhousie University prepares its students with the problem-solving skills needed for lifelong exploration in a field that answers some of today’s most pressing questions. The Faculty of Engineering fosters a close tradition of providing engineering education for students in the Atlantic Provinces that started in 1907 with the founding of the Nova Scotia Technical College. Its graduates occupy many important positions throughout Canada and in many other countries.

The Faculty of Engineering offers undergraduate curricula leading to the degree of Bachelor of Engineering in the following disciplines:
- Chemical Engineering
- Civil Engineering
- Electrical Engineering
- Environmental Engineering
- Industrial Engineering
- Materials Engineering
- Mechanical Engineering
- Mineral Resource Engineering

The Faculty also offers a Bachelor of Applied Science in Food Science (admission suspended, pending review), and post-graduate studies at the master’s and doctoral level.

For students who are eligible, the Faculty of Engineering offers a Bachelor of Engineering Co-operative Education program that integrates academic study with university-approved industrial experience. Graduation from this program requires satisfactory performance in both areas. The schedule of study and work terms varies according to the discipline, details of which are outlined in Section E of the Engineering curricula in this calendar.

The co-operative education system requires students to alternate periods of study with periods of university approval, full-time, paid employment. The period of employment is called a work term and is normally four months (16 weeks) in length. Some programs combine two or more four-month work terms. Work terms have academic requirements that must be completed in addition to the requirements of the employer.

The co-op degree program covers almost five calendar years, comprising eight or nine terms (depending on the area of specialization) each consisting of about four months’ duration of university work on campus which are pursuits alternately with four-month terms of supervised training in the practical experiences fundamental to the development of the graduate engineer. In a typical program of study, the total time spent in academic study is the same as that encountered in the usual course of four academic years.

Graduation from the University is the beginning of a lifelong learning experience. After completion of formal studies leading to the Bachelor of Engineering degree, and being admitted to an Engineer in Training (EIT) by an Association of Professional Engineers in Canada, four years of suitable experience are required as a condition of admission to the profession of Engineering.

The practice of engineering is regulated, by statute, in all Canadian provinces and territories. To become a Professional Engineer you must satisfy the requirements of the licensing bodies. These requirements include a degree from an accredited program, successful completion of a professional practice (law and ethics) examination, and suitable experience. Accreditation of the degree programs by the CEAB is the mechanism by which graduates qualify for registration as Professional Engineers without the need to undertake additional examinations in specific technical subject areas. The EIT programs described in this calendar have been specifically designed to satisfy the criteria of the Profession and are evaluated regularly by the Canadian Engineering Accreditation Board (CEAB) of Engineers Canada. The Faculty will not graduate any student who does not meet these requirements because this would jeopardize accreditation for the programs. The department responsible for the appropriate program will use these requirements in determining the suitability of student elective course selections. The baccalaureate programs in all disciplines are accredited by the Canadian Engineering Accreditation Board.
II. Degree Programs

A. Undergraduate

1. Engineering

1.a Bachelor of Engineering

Students who have successfully completed the academic study program in any of the disciplines will be granted the degree of Bachelor of Engineering.

1.b Bachelor of Engineering with Distinction

Students who have successfully completed the requirements for the degree of Bachelor of Engineering, and have obtained a Cumulative Grade Point average of at least 3.7, will be granted the degree of Bachelor of Engineering with Distinction.

1.c Bachelor of Engineering with Sexton Distinction

Dr. F.H. Sexton was the President of the Nova Scotia Technical College since its establishment in 1909 until his retirement in 1947. To honour his contributions, the Faculty of Engineering awards the designation of Sexton Distinction to each undergraduate student who has taken a full course load and obtained a cumulative Grade Point Average of at least 3.85 or higher with no failed marks during their program beginning in Academic Term 5.

1.d Co-operative Program Designation

Students who have successfully completed the requirements for the degree of Bachelor of Engineering and who, in addition, have successfully completed three four-month work terms, each of a minimum of 14 weeks, with a minimum of 35 hours per week, will receive the "Co-operative Education" designation on their degree.

1.e Diploma of Engineering

Students who have successfully completed the academic study program in the first four terms in any of the disciplines will be granted the Diploma of Engineering.

1.f Combined Bachelor of Science/Diploma of Engineering

Students may register in a combined Bachelor of Science Bachelor of Engineering program. Those who successfully complete the requirements as outlined in the Concurrent Programs sections will be awarded the Diploma in Engineering and the 15 credit Bachelor of Science Degree.

1.g Combined Bachelor of Arts/Diploma of Engineering

Students may register in a combined Bachelor of Arts Bachelor of Engineering program. Those who successfully complete the requirements as outlined in the Concurrent Programs sections will be awarded the Diploma in Engineering and the 15 credit Bachelor of Arts Degree.

2. Food Science

Bachelor of Applied Science

This is a standard 20 credit curriculum. Consult the Food Science section for details.

B. Graduate

1. Master of Applied Science

Students who have successfully completed the course requirements for the degree and who have submitted and defended orally an acceptable thesis, will be awarded the degree of Master of Applied Science.

2. Master of Engineering

Students who have successfully completed the course requirements for the degree and submitted an acceptable project report, will be awarded the degree of Master of Engineering.

3. Master of Engineering (Internetworking)

This is a 10-month plus internship project interdisciplinary Master’s Degree program focused on the theory and technology of the Internet. This program has been designed to prepare individuals to play an active role in the rapidly expanding field of Internetworking. Students who complete the prescribed ten courses and a project course will be awarded the MEng (Internetworking).

4. Master of Science

Students who have successfully completed the course requirements for the degree in Engineering Mathematics or Food Science and who have submitted and defended orally an acceptable thesis or project report, shall be awarded the degree of Master of Science.

5. Doctor of Philosophy

Students who have successfully completed the course requirements for the PhD degree, passed their comprehensive examination, and submitted and defended orally a satisfactory thesis, will be awarded the degree of Doctor of Philosophy.
Engineering

I. The Associated University Program

Students who have completed the degree requirements for a Diploma of Engineering or a Certificate of Applied Science from one of the Associated Universities are admissible to the Upper Division in the Faculty of Engineering. Admission to specific programs is competitive and is based on the students’ academic standing. The Associated Universities are:

- Acadia University
  Wolfville, Nova Scotia
  A. Mitchell, Director
  The Ivan Curry School of Engineering

- Cape Breton University
  Sydney, Nova Scotia
  E. MacLLellan, Director
  Diploma in Engineering Program

- St. Francis Xavier University
  Antigonish, Nova Scotia
  F. Comans, Chairman
  Department of Engineering

- Saint Mary’s University
  Halifax, Nova Scotia
  A. Merchant, Director
  Division of Engineering

- University of Prince Edward Island
  Charlottetown, Prince Edward Island
  S. Champion, Chairman
  Engineering Department

Each of the Associated Universities establishes its own entrance requirements. Dalhousie University recognizes all of the Associated Universities and enforces proper standards of achievement by means of the Associate University’s Degree of Engineering Committee. The program at each Associated University contains courses fulfilling the minimum entrance requirements established by the Senate of Dalhousie University. Students who complete the applied science or engineering program at an Associated University may receive a Certificate or Diploma and are normally admitted to the programs in Chemical, Civil, Electrical, Environmental, Industrial, Materials, Mechanical, or Mineral Resource at Dalhousie without examination. Students should ensure that their course selection of engineering courses on a letter of permission.

II. Academic Regulations

Courses on Letters of Permission

The academic program for a student will normally contain a maximum of two courses on a letter of permission. Working Rules also apply to all students.

Students are reminded that the academic regulations stated in the calendar and the regulations stated below, the current Faculty of Engineering Working Rules also apply to all students.

Course Grades

A student must achieve a grade of D or greater in each course of the curriculum and satisfy the regulations set out herein in order to graduate. Where Faculty regulations permit, a student who achieves a grade of F in a required course may write a supplementary examination to attempt to raise the grade to D or greater. If the grade is raised to at least D by means of a supplementary examination or if a supplementary examination is not permitted, the student must repeat the course. See also Supplementary, page 32.

A student is permitted to write a failed mandatory course only once. In the case of a failed elective course, a student may choose either to repeat the course or to substitute another elective course in lieu of the failed course. In the case of a substituted course only one such substitution is allowed. A student will be academically dismissed if the grade achieved in the repeated mandatory course or the repeated elective course or the substitution course is less than D.

Readmission After Academic Dismissal

A student who has been academically dismissed only once from their program may apply to be readmitted to the same program after a minimum of eight months from the time of dismissal, or, such a student may apply to be admitted to a different engineering program starting immediately. Readmission may be granted by the Faculty on the recommendation of the Department concerned. A department may readmit a student who has been academically dismissed, subject to special academic conditions set by the department, which are based on an evaluation of the student’s academic record. See also Academic Dismissal, page 32.

Scholarships

Only those students who are registered for a full load of courses as measured by the curriculum of the program concerned will be eligible for scholarships and awards in the Faculty of Engineering.

Supplementary Examinations

Supplementary examinations may be offered to students in order (1) to raise a course grade to at least D, (2) to raise a term GPA to at least C. In the case of raising the term GPA, the supplementary examination will be offered in a course with a grade lower than C. A student who is on Academic Dismissal is not eligible to write a supplementary examination.

Only one supplementary examination will be permitted per session. It must be written on the first scheduled date for writing supplementaries for that student’s particular course and cannot be postponed or carried forward to a later session. Supplementary examinations will normally be held in late August prior to the fall term, early January in the winter term and early May in the summer term.

Supplementary examinations will not necessarily be available for all courses. In addition, the minimum reported final mark required to write a supplementary examination is F. The Faculty will determine the courses in which supplementary examinations are not available and a list of those courses will be published early in the term.

The course mark resulting from a supplementary examination will replace the original course mark for all purposes. When a supplementary examination is offered, the mark obtained on the supplementary examination will normally replace the final examination mark in calculating the course grade.

Repeating Students

If changes are made in the curriculum, repeating students will be required to satisfy the new curriculum.

Auditing a Course

See definition of “audit student,” page 32.

Students who are registered for a degree in the Faculty must have the approval of the Faculty to audit a course. Such approval can be obtained by submitting a written request to the Dean, who will refer the matter to the Faculty for a decision.

Medical Notes for Final Examinations

Students who miss final examinations for medical reasons must submit medical notes to the Undergraduate Studies Office for consideration by the Associate Dean of Engineering. The medical note is verified and the professor advised if they may...
1. By April 30, each student must specify ordered preferences for three or more engineering disciplines. The procedure is as follows:

2. Admission to an Engineering Discipline

A student must apply to be admitted into one of the engineering disciplines. Approval must be made by April 30 of any year, for conditional acceptance into year two of the Bachelor of Engineering program.

Every engineering discipline has a defined minimum-acceptance; therefore places are assigned on a competitive basis. The criterion for this competition is the average grade over all credits completed to date in the curriculum of the Diploma in Engineering.

The procedure is as follows:

1. By April 30, each student must specify ordered preferences for three or more engineering disciplines. The application is for conditional acceptance into year two of an engineering discipline.

2. Any student who has completed all of the entry requirements for an engineering discipline, with a GPA of 3.30 or better, will be guaranteed a place in that engineering discipline.

3. In a single competition, students with a GPA, greater than or equal to 3.00 and less than 3.30 will be assigned conditional places (year two) in their engineering discipline, procuring in strict order of GPA, subject to discipline capacities.

4. Any student with a GPA of less than 2.00 will not be admitted to a discipline.

B. BSc/BEng

Students who meet the admission requirements for the Bachelor of Science program and the Bachelor of Engineering program are eligible to select this concurrent degree option. Students wishing specific advice should consult the Assistant Dean, Faculty of Science and the Associate Dean, Faculty of Engineering. Students accepted will complete the 15 credits BSc and the first two years of engineering studies leading to the Diploma in Engineering concurrently in a period of three calendar years. At the end of the three year period, both the degree and the diploma will be awarded to successful candidates. It is thus possible to complete the requirements for the Bachelor of Science and Bachelor of Engineering degrees concurrently in a time period of five years in total (or up to six years for Co-op programs).

C. BA/BEng

Students wishing to do so may complete the 15 credits BSc degree program and the first two years of engineering studies leading to the Diploma in Engineering concurrently in a period of three calendar years. At the end of the three year period, both the degree and the diploma will be awarded to successful candidates. It is thus possible to complete the requirements for the Bachelor of Engineering and the Bachelor of Arts degrees concurrently in a time period of five years in total (or up to six years for Co-op programs).

Courses in the fourth and fifth years are those required to finish the Bachelor of Engineering degree.

D. Diploma of Engineering

Students who have successfully completed the academic study program in the first four terms in any of the disciplines may be eligible to apply for the Diploma in Engineering. This means a student must have a minimum GPA of 2.0, and have completed, with a minimum grade of D, the required courses as specified in the discipline curriculum.

Curricula for Terms 1 - 4

Year 1 — Term 1 Fall
- ENGI 1101 Engineering Design and Graphics I
- ENGI 2102 Mechanics of Materials I
- ENGI 2103 Introduction to Physics I
- ENGI 2121 Introduction to Engineering Mathematics I

Year 1 — Term 2 Winter
- ENGI 1202 Mechanics of Materials II
- ENGI 1203 Introduction to Engineering Mathematics II

Year 2 — Term 3 Fall
- BIOL 1030 Biology for Engineers
- HISCT 1800 History of Engineering I
- ENSC 2101 Applied Vector Calculus
- ENGI 2102 Probability and Statistics
- SCED 2000 Electric circuits
- ENGI 2102 Thermo-Fluid Engineering I

Year 2 — Term 4 Winter
- ENGI 2202 Thermodynamics
- HISCT 1801 History of Engineering II
- ENGI 2202 Applied Differential Equations
- Three discipline-specific electives
Discipline-Specific Choices

**Chemical Engineering**
- PEAS 2201 Fundamentals of Process Engineering
- PEAS 2202 Fundamentals of Environmental Engineering
- PEAS 2203 Organic Chemistry

**Civil Engineering**
- ENGI 2400 Mechanics II: Dynamics
- MINE 2200 Introductory Geology for Engineers
- ENGI 2103 Thermo-Fluid Engineering II

**Environmental Engineering**
- PEAS 2201 Fundamentals of Process Engineering
- PEAS 2202 Fundamentals of Environmental Engineering
- PEAS 2203 Organic Chemistry

**Industrial Engineering**
- IENG 2005 Engineering Economics
- Any two electives from the following:
  - ECED 2001 Circuit Analysis
  - ECED 2200 Digital Circuits
  - PEAS 2201 Fundamentals of Process Engineering
  - PEAS 2202 Fundamentals of Environmental Engineering
  - MINE 2200 Geology for Engineers
  - ENGI 2103 Thermo-Fluid Engineering II

**Materials Engineering**
- PEAS 2201 Fundamentals of Process Engineering
- PEAS 2202 Fundamentals of Environmental Engineering
- PEAS 2203 Organic Chemistry

**Mechanical Engineering**
- ENGI 2400 Mechanics II: Dynamics
- IENG 2005 Engineering Economics
- ENGI 2103 Thermo-Fluid Engineering II

**Mineral Resource Engineering**
- MINE 2200 Introductory Geology for Engineers
- Any one elective from the following:
  - ECED 2001 Circuit Analysis
  - ECED 2200 Digital Circuits
  - PEAS 2201 Fundamentals of Process Engineering
  - PEAS 2202 Fundamentals of Environmental Engineering
  - ENGI 2400 Mechanics II: Dynamics
  - PEAS 2203 Organic Chemistry
  - ENGI 2103 Thermo-Fluid Engineering II

The elective choices are summarized in the table below.

* any two electives for Industrial
** any one elective for Mineral Resource

E. Engineering Co-op Program

The Faculty of Engineering offers a Bachelor of Engineering Co-operative Education program (BEng Co-op) that integrates academic study with university approved industrial experience. Graduation from this program requires satisfactory performance in both areas. The schedule of study and work terms varies according to the discipline, details of which are outlined below.

BEng Co-op is a selective program. Students interested in participating in the Engineering Co-op Program must register for the Engineering Co-op Orientation course by January 15th for the following programs: Chemical, Environmental, Materials and Mechanical, and by May 15th for Civil, Electrical, Industrial and Mineral Resource.

Co-operative education is based on the principle that an academic program combined with work experience in alternating terms, is desirable for effective professional preparation. Work term employment, which varies from sector to sector and location to location, allows students to acquire experience in their areas of career interest, while study terms are devoted primarily to fundamental and theoretical studies. These practical experiences and academic studies complement each other.

Students interested in participating in the Co-op Program, should be aware that work terms exist in a variety of public and private settings. Students compete for jobs four months prior to the start of the work term. Students will be assisted by the Dalhousie University Engineering Co-op Office, and efforts will be made to find suitable opportunities for eligible students. There are, however, no assurances that each student will secure a Co-op position. Students with high CGPAs, enthusiasm, and professional potential have typically had the greatest success in securing Co-op work terms. For other regulations pertaining to the co-op program, please refer to the Policies section of the Engineering Co-op website.

The Study and Work Schedule

The co-operative system requires students to alternate periods of study with periods of university approved, full-time, paid employment. The period of employment is called a work term and is normally four months (16 weeks) in length. Some programs combine two or more four-month work terms. Work terms have academic requirements that must be completed in addition to the requirements of the employer.
Eligibility

Students who meet the admission requirements for Co-op:
1. Are registered in the Bachelor of Engineering Program;
2. Have attained a minimum cumulative grade point average (CGPA) of 2.3 (or equivalent) in the Diploma of Engineering program;
3. Have completed all requirements for a Diploma of Engineering or equivalent (i.e. Have no deficiencies at the beginning of the term in which the job search starts);
4. Are eligible to work in Canada;
5. Have met all the academic pre-requisites for the particular co-op term, including passing all previous work terms;
6. Have successfully completed the Co-op Orientation course;

Students must also meet the following criteria to be eligible to compete for a work term and continue in the program:

• meet performance expectations of previous co-op employers;
• receive a passing grade for all previous work terms;
• refrain from deliberately misrepresenting themselves in academic or employment matters pertaining to the co-op program;
• be able to complete three work terms in the schedule prescribed by their discipline;
• adhere to the job competition regulations in the Policies section of the Engineering Co-op website;
• keep the Co-op Office informed of their employment status;
• maintain professional conduct at all times with respect to employers and co-op staff;
• refrain from deliberately misrepresenting themselves in academic or employment matters pertaining to the co-op programs;
• receive a passing grade for all previous work terms;
• meet performance expectations of previous co-op employers;

Students who opt out of co-op will not be re-admitted.

Obtaining Employment

It is the student’s responsibility to arrange suitable work term employment that is pre-approved by the Co-op Office. Students must be prepared to conduct their own job search in addition to competing for the employment opportunities that the Co-op Office solicits and advertises through the online myCareer system. The employment success rates of co-op students vary from program to program and from term to term based on prevailing labour market conditions. Employment statistics, by program, are available on the Engineering Co-op website.

The employment process is highly competitive, students are competing for jobs with their classmates and with students in other co-op programs across the country. Factors such as academic performance, skills, motivation, maturity, attitude, professional conduct, flexibility and performance potential, determine whether or not a student is offered employment. To be successful, students must review the job and interview notices daily, apply to an adequate number of opportunities, check and respond promptly to all Co-op Office correspondence, conduct their own job search, and maintain realistic expectations of job content, geographic locations and salary. Students should be aware that some co-op employers conduct criminal and/or driving record checks or other screening procedures. In some cases, it is the student’s responsibility to have such procedures completed.

Work term employment agreements are between the student and the employer. Dalhousie University is not a party to those agreements and assumes no financial or legal responsibility with regard to events or actions by either party that affect the employment situation for any co-op student (e.g. layoffs, intellectual property issues, confidentiality agreements, strikes, etc.). Students are responsible for knowing all the terms and conditions of employment before accepting a job.

Work Term Conduct

Because the University relies heavily on maintaining long-term successful relationships with employers to provide work terms, students on work terms must consider themselves to be ambassadors of the program. As such, students will:

• abide by the policies and procedures of their employer as well as the policies and procedures of the University and the Co-op Office;
• fulfill the entire time commitment required for each co-operative education work term;
• attempt to resolve with the employer any difficulties which arise during the work term and notify the Co-op Office immediately if they cannot be resolved;
• contact the Co-op Office prior to making any decision affecting their employer and/or employment;
• assist the Co-op Office with scheduling a work site meeting with the supervisor;
• maintain professional conduct with all co-workers, clients and supervisors.

Work Term Evaluation

Work terms are considered academic terms. Students must complete a set of academic requirements, as prescribed by their discipline, in addition to the work required by their employment supervisor. Students are given a Pass/Fail grade for each four-month work term. All disciplines have the following minimum requirements, some disciplines have additional requirements:

1. Complete the work term monitoring process.
3. A work term report.
4. A performance appraisal completed by the supervisor.

Students must achieve a satisfactory grade for each item in order to achieve a passing grade for the work term. The specific guidelines for each of these items are available from a variety of sources including the Co-op Office and Engineering Departmental websites.

Graduation

To graduate with a “Co-operative Education” designation on their degree, students must successfully complete three work terms.

Fees

Students are charged a non-refundable co-operative education program fee. Consult the Co-op Office for complete details.

IV. Course Descriptions

ECED 2000.03: Electric Circuits.

This is an introductory course in electric circuit analysis. The material covered starts with a review of the fundamental circuit variables such as voltage, current, charge, power and energy. Kirchhoff’s laws are introduced and developed into node and loop analysis techniques. Terminal behavior and circuit equivalence including Thévenin and Norton circuits are covered. Analysis with controlled sources and energy storage elements is developed including steady state and transient response for first order networks. Phasors and sinusoidal steady state are introduced. Students are introduced to circuit simulation tools such as P-spice.

PREREQUISITE: MATH 1290H3, PHYS 1260H3 or equivalent

ECED 2001.03: Circuit Analysis.

This course covers advanced circuit analysis techniques, starting with sinusoidal excitation. The concepts of phasors and complex impedance are fully developed. Mutual inductance and magnetically coupled coils are used to introduce transformer behavior and performance. Real and reactive power flow is covered before the introduction of balanced three phase circuits for power distribution.
Symmetrical components are introduced as a means of dealing with unbalanced networks. The concepts of grounding and harmonics are also introduced. FORMULAE: Lecture 3 hours, lab 3 hours

ECED 2200.03: Digital Circuits.
This course includes an introduction to Boolean algebra, encoders, decoders, shift registers, synchronous and asynchronous counters, together with timing considerations. Design of synchronous circuits, synchronous sequential circuits, and finite state machines is covered. Knowledge mapping techniques and state tables and diagrams are taught. Programmable logic is introduced. Contemporary computer-aided design and analysis software is used throughout the course. FORMULAE: Lecture 3 hours, lab 3 hours PREREQUISITE: ECE 2000.03

ENGI 1101.045: Engineering Design I.
The objective of the course is to provide students with conceptual design experience, team work experience, computer-aided design experience and to develop skills in engineering free-hand sketching, 3-D modeling, and rendering of engineering drawings. An integral part of the course is the Design Project, focused on design as the essence of engineering, and the process of design and reporting. Also included are lectures on technical writing and presentation skills, study skills, examination skills and an introduction to the variety of disciplines of engineering and technical regulations for engineering. FORMULAE: Lecture 6 hours, seminar 1 hour, lab 3 hours

This course teaches the concept of stress, strain and deformation of a solid body subjected to static forces. Topics considered include: stresses and strains under axial, bending, torsional and combined loadings, transformation relations for stresses and strains, Mohr’s circle for stresses and strains, stress graphs, mechanical properties of materials as failure theories. Also considered are introduction to the engineering profession, engineering ethics and professional responsibility as well technical writing and presentation skills. An individual design project is a major component of this course. FORMULAE: Lecture 6 hours, seminar 1 hour, lab 3 hours PREREQUISITE: PHYC 1190.03, MATH 1280.03

ENGI 2102.03: Thermo-Fluid Engineering I.
This course introduces the engineering sciences of thermodynamics and fluid mechanics in an integrated manner. A unified approach to energy transfer in thermal and mechanical systems is presented. The course covers basic properties of fluids, fluid statics, simplified analyses of fluid motion, the basic laws of thermal energy, and the application of control volume techniques to engineering problems. Power systems are introduced through a study of the Rankine cycle. FORMULAE: Lecture 4 hours, seminar 1 hour, lab 3 hours PREREQUISITE: ENGI 1202.045, CHEM 1021.03, MATH 1280.03, PHYC 1190.03

ENGI 2103.03: Thermo-Fluid Engineering II.
This course builds on the fluid mechanics introduction presented in Thermo-fluids I to present engineering concepts of fluid mechanics and energy. The course covers dimensional analysis, complex fluid dynamics from Thermo-fluids I, puts a larger emphasis on the motion of control volume needed to properly solve thermal fluid problems using the conservation laws presented as integral relations, transient flow in ducts using umbrellas on local losses (friction and minor) and presents a practical theory of turbomachinery. The different concepts studied during the course are brought together at the end in a series of design examples and design problems. FORMULAE: Lecture 3 hours, lab 2 hours PREREQUISITE: ENGI 1202.045, ENGI 2102.03, CHEM 1021.03, CHEM 1022.01, MATH 1280.03

ENGI 2203.03: Engineering Design II.
This course provides a project-based exercise in the engineering design process. Students work in teams and as individuals on defined projects which apply knowledge and skills in all areas of engineering studied in semesters 1 to 3. The projects encompass the design method, conceptual design, design selection, detailed analysis, CAD and simulation tools, engineering drawings, safety and preparation of professional technical reports. Discipline-specific projects are assigned. All projects involve evaluation/testing of student designs, depending on the discipline section either through (i) construction and testing of a physical prototype or (ii) development and testing of an engineering simulation model. PREREQUISITE: ENGI 1101.045, ENGI 1202.045 and ENGI 1801.03

ENGI 2400.03: Mechanics II.
This second course in Engineering Mechanics considers the kinematics and kinetics of a single particle and a single rigid body. The course builds on the concepts introduced in ENGI 1400.03 (Mechanics I). Both vector and scalar methods are used. Topics include kinematics of a particle, kinetics of a particle, kinematics of a rigid body, kinetic and static motions, and plane kinematics of a rigid body. FORMULAE: Lecture 3 hours, lab/tutorial 3 hours PREREQUISITE: ENGI 1801.03, MATH 1280.03, PHYC 1190.03, MATH 1280.03

ENGM 1041.03: Applied Linear Algebra.
This course covers geometric vectors in three dimensions, dot product, cross product, linear independence, complex numbers, systems of linear equations, matrix algebra, matrix inversion, determinants, Cramer’s rule, introduction to vector spaces, linear independence and bases, rank, linear transformations, orthogonality and applications, Gram-Schmidt algorithm, eigenvalues and eigenvectors. FORMULAE: Lecture 3 hours, lab 2 hours

ENGM 1081.03: Computer Programming.
This course covers fundamental programming principles including flow control, modularity, and structured programming. The student will implement significant programs in the C language to solve engineering problems. FORMULAE: Lecture 5 hours, lab 2 hours

The topics covered include probability laws and the interpretation of numerical data, probability distributions and probability density functions, random variables, joint distributions, inference concerning mean and variance, t-test of hypotheses, and introduction to linear regression. The course emphasizes engineering applications and makes extensive use of statistical computer packages. FORMULAE: Lecture 5 hours, lab 2 hours

ENGM 2101.03: Applied Vector Calculus.
This course covers space curves, arc-length, curvature, functions of several variables, partial derivatives, implicit functions, constrained and unconstrained extremas, multiple integrals, line, surface, and volume integrals, change of variables in multiple integrals, integral theorems and curl, Stokes Theorem, the Divergence Theorem, and applications to heat flow, electromagnetics and fluid flow. Programming skills are developed using software tools to solve practical problems. FORMULAE: Lecture 3 hours, lab 2 hours PREREQUISITE: MATH 1280.03 and MATH 1290.03

This course covers space curves, arc-length, curvature, functions of several variables, partial derivatives, implicit functions, constrained and unconstrained extremas, multiple integrals, line, surface, and volume integrals, change of variables in multiple integrals, integral theorems and curl, Stokes Theorem, the Divergence Theorem, and applications to heat flow, electromagnetics and fluid flow. Programming skills are developed using software tools to solve practical problems. FORMULAE: Lecture 3 hours, lab 2 hours PREREQUISITE: MATH 1280.03 and MATH 1290.03

ENG 2005.03: Engineering Economics.
This course is designed to provide students with the fundamentals of engineering economics. Engineers must function as managers in the real world of decision making where the economic indices are not only technological capital investments but also time value of money, project screening, and a variety of decision analysis techniques are presented. Make versus buy decisions and repair versus replace decisions are discussed. The tax effects on project cash flow and viability are also presented. This course is designed to introduce students to these fundamentals, and apply them through the use of software and projects. FORMULAE: Lecture 3 hours, lab 2 hours

PEAS 2201.03: Fundamentals of Process Engineering.
The main objective of this course is to develop the student’s ability to perform mass and energy balances on non-reactive and reactive processes. Introductory topics include systems of units and a study of process variables such as temperature, pressure and flow rate. Also covered are fundamental properties of multiphase systems, including phase equilibrium, vapour pressure, and Raoult’s and Flory-Huggins Laws. Emphasis is placed on developing problem solving skills and adopting a consistent approach to the analysis of process systems. FORMULAE: Lecture 5 hours, tutorial 2 hours PREREQUISITE: ENGI 2102.03

PEAS 2202.03: Fundamentals of Environmental Engineering.
This course will focus on sources of environmental pollutants, the effects of pollutants on living and non-living systems, and the processes by which pollutants are generated or by which their effects can be minimized or remediated. Lecture
Students will first develop an understanding of structure and bonding in organic compounds. With this background, the chemical and physical properties of the major functional groups will be introduced, with a focus on applications relevant to process engineers. Specifically, the synthesis and chemical reactions of commercially important molecules will be highlighted. Physical separations (i.e., distillation, crystallization) used in organic synthesis and spectroscopic methods of analysis will also be described.

**FORMA T:** Lecture 3 hours, lab 2 hours

**PREREQUISITE:** CHEM 1021.03 and CHEM 1022.03

**CPST Series: Complementary Studies Courses**

**CPST 3030.03: Engineering in Society II.**

The course provides an overview of the concepts and interrelationships among sustainable development, environmental stewardship and public health and safety in relation to engineering practice. These concepts will be examined through historical examples and current theory and practice of the engineering profession. Lectures and discussion will consider global ecosystem functions, human interactions with the environment, methods of reducing human impacts, methods of achieving sustainability, engineering challenges to enhance sustainable development, and factors that influence occupational health and safety from engineering and management viewpoints. Students will be exposed to a range of management methods and tools such as environmental auditing, ISO 14000, risk analysis and WHMIS and will be expected to consider class topics in relation to their own area of engineering specialization.

**FORMA T:** Lecture 3 hours

**Chemical Engineering**

**Location:** Sexton Campus
1560 Barrington Street
PO Box 15000
Halifax, NS B3H 4R2

**Telephone:** (902) 494-3953

**Fax:** (902) 420-7639

**Dean**
Leen, L. J., BSc, MSc, PhD (Dalhousie), PEng

**Department Head, Process Engineering and Applied Science**
Pegg, M. J., BSc, PhD (Leeds), PEng

**Undergraduate Program Co-ordinator**
Ghanem, A., BScEng (UNB), PhD (Cornell), PEng

**I. Introduction**

The Chemical Engineering program prepares students for careers in the chemical and process industries and in a variety of related fields. These microcosms, among others, the traditional areas of environmental control, plastics and polymers, pulp and paper, instrumentation and process control, petrochemicals, petroleum and natural gas processing, and energy conversion and utilization, as well as the growing fields of biotechnology, food processing, composite materials, corrosion and protective coatings, and manufacture of microelectronic components.

The responsibilities assumed by Chemical Engineers include a wide range of activities such as research and development of novel products and processes, the design, development and operation of process plants, and management of technical operations and sales.

The curriculum is designed to provide the student with a broad background in the underlying sciences of Chemistry, Physics and Mathematics. This is then combined with a detailed knowledge of engineering principles and practice, along with a good appreciation of social and economic factors. Thorough understanding of the principles is accomplished through lecture, tutorial and laboratory activities, and extensive use is made of the departmental computing facilities. Laboratory involvement is considered an important component of the students' education. Emphasis in the laboratory is placed on team work and on the development of problem-solving skills. The Department stresses the preparation of students for independent work and the development of interpersonal skills necessary for professional engineers. Elective courses provide the student with the opportunity to obtain additional training in one of the following areas: computers and process control, biotechnology, environment, energy resources and utilization, and research and development.

In the later academic terms, students have an opportunity to work under conditions similar to those encountered in consulting and engineering organizations, particularly in the computer-aided-design and process design courses.

Research opportunities leading to the Master’s and Doctorate degrees are offered in a wide range of topics within the Department as well as in conjunction with other departments and a number of research centres on the campus. Detailed information regarding the graduate program can be obtained from the Department.

Students have the option of joining either the co-op or non co-op undergraduate programs.

**II. Curriculum and course descriptions**

Refer to sections III and IIIb, Chemical Engineering Programs in the Process Engineering and Applied Science section of this calendar.
III. Co-operative program and schedule

Refer to section E. Engineering Co-op Program, in the Engineering section of this calendar page 341.

IV. Admissions

Admission requirements are those specified by the Faculty of Engineering.

Civil and Resource Engineering

Location: "D" Building, Room D215
1360 Barrington Street
PO Box 15000
Halifax, NS B3H 4R2

Telephone: (902) 494-3960
Fax: (902) 494-3108
Email: care@dal.ca
Website: http://civilandresource.engineering.dal.ca

Dean

Lunn, L. J., BSc, MSc, PhD (Dalhousie), PEng

Department Head

Lake, C., BEng (TUNS), PhD (UWO), PEng

Professors

Ali, N. A., BSc (Baghdad), MSc, PhD (N Carolina State), PEng (Undergraduate Program Coordinator, Civil Engineering)
Cortsen, S. F., BEng, MScE (TUNS), PhD (McMaster), PEng
Guignotte, G. A., BScE (Guelph), PhD (Waterloo), PEng
Liu, L., BSc (Nankai), MSc, PhD (Peking) (Graduate Coordinator)
Liu, X., BScE, MScE (UW), PEng
Newhook, J. F., BEng, MScE (TUNS), PEng
Sahab, M. G., BSc, BEng (Summa 64), MEng, PhD (Concordia), PEng
Taheri, F., BEng, MScE, PhD (TUNS), PEng
Zou, D. H., BSc (CUMT, China), MScE, PhD (Dalhousie), PEng

Associate Professors

Garagash, D., BSc (Moscow), MS, PhD (Minnesota)
Hansen, D., BScE (Guelph), MScE (UNB), PhD (Ottawa), PEng (Co-op Advisor)
Hill, J. D., BSc, MSc (Acadia), PhD (UWO)
Jones, J., BEng (UNB), BScE (TUNS), MBSA (Winnipeg), PhD (TUNS), PEng
(Load Pathways Program Coordinator, Undergraduate Program Coordinator, Civil Engineering)
Lake, C., BEng (TUNS), PhD (UWO), PEng
Walsh, M.E., BEng (TUNS), MEng (McGill), PhD (Dalhousie), PEng

Assistant Professors

Thorburn, J., BSc (UNB), BEng (Dalhousie), PEng

Adjunct Professors

Barney, J., BEng, BSc (Dalhousie), BEng (TUNS), MScE, PhD (Dalhousie), PEng

Caineau, D., BSc, MScE (McGill), MEng (Dalhousie), PEng
El-Jabi, N., BSc (Guelph), MScE (TUNS), PhD (Ottawa), PEng (Co-op Advisor)
Forrester, D., BEng (TUNS), PhD (Dalhousie), PEng
Kasumova, J. T., BEng (Ukraine), MEng (Alberta, MBSA (Ottawa)
Kenny, S., BEng, MEng (MUN), PEng
Klaveno, J. B., BEng (UNB), MScE (McGill), PEng
Phi, N., BSc (Gothenberg), MScE (UBC), PEng
Rand, J., BSc (Acadia), BEng, PhD (Dalhousie)

Professor Emeritus

Jaeger, L. G., BA, MA (Cambridge), PhD, DSc (London), DEng (Carleton, MUN, TUNS), PEng

I. Introduction

The Department of Civil and Resource Engineering consists of the Civil Engineering Program and the Mineral Resource Engineering Program. The Department currently offers two accredited professional degree programs.
II. Program Guides

A. Civil Engineering

Year 1 and 2 follow the program that is outlined in the Faculty of Engineering section of this calendar. The two Options, Earth and Environment and Infrastructure, contain a strong common core in those aspects of engineering considered to be crucial for all civil engineering bachelor’s, irrespective of specialization. Terms 5 and 6 are the same for both Options. In Terms 7 and 8 students will have the opportunity to select some courses from a list of technical electives based on their specific interests in focus areas of Civil Engineering.

Non Co-op Program:

Year 1 Term 1 (Fall)
- CIVL 3300.03 Hydraulics
- CIVL 3830.03 Surveying & Applied Geomatics

Year 1 Term 2 (Winter)
- CIVL 3101.03 Soil Mechanics
- CIVL 3705.03 Mechanics of Structural Materials & Components

Year 2 Term 1 (Fall)
- CIVL 3310.03 Structural Systems I-Form and Analysis
- CIVL 3410.03 Construction Materials & Methods

Year 2 Term 2 (Winter)
- CIVL 3305.03 Surveying & Applied Geomatics

Year 2 Term 3 (Spring)
- CIVL 3110.03 Geotechnical Engineering
- CIVL 4341.03 Reinforced Concrete Design
- CIVL 4351.03 Design of Steel Structures
- CIVL 4801.005 Senior Project I
- CPST 3030.03 Engineering in Society II

Total of five (minimum of four) electives may be chosen from the following courses (schedule permitting):
- CIVL 4411.03 Water Distribution & Wastewater Systems
- CIVL 4440.03 Water & Wastewater Treatment
- CIVL 4450.03 Solid Waste and Landfill Engineering
- CIVL 4560.03 Special Topics in Structural Systems
- ENGM 4375.03 Risk Assessment Management
- MINE 3620.03 Petroleum Engineering

Total of one elective may be chosen from the following courses (schedule permitting):
- ARCH 3104.03 Foundations in Architectural History and Theory
- ARCH 3105.03 Architectural History and Theory – 20th Century
- ENVE 3142.01 Energy and Environment
- ENVE 4341.01 Bioclimatic Design & Bioremediation
- ENVE 4365.01 Solar Energy Utilization
- ENVE 4700.03 Geoscience Info Management
- ENGE 4300.01 Operation Research
- ENGE 4347.03 Company Operations and Management
- ENGE 4355.01 Project Management
- GERH 3230.03 Intro to Community Design

Other courses require Department approval.

Technical Electives (choose three from the list below)
- CPST 3030.03 Engineering in Society II
- CIVL 4802.025 Senior Project II
- CIVL 4430.03 Water Distribution & Wastewater Systems
- CIVL 4440.03 Water & Wastewater Treatment
- CIVL 4450.03 Solid Waste and Landfill Engineering
- CIVL 4560.03 Special Topics in Structural Systems
- ENGM 4375.03 Risk Assessment Management
- MINE 3620.03 Petroleum Engineering

Total of one elective may be chosen from the following courses (schedule permitting):
- ARCH 3104.03 Foundations in Architectural History and Theory
- ARCH 3105.03 Architectural History and Theory – 20th Century
- ENVE 3142.01 Energy and Environment
- ENVE 4341.01 Bioclimatic Design & Bioremediation
- ENVE 4365.01 Solar Energy Utilization
- ENVE 4700.03 Geoscience Info Management
- ENGE 4300.01 Operation Research
- ENGE 4347.03 Company Operations and Management
- ENGE 4355.01 Project Management
- GERH 3230.03 Intro to Community Design

Other courses require Department approval.

2. Earth and Environment Option:

Year 3 Term 5 (Fall)
- CIVL 3300.03 Hydrology
- CIVL 3710.03 Mechanics of Structural Materials & Components
- CIVL 3725.03 Construction Materials & Methods
- CIVL 3830.03 Surveying & Applied Geomatics

Year 3 Term 6 (Winter)
- CIVL 3830.03 Surveying & Applied Geomatics
- CIVL 3725.03 Construction Materials & Methods
- CIVL 3705.03 Mechanics of Structural Materials & Components
- CIVL 3505.03 Structural Systems I-Form and Analysis
- CIVL 3101.03 Soil Mechanics

Year 4 Term 7 (Fall)
- CIVL 4440.03 Water & Wastewater Treatment
- CIVL 4401.005 Senior Project II
- ENVE 4772.01 Environmental Assessment & Management

*Technical Electives (choose three from the list below)

Year 4 Term 8 (Winter)
- CIVL 4440.03 Water & Wastewater Treatment
- CIVL 4401.005 Senior Project II
- CPST 3030.03 Engineering in Society II
- CPST 3030.03 Engineering in Society II

*Technical Electives (choose three from the list below)

*Earth and Environment Option Technical Electives: Total number of technical electives must equal six.
Total of one elective may be chosen from the following courses (schedule permitting):

- ARCH 3100.03 Foundations in Architectural History Theory
- ARCH 3100.03 Architectural History Theory - 20th Century
- ENV 3412.03 Energy and Environment
- ENV 4551.03 Solar Energy Utilization
- ERTH 3500.03 Geoscientific Information Management
- IENG 4590.03 Operations Research
- IENG 4574.03 Operations Research
- IENG 4516.03 Project Management
- MINE 3520.03 Introductory Mining Engineering
- MINE 3530.03 Mineral Processing
- MINE 4710.03 Mine Excavation Systems
- MINE 4812.03 Mine Production Engineering
- PLAN 1001.03 Introduction to Community Design I

Other courses require Department approval.

NOTES:
1. One or more graduate courses may be included as technical electives in Term II; however, permission of the instructor and department is required in order to register for such courses.
2. Not all of the technical elective courses will be offered each year.
3. Many courses have pre-requisites (see section IV following). If it is felt, however, that an equivalent course of study has been taken, a waiver of the pre-requisite requirement can be sought from the instructor.
4. Some courses have co-requisites. A co-requisite can also be completed before the course in question (instead of being done concurrently).

A. Mineral Resource Engineering

Years 1 and 2 follow the common program outlined in the Engineering section of this calendar.

Year 3 Term 5 (Fall)

- CIVL 3310.03 Soil Mechanics
- CIVL 3510.03 Surveying & Applied Geomatics
- CIVL 4500.03 Operations Research for Systems Engineering
- MINE 3520.03 Introductory Mining Engineering
- MINE 3530.03 Mineral Processing
- MINE 4650.03 Mining Geology I

Year 3 Term 6 (Winter)

- MINE 3540.03 Equipment Selection & Materials Handling
- MINE 3611.03 Rock Mechanics
- MINE 4612.03 Rock Penetration & Fragmentation
- MINE 4620.03 Petroleum Engineering
- MINE 4750.03 Mining Geology II

* Choose one technical elective as listed

Year 4 Term 7 (Winter)

- CIVL 3740.03 Computations System Modelling
- CPST 3010.03 Engineering in Society II
- MINE 4711.03 Mine Ventilation & Environment Control
- MINE 4750.03 Senior Design Project I
- MINE 4850.03 Mineral Economics and Mine Product

* Choose one technical elective as listed

Year 5 Term 8 (Fall)

- MINE 4813.03 Mining and the Environment
- MINE 4835.03 Mineral Economics and Mine Product

* Choose three technical electives, two of which must be from Mineral Resource Engineering (MINE xxx), as listed below.

Technical Electives:

- CIVL 4113.03 Geotechnical Engineering
- CIVL 4410.03 Engineering Hydrogeology
- CIVL 4710.03 Construction Planning
- CIVL 4753.3 Industrial Safety and Loss
- ENV 3411.03 Environmental Health and Safety
- ENV 4770.03 Environmental Assessment Management
- ENGI 4558.03 Project Management and Control
- IENG 4574.03 Decision and Risk Analysis
- MINE 4710.03 Mine Excavation Systems
- MINE 4801.03 Advanced Topics in Rock Mechanics
- MINE 4804.03 Mining Engineering Project
- MINE 4820.03 Surface Mine Slope Stability
- MINE 4822.03 Advanced Petroleum Engineering
- MINE 4823.03 Offshore Drilling and Production
- MINE 4830.03 Advanced Mineral Processing
- MINE 4852.03 Flotation

Other approved course.

III. Course Descriptions

A. Civil Engineering Series

CIVL 3101.03: Soil Mechanics I

This course is concerned with the physical and mechanical properties of soils. It includes topics of soil chemistry and soil fabric, soil classification, compaction, hydraulic conductivity, one-dimensional and two-dimensional seepage, soil compressibility, time dependent deformation of soils, and shear strength behavior of soils. Laboratory sessions involve experimentally evaluating the engineering properties of several different soil types and the application of these results to engineering problems.

PREREQUISITE: ENGI 2300.03 or (ENGI 2102.03 and ENGI 2103.03)

FORMAT: Lecture 3 hours, lab 1 hour, tutorial 1 hour

CIVL 3200.03: Transportation Engineering.

This course commences with an introduction to Transportation Engineering in the context of planning, design and operations of urban and rural systems. The course also provides an introduction to route location with special emphasis on Canadian standards and specifications. It also includes detailed study of road design elements, vehicle motion, vehicle/pavement interaction, and principles of roadway capacity.

PREREQUISITE: CIVL 3200.03

FORMAT: Lecture 3 hours, lab 2 hours

CIVL 3300.03: Hydraulics.

Fluid mechanics principles are applied to practical hydraulic problems involving flow in closed conduits and in open channels. Topics in pipe flow include losses in pipes, pipes in series and parallel, and network analysis. Topics in open channel flow deal with classification of flows, open channels and their properties, energy and momentum principles, uniform flow, design of perennial and non- perennial channels, and gradually varied flow. These aspects are explained in lectures and validated by laboratory measurements and demonstrations.

PREREQUISITE: CIVL 3300.03

FORMAT: Lecture 3 hours, lab 3 hours
CIVL 3310.03: Engineering Hydrology.

The emphasis in this course is on quantitatively describing the physical processes in the hydrologic cycle. Such processes include precipitation, evaporation, infiltration, groundwater movement, surface runoff, as well as land surface run-off processes. A working rainfall-runoff model is developed, and by convolution it is used in a design hydrograph. The size of a detention pond, statistical hydrology, and snow hydrology are also discussed.

FORMAT: Lecture 3 hours, lab 2 hours
PREREQUISITE: ENGM 2101.03, ENGM 2102.03, ENGM 2103.03, CIVL 3300.03, MATH 2200.03

CIVL 3451.03: Water Quality and Treatment.

This course expands on the student’s previous experience in aqueous chemistry and fluid mechanics. The course provides an Engineering perspective on: (i) water quality analysis, specifically on the physical, chemical and biological characteristics of water; (ii) significance and interpretation of water quality properties; (iii) modeling water quality in natural and engineered systems; and (iv) water treatment systems at the introductory level.

FORMAT: Lecture 3 hours, lab 3 hours
PREREQUISITE: CHEM 1021.03 and CHEM 1022.03, ENGM 2101.03 EXCLUSION: PEAS 2202

CIVL 3505.03: Structural Systems I: Form and Analysis.

This course begins with a review of the analysis of frames and shear and moment in beams. Majority of the course covers the calculation of elastic deflections for statically determinate structures and various methods for analyzing statically indeterminate structures focusing on slope deflection method and moment distribution method. The application of matrix methods in computer modeling using a typical commercially available structural analysis program will be introduced. Also the concept of influence lines for moving loads on statically determinate structures will be discussed.

FORMAT: Lecture 3 hours, tutorial 2 hours
PREREQUISITE: PRVC 1280.03, ENGM 1202.045

CIVL 3515.03: Structural Systems II: Loads and Behaviour.

The objective of the course is to provide students with a solid background in the fundamentals of structural analysis of structural materials and components. The analysis includes steel, concrete and timber, for representative structures. The student will be able to size basic tension, compression and flexural elements using steel, concrete and timber, for representative structures.

FORMAT: Lecture 3 hours, lab 2 hours
PREREQUISITE: CIVL 3505.03, CIVL 3701.03, CIVL 3725.03

CIVL 3705.03: Mechanics of Structural Materials and Components.

The content is focused on the application of the principles of the mechanics of solids in the design and analysis of structural materials and components. Building on engineering skills gained in the first two years, the class will examine general stress analysis, failure criteria, flexure, shear, torsion, compressive buckling and plasticity as these aspects apply to structural components constructed of timber, steel, concrete and fibre-reinforced polymers.

FORMAT: Lecture 3 hours, tutorial 2 hours
PREREQUISITE: CIVL 3505.03, CIVL 3515.03, CIVL 3700.03, CIVL 3725.03

CIVL 3725.03: Construction Materials and Methods.

This course is to provide students with knowledge of residential and commercial building techniques and materials. In it, the properties and applications of common construction materials, components, and systems that relate to wood, steel, and concrete-frame structures are examined.

FORMAT: Lecture 3 hours, lab 3 hours

CIVL 3740.03: Computations and Systems Modeling.

This course introduces the application of various computational methods for solving a range of practical problems in civil engineering. Basic numerical methods for solving algebraic equations, non-linear and eigen-value problems, as well as numerical differentiation and integration are introduced. Curve-fitting and non-linear regression techniques are presented. Computational tools such as Matlab, MathCad, Excel, and Mathematica are introduced and used to analyze structural stability, the behavior of non-frames, dynamics, vibrations, and other topics of interest in infrastructure systems.

FORMAT: Lecture 3 hours, lab 2 hours
PREREQUISITE: ENGM 2101.03, ENGM 1041.03

CIVL 3830.03: Surveying and Applied Geomatics.

This course covers the techniques, calculations and equipment used in surveying and geomatics, as well as their applications to civil engineering. Topics include fundamentals of distance measurement and surveying, leveling, theodolite, GPS and Total Station instruments, coordinate systems and geoid deformations, Geographic Information Systems, and engineering applications of geomatics, with particular focus on remote sensed data for common civil engineering and mining construction activities. Laboratory exercises will cover the basics of surveying techniques. Building up to an exercise in combining a measured GPS data set to a pre-existing GIS database for engineering design considerations of a facility.

FORMAT: Lecture 3 hours, lab 3 hours
EXCLUSION: CIVL 0124 and CIVL 4830

CIVL 4111.03: Geotechnical Engineering.

This course is concerned with the geotechnical aspects of temporary and permanent retaining walls for infrastructure or environmental works, deep and shallow foundation, soil-pipe interaction, and design-analysis of natural cut, embankments, and earth dams. The application of these design-analysis to particular infrastructure and environmental structures are emphasized in the laboratory sessions.

FORMAT: Lecture 3 hours, lab 2 hours
PREREQUISITE: CIVL 3101.03

CIVL 4200.03: Transportation Systems.

This course covers urban transportation planning, transportation demand and supply, transportation management. The environmental impact of transportation systems such as noise and air pollution will be examined. Methods to measure, predict, and evaluate impact of transportation models will be covered.

FORMAT: Lecture 3 hours, lab 2 hours
PREREQUISITE: CIVL 3200.03

CIVL 4250.03: Highway Engineering.

This course provides introduction to road location with special emphasis on Canadian standards and road design elements. It includes a surveying workshop. The purpose of workshop is to expose students to operation and application of surveying instrumentation. It includes topics of vertical and horizontal curves, roadway design elements and classification, alignment and cross section elements, drainage and earthwork operations, highways materials and pavement design.

FORMAT: Lecture 3 hours, lab 2 hours
PREREQUISITE: CIVL 3250.03

CIVL 4350.03: Hydraulic Engineering.

This course deals with the application of hydraulics in civil engineering design. The topics include design of culvert systems, storage dams (gravity dams, arch dams, buttress dams, earth dams and earth-fill dams), overflow and fish passage with emphasis on design of stilling basins. Hydraulic machinery (pumps and turbines) will be discussed with an emphasis on the selection a machine for a given power application. Design of single and multiple port outfall structures for effluent disposal in rivers and in oceans will also be discussed. Regular lectures and tutorial sessions will be supplemented with expert speakers from the industry and field trips.

FORMAT: Lecture 3 hours, lab 3 hours
PREREQUISITE: CIVL 3250.03

CIVL 4359.03: Form and Process in Alluvial Channels.

This course will consider various aspects of fluvial geomorphology and their applications to civil engineering point-of-view. Topics to be included are: (a) hydraulics resistance based on quantitative estimates of channel roughness, regime concepts for artifical and natural rivers, uses of boundary shear stress and unit-stream power in bed-load estimations, the hydraulics and statistics of suspended sediment, numerical versus physical modelling, and a review of case histories of responses of rivers to human activity. The hydraulics of fish habitat assessment is also considered. The application of HEC-RAS to a tributary creek is done as a group project.

FORMAT: Lecture 3 hours, lab 2 hours
PREREQUISITE: CIVL 3300.03 and CIVL 3310.03 (minimum), CIVL 4350.03 (preferable)
CROSS-LISTING: CIVL 6359.03 EXCLUSION: CIVL 6359.03
CIVL 4410.03: Engineering Hydrogeology. This course is an introduction to the application of numerical methods in hydrogeology with a review of key definitions and hydraulic principles pertaining to flow through porous media. This is followed by consideration of well hydraulics in the context of the evaluation and management of groundwater resources. The theory and application of numerical methods are discussed in relation to simple groundwater systems, and this is followed by discussion of the chemistry of both natural and contaminated systems. 

FORMAT: Lecture 3 hours, lab 2 hours 
PREREQUISITE: CIVL 3515.03 or PEAS 2202.03 
CIVL 4440.03: Solid Waste & Landfill Engineering. This course provides students with an understanding of the types of solid waste generation, physical and chemical properties of solid waste, solid waste treatment and disposal alternatives, design and operation of a landfill (including landfill design and configuration, liner selection, liner system, leachate control and treatment, and gas collection and control system). 

FORMAT: Lecture 3 hours, lab 2 hours 
PREREQUISITE: CIVL 3101.03 
CO-REQUISITE: CIVL 3415.03 
CIVL 4515.03: Reinforced Concrete Design. This course will provide students with a basic understanding of the behaviour and analysis of reinforced concrete as a structural material, elementary skills and concepts necessary for designing a variety of common structural elements, and appropriate analysis techniques and code approximations. Current design code provisions related to flexure, shear and compression members will be reviewed, leading to practical design examples for one-way floor systems, columns, footings, and masonry containing walls. 

FORMAT: Lecture 3 hours, lab 2 hour 
PREREQUISITE: CIVL 3115.03 
CIVL 4525.03: Design of Steel Structures. This introductory design course emphasizes the behaviour and design of steel members resisting tensile, compressive, and flexural loads and simple connections of these elements. Members subject to combined loading will also be studied. Upon course completion, the student will be able to design building elements to CSA-SA15-1. Although most design examples will be based on framed buildings, many of the concepts apply equally to other types of structures, e.g., bridges, towers, and submarine halls. 

FORMAT: Lecture 3 hours, tutorial 2 hours 
PREREQUISITE: CIVL 3115.03 
CIVL 4541.03: Application of Finite Element Method in Static & Dynamic Systems. This course provides an introduction to the theory and application of the finite element method. The basic linear elasticity, principles of minimum work and energy methods will be used in developing the methodology. Students will gain practical experience, using a commercial software package, to treat a balance set of problems using classical one-dimensional stress, deformation problem static and dynamic loading systems that are of specific interest to structural engineers. 

FORMAT: Lecture 3 hours, lab 2 hours 
PREREQUISITE: CIVL 3501.03, CIVL 3701.03, CIVL 3740.03 
CIVL 4560.03: Special Topics in Structural Systems. Based on current knowledge acquired from introductory design courses, this course will explore specific advanced topics and principles of the design and analysis of the behavior of concrete, steel and composite systems. Students will study stress, deformation and load failure of components and systems in a variety of applications. 

FORMAT: Lecture 3 hours, lab 2 hours 
PREREQUISITE: CIVL 3151.03 
CO-REQUISITE: CIVL 3415.03 
CIVL 4710.03: Construction Planning. This course deals with construction administration, bidding procedures, cost controls, planning and execution of civil engineering construction projects. The course also covers planning and scheduling techniques such as CPM and PERT. The course presents basic methods of estimating construction costs, with applications to buildings, bridges, foundations, highways and earthworks. 

FORMAT: Lecture 3 hours, lab 2 hours 
CIVL 4801.005: Senior Project I. This course develops the senior project for CIVL 4802. Topics include introduction to potential senior project topics, electing a project, meeting industry representatives, client meetings, and final project planning. 

FORMAT: Lecture 3 hours, lab 2 hours 
PREREQUISITE: CIVL 3415.03 
CIVL 4802.025: Senior Project II. The objective of this course is to provide experience in the application of engineering principles to the solution of specific problems in Civil Engineering. Under the supervision of a faculty member, students execute a project that may include laboratory and/or field experiments, design work, numerical simulations, technical communications on state-of-the-art technologies, or analysis of case histories. Students prepare a formal report according to faculty standards for report preparation and make an oral presentation of their project. 

PREREQUISITE: CIVL 4801.005 
B. Mineral Resource Engineering Series 

MINE 2200.03: Introductory Geology for Engineers. This course deals with the fundamental principles of geology. Topics include mineralogy, rock-forming processes, weathering, erosion, groundwater, glaciation, mass wasting, running water, deserts, shorelines, geologic structures, tectonics, and Earth’s interior. The links between geology, engineering and the environment are explored through case studies. Laboratory exercises covering the identification and interpretation on minerals, rocks, landforms (using topographic maps and remote sensing images) and geologic map structures are an important part of the class. 

FORMAT: Lecture 3 hours, lab 3 hours 
EXCLUSION: MINE 3500.03; ERTH 1090.03 and ERTH 1090.05 
MINE 3520.03: Introductory Mining Engineering. This course is an introduction to mineral industry and mining engineering. Emphasis is placed on unit operations, equipment and surface and underground mining methods. Summaries of the national and global mineral industries, innovative techniques and practices, and the relationships between mining and mineral processing are included. Laboratory experiments are included to simulate some of the processes used in the extractive and concentrating industries. 

FORMAT: Lecture 3 hours, lab 3 hours 
PREREQUISITE: MINE 2200.03 
MINE 3530.03: Mineral Processing. This course is concerned with the principles of unit operations employed in the physical processing of minerals; examination of mineral characteristics on which mineral separation methods are based; liberation of minerals, crushing, grinding, screening and classification. Mineral separation methods include: gravity, dense medium, magnetic and high tension separations, rod-mill sorting, flotation and selective flocculation. Laboratory tests, their interpretations, and assessment of separation performance are covered. 

FORMAT: Lecture 3 hours, lab 3 hours 
PREREQUISITE: MINE 2200.03.

Civil and Resource Engineering 349
MINE 3600.03: Equipment Selection and Materials Handling.
This course deals with mining equipment, analysis of parameters influencing the performance of equipment, and equipment selection. Included are cost analyses and estimation, unit costs, compressed air and hydraulic power systems, applications in mining, pump selection, materials handling systems in underground and surface operations, and storage bins.
FORM A: Lecture 3 hours, lab 2 hours

MINE 3605.03: Mining Geology I.
This course covers the topics of mineralogy, geologic structures, petrology of igneous, sedimentary and metamorphic rocks and ore processes. Emphasis is placed on the relationships between these topics and mining engineering. Laboratory exercises and assignments cover descriptive analysis, geologic maps and sections, stereographic projection and mineral miscibility.
FORM A: Lecture 3 hours, lab 3 hours
PREREQUISITE: MINE 2200.03

MINE 3611.03: Rock Mechanics.
Concepts of mechanical behavior and intact strength properties of rock masses are discussed. Classification systems and failure criteria for rocks are described. The principles of engineering design for underground and surface mine structures are covered. Stereographic projections and numerical methods are used to analyze surface and underground rock stability. Rock mechanics instrumentation is discussed. Laboratory sessions cover sample preparation and rock testing.
FORM A: Lecture 3 hours, lab 3 hours
PREREQUISITE: MINE 3605.03

MINE 3612.03: Rock Penetration and Fragmentation.
This course presents the principles and theories of rock drilling and blasting in both underground and surface mining applications. It covers the properties of explosives and the principles for selection of explosives for different situations. The transportation methods, loading techniques and priming procedures for explosives are discussed. Current trends in drilling and blasting practices are considered as well as controlled blasting and blast monitoring methods. State-of-the-art techniques in rock penetration and fragmentation are presented.
FORM A: Lecture 3 hours

MINE 3620.03: Petroleum Engineering.
This course is designed to provide a comprehensive overview of the engineering aspects of the petroleum industry. Similarities between mining and petroleum engineering are highlighted. Major topics include the fundamentals of petroleum engineering, exploration and development. Students will use the provided data to create ore bodies with information on site description, property rights, stratigraphy and structure, and drillhole data are provided. Mineral deposit is outlined by exploration together with best practices for evaluating deposits, including phase failure, waste failure, topping, and rotational failure.
FORM A: Lecture 3 hours, lab 2 hours
PREREQUISITE: MINE 3605.03, MINE 3620.03
EXCLUSION: MINE 4803.03

MINE 4706.03: Mining Geology II.
The Physical characteristics and origin of the main types of mineral deposits are covered. Individual mineral deposits are described in terms of their mineralogy, rock types, structures and geologic factors affecting mining engineering. Assignment and laboratory exercises concentrate on the three-dimensional analysis of mineral deposits using band specimens, maps, sections, structure contours and modelling of reserves. Case studies are covered in assigned readings.
FORM A: Lecture 3 hours
PREREQUISITE: MINE 3605.03, MINE 3620.03
EXCLUSION: MINE 4803.03

MINE 4710.03: Mine Excavation Systems.
This course deals with several specialized mining topics related to mine excavation including mine drainage in underground and surface operations, tunneling and shaft sinking equipment and techniques, mining related soil mechanics, pressure grouting, ground freezing and mine backfilling.
FORM A: Lecture 3 hours, lab 2 hours

MINE 4711.03: Mine Ventilation and Environment Control.
This course presents the main principles of total mine air conditioning: air quality, air quantity, and temperature-humidity control in underground mines. Health hazards from mine dusts, gases, radon, and heat mines are discussed. Design of airflow in single openings, circuit analysis, and ventilation network design are studied using manual and computer-based techniques. Temperature-humidity control systems design is discussed. Mine illumination and noise control are studied as part of the total mine environment.
FORM A: Lecture 3 hours, lab 2 hours

MINE 4750.03: Senior Design Project I.
This is the first part of a two-part senior project. Methods of mineral exploration are introduced. Methods of resources/reserves estimation are discussed. Surface and drillhole data are provided. Mineral deposit is outlined by exploration together with information on site description, property rights, geology, and structure. Students will use the provided data to create ore bodies and estimate the reserves. Industrial software will be used to complete the project.
FORM A: Lecture 2 hours, lab 2 hours
EXCLUSION: MINE 3520.03, MINE 3605.03 and MINE 4706.03

MINE 4801.03: Advanced Topics in Rock Mechanics.
This course deals with several generic topics in rock mechanics related to ground stability control in surface and underground mines. It covers ground failure, numerical modeling, and back-analysis techniques in mining engineering. Theory and state-of-the-art of relevant techniques are discussed.
FORM A: Lecture 2 hours, lab 2 hours
PREREQUISITE: MINE 3611.03 or permission by instructor

MINE 4815.03: Mining and the Environment.
This course covers environmental practices, problems and solutions in the mineral industry. Topics include exploration, reclamation, mine closure, acid rock drainage, surface subsidence, nuclear waste disposal and coal mine emissions. Case studies are used to highlight these topics. Class participation is emphasized through oral and written presentations.
FORM A: Lecture 3 hours, lab 2 hours
PREREQUISITE: MINE 2200.03 and MINE 4706.03

MINE 4816.03: Mining Engineering Project.
This project allows interested students to investigate a mining topic, which may also be oriented towards geology, mineral processing, environmental issues, or petroleum engineering. This topic must be original and acceptable to the department. A detailed written report of the investigation is required, which is evaluated by two professionals, one of whom is the student advisor.
FORM A: Lab 3 hours

MINE 4820.03: Surface Mine Slope Stability Analysis.
This course deals with the fundamentals of slope stability analysis in surface mining. Geometric and geotechnical parameters are introduced. Laboratory exercises focus on slope stability analysis using numerical methods, case studies are used to discuss practical problems.
FORM A: Lecture 3 hours, lab 2 hours
PREREQUISITE: MINE 3611.03 or MINE 3520.03

MINE 4821.03: Petroleum Reservoir Engineering.
This course discusses the theory and calculations in petroleum reservoir engineering. Major topics include petroleum composition, formation, migration and trapping mechanisms, classification and properties of reservoir rocks and fluids, fluid flow through porous media, phase behaviour diagrams, reservoir energy and recovery mechanisms, reservoir evaluation, as well as geological and reservoir considerations in drilling, and production engineering. An introduction to petroleum exploration methods, and data interpretation techniques is also included.
FORM A: Lecture 3 hours, lab 2 hours
PREREQUISITE: MINE 3611.03 or MINE 3520.03

MINE 4822.03: Advanced Petroleum Engineering.
This course is an advanced study of petroleum reservoir engineering, drilling and development. Topics include analysis and prediction of oil and gas reservoir performance under a variety of production methods, theory and practice of well testing and pressure analysis techniques, state-of-the-art well planning, drilling optimization, enhanced recovery mechanisms, displacement theory and modelling. Students will have to complete a term project dealing with one of these topics.
FORM A: Lecture 3 hours, lab 2 hours
EXCLUSION: MINE 3620.03, MINE 4803.03
CROSS-LISTING: MINE 4803.03

350 Civil and Resource Engineering
MINE 4823.03: Offshore Drilling and Production.

This course is oriented toward the practical applications of offshore drilling, production and completion technology in the ocean environment. Emphasis is placed on the types, applications and limitations of offshore rigs, platforms and subsea production systems. The technical aspects of offshore islands, breakwaters, safety, and fire protection, loading and transportation systems are also covered. The decision making process based on economics and developing technology regarding offshore field development and production is presented as a case study.

FORMAT: Lecture 1 hour, lab 2 hours
PREREQUISITE: MINE 3620.03, MINE 4821.03
CROSS-LISTING: MINE 6009.03

MINE 4830.03: Advanced Mineral Processing.

The objective of this course is to teach how unit operations of mineral processing may be integrated into overall plant operation. The topics considered are: the influence of ore characteristics on the choice of process, concentration methods applicable to various ores with reference to flow diagrams and operations in existing concentrators, basic principles of mineral processing plant design and development of a process flow sheet of a plant based on laboratory test work.

FORMAT: Lecture 2 hours, lab 3 hours
PREREQUISITE: MINE 3530.03

MINE 4832.03: Flotation.

The course provides detailed study of flotation and is designed for students who intend to work in mineral processing or related fields. The topics covered are: interfaces involved in a flotation system, interfacial energies, contact angle; electrical double layer effects; stability of suspensions; adsorption mechanisms; collectors, others, activators and depressants; modulation of collectors; froth stability; fines entrainment in froth lamellae; flotation kinetics; flotation machines; flotation of sulphides, oxides, salines and nonmetallic minerals, and flotation circuit design.

FORMAT: Lecture 2 hours, lab 3 hours

MINE 4835.03: Mineral Economics and Mine Production.

Major topics in Mineral Economics include the influence of mineral industry on the economy and mineral policy, marketing of minerals, price mechanisms, mine project evaluations and financing. Mine Production will cover topics on mine management, techniques to increase mine productivity, operating units analysis, mine maintenance, production scheduling and optimization.

FORMAT: Lecture 3 hours, tutorial 3 hours
PREREQUISITE: MINE 3620.03
EXCLUSION: MINE 4713.03 and MINE 4812.03

MINE 4850.03: Senior Design Project II.

This is the second part of the two-year senior design project. Based on the work completed in part one, students, working in groups, will select proper mining machines; flotation of sulphides, oxides, salines and nonmetallic minerals, and flotation circuit design. /...

MINE 4871.03 and Completion of all courses prior to Term II in the program. Exception may only be made to those with proven knowledge and industrial experience.

I. Introduction

Civil engineering deals with the design, construction, and maintenance of the infrastructure of human civilization. Civil engineers are engaged in addressing two fundamental questions. First, how do we protect our society and its infrastructure from the impacts of the natural environment? Second, what are the impacts of society and its infrastructure on our natural environment? The infrastructure considered may be at the feasibility or the design stage, or already in existence.

First, humans need protection from the elements to thrive on this planet. With the growth of centers of population and highly organized societies, the need for very diverse kinds of ‘shelter’ has also dramatically increased – now routinely including hospitals, schools, skyscrapers, factories, and theatres. Cities and other centers require energy and must be connected, giving rise to the need for such ancillary infrastructure as hydro-dams, road networks, bridges, and airports. The results of the design work of the civil engineer are therefore quite visible and a source of enduring pride. However, values sometimes collide with our infrastructure, striking it with hurricanes and ice storms. Even if the basic designs are sound, a significant maintenance effort by engineers who are knowledgeable about the basis for the original designs is implied.

Second, Civil engineers must recognize that humans are biological entities that consume resources and generate waste. They need water, they generate wastewater. They buy consumer goods, they generate solid waste. How can we ensure that our water is pure, and that it stays pure? How can we ensure that the waste from our cities is handled in such a way that damage to the environment and risks to our own health are minimized, or perhaps even nullified? Nature metes out drought and heat, floods and freezing temperatures. How can we prepare society for such eventualities? The fact that our water and other planetary resources are also finite, can be badly or well-managed, and have been abused in the past all raise additional questions and endeavors that come under the purview of civil engineering. That the undergraduate civil engineering program at Dalhousie University has two options (the Infrastructure Option and Earth and Environment Option) is a reflection of the long-standing relevance and importance of the role of Civil engineers in addressing the above questions.

Although civil engineering is only one among many engineering disciplines available at Dalhousie, as an applied science it is characterized by exceptional technical diversity, great breadth and depth of subject matter, and a propensity for proactively addressing the practical needs of society. It is therefore natural that a BEng in civil engineering is an excellent way to start ‘life in the universe’. It is often used by our graduates as a launching pad for post-graduate studies in very diverse modes of study. Civil engineers are found in all levels of government, in private consulting companies, in public utilities, in global enterprises, and in a wide range of fields that has included technology management, business administration, and even biomedical engineering.
The Department of Civil and Resource Engineering has about 60 graduate students. They are involved in a wide range of projects that will affect engineering practice. Our experienced and diversely trained faculty members therefore have many research outcomes upon which they can draw when coming to the classroom or the laboratory and in doing so are eminently able to keep the undergraduate program current and modern.

A. Infrastructure Option
In this option, the following aspects of civil engineering are emphasized: structural engineering and design, materials of construction (steel, concrete, timber, masonry, asphalt, fibre reinforced polymers), transportation engineering, construction management, and soil mechanics.

B. Earth and Environment Option
In this option the following aspects of civil engineering receive some emphasis: environmental engineering, water and wastewater treatment, water resources and hydrogeology, geo-environmental engineering, and waste management.

II. Curriculum and course descriptions
Refer to sections IIA and IIIA, Civil Engineering Program, in the Civil and Resource Engineering section of this calendar.
I. Introduction
No other branch of engineering can claim to have such an impact on modern society as Electrical and Computer Engineering. The case, speed and precision by which electrical energy and electrical signals can be transmitted, transformed and controlled has influenced not only the daily life of people, but has also changed the course of many other disciplines. Over only a few decades, Electrical and Computer Engineering has grown to a multi-branched discipline with significant applications in the areas of power systems, communication systems, microelectronics, photonics, and computers. This rapid growth, coupled with major advances in technology and material science, has made the field very dynamic, and poses a challenge to the student, to the educator and to the practicing Electrical and Computer Engineer for the breadth of its activities.

The Electrical and Computer Engineering curriculum is based on the physical and mathematical principles which constitute the unchanging foundation of the discipline. Courses apply these foundational principles to state-of-the-art applications within specialized areas of the field. In the final year, technical elective courses are provided to enable the student to obtain a deeper, more detailed understanding of current technology in a field of interest. Technical electives may also be chosen from listed courses offered by other Departments. Also during the final year the student, usually in teams of two, work on a project requiring the application of knowledge to a realistic engineering problem. The projects are supervised by professionals in local industrial and research facilities who then provide supervision in conjunction with an assigned Faculty Advisor. Laboratory sessions form an integral part of most Electrical and Computer Engineering courses. These sessions are conducted in laboratories housed in C Building.

Students enrolled in the Electrical and Computer Engineering Degree Programs may take part in Co-Operative Education where they can apply for up to three four-month work placements in industry. Students participating in the Co-op Program will require two years and four months to complete their degree while students not in the Co-op Program can finish in one year and eight months.

Students participating in our program may pursue either the Electrical or the Computer options as listed below.

II. Degree Programs
A. Electrical Engineering Option

Years 1 and 2 follow the core program outlined in the Engineering section of this calendar.

Term 5 (Fall)
- ECED 3003.03 Networks & Systems
- ECED 3201.03 Introduction to Electronics
- ECED 3204.03 Microprocessors
- ECED 3500.03 Electromagnetic Fields
- ECED 3501.03 Signal Analysis
- MENG 3320.03 Data Structures and Numerical Methods

Work Term 1 (Winter)
- ECED 3101.03 Power Systems I
- ECED 3202.03 Analog Electronics
- ECED 3300.03 Electromagnetic Waves and Propagation
- ECED 3311.03 Communication Systems
- ECED 3600.03 Modern Control Systems
- ECED 3901.03 Electrical Engineering Design II

Term 6 (Summer)
- ECED 4002.03 Digital Signal Processing
- ECED 4513.03 Communication Networks
- ECED 4502.03 Digital Control Systems
- ECED 4901.03 Senior Year Project I
- Technical Elective

B. Computer Engineering Option

Students follow the Electrical Engineering program for Terms 1 to 3. In Year 2, Term 4, the student starts the Computer Engineering program.

Term 5 (Fall)
- ECED 3003.03 Networks & Systems
- ECED 3201.03 Introduction to Electronics
- ECED 3204.03 Microprocessors
- ECED 3401.03 System Analysis
- ECED 3501.03 Signal Analysis
- MENG 3320.03 Data Structures and Numerical Methods

Work Term 1 (Winter)
- CSCI 3120.03 Operating Systems
- ECED 3202.03 Analog Electronics
- ECED 3403.03 Computer Architecture
- ECED 3511.03 Communication Systems
- ECED 3600.03 Modern Control Systems
- ECED 3901.03 Electrical Engineering Design II

Term 6 (Summer)
- CSCI 3120.03 Operating Systems
- ECED 4404.03 Computer Networks & Communications
- ECED 4513.03 Communication Networks
- ECED 4900.03 Senior Year Project I
- Humanities Elective
- Technical Elective

C. Co-op Program

The schedule for the cooperative education program includes eight study terms and three work terms, as follows:

### E. Technical Electives

- **ECED 4071.03** Analog Filter Design
- **ECED 4082.03** MOS Switched-Capacitor Circuits
- **ECED 4130.03** Electric Power Systems II
- **ECED 4140.03** Power Systems III
- **ECED 4200.01** IC Design and Fabrication
- **ECED 4550.01** Optical Electronics
- **ECED 4621.03** Technology and Applications of Fiber Optics
- **ECED 4660.01** Communications Electronics
- **ECED 4904.03** Digital Transmission Theory
- **ECED 4970.03** Biomedical Engineering

### III. Course Descriptions

**ECED 2000.03: Electric Circuits.**

This is an introductory course in electric circuit analysis. The material covered starts with a review of the fundamental circuit variables such as voltage, current, charge, power and energy. Kirchhoff's laws are introduced and developed into node and loop analysis techniques. Terminated behavior and circuit equivalence including Thévenin and Norton circuits are covered. Analysis with controlled sources and energy storage elements is developed including steady state and transient response for first order networks. Phasor and sinusoidal steady state are introduced. Students are introduced to circuit simulation tools such as pspice.

**PREREQUISITE:** MATH 2203.01, PHYS 1205.01 or equivalent

**ECED 2001.03: Circuit Analysis.**

This course covers advanced circuit analysis techniques, starting with sinusoidal excitation. The concepts of phases and complex impedance are fully developed. Mutual inductance and magnetically coupled coils are used to introduce transformer behavior and performance. Real and reactive power flow is covered before the introduction of balanced three phase circuits for power distribution. Symmetrical components are introduced as a means of dealing with unbalanced networks. The concepts of grounding and harmonics are also introduced.

**PREREQUISITE:** MATH 2203.01, PHYS 1205.01 or equivalent

**ECED 2200.03: Digital Circuits.**

This course includes an introduction to: Boolean algebra, encoders, decoders, shift registers, asynchronous and synchronous counters, together with timing considerations. Design of asynchronous circuits, synchronous sequential circuits, and finite state machines, is covered. Karnaugh mapping techniques and state tables and diagrams are taught. Programmed logic is introduced. Contemporary computer aided design and analysis software is used throughout the course.

**PREREQUISITE:** ECED 2000.03

**ECED 3101.03: Power Systems I.**

This course presents the development of the models of each of the components making up a power system including: transformer behavior (power, control and intertransient transformer models); transmission line elements (transmission line behavior and distributed parameter); power system protection; power system stability (steady state and transient stability) and the application of these models to power system planning and operation. The physical models are compiled to present network models that can be used to study power system operation. Load flow is discussed as well as fault estimation and circuit protection.

**FORMA T:** Lecture 3 hours, lab/tutorial 3 hours

**PREREQUISITE:** ECED 2001.03

**ECED 3201.03: Introduction to Electronics.**

The course gives an introduction to semiconductor physics. The theory of operation of semiconductor diodes, bipolar junction transistors (BJTs), and junction and metal oxide field effect transistors (MOSFETS), is covered in detail. The analysis and design of diode, BJT, and MOSFET circuits is covered including voltage multipliers, voltage regulators, and low frequency small signal amplifiers. Contemporary computer aided design and analysis software is applied to the microelectronic circuits.

**FORMA T:** Lecture 3 hours, lab/tutorial 3 hours

**PREREQUISITE:** ECED 2001.03

**ECED 3202.03: Analog Electronics.**

This course covers behaviors of real op-amps, BJTs and FETs in high-frequency and multistage applications. Topics include linear and non-linear op-amp circuits; current mirrors, active loads and biasing; multistage amplifier design feedback in amplifiers; high-frequency narrow-band amplifier tuning, coupling and matching; crystal, resonant, phase-shift and oscillation circuits, waveforms; generation; class A, AB, B and D power amplifier; voltage regulator design; harmonics; design of MOSFET linear control circuits and pulse-width modulators, in addition, filtering, noise and distortion are introduced.

**FORMA T:** Lecture 3 hours, lab/tutorial 3 hours

**PREREQUISITE:** ECED 3001.03 and ECED 3201.03

**ECED 3204.03: Microprocessors.**

This course introduces a currently available microprocessor system. Topics include microcontrollers as a type of microprocessor, microcontroller architecture, address, data and control busses, instruction set, allocation of internal memory modules, use of decoders, latches, flip-flops and other elements of a microprocessor system, CPU bus cycle, cycle-by-cycle execution, the timing diagrams, I/O, interrupts, interrupts and the interrupt control, asynchronous serial communication, RS-232 standard, parallel port interfacing, handshaking protocols, timers, time functions, interrupts, interrupt priority, assembly programming, software development and debugging.

**FORMA T:** Lecture 3 hours, lab/tutorial 3 hours

**PREREQUISITE:** ECED 2200.03

**ECED 3300.03: Electromagnetic Fields.**

This course forms an introduction to basic electromagnetic principles upon which Electrical Engineering is based. The laws underlying the theory are presented in integral and differential form. A classical development of electrodynamics, steady state current, and magnetostatics will lead to Maxwell's equations. The theory developed is applied to calculating circuit parameters such as resistance, capacitance, and inductance for any electronic or magnetic structure.

**FORMA T:** Lecture 3 hours, lab/tutorial 2 hours

**PREREQUISITE:** ENGM 2105.01

**ECED 3301.03: Electromagnetic Waves & Propagation.**

This course presents the basic theory and applications of propagation of electromagnetic waves. Major topics include: time-varying Maxwell's equations, electromagnetic force, electromagnetic spectrum, transmission of plane waves, reflection and refraction, polarization, radiation, transmission line theory, standing wave ratio, Smith Chart, impedance matching, guided wave structures, modes and cut-off frequencies.

**FORMA T:** Lecture 3 hours, lab/tutorial 2 hours

**PREREQUISITE:** ECED 3300.03

**EXCLUSION:** ECED 4500.03

**ECED 3401.03: System Analysis.**

Requirement analysis, specifications, concepts of transforming an ill-defined problem into a set of specifications. Functional decomposition and data dictionaries. Top down structured and object oriented analysis techniques. Laboratory and assignment work will address the analysis of relatively complicated systems using the different techniques.
Undergraduate book Page 355 Wednesday, March 12, 2014 12:03 PM

ECED 3403.03: Computer Architecture. 
This course deals with design methods, processor instruction sets, and memory systems. The student will study design methods, implementation techniques, modeling techniques, and performance analysis. Reduced instruction set architectures (RISC), pipelining, pipeline hazards, and their implementation for modern high-speed applications will be studied. The student project will require a team to design and implement (or simulate) a RISC architecture.
FORMAT: Lecture 3 hours, lab 2 hours
PREREQUISITE: ECED 2200.03
EXCLUSION: ECED 2400.03

ECED 3500.03: Signal Analysis. 
Transformation theory and frequency-domain representation of continuous-time signals including Fourier series, Fourier transform and Laplace transformation. Discrete-time signals, sampling theorem, aliasing and frequency domain representation of discrete-time signals including the $\delta$-transformation. Introduction to communication systems, exponential and sinusoidal-amplitude modulation.
FORMAT: Lecture 3 hours, tutorial 1 hour
PREREQUISITE: ENMG 1041.03 and ENMG 2202.03 and ENMG 2101.03

ECED 3511.03: Communication Systems. 
This course examines the principles of communication theory as applied to the transmission of information in the presence of noise. Statistical underpinnings of communication system design are presented for analog and digital modulation schemes with the emphasis on binary and M-ary signaling at the baseband and passband. Powerbandwidth efficiency tradeoffs are discussed. The course combines a rigorous development of the fundamental principles in transmitter/ receiver design with a realistic treatment of modulation and demodulation methods. The laboratory component is devoted to the design and implementation of a communication system.
FORMAT: Lecture 3 hours, lab 3 hours
PREREQUISITE: ECED 3500.03

ECED 3600.03: Modern Control Systems. 
This course deals with control systems analysis and design aspects. Techniques for analyzing the performance of analog systems are introduced. Emphasis is on the use of the Laplace transform and state space techniques in evaluating system performance indicators including stability. Tools introduced include frequency response methods, and the root locus. Practical examples involving design of controllers for small systems to address desired response are discussed.
FORMAT: Lecture 3 hours, lab/tutorial 2 hours
PREREQUISITE: ENMG 3000.03
EXCLUSION: ECED 4600.05

ECED 3901.03: Electrical Engineering Design II. 
This course deals with specific aspects of high-performance products and systems. Students gain experience in the design of complex systems. The course covers a design project that is based on an original design solution to a specific problem. The student will combine both classroom and lab work. The classroom component will use case studies, design reviews and conventional lectures. The lab component will be devoted to the design and implementation of a solution to the student challenge.
FORMAT: Lecture 2 hours, lab 3 hours
PREREQUISITE: ECEG 3001.03

ECED 4071.03: Analog Filter Design. 
This course deals with the theory and design of active filters, for audio-frequency applications, using op amps. It consists, basically, of two phases. Phase 1 deals with the realization of a given transfer function using cascade of first and/or second order RC-circuit filters. In phase II, the transfer functions of filters are studied in combination with frequency-response approximations such as Butterworth, Chebyshev, Inverse-C (beavley, Cauer (or Elliptic)) and Bessel-Thompson. The design of Monolithic MOS switched-capacitor filters is also introduced.
FORMAT: Lecture 3 hours, tutorial 2 hours
PREREQUISITE: ECED 3500.03 and ECED 3102.03

ECED 4082.03: MOS Switched-Capacitor Circuits. 
Metal-oxide-semiconductor (MOS) switched-capacitor (SC) techniques are the most common approach for realizing analog-to-digital conversion due to their high degree of accuracy and linearity. This course deals with the theory, analysis and design of SC circuits. It covers the following topics: fundamentals of sampled-data systems, MOS technologies, MOS devices for linear analog integrated circuits, Parameter-capacitance, systematic analysis techniques, basic building blocks of SC filters, synthesis and design of SC filters.
FORMAT: Lecture 3 hours, lab/tutorial 2 hours
PREREQUISITE: ECEG 3501.03
EXCLUSION: ECEG 3500.03

ECED 4102.03: Electromechanics. 
This course covers the principle of electromechanical energy conversion and electrical motion. A review of magnetic field behavior leads to magnetic circuit calculations and permanent magnet circuit behavior. Energy balance principles are used to develop force and torque relationships for many electromechanical applications including relays, motor movements and motor operation. Basic principles of motor operation such as rotating magnetic fields, efficiency and machine ratings are given as a prerequisite to an in-depth presentation of AC and DC motor behavior. Emphasis is placed on motor control and application.
FORMAT: Lecture 3 hours, lab/tutorial 3 hours
PREREQUISITE: ECED 3001.03 or ECED 3101.03
EXCLUSION: ECEG 3100.03

ECED 4130.03: Electric Power Systems II. 
FORMAT: Lecture 3 hours, lab 2 hours
PREREQUISITE: ECED 4101.03

ECED 4140.03: Power Systems III. 
The course covers topics such as load curves and forecasting, characteristics and peak demand forecasting, weather-load models, discounted multiple regression and ARMA models, introduction to power system reliability evaluation, generating capacity reserve evaluation, contingency evaluation and an introduction to long-range power system expansion planning packages and production costing.
FORMAT: Lecture 3 hours, lab 2 hours
PREREQUISITE: ECED 2200.03 and ECED 4201.03
RESTRICTION: Include: Major - Ceng

ECED 4350.03: Optical Electronics. 
This course deals with the fundamental science of light and detection of light in semiconductor materials as they pertain to optoelectronic devices such as light emitting devices, laser diodes, photodiodes, and light detectors. Major topics include: review of semiconductor properties; photo detectors such as PIN, photodiodes and Avalanche photodiodes (APDs); spontaneous emission and stimulated emission in light emitting diodes (LEDs); and optical gain in Laser diodes (LDs). Typical materials, structures, characteristics and parameters of these devices are discussed with relation to various applications in fiber optics, consumer and computer products.
FORMAT: Lecture 3 hours, tutorial 2 hours
PREREQUISITE: ECED 2200.03
EXCLUSION: ECED 2400.03

ECED 4402.03: Real Time Systems. 
This course covers system analysis and design techniques and then addresses real time implementation methods. Real time operating system (RTOS) requirements are covered. Topics include message queues, resource sharing, priority assignments, event flags, interrupts, memory allocation, and typical RTOS configurations. Examples in engineering and networking will be discussed. A significant design and implementation project will be undertaken.
FORMAT: Lecture 3 hours, lab/tutorial 3 hours
PREREQUISITE: ECED 4501.03 or ECED 3204.03, and CSCI 3120.03

ECED 4404.03: Computer Networks & Communications. 
Network architecture and topology, ISO, physical and data link layers, LANS, ATM, routing, quality of service, and emerging technologies. The laboratory and assignments will require implementation of network software and evaluation of current technologies.
FORMAT: Lecture 3 hours, lab 2 hours
PREREQUISITE: ECED 3400.03 or ECED 3204.03

Electrical and Computer Engineering 355
ECED 4421.03: Technology and Applications of Fiber Optics.
This course deals with the basic principles and applications of optical fiber communication systems. Topics include: the realization of passive components for high frequency applications; small signal amplifier design and characterization employing s-parameter techniques; large signal circuit design; realization and analysis employing voltage series and harmonic balance nonlinear analysis procedure; the realization and characterization of non-linear circuits such as high efficiency power amplifiers, oscillators, frequency converters, and modulator/demodulator subsystems; the integration of appropriate subsystems into analog and digital terrestrial and space borne radio communication systems.

ECED 4460.03: Communications Electronics.
This course provides an introduction to the theory and design of electronic circuits for communications systems. Topics include: the realization of passive components for high frequency applications; small signal amplifier design and characterization employing s-parameter techniques; large signal circuit design; realization and analysis employing voltage series and harmonic balance nonlinear analysis procedure; the realization and characterization of non-linear circuits such as high efficiency power amplifiers, oscillators, frequency converters, and modulator/demodulator subsystems; the integration of appropriate subsystems into analog and digital terrestrial and space borne radio communication systems.

ECED 4402.03: Digital Signal Processing.
Topics covered will include detailed analysis of channel and source coding techniques with derivation of bit error rates for various modulation schemes and power-bandwidth efficiency trade-offs. Design of optimum receivers is examined. Power Spectral Density of communications waveforms is presented. Channel fading and performance degradations are discussed. Information Theory issues are examined. Teletraffic analysis is presented for both circuit and packet switched networks. ECED 4421.03: Technology and Applications of Fiber Optics.

ECED 4404.03: Digital Transmission Theory.
Topicals covered will include detailed analysis of channel and source coding techniques with derivation of bit error rates for various modulation schemes and power-bandwidth efficiency trade-offs. Design of optimum receivers is examined. Power Spectral Density of communications waveforms is presented. Channel fading and performance degradations are discussed. Information Theory issues are examined. Teletraffic analysis is presented for both circuit and packet switched networks. ECED 4421.03: Technology and Applications of Fiber Optics.

ECED 4513.03: Communication Networks.
This course focuses on the fundamentals of data communication networks. It covers the layered architecture of packet networks and their network elements (switches, routers, bridges). The protocols used to enable transmission of packets through the Internet are examined in detail. Analysis and design of protocols to enhance the efficiency of data transmission in the context of Internet technology is also presented. Students will gain an appreciation of implementing voice over IP, DVD and WiFi transmissions.

ECED 4501.03: Biomedical Engineering.

ECED 4900.03: Senior Year Project I.
This course develops the use of fundamental theory in the detailed design of a suitable project selected by the student in consultation with the department. The student is expected to take the project from its preliminary stage through the various design stages to the ultimate completion of the design, which include a detailed report with calculations, drawings, possibly a model and verbal presentation.

ECED 4901.03: Senior Year Project II.
This course is a continuation of Senior Year Project I leading to a final report and formal presentation. The presentation will be made to fellow students and departmental staff members.

ECED 4900.03: Senior Year Project I.
This course develops the use of fundamental theory in the detailed design of a suitable project selected by the student in consultation with the department. The student is expected to take the project from its preliminary stage through the various design stages to the ultimate completion of the design, which include a detailed report with calculations, drawings, possibly a model and verbal presentation.

ECED 4901.03: Senior Year Project II.
This course is a continuation of Senior Year Project I leading to a final report and formal presentation. The presentation will be made to fellow students and departmental staff members.
II. Course Descriptions

ENGM 1011.03: Engineering Mathematics I.
This course covers functions, limits, continuity, differentiation and integration of polynomials, exponential, logarithmic and trigonometric functions, product, quotient and chain rule applications of differentiation to graphing, maximization and minimization problems and related rate problems, definite and indefinite integrals, and the fundamental theorem of Calculus.

ENGM 1012.03: Engineering Mathematics II.
This course covers applications of integration including areas, volumes, moments, pressure work, techniques of integration, numerical integration, length of curves, surfaces of revolution, parametric equations, polar coordinates, sequences and series, and Taylor series.

ENGM 1041.03: Applied Linear Algebra.
This course covers geometry vectors in three dimensions, dot product, cross product, lines and planes, complex numbers, systems of linear equations, matrix algebra, matrix inverses, determinants, Cramer's rule, introduction to vector spaces, linear independence and bases, rank, linear transformations, orthogonality and applications, Gram Schmidt algorithm, eigenvalues and eigenvectors.

This course covers first order linear and non-linear differential equations, differential equations of higher order with constant coefficients, applications to Engineering problems. Laplace transforms, periodic functions, applications of Laplace transforms to linear systems, Fourier Series, the line spectrum.

This course covers geometric vectors in three dimensions, dot product, cross product, lines and planes, complex numbers, systems of linear equations, matrix algebra, matrix inverses, determinants, Cramer's rule, introduction to vector spaces, linear independence and bases, rank, linear transformations, orthogonality and applications, Gram Schmidt algorithm, eigenvalues and eigenvectors.

ENGM 3032.03: Applied Statistics.
This course deals with some statistical techniques and their application to engineering problems. Topics covered include probability laws and the interpretation of numerical data, probability distributions and probability densities, functions of random variables, joint distributions, inference concerning mean and variance, tests of hypotheses, and introduction to linear regression. The course emphasizes engineering applications and makes extensive use of statistical computer packages.

ENGM 3052.03: Applied Probability and Statistics.
The topics covered include probability laws and the interpretation of numerical data, probability distributions and probability densities, functions of random variables, joint distributions, inference concerning mean and variance, tests of hypotheses, and introduction to linear regression. The course emphasizes engineering applications and makes extensive use of statistical computer packages.

ENGM 4101.03: Engineering Mathematics and Internetworking.
This course covers fundamental programming principles including flow control, modularity, and structured programming. The student will implement significant packages.

ENGM 4102.03: Computer Programming.
This course covers fundamental programming principles including flow control, modularity, and structured programming. The student will implement significant packages.

ENGM 4103.03: Applied Vector Calculus.
This course covers vector calculus, arc length, curvature, functions of several variables, partial derivatives, implicit functions, constrained and unconstrained extrema, multiple integrals, line, surface, and volume integrals, change of variables in multiple integrals, scalar and vector fields, gradient, divergence and curl, Stokes Theorem, the Divergence Theorem, and applications to heat flow, electrostatics and fluid flow. Programming skills are developed using software tools to solve practical problems.

ENGM 4104.03: Applied Probability and Statistics.
This course covers fundamental programming principles including flow control, modularity, and structured programming. The student will implement significant packages.

ENGM 4105.03: Applied Statistics.
This course deals with some statistical techniques and their application to engineering problems. Topics included are: review of statistical inference, linear regression and correlation, analysis of variance, the design of experiments and nonparametric statistical methods.

ENGM 4106.03: Engineering Mathematics and Internetworking.
This course covers fundamental programming principles including flow control, modularity, and structured programming. The student will implement significant packages.
ENGM 3202.03: Data Structures and Numerical Methods.
This course introduces the student to system analysis, and software techniques. Topics covered include objects, stacks, queues, multiple linked lists, searching and sorting algorithms, and their implementations in the C++ programming language. The students use linear algebra and numerical methods in engineering examples while learning to implement properly structured solutions.

FORMA T: Lecture 3 hours, lab 2 hours
PREREQUISITE: ENGM 1081.03, ENGM 2101.03, ENGM 2022.03
ENGM 3271.03: Engineering Mathematics V.
This course has three parts. The first is complex analysis, including the residue theorem and its applications. The second part concerns transform theory including Fourier Series, Fourier Transform, the frequency domain representation of signals, impulse response, and transfer function. The third part concerns partial differential equations including the classification of equations and boundary conditions, separation of variables, the wave equation, Laplace’s equation, and applications to electrical engineering problems.

FORMA T: Lecture 3 hours, lab 2 hours
PREREQUISITE: ENGM 1081.03, ENGM 2022.03, ENGM 2101.03
CROSS-LISTING: ECED 3390.03
ENGM 3282.03: Data Structures and Numerical Methods.
This course introduces the student to system analysis, and software techniques. Topics covered include objects, stacks, queues, multiple linked lists, searching and sorting algorithms, and their implementations in the C++ programming language. The students use linear algebra and numerical methods in engineering examples while learning to implement properly structured solutions.

FORMA T: Lecture 3 hours, lab 2 hours
PREREQUISITE: ENGM 1081.03, ENGM 1081.03
ENGM 3356.03: Numerical Methods and Partial Differential Equations.
This course provides an introduction to Numerical Analysis and Partial Differential Equations with emphasis on solution of problems related to Mechanical Engineering. The following topics are covered: approximations and errors; roots of non-linear equations; systems of equations; curve fitting; numerical integration and differentiation; numerical solution of ordinary differential equations; partial differential equations; separation of variables, solution of the equation, wave equation, Laplace’s equation with various boundary conditions; numerical solutions of partial differential equations.

FORMA T: Lecture 3 hours, lab 2 hours
PREREQUISITE: ENGM 1081.03, ENGM 1081.03
ENGM 4657.03: Risk Assessment and Management.
This course introduces the student to system analysis, and software techniques. Topics covered include objects, stacks, queues, multiple linked lists, searching and sorting algorithms, and their implementations in the C++ programming language. The students use linear algebra and numerical methods in engineering examples while learning to implement properly structured solutions.

FORMA T: Lecture 3 hours, lab 2 hours
PREREQUISITE: ENGM 2022.03
ENGM 4680.03: Ecosystem Modelling of Marine and Freshwater Environments.
Students develop and apply mathematical models of marine and freshwater ecosystems to study biological production, biogeochemical cycling etc. Lectures provide theoretical background for coupling nutrient and plankton dynamics, including parameterizing biological processes and physical effects. Computer sessions provide hands-on modelling experience. Students also learn to critique modelling literature in a journal-club setting.

FORMA T: Lecture 3 hours, lab 2 hours
CROSS-LISTING: ENGM 6680.03, OCEA 6680.03
I. Introduction

Food Science is a discipline that combines a basic knowledge of science and engineering principles in the study of food products and preservation technologies. Food scientists have training in and employ the principles of the basic sciences such as physics, mathematics, chemistry, biology, biochemistry, and microbiology. Food Science is the application of the basic sciences and engineering to food processing, preservation and safety.

A Minor in Food Science is available to students registered in the BSc 20 credit major and honours programs. See page 373.

II. Curriculum and course descriptions

Refer to sections IID and IIID, Food Science Program, in the Process Engineering and Applied Science section of this calendar, page 369.

III. Admissions

Students from Canadian High schools are recommended to take the following subjects in high school: Pre-calculus Math and English and two or more of Physics, Chemistry, Food Science or Biology. The admission requirements are the same as for admission to the Bachelor of Science program. Many of our students have traditionally been transfer students. Please contact the program chair for advice on this matter.

---

I. Introduction

Industrial Engineers design systems to enable people and society to improve productivity, efficiency, effectiveness and quality. All engineers work at planning, designing, implementing and controlling the systems that enable people to use technology. The systems that industrial engineers design are broad and are characterized by a need to integrate both the physical and decision making capabilities of humans with all other aspects of the system design. Problems range from the design of a work method and work station, to the design of a factory floor, to the design of an overall corporate plan involving materials procurement, production, inventory and distribution. The idea of a factory is also extended to include communications, systems, energy systems, health care systems, municipal systems, transportation systems; in fact all the systems that are essential to the functioning of modern society. To facilitate effective decision making and achieve high performance in areas such as scheduling, inventory and quality control, industrial engineers are often required to design and implement computer based information systems.
Human behaviour and capabilities are key elements in the systems industrial engineers work with. In designing the layout of a production line for an automobile manufacturer, the checkout counter for a supermarket, the organization of work for a bank or the materials handling system for a steel plant, the engineer must consider both physical requirements and cost parameters, and the physiological and behavioural performance of the human operators. The industrial engineer has a dual role, both to extend human capability to operate, manage and control the overall production system, and to ensure the safety and well-being of those working in the system.

Design and development of these systems requires the unique background of the industrial engineer. The process of engineering always starts with measurement. Where other engineers might measure temperatures, pressures, or loads, the industrial engineer measures the time of a work cycle, dollar value of expenditures, rate of machine failures, and demand for finished goods. Usually the mathematical analysis must take into account risk and uncertainty to a larger extent than in other engineering fields. Computer simulation and optimization are often required. The concepts and techniques found in the Industrial Engineering curriculum have been selected to assist the student to develop the skills that meet the specific challenges of systems which involve managerial activities.

Students begin the Industrial Engineering program with a background in engineering fundamentals studied during their initial two years. In the latter portion of the IE program, they are introduced to the fundamental approaches of work place design and operations research, while at the same time enhancing their mathematical and computer background. Later, more advanced modelling approaches are examined together with courses more directly related to the management process. Production scheduling, inventory control, quality management and plant layout are studied, as are the factors which influence human performance. Students are provided with the opportunity to study such areas as manufacturing, service systems, or maintenance through the Department's elective course offerings.

In their final year, all students undertake a major design project. Projects are drawn from companies or institutions outside the University and are treated as a consulting assignment. Students are evaluated on their ability to achieve an innovative solution by drawing upon the analytical skills developed throughout their program of studies. They must also, of course, satisfy the practical requirements of the client.

Job opportunities for industrial engineers are both plentiful and widely based. Former graduates are currently practicing industrial engineering in areas ranging from semiconductor manufacturing and airlines, to utilities and hospitals. Invariably, the work assigned is original in its nature, demanding that the industrial engineer be creative in applying his or her many abilities to achieve the best solution. Managers require such results if they are to keep their costs under control and manage and control the overall production system, and to ensure the safety and well being of those working in the system.

II. Program Guide

Years 1 and 2 follow the core program outlined in the Engineering section of this calendar.

Co-op Program

<table>

Students not wishing to participate in the co-op program are able to structure their academic program over a two-year time period. To do so requires the student to complete the first year in the summer study term, which commences the first week of May (Study Term 1). The student then completes Study Term 5 in the fall, and then Study Term 7 in the winter. After a summer "off", the student completes the final two study terms in the same order as students in the co-op program—thus completing the five study or academic terms within two calendar years.

Year 3, Term 5 (Fall)
- IENG 3161.03 Design of Information Management Systems
- IENG 3200.03 Analysis of Design of Production Systems
- IENG 3521.03 Manufacturing Processes and Materials
- IENG 3334.03 Industrial Statistics
- IENG 3343.03 Operations Research: Stochastic and Non-Linear Models

Year 3, Term 6 (Summer)
- IENG 3164.03 Design of Information Management Systems
- IENG 3320.03 Analysis of Design of Production Systems
- IENG 3521.03 Manufacturing Processes and Materials
- IENG 3343.03 Operations Research: Stochastic and Non-Linear Models

Year 4, Work Term 2 (Fall)
- IENG 4432.03 Simulation of Industrial Systems
- IENG 4443.03 Quality Control and Reliability
- IENG 4444.03 Facilities Design
- IENG 4445.03 Design of Inventory Systems
- IENG 4446.03 Project Management and Control

Year 4, Work Term 3 (Summer)
- IENG 4548.03 Systems Engineering
- IENG 4549.03 Special Topics in Industrial Engineering

Year 4, Term 7 (Winter)
- IENG 4447.03 Operations and Management
- IENG 4500.06 Industrial Engineering Design Project
- IIE Elective
- IIE Elective

Year 5, Term 8 (Fall)
- IENG 4547.03 Operations and Management
- IENG 4500.06 Industrial Engineering Design Project
- IIE Elective
- IIE Elective

Year 5, Term 9 (Winter)
- IENG 4528.03 Industrial and Organizational Psychology
- IENG 4500.06 Industrial Engineering Design Project
- IIE Elective
- IIE Elective

Industrial Engineering Electives
- IENG 4544.03 Routing and Scheduling
- IENG 4562.03 Maintenance Engineering and Management
- IENG 4564.03 Design and Optimization of Service Systems
- IENG 4571.03 Computer Integrated Manufacturing Systems
- IENG 4572.03 Industrial Biomechanics
- IENG 4573.03 Decision and Risk Analysis
- IENG 4579.03 Computer Networks
- IENG 4599.03 Special Topics in Industrial Engineering
III. Course Descriptions

IENG 2005.03: Engineering Economics.
This course is designed to provide students with the fundamentals of engineering economics. Engineers must function as managers in the real world of decision making where the criteria include not only technological excellence, but cost. Time value of money, project screening, and a variety of discounting analysis techniques are presented. Make versus buy decisions and review versus replace decisions are discussed. The tax effects on project cash flow and viability are also presented. This course is designed to introduce students to these fundamentals, and apply them through the use of software and projects.

FORMATTED: Lecture 3 hours, lab 2 hours

IENG 3301.03: Fundamentals of Industrial Engineering.
This course introduces students to the fundamentals of industrial engineering. The history, development and theoretical basis of industrial engineering will be discussed, as well as the social and environmental impact of engineering decisions. Students will be introduced to the concept of systems and systems thinking. Fundamental industrial engineering techniques will be covered, including motion study, work measurement of standards, and operations evaluation and analysis.

FORMATTED: Lecture 3 hours, lab 2 hours

PREREQUISITE: IENG 2005.03
EXCLUSION: IENG 3311.03

IENG 3303.03: Ergonomics and Work Design.
Ergonomics is the science of applying knowledge of the capabilities and limitations of humans into the design of products, work spaces and systems we use every day. Topics in this course include the musculoskeletal system, anthropometry, manual material handling, work physiology, the effect of work environment on performance, human/machine interaction, cognition and information processing. Design principles based on this knowledge will be presented. This course will include labs and final design project.

FORMATTED: Lecture 3 hours, lab 3 hours

CROSS-LISTING: KINE 3407.03

EXCLUSION: IENG 3313.03, IENG 3347.03

IENG 3305.03: Computational Methods and Algorithms for IE.
An overview of advanced programming methods is presented with an introduction to algorithms used in industrial engineering applications. Topics covered include sorting, searching, data structures, shortest path, random number generation, simulated annealing, matrix operations, curve fitting and geometric algorithms. Algorithms for solving several classes of equations are considered. Techniques for writing and debugging large programs, and controlling numerical errors are taught. The C programming language will be used for implementation.

FORMATTED: Lecture 3 hours, lab 2 hours

PREREQUISITE: IENG 1001.03

IENG 3316.03: Design of Information Management Systems.
Techniques used in the design of information management systems to support decision making are taught. This includes the principles of systems analysis, software engineering and requirements analysis. The design of relational database systems, user interfaces and documentation are covered. Current technologies for computer hardware, software, networking and communications are reviewed. Students are taught how to program database applications in a fourth generation environment. Software development projects will be assigned.

FORMATTED: Lecture 3 hours, lab 2 hours

PREREQUISITE: IENG 1001.03

IENG 3320.03: Analysis and Design of Production Systems.
This course teaches the student with an introduction to issues in planning and control of production systems and scheduling techniques used in production environments. Topics include aggregate planning models, performance measurement, materials requirements planning, production lot-sizing, just-in-time (JIT) models and other pull control systems. Job scheduling and sequencing. Models currently practiced in industry, such as Lean Manufacturing and Six-Sigma, will also be introduced.

FORMATTED: Lecture 3 hours, lab 3 hours

PREREQUISITE: IENG 1001.03, IENG 2202.03, IENG 3345.03, IENG 2203.03 (may be taken concurrently)

IENG 3321.03: Manufacturing Processes and Materials.
The course deals with properties of manufacturing materials, casting and forming, traditional and non-traditional machining processes, welding and computer-integrated manufacturing (CIM). Theoretical background is provided that includes equilibrium diagrams, heat treatment, tool life and wear, and manufacturing and quality control.

FORMATTED: Lecture 3 hours, lab 2 hours

PREREQUISITE: ENGI 1101.045, ENGI 2203.03

IENG 3334.03: Industrial Statistics.
This course covers hypothesis testing, chi square tests and nonparametric techniques, analysis of variance and experimental design, as well as simple and multiple linear regression. Numerical examples are solved by straightforward calculation as well as by computer software, and various applications are presented. A project concerns the building and testing of a multiple linear regression model.

FORMATTED: Lecture 3 hours, lab 2 hours

PREREQUISITE: ENGM 2010.03, IENG 1004.03, IENG 1081.03

IENG 3345.03: Operations Research: Linear Models.
The course is an introduction to linear programming and its applications to industrial engineering design. The simplex method and duality theory are covered in detail. Formulation, solution algorithms, and applications of several problem classes are presented including network models and integer programs. Through a class project, students are introduced to the process of developing an optimization model, including the ideas of database, matrix generators, and report writers.

FORMATTED: Lecture 3 hours, lab 3 hours

PREREQUISITE: ENGM 2010.03, IENG 1004.03, IENG 1081.03

IENG 3348.03: Systems Engineering.
The course places the industrial engineering viewpoint in the context of systems theory. The course begins with an introduction to the general concepts of systems, and then examines classical linear systems theory as applied traditionally in engineering. It is shown how industrial engineering design can be viewed as a control system problem. The concepts of systems engineering are in turn applied to industrial engineering design. Systems dynamics simulation is used to explore these ideas. Issues of capacity planning, hierarchical production planning and control, short term scheduling and data envelopment analysis are presented.

FORMATTED: Lecture 3 hours, lab 2 hours

PREREQUISITE: IENG 2023.03, IENG 2025.03, IENG 3354.03

EXCLUSION: IENG 4404.03

IENG 4432.03: Simulation of Industrial Systems.
The course stresses discrete event systems simulation. Model development includes validation and verification methods, the generation of pseudo-random numbers from continuous and discrete distributions, selection of probability distributions and variance reduction techniques. Statistical output analysis and inference are studied for effective interpretation of results. Applications in areas such as manufacturing, service operations, project management and system design are reviewed. Simulation software is used throughout the course.

FORMATTED: Lecture 3 hours, lab 2 hours

PREREQUISITE: IENG 3300.03, IENG 3301.03, IENG 3334.03, IENG 3345.03

EXCLUSION: IENG 4404.03

IENG 4443.03: Quality Control and Reliability.
The course evaluates aspects of production to ensure that products meet specifications. Statistical quality control, which is used to determine process capability and to detect process changes, involves the design and use of different types of control charts. Sampling inspection, which is used to separate good lot
from poor lots, covers the design of sampling plans. Reliability is concerned with the design of products and reliability testing.

**IENG 4443.03: Quality Control and Reliability.**

This course evaluates aspects of production to ensure that products meet specifications. Statistical quality control, which is used to determine process capability and to detect process changes, involves the design and use of different sampling plans. Sampling inspection, which is used to separate good and poor lots, covers the design of sampling plans. Reliability is concerned with the design of products and reliability testing.

**FORMAT:** Lecture 3 hours, lab 2 hours
**PREREQUISITE:** IENG 3301.03, IENG 3311.03, IENG 3334.03
**EXCLUSION:** IENG 3443.03

**IENG 4445.03: Facilities Design.**

This course deals with the principles, concepts and methods of plant layout and materials handling for the optimum design of a facility. The topics include information requirements for facility design, conventional and newer quantitative techniques for analyzing material flow, facilities location, space determination, computerized plant layout techniques, the unit load concept, materials handling equipment selection and automatic storage and retrieval systems. A project involves facilities design for the manufacture and assembly of a mechanical device.

**FORMAT:** Lecture 3 hours, lab 2 hours
**PREREQUISITE:** IENG 3301.03
**EXCLUSION:** IENG 3445.03

**IENG 4454.03: Design of Inventory Systems.**

This course introduces a number of quantitative methods for the analysis and design of inventory systems. These include deterministic and probabilistic economic order quantity (EOQ) models and variants, single and multiple-period inventory models, exchange curves, and other advanced inventory models. Forecasting algorithms applicable to inventory systems are also covered.

**FORMAT:** Lecture 3 hours, lab 3 hours
**PREREQUISITE:** IENG 3013.01, IENG 3311.03, IENG 3320.03, IENG 3334.03, IENG 3343.03

**IENG 4500.03: Operations Research Methods for Systems Engineering.**

This course will introduce non-industrial engineering students to operations research models and methodologies to optimize the design, development and operation of engineered systems. The objectives of this course will be to provide students with the skills to solve a variety of linear and nonlinear models and the ability to recognize how such models can be applied in a wide variety of engineering disciplines. Topics to be covered include linear programming, integer programming, network models, decision analysis, dynamic programming, queuing models, and non-linear optimization. Applications will focus on diverse areas of engineering such as manufacturing, transportation, and environmental management.

**PREREQUISITE:** IENG 3301.03

**IENG 4529.03: Industrial and Organizational Psychology.**

Industrial behavior and group processes are reviewed, particularly as they relate to activities in organizations. Perception, learning, motivation and attitudes are covered. The implications of different personality types at work are taught. Organizational issues such as group dynamics, communication, power and conflict are studied. Applications include job analysis, team effectiveness, personnel selection and training, job enrichment, leadership and career management.

**FORMAT:** Lecture 3 hours, lab 2 hours

**IENG 4544.03: Routing and Scheduling.**

Optimization techniques for solving vehicle routing and scheduling problems are covered. Elementary concepts and systems for graphs, networks, maps and geographic information systems (GIS) are presented. Specific issues include NP-complete problems, shortest paths and traveling salesman problems. Vehicle routing and scheduling with capacity constraints, time windows, pick-up and delivery constraints are also discussed. Applications in manufacturing and transportation are reviewed.

**FORMAT:** Lecture 3 hours, lab 2 hours
**PREREQUISITE:** IENG 3305.03, IENG 3344.03

**IENG 4547.03: Computer Integrated Manufacturing Systems.**

Techniques are introduced for the analysis and design of computer integrated manufacturing systems. The architecture of CIM is discussed, including machining stations, material handling, robots, computer control and information systems. Specific topics include manufacturing simulation, automated material handling, warehouse management, robotics, manufacturing planning and control, just-in-time systems, group technology, cellular manufacturing, flexible manufacturing systems, concurrent engineering, computer aided process planning and information systems design.

**FORMAT:** Lecture 3 hours, lab 2 hours
**PREREQUISITE:** IENG 3301.03, IENG 3345.03

**IENG 4571.03: Computer Integrated Manufacturing Systems.**

The course primarily deals with the functioning of the structural elements of the human body and the effects of external and internal forces on the body. Due emphasis is given to the biomechanical approach to job analysis. This takes into account human motor capabilities and limitations, work physiology, task demands, equipment and workplace characteristics in an integrated manner. Use of instruction and applications of biomechanics in work, industry and rehabilitation are discussed.

**FORMAT:** Lecture 3 hours, lab 2 hours
**PREREQUISITE:** IENG 3320.03, IENG 3321.03, IENG 4452.03

**IENG 4573.03: Industrial Biomechanics.**

This course develops BQ-34 assessment, and decision-making are presented. Methods for scoping a decision-making problem, environmental, social, economic and public approval of society are discussed.

**FORMAT:** Lecture 3 hours, lab 2 hours
**PREREQUISITE:** IENG 2005.03

**IENG 4558.03: Project Management and Control.**

This course identifies the common aspects and peculiarities of projects and their phases to illustrate the application of analytical approaches to meet the challenges of achieving effective project management. The following topics are covered: feasibility studies, project planning, cost estimation, building, use of professional tools and other types of computerized project scheduling and resource allocation and project life cycle concepts. The role of the professional engineer in society and the impact that engineering in all its forms makes on the environment, social, economic and cultural aspirations of society are discussed.

**FORMAT:** Lecture 3 hours, lab 2 hours

**IENG 4562.03: Maintenance Engineering and Management.**

This course deals with basic maintenance systems of equipment and buildings, maintenance job planning and scheduling, maintenance work measurement/standard maintenance (SMS), breakdown versus preventive maintenance, total productive maintenance (TPM), budgets and cost control, computerized maintenance management information system, reliability measurement based on the Weibull distribution, maintainability measures and managing maintenance.

**FORMAT:** Lecture 3 hours, lab 2 hours
**PREREQUISITE:** IENG 3205.03

**IENG 4564.03: Design and Optimization of Service Systems.**

This course will focus on the design of systems in Canada’s largest industry: healthcare. Throughout the course, examples drawn from healthcare will be used to illustrate how industrial engineering techniques can be applied in a wide variety of settings. Topics to be discussed include: capacity planning, service distribution, quality, decision, analysis, scheduling, and waiting line models.

**FORMAT:** Lecture 3 hours, lab 2 hours
**PREREQUISITE:** IENG 3301.03, IENG 3345.03

**IENG 4571.03: Computer Integrated Manufacturing Systems.**

The purpose of this course is to introduce the student to the management and operation of large and small businesses. Topics include the business environment in Canada, entrepreneurship, small business start-up and financing, organizational theory, management cycles, managing projects, human resources, industrial relations, management functions, marketing and sales. A term project is an integral part of this course.

**FORMAT:** Lecture 3 hours, lab 2 hours
**PREREQUISITE:** IENG 2005.03

**IENG 4547.03: Company Operations and Management.**

This course covers the design of products and reliability testing. The purpose of this course is to introduce the student to the management and operation of large and small businesses. Topics include the business environment in Canada, entrepreneurship, small business start-up and financing, organizational theory, management cycles, managing projects, human resources, industrial relations, management functions, marketing and sales. A term project is an integral part of this course.

**FORMAT:** Lecture 3 hours, lab 2 hours
**PREREQUISITE:** IENG 2005.03
Materials Engineering

I. Introduction

Metals and materials are found in every aspect of society today. Materials have always been central to the advancement of civilization so it is not surprising that entire eras are named after them (bronze age, iron age). The importance of developing new, advanced materials is truly a global issue with societal demands for things such as more fuel efficient vehicles and faster computer processors reaching all time highs. Materials Engineers are the driving force behind such developments, having an unsurpassed understanding of the respective structure, properties and processing of materials. Consequently, graduates are employed in practically all industries. Principals amongst these are primary metal production, automotive, aerospace, government research establishments and consulting firms. Literally all graduates find immediate employment - historically, over 70% have secured full time positions before the start of their final academic term. These niche individuals are highly respected within the companies that they work for and many advance into upper managerial and executive positions.

The program has been designed to give students extensive coverage of this highly unique field which in itself is very broad. The principal branches of Materials Engineering in which students receive instruction include (i) Extractive Processing of Materials, (ii) Structure of Materials, and (iii) Mechanical Properties and Testing of Materials; usually the graduating engineer chooses to specialize in one of these three. Students learn about all of the major courses of materials including metals, ceramics, polymers, and composites -graduates are true “Materials Experts.” In doing so, the respective curricula are designed to provide in-depth knowledge of engineering and more importantly, extensive coverage of discipline-specific areas. Students’ understanding of the field is further accentuated by the fact that average class sizes are on the order of 20 to 25 students ensuring each an exceptional level of attention from faculty members and one-on-one interaction.

In 1979, Materials Engineering was the first discipline in the faculty to offer the now highly popular Co-op Program. Students are able to obtain a Bachelor of Engineering, the other a combined BEng/MAE Degree. The undergraduate curriculum is the same for both programs.

The BEng/MAE was developed in light of the program’s strong commitment to research and to permit the identification of students interested in graduate studies before they complete their undergraduate courses. In this regard, all faculty members are actively involved in international research and development initiatives. Consequently, students may also choose to pursue Master’s and Doctoral programs.
II. Curriculum and course descriptions
Refer to sections III and IIIE, Materials Engineering Program, in the Process Engineering and Applied Science section of this calendar, page 369.

III. Co-operative program and schedule
Refer to section E. Technical Co-op Program, in the Engineering section of this calendar, page 341.

Quinn, W., BSc, U. of Strathclyde, MSc, PhD (Queen’s)
Sato, M., BSc, MSc, PhD (UK), PEng

Senior Instructor
Warner, R. A., BEng (TUNS), PEng

I. Introduction
Mechanical Engineering covers a very broad field of professional activity in such areas as land, sea, air, and space transportation; primary and secondary manufacturing industries; energy supply, conversion and utilization; environmental control; and industrial management. In these areas, the Mechanical Engineer may become involved with design, construction, operation, development, research, planning, sales and management.
Mechanical Engineering offers two versions of the BEng Program:

1. Co-op Program
2. Non-Co-op Program

### A. Co-op Program

Years 1 and 2 follow the core program outlined in the Engineering section of this calendar.

#### Year 3, Work Term 1 (Fall)
- MECH 3100.03 Machine Design: Loading of Components
- MECH 3300.03 Dynamics of Machines
- MECH 3800.03 Mechanical Engineering Thermodynamics
- CMPT 3000.03 Engineering in Society II
- ENGM 3335.03 Numerical Methods and Partial Differential Equations
- MATH 3000.03 Materials Engineering

#### Year 3, Work Term 2 (Summer)
- MECH 4900.03 Thermo-Fluid Engineering III
- MECH 4910.03 Fluid Power
- MECH 4920.03 Advanced Control Engineering
- MECH 4930.03 Computer Aided Toler. & Dimensioning
- MECH 4940.03 Robotics
- MECH 4950.03 Marine Craft Design
- MECH 4960.03 Biomechanical Engineering
- MECH 4970.03 Kinematics of Human Motion
- MECH 4980.03 Mechanical Engineering Thermodynamics
- MECH 4990.03 Energy from Renewable Resources
- MECH 4021.03 Thermodynamics of Heat Engines
- MECH 4031.03 Heat Transfer
- MECH 3900.03 System I
- Humanities Course*

### Year 4, Work Term 3 (Winter)

#### Year 4, Work Term 4 (Summer)

#### Year 5, Study Term 7 (Fall)
- MECH 4025.03 Design Project II
- MECH 4950.03 Vibration
- MECH 4990.03 System II
- Technical Elective I
- Technical Elective III

#### Year 5, Study Term 8 (Winter)
- MECH 4805.03 Thermo-Fluid Engineering III
- MECH 4810.03 Energy Conversion Systems
- MECH 4820.03 Energy from Renewable Resources
- MECH 4830.03 Reciprocating Internal-Combustion Engines
- MECH 4840.03 Steam Plant Engineering
- MECH 4850.03 Heat Exchangers & Air Conditioning
- MECH 4860.03 Heat Transfer
- MECH 4870.03 Fluid Power
- MECH 4880.03 Advanced Control Engineering
- MECH 4890.03 Computer Aided Toler. & Dimensioning

### B. Non-Co-op Program

#### Technical Elective Choices
- MECH 4000.03 Manufacturing
- MECH 4010.03 Energy Management I
- MECH 4020.03 Thermodynamics
- MECH 4030.03 Principles of Marine Craft Design
- MECH 4040.03 Biomechanical Engineering
- MECH 4050.03 Marine Craft Design and Construction
- MECH 4060.03 Applied Dynamics
- MECH 4070.03 Mechanics of Composite Materials
- MECH 4080.03 Aerodynamics
- MECH 4090.03 Space Systems
- MECH 4100.03 CAD/CAM
- MECH 4110.03 Computer Aided Toler. & Dimensioning
- MECH 4120.03 Robotics
- MECH 4130.03 Biomechanical Engineering
- MECH 4140.03 Kinematics of Human Motion
- MECH 4150.03 Finite Element Method in Mechanical Design
- MECH 4160.03 Energy from Renewable Resources
- MECH 4170.03 Thermodynamics of Heat Engines
- MECH 4180.03 Heat Transfer
- MECH 3900.03 System I
- Humanities Course*
Faculty of Engineering

Undergraduate book  Page 366  Wednesday, March 12, 2014  12:03 PM

3. Seniors may take one technical elective from another engineering department at Dalhousie with the permission of the undergraduate advisor of the Mechanical Engineering department and the professor offering the course.

III. Course Descriptions

MECH 3010.03: Machine Design: Loading of Components.

This course builds on the thermodynamics concepts presented in Thermo-Fluid MECH 3805.03: Mechanical Engineering

PREREQUISITE: ENGI 2102.03, ENGI 2103.03

FORMAT: Lecture 3 hours, lab/tutorial 2 hours

MECH 3200.03: Machine Design: Power Components.

The use of engineering principles in the design of machine power components is developed. Topics include: lubrication and sliding bearings, solid bearings, spur gears, bevel, helical and worm gears, shafts, clutches and brakes, power transmitters such as belts and chains.

FORMAT: Lecture 3 hours, lab/tutorial 2 hours

PREREQUISITE: MECH 2100.03 or ENGI 2203.03, ENGI 2400.03

MECH 3305.03: Fluid Mechanics.

This course presents the dynamic governing equations of fluid flow in differential forms: continuity, Navier-Stokes and energy. Concepts of stream function, vorticity and velocity potential are also introduced. The physics and modeling of Turbulence in fluid systems is shown. The boundary layer theory is shown and flow past immersed bodies is studied. Concepts of drag and lift forces are presented. Compressible flow is introduced: speed of sound, nozzle and diffuser, shock waves, Rayleigh and Fanno flows are all studied.

FORMAT: Lecture 3 hours, lab/tutorial 2 hours

PREREQUISITE: MECH 2100.03 or ENGI 2203.03, ENGI 2400.03

MECH 3500.03: Dynamics of Machines.

The course focuses on design of mechanism, their motion, static and dynamic loads, and power transmission. It includes planar and spatial 4-bar and 5-bar linkages, cam mechanisms, gear trains, or other systems, and manipulators. Linkage inversion, transformation, and synthesis are used for design of new mechanisms. Graphical, analytical, computer, and physical modeling techniques are used. Many real-life mechanisms are analyzed.

FORMAT: Lecture 3 hours, lab/tutorial 3 hours

PREREQUISITE: ENGI 2102.03, ENGI 2103.03

MECH 3600.03: Finite Element Method in Mechanical Design.

This course deals with the application of the finite element method to stress analysis problems encountered in mechanical design. Introduction to the finite element method is followed by extensive applications to the design of machines and structural components. Mechanical and thermal stress in beams, beams, asymmetrical, shell, and 3D solid elements are considered. Professional finite element modeling best practices are discussed. A finite element pre-processor, code, post-processor are introduced and used in the course assignments.

FORMAT: Lecture 3 hours/week, tutorial 2 hours

PREREQUISITE: ENGI 2400.03

MECH 3705.03: Heat Transfer.

This course is an introduction to the three modes of heat transfer: conduction, convection and radiation. Topics covered in conduction include steady-state and transient conduction, in one and two-dimensional systems, and the study of extended surfaces. Force and free convection for internal and external flows are examined. The fundamentals of radiation heat transfer are covered, including blackbody radiation, grey surfaces, Kirchhoff's law and radiation exchange between surfaces.

FORMAT: Lecture 3 hours/lab/tutorial

PREREQUISITE: ENGI 2102.03, ENGI 2103.03

MECH 3805.03: Mechanical Engineering Thermodynamics.

This course builds on the thermodynamics concepts presented in Thermo-Fluid Engineering I. Introductory concepts of cycles, processes, heat and work are reviewed. The first and second law of thermodynamics are applied to open and closed systems, both steady-state and transient processes. Availability and energy analysis are presented. Vapour and gas power and refrigeration cycles are studied; absorption refrigeration cycles and refrigerants are also discussed.

FORMAT: Lecture 3 hours, lab/tutorial 3 hours

PREREQUISITE: ENGI 2102.03, ENGI 2103.03

MECH 3900.03: Systems I.

The course deals with the analysis of dynamic physical systems. Ordinary- and partial-differential equations are developed for mechanical, thermal, fluid and electrical systems. System equations are solved using classical methods and Laplace-transform techniques. System characteristics are introduced, as are block-diagram & state-space representations. Systems are simulated by digital computer in the laboratory portion.

FORMAT: Lecture 3 hours, lab/tutorial 3 hours

PREREQUISITE: ENGI 2300.03 or ENGI 2202.03, ENGI 2101.03 or ENGI 2101.03

MECH 4000.03: Manufacturing.

The course starts with a manufacturing process overview and a final design project study in the following areas: manual assembly, machining, injection molding, thermofoming and cutting. A relationship between process and design is examined and design for manufacturing methodologies is introduced. Quality control and quality assurance issues are overviewed. The principles of cell design for assembly and machining are introduced and part technology for process and system is studied.

FORMAT: Lecture 3 hours, lab/tutorial 2 hours

PREREQUISITE: MECH 3020.03

MECH 4015.05: Design Project I.

This course provides a project-based exercise in the engineering design process in a real world engineering context. Students work in teams and are expected to take the project from its preliminary stage through the design stages to the ultimate completion of the design including: technical reports with calculations, engineering drawings, peer evaluation, and presentations and possibly a physical prototype or model.

FORMAT: Lecture 3 hours, lab/tutorial 2 hours

PREREQUISITE: MECH 3010.03 or MECH 3020.03

MECH 4025.05: Design Project II.

This course is a direct continuation of Design Project I leading to the implementation of the student team design. All projects involve a final examination. Testing of student designs, this is usually done via a constructed physical prototype or a model. Students produce a final technical report, conduct peer evaluations and give a final presentation.

FORMAT: Lecture 3 hours, lab/tutorial 2 hours

PREREQUISITE: MECH 4015.05

MECH 4300.03: Stress Analysis.

Topics include: general state of stress, equilibrium equations, stress-strain-temperature relations, plane stress, axi-symmetrical stress problems, thick cylindrical pressure vessel, rotating disks, bending of rectangular and circular plates, tension of non-circular membranes, membrane analogy, thin-walled hollow sections, non-symmetrical bending, properties of cross-sections, stress center, composite beams, plastic hinge, Energy Methods, Castigliano’s and theorems, statically indeterminate problems.

FORMAT: Lecture 3 hours, lab/tutorial 2 hours

PREREQUISITE: MECH 2100.03

MECH 4340.03: Energy Management I.

The purpose of this course is to introduce the concepts and techniques of energy management and conservation. The subjects that will be discussed are energy supply and demand, energy pricing, scope of the energy problem and approaches to provide solutions; energy auditing; improving energy utilization in space conditioning, and steam, hot water and compressed air systems; insulation; and electrical energy conservation. An interdisciplinary approach will be employed in this course to provide a wider understanding of the subject.

FORMAT: Lecture 3 hours, tutorial 2 hours

PREREQUISITE: MECH 3300.03 or MECH 3700.03 or MECH 3700.03 or ENGM 3000.03 or MECH 3805.03

CROSS-LISTING: ENGM 3300.03

MECH 4400.03: Turbomachinery.

Various types of turbomachinery, from wind turbines to high-ratio compressors are studied. Although hydraulic pumps and turbines are treated, the majority of the
MECH 4440.03: Principles of Marine Craft Design. This course covers the fundamentals of hydrodynamics and hydrostatics of marine craft. Topics include: hydrodynamics and stability calculations for marine craft; dimensional analysis and modelling of marine systems; resistance estimation of low-speed and high-speed craft; sail power, marine propellants and jet propulsion; difference equations control theory and motion in waves. FORMAT: Lecture 3 hours, laboratory 3 hours

MECH 4444.03: Mechatronics. This course deals with the integration of mechanical, electrical, computer and control engineering which is increasingly becoming an important part of engineering design. Topics include: Mechanical and Electrical Actuation Systems, Sensors, and Signal Conditioning, Microprocessors and Programming and Control. A major part of the course is project-based enabling students to apply the concepts studied in the course. FORMAT: Lecture 3 hours, laboratory/tutorial 2 hours

MECH 4450.03: Engineering Measurements. The static and dynamic characteristics of force and second-order systems and measurement systems are examined. The experimental versus theoretical approach to engineering problems is studied. Topics include data acquisition, analysis, and presentation, including the probabilistic nature of engineering measurements. The course is designed to ensure measurement systems and data conversion on force, strain, temperature, pressure, velocity, and fluid flow. Computers are used extensively in the laboratory experiments. FORMAT: Lecture 3 hours, laboratory/tutorial 3 hours

MECH 4460.03: Space Systems. This course deals with the design and analysis of space systems and their interrelationships. Topics include orbital mechanics, satellite perturbations, satellite antenna and sensor systems, satellite access and coverage. FORMAT: Lecture 3 hours, tutorial 2 hours

MECH 4490.03: Robotics. The course is designed to provide an introduction to the design and programming of robots. Topics include: robot arm and gripper, drives, robot position measuring systems, external sensors and feeding, storage, changing position and clamping devices, all of which, together with the robot itself, constitute a "robotized" workplace. The main part of the course is focused on the robot hardware. However, robots are an inherently interdisciplinary field and the course will also involve sensor and control systems. Other topics include: robotics in an inherently interdisciplinary field and the course will also involve robotics control and application. Topics covered include: mechanical and dynamics of the robot arm and gripper, drives, robot position measuring systems, external sensors and feeding, storage, changing position and clamping devices, all of which, together with the robot itself, constitute a "robotized" workplace. FORMAT: Lecture 3 hours, laboratory/tutorial 2 hours

MECH 4500.03: Vibrations. Single and multiple degree of freedom lumped parameter systems subjected to harmonic and transient excitation are examined. Analytical as well as numerical solutions are covered. Vibrations of continuous systems such as beams and shafts are introduced. Laboratory experiments deal with vibration of lumped parameter physical systems as well as vibrations of rotating machinery. Vibration control in industrial applications is emphasized and the effects of whole body vibration on humans are studied. FORMAT: Lecture 3 hours, laboratory/tutorial 2 hours

MECH 4510.03: Mechanics of Composite Materials. The course introduces classification of composite materials, fabrication processes and applications of composites; the basic relations of anisotropic materials are studied. The behavior of composites and the significance of composite materials are considered. Smart composite structures and their constituents are introduced. FORMAT: Lecture 3 hours, laboratory/tutorial 2 hours

MECH 4521.03: Applied Dynamics. This course begins with a review of plane kinematics and kinetics of rigid bodies. This course is designed to provide an introduction to the design and programming of robots. Topics include: robot arm and gripper, drives, robot position measuring systems, external sensors and feeding, storage, changing position and clamping devices, all of which, together with the robot itself, constitute a "robotized" workplace. The main part of the course is focused on the robot hardware. However, robots are an inherently interdisciplinary field and the course will also involve sensor and control systems. Other topics include: robotics in an inherently interdisciplinary field and the course will also involve robotics control and application. Topics covered include: mechanical and dynamics of the robot arm and gripper, drives, robot position measuring systems, external sensors and feeding, storage, changing position and clamping devices, all of which, together with the robot itself, constitute a "robotized" workplace. FORMAT: Lecture 3 hours, laboratory/tutorial 2 hours

MECH 4540.03: Aero-dynamics. The course deals with the fundamentals of aerodynamics and the theory of flight. Material covered includes: the standard atmosphere; airfoil coefficients and section properties; finite wings and induced drag; airplane performance - power required, rate of climb, range and endurance; basics of stability and control. FORMT: Lecture 3 hours, laboratory/tutorial 2 hours
**Mechanical Engineering**

Emphasis is also placed on numerous experimental facts collated from the biomedical research literature. Topics include kinematic geometry of a single body, the description of joint configuration, and differential kinematics of biokinematic chains. Three-dimensional kinematics of individual joints (i.e., the knee, hip and elbow) is emphasized from the perspective of total joint replacement design.

**MECH 4600.03: Finite Element Method in Mechanical Engineering**

Class deals with the application of the finite element method to stress analysis problems using the Finite Element Method (FEM). Emphasis is placed on understanding the fundamental principles of the finite element method. The course covers the formulation of the finite element method and its application to a variety of mechanical engineering problems. Students will learn how to model and analyze complex structures using the finite element method.

**MECH 4805.03: Thermo-Fluid Engineering III.**

This course builds on the thermodynamics concepts presented in Thermo-Fluid Engineering I. Introductions to basic concepts of cycles, processes, heat and work are reviewed. The first and second law of thermodynamics are applied to open and closed systems, both steady-state and transient processes. Availability and energy analysis are presented. Vapour and gas power and refrigeration cycles are studied; absorption refrigeration cycles and refrigerants are also discussed.

**MECH 4900.03: Fluid Power Systems**

This course covers the principles of fluid power systems, focusing on the design and operation of hydraulic and pneumatic systems. Topics include fluid power system design, fluid power system control, and fluid power system application. The course is supported by computer-based simulation and design software.

**MECH 4950.03: Advanced Control Engineering.**

The course develops the students' capabilities in system simulation and feedback control system design. Topics include system-parameter identification, control-system hardware, computer-based forward/feedback control-system design and implementation. Topics include: system-parameter identification, control-system hardware, computer-based forward/feedback control-system design and implementation. The course is supported by computer-based simulation and design software.

**MECH 4960.03: Computational Methods in Engineering.**

The course presents basic computer methods of application of mathematical tools to solve engineering problems. Numerical methods such as finite differences, finite elements, and adaptive control. The course is supported by computer-based simulation and design software.

**MECH 4851.03: Heating, Ventilating and Air Conditioning.**

Design basics in the design of thermal systems for indoor climate control. The major topics include: human comfort requirements, outdoor climate variables, heating and air-conditioning loads, cooling and dehumidification loads, ventilation requirements and criteria, system control types and selection, energy sources and costs, piping, pumps, ducts, fans, and control systems. Computer programs will be introduced for design calculations involving heating and cooling load, piping, ducting and energy consumption. The course covers the principles of fluid power systems, focusing on the design and operation of hydraulic and pneumatic systems. Topics include fluid power system design, fluid power system control, and fluid power system application. The course is supported by computer-based simulation and design software.
Mineral Resource Engineering

I. Introduction

The Mineral Resource Engineering Program concentrates on the technical, environmental and economic aspects of the extraction and processing of the Earth’s mineral resources. Students can pursue options in mineral resource engineering, petroleum engineering and mineral processing.

The main employers for Mineral Resource Engineering graduates are the mineral resource industries, oil and gas industries, financial and government institutions, consulting companies, mining equipment manufacturers and dealerships, marketing mine service companies, mineral investment and financial institutions, and research and teaching institutions. The development of an analytical attitude, team work and communication skills are important aims of the Mineral Resource Engineering Program. Participation in field trips to mining and petroleum operations in the Maritime region is a degree requirement and each student is required to share costs.

Opportunity also exists to continue in the MASc, MEng, and PhD programs for those who would like to specialize in areas of Mineral Extraction, Mineral Processing and Petroleum Engineering at Dalhousie.

4 Study Term 6 Work Term 3 Work Term 4
5 Study Term 7 Study Term 8

Years 1 and 2 follow the core program outlined in the Engineering section of this calendar.

Year 3, Work Term 1 (Fall)

- BENG 2043.03 Engineering Economics
- CHEE 3522.03 Chemical Reaction Engineering
- CHEE 3525.03 Process Dynamics & Control
- CHEE 3601.03 Process Thermodynamics

Year 3, Term 2 (Summer)

- CHEE 3601.03 Thermal Unit Operations
- CHEE 3614.03 Chemical Reaction Engineering
- ENGM 3022.03 Applied Numerical Methods
- MATL 3500.03 Materials Engineering
- PEAS 3500.03 Computer-Aided Process Design

Year 4, Work Term 2 (Fall)

- BENG 2043.03 Engineering Economics
- CHEE 3522.03 Chemical Reaction Engineering
- CHEE 3525.03 Process Dynamics & Control
- TECHN 4622.03 Technical Elective I

Year 4, Work Term 3 (Winter)

- CHEE 3601.03 Thermal Unit Operations
- CHEE 3614.03 Chemical Reaction Engineering
- CHEE 3632.03 Process and Plant Design II
- CHEE 3640.03 Process and Plant Design II

Year 5, Term 7 (Fall)

- CHEE 3601.03 Thermal Unit Operations
- CHEE 3614.03 Chemical Reaction Engineering
- CHEE 3632.03 Process and Plant Design II
- CHEE 3640.03 Process and Plant Design II

Year 5, Term 8 (Winter)

- CHEE 3601.03 Thermal Unit Operations
- CHEE 3614.03 Chemical Reaction Engineering
- CHEE 3632.03 Process and Plant Design II
- CHEE 3640.03 Process and Plant Design II

Technical Electives

This list is not exhaustive, nor does it imply that each course will be offered every year. Students should check with the Undergraduate Program Co-ordinator.

- BENG 4142.03 Industrial Biotechnology
- BMNG 5103.03 Introductory Physiology for Biomedical Engineering
- BMNG 5104.03 Cell Biology for Biomedical Engineering
- BMNG 5105.03 Pathobiology for Biomedical Engineering
- BMNG 5106.03 Introduction to Biomedical Engineering
- BMNG 5107.03 Biocompatibility and Biomaterials Design
- BMNG 5108.03 Introduction to Tissue Engineering
- BMNG 5109.03 Biostatic in Ortho.
- BMNG 5120.03 Biomedical Signals
- BMNG 5121.03 Biomedical Signals
- BMNG 5122.03 Principles of Medical Imaging
- ENV 3252.03 Environmental Assessment and Management
- CHEE 3503.03 Materials Science
- CHEE 4502.03 Polymer Science
- CHEE 5303.03 Physical Properties of Materials
- CVIL 4440.03 Water and Wastewater Treatment
- CVIL 4460.03 Solid Waste and Landfill Engineering
- CVIL 6101.03 Advanced Strength of Materials
- CVIL 6147.03 Advanced Theory of Structures
- CVIL 6484.03 Application of Finite Element Method I
- CVIL 6486.03 Application of Finite Element Method II
- CVIL 6515.03 Fibre-Reinforced Plastics

• PEMS 3500.03 Process Thermodynamics
• Process Engineering and Applied Science 371

There are also a number of graduate courses that students have taken, mainly in Chemical Engineering, Biomedical Engineering, and Petroleum Engineering.

Notes:
1. Seniors may take a postgraduate course as a Technical elective with the approval of the Undergraduate Program Coordinator and the professor offering the course.
2. Not all technical electives are available each year and other elective courses may be available. Please check with the department prior to registration.

Combined BEng - MASc Program Guide

1. Program Entrance Requirements
   To be eligible to enter the Combined BEng/MASc Program, a student must be able to demonstrate an overall average of 70% based on the subjects in the first three academic terms of the Materials Engineering Program.
   Since the first two academic terms of the BEng and combined BEng/MASc Programs are common, students enrolled in the BEng Program may apply for entrance into the combined degree program at any time before the beginning of the seventh academic term.

2. Financial Support
   All students accepted into the BEng/MASc Program will be eligible for financial assistance beginning at the start of the seventh academic term. The assistance will be spread over the remainder of the academic terms and may have a total value of approximately $15,000.
   Part of the financial assistance is derived from money obtained to further specific research objectives on which the student is expected to work for his or her Master’s Thesis. The remainder of the financial support is normally derived from assigned duties as Part-Time Teaching Assistant. A course work Master’s Program (MEng) can be followed but the amount of financial assistance will be considerably reduced.

3. Maintenance of Standing
   In order to maintain standing in the Combined BEng/MASc Program, students must continue to maintain an academic average of B-. Failing this, a student may obtain a BEng Degree by completing the required courses, but will not be eligible for further financial assistance from the Department. However, on graduation, should the student attain an average of B+, he/she may be eligible to pursue graduate studies in the department.

4. Scholarships
   Students in the Combined BEng/MASc Program are encouraged to apply for the usual scholarships and bursaries in order to partially augment the financial support received. Contact the Department for details.

5. Combined BEng/MASc Scheduling
   The combined BEng/MASc Degree follows the program as indicated for the BEng with the addition of two academic terms as follows:
   **Year 6, Term 10 (Fall)**
   - Thesis
   **Year 6, Term 11 (Winter)**
   - Thesis

6. Technical Electives
   Choose three:
   - BIOL 4591.03: Biopolymer Engineering
   - BIOL 4598.03: Environmental Assessment and Management
   - BIOL 4599.03: Project Management and Control

---

D. Minor in Food Science for BSc Major or Honours

The Minor in Food Science is available to students registered in the BSc 20 credit major and honours programs. The requirements are as for the appropriate program with the completion of the following courses to fulfill the Food Science Minor:

- **FOSC 1000: Concepts in Food Science**
- **FOSC 3233: Microbiology**
- **FOSC 3234: Food Chemistry**
- **FOSC 3235: Food Analysis**
- **FOSC 3236: Food Safety**
- **FOSC 4237: Food Preservation**
- **FOSC 4238: Food Quality Assurance**
- **FOSC 4239: Food Microbiology**
- **FOSC 4240: Food Product Development**

---

III. Course Descriptions

A. Biological Engineering Series

**BIOE 3051: Principles of Food Engineering**
This course presents principles of engineering and applications to food processing and unit operations. This course is intended for primarily food science majors, and other non-engineering students. Topics covered are parts and dimensions, unit operations in food processing, material balance, thermodynamics and energy balance, fluid flow, heat transfer, and mass transfer.

**FORMA T: Lecture 2 hours, lab 3 hours
PREREQUISITE: MATH 1200.03 and 1201.00, or ENGM 1011.03 and 1012.03, PHYS 1000X.03
**

**BIOE 4343: Food Science for Engineers.**
This course introduces the fundamental chemical, nutritional and microbiological aspects of food processing. Emphasis is placed on food quality, deterioration and principles of its preservation. Topics covered include: constituents of food (proteins, significance, and nutritive aspects); factors related to quality and deterioration; fats and oils; food additives; and the requirements for food preservation, packaging and storage.

**FORMA T: Lecture 2 hours, lab 3 hours
PREREQUISITE: BIOE 3251.03
**

**BIOE 4342: Industrial Biotechnology.**
This course introduces students to industrial applications of biotechnology. Basic biochemistry and molecular biology are covered in addition to starchchemistry and kinetics for bioprocesses. Modern tools and approaches of biotechnology are presented, followed by application of biotechnology to diverse areas (e.g., the
process into a suitable form for simulation and design. Other topics include CHEE 3544.03: Computer-Aided Process Design.

- vapour-liquid equilibrium and equilibrium constants in chemical reactions.
- properties of pure liquids, properties of solutions, and a comprehensive study of partially miscible components. The course also deals with thermophysical vapour-liquid equilibria in ideal and non-ideal systems including miscible and review is given of concepts in physical chemistry: partial molal quantities and reaction kinetics modelling, size reduction, emulsification, packaging and storage, extension processes, flavouring and flavoring, evaporation and freeze concentration, crystallization, thermal process calculations and microwave heating. As a term project, a food process is simulated using a software package.

B. Chemical Engineering Series

CHEE 3522.03: Mechanical Unit Operations.

This course introduces to the principles and practices involved in contacting, conveying, separating and mixing single and multiphase systems. It includes the flow of incompressible and compressible fluids in conduits and past immersed bodies, as well as the transportation, metering, and mixing of fluids. Unit operations involved in the contacting and separation of phases, such as fluidization, sedimentation and centrifugation, are also studied.

CHEE 3525.03: Separation Processes.

This course provides an introduction to cascade theory and develops fundamentals for design and analysis of staged operations such as leaching, liquid-liquid extraction and distillation. Topics include single-stage operations, multi-stage, counter-current cascade and without refluxes, and binary and multi-component distillation.

CHEE 3530.03: Chemical Engineering Thermodynamics.

The course deals with theory and practice of chemical thermodynamics. A brief review is given of concepts in physical chemistry: partial molar quantities and vapore-liquid equilibria in ideal and non-ideal systems including miscible and partially miscible components. The course also deals with thermophysical properties of pure liquids, properties of solutions, and a comprehensive study of vapore-liquid equilibrium and equilibrium constants in chemical reactions.

CHEE 3544.03: Computer-Aided Process Design.

The course aims to develop the student's ability to solve process design problems using packaged software. Major emphasis is placed on how to translate a flow sheet into a suitable form for simulation and design. Other topics include relational data bases, and design of specific unit operations using both available software and student-developed programs.

CHEE 3550.03: Process Dynamics and Control.

This course provides an introduction to control of chemical processes. The dynamics of behavior of simple processes is analyzed through transfer functions and means of determining the dynamic performance of feedback control systems are presented. An introduction to stability of control systems is made. Procedures for selecting and designing proportional, proportional-integral and proportional-integral-derivative controllers are discussed.

CHEE 3601.03: Thermal Unit Operations.

This course introduces to the principles and practices involved in contacting, conveying, separating and mixing single and multiphase systems. It includes the flow of incompressible and compressible fluids in conduits and past immersed bodies, as well as the transportation, metering, and mixing of fluids. Unit operations involved in the contacting and separation of phases, such as fluidization, sedimentation and centrifugation, are also studied.

CHEE 3634.03: Chemical Reaction Engineering.

This course introduces the subject of chemical reaction engineering. Classical reaction kinetics concerning rate, mechanisms, temperature effects and multiple reactions are studied. The concepts of typical, continuous stirred-tank and plug flow reactors are introduced for the ideal case. Non-ideal reactors and non-ideal flow are considered in the design of chemical reactor systems. Heterogeneous reactions and reactions are also discussed. Emphasis is placed on computational techniques for reactor problem solutions.

CHEE 4702.03: Unit Operations. Lab 1.

This course deals with the control and feedback systems for separations of chemical streams. The dynamics of behavior of processes is analyzed through transfer functions and means of determining the dynamic performance of feedback control systems are presented. Stability and Root Locus Analysis and design considerations, and multivariable systems are covered.

CHEE 4704.03: Separation Processes II.

In this course, students will learn how to apply the fundamental concepts of moment and energy to the design of thermal processing unit operations. Examples include double pipe heat exchangers, shell and tube heat exchangers, plate heat exchangers, coiled heat exchangers, cooling towers, condensers, and filters.

FORMA T: Lecture 2 hours, lab 2 hours
PREREQUISITE: CHEE 3522.03, CHEE 3525.03, CHEE 3530.03, CHEE 3550.03, CHEE 3601.03, CHEE 3634.03, CHEE 3643.03, CHEE 3650.03

CHEE 4720.03: Unit Operations Laboratory.

In this course, students apply the principles of Unit Operations in the laboratory using pilot scale equipment. An emphasis is placed on experimental, analysis and reporting.

FORMA T: Lecture 1 hour, lab 4 hours
PREREQUISITE: CHEE 3522.03, CHEE 3525.03, CHEE 3530.03, CHEE 3550.03, CHEE 3601.03, CHEE 3634.03, CHEE 3643.03, CHEE 3650.03

BIOE 4391.03: Polymeric Biomaterials.

This course provides an introduction to the characterization, fabrication and use of synthetic and naturally-derived polymeric materials to replace or regenerate tissues and organs in the human body. Classes will include a discussion of natural and synthetic macromolecular structure, properties (chemical, physical, mechanical), synthesis, and interactions with the human body. The design and application of polymeric materials in tissue engineering, drug delivery, and prosthetics will also be discussed using specific examples including: blood vessel replacement, artificial pacemakers, skin substitutes, and nerve regeneration.

FORMA T: Lecture 3 hours, lab 2 hours
PREREQUISITE: PHVC 1200.03, CHEM 1021.03, and CHEM 1022.03, or the equivalents

BIOE 4392.03: Biochemical Engineering.

This course focuses on the process design of unit operations in food processing, preservation, packaging and storage. Topics include mass and energy balances, reaction kinetics modelling, size reduction, amination, food dehydration, packaging and storage, extension processes, flavouring and flavoring, evaporation and freeze concentration, crystallization, thermal process calculations and microwave heating. As a term project, a food process is simulated using a software package.

FORMA T: Lecture 3 hours, lab 2 hours
PREREQUISITE: BIOE 3523.03 or equivalent

BIOE 4393.03: Food Engineering.

This course focuses on the process design of unit operations in food processing, preservation, packaging and storage. Topics include mass and energy balances, reaction kinetics modelling, size reduction, amination, food dehydration, packaging and storage, extension processes, flavouring and flavoring, evaporation and freeze concentration, crystallization, thermal process calculations and microwave heating. As a term project, a food process is simulated using a software package.

FORMA T: Lecture 3 hours, lab 2 hours
PREREQUISITE: BIOE 3523.03 or equivalent

CO-REQUISITE: CHEE 3522.03, CHEE 3525.03, CHEE 3530.03, CHEE 3601.03, CHEE 3634.03, PEAS 3500.03

CHEE 4702.03: Unit Operations. Lab 1.

This course deals with the control and feedback systems for separations of chemical streams. The dynamics of behavior of processes is analyzed through transfer functions and means of determining the dynamic performance of feedback control systems are presented. Stability and Root Locus Analysis and design considerations, and multivariable systems are covered.

FORMA T: Lecture 2 hours, lab 2 hours
PREREQUISITE: CHEE 3522.03, CHEE 3525.03, CHEE 3530.03, CHEE 3550.03, CHEE 3601.03, CHEE 3634.03, CHEE 3650.03

CHEE 4704.03: Separation Processes II.

In this course, students will learn how to apply the fundamental concepts of moment and energy to the design of thermal processing unit operations. Examples include double pipe heat exchangers, shell and tube heat exchangers, plate heat exchangers, coiled heat exchangers, cooling towers, condensers, and filters.

FORMA T: Lecture 2 hours, lab 2 hours
PREREQUISITE: CHEE 3522.03, CHEE 3525.03, CHEE 3530.03, CHEE 3550.03, CHEE 3601.03, CHEE 3634.03, CHEE 3650.03

CHEE 4720.03: Unit Operations Laboratory.

In this course, students apply the principles of Unit Operations in the laboratory using pilot scale equipment. An emphasis is placed on experimental, analysis and reporting.

FORMA T: Lecture 1 hour, lab 4 hours
PREREQUISITE: CHEE 3522.03, CHEE 3525.03, CHEE 3530.03, CHEE 3550.03, CHEE 3601.03, CHEE 3634.03, CHEE 3643.03, CHEE 3650.03

BIOE 4702.03: Unit Operations. Lab 1.

This course deals with the control and feedback systems for separations of chemical streams. The dynamics of behavior of processes is analyzed through transfer functions and means of determining the dynamic performance of feedback control systems are presented. Stability and Root Locus Analysis and design considerations, and multivariable systems are covered.

FORMA T: Lecture 2 hours, lab 2 hours
PREREQUISITE: CHEE 3522.03, CHEE 3525.03, CHEE 3530.03, CHEE 3550.03, CHEE 3601.03, CHEE 3634.03, CHEE 3650.03

CHEE 4704.03: Separation Processes II.

In this course, students will learn how to apply the fundamental concepts of moment and energy to the design of unit operations designed for separations of chemical streams. This is intended as a continuation of CHEE 3522.03: Separation Processes. Unit operations including but not limited to absorption/desorption, adsorption, solvent extraction, drying, humidification/deshumidification, solvent extraction, leaching and ion exchange will be covered.

PREREQUISITE: CHEE 3522.03, CHEE 3525.03, CHEE 3530.03, CHEE 3601.03, CHEE 3634.03, CHEE 4720.03

CHEE 4720.03: Unit Operations Laboratory.

In this course, students apply the principles of Unit Operations in the laboratory using pilot scale equipment. An emphasis is placed on experimental, analysis and reporting.

FORMA T: Lecture 1 hour, lab 4 hours
PREREQUISITE: CHEE 3522.03, CHEE 3525.03, CHEE 3530.03, CHEE 3550.03, CHEE 3601.03, CHEE 3634.03, CHEE 4720.03

374 Process Engineering and Applied Science
CHEE 4726.03: Mass Transfer.
Unit operations based on the theory of diffusional mass transfer are discussed. Emphasis is on engineering applications and the understanding of basic design theory. Topics include molecular and turbulent diffusion, interfacial mass transfer, simultaneous heat and mass transfer, and design of mass transfer equipment.
FORMATT: Lecture 3 hours, lab 2 hours.

CHEE 4741.03: Process and Plant Design I.
This course aims to develop the student’s abilities in the synthesis of processing elements into an integrated plant that is capable of achieving a prescribed goal. Various design projects are undertaken to emphasize: process selection and economic evaluation, and detailed design of process equipment as well as optimization of processing subsystems such as distillation systems.
FORMATT: Lecture 2 hours, lab 4 hours
PREREQUISITE: ENGM 2203.03, CHEE 3202.03, CHEE 3222.03, CHEE 3252.03, CHEE 3253.03, CHEE 3544.01, MATL 3508.03, CHEE 3614.03, ENGM 2001.03, CHEE 3601.03 or CHEE 3634.03.

CHEE 4752.03: Process Modelling, Simulation & Control.
This course deals with the formulation of mathematical models describing the dynamic behavior of chemical processes. Numerical methods for analyzing the dynamic response of lumped parameter and distributed parameter systems on digital computers are presented. Frequency response techniques are used to analyze and design control systems. Design methods for control of processes with dead times, inverse response and those requiring control of more than one variable are discussed.
FORMATT: Lecture 2 hours, lab 2 hours, tutorial 1 hour
PREREQUISITE: CHEE 3550.03

CHEE 4760.03: Fundamentals of Combustion.
This course is an introduction to the principles of combustion processes. The properties of premixed gas flames are examined. Diffusion flames and the burning of liquid and solid fuels are studied. Ignition phenomena and spontaneous combustion, with particular reference to safety in the chemical process industries, are examined.
FORMATT: Lecture 2 hours, lab 3 hours

CHEE 4772.03: Environmental Assessment and Management.
This course examines the ecological impacts of human activities with regard to water, air and soil pollution. Ecological theory and practice are reviewed and methods of environmental regulation and management considered in the light of the principles of sustainability and maintenance of biodiversity. Lecturers will include representatives of environmental agencies and private companies. Tutorials will be devoted to the preparation and presentation of hypothetical environmental impact statements and assessments.
FORMATT: Lecture 3 hours, tutorial 2 hours
CROSS-LISTING: ENVE 4772.03

CHEE 4773.03: Industrial Safety and Loss Management.
Topics covered in this course include: history of health and safety; causes and effects of loss; policy development; loss control and health basics; emergency preparedness and standards; hazardous identification; risk process design; inspection and investigation processes; measurement, evaluation and audits of OHS & program elements; legislation.
FORMATT: Lecture 3 hours, tutorial 2 hours
PREREQUISITE: CHEE 3420.03 or PEAS 2212.03, PEAS 3700.03
EXCLUSION: CHEE 4701.03

CHEE 4791.03: Research Project I.
The course objective is to provide experience in the application of engineering principles to the solution of specific problems in Chemical Engineering. A research project is chosen in collaboration with a particular faculty member. The student then prepares a work plan, carry out a literature search pertinent to the problem, designs and experimentation setup, if needed, and arranges for the acquisition of necessary equipment. Interim and final progress reports are required in both written and oral formats.
FORMATT: Lecture 2 hours, lab 3 hours

CHEE 4802.03: Unit Operations Lab II.
This course is a continuation of CHEE 4802.03, where additional Unit Operations experiments will be conducted, analyzed and reported.
FORMATT: Lecture 1 hour, lab 6 hours
PREREQUISITE: CHEE 4702.03

CHEE 4803.03: Oil and Gas Processing.
This course provides an overview of the oil and gas industry as a whole, introducing the typical technologies, processes and anti-operations. Topics covered include: natural gas recovery and purification, and the properties of bitumen, its recovery, and subsequent refinement. Specific emphasis is placed on detailed design of unit operations for petroleum upgrading and the interrelation between processes for recovery of gases and the conversion of petroleum products.
PREREQUISITE: CHEE 3601.03, CHEE 4701.03, CHEE 3614.03 or instructor approval.

CHEE 4842.03: Process and Plant Design II.
This course is a continuation of Process and Plant Design I, but emphasizes the synthesis of whole systems. Design projects cover process identification and selection, material and energy balance, system sensitivity to various parameters and preliminary process optimization, design and specification of processing units, plant layout, costing and economic evaluation.
FORMATT: Lecture 2 hours, lab 3 hours
PREREQUISITE: CHEE 4741.03

CHEE 4854.03: Computer Process Control.
This course deals with digital computer control of chemical processes. Methods for analyzing and designing control systems using z-transforms are covered. Experience is provided in the use of currently popular control methods, such as model predictive control. An introduction is given for other advanced techniques, such as adaptive control, optimal control and stochastic control.
FORMATT: Lecture 2 hours, lab 3 hours
PREREQUISITE: CHEE 3525.03 or instructor’s permission

CHEE 4856.03: Process Optimization.
The course deals with the study and application of optimization techniques to engineering problems, with particular emphasis on chemical processes. Topics include analytical and numerical techniques for optimization of single and multi-dimensional problems, linear programming, nonlinear programming and dynamic programming. The course employs available computer software and student-developed programs to solve the problems.
FORMATT: Lecture 2 hours, lab 3 hours

CHEE 4862.03: Fundamentals of Combustion Engineering.
In this course, the principles of combustion processes (studied in Fundamentals of Combustion) are applied to industrial applications. The properties of solid, liquid and gaseous fuels are discussed. Various burners systems and the importance of combustion aerodynamics in boilers, furnaces and turbines are studied. The method of determining boiler and furnace efficiency and an introduction to pollution control are presented.
FORMATT: Lecture 2 hours, lab 3 hours
PREREQUISITE: CHEE 4703.03

CHEE 4892.03: Research Project II.
This course is a continuation of Research Project I. The student conducts the planned research work, analyzes the data obtained and critically evaluates the findings. Written and oral progress reports are required at mid-term. A written report and oral presentation are required at the end of the term.
FORMATT: Lecture 2 hours, lab 3 hours
PREREQUISITE: CHEE 4791.03

C. Environmental Engineering Series
ENVE 3251.03: Environmental and Industrial Microbiology.
The principles of microbial communities are applied to biological systems. Emphasis is placed on microbial populations in air, soil and water. Further investigation includes microorganisms found in food, aquaculture and mining industries. Applications of microbial ecology to agriculture, industry, biotechnology and environment are examined.
FORMATT: Lecture 3 hours, lab 3 hours
PREREQUISITE: BIOL 1030.03
ENVE 3412.03: Energy and Environment.
This course deals with energy sources and consumption in various systems. Energy conservation and utilization of renewable energy sources are emphasized. The prediction, nature, effects and control of natural surface and sub-surface waters and wet-land and surface pollutants in catchments are considered. Design flood hydrograph, flood-routing, porous media flow and solute sources prediction techniques are presented. Energy dissipating structures used to control flood flows which are discussed include terraces, dams, deep intakes, grassed swales, culverts and small earth dams. An earth dam design project extends over the course duration.

ENVE 3500.03: Air Quality.
This course covers sources, the impact on health and the environment, atmospheric chemistry, fate and transport and the measurement and modelling of atmospheric pollutants. The application of regulatory computer models to air quality case studies will be demonstrated in laboratory classes. In addition, field and laboratory classes will provide hands-on experience of measuring and characterizing air pollutants. Problem solving sessions are used to illustrate the application of meteorology, measurement and models to determine the sources and impact of air pollutants at various receptors found both outdoor and indoors.

ENVE 4000.03: Small Watershed Hydrology.
Following an overview of the nature of hydrologic data and models, emphasis is placed on the impacts of energy development and consumption on the aquatic environment. The synthesis of complete hydrographs. Components examined include precipitation, infiltration, evapotranspiration, subsurface and surface flow. The structure and application of selected current models are presented.

ENVE 4342.03: Industrial Biotechnology.
This course introduces students to industrial applications of biotechnology. Basic biochemical and molecular biology are covered in addition to stoichiometry and kinetics for bioprocesses. Modern tools and approaches of biotechnology are presented, followed by application of biotechnology to diverse areas (e.g., food processing, agriculture, pharmaceutical and medical processing industries). This course is suitable for engineering science students who wish to pursue employment in the biotechnology sector with little/no prior knowledge of biotechnology or genetic engineering.

ENVE 4411.03: Indoor Environment Control and Air Quality.
The course deals with the design of heating, ventilating and air conditioning systems for controlled environment facilities such as animal housing, residential and commercial buildings. Indoor air quality for humans and animals is discussed in relation to current methods of environmental control and energy conservation in buildings. Completion of an assigned term project is a part of this course.

ENVE 4412.03: Biogeochemistry and Bioremediation.
Following an overview of fresh water and ocean geochemistry, the primary production of biogeochemical cycles in rivers, lakes and the ocean are studied. Oil spills, their impact on the ecosystem and remedial measures are investigated. Design and maintenance of wetlands as treatment systems are presented. The sources of environmental pollutants and the health, environmental, and socio-economic implications of pollutants are studied. The application of various bioremediation technologies to restore contaminated sites is discussed.

ENVE 4432.03: Waste Disposal and Utilization.
This course deals with sources of pollution and their effects on air, water, and soil qualities. The physical, chemical and biological treatment processes of various types of waste are discussed in relation to pollution control. Physical, chemical and microbiological analyses of various types of wastes are done in the laboratory periods. This course includes a term project, field trips, and seminars.

ENVE 4612.03: Waste Disposal and Utilization.
The physical, chemical and biological properties of liquid and solid wastes are discussed and related to current handling and disposal methods. Solution to problems of pumping liquid waste, lagoon design and holding facilities are presented. Methods of land application of wastes are compared based on pollution and fertilizer issues. Technological advances of utilization of wastes for the production of compost, single cell protein, alcohol, fertilizer, biogas, and chemicals are discussed. The course includes a term project, field trips, and seminars.

ENVE 4621.03: Atmospheric Air Quality.
This course will cover fundamentals of air quality. Sources and characteristics of atmospheric pollutants will be introduced as well as methods for sampling and analyzing atmospheric processes. The thermodynamics and fluid mechanics of the planetary boundary layer, and the behavior of plumes, will be primary focus. Contaminant transformations in the atmosphere, as well as wet and dry deposition of pollutants, will be covered. Other topics will include computer models, standards/legislation and climate change.

ENVE 4641.03: Contaminant Fate and Transport.
This course focuses on the quantitative analysis of mechanisms that control the fate and transport of contaminants in the environment. The occurrence, movement, and transformation of contaminants in a variety of environmental media, including surface water, terrestrial ecosystems, and the atmosphere are covered. A 3rd field lab will be held at the beginning of the semester in which...

students will gain experience in (i) sampling environmental media, and (ii)characterizing transport processes in terrestrial and aquatic environments. FORMUL: Lecture 3 hours, PREREQ: ENVE 3482.03, CIVL 3010.03, PES 2002.03, CIVL 3480.03, ENVG 3502.03, CIVL 4720.03

ENVE 4651.03: Solar Energy Utilization.
The course will cover the principles and practice of the design and performance analysis of active and passive solar heating systems. Topics covered include: estimation of solar radiation availability, analysis of solar collectors and sun spaces, sensible and latent heat thermal storage. Procedures for the design and optimization of solar thermal systems are presented. A design project on the application of solar energy in residential, industrial or agricultural sectors is required. FORMAT: Lecture 3 hours, lab 3 hours PREREQ: ENVE 3472.03 or equivalent

ENVE 4772.03: Environmental Assessment and Management.
This course examines the environmental impact of human activities with regard to water, air and soil pollution. Ecological theory and practice are reviewed and methods of environmental regulation and management considered in the light of the the concepts of sustainability and maintenance of biodiversity. Lectures will include presentations by government and corporate regulators and managers. Tutorials will be devoted to the preparation and presentation of hypothetical environmental impact statements and assessments. FORMAT: Lecture 3 hours, tutorial 1 hour CROSS-LISTING: CHEE 4772.03

ENVE 4872.03: Air Pollution Control.
This course deals with air pollution emanating from the standpoint of its generation and control. Both gaseous and particulate matter emitted from combustion and industrial sources are considered. FORMAT: Lecture 2 hours, tutorial 3 hours EXCLUSION: CHEE 4872.03

D. Food Science Series

FOSC 1000.03: Concepts in Food Science.
This course will present an overview of the discipline of Food Science and Food Processing. The overview will include discussions of topics such as food preservation and quality, food packaging, shelf life and food safety. Selected food processing operations will also be discussed in further detail. Food safety issues such as food infection and intoxication and HACCP will be introduced. FORMAT: Lecture 3 hours, lab 3 hours CO-REQ: BIOB 1010.03, BIOI 1011.03

FOSC 2010.03: Food Commodities.
This course will study the basic scientific principles underlying the processing of varying food commodities. General preservation methods such as freezing, dehydration, thermal processing, irradiation and microwave heating and their applicability to various foods will be examined during lectures and tours to industrial food processing plants. The principles of food manufacturing, preservation, distribution, and marketing of food materials will be related to basic food science principles. FORMAT: Lecture 3 hours, lab 3 hours

FOSC 3010.03: Food Chemistry.
This course will examine the molecular basis of basic constituents common to foods products and relate this behavior to the structure and properties of food constituents. Topics covered will include water, carbohydrates, proteins and lipids and micro-nutrients such as vitamins and minerals, pigments and flavors. Chemical processes such as browning, enzyme reactions and emulsification will also be examined. The function of ingredients, additives and nutrient deficiencies will be examined. FORMAT: Lecture 3 hours, lab 3 hours PREREQ: CHEM 2441.03

FOSC 3020.03: Food Analysis.
This course will cover the theory and practice used in modern food analysis. The analysis of proteins, lipids and carbohydrates will be presented. As well, the principles of spectroscopy, titration, electrophoresis and chromatography will be discussed and demonstrated using various foods. Other analytical techniques specific to foods such as reflective colorimetry, texture profile analysis and water activity measurement will be presented. FORMAT: Lecture 3 hours, lab 3 hours PREREQ: CHEM 2441.03

FOSC 3030.03: Food Quality Assurance.
This course will examine techniques employed to ensure the processing and delivery of quality food products. Topics covered will include quality management systems, statistical quality control, government regulations and food legislation. Details of Hazard Analysis Critical Control Point (HACCP) planning will be covered in detail. Quality assurance systems employed in government and the food industry will be examined. FORMAT: Lecture 3 hours, tutorial 3 hours PREREQ: STAT 1060.03, FOSC 3010.03

FOSC 3070.03: Food Processing.
This course will examine various unit operations in food processing. Topics examined will include thermal processing via general and formula methods, blanching, pasteurization, beer processing and food packaging. Other food processing techniques including drying and freezing will be examined. The unit operations of various food and seafood commodities will be examined in detail. FORMAT: Lecture 3 hours, lab 3 hours PREREQ: FOSC 3010.03, BIOE 3511.03

FOSC 3080.03: Food Microbiology.
This course is designed to introduce students to current aspects of food microbiology with special emphasis on spoilage organisms and foodborne pathogens. Subjects covered will include food infection and intoxication, factors affecting microbial growth and death, sanitation and predictive microbiology. Special emphasis will be given to the microbial ecologies associated with foods from agricultural and marine sources. The characteristics of emerging food pathogens and their influence on the safety of the food supply will be examined. Rapid methods of detection of foodborne microorganisms will be studied. FORMAT: Lecture 3 hours, lab 3 hours PREREQ: BIOL 2010.03 or MICR 3000.03

FOSC 4020.03: Chemistry - Fats, Oils, Lipids.
The difference in physical and chemical properties of natural fatty acids are correlated with the physical nature of fats, oils and lipids, and the chemical combinations of fatty acids with glycerol, fatty alcohols, steroids and other chemical materials. Methods of separation such as chromatography, solubility and crystallization are explained in terms of the molecular properties. Important industrial processes and products are included. FORMAT: Lecture 3 hours, lab 3 hours PREREQ: FOSC 3010.03 or CHEM 2230.03 CROSS-LISTING: CHEE 4020.03

FOSC 4030.03: Food Product Development.
This course examines the process of food product development and techniques used to measure food sensory aspects, shelf life and food stability. Topics covered will include food structure, colorimetry, shelf life modelling and sensory analysis. This course has been designated as a “capstone” course and it will incorporate concepts from other food science courses to develop problem solving and critical thinking abilities. FORMAT: Lecture 3 hours, lab 3 hours PREREQ: FOSC 4010.03

FOSC 4081.03: Brewing Science.
This course will examine unit operations employed during the production of malt and beer. Brewing, fermentation and packaging aspects of beer production as well as brewing quality assurance, collaflaefl, flavor and haze stability will be discussed. FORMAT: Lecture 3 hours, lab 3 hours PREREQ: FOSC 3080.03

FOSC 4091.03: Food Safety and Biotechnology.
This course will teach students biological aspects of safety in our food and water supply. The course is divided into three modules: (1) Introduction to molecular biology and biotechnology methods used to detect disease-causing microorganisms, create genetically modified organisms and manipulate food related organisms, (2) Food hygiene and contamination, and (3) Current issues in public health and safety of our food and drinking water supply. FORMAT: Lecture 3 hours, lab 3 hours PREREQ: FOSC 3080.03 EXCLUSION: FOSC 4090.03
Process Engineering and Applied Science

EXCLUSION: MATL 3601.03 EXCLUSION: MATL 4750.03 EXCLUSION: MATL 4750.03

MATL 3500.03: Materials Engineering
This course covers properties of engineering materials with their structure. Laboratory objectives include preparation of reports in publication format and illustration of lecture material. Basic concepts of crystallography, chemical bonding and binary phase diagrams are introduced. These are used to describe properties of metallic and nonmetallic materials and how these may be controlled by engineers. Materials discussed include ferrous and nonferrous metals and alloys, composites, ceramics and semiconductors.

FORMA T: Lecture 2 hours, lab 3 hours
PREREQUISITE: FOSC 3060.03, FOSC 3070.03, FOSC 3080.03 EXCLUSION: MATL 3500.03

MATL 3510.03: Extraction of Materials
The lecture portion of this course covers the fundamental principles involved in the high temperature extraction of materials from their ores. Included are descriptions of the equipment used in unit operations such as roasting, smelting and refining and the application of these operations to the production of iron and steel and the more common nonferrous metals. The laboratory portion of this course consists of practice in stoichiometric mass balance and thermal calculations of common pyrometallurgical processes for extracting materials.

FORMA T: Lecture 3 hours, lab 3 hours
PREREQUISITE: FOSC 3060.03, FOSC 3070.03, FOSC 3080.03 EXCLUSION: MATL 4500.03

MATL 3520.03: Structure of Materials
This course presents the following topics: the electronic structure of materials, fundamentals of crystallography, electron motion in the space lattice, introduction to computer X-ray diffraction and X-ray diffraction techniques, and the crystal structures of metals and nonmetallic and binary phase diagrams are discussed from the structural point of view.

Laboratory experiments include preparation and evaluation of X-ray films and diffraction charts, structural investigation of binary alloys, and crystal size structure.

FORMA T: Lecture 2 hours, lab 3 hours EXCLUSION: MATL 3801.03

MATL 3600.03: Mechanical and Physical Behaviour of Materials
This course is designed to give students a fundamental understanding of how materials behave as mechanical and physical forces are applied to the material structure so as to alter this behavior. Core topics include basic crystallography, dislocation theory, strengthening mechanisms (dislocation, precipitation hardening, and ceramic reinforcements), and mechanical testing. For the latter, specific emphasis is placed on the techniques of tensile, creep, and fatigue testing.

FORMA T: Lecture 3 hours/lab 3 hours EXCLUSION: MATL 3620.03 and MATL 3621.03

MATL 4700.03: Materials Design Project I.
The course focuses on the preparation, characterization, and application of engineering principles to the solution of a specific problem in Materials Engineering. A research project is chosen in collaboration with a particular faculty member. The student then prepares a work plan, carries out a literature search, designs the experimental setup as needed, and arranges for the acquisition of necessary equipment. The student conducts the planned research work, analyses the data obtained and critically evaluates the findings. Oral progress reports are required. A written report and an oral presentation are required at the end of the term.

FORMA T: Lab 3 hours PREREQUISITE: MATL 3500.03 EXCLUSION: MATL 4700.03

MATL 4710.03: Ferrous Alloys and Joining of Materials.
The course covers the iron-carbon system, including the transformation products of austenite, alloying elements and combined thermo-mechanical treatments. Specific classes of steels, ranging from the simple plain carbon steels to the duplex stainless steels, are considered. The course also discusses the fusion welding of a representative selection of steels. Fusion welding process variables are studied together with the metallurgy of the weld metal and the heat-affected zone.

FORMA T: Lecture 3 hours, lab 2 hours PREREQUISITE: MATL 3500.03 EXCLUSION: MATL 4710.03

MATL 4720.03: Industrial Processing of Materials.
The fundamentals of metal working in relation to rolling, forging, extrusion, and drawing are studied. In each section the physical and mechanical metallurgical principles involved are considered as in the role of technology. Case studies for a variety of alloys are considered. Hands-on laboratory experiments are included to reinforce key topics.

PREREQUISITE: MATL 3500 EXCLUSION: MATL 4720.03

MATL 4800.03: Materials Design Project II.
The objective of this course is to provide experience in the design of materials to the solution of a specific problem in the realm of design project. The student then prepares a work plan, carries out a literature search, and designs an experimental setup. The student conducts the planned research, and uses the data and critically evaluates the results. Students demonstrate their findings through written reports and an oral talk at the end of the term.

FORMA T: Lab 3 hours PREREQUISITE: MATL 3500.03 and (MATL 4700.03 or MATL 4704.01)

MATL 4805.03: Electrochemical Processing of Materials.
The course discusses principles of electrochemistry and electrochemical engineering as they apply to the design of processes for the production of materials. The theory and application of various electrochemical techniques such as electroplating, electroforming, electromachining, electrorefining, and fused-salt electrolysis are included. A high level of review and the development of electrochemical sensors and devices using solid state electrolytes is presented. Surface modification by electrochemical means is also discussed.

FORMA T: Lecture 2 hours, lab 3 hours CROSS-LISTING: MATL 6805.03

MATL 4806.03: Particulates in Materials Engineering.
The course covers the preparation, characterization, physical and chemical properties and processing of powders in materials processing including agglomeration, gas-solid reactions, sintering and hot pressing.

FORMA T: Lecture 2 hours, lab 3 hours CROSS-LISTING: MATL 6806.03

MATL 4810.03: Materials Process Design.
This course focuses on the design of new metallurgical plants, processes and products based on knowledge acquired in previous core courses. Material and heat
balances, metal economics, design and optimization aspects are covered. Groups of students undertake design projects aiming at modernization of existing plants or establishing new plants operating on new technology. Emphasis is placed on process selection and control, economic evaluation, detailed design of process equipment, sizing and costing and optimizing the processing units.

**FORMAT:** Lecture 2 hours/lab 3 hours

**PREREQUISITE:** MATL 3500.03

**EXCLUSION:** MATL 4802.03

---

**MATL 4813.03: Iron and Steel Production.**

This course discusses factors affecting the global iron and steel industry with particular reference to Canadian participation. These factors include the supply of raw materials, new technology, environmental concerns and economics. The future of any metallurgical industry is influenced by many concerns, not all of which are technical.

**FORMAT:** Lecture 2 hours, lab 3 hours

**PREREQUISITE:** MATL 3510.03

---

**MATL 4817.03: Metallurgical Processing.**

This course covers the principal practices related to metallurgical processing and the marketing of metals, including modification of concentrations (smelting, refining, briquetting). Descriptive outlines of metallurgical processes such as iron and steel, lead, aluminum and zinc production are presented, along with utilization of fuels for metallurgical purposes (coal, coke, oil).

**FORMAT:** Lecture 3 hours

---

**MATL 4820.03: Non-Metallic Materials.**

The course includes a description of the chemical and structural characteristics of various common non-metallic materials as well as manufacturing methods. A number of applications for such materials are considered including glass, ceramics, refractories, solid electrolytes and electronic materials. The chemistry of multi-component systems are also discussed. The laboratory experiments are designed to illustrate the lecture material.

**FORMAT:** Lecture 2 hours, lab 2 hours

**EXCLUSION:** MATL 4803.03

---

**MATL 4825.03: Solidification and Casting.**

The fundamental principles of solidification and practical applications in the casting industry are dealt with in this course. The topics covered include nucleation processes, the growth of single crystals, phase front, cellular and dendritic solidification in single and polycrystalline alloys, solidification of castings, ingot moulding and core making processes, moulding sands, design of runners and gates, and the melting of metals. The laboratory experiments cover the growth of single crystals of pure metals, alloys, and superconductors, patterns, mould and core making, and the casting of commercial alloys.

**FORMAT:** Lecture 2 hours, lab 3 hours

---

**MATL 4826.03: Physical Metallurgy and Ceramics.**

The first portion of this course covers the physical metallurgy, properties and uses of the principal industrial alloys. The remainder of the course deals with the structure of important ceramic materials such as glass, porcelain and refractories, their properties, and the processing and applications of ceramics. The laboratory experiments will illustrate the principles discussed in the lectures.

**FORMAT:** Lecture 2 hours, lab 3 hours

---

**MATL 4830.03: Non-Ferrous Alloys.**

The objective of this course is to introduce students to the structure, properties, and processing of different types of non-ferrous alloys. Alloys of principal interest include those that are prevalent on aluminium, copper, nickel, and titanium. Select applications for these industrially-important material are also reviewed.

**FORMAT:** Lecture 3 hours/lab 3 hours

**PREREQUISITE:** MATL 3500.03

---

**MATL 4840.03: Corrosion and Degradation of Materials.**

This course introduces the student to the basic theory of corrosion as well as the basic principles of hydrometallurgy. Students will also be introduced to the different types of corrosion and the practices of corrosion prevention and remediation.

**FORMAT:** Lecture 3 hours/lab 3 hours/tutorial 3 hours

**PREREQUISITE:** MATL 3500.03 and (MATL 3612.03 or PEAS 3500.03)

**EXCLUSION:** Students that have passed MATL 3611.03 cannot register for this course.

---

**F. Process Engineering Series**

**PEAS 2201.03: Fundamentals of Process Engineering.**

The main objective of this course is to develop the student’s ability to perform mass and energy balances on non-reactive and reactive processes. Introductory topics include systems of units and a study of process variables such as temperature, pressure and flow rate. Also covered are fundamental properties of multiphase systems, including phase equilibria, vapour pressure, and Raoult’s and Henry’s Laws. Emphasis is placed on developing problem-solving skills and applying a consistent approach to the analysis of process systems.

**FORMAT:** Lecture 3 hours, tutorial 2 hours

**PREREQUISITE:** ENGI 2102.03

---

**PEAS 2202.03: Fundamentals of Environmental Engineering.**

This course will focus on sources of environmental pollution, the effects of pollutants on living and non-living systems, and the processes by which pollutants are generated or by which their effects can be minimized or remediated. Lectures are supplemented by tutorials which include plant speakers, case studies and field trips.

**FORMAT:** Lecture 1 hour, lab 2 hours

**PREREQUISITE:** CHEM 1021.03 and CHEM 1022.03

---

**PEAS 2203.03: Organic Chemistry for Process Engineers.**

Students will first develop an understanding of structure and bonding in organic compounds. With this background, the chemical and physical properties of functional groups will be introduced, with a focus on applications relevant to process engineers. Specifically, the synthesis and chemical reactions of commercially important molecules will be highlighted. Physical separations (i.e., distillation, crystallization) used in organic synthesis and spectroscopic methods of analysis will also be described.

**INSTRUCTOR(S):** Lecture 3 hours

**PREREQUISITE:** CHEM 1021.03 and CHEM 1022.03

---

**PEAS 3500.03: Process Thermodynamics.**

This course covers the application of thermodynamic concepts such as entropy, free energy, activities and phase diagram relations, for pure substances and solutions (aqueous and molten) in biological, chemical and materials processing systems. The application of computer programs to the analysis of thermodynamics in chemical reactive systems is demonstrated. Problem solving sessions are used to illustrate applications of these concepts in processing.

**FORMAT:** Lecture 3 hours/tutorial 3 hours

**PREREQUISITE:** ENGI 2102.03, PEAS 2201.03, ENGI 2101.03

---

**PEAS 3600.03: Transport Phenomena.**

This course covers the physical, chemical and thermal factors affecting the mechanisms of heat and mass transfer in biological, chemical and materials processing systems. The principles of physical and mathematical modeling are demonstrated in real applications in the fields of biological, chemical and materials engineering. Problem solving sessions to illustrate the application of the above concepts to processing are given.

**FORMAT:** Lecture 3 hours/tutorial 3 hours

**PREREQUISITE:** PEAS 2201.03, ENGI 2101.03 or ENGI 2102.03

---

**PEAS 3700.03: Law and Ethics in Process Engineering.**

This course will provide students with the legal and ethical framework for the practice of engineering. The sections on ethics will introduce ethical theories and demonstrate how these theories are embodied in various engineering codes of ethics. It will also show how these theories, as well as the codes of ethics, can be used to address real ethical dilemmas that can arise in the practice of engineering. Case studies will be used extensively to guide the students through this. The course will also introduce the student to an understanding of its relation to the practice of engineering. It will cover the basics of what the student should know about contract law, professional liability and tort law, and intellectual property law. Because the students will be required to submit a good number of written assignments, the first third of the course will focus on improving their writing skills.
Faculty of Health Professions

I. Introduction

The Faculty of Health Professions recognizes that Affirmative Action is required to increase the admission of and number of graduates from underrepresented groups. Aboriginal peoples, African Canadians and Persons with (dis)Abilities are part of these underrepresented groups to apply to and graduate from the Faculty of Health Professions.

As a matter of priority, the Faculty will develop strategies to identify and create recruitment and support systems that will encourage and support members of these underrepresented groups to apply to and graduate from the Faculty of Health Professions.

Policy Statement on Interprofessional Health Education

Students in the Faculties of Dentistry, Health Professions and Medicine are required to participate in interprofessional health education activities. These activities, together with specific program requirements, are currently evolving and in transition and are integrated into the curricula of individual programs. Participation is mandatory. The objective of interprofessional education in the Faculty of Health Professions includes developing:

- knowledge and understanding of, and respect for, the expertise, roles and values of other health and human service professionals;
- understanding the concept and practice of patient/client/family-centred care;
- effective communication, teamwork and leadership skills applied in interprofessional contexts;
- positive attitudes related to the value of collaboration and teamwork in health and human service contexts;
- an understanding, from a multi-disciplinary perspective, of the Canadian health and social systems; the legal and regulatory foundation of professional practice, how health and human service institutions are organized and operate, and how different health and human service professions contribute to the systems and institutions.

Students in the entry-to-practice programs in the Faculty of Health Professions, are required to maintain enrolment in HPHR 4900 (see calendar section on Health Professions Interprofessional Health Education) for the duration of their studies. Successful completion of this class is a requirement for graduation in these programs, and will be recognized further with the awarding of a special Certificate in Interprofessional Collaboration; to be presented by the Faculty of Health Professions. For more information, students should contact their specific school/college.

I. Statement Regarding Criminal Records Check

The Faculty of Health Professions of Dalhousie University does not require a Criminal Records Check or other screening procedure (e.g., Vulnerable Sector Screen) as a condition of admission into its programs. However, students should be aware that such record checks or screening requirements relevant to clinical, fieldwork or other placements or experiences related to an academic class assignment, which, in some instances, may be a requirement for graduation. It is the student’s responsibility to have such procedures completed.

Each facility may refuse to accept students on the basis of information contained in the record check or other screening procedures. If the student is unable to complete a clinical requirement due to a failure to meet the record check or screening requirements of the facility, or if the student is refused access to the facility on the basis of information provided, such a student may fail the class, and as a result, in some instances, may not be eligible for graduation or placement.

Students should check with their School/College for details concerning any record checks or screening requirements relevant to clinical, fieldwork, or placements in their particular program. Note that facility requirements may change from time to time and are beyond the control of the University. Students should also be aware that some professional regulatory bodies may require a satisfactory record check as a condition of professional license.

Practicum/Fieldwork Placements Outside Halifax

Students enrolled in programs of study in the Faculty of Health Professions (Health Sciences, Nursing and Human Performance, Social Work and Pharmacy) are advised that they may have to do some or all of their required clinical education/fieldwork at sites outside Halifax, and hence must have to incur additional personal expenses for travel and temporary accommodation.

In some situations, sites may require a payment to the site for support of clinical education/fieldwork supervision, and some sites may require separate disability insurance in lieu of eligibility for Worker Compensation coverage. Such costs are the responsibility of the student.
Student Disclosure of Health Information
Faculty of Health Professions

Students registered in this Faculty are encouraged to inform both the School/College and the field work learning sites if they have a health concern that has the potential to compromise client, student and/or agency personal safety and/or has the potential for limiting their ability to learn and perform their role as learner.

For the purposes of this policy, the term health concern refers to any cognitive, affective, and/or physical health problem, injury, or condition that may place the student and/or others at risk and/or inhibit the student’s learning ability and performance.

A. Guidelines for Disclosure

The student has the right to decide if disclosure of health information is appropriate. The method, timing, and extent of the disclosure is at the student’s discretion (for consultation options, see below). Early disclosure of the following information regarding the health concern may be helpful to students in the academic and/or field work sites.

To disclose this information:
1. Clearly describe the nature of the health concern and the potential limitations with regard to the learning tasks expected in either the academic or field work site. Appropriate verification of the information may be required.
2. List any adaptations, modifications, and/or safety procedures that may be required in planning the student’s learning experiences in either setting.
3. Provide clear and appropriate advice regarding the management of this health concern.

If the disclosure of health information in field work and/or academic sites produces difficulties, students are encouraged to report these difficulties immediately to the appropriate person(s) within both the field work site and/or within their educational program (see below). Discrimination in any form will not be tolerated.

Students are advised to make the initial contact with the persons with whom they are most comfortable from the lists below. Those individuals would be available for consultation/advocacy:
- Academic/faculty advisor
- Field work coordinator(s)
- Director of the School or College where student is enrolled
- Dean of the Faculty of Health Professions
- Advisor to Students with Disabilities, Dalhousie University
- Dalhousie/king’s Association of Students with Disabilities
- Human Rights Commission

College of Pharmacy
- Preceptor
- Site coordinator
- Externship administrator

School of Nursing
- Clinical instructor
- Class professor
- Associate Director, Undergraduate Student Affairs
- Nurse Practitioner/Acute Nursing Program Coordinator

School of Occupational Therapy
- Preceptor
- Field site director
- Provincial or Atlantic Region fieldwork education coordinators

School of Physiotherapy
- Clinical supervisor
- Facility clinical coordinator
- Provincial coordinator

School of Social Work
- Agency field instructor
- Program coordinator
- Faculty field instructor

School of Health Administration
- Preceptor

School of Human Communication Disorders
- Clinical Educator

School of Health and Human Performance
- Student Services Administrator

QEII–Dalhousie School of Health Sciences
- Clinical Education Coordinator

382 Disability Management

A. Purpose of Program

The Certificate in Disability Management addresses specific goals and objectives for the education of prospective disability case managers and vocational consultants by providing an understanding of injury, its impact and recovery processes. In addition, the Program responds to changes in workplace health and safety programs, legislation, regulations, and practices to changes in the health care system in general. While the main paradigm of the program is grounded in the health, rather than the medical model, its conceptual basis has roots in health and medical sciences, the social sciences, and the physical sciences as related to ergonomics and human kinesics.

The goal of the Certificate in Disability Management program is to prepare Disability Management team members who: provide effective, efficient and safe coordination of services, facilitate a team-oriented approach, convey understanding of the health impact of injury, convey an understanding of the impact of injury on work, develop decision-making skills and develop management skills.

B. What is Disability Management

Returning to work for injured workers can be influenced by many medical, physical and psychological factors that may impede recovery. There is the belief that the needs of workers and their employers are central to the disability management process, and workers must play an active role. A requirement in the worker-centered process is the need to ensure that all the facts about injuries/illnesses, treatments, and entitlements are known to these injured workers and that clear decision-making is exercised by all parties to ensure both continuity in the return to work process and establishment of trusting relationships among injured workers, their employers, and the disability management team.

C. Career Opportunities

Graduates of a Disability Management program will typically work as Disability Managers, Return to Work Facilitators, and Vocational Consultants.

D. Learning Principles for Program Development and Delivery

Learning activities in courses will reflect the disability management philosophy and be integrated through the program with a case-oriented approach to problem-solving. Assessment of learning will include a variety of evaluative approaches and activities to stimulate critical discourse which combines practical situations analyzed against learned theories, concepts and frameworks. Learning activities will foster personal growth through critical reflection of student’s attitudes and decision making patterns.

II. Regulations

Students registered in the courses of the Disability Management Certificate Program (CDM) are bound by the University and Faculty regulations in the same manner as all Dalhousie students. The University and Faculty of Health Professions (FHP) regulations are found in the University Regulations section of the Dalhousie University Calendar. Academic regulations are found in the Academic Regulations section of the Calendar. It is the responsibility of each CDM student to become familiar with both the University and FHP regulations.

Please note that the “Acceptable Use Policy” found in the University Regulations section of the Dalhousie Calendar. Because of the distance learning component of this Program, students should pay particular attention to regulations designed to respect the rights of other computer users.

A. Course Grades

The minimum passing grade for all of the CDM courses is 50%. A course may be repeated only once, with a minimum of two repeated courses permitted. A student who fails the same course twice will not be awarded the Certificate.

B. Appeals

On occasion, conflict or disagreement on final grades or evaluative procedures may arise. All students are expected to familiarize themselves with the processes available to them for academic appeals. Timeliness is of the essence for presentation and consideration of all appeals and, in all instances, the first level of appeal will be at the informal level.

In formal appeals, a student must follow the regulations as stated in the University Calendar and such appeals will only be considered after failure to resolve the issue at the informal level has occurred. Students who do not follow these procedures will automatically forfeit their right to further consideration of their appeal and the original decision will remain in effect.

In all instances, the first level of appeal will be at the informal level.

C. Career Opportunities

Graduates of a Disability Management program will typically work as Disability Managers, Return to Work Facilitators, and Vocational Consultants.

D. Learning Principles for Program Development and Delivery

Learning activities in courses will reflect the disability management philosophy and be integrated throughout the program with a case-oriented approach to problem-solving. Assessment of learning will include a variety of evaluative approaches and activities to stimulate critical discourse which combines practical situations analyzed against learned theories, concepts and frameworks. Learning activities will foster personal growth through critical reflection of student’s attitudes and decision making patterns.

II. Regulations

Students registered in the courses of the Disability Management Certificate Program (CDM) are bound by the University and Faculty regulations in the same manner as all Dalhousie students. The University and Faculty of Health Professions (FHP) regulations are found in the University Regulations section of the Dalhousie University Calendar. Academic regulations are found in the Academic Regulations section of the Calendar. It is the responsibility of each CDM student to become familiar with both the University and FHP regulations.

Please note that the “Acceptable Use Policy” found in the University Regulations section of the Dalhousie Calendar. Because of the distance learning component of this Program, students should pay particular attention to regulations designed to respect the rights of other computer users.

the Request for Certificate Form to the Disability Management office in order to be considered and to receive the Certificate. This form is available on the CDM website: http://www.dal.ca/dmcert

IV. Course Descriptions

DISM 3010.03: Introduction to Occupation and Disability Management.
This course asks the following questions in seeking to understand the meaning and importance of occupation to individuals: What is occupation? What is the meaning of occupation? What is the meaning of work injury and loss of occupation? It also explores: What is disability management? What are some of the professional and ethical issues, as well as the philosophy, roles, conceptual framework for program? What are levels of disability management in organizational systems, injury prevention, and on-site management?
FORMA T: Distance Education
CROSS-LISTING: KINE 3010.03

DISM 4010.03: Return to Work Planning and Communication.
This course will consider processes including factors that create resistance among workers. Introduction to return to work planning and communication processes in understanding resistance and compliance/motivation in workers.
FORMA T: Distance Education

DISM 4040.03: Strategies for Alternative Work and Prevention.
In situations where return to a worker’s former occupation is impossible, learners will identify strategies to assist the client. Such strategies include dealing with issues of job loss, vocational rehabilitation and employment for persons with disabilities. Students will look at prevention strategies in dealing with job loss, vocational rehabilitation, employment for persons with disabilities, meaningful occupation, case closure, and prevention strategies within systems, structures and organizations.
FORMA T: Distance education

DISM 4050.03: Psycho-social Issues in Disability Management.
Many complex psycho-social issues involve the injured worker’s family, community and employer dynamics. Topics studied in this course include: family, community and unemployed persons, psycho-social dynamics, employer dynamics employer/employee relationships, societal trends, dependence and disability categorization, and medical authorization.
FORMA T: Distance education
The program is conducted through the Internet and Web-based conferencing with a learning platform called BbLearn. BbLearn is a distance education course management system. It provides a learning environment where students direct their learning. BbLearn consists of a suite of tools which provide mechanisms for interactive exercises, such as group discussions, presentations, and information sharing.

NOTE: Courses offered through the online format are assessed per course Distance Education Fee (DEF) in addition to the course-based tuition.

A. Application Procedure

Applicants must meet the Dalhousie University undergraduate admission requirements to warrant consideration into this program. Applicants require university preparation (you may not apply from high school). In addition to transcripts, students are required to submit a current resume and at least one letter of reference with their application to the Diploma program.

Applications should be submitted as early as possible, and not later than July 1 for September admission, November 15th for January admission and March 15 for May admission.

Students may be considered for advanced placement if they have completed courses equivalent to the required or elective courses. Application for advanced placement must be made in writing after an applicant has been accepted to the program.

Further information on the Diploma in Health Services Administration program may be obtained from: School of Health Administration, Dalhousie University, 5161 George Street, Suite 700, PO Box 1500, Halifax, NS B3H 4R2, (902) 494-7607. Application forms are available online at www.dal.ca/healthadmin/apply.html.

B. Curriculum

The one-year program features both an academic and outcome-oriented curriculum. Students accepted into the DHSA program take the following half-credit courses:

**Fall term**
- HESA 4000.03: Canadian Healthcare Delivery System
- HESA 4002.03: Health Human Resource Management
- HESA 4003.03: Healthcare Planning
- HLTH 4040.03: Health Law for Non-Lawyers

**Winter term**
- HESA 4004.03: Healthcare Financial Management
- HESA 4005.03: Healthcare Financial Management
- HESA 4006.03: Healthcare Financial Management
- HESA 4007.03: Healthcare Financial Management

**Summer term**
- HESA 4008.03: Healthcare Financial Management
- HESA 4009.03: Healthcare Financial Management

**CROSS-LISTING: CANA 4300.00**

III. Course Descriptions

HESA 4000.03: Canadian Healthcare Delivery System

The course is designed to provide an overview of healthcare in Canada, and more specifically in Nova Scotia, where the health reform process will be addressed. Annel specifically at supervisors, middle management, and administrators, the existing trends in healthcare from a national and provincial perspective will be reviewed. The goal of this course is to provide the student with a snapshot view of the existing healthcare system, its past development, and future direction.

**CROSS-LISTING: CANA 4300.00**

HESA 4001.03: Management Roles and Competencies

This course seeks to help students to examine what managers do to add value to their organizations. As a starting point we will briefly explore the evolution of management theories, comparing the founding theories with more recent literature. We will also examine the role of managers in public organizations such as hospitals. Finally, we will examine specific skills and duties of healthcare managers including: leadership, power, motivation, decision making, communication, teamwork, conflict resolution, organizational change, and others. Learning is facilitated through a mix of individual study and group discussions, and direct feedback from the instructor.
HESA 4002.03: Health Human Resource Management. This course will provide the student with a working knowledge of the day-to-day operational management of human resources. The course will focus on the responsibilities of a manager to mentor, lead and manage the organization’s human resources. The interaction and interdependencies between the manager and the human resource department will be examined. Topics include labor management relations; human rights and labor related legislation; recruitment and selection; performance development and management; professional development and training; compensation related issues; collective bargaining and dealing with special employment related issues. Approved with Canadian Studies. PREREQUISITE: HESA 4000.03 CROSS-LISTING: HESA 4002.03

HESA 4003.03: Quality Management. This course will provide an introduction to the concept of quality improvement. Students will be exposed to the various methods to measure and assess quality in healthcare and be provided exposure with tools and techniques utilized in practice. A focus on safety and risk, patient satisfaction, team leadership as well as accreditation will be undertaken to ensure students gain practical understanding of the drivers of quality in Canadian healthcare. Approved with Canadian Studies. PREREQUISITE: HESA 4000.03 CROSS-LISTING: HESA 4020.03

HESA 4004.03: Healthcare Planning. This course will use lectures, readings and case discussions to explore issues and methods related to healthcare planning and evaluation. Emphasis will be placed on learning how to apply theory to practice at the system, organization, and service levels.

HESA 4005.03: Healthcare Financial Management. This course will introduce the student to financial management concepts. The key concepts of financial resource management will be explored with particular emphasis on implementation in the healthcare sector. Introduction of the basic components will enable the student to understand the concepts within the larger framework of strategic and organizational resource planning and utilization. Topics covered include preparing, managing, and evaluating department budgets, payment systems, and fiscal accountability.

HESA 4100.03: Management Process and Human Resource Issues in EHS. The course is designed to develop skills in the eight core management processes required to effectively manage an EHS operation. The core management skills taught in this course include: Interpersonal Communications and Coaching, Building Effective Teams, Monitoring and Managing Performance, Project Management, Leading Others, productivity Improvement, Influencing and Negotiating with Others, and Managing Innovation and Change. The overall aim of this course is to provide EHS practitioners with the skills necessary to manage effectively in their own work environment, and introduce EHS practitioners to innovations in EHS systems design and management practices. PREREQUISITE: HESA 4000.03 CROSS-LISTING: HESA 4005.03

HESA 4020.03: Quality Improvement in EHS. The objectives of this course are to (1) lead EHS managers through a step-by-step process to design, plan, implement, monitor and evaluate a continuous quality improvement initiative, (2) link continuous quality improvement principles to the concepts and practices of Six Sigma Performance Systems (6SPS), (3) apply the principles, practices, and tools of continuous quality improvement to an EHS operation, and (4) create a team based continuous quality improvement environment. Participants will be introduced to and will apply the concepts of healthcare improvement teams throughout the course. PREREQUISITE: HESA 4000.03 CROSS-LISTING: HESA 4003.03

HESA 4030.03: EHS System Design. The advent of the high performance EHS system makes it evident that it is possible to “do more with less”, however, that possibility requires sensible design tempered by the political realities of the services area. It also requires the use of CQI practices to modify the design and ever vigilant system state management to maintain high performance. This course will consider first the structure issues, both external and internal, that bear upon EHS system design. Then the course will consider the different designs originated from organizational theory. In the second half of the course the various system components will be presented. Finally, the course will consider disaster management of EHS systems. The objectives of this course are: (1) provide managers and management-bound students a broad perspective of the process of providing EHS services, (2) identify the scope of factors that influence, create and alter the design of EHS systems, (3) provide a foundation for system evaluation, and (4) challenge students to anticipate the factors that will affect system design when disaster strikes.

HESA 4040.03: Principles of Community-Based EHS. Emergency Health Service (EHS) systems face challenging environments. However, strategies can be developed that go beyond merely reacting to what occurs in the environment. This course presents public relations planning so that a disaster or even a scandal can be turned into an opportunity. In addition, the course offers a basic understanding of marketing strategies that can help offset market pressures and demands. The objectives of this course are: (1) appreciate how marketing strategies vary when designed for the public good or a public service; (2) develop a marketing plan specific to the student’s emergency health service system; (3) develop and evaluate an emergency health services public relations plan; and (4) facilitate a collaborative activity between the student’s emergency health organization and some of its stakeholders.

HESA 4200.03: Epidemiology for Managers. This course is a general, introductory course in the principles of epidemiology. Discussions will concentrate on the occurrence of disease and injuries in human populations, examine methods of determining the causes of illness and death, and analyze conclusions which have been reached through the application of epidemiological studies. PREREQUISITE: HESA 4000.03

HESA 4400.03: Introduction to Healthcare Economics. This course is an introduction to economic issues in the Canadian Health Care System. The purpose of this course is to provide students with economic tools with which to examine issues affecting the Canadian health system. Specific topics to be examined include: the supply of, and demand for, healthcare; investment appraisal; healthcare systems and markets; health insurance schemes;rationing healthcare services; human resource planning; human resource management; and, outcome measurement and evaluation.

Dean
Webster, W.G., PhD

Director
McCann, F., BRes (Dalhousie), MA (Western Michigan), PhD (Southern Illinois University)

Assistant Professors
Westwood, D. A., BSc, MA, PhD (Waterloo)
Robinson, L. M., BSc Honours 1st class (UVic), MA, PhD (Simon Fraser)

Associate Professors
Singleton, J. F., BA (Waterloo), MS (Penn State), PhD (Maryland)
McGinn, F., BRec (Dalhousie), MA (Western Michigan), PhD (Southern Illinois University)

Professor Emeritus
McGinn, F., BRec (Dalhousie), MA (Western Michigan), PhD (Southern Illinois University)

Purpose of the Policy
This policy is intended to create opportunities for the admission of under-represented African Canadians, Aboriginal peoples, and persons with disabilities, in the School of Health and Human Performance.

Eligibility
Persons eligible to be considered under this policy must self-identify as African Canadian, Aboriginal, or a person with a disability. Although the School of Health and Human Performance is committed to supporting eligible students from across Canada, preference will be given to those who are residents of Atlantic Canada or who have a parent residing in Atlantic Canada at the time of application.

Consideration for admission under this policy is optional. Applicants wishing to be considered under this policy must identify on the undergraduate application form.

Requirements
To be considered for admission under this policy, the following criteria must be met:

1. Those applying directly from high school must have attained a minimum grade of 65% in each of the prerequisites listed for the program of choice. Transfer students (i.e., individuals having completed post secondary courses) must have achieved a minimum overall GPA of 2.3 (C+).
2. The applicant would otherwise not have been admitted through the regular admission process.
3. The applicant must have a parent residing in Atlantic Canada at the time of application.

Support Services
Once admitted to the School, students wishing to access the following support services must identify their need to the Student Services Administrator, or the individual's school/college to determine the specific guidelines and expectations regarding the required portfolio.

A. Purposes of the School
The School’s mission is to develop professionals and scholars who can generate, disseminate and apply knowledge to advance health and human performance. We do this by offering undergraduate and graduate programs as well as by conducting research in health promotion, kinesiology and recreation/leisure studies.

B. Limited Enrolment
All programs offered by the School of Health and Human Performance have enrolment limits.

C. Interprofessional Health Education
Students are required to maintain enrolment in IPHE 4900.00 (see calendar section on Health Professions, Interprofessional Health Education) for the duration of their studies.

D. Affirmative Action Admission Policy

I. Introduction

Patricia J., BPE (UNB), MS Ed (Ontario)
Torrey, L., BSc (Univ. of British Columbia), MSc (Dalhousie)
Willigress, S., BSc, MSc (Calgary)

1. School of Health and Human Performance:

a) The Student Services Administrator will meet regularly with students to discuss, disseminate and apply knowledge to advance health and human performance.

b) Faculty members who are members of the designated groups, or who are closely affiliated with those groups, will be asked to provide academic mentorship if required.

 McCann, F., BRes (Dalhousie), MA (Western Michigan), PhD (Southern Illinois University)

386 Health and Human Performance
d) Faculty whose office is in a building that might be inaccessible to students with a physical disability will arrange an alternative, more accessible, space for meeting with those students.

2. Dalhousie University offers a variety of services to students

For further information go to www.dal.ca/campus_life/student_services.html

II. School of Health and Human Performance Regulations

1. All students must observe the University and Academic Regulations described in this Calendar.

2. Attendance

All students must attend the classes of their prescribed course regularly and punctually. When the work of a student becomes unsatisfactory or attendance is irregular, the student may be required to discontinue the course concerned.

3. Workload

The maximum course load for any fall or winter term is 15 credit hours (five half-credits) and during spring and summer terms, the maximum course load for each is 6 credit hours. Students wishing to exceed the maximum course load must receive permission from the academic advisor within the School. Permission will not normally be granted to any student in his or her first year of study or to any student who does not have a cumulative GPA of 3.00 or above. Other requests based on extenuating circumstances will be considered.

4. Grade Point Average Requirements

The grade point average system is described in the Academic Regulations.

5. Supplemental Examinations

The School of Health and Human Performance does not offer supplemental examinations in any of its programs.

6. Academic Appeals Procedures

A student wishing to appeal a decision based on School regulations should in the first instance attempt to resolve the issue with the instructor(s) concerned before proceeding as per School Appeal Procedures. See Academic Regulation 24.6.

6.a School Committee on Undergraduate Student Appeals

A School-wide Committee on Undergraduate Student Appeals exists for the purpose of hearing initial student appeals of academic decisions.

The student appellant is responsible for the preparation of all documentation in support of his/her appeal.

The student must submit the appeal to the Chair, Committee on Undergraduate Student Appeals.

The student has the right to appear before the Committee on Undergraduate Student Appeals and he/she should notify the Chair of his/her desire to do so. The student also has the right to be represented by an advocate of his/her choice.

The decision of the Committee on Undergraduate Student Appeals shall be conveyed to the student, in writing, by the Chair, Committee on Undergraduate Student Appeals within three working days after the conclusion of the appeal. If the student’s appeal is being denied, this notification should include information about procedures to appeal to the Committee on Undergraduate Student Appeals of the Faculty of Health Professions (see Academic Regulation 25.6). It should be noted that this appeal is the Faculty Committee on Undergraduate Student Appeals must be presented within 30 days of notification from the School of the appealed academic decision.

7. Student Advisory Programs

Although many courses are compulsory in the School’s programs, considerable latitude exists for the development and extension of individual interests. To help in planning a total personal program each student is assigned to the Student Services Administrator. He/she can help students to select courses, avoid common pitfalls, interpret regulations, and solve various types of problems. Although students are responsible for their own programs and for maintaining high academic standards, they should consult their advisor regularly.

III. Degree Programs

The School offers eight undergraduate degree programs:

A. BSc (Health Promotion)
B. BSc (Health Promotion) with Honours
C. BSc (Kinesiology)
D. BSc (Kinesiology) with Honours
E. BSc (Recreation)**
F. BSc (Recreation)/Bachelor of Management***
G. BSc (Recreation) with Honours*
H. BSc (Recreation) with Honours* Bachelor of Management degree

* Application is made to the Faculty Coordinator by November 15 for HPR, Rec (TR), Rec Mgmt and April 1 for Kinesiology, of the student’s first year; Consult department for further information.

** The BSc (Recreation) is a degree in Therapeutic Recreation.

***This is a five-year combined degree in which the student will graduate with both a Bachelor of Science (BSc) and Bachelor of Management degree.

NOTE 1: Students entering into any of the above degree programs from high school should refer to the Admission Requirements section of this calendar.

NOTE 2: Students who are transferring into any of the above degree programs with previous academic work will formulate a program of study with the Student Services Administrator, based on previous work and area of concentration.

Students transferring into the BSc (Health Promotion), BSc (Recreation) and BSc (Recreation)/Management programs should note that the internship experiences required in the final year of these programs are normally only offered in the fall and winter terms.

A. School of Health and Human Performance Courses

The following courses are required for certain degree programs within the School. Please refer to the Required Courses section of the specific degree program of interest:

- HAHF 1000.03
- HAHF 2000.03
- HAHF 3000.03
- HAHF 3100.03

HAPH Course Descriptions

HAPH 1000.03: Introduction to Health, Health Promotion and Health Professions

This course provides the philosophical and practical scope of the School’s unique perspective on health. It includes an examination of theories, research, politics and practices that have helped to define health, and health promotion as an umbrella for health-related activities. An historical perspective of health and healthcare is offered and current international, national and local issues are considered. Also included is an introduction to the professional streams offered in the School and how they fit into health promotion and the Canadian healthcare system.

FORMAT: Lecture/seminar

HAPH 2000.03: Human Growth and Development

A study of factors influencing human growth and development from birth to maturity and throughout the lifespan, as revealed by observational and experimental studies.

FORMAT: Lecture, 3 hours

RESTRICTION: Restricted to students in the School of Health and Human Performance, and Bachelor of Health Science students. Others by permission of instructor with priority to Health Professions students.

HAPH 3000.03: Community Development

This course examines the nature and process of community development, reviews differing interpretations and approaches to community development, and provides students the opportunity to develop skills to catalyze and engage in the process. The course will investigate current Canadian initiatives and projects that encourage the practice of community development, and provide the opportunity to witness and become involved in local health-related projects that foster the principles of community development.

FORMAT: Lecture/discussion/tutorial, 3 hours

RESTRICTION: Restricted to students in the School of Health and Human Performance.
HAHP 3100.03: Introduction to Research Methods.
This course provides students with basic knowledge for conducting research in health professions. The content covers ethics associated with research, research design, issues in measurement, sampling, data collection strategies, data analysis and report writing. Students will learn about different approaches to research from the classical scientific model to more subjective interpretive models of inquiry. Testing, as well as written assignments will serve as evaluative techniques.

FORMAT: Lecture/discussion 3 hours
EXCLUSION: NSCE 3010.03
RESTRICTION: Restricted to students in the School of Health and Human Performance, and Bachelor of Health Informatics students.

B. Bachelor of Science (Health Promotion)
The Bachelor of Science (Health Promotion) is a four-year degree program. The goal of health promotion is to educate health promotion professionals in promoting, maintaining and improving the health and well-being of individuals, families and communities. As a profession, Health Promotion is principally devoted to employing health promotion processes and to fostering healthy behaviors.

The responsibilities of health promoters include: assessing health promotion needs; planning, conducting and evaluating health promotion programs; coordinating health promotion activities and resources; promoting health promotion throughout the community; and professional development.

The BSc (Health Promotion) program guides students in attaining: (1) knowledge, attitudes and practices conducive to a healthy lifestyle; (2) professional preparation for advanced study and research in health promotion or health-related fields; (3) academic preparation for a career in community health promotion; and professional development.

Program of Study

NOTE: On admission into the BSc (Health Promotion) program, all students will be issued a Program of Studies Form. It is the responsibility of the student to ensure that all of the requirements for the degree as outlined on the form are completed for graduation.

* Language/Humanities Elective - see list under Degree Requirements Section in the Academic Calendar.
** Open Electives can be chosen from any available course at Dalhousie.
*** See list of writing requirement courses under Degree Requirements Section in the Academic Calendar.
**** * See list of writing requirement courses under Degree Requirements Section in the Academic Calendar.
***** See list of writing requirement courses under Degree Requirements Section in the Academic Calendar.

At graduation, valid Standard First Aid and CPR Level C Certification are required. Students must submit copies of valid certification to the Student Services Administrator before the end of their final term.

C. Bachelor of Science (Health Promotion) with Honours

Students wishing to be considered for entrance into the Honours Program must meet the minimum requirements listed below. Acceptance to the program after meeting these requirements will depend on a faculty member being willing to supervise the honours thesis.

1. Completed a minimum 75 credit hours towards his/her undergraduate degree.
2. Obtained a GPA of 3.5 based on the previous 45 credit hours of work.
3. Completed HAHP 3101 with a minimum grade of B.
4. Completed a 3000 level or higher HPRO course most related to the area of research.
5. Completed the Financial, Technical, Equipment and Space Support Form indicating the financial needs of the thesis can be met.

Application is made by November 15th of the student's third year.

NOTE: Students accepted into the Honours program must complete HPRO 4101.03 and HPRO 4102.03.

The Honours Program is part of the 120 credit hours required for the Bachelor of Science (Health Promotion) degree. These six credit hours may be attributed as open electives or as health-related electives.

Students accepted into the Honours program are required to attend an Honours seminar weekly for the first two months, and then monthly.

1 A student who has completed 87 credit hours may apply to the School of Health and Human Performance Undergraduate Student Appeals Committee for a waiver of the requirement. Successful appeal will depend upon the merits of the argument.
Form: Lecture 3 hours

HPR0 2255.03: Drugs and Drug Education.

This course introduces students to the basic concepts of epidemiology - the study of the causes and distribution of disease in human populations. Emphasis will be on disease causation, morbidity and mortality through studying selected chronic conditions. This course examines social determinants of health and their relationship to chronic conditions. Students are introduced to the concept of safety, the causes and effects of injuries, and strategies for reducing same through safety education, engineering and policy. Specific study of injuries, their causes, and preventive measures and programs is preceded by a review of definitions of health, health promotion/education modules and policies. The latter part of the course focuses on community orientations to injury prevention.

FORMAT: Lecture/discussion 3 hours

HPR0 3360.03: Multicultural Health Promotion Research and Policy.

The purpose of this course is to provide students with an opportunity to explore the distinct and integrated influence of research and policy on the health of multicultural populations within the Canadian context. In particular, this course will assist students in developing a critical understanding of the interaction of multicultural health with policies and power. Through engagement with multidisciplinary perspectives, students will examine health research and policy issues pertaining specifically to New Canadians (Immigrants), African Canadians, and Aboriginal peoples.

PREREQUISITE: HPR0/HEED 1195.03, HPR0 2120.03

RESTRICTION: Restricted to School of Health and Human Performance students; others by permission of instructor, with priority to Health Professions students.

HPR0 3361.03: Program Planning.

This course introduces students to basic program planning principles, program planning models, and examples of programs that are pertinent to leisure services and health education promotion. The planning process will include issues such as targeting specific populations, scanning for needs and assets, partnering, arranging stakeholder relationships, and evaluation.

FORMAT: Lecture/discussion 3 hours

HPR0 3375.03: Mental Health Promotion.

This course is designed to encourage those working and studying in the areas of health promotion to better understand the connection between health promotion theory and research, policy and community practice. This course will also provide students with an opportunity to explore and critically analyze the principal methods and theoretical approaches in the evolution and assessment of evidence for effectiveness of health promotion programs and interventions.

PREREQUISITE: HPR0/HEED 1195.03

RESTRICTION: Restricted to Health Promotion students. Others by permission of instructor with priority to Health Professions students.

HPR0 2550.03: Interdisciplinary Class in Human Nutrition.

This course focuses on the science of nutrition and the role of nutrition in health. We study how the body responds to different nutrients including protein, carbohydrate, fat, vitamin, minerals, and water. Current knowledge and controversies regarding the role of diet in disease and optimal health will be explored.

FORMAT: Lecture 3 hours

HPR0 2255.03: Drugs and Drug Education.

International, national and regional issues of prevention, treatment, and legislation of drug use are examined. Recreational, over-the-counter and some prescription drugs will be considered. Some strategies and methods of educating about drugs and drug-related issues will be included.

FORMAT: Lecture 3 hours

RESTRICTION: Restricted to School of Health and Human Performance students. Others by permission of instructor, with priority to Health Professions students.

HPR0 2361.03: Program Planning.

This course reviews the principles of program planning, various program planning models, and examples of programs that are pertinent to leisure services and health education promotion. The planning process will include issues such as targeting specific populations, scanning for needs and assets, partnering, arranging stakeholder relationships, and evaluation.

FORMAT: Lecture/discussion 3 hours

HPR0 2120.03: Health Promotion Policy.

The purpose of the course is to introduce students to the concept of policy and health promotion policy in particular. Students will be exposed to content that demonstrates the policy development process at many levels and the complexity of health promotion policy. Through the use of case studies, students will be asked to critically analyze existing health promotion policies and understand issues related to policy interpretation, application and compliance at national, provincial and local levels.

PREREQUISITE: HPR0/HEED 1195.03

RESTRICTION: Restricted to Health Promotion students. Others by permission of instructor with priority to Health Professions students.

HPR0 2110.03: Health Promotion Theory.

This course is designed to encourage those working and studying in the areas of health promotion to better understand the connection between health promotion theory and research, policy and community practice. This course will also provide students with an opportunity to explore and critically analyze the principal methods and theoretical approaches in the evolution and assessment of evidence for effectiveness of health promotion programs and interventions.

PREREQUISITE: HPR0/HEED 1195.03

RESTRICTION: Restricted to Health Promotion students. Others by permission of instructor with priority to Health Professions students.

HPR0 2110.03: Health Promotion Theory.

This course introduces students to the basic concepts of epidemiology - the study of the causes and distribution of disease in human populations. Emphasis will be on disease causation, morbidity and mortality through studying selected chronic conditions. In addition, this course examines social determinants of health and their relationship to chronic conditions.

FORMAT: Lecture/discussion 3 hours

HPR0 3345.03: Epidemiological Approach to Disease.

This course explores the basic concepts of epidemiology - the study of the causes and distribution of disease in human populations. Emphasis will be on disease causation, morbidity and mortality through studying selected chronic conditions. In addition, this course examines social determinants of health and their relationship to chronic conditions.

FORMAT: Lecture/discussion 3 hours
HPRO 3370.03: International Health Promotion Research and Policy.

The main goal of the course is to introduce students to the ways in which health promotion research questions, methods and ethics, as well as health policies, vary depending upon the specific international context (local and national). A comparative analysis will be undertaken of the disparities in health in well-being between (and within) developed and developing countries while considering the historical development of antigovernmental action. Each year the students will choose from among a variety of key global health issues (e.g. tobacco addiction, alcohol consumption, lessons from world AIDS and nutrition). Focus will be placed on the social determinants of these health issues/problems, and the types and level of health promotion research and policy issues needed to address these health problems within particular geographical contexts/countries. One of the central themes of the course is how societies are organized, and the way in which resources are invested and whose interests the systems serve, affect the health of individuals and populations within the society.

PREREQUISITE: HPRO/HEED 1195.03, HPRO/HEED 2361.03
RESTRICTION: Restricted to Health Promotion students. Others by permission of instructor with priority to Health Professions students.

HPRO 3397.03: Community Health Promotion Strategies.

A broad spectrum of health promotion strategies is available to facilitate health in various community settings and with diverse populations. The course reviews these major strategies and offers students practice in applying them. In addition, the various models and theories of health behaviour change will be examined.

FORMA T: Lecture 3 hours
NOTE: Students may take no more than a total of 6 credit hours of independent research; this includes writing a formal research report in the form of a thesis.

PREREQUISITE: HPRO 3335.03 or HPRO 3345.03
RESTRICTION: Restricted to School of Health and Human Performance students; others by permission of instructor with priority to Health Professions students.

HPRO 4101.03: Advanced Topics in Applied Research Methods in Health Promotion and Policy.

The purpose of this course is to provide students with an opportunity to develop their understanding of research methodologies and apply their knowledge to a specific health promotion topic. Health policies will be discussed and considered relative to specific health behaviours.

FORMA T: Research/tutorial 3 or 6 hours
NOTE: Students may take no more than a total of 6 credit hours of independent research; this includes writing a formal research report in the form of a thesis.

PREREQUISITE: HPRO 3310.03 and HPRO 4101.03 with a grade of B or better in each, and ethical approval by August 1.
RESTRICTION: Restricted to Health Promotion students. Others by permission of instructor with priority to Health Professions students.

HPRO 4102.03: Honours Thesis.

The purpose of the course is to develop research skills by completing a major independent research project and writing a formal research report in the form of a thesis. Up to four of their research, students will demonstrate skills, knowledge and ability in literature research, research design, data collection/analysis and formal academic writing.

FORMA T: Research/tutorial 3 hours
NOTE: Students may take no more than a total of 6 credit hours of independent research; this includes writing a formal research report in the form of a thesis.

PREREQUISITE: HADV 3100.03 and HPRO 4101.03 with a grade of B or better in each, and ethical approval by August 1.
RESTRICTION: Restricted to Health Promotion students. Others by permission of instructor with priority to Health Professions students.

HPRO 4365.03: Health: A Biopsychosocial Approach.

Health is increasingly recognized as multiply determined by the complex interactions of biological, psychological, and social contexts and determinants. Research into these interactions is advancing rapidly. Students in this course are expected to develop an understanding of these processes, be aware of the most recent research and be capable of seeking out new research in the future and applying this knowledge to health problems. Time.

FORMA T: Seminar 3 hours
NOTE: Students may take no more than a total of 6 credit hours of independent research; this includes writing a formal research report in the form of a thesis.

PREREQUISITE: HPRO 3335.03 or HPRO 3345.03
RESTRICTION: Restricted to Health Promotion students. Others by permission of instructor with priority to Health Professions students.

HPRO 4412.03: Environmental Health.

Individual health and well-being is partially determined by the values we hold and the choices we make as individuals. Equally important is the environment that enables us to make those choices that maintain and enhance our health. This course emphasizes the importance of the environment, both physical and social, and how it is implicated in the work of health promoters and other health professionals. The course reviews principles of natural and social ecology, the role of policy in shaping our environment, and research aimed at finding the impact of various environmental conditions on health. Students will explore environmental health issues within the community and propose educational strategies to maintain and enhance health and well-being.

FORMA T: Lecture/discussion
RESTRICTION: Restricted to School of Health and Human Performance students; others by permission of instructor, with priority to Health Professions students.

HPRO 4450.03: Comprehensive School Health Promotion.

This course will provide students with an overview of the components of a comprehensive health promotion program in the public school system from a community health promotion perspective. The school health curriculum, school health services, and the healthy school environment - and how a community health promoter might interact with the school system - will comprise the course content.

FORMA T: Lecture/tutorial 3 hours
NOTE: Students may take no more than a total of 6 credit hours of independent research; this includes writing a formal research report in the form of a thesis.

PREREQUISITE: HPRO 1195.03, HPRO 2110.03, HPRO 2361.03, HPRO 3379.03; at least two of HPRO 2235, HPRO 4412, HPRO 4365, HPRO 3355, HPRO 3345, or HPRO 3353
RESTRICTION: Restricted to Health Promotion students in their final year of study.

HPRO 4495.15: Health Promotion Internship.

This course is an extended professional development internship during the final year of study. It requires completion of a 14-week, 40 hours per week internship in a health promotion agency. The internship involves an in-depth agency analysis and the completion of a special service project for the agency, as well as several other academic projects. Details of the goals and specific procedures for the internship are contained in the current Internship Handbook.

FORMA T: Internship – 14 weeks in the Fall term (September-December), or Winter term (January-April) or Spring term (April to mid-May) available only with permission of the Internship Coordinator.
PREREQUISITE: Completion of all other program requirements and approval of the Student Services Administrator. A Standard First Aid and Level 1 CPR Certification.
RESTRICTION: Restricted to Bachelor of Science (Health Promotion) students in their final term.

HPRO 4700.06/4701.03/4702.03: Senior Seminar.

This course is intended for small groups of students. It is designed to allow students to focus on a particular issue or set of related issues, that are not part of the regular curriculum. Part of this course could entail a practicum experience. The course will only be offered if a faculty member is available to supervise the work.
FORMA T: Seminar
RESTRICTION: Restricted to Health Promotion students in their final year of study.

HPRO 4800.06/4801.03/4802.03: Independent Study.

The Independent Study allows students to develop an area of specialization with library, laboratory or field research, under the guidance of an appropriate faculty member.
NOTE: Students may take no more than a total of 6 credit hours of independent research.
FORMA T: Research/tutorial 3 or 6 hours
NOTE: Students may take no more than a total of 6 credit hours of independent research.
PREREQUISITE: Fourth year standing; a GPA of at least 3.00; a “B” grade in an earlier class in the area of study (where appropriate); consent of advisor; consent of tutor. Intention to register for an Independent Study should be confirmed with the undergraduate secretary by April 1st of the preceding academic year.
RESTRICTION: Restricted to School of Health and Human Performance students; others by permission of instructor, with priority to Health Professions students.

390 Health Promotion
C. Bachelor of Science (Kinesiology)

Program Description

Kinesiology is the study of the structure and function of the human body within the context of human movement and with a focus on the maintenance and enhancement of health and well-being. Students may elect to concentrate in one of these three professional areas: ergonomics, fitness and lifestyle, or coaching science*. or follow a more general stream with a focus on research or other professional areas in which human movement and health are central. The School offers a four-year BSc (Kinesiology) degree as well as a four-year honours degree in Kinesiology (see Section E below).

* See stream requirements under Program of Study below.

The goals of these degrees are to provide students with:

1. A broad background in various subdisciplines of Kinesiology, including anatomy, physiology, neuropsychology, biomechanics, movement control and psychology of performance;
2. An exposure to several science disciplines which are prerequisite and/or complementary to the kinesiology subdisciplines (e.g., biology, physics, psychology, mathematics);
3. An introduction to the discipline of health promotion and an appreciation of the role kinesiology plays in health and well-being concerns of the individual;
4. An exposure to some aspects of the humanities and social sciences, as a means of enhancing the liberal education of the student and addressing social concerns in relation to health promotion;
5. A solid foundation in research methodology and statistics, including opportunities for independent research if the student should so choose;
6. An understanding of the principles and tools necessary to evaluate human movement from a variety of perspectives and in a variety of settings, as well as hands-on experience in several evaluative procedures;
7. Professional preparation in the areas of fitness and lifestyle; ergonomics; or coaching sciences;
8. Experiences in active and problem-based learning;
9. The necessary background to enable the student to pursue graduate work in kinesiology or related fields.

Program of Study

On admission into the BSc (Kinesiology) program, all students will be issued a Program of Studies Form. It is the responsibility of the student to ensure that all of the following requirements for the degree as outlined on the form are completed for graduation.

Required Courses - BSc (Kinesiology)

- BIOL 1011.03: Principles of General Biology II
- BIOL 1010.03: Principles of General Biology I

Engineering, Science, or Medicine.

** Science electives must be from the Faculties of Computer Science, Engineering, Science, or Medicine.

Kinesiology Electives *18

Open Electives**21

Six credit hours of the total 24 credit hours must be 2000 level or above.

** Open electives must include: (1) six credit hours from Humanities or Sociology; (2) at least nine credit hours must be at the 2000 level or above.

Students considering the Honours degree are required to take six credit hours of Math, and are required to have 30 credit hours of science electives, with 12 credit hours of those Science electives at the 2000 level or above by the end of their final year. For further information see section B. Bachelor of Science (Kinesiology) with Honours (p. 340).

Stream Requirements

Students interested in focusing on Ergonomics; Fitness and Lifestyle; or Coaching Science at an advanced level will be guided into one of these specialty streams. A maximum of 12 students/year/stream will be selected, primarily on the basis of GPA. Students wishing to complete a stream should consult the student advisor.

The following is a list of required courses for each stream. Any courses over the 18 credit hours of required KINE electives can be counted as open electives.

Ergonomics Stream

- KINE 3414.03: Physical Fitness Assessment and Program Design
- KINE 3479.03: Principles of Ergonomics
- KINE 3482.03: Care & Prevention of Injuries
- KINE 4466.03: Advanced Biomechanics
- KINE 4577.03: Cognitive Ergonomics
- KINE 4578.03: Physical Ergonomics
- KINE 4580.03: Clinical and Occupational Kinesiology

Fitness and Lifestyle Stream

- KINE 3413.03: Physical Fitness Assessment and Program Design
- KINE 3419.03: Application of Physiological Principles to Human Performance
- KINE 3430.03: Psychology of Sport
- KINE 4412.03: Counselling for Health and Well-being
- CHEM 1011.03: General Chemistry Part I
- CHEM 1012.03: General Chemistry Part II
- MATH 1000.03: Differential & Integral Calculus
- MATH 1010.03: Differential & Integral Calculus
- PSYO 1011 or 1021.03: Introduction to Psychology and Neuroscience I
- PSYO 1012 or 1022.03: Introduction to Psychology and Neuroscience II
- PSYO 1060.03: Principles of General Psychology

D. Bachelor of Science (Kinesiology) with Honours

Students who wish to complete the Honours Program may apply at the end of their third year of study. Acceptance into the Honours program is contingent upon the willingness of a faculty member to serve as the honours thesis advisor. To be considered for admission into the program, students must have fulfilled the following requirements:

1. Completed MATH/STAT 1060.
2. Completed a minimum of 24 credit hours of science electives, including a math course in addition to the required MATH/STAT 1060. The other math
Students accepted into the Honours program must complete KINE 5. Completed HAHP 3100.03 (Research Methods) with a minimum grade of B. Obtained an overall GPA of 3.5 on the previous 60 credit hours of work; completed an upper level Kinesiology course (at the 3000 level or above) in introductory course will provide students with the fundamental knowledge of how their role in society. Debate and critical analysis will figure prominently in the study of physical activity and the implementation of physical activity programs in public and professional contexts. This course develops core principles in the sciences. Problem Based Learning (PBL) will be used as the course methods of measurement and evaluation and the technology involved in each of these sub-disciplines are, students will gain an understanding of the and for them to learn about the sub-disciplines and content areas that contribute to the general body of knowledge in Kinesiology. In addition to understanding what these sub-disciplines are, students will gain an understanding of the interrelationships among these sub-disciplines and the types of careers that students can enter. Students will be exposed to discipline content as well as the methods of measurement and evaluation and the technology involved in each of the disciplines. Problem Based Learning (PBL) will be used as the course instruction method. Format: Lecture 3 hours, lab 1.5 hours. Restriction: Restricted to Kinesiology students only.

KINE 1106.03: Philosophy and Ethics for Kinesiologists. Physical activity figures prominently in many aspects of society and culture. Kinesiologists are in a unique position to bridge the gap between the scientific study of physical activity and the implementation of physical activity programs in public and professional contexts. This course develops core principles in philosophy and ethics to help the aspiring kinesiologist think about and evaluate their role in society. Debate and critical analysis will figure prominently in the course. Format: Lecture 3 hours, tutorial 1 hour. Restriction: Restricted to Kinesiology students only.

KINE 1108.03: Psychology and Physical Activity. Physical inactivity is widely recognized as a lifestyle associated with considerable health risk. The challenge of increasing the level of physical activity in the population requires an in-depth understanding of the individual and environmental factors that influence or promote or inhibit regular activity. Accordingly, this introductory course will provide students with the fundamental knowledge of how psychological concepts are related to physical activity participation and health. The main focus is to provide (a) a basic understanding of various social- psychological concepts and principles involved in health and exercise psychology, and (b) to see how these concepts and principles might be translated into promoting health and wellness via physical activity participation. Core concepts include the basics of psychology research, theories, motivation, adherence, and behavior modification.

Format: Lecture 3 hours, lab 1.5 hours. Restriction: Priority given to Kinesiology students.

KINE 2250.03: Interdisciplinary Class in Human Nutrition. This course focuses on the science of nutrition and the role of nutrition in health. We study how the body responds to different nutrients including proteins, carbohydrates, fat, vitamins, minerals, and water. Current knowledge and controversies regarding the role of diet in disease and optimal health will be explored.

Format: Lecture 3 hours. Cross-listing: HPRO 2250.03

KINE 2310.03: Physiology of Exercise. This is an introductory course for students with a basic knowledge of anatomy and physiology. It concentrates on the respiratory, cardiovascular and neuromuscular systems in terms of their involvement during exercise, their adaptation to different types of training and how they limit performance during exercise in different environmental conditions.

Format: Lecture 3 hours, lab 1.5 hours. Prerequisite: ANAT 1020.03 or ANAT 1010.03, PHYH 1010.06 or PHYH 1000.06 or PHYH 2010.06. Restriction: Restricted to Kinesiology students.

KINE 2320.03: Kinesiology Anatomy. Neuroanatomical and musculoskeletal structures are presented and discussed in order to establish the understandings necessary for an in-depth analysis of human movement.

Format: Lecture 3 hours, lab 1 hour. Prerequisite: ANAT 1020.03 or ANAT 1010.03 and PHYH 1010.06 or PHYH 1000.06 or PHYH 2010.06. Restriction: Restricted to Kinesiology students

KINE 2430.03: Motor Control and Learning. This course deals with the process of generating movements to achieve a desired goal. It involves systematic changes in perception of the environment, decisions about what movements to make, as well as changes in how those movements are carried out. This course covers what is known about these processes as well as how this information can be applied.

Format: Lecture 3 hours, lab 1.5 hours. Restriction: Restricted to Kinesiology students.

KINE 2465.03: Introductory Biomechanics. The purpose of this course is to introduce students to the areas of biomechanics and human movement analysis. Students will be exposed to the concepts of kinematic and kinetic analysis of motion as well as muscle forces and moments of force as applied to the human body.

Format: Lecture 3 hours, lab 1.5 hours. Prerequisite: PHYH 1300.06 or PHYH 1310.05. Exclusion: PHYH 2460.03. Restriction: Restricted to Kinesiology students.

KINE 3010.03: Introduction to Disability Management. Introduction to Disability Management is designed to provide students with a comprehensive understanding of an occupational injury, its impact and recovery processes. In particular, the course will expose students to levels of disability management in organizational systems, injury prevention and on-site management.

Note: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term. Cross-listing: DDIS 3010.03

KINE 3200.03: Sociocultural Issues in Physical Activity. This course will provide students with an introduction to social theory, culture, and social psychology as applied to physical activity and sport. While recognizing that physical activity does not take place in a social vacuum, and social context often influences how physical activity and sport are experienced, this
course explores participation in and perceptions of physical activity and sport according to gender, social class, age, sexual orientation, ethnic group and nationality. The meaning of physical activity and sport in society, the role of Canadian public policy in promoting and facilitating participation in physical activity, and sport as an agent for social change will also be explored.

**KINE 3320.03: Anatomical Basis of Human Movement.**
The purpose of this course is to integrate information from movement sciences in order to analyze a broad spectrum of human activities. From simple static contractions to complex patterns of both fine motor and gross motor activities. Understanding the role of sport and fitness movements will be examined using an integrated digital video-channels EMG approach.

**FORMAT:** Lecture 3 hours

**PREREQUISITE:** ANAT 1020.03 or ANAT 1010.03, PHYS 1010.06 or PHYS 1000.06 or PHYS 2030.06, KINE 1104.03, KINE 2310.03, KINE 2320.03, KINE 2450.03, KINE 2460.03

**RESTRICTION:** Restricted to Kinesiology students. Others by permission of instructor, with priority to Health Professions students.

**KINE 3384.03: Physical Activity for Persons with Disabilities.**
The course will cover basic exercise and sports techniques required to assess physical fitness as well as the knowledge required to design physical activity/exercise programs for healthy populations (children and youth, adults and older adults). Techniques to assess aerobic fitness, body composition, muscular endurance and flexibility will be covered in laboratory sessions.

**FORMAT:** Lecture/lab 3 hours

**PREREQUISITE:** KINE 2320.03

**KINE 3414.03: Exercise Testing and Prescription for Healthy Populations.**
The course will cover basic exercise testing techniques required to assess physical fitness as well as knowledge required to design physical activity/exercise programs for healthy populations (children and youth, adults and older adults). These include: an overview of fitness concepts of motor control and learning; variables that impact on skill acquisition, practice and instruction will be examined. Students will be introduced to the application of these principles to skill acquisition.

**FORMAT:** Lecture 3 hours

**PREREQUISITE:** KINE 2310.03

**RESTRICTION:** Restricted to Kinesiology students. Others by permission of instructor, with priority to Health Professions students.

**KINE 3419.03: Application of Physiological Principles to Human Performance.**
This course will cover basic exercise testing techniques required to assess physical fitness as well as knowledge required to design physical activity/exercise programs for healthy populations (children and youth, adults and older adults). The etiology and effects of the more prevalent disabling conditions form the bases of strategies for teaching, coaching and rehabilitating these affected. Emphasis is placed on the physical components of disability and the adaptation of the environment and equipment to facilitate learning of ADL and sport. A practicum is required.

**FORMAT:** Lecture/practicals 3 hours

**PREREQUISITE:** KINE 2320.03

**KINE 3430.03: Principles of Skill Acquisition.**
This course will provide students with an understanding of the fundamental principles and concepts of effective coaching planning and practice. Students will explore the role of the coach, their knowledge base, and philosophical approaches to coaching and pedagogical. They will learn to develop lesson plans, write objectives, design and administer tests, organize and analyze test results. Students will develop the conceptual skills, mental preparation in sport. It will systematically analyze, investigate and assess psychological skills, attributes and preparation in this area, and their application in other environments. Emphasis will also be placed upon personal experience and practical application.

**FORMAT:** Lecture, 3 hours

**PREREQUISITE:** PSYO 1011.03 or 1021.03 and PSYO 1012.03 or 1022.03 or permission of instructor.

**KINE 3500.03: Principles of Measurement and Evaluation.**
An introduction to the fundamentals involved in measurement and evaluation, including writing objectives, designing and administering tests, organizing and analyzing test results. Tests used to measure physical fitness, specific motor skills and health knowledge are investigated.

**FORMAT:** Lecture, 3 hours

**PREREQUISITE:** PSYO 1011.03 or 1021.03 and PSYO 1012.03 or 1022.03 or permission of instructor.

**KINE 3482.03: Prevention and Care of Injuries.**
This course explores prevention, assessment, and treatment of injuries that are associated with participation in sport and physical activity. Students will learn about the major classes of neurological movement disorders, from assessment to intervention. The course will build upon introductory courses in neural basis of behavior.

**FORMAT:** Lecture 3 hours, tutorial 1 hour

**PREREQUISITE:** KINE 2430 or PSYO/NESC 2470

**RESTRICTION:** Restricted to Kinesiology students. Others by permission of instructor, with priority to Health Professions students.

**KINE 3474.03: Principles of Ergonomics.**
This course applies health and human performance concepts in kinesiology to the workplace. The course content includes identifying characteristics of work environments and the effect on performance and health, the design of effective workplaces and the use of training and educational programs to increase productivity and reduce injuries.

**FORMAT:** Lecture 5 hours, lab 1.5 hours

**PREREQUISITE:** KINE 2310.03, KINE 2320.03, KINE 2430.03, KINE 2465.03

**RESTRICTION:** Restricted to Kinesiology students. Others by permission of instructor, with priority to Health Professions students.

**KINE 3482.03: Prevention and Care of Injuries.**
This course explores the development of strategies for teaching, coaching and rehabilitating those affected. Emphasis is placed on the physical components of disability and the adaptation of the environment and equipment to facilitate learning of ADL and sport. A practicum is required.

**FORMAT:** Lecture 3 hours

**PREREQUISITE:** ANAT 1020.03 or ANAT 1010.03, PHYS 1010.06 or PHYS 1000.06 or PHYS 2030.06, KINE 2310.03, KINE 2320.03

**RESTRICTION:** Restricted to School of Health and Human Performance students. Others by permission of instructor, with priority to Health Professions students.

**KINE 3486.03: Psychology of Sport.**
This course offers an awareness and understanding of the phenomena involved in motor performance in sport. It will systematically analyze, investigate and assess psychological skills, attributes and preparation in this area, and their application in other environments. Emphasis will also be placed upon personal experience and practical application.

**FORMAT:** Lecture, 3 hours

**PREREQUISITE:** PSYO 1011.03 or 1021.03 and PSYO 1012.03 or 1022.03 or permission of instructor.

**KINE 3525.03: Principles of Motor Control and Learning.**
An introduction to the fundamentals involved in measurement and evaluation, including writing objectives, designing and administering tests, organizing and analyzing test results. Tests used to measure physical fitness, specific motor skills and health knowledge are investigated.

**FORMAT:** Lecture, 3 hours

**PREREQUISITE:** PSYO 1011.03 or 1021.03 and PSYO 1012.03 or 1022.03 or permission of instructor.

**KINE 3741.03: Coaching Science Practicum.**
The purpose of this course is to provide students with the opportunity to observe, identify, apply and evaluate the fundamental principles and methodologies of coaching that are associated with the creation of an effective practice, and training environment, for the developing athlete. This will be facilitated through the completion of a twelve week placement with a school, or club, mentor coach.

**FORMAT:** Placement with mentor coach, 3 hours per week

**PREREQUISITE:** KINE 3740.03

**FACULTY OF HEALTH PROFESSIONS**
KINE 4108.03: Mind/Body Connections and Well-being.

The connection of mind and body as it relates to well-being is addressed through a survey of complimentary (or alternative) healthcare practices including mind body medicine (e.g., relaxation, meditation), therapeutic systems (e.g., chiropractic, homeopathy), herbalogy, bodywork techniques (e.g., massage, pressure point therapies), movement therapies and exercise (e.g. Alexander, yoga) and integrated medical systems (e.g., Chinese Medicine, Ayurvedic). Theoretical and scientific bases of each are covered and controversies surrounding those practices are addressed. This course is not designed to train students to be practitioners of any technique.

FORMAT: Lecture 3 hours
PREREQUISITE: HAHP 3100.03
RESTRICTION: Restricted to students enrolled in their final year of study in the School of Health and Human Performance or by permission of instructor

KINE 4412.06: Advanced Exercise Testing and Prescription for Clinical Populations.

This class will cover advanced exercise testing techniques (e.g. graded exercise testing, ECG, etc.) in order to assess physical fitness in clinical populations as well as the theory required to design exercise programs for these populations. Physiotherapy and basic pharmacology will also be discussed. Disease topics covered include cardiovascular, pulmonary, metabolic and autoimmune diseases.

SIGNATURE REQUIRED
FORMAT: Lecture 3 hours, lab 1 hour
PREREQUISITE: ANAT 1020.03 or 1010.03, PHYS 1010.06 or PHYL 1000.06 or PHYS 2010.06, KINE 2310.03, KINE 3142.03, KINE 3149.03, CPR
RESTRICTION: Restricted to Kinesiology students. Others by permission of instructor, with priority to Health Professions students.

KINE 4466.03: Advanced Biomechanics.

This course takes a quantitative approach to understanding human movement from a mechanical perspective. Concepts presented in the course will be illustrated with examples taken from the areas of sport, exercise, activities of daily living, and ergonomics. Students will be introduced to several techniques used in biomechanical research.

FORMAT: Lecture 3 hours, lab 2 hours
PREREQUISITE: KINE 2465.03
RESTRICTION: Restricted to Kinesiology students. Others by permission of instructor, with priority to Health Professions students.

KINE 4577.03: Cognitive Ergonomics.

This course examines the role of cognition in injury prevention and human performance in the workplace. The course generally takes an information processing approach to various work-related issues. The course requirements include a written test on the content, a data collection project and a class presentation.

FORMAT: Lecture 3 hours
PREREQUISITE: KINE 3478.03
RESTRICTION: Restricted to Kinesiology students. Others by permission of instructor, with priority to Health Professions students.

KINE 4578.03: Physical Ergonomics.

This advanced level course examines the application of the physical sciences in the productivity, health and safety of the workplace. The course will consider the design of work and the workplace from a physical science perspective. Due emphasis will be placed on the importance of the understanding of, and designing for, the capacity and capabilities of the human operator. When possible, the course will consider the present national and international standards in health and safety related to the content areas. The course requirements include a written test on the content, a project and a class presentation.

FORMAT: Lecture 3 hours, lab 1 hour as required
PREREQUISITE: STAT 1060.03 or STAT 2000, KINE 2310.03, KINE 2320.03, KINE 2465.03, KINE 3478.03
RESTRICTION: Restricted to Kinesiology students. Others by permission of instructor, with priority to Health Professions students.

KINE 4588.03: Clinical and Occupational Kinesiology.

This advanced level course examines the role that Kinesiology can play in clinical and occupational settings. In particular, the course will expose the student to an integrated approach in human motion analysis with a primary focus on the use of electromyography, ultrasound and radiography to other biomechanical and physiological measures. Due emphasis will be placed on the importance of understanding the strengths and weaknesses of present laboratory and field measures of human motion. The course requirements include a written test on the content, a project and a class presentation.

FORMAT: Lecture 3 hours, lab 1 hour
PREREQUISITE: KINE 3414.03, KINE 4466.03
RESTRICTION: Restricted to Kinesiology students. Others by permission of instructor, with priority to Health Professions students.

KINE 4600.03: Practicum in Kinesiology.

Students take part in a supervised practical experience that links classroom knowledge to professional practice. Under the supervision of a Kinesiologist, students will consider the present national and international standards in health and safety related to the content areas. The course requirements include a written test on the content, a data collection project and a class presentation.

FORMAT: Field placement/semester
PREREQUISITE: KINE 1104.03, KINE 2310.03, KINE 2320.03, KINE 2403.03, KINE 2465.03, HAHP 2008.03, HAHP 3100.03, HAHP 2008.03, KINE 3505.03, and at least three 3000 or 4000 level kinesiology courses.
RESTRICTION: Restricted to Kinesiology students enrolled in their final year of study in the School of Health and Human Performance

KINE 4700/X.Y.06/4701.03/4702.03: Senior Seminar.

This course is tailored for small groups of students. It is designed to allow students to focus on a particular issue or set of related issues, that are not part of the regular curriculum. Part of this course could entail a practicum experience. The course will only be offered if a faculty member is available to supervise the work.

NOTE: Students taking KINE 4700 must register in both X and Y in consecutive terms; credit will be given only if both are completed consecutively.
FORMAT: Seminar
RESTRICTION: Restricted to Kinesiology students in their final year of study.

KINE 4740.03: Advanced Coaching Science Seminar.

The purpose of this course is to provide students with the opportunity to learn about the advanced principles and concepts of effective coaching planning and practice. Students will design, quantify and monitor a season training plan using PLAN software, addressing the performance factors of speed, strength, suppleness, stamina and skill appropriate to the competitive level of the athlete, as well as the integration of psychological preparation and competitive strategies. The course will also prepare students to meet the requirements for Level Three of the Theory component of the national Coaching Certification Program (NCCP).

FORMAT: Group project/semester
PREREQUISITE: KINE 4740.03
RESTRICTION: Restricted to Kinesiology students in their final year of study.

KINE 4741.03: Advanced Coaching Science Practicum.

The purpose of this course is to provide students with the opportunity to observe, identify, apply and evaluate the advanced principles and methodologies of coaching that are associated with the creation of an effective practice, and training environment, for the developing athlete. This will be facilitated through the completion of a twelve week placement with a varsity, school, or club, mentor coach. Students will also apply an intervention strategy developed to enhance a customizable specific performance factor in a sport of choice.

FORMAT: Placement with mentor coach, 3 hours
PREREQUISITE: KINE 4740.03

KINE 4800/X.Y.06/4801.03/4802.03: Independent Study.

Senior undergraduate students develop an area of specialization under the direction of a faculty member.

FORMAT I: Experimental research (laboratory experiment) or other research study, 3 or 6 hours
FORMAT II: Literature research; 3 or 6 hours
NOTE: Students may take no more than a total of 6 credit hours of independent study.

Students carry out an independent piece of original research in the respective field of expertise of their supervisor. Students become familiar with the experimental procedures involved in data collection, analysis, literature searches and scientific writing.
NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.
FORMATT: Independent research.
RESTRICTION: Restricted to Kinesiology honors students.

E. Bachelor of Science (Recreation) - Therapeutic Recreation

Program Description
Therapeutic Recreation involves the delivery of change-oriented services to individuals with disabilities, illness and other limitations, with the focus on increasing quality of life through leisure and recreation involvement. The graduates of the Therapeutic Recreation degree will be skilled in the areas of disability and illness, leisure theory, assessment, planning (program and client planning), program implementation and evaluation, and documentation. Graduates will find employment in both traditional clinical settings such as rehabilitation facilities, psychiatric hospitals and nursing homes, and in community settings such as community mental health centres or associations for community living, etc.

Objectives
The general objectives of the program are:
1. To provide the student with a broad educational exposure to various social science and humanities disciplines (e.g., Psychology, Sociology, Economics, Political Science, Anthropology, History);
2. To familiarize students with current social science-based research methods and statistics;
3. To provide the student with the necessary skills and knowledge for entry into the roles of leadership, advocacy, consistency and education in recreation and leisure services;
4. To provide the necessary background to enable students to pursue graduate work in leisure studies, management studies or the social sciences and humanities.

Program of Study
On admission into the BSc (Recreation) program, all students will be issued a Program of Studies Form. It is the responsibility of the student to ensure that all of the course requirements for the degree as outlined on the form are completed for graduation.

Required Courses BSc (Recreation) - Therapeutic Recreation

• BAIHP 2000.03 3
• BAIHP 1000.03 3
• BAIHP 3100.03 3
• ANAT 1020.03 3
• PHYS 1010.06 6
• KINE 3104.03 3
• LEIS 1127.03 3
• LEIS 2127.03 3
• LEIS 2130.03 3
• LEIS 1127.03 3
• LEIS 3426.03 3
• LEIS 3362.03 3
• LEIS 3360.03 3
• LEIS 2361.03 3
• LEIS 2127.03 3
• LEIS 3426.03 3
• LEIS 2360.03 3
• LEIS 3424.03 3
• STAT 1060/MATH 1060.03 3
• LEIS 4546.03 3
• LEIS 4597.15 15

Required Arts and Social Science Courses

• PSYO 1011.03 or PSYO 1021.03 and PSYO 1022.03 3
• PSYO 2220.03 3
• SOSA 1000.06 or SOSA 1050.06 or SOSA 1200.06 3

Therapeutic Recreation Electives
Two of the following:
• LEIS 4402.03 3
• LEIS 4512.03 3

• LEIS 4546.03 3
• LEIS 4563.03 3
• Designated Elective* 3
• Open Electives** 27

* Designated electives can be chosen from the courses in the Language/ Humanities list (under Degree Requirements at the front of the calendar), Health Professions or Interdisciplinary Health Professions, Health Services Administration or Social Sciences.
**12 of the 27 credit hours of the open electives must be 2000 level or above.

NOTE: Students should consult the NCTRC website (http://www.NCTRC.org) for CTRS Certification requirements.

A. Bachelor of Science (Recreation)/Bachelor of Management

Program Description
The curriculum of this combined program was developed in response to guidance from alumni and practicing professionals in the field — it was clear that while graduates entering the field of recreation administration needed the strong grounding in the recreation discipline, they also needed more management skills. The Faculty of Management’s Bachelor of Management degree emphasizes an orientation to management in the public and non-profit sector. This combined degree program enhances career options of future recreation students. The Bachelor of Science (Recreation)/Bachelor of Management is a five-year program comprising 25 full credits (50 half credits). Upon completion of this program, the successful student graduates with a Bachelor of Science (Recreation) degree and a Bachelor of Management degree.

Objectives
1. To provide the student with a broad educational exposure to various social science and humanities disciplines (e.g., Psychology, Sociology, Economics, Political Science, Anthropology, History);
2. To familiarize students with current social science-based research methods and statistics;
3. To provide the student with the necessary skills and knowledge for entry into the professional roles of leadership, advocacy, education and service delivery in recreation.
4. To provide the necessary background to enable students to pursue graduate work in leisure studies, management studies, or the social sciences and humanities.

Recreation 395
Students wishing to be considered for entrance into the Honours Program must meet the minimum requirements listed below. Acceptance to the program after meeting these requirements will depend on a faculty member being willing to supervise the honours thesis.

1. Completed a minimum of 75 credit hours towards the Bachelor of Science (Recreation) degree. Normally students will have completed five semesters prior to beginning the honours component of the program.
2. Obtained a GPA of 3.5 based on the previous 45 credit hours of work.
3. Completed a 3000 level or higher LEIS course most related to the area of specialization.
4. Completed the Financial, Technical, Equipment and Space Support Form (this form is due by November 15th of the student's third year for Therapeutic Recreation students or with permission of the instructor).
5. Completed the Technical, Financial, Equipment and Space Support Form indicating the financial needs of the thesis can be met.

NOTE: Students accepted into the Honours program must complete LEIS 4101.03 and LEIS 4102.03. These six credit hours may be attributed as open electives or as required electives.

The Honours Program is part of the 120 credit hours required for the Bachelor of Science (Recreation) degree, or part of the 150 credit hours for Recreation Management.

Students accepted into the Honours program are required to attend an Honours seminar weekly for the first two months, and then monthly.

H. Bachelor of Science (Recreation) with Honours/ Bachelor of Management

LEIS Course Descriptions

LEIS 1127.03: Foundations of Recreation.

This course provides an introductory analysis of leisure in modern society from sociological, psychological, and social psychological perspectives. The role of leisure in the everyday life of individuals will be discussed in terms of social relationships, life stage, gender, the family, work, attitudes and motivations, etc. In addition, since the role and function of leisure is affected by political, economic, and cultural systems, a macro-level perspective on leisure will also be provided by focusing on such topics as the influence of modern technology, the commercialization of leisure, the influence of social institutions and of the mass media.

FORMAT: Lecture/discussion 3 hours

RESTRICTION: Restricted to Bachelor of Science (Recreation) students. Others by permission of instructor, with priority to Health Professions students.

LEIS 2130.03: Foundations and Concepts of Therapeutic Recreation.

This course provides the conceptual foundation for the study of therapeutic recreation. Philosophical, conceptual, and historical issues related to the delivery of therapeutic recreation services will be discussed in terms of health and wellness promotion. The course will also involve the examination of professional issues such as standards of practice, ethics, quality assurance, etc., the scope of therapeutic recreation services and service delivery settings. Finally, students will be exposed to the variety of therapeutic recreation settings through site visits and observation. Students are required to join a therapeutic recreation professional group or provide the instructor with documentation on their current membership in a therapeutic recreation organization.

FORMAT: Lecture/discussion 3 hours

RESTRICTION: Restricted to Bachelor of Science (Recreation) students. Others by permission of instructor, with priority to Health Professions students.

LEIS 2361.03: Program Planning.

Designing, planning, implementing and evaluating programs is fundamental to both leisure services and health education. Both disciplines develop programs to enhance the quality of life for individuals, groups and communities. This course reviews the principles of program planning, various program planning models, and examples of programs that are pertinent to leisure services and health education/promotion. The planning process will include issues such as targeting specific populations, scanning for needs and assets, partnering, managing stakeholder relationships, and evaluation.

FORMAT: Lecture/discussion 3 hours

RESTRICTION: Restricted to Bachelor of Science (Recreation), Bachelor of Science (Recreation)/Bachelor of Management and Bachelor of Science (Health Promotion) students or with permission of the instructor.

Other Required Courses

- MGMT 2401.03
- MGMT 2501.03
- MGMT 2601.03
- MGMT 4001.03

**Open Electives (27)**

**The equivalent of six credit hours must be chosen from any MGMT or LEIS course.**

Internship Requirement (LEIS 4997.15)

The equivalent of 2.5 (five half credits) fulfills the internship requirement during the student’s final year.

G. Bachelor of Science (Recreation) with Honours/ Bachelor of Management

**NOTE:** Students accepted into the Honours program must complete LEIS 4101.03 and LEIS 4102.03. These six credit hours may be attributed as open electives or as required electives.

**The equivalent of six credit hours must be chosen from any MGMT or LEIS course.**

**Other Required Courses**

- ECON 1101.03
- LEIS 1127.03
- PHYS 1000 or PHYS 1050 or PHYS 1100 or PHYS 1200
- Writing Requirement (6)*
- Open Electives (27)**

Students must complete a six credit hour writing requirement. This can be completed by choosing six credit hours from the list of Writing Courses within the Faculty of Arts and Science Degree requirements.

**The equivalent of 27 credit hours chosen from all courses offered in the University. Twelve of the 27 credit hours must be 2000 level or above.**

**The equivalent of six credit hours must be chosen from any MGMT or LEIS course.**

**NOTE:** Students accepted into the Honours program must complete LEIS 4101.03 and LEIS 4102.03. These six credit hours may be attributed as open electives or as required electives.

**The equivalent of six credit hours must be chosen from any MGMT or LEIS course.**

**Other Required Courses**

- ECON 1010.03
- LEIS 1127.03
- PHYS 1000 or PHYS 1050 or PHYS 1100 or PHYS 1200
- Writing Requirement (6)*
- Open Electives (27)**

**The equivalent of six credit hours must be chosen from any MGMT or LEIS course.**

**NOTE:** Students accepted into the Honours program must complete LEIS 4101.03 and LEIS 4102.03. These six credit hours may be attributed as open electives or as required electives.

**The equivalent of six credit hours must be chosen from any MGMT or LEIS course.**
LEIS 2384.03: Leisure and Individuals with Disabilities.

An introduction of current philosophy, issues and practices relating to leisure opportunities for persons who, due to physical, mental, and social conditions, have difficulty gaining access to community services. An analysis of leisure behaviors, attitudes and attitudinal development, barriers, and needs of individuals with various disabilities and members of the community will be provided throughout the course. Issues relating to mainstreaming, integration and normalization will be themes throughout the course. A practicum is required in order to facilitate hands-on experience with individuals with disabilities.

FORMAT: Lecture/discussion/practicum 3 hours

PREREQUISITE: LEIS 1127.03

RESTRICTION: Restricted to School of Health and Human Performance students. Others by permission of instructor, with priority to Health Professions students.

LEIS 3127.03: Leisure Education.

This course is designed to provide students with the knowledge and skills required to facilitate leisure education interventions designed to bring about desired changes in the leisure behavior of individuals with disabilities. While the focus of the course is on leisure education, the overarching concepts of health, wellness, and health promotion will be incorporated into the course material. The course will address the following three broad areas: a) concepts and models of leisure education, b) content related to specific skills required for leisure involvement (leisure awareness, values clarification, social skills development, friendship development, stress management, assertiveness, leisure resources, decision making, etc.) and c) instructional and instructional techniques used in leisure education. In addition, students will have the opportunity to plan and facilitate leisure education experiences in class.

FORMAT: Lecture/discussion/field trips 3 hours

PREREQUISITE: LEIS 1127.03, LEIS 2127.03; LEIS 2501.03, LEIS 2504.03

RESTRICTION: Restricted to Recreation students. Others by permission of instructor, with priority to Health Professions students.

LEIS 3296.03: Leadership and Group Dynamics.

This course will focus primarily on the functions of leadership and the process of small group dynamics, as applied to recreation and health education service delivery. Emphasis will be placed on the achievement of individual and group goals in health-related settings. In addition, effective leadership of individuals and groups within a community, through direct experience and observation, will be emphasized.

FORMAT: Lecture/discussion 3 hours

PREREQUISITE: LEIS 1127.03 or HPRO 1185.03

RESTRICTION: Restricted to Health Promotion and Recreation students.

LEIS 3360.03: Analysis of Leisure Service Delivery Settings.

Reflections on the twentieth century reveal tremendous changes in the way people live. These changes have impacted work, family structure, and mental and physical well-being, and signal the importance and need of opportunities for leisure pursuits. Leisure is one of life’s greatest gifts: an important dimension influencing the quality of an individual’s life. Similarly, leisure enhances the quality of life available to a society or culture. The growth of the leisure industry reflects the ever-increasing value that individuals are placing upon leisure in their lives. It is essential for the student of recreation management to know and understand that leisure delivery and life satisfaction are dependent upon effective organizational analysis and the quality of services provided. This course presents historical and current concepts of the diverse types of agencies and institutions providing leisure services in North America. It will review the nature and effectiveness of services provided by various leisure service agencies in the private, private non-profit, commercial recreation, travel and tourism sectors of the leisure industry. It will seek to (a) evaluate the political, social, physical and economic impact on each of the sectors, (b) determine ways of assessing the quality of service delivery, and (c) find ways of motivating improvements in the identifying and meeting of consumers’ leisure needs, today and in the future. Consideration is also given to organizational structure and governance within leisure service settings, and the incorporation of the “benefits based model” to leisure service delivery.

FORMAT: Lecture/discussion/science laboratory analysis/3 credit hours

PREREQUISITE: LEIS 1127.03 and LEIS 2127.03, PREREQUISITE: LEIS/PRO/HEED 2161.03, MGMT 1000.03, MGMT 1001.03, PUAD 2401.03

RESTRICTION: Restricted to Bachelor of Science (Recreation)/Bachelor of Management students. Others by permission of instructor, with priority to Health Professions students.

LEIS 3362.03: Financial Management and Fundraising.

This course builds on previous functions of management such as program planning and analysis of leisure services by further focusing on the budgeting process, cost analysis, pricing of services, resource inventory and management, fundraising and grant writing. Strategic analysis of economic trends in understanding financial management, purchasing, inventory control, fiscal policy and accountability, and financial auditing will also be examined. Course content will be presented through lecture, case study analysis, budget, and grant proposal development. Such information will be applicable to management of public, private, commercial and/or community non-governmental recreation, health, and/or sport organizations.

PREREQUISITE: LEIS/PRO/HEED 2161.03, MGMT 2101.03

EXCLUSION: LEIS 4581.03

RESTRICTION: Restricted to Bachelor of Science (Recreation)/Bachelor of Management students. Others with permission of the instructor.

LEIS 3370.03: Recreation Facility Design and Operations Management.

This course will emphasize the management functions of planning, organizing, and coordinating as it looks at the role of the manager in effectively managing recreation physical facilities and environmental resources. The course will cover the new and emerging trends in facility design and cover the management process in the planning, and construction of indoor and outdoor recreation facilities, parks, playgrounds and pools. The course content will also focus on the core operational management competencies essential for the management of recreational facilities: namely, organizational structure and staffing, facility operations and maintenance, control and security, risk management and litigation, equipment procuring and inventory control.

FORMAT: Lectures/guest lectures/lab analysis/practicum experience/practicums experience, 3 credit hours

PREREQUISITE: LEIS 1127.03, LEIS 2127.03, LEIS/PRO/HEED 2161.03, INFO 1601.03, MGMT 2503.03 and MGMT 2504.03

RESTRICTION: Restricted to Bachelor of Science (Recreation)/Bachelor of Management students. Others by permission of instructor, with priority to Health Professions students.

LEIS 3420.03: Therapeutic Recreation Service Delivery.

Issues related to the delivery of therapeutic recreation services will be the focus of this course. In particular, the following topics will be addressed: documentation in therapeutic recreation; client assessment issues; therapeutic recreation program planning; identifying client needs, selecting appropriate interventions, task and activity analysis, planning change-oriented programs, writing behavioral objectives, etc. Program and client evaluation, written plans of operation. The final component of this course will be the opportunity to work with individuals with disabilities in a program planning context.

FORMAT: Lecture/discussion/practicum 3 hours

PREREQUISITE: LEIS 1127.03, LEIS 2127.03, LEIS/PRO/HEED 2161.03, LEIS 2384.03, KINE 3384.03

RESTRICTION: Restricted to Bachelor of Science (Recreation) students. Others by permission of instructor, with priority to Health Professions students.

LEIS 3492.03: Counselling for Health and Well-being.

This course is designed to provide students with the knowledge and skills required to utilize effective communication and helping behaviors which are designed to facilitate change in the leisure behavior of individuals with disabilities or other health problems. While the focus of the course is on facilitation techniques, the overarching concepts of quality of life, health, and health promotion will be incorporated into the course material. The course will address four broad topical areas: a) concepts of quality of life, health, health promotion, and lifestyle; b) concepts and models of helping; c) communication skills and therapeutic techniques; d) lifestyle issues related to health and well-being. Finally, students will have the opportunity to practice counselling techniques through role playing and simulations.

FORMAT: Lecture/discussion/practicum 3 hours

PREREQUISITE: LEIS 1127.03, LEIS 2127.03, LEIS/PRO/HEED 2161.03, LEIS 2384.03

RESTRICTION: Restricted to Bachelor of Science (Recreation) students. Others by permission of instructor, with priority to Health Professions students.

LEIS 4101.03: Advanced Research Methods.

The purpose of this course is to provide students with an opportunity to develop their understanding of research methodologies and apply their knowledge to a specific research/leisure studies topic. Theories and methodologies will be
discussed with reference to leisure studies. The students will develop an honours thesis and ethics proposal as part of the course requirements.

LEIS 4102.03: Honours Thesis.
The purpose of this course is to develop research skills by conducting an independent research project and writing a formal research report based on the findings. Students will demonstrate their knowledge and ability in research methodologies, data collection, analysis, and formal academic writing.

RESTRICTION: Restricted to Recreation honours students.

LEIS 4362.03: Recreation Entrepreneurship and Special Events.
Through lecture, discussion, and case study analysis, this course will provide the student with advanced insight and applied experience in select individual-based management concepts and functions of directing, coordinating and staffing that will be useful to the potential or practicing manager in sport administration, community, or commercial leisure and health service delivery agencies. In particular, a focus will be directed towards special event planning and management, and marketing and business plan development.

PREREQUISITE: LEIS/HPRO/HEED 2361.03, LEIS 3362.03, MGMT 2303.03, MGMT 2304.03
EXCLUSION: LEIS 3361.03
RESTRICTION: Restricted to Bachelor of Science (Recreation)/Bachelor of Management students. Others with permission of the instructor.

LEIS 4365.03: Administrative Concepts in Therapeutic Recreation.
This course emphasizes the essentials of management that are pertinent to being an effective practicing therapeutic recreation manager in either a clinical setting, a healthcare facility, or a community-based leisure or health service setting. After introducing the student to the theory and discipline of management and related ethical perspectives, the course will examine selective administrative functions in each of the areas of (a) Operational Management, i.e., budgeting and financial management, sources of revenue generation and grant writing, decision making, problem solving and conflict management, etc., (b) Human Services Management, i.e., ethical perspectives of recreation services and the various service delivery issues specific to physical and developmental disabilities will be examined, including assessment procedures, program intervention techniques, documentation and efficacy of delivery issues specific to older adults will be examined. Finally, the therapeutic recreation service delivery issues specific to mental illness and addiction will be examined, including assessment procedures, program intervention techniques, etc. Site visits, observations, and simulations will be used to facilitate the application of this material.

FORMAT: Lecture/discussion/practicum 3 hours
PREREQUISITE: LEIS 2127.03, LEIS 2317.03, LEIS 2318.03, LEIS 3127.03, LEIS 3362.03, LEIS 3942.03, PSYO 2202.03
RESTRICTION: Restricted to Bachelor of Science (Recreation) students in their final two years of study. Others by permission of instructor, with priority to Health Professions students.

LEIS 4482.03: Therapeutic Recreation Specialization: Youth at Risk.
Youth as a sector of society and as a stage in human development is of great significance in the study of leisure. Particularly relevant is the issue of unemployment and underemployment which has created a number of problems such as low self-worth, alcohol use, teenage mothers, etc. There are programs being developed to address these problems, many of which are experientially based, e.g., Outward Bound, study service, service learning and national service. This course will study the phenomenon of youth development in the light of experiential educational approaches. During the course there will be an expectation that the students will meet and interact with a variety of youth. A practicum is included.

FORMAT: Lecture/practicum 3 hours discussion
PREREQUISITE: LEIS 2127.03, LEIS 2127.03, LEIS 2318.03, LEIS 2364.03, LEIS 3127.03, LEIS 3362.03, LEIS 3942.03, PSYO 2202.03
RESTRICTION: Bachelor of Science (Recreation) students in their final two years of study.

LEIS 4512.03: Therapeutic Recreation Specialization: Physical and Developmental Disabilities.
This course is an upper level therapeutic recreation specialization course which takes the concepts and skills learned in the previous therapeutic recreation courses and applies them specifically to clients with physical and developmental disabilities. Initially, issues related to etiology, characteristics, and treatment needs of clients with various physical and developmental disabilities will be discussed. The implications of these characteristics for therapeutic recreation services and the various service settings in which therapeutic recreation services are provided will then be examined. Finally, the therapeutic recreation service delivery issues specific to physical and developmental disabilities will be examined, including assessment procedures, program intervention techniques, etc. Site visits, observations, and simulations will be used to facilitate the application of this material.

FORMAT: Lecture/discussion/practicum 3 hours
PREREQUISITE: LEIS 2127.03, LEIS 2127.03, LEIS 2318.03, LEIS 2364.03, LEIS 3127.03, LEIS 3362.03, LEIS 3942.03, PSYO 2202.03
RESTRICTION: Restricted to Bachelor of Science (Recreation) students in their final two years of study. Others by permission of instructor, with priority to Health Professions students.

LEIS 4540.03: Therapeutic Recreation Specialization: Addiction and Mental Illness.
This course is an upper level therapeutic recreation specialization course which takes the concepts and skills learned in the previous therapeutic recreation courses and applies them specifically to clients with mental health problems and/or addiction. Initially, issues related to etiology, characteristics, and treatment needs of clients with addiction and mental illness will be discussed. The implications of these characteristics for therapeutic recreation services and the various service settings in which therapeutic recreation services are provided will then be examined. Finally, the therapeutic recreation service delivery issues specific to mental illness and addiction will be examined, including assessment procedures, program intervention techniques, etc. Site visits, observations, and simulations will be used to facilitate the application of this material.

FORMAT: Lecture/discussion/practicum 3 hours
PREREQUISITE: LEIS 2127.03, LEIS 2127.03, LEIS 2318.03, LEIS 2364.03, LEIS 3127.03, LEIS 3362.03, LEIS 3942.03, PSYO 2202.03
RESTRICTION: Restricted to Bachelor of Science (Recreation) students in their final two years of study. Others by permission of instructor, with priority to Health Professions students.

LEIS 4563.03: Therapeutic Recreation Specialization: Aging and Lifestyle.
This course is an upper level therapeutic recreation specialization course which takes the concepts and skills learned in the previous therapeutic recreation courses and applies them specifically to older adults. Initially, issues related to theories of aging, characteristics of older adults and pre-retirement planning will be discussed. The implications of these characteristics for therapeutic recreation services and the various service settings in which therapeutic recreation services are provided will then be examined. Finally, the therapeutic recreation service delivery issues specific to older adults will be examined, including assessment procedures, program intervention techniques, documentation and efficacy of therapeutic recreation service delivery issues specific to this population. Site visits, observations, and simulations will be used to facilitate the application of this material.

FORMAT: Lecture/discussion/practicum 3 hours
PREREQUISITE: LEIS 2127.03, LEIS 2127.03, LEIS 2318.03, LEIS 2364.03, LEIS 3127.03, LEIS 3362.03, LEIS 3942.03, PSYO 2202.03
RESTRICTION: Restricted to Bachelor of Science (Recreation) students in their final two years of study. Others by permission of instructor, with priority to Health Professions students.

LEIS 4597.15: Recreation Internship.
This course is an extended professional development internship during the final year of study. It requires the completion of a minimum 16 week, 35 hours per week internship in a recreation service delivery agency. The internship involves an in-depth agency analysis and the completion of a special service project for the agency, as well as several other academic projects. Details of the goals and specific procedures for the internship are contained in the current Internship Handbook.

FORMAT: Internship – 16 weeks in the Fall term (September–December), or Winter term (January–April)

PREREQUISITE: Completion of all other program requirements and approval of the Student Services Administrator/Standard First Aid and Level C CPR certifications. Minimum cumulative GPA of 2.0.

RESTRICTION: Restricted to Bachelor of Science (Recreation), and Bachelor of Science (Recreation)/Bachelor of Management students in their final term.
LEIS 4700.06/4701.03/4702.03: Senior Seminar.  
This course is tailored for small groups of students. It is designed to allow students to focus on a particular issue or set of related issues, that are not part of the regular curriculum. Part of this course could entail a practicum experience. The course will only be offered if a faculty member is available to supervise the work.  
FORMAT: Seminar  
RESTRICTION: Restricted to Recreation students in their final year of study

LEIS 4800X/Y.06/4801.03/4802.03: Independent Study.  
Senior undergraduate students develop an area of specialization under the direction of a faculty member.  
NOTE: Students taking 4800X/Y.06 must register in both X and Y in consecutive terms; credit will be given only if both are completed consecutively.  
FORMAT: Library survey or other research study 3 or 6 credit hours  
PREREQUISITE: A GPA of at least 3.00, a “B” grade in an earlier class in the area in which the project will be conducted (where applicable), consent of advisor, consent of faculty. Intention to register for an Independent Study should be confirmed with the undergraduate secretary by April 1st of the preceding academic year. NOTE: Students may take no more than 6 credit hours of independent studies.

I. Course Description

HLTH 4040.03: Health Law for Non-Lawyers.
The objectives of this course is to provide the non-law student with an overview of significant legal issues that arise in the healthcare context. The first part of the course covers an introduction to the Canadian legal system, the Canadian healthcare system from a legal perspective, and the nature of legal proceedings.
The second part focuses on issues of particular relevance in the provision of health services; these issues may include: practice management; confidentiality and disclosure of information, including whistle blowing; consent to treatment, including issues regarding minors and those lacking capacity; mental health law; and the regulation of drugs. Finally, the third part addresses contemporary issues in health law such as cost containment, issues of care at the end of life, and the impact of human rights legislation on healthcare services and delivery.
FORMAT: Fall term BLS
RESTRICTION: Health Profession students only
Health Sciences

Location: School of Health Sciences, 6th Floor, Beedie Building
1276 South Park Street
Halifax, NS B3H 2Y9

Bachelor of Health Science (Specific Discipline) degree. The programs leading to Cytology, Diagnostic Medical Ultrasound, and Respiratory Therapy only) and a Bachelor of Health Science (specific Discipline) degree. The programs leading to these credentials are accredited. The University does not determine eligibility for certification/registry exams. Rather, through accreditation, the University ensures that graduates of its programs meet the eligibility criteria set by the professional associations. Diagnostic Cytology, Diagnostic Medical Ultrasound (General, Cardiac and Vascular), Nuclear Medicine and Radiological Technology are accredited by The Canadian Medical Association. Respiratory Therapy is accredited by The Council on Accreditation for Respiratory Therapy Education.

I. Bachelor of Health Science Degree Program

The BHSc program is a four-year degree program that provides an integrated curriculum that includes core, interdisciplinary and discipline-specific courses. Clinical practice is included in each year of study requiring a full-time commitment in the May-June time period.

In order to accommodate all third-year Respiratory Therapy students in required clinical rotations, courses for this group only will begin on August 27, 2014.

Dalhousie University confers a Diploma in Health Science (for Diagnostic Cytology, Diagnostic Medical Ultrasonic, and Respiratory Therapy only) and a Bachelor of Health Science (Specific Discipline) degree. The programs leading to these credentials are accredited. The University does not determine eligibility for certification/registry exams. Rather, through accreditation, the University ensures that graduates of its programs meet the eligibility criteria set by the professional associations. Diagnostic Cytology, Diagnostic Medical Ultrasound (General, Cardiac and Vascular), Nuclear Medicine and Radiological Technology are accredited by The Canadian Medical Association. Respiratory Therapy is accredited by The Council on Accreditation for Respiratory Therapy Education.

A. For the professions of Diagnostic Cytology*, Diagnostic Medical Ultrasonic, and Respiratory Therapy

Students are eligible to write the certification/registry exam upon successful completion of Year 3, when all requirements for a diploma exit have been met. They are eligible even if they choose not to exit with a diploma. Students should check with faculty concerning examination dates.

Following degree completion, students in Diagnostic Medical Ultrasound may be eligible to write certification/registry exams in the specialized areas of cardiac and vascular sonography.

**Note that intake to the Diagnostic Cytology program is suspended for 2014-2015.

B. For the professions of Nuclear Medicine Technology and Radiological Technology

Students are eligible to write the Certification registry exam upon successful completion of the Bachelor of Health Science degree.

II. The Professions

Diagnostic Cytology

A cytotechnologist is a health professional who specializes in detecting and diagnosing cancer at a cellular level. A cytotechnologist requires expertise and precise diagnostic skills to identify and accurately evaluate minute changes within cells to provide a diagnosis. A cytotechnologist integrates scientific knowledge, cellular morphology and clinical history to formulate a cytological report. The cytotechnologist must be comfortable with using a compound microscope so this is how s/he must spend a great portion of their day. The cytotechnologist has limited patient contact, but must communicate effectively with other health care professionals in discussing results, procedures and/or policies and practices.

Diagnostic Medical Ultrasound

The Diagnostic Medical Sonographer utilizes high frequency sound waves, specialized equipment, and other diagnostic techniques to collect detailed information on the anatomical, physiological and pathological state of the patient. This health professional is able to produce and evaluate ultrasound images and related data that are used by specialized physicians to render a medical diagnosis. Sonographers typically provide technical expertise in abdominal, superficial structures, obstetrics/gynecology, vascular and cardiac applications.

Nuclear Medicine Technology

A nuclear medicine technologist is a health professional responsible for performing diagnostic and therapeutic nuclear medicine procedures. The technologist administers radiopharmaceuticals to the patient most often by way of an intravenous injection while adhering to proper drug preparation techniques, radiation protection guidelines and patient care practices.

The technologist operates a variety of radiation detection equipment, one of which is the gamma camera, in order to provide an assessment of the distribution of the radiopharmaceutical within the patient. By using various computer programs, the technologist analyzes the data to obtain the best information from the study which is then interpreted by a nuclear medicine physician.
First Aid Certification
• All BHSc students must present proof of current certification in BLS at a BLS-HCP Certification

Criminal Record Check
2. Upon entering the program students must show certification
1. It is a regulation of the Faculty of Health Professions and affiliated health care
found at

Respiratory Therapy
A respiratory therapist is a health professional who assists in the diagnosis, treatment and health promotion of patients with cardio-respiratory disorders through therapeutic means. Respiratory therapists provide cardio-pulmonary support, including cardio-pulmonary resuscitation, mechanical ventilation support, administration of medical gases, aerosolized medications, humidity therapy and airway management. The respiratory therapist also performs respiratory assessments of patients, tests and monitors cardio-pulmonary function, assists with the transport of high-risk patients and participates in home care programs.

The therapist plays an important role in the education of patients, families and hospital staff. The therapist is also involved in the maintenance, repair, testing and evaluation of respiratory equipment. The therapist must be able to provide competent assistance in cardio-pulmonary research.

III. Pre-Enrolment Requirements
Immunization (current detailed version of policy can be found at http://www.dal.ca/shs (current students, Policies and Guidelines))
1. It is a regulation of the Faculty of Health Professions and affiliated health care agencies that all students must be immunized. This has been instituted to protect patients as well as to protect students and employees.
2. Upon entering the program students must show certification for current immune status against tetanus, diphtheria, measles, mumps, rubella, rubeola and varicella (chickenpox). Evidence of tuberculosis testing (Mantoux – two step method) must also be shown. Annual Mantoux testing is also required. It is also recommended that students be immunized for influenza on an annual basis.

The Hepatitis-B vaccination is required for all students. It is a series of three injections: the second and third shots are administered one month and six months after the first injection. The vaccination lasts for several years. This cost (approximately $105, subject to change) must be paid by the student.

Criminal Record Check
• All BHSc students must provide a criminal record check (obtained within the previous six months) prior to attendance at any Capital Health or IWK facility.

BLS-HCP Certification
• All BHSc students must present proof of current certification in BLS at a Healthcare Provider prior to entry into the program. Students are required to maintain current certification throughout the program.

First Aid Certification
• All BHSc students must show proof of Standard First Aid current certification prior to entry into the program. Standard First Aid must be recertified bi-annually.

N95 Mask Fit Testing
• All BHSc students must be mask fit tested for a particulate respirator according to clinical site requirements. This must be recertified every two years, and may need to be recertified annually, depending on the mask in use at your clinical site. Note: There is a cost to the student for this procedure. Consult your school for details.

IV. Additional Costs
There are additional costs associated with all professional streams of the BHSc program, including but not limited to Standard First Aid and BLS-HCP certification, immunization, uniforms, membership in professional associations, equipment, fees for writing registry exams, mask fit testing, criminal record check, and travel to clinical sites. These additional costs are the responsibility of the student. A detailed list is available from the School.

V. Intellectual, Emotional and Physical Demands
The health professions included in the Bachelor of Health Science program are intellectually, emotionally and physically demanding. It is important that students become familiar with the profession before entering the program so that they are able to function at an acceptable standard. It is common to have to lift and move heavy equipment, position patients, wear lead aprons, manipulate valves and knobs on equipment, remain on your feet for extended periods of time and move frequently from one clinical area to another. It is also common to have to view information displayed on computer monitors or on slides under a microscope. It might be necessary to distinguish fine gradations of color and to respond to alarms and buzzers. There may be emergency situations that arise in the health care setting that require students to respond immediately. Shift work may be required, including rotating 12-hour shifts. Latex gloves are in wide use and chemicals are used in a variety of settings. Refer to http://www.dal.ca/shs (Admissions) for Statements of Fitness required for each profession. Students who have concerns about fitness should contact the School for further information.

VI. Program Outline
Four-Year Entry-Level Program
The curriculum is comprised of four years of full-time study with each year including core, interdisciplinary, discipline-specific, health professional and basic science courses.

Fourth-year BHSc students must meet the School’s clinical skills maintenance requirements and complete the “Record of Clinical Practice for Year 4” each term, until the 4th-year classwork is completed. Students should contact the School for full details.

Diagnostic Cytology
Please note that this program has suspended admissions for the 2014-2015 academic year.

Year 1

Note: RSPT 4210.03 is considered an “approved elective.”
The post-diploma BHSc curriculum is equivalent to two years of full time university study (60 credit hours). Courses may be completed in the sequence best suited for the student; however, attention must be paid to the course pre-requisites.

It is the responsibility of each individual student to ensure she/he is enrolled in the courses required to complete the BHSc program of study. Therefore students are expected to meet with their academic advisors to seek counselling in this regard, to ensure that course selections and course load are appropriate, and will not cause difficulties later on in the program.

404 Health Sciences
Permission to carry more than a normal workload

A workload exceeding these audit hours in any given term will be considered an overload.

- Students who wish to take on an overload must have the approval from the School of Health Sciences Academic Regulations Officer. Any student applying for an increased workload (overload) must apply at least four weeks in advance of the start of the semester or year in question.
- Students should contact their program coordinator and the School of Health Sciences Academic Regulations Officer to request a Waiver of Academic Regulation.
- Applications from students who give good reasons for wishing to take an overload will be considered. Such permission will not normally be granted to students who, in the first year of study, or to any student in full-time academic term, obtained a grade point average of less than 3.00.
- During Clinical Practicum and/or Clinical Education Courses no additional courses will be permitted without prior approval from the Academic Regulations Officer.
- Such requests require student completion of a Waiver of Academic Regulation Application, available from your academic advisor, or the Registrar’s Office.
- Students who exceed the normal workload per academic term without the Academic Regulations Officer’s approval, will be required to withdraw from the course.

Attendance at Courses

Regular and punctual attendance at courses is required; students are expected to notify instructors if they are going to miss a course. When the work of a student becomes unsatisfactory or attendance is irregular, the student may be required to withdraw from the school.

Grade Requirements

A student must receive a grade of C+ in each course with a course number in the School of Health Sciences (HSC, DCCY, DMMT, MIDE, MRT, NUMT, RADT, RSIPT) in order for that course:
- to be counted as a prerequisite for another course;
- to be credited towards the Bachelor of Health Science or Diploma in Health Science.
- to be considered as a prerequisite for another course.

Since most professional courses are prerequisites for more advanced courses and for clinical practice, the student’s academic progress will be severely impacted by a failure. Students must seek academic advice.

Any student failing a required course for the second time must withdraw from the School of Health Sciences. Students who, in a failed third year, fail their reasons for seeking an overload and include supporting arguments and evidence, such as their academic record and any other relevant considerations.

Supplemental Exams

Supplemental Exams must be passed before the student can begin their clinical placement. In no case will a clinical placement be delayed for more than two weeks.

No more than two supplemental exams for courses with course numbers in the School of Health Sciences will be allowed in any one year. Only one supplemental exam is allowed per course.

Voluntary Withdrawal

Students who voluntarily withdraw from the School of Health Sciences, having satisfactorily completed courses toward the BHSc (specific discipline) degree, with the intention of returning at a later date and advised that re-admission is contingent upon there being an available place.

Leave of Absence

1. Students who apply for a leave of absence (LOA) from their program of study must do so in writing to the School of Health Sciences Academic Regulations Officer. If possible, such applications should be made in advance of the term or year for which a LOA is being requested.
2. A request for Leave of Absence may be for a duration of one term to a maximum of one year in length. Students are eligible for a maximum of one such leave for the duration of their program.
3. Following approval of the application for LOA, the Academic Regulations Officer will notify the following individuals:
   a) The student;
   b) Dalhousie University Registrar’s Office;
   c) Students Services office at the School; and
   d) Student’s academic advisor.
4. Students may apply to return to the program prior to the designated end of the LOA. At the time students return to the program, the LOA is considered ended.
5. At least two to three months prior to returning to the program, students granted LOA will inform the following, in writing, of their intent to resume their studies:
   a) Academic Regulations Officer;
   b) Student’s academic advisor.

Policies on Students at Academic Risk

The School of Health Sciences Studies at Academic Risk Policy aims to identify students at risk and recommend a course of academic and clinical remediation to ensure minimum clinical competencies are maintained.

Re-Admission of Academically Dismissed Students Policy

The primary goal of the School of Health Sciences and Dalhousie University is to ensure students are successful in their chosen profession while maintaining integrity of the program. Academic Regulation Section 20.1.3 allows for students who have been academically dismissed to apply for readmission to the University. Decisions on re-admission to a program in the School of Health Sciences are made in consultation with the individual student, clinical coordinator, and the Admissions Committee and will include, but not be limited to, consideration of availability of clinical placements.
Health Sciences

expected level of performance. Clinical Education Courses are taken in Year 3 at examination to assess knowledge of subject matter, and practical assessments to health care. Evaluation methods may include, but are not limited to, a written experiences designed to enhance students' understanding of the team approach to share their expertise with students. There may be interprofessional learning critical reasoning skills. Medical specialists and practitioners may be invited to students by facilitating seminars/tutorials, conducting assessments, providing rotation. Students may be required to travel to a site outside Halifax in order to in a specific area of clinical practice. Scheduling requires full-time rotations in the These courses provide students with an opportunity to gain hands-on experience growth through introspection and reflection by maintaining journals, recording application of theory to practice. Students monitor their personal and professional assessment of skills competencies, demonstration of professional behaviors, and preceptor ratio is one-to-one. Evaluation may include, but is not limited to, student/ student. Students are scheduled in a clinical setting for eight-to-ten consecutive weeks, and are supervised by faculty and/or preceptors. The normal student/length within the Halifax region, throughout the Atlantic provinces, and in various sites across Canada. All expenses related to clinical placement are the responsibility of the student. Clinical placements will be arranged by the Clinical Coordinator for the School of Health Sciences. Students may be assigned to clinical sites located within the Halifax region, throughout the Atlantic provinces, and in various sites across Canada. All expenses related to clinical placement are the responsibility of the student. Students are scheduled in a clinical setting for eight-to-ten consecutive weeks, and are supervised by faculty and/or preceptors. The normal student/preceptor ratio is one-to-one. Evaluation may include, but is not limited to, assessment of skills competencies, demonstration of professional behaviors, and application of theory to practice. Students monitor their personal and professional growth through introspection and reflection by maintaining journals, recording experiences in skills log books, successfully passing examinations or presenting case studies.

Two elements of clinical education are:

1. Clinical Practicum

The program includes three clinical practice periods during the May – early July time period following Years 1, 2, and 3. The Clinical Practicum is designed to prepare students with opportunities to develop the knowledge, skills and professional attitudes necessary to function as competent entry-level practitioners within a variety of settings and roles. Students are assigned to various clinical sites, based on their level within the program, the expected learning outcomes of their professional stream, and the availability of appropriate sites.

Clinical placements will be arranged by the Clinical Coordinator for the School of Health Sciences. Students may be assigned to clinical sites located within the Halifax region, throughout the Atlantic provinces, and in various sites across Canada. All expenses related to clinical placement are the responsibility of the student. Students are scheduled in a clinical setting for eight-to-ten consecutive weeks, and are supervised by faculty and/or preceptors. The normal student/preceptor ratio is one-to-one. Evaluation may include, but is not limited to, assessment of skills competencies, demonstration of professional behaviors, and application of theory to practice. Students monitor their personal and professional growth through introspection and reflection by maintaining journals, recording experiences in skills log books, successfully passing examinations or presenting case studies.

2. Clinical Education Courses

These courses provide students with an opportunity to gain hands-on experience in a specific area of clinical practice. Scheduling requires full-time rotations in the clinical setting and, depending on the area, may require skill work and/or off-site rotation. Students may be required to travel to a site outside Halifax in order to meet their clinical learning objectives. Preceptors supervise and guide students through the period of study and skills practice. Faculty continues to support students by facilitating seminars/tutorials, conducting assessments, providing constructive feedback and structuring learning experiences to further develop critical reasoning skills. Medical specialists and practitioners may be invited to share their expertise with students. There may be interprofessional learning experiences designed to enhance students' understanding of the team approach to health care. Evaluation methods may include, but are not limited to, a written examination to assess knowledge of subject matter and practical assessments to confirm that clinical skills and professional behavior are readily applied at the expected level of performance. Clinical Education Courses are taken in Year 3 at all programs. In addition, Clinical Education Courses are a required part of the Year 4 curriculum for students in Nuclear Medicine Technology and Radiological Technology.

IX. Interprofessional Health Education

Students are required to maintain enrolment in IPHE 4900 (see calendar section on Health Professions, Interprofessional Health Education) for the duration of their studies. Please register in IPHE 4900.00 section 3. Successful completion of this course is a requirement for graduation and will be recognized further with the awarding of a special Certificate in Interprofessional Collaboration to be presented by the Faculty of Health Professions. Students are asked to consult with their individual school/college to determine the specific guidelines and expectations regarding the required portfolio.

X. Course Descriptions

DCYT 1000.03: Diagnostic Cytology Laboratory Applications. This course provides a comprehensive study of topics relevant to the Diagnostic Cytology laboratory. Safety, collection of specimens, interpretation of clinical data, cytopreparatory techniques, and specimen processing are examined. Topics such as quality assurance, fixation and transcription of biological specimens, record keeping and organization of the Diagnostic Cytology laboratory will be discussed. Laboratory sessions will demonstrate the techniques required to prepare, and process a specimen adequate for cytolgic diagnosis. In this context, emphasis will be placed on safe professional practice and the delivery of care.

FORM: Lecture 3 hours, lab 2 hours
RESTRICTION: Restricted to Bachelor of Health Science students in the professional stream of Diagnostic Cytology

DCYT 1010.03: Gynecological Cytopathology I. This course is designed to provide the foundation in gynecological Cytopathology. The purpose of the course is to introduce the basic skills and knowledge required to interpret, interpret and evaluate the cellular morphology of normal histologic tissues, cytocine cellular specimens of normal and benign processes of the female reproductive tract. Emphasis will be placed on the critical evaluation of pathologic and cytocine characteristics of normal and benign processes. The course will further allow students to maintain their professional practice in the role of respect towards the patient.

FORM: Lecture 3 hours, lab 4 hours
PREREQUISITE: HSCE 1030.03, DCYT 1000.03, HSCE 1020.03
CO-REQUISITE: HSCE 1030.03
RESTRICTION: Restricted to Bachelor of Health Science students in the professional stream of Diagnostic Cytology

DCYT 1500.03: Laboratory and Clinical Gynecological Applications I. This clinical practicum enables the student to integrate theoretical knowledge with application to specimen procurement and normal and benign gynecologic diagnoses. The student consolidates concepts, techniques and knowledge required to perform skills introduced in DCYT 1000.03, DCYT 1010.03, HSCE 1000.03. Students are expected to work under direct supervision, assume responsibility for their actions and decisions and to interact effectively with peers, technologists, supervisors and medical staff.

FORM: Full-time rotations in clinical settings
PREREQUISITE: BIOL 1010.03 or 1020.03 and DCYT 1010 and HSCE 1020, and HSCE 1010
RESTRICTION: Restricted to Bachelor of Health Science students in the professional stream of Diagnostic Cytology

DCYT 2000/YT:06: Gynecological Cytology II. This course provides a high level of study in gynecological Cytopathology. The purpose of the course is to further develop the diagnostic skills required to integrate, interpret and evaluate the cellular morphology of normal and benign processes of the female reproductive tract. Students will be introduced to the cellular morphology, nomenclature and diagnostic application of abnormal and malignant disease processes of the female reproductive tract. Emphasis will be placed on the critical evaluation of pathologic and cytocine characteristics. The student will be placed in a simulated environment where diagnosis and reporting will be the focus. This environment provides an opportunity for active learning, feedback, communication between student and faculty as well as self evaluation.

406 Health Sciences
The course will further allow students to maintain their professional practice in the role of respect towards the patient. NOTE: Students taking this class must register in both X and Y in consecutive terms, credit will be given only if both are completed consecutively.

FORMATT: Lecture 3 hours, labs 3 hours.

RESTRICTION: Reenrolled to the Bachelor of Health Science students in the professional stream of Diagnostic Cytology.

DCYT 2001.03: Gynecological Cytopathology II.
This course will focus on the cellular morphology and nomenclature of abnormal and malignant disease in gynecological cytology. Emphasis will be placed on the interpretation and critical evaluation of the cellular morphology of normal, benign and malignant disease processes. A variety of therapy modalities and recent advances will be examined.

NOTE: Students taking this class must register in both DCYT 2001 and DCYT 2002 in consecutive terms.

FORMATT: Lecture 3 hours, labs 3 hours.

PREREQUISITE: DCYT 1500.03
EXCLUSION: DCYT 2490.06

RESTRICTION: Reenrolled to the Bachelor of Health Science students in the professional stream of Diagnostic Cytology.

DCYT 2002.03: Clinical Application for Gynecological Cytopathology.
This clinical education course will provide an opportunity for students to integrate theory from DCYT 2001.03 into clinical practice. This course will offer a simulated environment where diagnosis and reporting of gynecologic specimens will be the focus.

FORMATT: Lecture 3 hours twice a week.

PREREQUISITE: DCYT 1500 and DCYT 2001
EXCLUSION: DCYT 2000.06

RESTRICTION: Reenrolled to Bachelor of Health Science in the professional stream of Diagnostic Cytology.

DCYT 2010.03: Pathology and Histopathology for Diagnostic Cytology.
This course provides a basic understanding of the disease process at the tissue level. It provides the appropriate information that will allow a student to recognize morphological features that are related to the origin of the cells. In the General Pathology component, topics covered include: cell injury and adaptation, inflammation and repair, disorders of growth, fluid and hemodynamic arrangements, neoplasia, environmental and nutritional diseases, microbiology and cancer. The Systems Pathology component covers all the body systems and enables the student to identify histologic processes related to various disease processes.

FORMATT: Lecture 3 hours.

PREREQUISITE: DCYT 1500.03

RESTRICTION: Reenrolled to Bachelor of Health Science in the professional stream of Diagnostic Cytology.

DCYT 2500.03: Gynecological Cytopathology Practicum.
This practicum will prepare the student, in a clinical setting, to integrate and apply knowledge and skills introduced during DCYT 2001.03 into clinical practice. This course will offer a simulated environment where diagnosis and reporting of gynecologic specimens will be the focus. This environment provides an opportunity for students to further their abilities, formulate decision and implement diagnostic expertise in relation to gynecological clinical competencies. This provides an opportunity to implement and enhance knowledge with application to diagnostic. Under supervision, students assume responsibility and build their case load to approximately 70% of that of an entry-level diagnostic cytotechnologist.

FORMATT: Full time clinical rotation

PREREQUISITE: DCYT 2000.03, DCYT 3010.03, DCYT 3200.03, 3204.03

RESTRICTION: Reenrolled to Bachelor of Health Science students in the professional stream of Diagnostic Cytology.

DCYT 3200.03: Diagnostic Gynecological Cytology Application I.
This third year course is a 3.0 credit hour gynecological clinical education course. This will provide an opportunity for students to further their abilities, formulate decisions and implement diagnostic expertise in relation to gynecological clinical competencies. This provides an opportunity to implement and enhance knowledge with application to diagnosis. Under supervision, students assume responsibility and build their case load to approximately 80% of that of an entry-level diagnostic cytotechnologist.

FORMATT: Full time clinical rotation

PREREQUISITE: DCYT 2500.03

RESTRICTION: Reenrolled to Bachelor of Health Science students in the professional stream of Diagnostic Cytology.

DCYT 3210.03: Diagnostic Gynecological Cytology Application II.
This third year course is a 3.0 credit hour gynecological clinical education course. This will provide an opportunity for students to further their abilities, formulate decisions and implement diagnostic expertise in relation to gynecological clinical competencies. This provides an opportunity to implement and build upon knowledge and experience with application to diagnostic gynecology. Under supervision, students assume responsibility and build their case load to approximately 80% of that of an entry-level diagnostic cytotechnologist.

FORMATT: Full time clinical rotation

PREREQUISITE: DCYT 3200.03

RESTRICTION: Reenrolled to Bachelor of Health Science students in the professional stream of Diagnostic Cytology.

DCYT 3220.03: Diagnostic Gynecological Cytology Application III.
This third year course is a 3.0 credit hour gynecological clinical education course. This will provide an opportunity for students to further their abilities, formulate decisions and implement diagnostic expertise in relation to gynecological clinical competencies. This provides an opportunity to implement and further build upon...
knowledge and experience with application to diagnostic gained in DCYT 3210.03. Under supervision, students assume responsibility and build their case load to approximately 90% of that of an entry-level diagnostic cytotechnologist.

DMUT 1500.03: Clinical Practicum I in Diagnostic Medical Ultrasound.

This clinical practicum introduces students to Diagnostic Medical Ultrasound. Within the Diagnostic Imaging Department, students will develop a knowledge of departmental procedures, an ability to interpret and utilize requisitions and demonstrate proficiency in equipment selection and instrumentation. Students will develop clinical skills in performing abdominal and pelvic ultrasound examinations. Students will apply health professional practice skills when interacting with patients and healthcare professionals.

RESTRICTION: Restricted to Bachelor of Health Science students in the professional stream of Diagnostic Medical Ultrasound.

DMUT 1010.03: Principles and Instrumentation of Diagnostic Medical Ultrasound I.

This course provides the student with the basic knowledge of the physical principles of ultrasound. It examines how diagnostic ultrasound works (how it is generated and how it interacts with tissues). Also covered in this course is the instrumentation used to transmit, receive and present echo information and the application of these to the practice of Diagnostic Medical Ultrasound.

FORMAT: Lecture 3 hours

Prerequisites: PHYC 1300X/Y 06

RESTRICTION: Restricted to Bachelor of Health Science students in the professional stream of Diagnostic Medical Ultrasound.

DMUT 1020.03: Fundamentals of Sonography II.

This course provides a general overview of the normal sonoanatomic appearance of organs and structures of the abdominopelvic cavity which are fundamental to sonography. Where applicable, the sonoanatomic application and normal variants of specific organs and structures within the abdominopelvic cavity are also discussed. Included are reference charts highlighting other common diagnostic tests, normal measurements, and laboratory values associated with each organ and structure of interest.

FORMAT: Lecture 3 hours, lab 3 hours

Prerequisites: DMUT 1000.03

RESTRICTION: Restricted to Bachelor of Health Science students in the professional stream of Diagnostic Medical Ultrasound.

DMUT 1500.03: Clinical Practicum I in Diagnostic Medical Ultrasound.

This clinical practicum introduces students to Diagnostic Medical Ultrasound. Within the Diagnostic Imaging Department, students will develop a knowledge of departmental procedures, an ability to interpret and utilize requisitions and demonstrate proficiency in equipment selection and instrumentation. Students will develop clinical skills in performing abdominal and pelvic ultrasound examinations. Students will apply health professional practice skills when interacting with patients and healthcare professionals.

FORMAT: Lecture 3 hours, lab 3 hours

RESTRICTION: Restricted to Bachelor of Health Science students in the professional stream of Diagnostic Medical Ultrasound.

DMUT 2000.03: Sonography of the Abdomen/ Superficial Structures I.

This is the first of three courses related to abdominal and superficial structures. This course will focus on the sonoanatomic application and normal variants of organs and structures of the abdominopelvic cavity which are fundamental to sonography. It includes sonoanatomic application and normal variants of organs and structures of the abdominopelvic cavity which are fundamental to sonography.

FORMAT: Lecture 2 hours, lab 3 hours

Prerequisites: DMUT 1000.03

RESTRICTION: Restricted to Bachelor of Health Science students in the professional stream of Diagnostic Medical Ultrasound.

DMUT 1010.03: Principles and Instrumentation of Diagnostic Medical Ultrasound I.

This course provides the student with the basic knowledge of the physical principles of ultrasound. It examines how diagnostic ultrasound works (how it is generated and how it interacts with tissues). Also covered in this course is the instrumentation used to transmit, receive and present echo information and the application of these to the practice of Diagnostic Medical Ultrasound.

FORMAT: Lecture 3 hours

Prerequisites: PHYC 1300X/Y 06

RESTRICTION: Restricted to Bachelor of Health Science students in the professional stream of Diagnostic Medical Ultrasound.
DMUT 2020.03: Principles and Instrumentation of Diagnostic Medical Ultrasound II.
This course builds on knowledge and experience gained in DMUT 1010. It provides the student with principles and instrumentation of continuous-wave pulsed-wave Doppler spectral analysis and color-flow imaging. Imaging artifacts, quality assurance, and biocompatibility are investigated thoroughly. Application of this knowledge and the development of skills and competence needed in the clinical practice of Diagnostic Medical Ultrasound will be included in this course.
FORM: Lecture 3 hours
PREREQUISITE: DMUT 1500.03, HSCE 2010.03
RESTRICTION: Restricted to Bachelor of Health Science students in the professional stream of Diagnostic Medical Ultrasound
DMUT 2030.03: Sonography of the Abdomen and Superficial Structures II.
This is the second of three courses related to Abdomen and Superficial Structures. The course will focus on the pathology of the pancreas, adrenal, retroperitoneum, lymphatic system, urinary tract, thyroid and parathyroid glands. Ectopic pregnancy, laboratory testing, sonoanscriptive presentation, differential diagnosis and treatment modalities related to these body systems will be examined. Students will be challenged to analyze, formulate, sonographic scanning strategies, and diagnose appropriately relevant pathology viewed in a hospital clinical environment. The course will provide students with the opportunity to integrate skills and concepts learned in previous courses and continue development of professional skills in Diagnostic Medical Ultrasound.
FORM: Lecture 3 hours, lab 3 hours
PREREQUISITE: DMUT 2500.03
RESTRICTION: Restricted to Bachelor of Health Science students in the professional stream of Diagnostic Medical Ultrasound
DMUT 2040.03: Sonography in Obstetrics I.
This course provides the learner with a comprehensive study of normal and abnormal first trimester and normal second trimester obstetric ultrasound examinations. Critical evaluation of first trimester pregnancy complications and the sonoanscriptive appearance in second trimester obstetrical patient essential to contemporary study in DMUT 3000. Ultrasound identification, safety and assisted reproductive technologies are also explored in detail. The study of embryology is an important component to focus on sonoanscriptive appearance associated with the growing fetus. Ethical issues related to obstetrical ultrasound will be examined and discussed.
FORM: Lecture 3 hours
RESTRICTION: HOLD Restricted to Bachelor of Health Science students in the professional stream of Diagnostic Medical Ultrasound
DMUT 2500.03: Clinical Practicum II in Diagnostic Medical Ultrasound.
Practicum II provides students with the opportunity to continue skill development in abdominal and pelvic ultrasound examinations including the recognition, identification and documentation of abnormalities. In addition, students will develop clinical skills in performance and second trimester obstetrical ultrasound examinations. This clinical practicum requires the student to travel to clinical sites outside the Halton Regional Municipality. Students will be responsible for travel and accommodation arrangements.
FORM: Full-time rotations in clinical settings
PREREQUISITE: DMUT 2010.03, 2020.03, 2030.03, HSCE 2400.03, DMUT 2400.03
RESTRICTION: Restricted to Bachelor of Health Science students in the professional stream of Diagnostic Medical Ultrasound
DMUT 3000.03: Sonography in Obstetrics II.
This course provides a comprehensive study of the normal and abnormal second and third trimester ultrasound examinations. Critical evaluation of fetal pathology and sonoanscriptive characteristics associated with these pathologies will be fully explored. Maternal complications associated with pregnancy and anesthetic training will also be covered.
FORM: Lecture 3 hours, lab 3 hours
PREREQUISITE: DMUT 2500.03
RESTRICTION: Restricted to Bachelor of Health Science students in the professional stream of Diagnostic Medical Ultrasound
DMUT 3010.03: Sonography of Abdomen and Superficial Structures III.
The third and final course DMUT 3010, Abdominal and Superficial Structures III, focuses on abdominal and pelvic ultrasound examinations including the recognition, identity and sonoanscriptive characteristics of the male reproductive system, nonanatmic adrenal, common bile duct, mesocolic, blood vascular channel and lower extremity common ultrasound. This course will prepare the student for a more advanced level of study and clinical practice in ultrasound interventional biopsy, instrumental techniques and procedures. An integration of previously acquired knowledge and clinical skills will be applied to a more advanced level of theoretical and clinical application using Doppler ultrasound technology.
FORM: Lecture 3 hours, lab 2 hours
PREREQUISITE: DMUT 2500.03
RESTRICTION: Restricted to Bachelor of Health Science students in the professional stream of Diagnostic Medical Ultrasound
DMUT 3200.03: Abdominal Imaging.
This clinical education course allows the student to integrate and consolidate knowledge, concepts and skills developed and maintained from previous courses. The expectation is that the student will be able to recognize, identify and document normal and abnormal sonoanscriptive images of the abdomen under indirect supervision. This experience will enhance the student’s ability to make independent decisions and to critically evaluate images of abdominal organs and related structures. Students are expected to assume responsibility for their actions and decisions. Students are expected to interact effectively with patients and all healthcare team professionals while maintaining acceptable professional practice standards in an ultrasound environment.
FORM: Full-time rotations in clinical settings
PREREQUISITE: DMUT 3000.03
RESTRICTION: Restricted to Bachelor of Health Science students in the professional stream of Diagnostic Medical Ultrasound
DMUT 3210.03: Obstetrical Imaging.
Building on experience developed in Clinical Practicum II and knowledge and concepts learned in Sonography in Obstetrics I and II, this obstetrical ultrasound clinical education course enhances the student’s ability to recognize, identify and document normal and abnormal obstetrical ultrasound examinations. This course provides the opportunity to reflect on their own clinical and professional skills in dealing with the obstetrical patient. Assuming responsibility for their actions and decisions in the clinical setting, the student becomes competent in performing obstetrical sonoanscriptive examinations.
FORM: Full-time rotations in clinical setting
PREREQUISITE: DMUT 3000.03
RESTRICTION: Restricted to Bachelor of Health Science students in the professional stream of Diagnostic Medical Ultrasound
DMUT 3220.03: Gynecological Imaging.
This clinical course allows the student to integrate knowledge, concepts and skills developed and maintained from previous courses. The expectation is for the student to achieve competency in recognizing, identifying, and documenting normal and abnormal sonoanscriptive images of the female pelvis under indirect supervision. The student will be expected to reflect on their own skills and assume responsibility for their actions and decisions in the clinical setting.
FORM: Full-time rotations in clinical setting
PREREQUISITE: DMUT 2500.03
RESTRICTION: Restricted to Bachelor of Health Science students in the professional stream of Diagnostic Medical Ultrasound
DMUT 3230.03: Superficial Structure Imaging.
This clinical education course allows the student to integrate knowledge, concepts and skills developed and maintained from previous courses. The expectation is that the student will be able to recognize, identify and document normal and abnormal sonoanscriptive images of superficial structures under indirect supervision. This clinical experience will enhance the student’s ability to make independent decisions and to critically evaluate images of superficial structures. Students are expected to assume responsibility for their actions and decisions. Students are expected to interact effectively with patients and all healthcare team professionals while maintaining acceptable professional practice standards in an ultrasound environment.
FORM: Full-time rotations in clinical settings
PREREQUISITE: DMUT 3000.03
RESTRICTION: Restricted to Bachelor of Health Science students in the professional stream of Diagnostic Medical Ultrasound
DMUT 3240.03: Application of Ultrasound Instrumentation.
This clinical education course further expands the student's ability to analyze and process data. Integrating knowledge, concepts and skills developed in previous courses, the student will enhance their independent decision making skills. The expectation is for the student to achieve competency in their utilization of ultrasound instrumentation in a variety of ultrasound examinations. The student will be expected to reflect on their own skills in their application to theory.

FORMAT: Full-time rotations in clinical settings
PREREQUISITE: DMUT 2010.03
RESTRICTION: Restricted to Bachelor of Health Science students in the professional stream of Diagnostic Medical Ultrasound.

DMUT 3500.03: Clinical Practicum III in Diagnostic Medical Ultrasound.
Clinical Practicum III provides students with the clinical exposure to various specialties which include: related imaging modalities, vascular technology, echocardiography and total assessment ( Doppler, amniocentesis etc.). This clinical practicum will provide the student with the opportunity to correlate ultrasound imaging with other imaging specialties. This clinical practicum also allows the student to gain clinical exposure to specialty practice areas which may choose to pursue in the fourth year.

FORMAT: Full-time rotations in clinical settings
PREREQUISITE: Completion of all other third year DMUT courses
RESTRICTION: Restricted to Bachelor of Health Science students in the professional stream of Diagnostic Medical Ultrasound

DMUT 4000.12/4100.06: Specialty Practice I/Specialty Practice II.
Specialty practice affords students the opportunity to attain additional competence and knowledge in a specialty practice area. There are three components to specialty practice: clinical, contractual and theoretical. This course can be six or twelve credit hours depending on the nature of the specialty practice. Specialty practice is arranged through consultation with the fourth year/ post diploma advisor.

PREREQUISITE: DMUT 3500.03 for entry level students; Post diploma students must consult with the post diploma advisor to ensure the necessary preparation has been met.
RESTRICTION: Restricted to Bachelor of Health Science students in DMUT.
Enrollment may be limited due to clinical site availability.

DMUT 4010.03: Vascular Ultrasonography.
This course builds on knowledge and experience gained in DMUT 2020 (Principles and Instrumentation of Diagnostic Medical Ultrasound II) and DMUT 3010 (Sonography of the Abdomen/ Superficial Structures III). The student will review hemodynamics, physiology and instrumentation, spectral analysis, color flow imaging and the use of contrast agents in vascular sonography. Applications in vascular sonography and technology to include: examinations of the cerebral vessels, arteries and veins of the extremities and abdominal vessels will be covered.

FORMAT: Online delivery via BLS
PREREQUISITE: DMUT 3500.03
RESTRICTION: Restricted to Bachelor of Health Sciences students in the professional stream of Diagnostic Medical Ultrasound. Post diploma students by permission of instructor.

DMUT 4020.03: Cardiac Ultrasound.
This course builds on knowledge and experience gained in DMUT 2020 (Principles and Instrumentation of Diagnostic Medical Ultrasound II) and HSCE 2040 (Pathophysiology for Health Sciences). This course provides a comprehensive study of the normal and abnormal cardiac ultrasound examinations. The student will review anatomy and physiology and hemodynamics of the heart and relate theory to echocardiography. Normal principles of cardiac ultrasound, normal echocardiography examination techniques and standard views will be covered including: two-dimensional, M-mode and Doppler. Clinical indications for echocardiography examinations will be covered as well as congenital and acquired cardiac disease processes evaluated with echocardiography.

FORMAT: Online delivery via BLS
PREREQUISITE: DMUT 3500.03
RESTRICTION: Restricted to Bachelor of Health Sciences students in the professional stream of Diagnostic Medical Ultrasound. Post diploma students by permission of instructor.

HSCE 1000.03: Foundations of Health Care Practice.
This course introduces students to the basic BHSc professional to the Canadian Health Care System and the role of the health professional within that system. The course compares the Canadian health care systems with other countries and covers diverse healthcare models such as primary care, palliative care, long term care, etc. The role of the health professional is explored through the study of professionalism, scope of practice, and risk management in an interprofessional context. The course will allow students the opportunity to develop/improve essential skills to help them study and work in a multi-disciplinary system including critical thinking, writing skills, communication and teamwork.

FORMAT: Lecture 3 hours
RESTRICTION: Restricted to Bachelor of Health Science students or by permission of instructor

HSCE 1010.03: Clinical Skills for Health Sciences.
This course will further the students' understanding of working within a healthcare environment as they learn the skills required to provide patient-centered care. The course provides academic knowledge and laboratory experiences for students to develop clinical skills essential in all five professional streams of the BHSc program.

FORMAT: Lecture 1 hours, laboratory 1.5 hours
PREREQUISITE: HSCE 1000.03 and one discipline specific course RESTRICTION: Restricted to Bachelor of Health Science students.

HSCE 1020.03: Human Anatomy and Physiology I.
This course, which is along with HSCE 1030 is designed to provide the student with an understanding of the cellular, organ, and system levels of organization of the human body. It includes a comprehensive study of topics pertaining to the covering, support and movement of the human body. Topics covered will include: organization of the body, the integumentary, skeletal and muscular systems.

FORMAT: Lecture 1 hours
PREREQUISITE: HSCE 1010.03
EXCLUSION: ANAT 1000.03, ANAT 1020.03, PHYS 1000.06, PHYS 1010.06
RESTRICTION: None, however priority is given to Health Science students.

HSCE 1030.03: Human Anatomy and Physiology II.
This course studies the systems that serve in maintaining the human body and ensuring its continuity. Topics covered will include: cardiovascular, immune, respiratory, digestive, urinary and reproductive systems. This course will provide students with an appreciation of the complexities of the human function and form, and set the stage for understanding the integration of organ system functions.

FORMAT: Lecture 1 hours
PREREQUISITE: HSCE 1020.03
EXCLUSION: ANAT 1000.03, ANAT 1020.03, PHYS 1000.06, PHYS 1010.06
RESTRICTION: None, however priority is given to Health Science students.

HSCE 2000.03: Health Care Ethics.
This is an introductory course in healthcare ethics. Students will be provided with an overview of moral theory and principles, a chance to reflect upon and discuss contemporary ethical issues in healthcare, and an opportunity to acquire the conceptual and practical tools required to make competent ethical decisions in their own practice. Teaching methods will include lecture, group instruction and case analysis.

FORMAT: Lecture 3 hours
RESTRICTION: None, however priority is given to Health Science students.

HSCE 2010.03: Digital Imaging.
This course provides an overview of computer basics, digital file structure, digital imaging principles and their applications in radiological technology, magnetic resonance imaging, nuclear medicine technology, and diagnostic medical ultrasound. The principles of image distribution by Teleradiology and Picture Archiving Communication Systems are also provided. The course operates as a distance education course using BLS, with materials being distributed via the Internet. Tutorial sessions are scheduled throughout the term.

FORMAT: Online delivery via BLS
PREREQUISITE: RADT 1000.03 or NUMT 1020.03 or DMUT 1010.03
RESTRICTION: Restricted to Bachelor of Health Science students in the professional stream of Diagnostic Medical Ultrasound.

HSCE 2020.03: Radiation Physics.
The purpose of this course is to build on the basic principles of the science of radiations physics with a focus on the concepts that directly apply to the medical radiation fields of nuclear medicine technology and radiological technology. Topics of study include atomic physics, radiometric and cinematographic radiation. The course will explain radiation interaction with matter in relation to the absorption and scatter of x-rays and gamma rays.
HSCE 2040.03: Pathophysiology for Health Sciences.

This course provides a theoretical overview of the biophysical basis of disease. The knowledge is linked to radiation physics principles as applied to the practice of medical radiation. Current regulatory issues that are impacting the safety of facilities and equipment will be examined. Emphasis will be placed on practical means of radiation protection for the technologist, the patient and the general public.

FORMAT: Lecture 3 hours

PREREQUISITE: HSCE 2020.03

RESTRICTION: None, however priority is given to the Health Sciences students

HSCE 3000.03: Culture, Diversity and Health.

Community development, community advocacy, social justice and primary healthcare will be the theoretical frameworks for exploring the Health Sciences practitioners' role and practice in the context of working with populations in high risk environments. The emphasis is on understanding the issues, collaborating with those involved, and building individual and group capacities to enhance and promote the health and well-being of specific populations.

FORMAT: Online delivery via BLS

RESTRICTION: None, however priority is given to the Health Sciences students

HSCE 3010.03: Introduction to Health Research.

HSCE 3010 is designed to help students make sense of the research they can be expected to encounter in their professional practice. By focusing on the role of research in contemporary health professional practice this course will provide the student with a sound basis in the principles and methods of research, data collection, data analysis and communication skills.

FORMAT: Online delivery via BLS

EXCLUSION: HA3P 3000.05

RESTRICTION: None, however priority is given to the Health Sciences students

HSCE 3600.01: Clinical Elective.

This clinical elective is available for visiting students only, in the health professional streams of Diagnostic Medical Ultrasound, diagnostic cytology, nuclear medicine technology, radiological technology, or respiratory therapy. Contact department for details.

HSCE 4030.03: Leadership in Health Care.

This course will consider various elements of leadership in a complex, multi-professional and rapidly changing healthcare system, and will enable students to assess and strengthen their own leadership style. An understanding of current trends and issues in healthcare will provide a basis for the development of leadership skills. Critical thinking, decision-making processes and other leadership behaviours will be examined.

FORMAT: Online delivery via BLS

RESTRICTION: None, however priority is given to the Health Sciences students

HSCE 4040.03: Independent Study.

The student will carry out an independent study or complete a project related to health science. Fulfillment of this requirement is by faculty or course supervisor and is dependent upon the nature of the course of study. Students wishing to pursue HSCE 4040.03 must consult with the fourth year post-diploma advisor for approval a minimum of three months prior to the beginning of the term in which they hope to enrol in the course.

This course may not be offered every year and will be contingent upon the availability of faculty.

HSCE 4041.03: Independent Study.

The student will carry out an independent study or complete a project related to health science. Fulfillment of this requirement is by faculty or course supervisor and is dependent upon the nature of the course of study. Students wishing to pursue HSCE 4041.03 must consult with the fourth year / post diploma advisor for approval a minimum of three months prior to the beginning of the term in which they hope to enrol in the course.

This course may not be offered every year and will be contingent upon the availability of faculty.

HSCE 4200.03: Foundations in Clinical & Professional Education.

Using an adult education theoretical perspective, this course introduces students to elements of program design, objective-setting, selection of instructional methods and assessment strategies for application to their roles as preceptors, student educators, and lifelong learners. This course will discuss a variety of teaching, learning and delivery methods as well as their appropriateness to clinical and professional education.

FORMAT: Online delivery via BLS

RESTRICTION: Restricted to students within the Faculty of Health Professions

HSCE 4220.03: Critical Research Appraisal and Practices.

This course is designed to give students and practicing professionals the opportunity to further develop and practice those skills essential to the competent translation of knowledge into clinical practice. Through evaluation and use of evidence-informed decision making and change management processes students will be prepared to assist their future workplaces in staying at the forefront of clinical practice.

FORMAT: On-line delivery via BLS

PREREQUISITE: HSCE 4210 or equivalent

RESTRICTION: None, however priority is given to the Health Sciences students

MDLT 4000.12: 4100.06: Specialty Practice I.

Specialty practice provides students with learning experiences at a level not previously available and affords the opportunity to attain additional competence and knowledge in a specialty practice area. This course includes leadership, development of clinical competence, and the opportunity to further develop and practice those skills essential to the competent translation of knowledge into clinical practice. Through evaluation and use of evidence-informed decision making and change management processes students will be prepared to assist their future workplaces in staying at the forefront of clinical practice.

FORMAT: Online delivery via BLS

PREREQUISITE: HSCE 4100.03 or equivalent

RESTRICTION: None, however priority is given to the Health Sciences students

MRIT 4100.03: MRI Physics.

The physical principles involved with Magnetic Resonance Imaging (MRI) are introduced. The course covers topics such as basic principles, image sculpting and contrast, image acquisition and reconstruction, data collection and image formation, and a detailed study of MRI pulse sequences.

FORMAT: On-line delivery via BLS

RESTRICTION: Restricted to 3rd and 4th year BScDMUT, NUMT or RADT students

PREREQUISITE: HA3P 3000.05

RESTRICTION: Restricted to BScDMUT students, MDLS; Enrollment may be limited due to clinical site availability.

MRIT 4110.03: Advanced MRI Physics.

Advanced MRI Physics builds on the foundations established in MRIT 4100. This course includes a comprehensive study of the artifacts encountered in magnetic resonance imaging as well as flow phenomena. The physics behind advanced imaging techniques are presented including: vascular, cardiac, functional, diffusion, perfusion, spectroscopy, interventional and breast MRI. Image post processing techniques are also introduced.

FORMAT: On-line delivery via BLS

RESTRICTION: Restricted to 4th year BScDMUT, NUMT or RADT students.
MRIT 4120.3: MRI Instrumentation, Safety and Contrast Media.
MRI Instrumentation, Safety and Contrast Media presents instrumentation and equipment, MRI technology, quality control methods, patient monitoring, site planning for new MRI sites and site developments in MRI technology. This course will focus on the study of MRI safety as well as composition, safety and application of MRI contrast media in current practice.
FORMAT: On-line delivery via BLS
PREREQUISITE: MRIT 4100.03
RESTRICTION: Restricted to 3rd and 4th year BHSC DMUT, NUMT or RADT students.

MRIT 4130.3: MRI Techniques and Applications.
MRI Techniques and Applications expands on the physics and theory of MRI introduced in MRIT 4100.03 and introduces students to the practice of MRI scanning. Positioning techniques, coil selection, pulse sequences, protocol development, anatomy, pathology, and artifacts imaged with MRI will be discussed to prepare students for clinical practice.
FORMAT: On-line delivery via BLS
PREREQUISITE: MRIT 4100.03
RESTRICTION: Restricted to 3rd and 4th year BHSC DMUT, NUMT and RADT students.

NUMT 1000.03: Fundamentals of Nuclear Medicine.
This course is designed to provide the students with an introduction to nuclear medicine technology by exploring how radiation and detection equipment are used to perform clinical procedures. The course is divided into sections with each section containing content which builds on the previous concepts. Concepts covered include: detectors used in measuring radiation, semiconductors and semiconductor detectors with a focus on the gamma camera - components, acquisition techniques, SPECT reconstruction and quality control.
FORMAT: Lecture 3 hours, lab 2 hours
RESTRICTION: Restricted to Bachelor of Health Science students in the professional stream of Nuclear Medicine Technology.

NUMT 1010.03: Nuclear Medicine Instrumentation I.
This course is designed to expand on the learner's knowledge of gamma cameras instrumentation acquired in NUMT 1000.03. Image acquisition, processing and quantitative image analysis will be explored in detail. Special emphasis will be placed on theory, clinical applications, quality control of Single Photon Emission Computed Tomography (SPECT) as it relates to nuclear medicine practice. Opportunity to apply and expand on the theory will be provided through laboratory and self-directed learning sessions. In addition students will cover the concept of quality assurance and gain the ability to design and critique a Nuclear Medicine Quality Assurance program.
FORMAT: Lecture 3 hours, lab 3 hours. Online delivery via BLS (some content and supplemental material)
PREREQUISITE: NUMT 1000.03
RESTRICTION: Restricted to Bachelor of Health Science students in the professional stream of Nuclear Medicine Technology.

NUMT 1020.03: Nuclear Medicine Clinical Procedures I.
In this course the student will learn the Nuclear Medicine procedures that involve the use of radiopharmaceuticals in the investigation of the function of organs in the endocrine and cardiovascular systems. Image interpretation, radiopharmaceutical distribution, computer analysis, related procedures and procedural troubleshooting will be covered. Clinical lab sessions will enable students to observe and practice these skills.
FORMAT: Lecture 3 hours, clinical 6 hours, tutorial 1.5 hours
PREREQUISITE: NUMT 1000.03, NUMT 1010.03, and HSCE 1020.03
RESTRICTION: Restricted to Bachelor of Health Science students in the professional stream of Nuclear Medicine Technology.

NUMT 1030.03: Nuclear Medicine Instrumentation II.
This course is designed to provide the students with an introduction to nuclear medicine technology by exploring how radiation and detection equipment are used to perform clinical procedures. The course is divided into sections with each section containing content which builds on the previous concepts. Concepts covered include: detectors used in measuring radiation, semiconductors and semiconductor detectors with a focus on the gamma camera - components, acquisition techniques, SPECT reconstruction and quality control.
FORMAT: Lecture 3 hours, lab 2 hours
RESTRICTION: Restricted to Bachelor of Health Science students in the professional stream of Nuclear Medicine Technology.

NUMT 1040.03: Nuclear Medicine Clinical Procedures II.
In this course the student will learn the Nuclear Medicine procedures that involve the use of radiopharmaceuticals in the investigation of the function of organs in the endocrine and cardiovascular systems. Image interpretation, radiopharmaceutical distribution, computer analysis, related procedures and procedural troubleshooting will be covered. Clinical lab sessions will enable students to observe and practice these skills.
FORMAT: Lecture 3 hours, clinical 6 hours, tutorial 1.5 hours
PREREQUISITE: NUMT 1000.03, NUMT 1010.03, and HSCE 1020.03
RESTRICTION: Restricted to Bachelor of Health Science students in the professional stream of Nuclear Medicine Technology.

NUMT 2000.03: Radiopharmacy.
This course encompasses all aspects of radiopharmaceutical preparation utilized in a nuclear medicine facility. Classification of radiopharmaceuticals, the production of nuclides, generator construction and elution, labeling methods and pharmacological standards are covered in detail. Emphasis is placed on preparing, assaying, dispensing, calculating, safe handling and storing of radiopharmaceuticals. A comprehensive quality assurance program is presented, as well as licensing and record keeping.
FORMAT: Lecture 3 hours, lab 2 hours
PREREQUISITE: NUMT 1000.03, NUMT 1010.03
RESTRICTION: Restricted to Bachelor of Health Science students in the professional stream of Nuclear Medicine Technology.

NUMT 2010.03: Nuclear Medicine Clinical Procedures III.
This course provides students with the knowledge and skills to perform Nuclear Medicine procedures in the central nervous, respiratory and gastrointestinal systems. Image critique and interpretation, radiopharmaceutical distribution, computer analysis, related procedures and procedural troubleshooting will be covered. Clinical lab sessions will enable students to observe and practice these skills.
FORMAT: Lecture 3 hours, clinical 6 hours, tutorial 1.5 hours
PREREQUISITE: NUMT 1000.03
RESTRICTION: Restricted to Bachelor of Health Science students in the professional stream of Nuclear Medicine Technology.

NUMT 2020.03: Nuclear Medicine Clinical Procedures III.
This course provides students with the knowledge and skills to perform Nuclear Medicine procedures in the central nervous, respiratory and gastrointestinal systems. Image critique and interpretation, radiopharmaceutical distribution, computer analysis, related procedures and procedural troubleshooting will be covered. Clinical lab sessions will enable students to observe and practice these skills.
FORMAT: Lecture 3 hours, clinical 6 hours, tutorial 1.5 hours
PREREQUISITE: NUMT 1000.03
RESTRICTION: Restricted to Bachelor of Health Science students in the professional stream of Nuclear Medicine Technology.

NUMT 2030.03: Positron Emission Tomography.
The course provides students with introduction to Positron Emission Tomography (PET), scanner physics, instrumentation, and quality control. Students will also explore cyclotron physics and radiopharmaceutical synthesis in the clinic. A section of the course content involves the use of various PET radiopharmaceuticals in clinical imaging, presented in the larger context of current PET clinical procedures. Clinical application of fusion imaging with PET/CT will also be covered.
FORMAT: On-line delivery through BLS, in weekly tutorials
PREREQUISITE: NUMT 2000.03, 2020.03
RESTRICTION: REstricted to Bachelor of Health Science students in the professional stream of Nuclear Medicine Technology.

NUMT 3020.03: CT Scan Technologists.
The course provides students with advanced knowledge of Computed Tomography (CT) scanner physics, instrumentation, and quality control. Students will also explore contrast media and CT technology, and the role of CT in hybrid technologies. Opportunity to apply and expand upon the knowledge gained through lectures will be provided through clinical experience and self-directed learning sessions.
PREREQUISITE: NUMT 2500.03
RESTRICTION: Restricted to students enrolled in the Bachelor of Health Science Program in the professional stream of Nuclear Medicine Technology.
NUMT 3200.03: Radiopharmacy.

Students will be exposed to the daily operation of a central radiopharmacy. Generator elution, product preparation and performance of quality control procedures, including solutions, and radiopharmacy research and development. Quality Control procedures, evaluation and trouble-shooting techniques will be utilized to optimize efficiency and validate results.

FORMAT: Clinical Education Course
PREREQUISITE: NUMT 2500

RESTRICTION: Restricted to Bachelor of Health Science students in the professional stream of Nuclear Medicine Technology

NUMT 3210.03: Non-Imaging Procedures.

This clinical course will allow students to apply theory to clinical practice by performing a variety of non-imaging Nuclear Medicine procedures to include: white blood cell labelling; 14C urea breath tests, and radiosynthetic therapeutic procedures, including ablations. Proper lab technique will be emphasized. Students will be able to assess, modify and apply instrumentation applications for each procedure performed. Quality Control procedures, evaluation and trouble-shooting techniques will be utilized to optimize efficiency and validate results.

FORMAT: Clinical Education Course
PREREQUISITE: NUMT 2500

RESTRICTION: Restricted to Bachelor of Health Science students in the professional stream of Nuclear Medicine Technology

NUMT 3220.03: General Imaging I.

Students will apply theory to clinical practice by performing a variety of procedures. Emphasis will be on the application and evaluation of nuclear medicine general imaging procedures as they relate to the diagnosis and management of patients. Students will be assessed and required to obtain a minimum number of general imaging clinical competencies. Students will be able to assess, modify and apply instrumentation applications for each procedure performed. Quality control procedures, evaluation and troubleshooting techniques will be utilized to optimize efficiency and validate results.

FORMAT: Clinical Education Course
PREREQUISITE: NUMT 2500

RESTRICTION: Restricted to Bachelor of Health Science students in the professional stream of Nuclear Medicine Technology

NUMT 3222.03: General Imaging II.

Students will apply theory to clinical practice by performing a variety of procedures. Emphasis will be on the application and evaluation of nuclear medicine general imaging procedures as they relate to the diagnosis and management of patients. Students will be assessed and required to obtain a minimum number of general imaging clinical competencies beyond those obtained in General Imaging I. Students will be able to assess, modify and apply instrumentation applications for each procedure performed. Quality control procedures, evaluation and troubleshooting techniques will be utilized to optimize efficiency and validate results.

FORMAT: Clinical Education Course
PREREQUISITE: NUMT 2500

RESTRICTION: Restricted to Bachelor of Health Science students in the professional stream of Nuclear Medicine Technology

NUMT 3230.03: Cardiac Imaging.

Students will apply theory to clinical practice by performing procedures involving the cardiovascular system. Application and evaluation of acquisition and processing of nuclear cardiac images with a focus on stress imaging (stressful and medication induced) and wall motion imaging will be emphasized. Students will be able to assess, modify and apply instrumentation applications for each procedure performed. Quality Control procedures, evaluation and troubleshooting techniques will be utilized to optimize efficiency and validate results.

FORMAT: Clinical Education Course
PREREQUISITE: NUMT 2500

RESTRICTION: Restricted to Bachelor of Health Science students in the professional stream of Nuclear Medicine Technology

NUMT 3240.03: Pediatric Imaging.

Students will focus on nuclear medicine practice in the care of children and their families. Application and evaluation of nuclear medicine procedures relevant to the diagnosis and management of children will be emphasized. Students will be able to assess, modify and apply instrumentation applications for each procedure performed. Quality Control procedures, evaluation and trouble-shooting techniques will be utilized to optimize efficiency and validate results.

FORMAT: Clinical Education Course
PREREQUISITE: NUMT 3500

RESTRICTION: Restricted to Bachelor of Health Science students in the professional stream of Nuclear Medicine Technology

NUMT 3500.03: Clinical Practicum In Nuclear Medicine Technology III.

Clinical Practicum III is intended to consolidate nuclear medicine theory and practice covered by the end of year three. The students will be provided the opportunity to demonstrate competency in nuclear medicine practice, integrating aspects of all discipline and health science related course theory. This course allows students to expand their knowledge of the healthcare team by providing an opportunity for them to observe and experience healthcare services provided by other professionals.

FORMAT: Full-time rotations in clinical settings
PREQUISITE: NUMT 3200.03, 3222.03 3230.03, 3240.03

RESTRICTION: Restricted to Bachelor of Health Science students in the professional stream of Nuclear Medicine Technology

NUMT 4100.06: Specialty Practice I/Specialty Practice II.

Numerous practice affords students the opportunity to attain additional competence and knowledge in a specialty practice area. There are three components to specialty practice: clinical, contextual and theoretical. Specialty Practice I is arranged through consultation with the fourth year post-diploma advisor. PREREQUISITE: NUMT 3500.03 for entry level students. Post diploma students must consult with the post diploma advisor to ensure the necessary pre-requisites have been met.

RESTRICTION: Restricted to Bachelor of Health Science students in the professional stream of Nuclear Medicine Technology. Enrolment may be limited due to clinical site availability.

NUMT 4210.03: Professional Practice in Nuclear Medicine Technology I.

This clinical education course provides the student with the opportunity to assume clinical responsibility and develop leadership skills through two processes. Students will apply professional skills acquired through previous courses to function as a member of the diagnostic team and perform duties associated with a team leader role. Also, through a mentoring program, students will act as role models and support first year nuclear medicine students in an effort to further develop leadership skills.

NOTE: Students cannot be registered in NUMT 4210.03 and 4220.03 concurrently.

FORMAT: Clinical Education Course
PREREQUISITE: NUMT 4200.03

RESTRICTION: Restricted to Bachelor of Health Science students in the professional stream of Nuclear Medicine Technology

NUMT 4220.03: Professional Practice in Nuclear Medicine Technology II.

This clinical education course provides the student with the opportunity to assume clinical responsibility and to continue development of professional skills in nuclear medicine technology. Students will be scheduled to a variety of imaging areas where they will be responsible, with remote supervision, for functioning as an integral member of the nuclear medicine team. This course also provides the opportunity for students to become actively involved in the education of patients, as well as in the continuing education of both practicing nuclear medicine technologists and affiliated healthcare groups.

NOTE: Students cannot be registered in NUMT 4210.03 and 4220.03 concurrently.

FORMAT: Clinical Education Course
PREREQUISITE: NUMT 3500.03

RESTRICTION: Restricted to Bachelor of Health Science students in the professional stream of Nuclear Medicine Technology

RADT 1000.03: Skeletal Radiography.

This course provides the student with the knowledge required to perform basic skeletal radiography examinations. Aspects studied include: patient positioning, alignment of the radiation field, and radiation exposure factors. Radiographic images are analyzed with a focus on structures demonstrated, evaluation criteria, and modifications required to improve sub-optimal images. Students have the
ability to develop radiographic skills for positioning and image analysis in lab, tutorial sessions.

**RADT 1010.03: Imaging Fundamentals.**

This course offers an introduction to the processes involved in the production of x-ray images and the factors that influence image quality. Students have the opportunity to use imaging equipment during lab sessions.

**RADT 1020.03: Skeletal and Systems Radiography.**

Skeletal and Systems Radiography provides the student with the knowledge required to perform radiological imaging procedures of the vertebral column, craniofacial structures, and the extremities. This knowledge is applied during lab sessions. Students have the opportunity to develop skills in the use of radiological imaging equipment.

**RADT 1500.03: Clinical Practicum I in Radiological Technology.**

This clinical practicum introduces students to the field of radiology and provides them with the opportunity to experience the clinical work environment. The course is offered in the professional stream of Radiological Technology.

**RADT 2000.03: Advanced Skeletal Systems Radiography.**

This course covers the use of advanced skeletal examination methods and provides students with the opportunity to develop their skills in radiographic positioning and the interpretation of radiographic images.

**RADT 2010.03: Imaging Equipment.**

This course covers the structure, operating principles, and quality control of the imaging equipment used in radiology. It includes a comprehensive study of x-ray generation, tubes, fluoroscopy, and processing equipment. The student will develop an understanding of the principles and applications of imaging equipment in radiological technology.

**RADT 2500.03: Clinical Practicum II in Radiological Technology.**

This clinical practicum provides students with the opportunity to develop skills in clinical procedures and patient care. The course is offered in the professional stream of Radiological Technology.

**RADT 3000.03: Applied Pathology in Radiological Technology.**

This course provides students with the knowledge and skills required to interpret radiographic images and to develop an understanding of the diseases that can be diagnosed through radiography. The course is offered in the professional stream of Radiological Technology.

**RADT 3100.03: Speciality Practice Concepts.**

This speciality practice concepts course provides students with the knowledge and skills required to practice in radiology as a radiographer. The course is offered in the professional stream of Radiological Technology.

**RADT 3200.03: Gastrointestinal/Genitourinary/Operating Room Imaging.**

This course provides students with the knowledge and skills required to perform imaging procedures in the gastrointestinal, genitourinary, and operating room environments. The course is offered in the professional stream of Radiological Technology.
acquired knowledge and skills to radiological procedures. The students will develop their skills in performing a high standard of patient care, producing and evaluating images, problem solving and collaboration.

FORMAT: Clinical Education Course
PREREQUISITE: RADT 2500.03, RADT 3000.03
RESTRICTION: Restricted to Bachelor of Health Science students in the professional stream of Radiological Technology

RADT 3240.06: General/Adaptation Radiography.

This course provides students with the opportunity to further develop general radiography skills. Under appropriate direction from a preceptor, students will apply the knowledge and skills acquired in previous courses/practica and adapt routine imaging procedures for challenging clinical situations and patients with special needs. Students will be scheduled to a variety of imaging areas where radiographic adaptions are typically required: emergency, in-patient/in-hospital procedures, on-call experience on evening, night, and weekend shifts is provided in this course.

FORMAT: Clinical education course
PREREQUISITE: RADT 2500.03, RADT 3000.03
RESTRICTION: Restricted to Bachelor of Health Science students in the professional stream of Radiological Technology

RADT 3500.03: Clinical Practicum III.

Clinical Practicum III provides students with the opportunity to integrate skills and concepts from previous courses, clinical practice and the clinical education courses. Under appropriate levels of supervision, the student will assume the responsibilities of a radiological technologist and demonstrate competency in radiography and computed tomography. This practicum takes place at a Diagnostic Imaging Department outside the QEII Health Sciences Centre. This course can be six to twelve credit hours depending on the nature of the specialty practice. Specialty practice is arranged through consultation with the fourth year/post diploma advisor.

PREREQUISITE: RADT 3500.03 for entry level students; Post diploma students may consult with the preceptor.

RESTRICTION: Restricted to Bachelor of Health Science students in the professional stream of Radiological Technology

RADT 4000.12/4100.06: Specialty Practice I/Specialty Practice II.

Specialty practice affords students the opportunity to attain additional competence and knowledge in a specialty practice area. There are three components to specialty practice: clinical, contextual and theoretical. This course can be six to twelve credit hours depending on the nature of the specialty practice. Specialty practice is arranged through consultation with the fourth year/post diploma advisor.

PREREQUISITE: RADT 3500.03 for entry level students; Post diploma students may consult with the preceptor.

RESTRICTION: Restricted to Bachelor of Health Science students in the professional stream of Radiological Technology

RADT 4200.03: Professional Practice in Radiological Technology.

This clinical education course provides the student with the opportunity to strengthen radiological technology skills while increasing confidence and independence in clinical practice. Under appropriate direction from a preceptor, students will apply the knowledge and skills acquired in previous courses/practica to further develop clinical judgement and self-confidence. To demonstrate competence, students must successfully complete a summative clinical assessment and comprehensive competency based written examination. Students will also plan, design, and deliver a professional development session/activity for students of their radiological background.

FORMAT: Clinical Education Course
RESTRICTION: Restricted to Bachelor of Health Science students in the professional stream of Radiological Technology

RSPT 1000.03: Respiratory Therapy Instrumentation and Techniques.

This course provides the student with the fundamental knowledge required to understand the physical principles and concepts necessary for the safe and efficient delivery of physician prescribed therapy. Clinical skills competency through lab simulation is required.

FORMAT: Lecture 3 hours, lab 3 hours
RESTRICTION: Restricted to Bachelor of Health Science students in the professional stream of Respiratory Therapy

RSPT 1020.03: Respiratory Therapy Clinical Assessment and Techniques.

This course prepares students for a career in respiratory therapy by developing a thorough understanding of normal and abnormal cardiopulmonary function in the human body and is considered a foundation course for RSPT specific courses in the program. Lecture 4.5 hours; individual and group work with case studies
PREREQUISITE: RSPT 1000.03, HSCE 1025.03, CHEM 1410.03
CO-REQUISITE: BIOC 1420.03

RSPT 1030.03: Cardiopulmonary Physiology I.

This course presents a modular approach to developing a thorough understanding of normal and abnormal cardiopulmonary function in the human body and is considered a foundation course for RSPT specific courses in the program. Lecture 4.5 hours; individual and group work with case studies
PREREQUISITE: RSPT 1000.03, HSCE 1025.03, CHEM 1410.03
CO-REQUISITE: BIOC 1420.03

RSPT 1500.03: Clinical Practicum I.

Clinical Practicum I introduces students to clinical practice in the patient care (hospital) environment. Students will have the opportunity to apply theory to skills practice at the defined competency level. Note: Full time rotations in clinical settings will be assigned to preceptors. Shift work and weekends may be required. Students will be required to travel to clinical sites outside the Halifax Regional Municipality. Students will be responsible for travel and accommodations.
PREREQUISITE: RSPT 1020.03, RSPT 1000.03, HSCE 1010.03, HSCE 1010.03, BIOC 1420.03
RESTRICTION: Restricted to Bachelor of Health Science students in the professional stream of Respiratory Therapy

RSPT 2000.03: Principles of Mechanical Ventilation.

This course will introduce the student to the delivery of mechanical ventilation by learning the terminology, physical principles and physiologic concepts associated with the application of mechanical ventilation. Equipment operation, function and troubleshooting will be investigated in the lab and clinical setting.

FORMAT: Lecture 3 hours, lab/clinical 3 hours
PREREQUISITE: RSPT 1500.03
CO-REQUISITE: RSPT 2000.03
RESTRICTION: Restricted to Bachelor of Health Science students in the professional stream of Respiratory Therapy
RSPT 2020.03: Application of Mechanical Ventilation. Students will be introduced to the background knowledge necessary for understanding the physical principles and concepts governing the operation of mechanical ventilation, and assist respiratory therapy equipment to ensure the safe and effective delivery of therapy. Clinical skills training is required. FORMA: Lecture 3 hours, lab 3 hours.
PREREQUISITE: RSPT 2000.03, 2010.03, 2020.03, 2070.03
RESTRICTION: Restricted to Bachelor of Health Science students in the professional stream of Respiratory Therapy

RSPT 2030.03: Cardiopulmonary Physiology II. This course is a continuation of the physiological concepts introduced in RSPT 1030 and will examine the intricate chemical and physiological processes of fluid and electrolyte balance, pulmonary function testing, hemodynamics and the cardiopulmonary response to unusual and changing environments. Case study presentations and patient scenarios will complement the learning environment and assist the student in integrating previous knowledge. FORMA: Lecture 4.5 hours, individual and group work, presentations, case study scenarios.
PREREQUISITE: RSPT 1500.03
RESTRICTION: Restricted to Bachelor of Health Science students in the professional stream of Respiratory Therapy

RSPT 2050.03: Health Practice for Respiratory Therapy. This course consists of classroom work, clinical skills testing, guest presentations, community project and an advanced cardiopulmonary support course (ACLS). The learning environment will enhance the understanding of the role of the respiratory therapist in hospitals, healthcare facilities and the community. Basic competency level in the skills required for RSPT 2500 will be achieved through practicing the clinical skills in the lab. Students will be challenged to evaluate and integrate knowledge and skills. FORMA: Lecture 3 hours, lab 3 hours. One required weekend workshop in ACLS.
PREREQUISITE: RSPT 2000.03, 2010.03, 2020.03, 2070.03

RSPT 2063.03: Respiratory Disease & Therapeutics I. The proper assessment, evaluation and treatment of clients with conditions and diseases affecting the cardio-respiratory system are vital to the role of a respiratory therapist. The purpose of this course is for students to gain knowledge and understanding of the incidence, etiology, clinical manifestations, pathophysiology, and differential diagnosis of pathologies treated by respiratory therapists in the acute, chronic and home care environments. While analyzing each individual disease, the evidence-based treatment and prevention strategies, including pharmacology, will be examined.
FORMA: Lecture 4.5 hours.
PREREQUISITE: RSPT 1500.03

RSPT 2065.03: Respiratory Disease & Therapeutics II. The proper assessment, evaluation and treatment of clients with conditions and diseases affecting the cardio-respiratory system are vital to the role of a respiratory therapist. The purpose of this course is for students to gain knowledge and understanding of the incidence, etiology, clinical manifestations, pathophysiology, and differential diagnosis of pathologies treated by respiratory therapists in the acute, chronic and home care environments. While analyzing each individual disease, the evidence-based treatment and prevention strategies, including pharmacology, will be examined.
FORMA: Lecture and PBL 4.5 hours.
PREREQUISITE: RSPT 2063.03

RSPT 2070.03: Human Pregnancy and Fetal/Newborn Development. This course contains background information and assessment skills necessary for the progression to more advanced assessment, skills and competency levels in respiratory care of the normate and child. The integration of this and additional required courses will allow the student to learn and to challenge the competency component of the program as it relates to neonatal/pediatric therapies and instrumentation, pathophysiology, applications of mechanical ventilation, pharmacology, and Neonatal Resuscitation Program (NRP).
FORMA: Lecture 3 hours, and NRP.
PREREQUISITE: RSPT 1500.03

RSPT 2500.03: Clinical Practicum II. This clinical practicum provides students with the opportunity to continue clinical skill competency development and achieve defined skills by performing in a clinical patient environment. Students will have the opportunity to rotate through assigned clinical placements throughout the 12 hour day and eight shifts during weekends, depending upon the placement requirements. FORMA: Full-time rotations on clinical settings with assigned preceptors. Students will be required to travel to clinical sites outside the Halifax Regional Municipality. Students will be responsible for travel and accommodation arrangements.
PREREQUISITE: RSPT 2020.03, 2050.03, 2065.03, 2070.03, HSCE 2000.03
RESTRICTION: Restricted to Bachelor of Health Science students in the professional stream of Respiratory Therapy

RSPT 3000X/Y.06: Anesthesia Instrumentation and Clinical Techniques. This course will consist of two modules, the first being a seminar/lecture series during the first few weeks of the Fall semester and the second being two-weeks of full-time clinical application program in the operating room. Students will be precepted by an anesthetist with focus on surgery management skills and patient monitoring. Students will also attend an intensive 2-day workshop in management of the difficult airway. Depending on availability of clinical sites, students may be expected to travel outside the metro area at their own expense.
NOTE: Students taking this course must register in both X and Y in consecutive terms; credit will be given only if both are completed consecutively.
PREREQUISITE: RSPT 2500.03
RESTRICTION: Restricted to Bachelor of Health Science students enrolled in the professional stream Respiratory Therapy

RSPT 3010X/Y.06: Neonatal and Pediatric Therapeutics. This course will consist of two modules, the first being a seminar/lecture series during the first few weeks of the Fall semester and the second being a five-week full-time clinical application program. Students will integrate and apply theories and skills in the neonatal and pediatric environment and understand the role of the skilled preceptor. Students will be assigned to diverse clinical areas including Neonatal Intensive Care I and II, Paediatric Intensive Care, Birth Unit, and General Ward. Students may be assigned to clinical experiences during twelve hour day or night shifts. Students may be required to travel outside the metro area at their own expense.
NOTE: Students taking this course must register in both X and Y in consecutive terms; credit will be given only if both are completed consecutively.
PREREQUISITE: RSPT 2500.03, STAT 1060.03
NOTE: Students taking this course must register in both X and Y in consecutive terms; credit will be given only if both are completed consecutively.
RESTRICTION: Restricted to Bachelor of Health Science students enrolled in the professional stream Respiratory Therapy

RSPT 3020X/Y.06: Cardiac and Pulmonary Diagnostics. This course will consist of two modules, the first being a seminar/lab series during the first few weeks of the Fall semester and the second being a three-week full-time clinical application program in the adult and pediatric pulmonary function, arterial blood gas analysis, electrocardiography and sleep laboratories. Students will integrate and apply theories and skills in specialized diagnostic environments. Students will be precepted and evaluated by certified technologists. This course will enable students to become proficient in performing cardio-pulmonary diagnostic testing including spirometry. Students will have exposure to bronchospirometry testing and exercise stress testing. Students may be required to travel outside the metro area at their own expense.
NOTE: Students taking this course must register in both X and Y in consecutive terms; credit will be given only if both are completed consecutively.
PREREQUISITE: RSPT 2500.03, STAT 1060.03
RESTRICTION: Restricted to Bachelor of Health Science students enrolled in the professional stream Respiratory Therapy

RSPT 3230X/Y.06: Critical Care Instrumentation and Clinical Techniques. This course will consist of two modules; the first being a seminar/lecture series during the first few weeks of the Fall semester and the second being a five-week full-time clinical application program in diverse critical care areas. Students will be presented with the concepts and theories relevant to the respiratory care of the...
critical patient. Students will recall and apply theories and concepts learned in previous courses in order to integrate this knowledge with new information presented. The clinical application program will provide the students with the opportunity to integrate theories and procedures learned in the seminar/lecture series. Students may be assigned to any of the following critical care areas: medical, surgical, neurosurgical, cardiovascular and coronary care. Depending on availability of clinical sites, students may be expected to travel outside the Metro area at their own expense.

NOTE: Credit can only be given for this class if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.

PREREQUISITE: RSPT 2500.03
CO-REQUISITE: RSPT 3000X/Y.06

RSPT 3250X/Y.06: Health Practice.
This course enables students to apply theories, practice clinical skills and integrate previous learning experiences acquired throughout the three years of the BHSc program. Students will be assigned to a rotating clinical schedule at various clinical sites. Clinical experiences in this course may occur on weekends or night shifts. Students will be evaluated by preceptors at the assigned clinical sites in consultation with faculty. Students may be required to travel outside the metro area at their own expense.

NOTE: Students taking this course must register in both X and Y terms, credit will be given only if both are completed concurrently.

PREREQUISITE: RSPT 2500.03
RESTRICTION: Restricted to Bachelor of Health Science students enrolled in the professional stream Respiratory Therapy

RSPT 3500.03: Clinical Practicum III.
This course enables students to integrate theories and skills acquired throughout the previous three years of the program, including theory, clinical practicum and clinical education courses. Students will be assigned to diverse clinical areas and patient populations. Clinical experiences in this course will occur during twelve hour day and night shifts, including weekends.

FORMAT: May also include one weekend workshop in Pediatric Advanced Life Support.

PREREQUISITE: RSPT 3000.06, 3010.06, 3230.06, 3250.06
RESTRICTION: Restricted to Bachelor of Health Science students enrolled in the professional stream Respiratory Therapy.

RSPT 4000.12/4100.06: Specialty Practice I/Specialty Practice II.
Specialty practice affords students the opportunity to attain additional competence and knowledge in a specialty practice area. There are three components to specialty practice: clinical, contextual and theoretical. This course can be six or twelve credit hours depending on the nature of the specialty practice. Specialty practice is arranged through consultation with the fourth year/post diploma advisor.

PREREQUISITE: RSPT 3500.03 for entry level students; Post diploma students must consult with the post diploma advisor to assure the necessary prerequisites have been met.

RESTRICTION: Restricted to Bachelor of Health Science students in Respiratory Therapy. Enrolment may be limited due to clinical site availability.

RSPT 4010.03: Anaesthesia Technology and Related .
The course will provide advanced knowledge of the function, operation, set-up and quality assurance issues regarding anaesthesia and related equipment. The student will be provided with the knowledge necessary to work with anaesthesia equipment in operating room and related settings.

FORMAT: Online delivery via BLS

PREREQUISITE: RSPT 3500.03
RESTRICTION: Restricted to Bachelor of Health Science students in Respiratory Therapy or by permission of instructor

RSPT 4020.03: Anaesthesia Medication Delivery.
The course will provide in-depth knowledge of the modes of delivery and action and interaction of anaesthesia pharmacology. The student will be provided with knowledge regarding common medications related to the delivery of anaesthesia and monitoring their effect in the operating room and related settings.

FORMAT: Online delivery via BLS

PREREQUISITE: RSPT 3500.03 or equivalent
RESTRICTION: Restricted to Bachelor of Health Science students in Respiratory Therapy or by permission of instructor
Interprofessional Health Education

I. Course Descriptions

IPHE 2201.03: Introduction to Aboriginal Peoples’ Health and Healing.
This course provides students the opportunity to learn about Aboriginal perspectives regarding health, as well as the multiple and complex challenges facing Aboriginal peoples with respect to key health issues, such as health and social inequalities, the epidemiology of disease and culturally appropriate service provision.

RESTRICTION: Faculty of Health Professions students only

IPHE 4900.00: Interprofessional Health Education Portfolio.
This course is intended to prepare students to work in a collaborative and patient/community/family-centered work environment. Students in Health Professions undergraduate programs are required to maintain registration in this course for the duration of their studies. The student will be required to have completed, by the end of their program of study, a total number of different, meaningful and relevant interprofessional collaborative learning experiences (as determined and approved by the School/College) equal to two times the number of years or part of years of study on the program. At least one of these experiences will be in a practice setting (in the event there are no students from other professions in any of the student’s practice settings, credit may be granted for interactions with non-student professionals which follow an approved structured format). The experiences will include interactions with undergraduate and/or graduate students from a total of at least 4 different related professions with which there are natural affinities or linkages in the professional environment, some professions of which are outside the student’s home School/College. In accordance with the guidelines/requirements of the home School/College, students will prepare a portfolio (or comparable document/process) which maps their interprofessional collaborative learning experiences on to the specific requirements of the School/College. The portfolio will be graded by the School/College on a Pass/Fail basis. Successful completion of this course is a requirement for graduation in all programs, and will be recognized further with the awarding of a special Certificate in Interprofessional Collaboration to be presented by the Faculty of Health Professions.

NOTE: Students must ensure they are registered for the correct section that corresponds with their school/college and must check the timetable for the appropriate section for their discipline.

Preceptors

Many nurses and people in other disciplines, and settings, provide valuable assistance in the education of nursing students. Names can be obtained by contacting the School of Nursing.

I. Introduction

The School of Nursing opened in 1949 and became a constituent part of the Faculty of Health Professions in 1961. Currently the School offers an undergraduate program for Basic and Post Diploma students, a Bachelor of Science (Arctic Nursing), a Master of Nursing Program and a PhD (Nursing) Program.

A. School of Nursing Regulations

1. Students are required to observe the University Regulations and Academic Regulations as described in this calendar.

2. Students are assessed on their aptitude and fitness for nursing. Students who, in the judgment of the faculty, fail to attain a satisfactory standard in this assessment, may be required to withdraw from the School.

3. Students are responsible for ensuring that they are registered in appropriate courses throughout the program. Incorrect registration, at any time, could cause conflicts in a student’s year-to-year progression and/or graduation.

4. Students in the Baccalaureate Program are responsible for (a) the purchase of recommended and/or required immunizations and/or testing. Each student must also purchase a name tag from the University.

5. Because of enrolment limits on class size, part-time students who wish to change to full-time status must present this request in writing to the Assistant Committee to help them plan their academic program and to discuss academic progress or difficulties.

6. Students are permitted to repeat a nursing course, exclusive of nursing electives, in the BScN program only once. A second failure will result in dismissal from the program.

7. Students wishing to appeal a decision based on faculty regulations or decisions should follow the School of Nursing Appeal Procedure outlined in the Nursing Student Guide.

8. Supplemental exams will not be available in clinical courses.

9. Because of the nature of the study and practice of Nursing which places Nursing students in a position of special trust, applicants will be asked to complete a screening to determine past criminal convictions which might affect the applicant’s suitability for the practice of Nursing. Students accepted
into the nursing program who provide false information will be disciplined by the university. It is the student’s responsibility to inform the Assistant Director (Undergraduate Studies) of any new criminal conviction which could affect the student’s suitability for practice.

11. Once enrolled in the Nursing Program it is the students’ continuing responsibility to inform the Assistant Director (Undergraduate Studies) of any criminal conviction or any significant personal circumstance which would adversely affect their ability to continue with their studies or which would make them ineligible for registration within CRNNS upon graduation.

B. School of Nursing Appeal Procedure

An appeal is a request for alteration of a decision which is based on School or Faculty regulations (academic matters). Both students and faculty have rights and responsibilities and further, that the University is a complex system, students may experience difficulty in determining how to express dissatisfaction. This document is provided as a guideline for students and faculty in solving dissatisfaction.

The University has established a system which allows students to appeal academic decisions made by faculty. Appeals can be heard at different levels within the University: At the School and at Senate. Appeals are heard in the School by the Student Appeals Committee and at Senate level by the Senate Academic Appeals Committee.

C. Procedure for Undergraduate Appeals

Undergraduate appeals are heard by the Student Appeals Committee of the School of Nursing. Procedures for undergraduate appeal procedures are available from the School.

D. Interprofessional Health Education

Students are required to maintain enrollment in IPHE 4000 (see calendar section on Health Professions, Interprofessional Health Education) for the duration of their studies. Successful completion of this course is a requirement for graduation, and will be recognized further with the awarding of a special Certificate in Interprofessional Collaboration to be presented by the Faculty of Health Professions. Students are asked to consult with their individual school/college to determine the specific guidelines and expectations regarding the required portfolio.

II. Degree Options

A. Bachelor of Science (Nursing) for Basic Students

1. Degree Requirements

Throughout the undergraduate program students must: obtain a minimum cumulative GPA of 2.0; complete a minimum of 129 credit hours; successfully complete all compulsory courses, as well as the necessary number of elective courses. Credit will be given for non-nursing courses that are up to ten years old by the date the degree is completed.

2. Grade Point Average Standards (GPA)

The grade point average system is described in the Academic Regulations.

3. Grades

4. Requirements for Promotion

Besides meeting the GPA requirements students must meet the following for promotion: Year 1 to Year II: A student must pass all 1000-level courses in order to advance to 2000-level nursing courses, including, ANAE 1010.03, PSIY 1010.06, and BIOC 1420.03. Year II to Year III: A student must pass all second-year nursing courses, MICT 1100.03, and STAT 1060.03. Year III to Year IV: A student must pass all 3000-level nursing courses.

5. Normal Workload

The program consists of 129 credit hours (21.5 credits); Students can register for a maximum of 15 credit hours per term.

6. Prerequisite for Course Admissions

There are a number of courses that require prerequisites (see course descriptions). Students must successfully complete the required prerequisites for each course or obtain approval from the Committee on Undergraduate Admission Secretary.

7. Advanced Placement

Incoming students with previous post-secondary work may qualify to complete an accelerated or fast-track BScN stream. Two Calendar Year, Three Academic Year and Three Calendar Year options are available. To qualify, students must have a GPA of at least 3.0 and specific prerequisites. Space is limited. For more information contact the Undergraduate Admission Secretary.

B. Bachelor of Science (Nursing) (Arctic Nursing)

The Arctic Nursing Program, developed collaboratively between Nunavut Arctic College and Dalhousie University, is a four-year program that focuses on nursing in Nunavut. This program is designed for Nunavut residents. The curriculum emphasizes awareness and respect for Inuit culture and will prepare Inuit nurses to be leaders in the health-care system of Nunavut. To apply or learn more about the program contact the School of Nursing.

C. Graduate Programs

For details of the Master of Nursing, the joint Master of Nursing/Master of Health Administration programs and PhD (Nursing) program, please consult the Faculty of Graduate Studies calendar.

III. Bachelor of Science (Nursing) Degree Program

In response to a health care system based on principles of primary health care, the Bachelor of Science (Nursing) Program prepares nurses to work in partnerships with individuals, families, groups and communities to promote, maintain and strengthen health. Graduates are prepared to respond to a range of health and illness needs in a variety of settings and organizational health care infrastructures. The curriculum is designed to enable graduates to meet the standards of nursing practice in Canada and be eligible for registration in Nova Scotia. In addition to the Dalhousie Campus, students may complete a BScN degree on site in Yarmouth. Students interested in this option should contact the School for further information.

Program Objectives

The Bachelor of Science (Nursing) graduate will:

1. Demonstrate application of nursing science through critical inquiry, commitment to life-long learning and evidence-based practice.

2. Practice competently by applying the principles of primary health care with diverse *clients in a variety of health care contexts and by responding to emerging trends, technology and concepts in health.

3. Communicate, collaborate and partner with *clients, and other members of the health care team to increase capacity and enhance health of populations.

4. Demonstrate ethical, legal and professional accountability in the practice of nursing and remain committed to professional competence through life-long learning.

5. Influence nursing and health care through a social and political analysis of current health care issues and application of leadership skills.

* (individuals, family, groups, community and/or populations)

A. Bachelor of Science (Nursing) for Basic Students

The Bachelor of Science in Nursing degree is a 129 credit hour program. Graduates are eligible to write examinations for membership in the College of Registered Nurses of Nova Scotia.

1. Immunization

Before commencing first year studies, students are responsible to have complete and current immunizations against diphtheria, polo, tetanus, pertussis, measles, mumps, rubella, Hepatitis B and 2-step Meninges. Access to clinical agencies will be denied if immunizations are not current and complete.
2. CPR, (BCLS) and Standard First Aid Certification

Before commencing first year studies, students must have CPR (Health Care Provider Level) and Standard First Aid Certification. CPR and Health Care Provider Level must be renewed annually. A cardio-pulmonary resuscitation (CPR) course and standard first-aid course are the student's responsibilities in time and cost. Access to clinical settings will be denied if certification is not current.

3. Course of Study

The program is offered at both the Halifax and Yarmouth sites. The following is an outline of courses that are normally taken each year.

Program requirements may change with ongoing curricular revisions.

First Year
• ANAT 1010.03
• BIOC 1420.03
• PHYS 1010.06
• NURS 1000.03
• NURS 1030.03
• NURS 1220.03
• NURS 1240.03 (a five-week clinical/course starting in late April or early May with annual variations)
• nine credit hours at the 1000 level from Biology, Chemistry, Philosophy, Psychology and/or Sociology.

Second Year
• MICS 1100.05
• NURS 2000.03
• NURS 2035.03
• HSS 2050.03
• NURS 2080.03
• NURS 2090.03
• NURS 2100.03
• NURS 2120.03
• NURS 2220.06 (a six-week clinical nursing internsession taken in May/June or July/August)
• STAT 1040.03

Third Year
• NURS 3080.03
• NURS 3060.03
• NURS 3260.03
• NURS 3270.03
• NURS 3280.03
• NURS 3290.06 (a six-week clinical nursing internsession usually starting in April or early May with annual variations)
• Six credit hours at the 2000 or 3000 level from Biology, Chemistry, Philosophy, Psychology, and/or Sociology.

• Three credit hours of general electives may be taken from any course NOT listed as a nursing elective; however, the course must be at the 2000 level or above except in the case of a language (not English) which can be taken at the 1000 level.
• One Nursing elective (three credit hours)

Fourth Year
• NURS 4260.03
• NURS 4250.03
• NURS 4260.03
• NURS 4250.03
• NURS 4260.03
• NURS 4240.03
• One Nursing elective (three credit hours)
• NURS 4240.06 (minimum 280 hour internship beginning in March)

B. Bachelor of Science (Nursing) for Registered Nurses

The Bachelor of Science (Nursing) for registered nurses consists of 60 credit hours of study. Students may complete the program at either the Halifax or Yarmouth sites through full- or part-time study. The program can be completed in two calendar years of full-time study provided Faculty resources allow required nursing courses to be offered during the summer session. Otherwise, students without transfer credits can complete the program in two full-time and one part-time academic year (September - April). Part-time students who wish to change their status to full-time must write their request to the Associate Director of Undergraduate Student Affairs by March 1.

A clinical major option in oncology nursing may be available as a course component of the BScN (RN) degree program.

The School of Nursing has made a commitment to offer accessible nursing education to registered nurses allowing them to obtain their education in the communities where they live and work.

Check with the Distance Advisor for Post RN students regarding course offerings.

Course of Study

With the help of an academic advisor, an individual course of study is determined. Course of study may be affected by the actual courses offered in an academic year. Certain courses may have prerequisites as noted in the course descriptions. Part-time students are encouraged to complete most of the required non-nursing courses before starting nursing courses. The course of study varies considerably when the student applies transfer credits toward the degree. Transfer credit regulations are outlined under the Academic Regulations section of the University Calendar.

Required Courses
• STAT 1060.03
• NURS 2200.03
• NURS 3080.03
• NURS 3260.03
• NURS 4250.03
• NURS 4260.03

• Nursing Electives (six credit hours)
• The six credit hours of electives may be chosen from Nursing and Interdisciplinary courses. Course selections vary by year. Please consult the current year's timetable for course offerings.

Optional courses (nine credit hours must be selected)
• NURS 2080.03
• NURS 2240.03
• NURS 2270.03
• NURS 4090.03

Eighteen credit hours must be chosen from at least two of the following nursing subject areas: Anatomy, Biochemistry, Biology, Chemistry, Microbiology, Philosophy, Physiology, Psychology and Sociology.

Six credit hours of general electives must be taken from any course NOT listed as a nursing elective; however, the course must be at the 2000 level or above except in the case of a language (not English) which can be taken at the 1000 level. An open elective (either nursing or general) is also required.

C. Nursing Elective Courses

Basic students are required to complete six credit hours of nursing electives. Post RN students must complete six credit hours of nursing electives. NOT ALL NURSING ELECTIVES ARE OFFERED EVERY YEAR. Please consult the School to ascertain the current offerings. When resources allow, the following are offered:
• NURS 2360.03: The Phenomenon of Pain: Assessment and Management.
• NURS 2350.03: Emergency Preparedness: A Nursing Perspective.
• NURS 3380.03: Culture Caring and Health Care.
• NURS 3310.03: Health Informatics.
• NURS 3220.03: Acute Care Specialty Nursing.
• NURS 3330.03: Fundamentals of Oncology Nursing.
• NURS 3340.03: Alternative and Complementary Therapies: Implications for Nursing Practice.
• NURS 4090.03: Nutritional Counseling for Family and Community Health.
• NURS 4350.03: Self-Directed Learning.
• NURS 4351.03: Specialty Practice of Oncology Nursing.
• NURS 4350.03: Management - The Process in Health Care Agencies.
• NURS 4371.03: Addictions Nursing Practice.
• NURS 4380.03: Introduction to Epidemiology Methods in Nursing Practice.
• NURS 4390.03: Intermediate Pathophysiology and Nursing.
D. Interdisciplinary Nursing Elective Courses
   • NURS 4770.03: Women and Aging.
   • NURS 4800.03: Interdisciplinary Course in Human Nutrition.

IV. Course Descriptions
   Section 01 is restricted to students registered in the Allied program. Section 02 is restricted to students registered in the NURS 1000 program. Section 06 is for students choosing the Distance option.
   ANAT 1010.03: Basic Human Anatomy.
   See course description in the Anatomy/Neuroanatomy section of calendar.

BIOC 1420.03: Introductory Biochemistry for Nursing Students.
   See course description in the Biochemistry/Molecular Biology section of calendar.

MICI 1100.03 Health Science Microbiology.
   See course description in the Microbiology and Immunology section of calendar.

NURS 1000.03: Introduction to the Foundations of Nursing.
   Major concepts of health and professional nursing are introduced. Students begin to develop an awareness of the practice of nursing based on the determinants of health, primary healthcare and major nursing concepts. Emphasis is given to the helping role of nursing. A variety of experiences facilitate learning and students are introduced to the practice of nursing in clinical settings.
   FORMAT: Lecture 2 hours, tutorial 1 hour

NURS 1030.03: Human Development and Health I: Adults and Healthy Aging.
   Guided by the principles of Primary Health Care and building on the concepts introduced earlier, students examine the developmental processes experienced by adults. Students focus on the psychosocial, cultural, cognitive, and spiritual health of adults and on nursing practices that promote health in adults. As a basis for these experiences, the concept of a developmental stage is explored. Strategies to foster healthy aging at the individual, family, and community level are explored.
   FORMAT: Lecture 3 hours
   PREREQUISITE: NURS 1000.03

NURS 1220.03: Knowledge and Process in Nursing Practice I.
   Students develop beginning competence in the use of health assessment. Comprehensive health assessments are integrated as a basis for clinical interventions inherent in the caring role. In addition, students are introduced to the organizational and role responsibilities required for clinical practice.
   FORMAT: Lecture 2 hours, clinical/lab 4 hours
   PREREQUISITE: NURS 1000.03

NURS 1240.03: Introduction to Nursing Practice.
   Students are introduced to healthcare settings where they interact with older adults at various levels of health. As a basis for these experiences, the foundations of nursing education in NURS 1000 and NURS 1010 are further developed. Learning experiences are designed to promote beginning knowledge and skills for the practice of nursing with an emphasis on helping relationships.
   FORMAT: Lecture/lab and clinical 40-hour week for 5 weeks
   PREREQUISITE: NURS 1000.03, 1220.03

NURS 2000.03: Teaching and Learning and the Communication Process.
   Teaching and learning interactions among nurses and individuals, families, groups and communities are integral to health and well-being. The process of communication is central to the teaching-learning process and occurs within the nurse-patient relationship (a collaborative partnership). The course is designed to provide students with opportunities to critically analyze and integrate the teaching-learning dynamics of nursing practice within the helping role of the nurse. Principles and theories of learning are used to identify strategies to help clients acquire knowledge, skills and attitudes that enable them to maintain optimal levels of health. The course includes an introduction to the counseling role of the nurse with a focus on diaphoretic communication strategies necessary to establish partnerships with clients. Students are given opportunities to expand their existing interviewing and communication skills and teaching abilities.
   FORMAT: Lecture 3 hours
   PREREQUISITE: NURS 1240.03, BIOC 1420.03, PHYLL 1010/06, ANAT 1010/03

NURS 2035.03: Nursing Research.
   This course requires students to engage in a critical inquiry about how research processes influence the way knowledge is constructed. Students explore dimensions of knowing from multiple perspectives of acquired knowledge, experiential knowledge of nursing practice, conceptual meanings, collaborative practice partnerships and values and beliefs about the contributions of nursing knowledge as transformative in the healthcare system. Sharing new knowledge resulting from the synthesis and transfer of evidence across disciplines and healthcare sectors will be examined. The use of innovative and creative thinking supports students to design ways of communicating and translating research findings for application to practice.
   FORMAT: May be offered in class (3 hour lecture) and/or on-line
   PREREQUISITE: NURS 1240.03, ANAT 1010/03, PHYLL 1010/06, BIOC 1420.03
   CO-REQUISITE: STAT 1060.03, MATH 1060.03

NURS 2050.03: Pharmacology and Nursing.
   Students are introduced to the pharmacokinetics and pharmacodynamics of the major drug categories with an emphasis on application to the clinical setting. Interdisciplinary and collaborative aspects of the nurse’s role in administering and monitoring medications and the effects of drugs are explored. Students demonstrate knowledge of dosage calculation, preparation and administration of medications.
   FORMAT: Lecture 3 hours
   PREREQUISITE: NURS 1240.03, BIOC 1420.03, PHYLL 1010/06, ANAT 1010/03
   CO-REQUISITE: NURS 2090.03, NURS 2200.03

NURS 2080.03: Social and Cultural Determinants of Health.
   Social inequities often make it difficult for individuals, families, groups and communities to attain or maintain health. This course is designed to critically analyze the social and cultural determinants of health. Students explore their own attitudes and beliefs related to topics including racism, poverty, ageism, sexism and classism. Critical social theory, cross-cultural nursing, communication, health promotion, health education and social action are included in the course to provide students with the knowledge and skills to influence the social determinants of health in the healthcare system.
   FORMAT: Lecture 3 hours
   PREREQUISITE: NURS 1240.03, BIOC 1420.03, PHYLL 1010/06, ANAT 1010/03

NURS 2090.03: Pathophysiology and Nursing.
   This course provides a foundation for understanding human physiological responses to health alterations. An in-depth understanding of structural and functional changes from normal serves as the basis for nursing assessment, intervention, and care.
   FORMAT: Lecture 3 hours
   PREREQUISITE: BIOC 1420.03, ANAT 1010/03, PHYLL 1010/06, NURS 1240.03
   CO-REQUISITE: MICI 1100.03, NURS 2050.03, NURS 2200.03

NURS 2200.03: Knowledge and Process in Nursing Practice II.
   Students are introduced to theoretical bases of nursing to guide critical thinking behaviors and outcomes. Students build on health assessment skills, monitor, implement and evaluate nursing interventions. Students are introduced to research to guide reflective nursing practice and the safe use of technology and caring approaches in laboratory settings.
   FORMAT: Lecture 2 hours, lab 2 hours
   PREREQUISITE: NURS 1240.03, ANAT 1010/03, PHYLL 1010/06, BIOC 1420.03
   CO-REQUISITE: NURS 2500.03, NURS 2200.03

NURS 2220.06: Nursing Practice II.
   (practicum) This clinical practicum enables students to continue to integrate primary healthcare principles, nursing knowledge and theory, and nursing processes within nursing practice. Students consolidate concepts, theories and skills in caring for individuals in acute and chronic care settings. Emphasis is...
NURS 2250.03: Theoretical Perspectives for Contemporary Nursing Practice.

The purpose of this course is to provide students the opportunity to use theoretical perspectives in nursing to discover knowledge related to the process of nurse-client interaction. Students will examine the development and progress of relevant nursing theories and explore the relationships between nursing theory, nursing science, and nursing knowledge. Students will be introduced to selected methods of theory analysis. The concepts and assumptions of selected nursing theories will be used to describe and explain phenomena relevant to nurse-client interaction.

FORM: Lecture 2 hours, clinical 4 hours

RESTRICTION: For POST-RN students only

NURS 2260.03: PREREQUISITES: NURS 2220.03, STA T 1060.03, MICI 1100.03

FORM: Lecture 4 hours, 78 clinical hours total

NURS 2360.03: The Phenomenon of Pain: Assessment and Management.

This course challenges students to critically examine their current knowledge and skill in the nursing responsibilities associated with care of clients experiencing pain and to further develop students' knowledge, attitudes, skills, and competencies in providing effective pain management. Students will improve their ability to identify the client who has pain, perform comprehensive assessments of pain and its impact, initiate nursing interventions to alleviate the pain and evaluate the effectiveness of those interventions. Emphasis is placed on advancing the students' ability to assess, analyze, and manage this complex phenomenon in order to successfully provide effective pain relief. Critical thinking, interpersonal communication, and documentation skills will be enhanced through a variety of learning activities including case studies and weekly online, asynchronous discussions.

FORM: Distance

NURS 2380.03: PREREQUISITES: NURS 2260.03, 2280.03, 2250.03

FORM: Lecture 2 hours, 78 clinical hours total

NURS 2390.03: Emergency Preparedness: A Nursing Perspective.

This course focuses on preparation of future nurses for various hazards using an "all hazards" approach. Local, provincial, and national disaster response systems, in the event of a mass casualty, are explored, and the ability to care for victims and responders of all types of hazards is emphasized.

FORM: Distance

NURS 3040.03: Human Development and Health II: Children and Youth.

This course examines concepts and theories of healthy growth and development across the life-span from conception to adolescence. Content is organized around health, nutrition, and the safety of individuals at specific stages in their physical, cognitive, and psychosocial development. Concepts of culture/ethnicity, environment, economic status and other life situations are introduced in terms of their relationship to optimal health.

FORM: May be offered in class (3 hour lecture) and/or online.

NURS 3060.03: Legal and Ethical Issues in Nursing Practice.

Note: This course available starting 2014-2015. This course is designed to provide background understanding and application of ethical and legal concepts and theory within the dimensions of nursing practice. Students focus on decision-making processes and the impact of technology on nursing practice.

FORM: Lecture 3 hours

NURS 3080.03: Culture Caring and Health.

This nursing elective promotes student awareness of the international/global impact of culture on health beliefs and client access to healthcare systems. Students explore their own attitudes and approaches to international/global cultures. Through this exploration, students identify strategies for international/global healthcare practices.

PREREQUISITE: NURS 1240 or with instructor’s permission.

NURS 3260.03: Nursing Practice: Mothers, Infants and Childbearing Families.

Students focus on the integration of the domains of nursing practice in caring for mothers and newborn infants within the context of the childbearing family. The nature of the childbirth experience is critically analyzed from the perspectives of the determinants of health as well as the theoretical bases of maternal-infant attachment and nurse caring. Clinical experiences with clients during pregnancy, birthing and post birth in hospital and home settings enable students to focus on health promotion within the context of family-centered care.

FORM: Lecture 2 hours, 78 clinical hours total

NURS 3270.03: Nursing Practice: Caring for Families.

Guided by the principles of primary healthcare, students focus on families and family health with an emphasis on a thorough understanding of family assessment and developing family therapeutic relationship skills. Students examine family health and health issues from a nursing, cultural, sociological, psychological and other theoretical perspectives as they relate to nursing practice that focuses on working with families in all settings. Upon completion of the course, students will have developed competencies required to use a systems approach when working with families. Laboratory and clinical experiences that include visiting families in their homes provide the students with opportunities to integrate, discuss and practice family nursing.

FORM: Lecture 2 hours, 78 clinical hours total

NURS 3280.03: Care of Adults II.

This course focuses on family-centered nursing practice with adults who are managing complex health problems. Emphasis is placed on theoretically based nursing strategies incorporating principles of primary healthcare. Students are guided in developing theoretical and research-based critical practice.

FORM: Lecture 2 hours, 78 clinical hours total

NURS 3290.06: Nursing Practice III. (Intersession) This is an opportunity to apply the principles of primary healthcare through reflective practice, the integration and application of theories and family nursing. Students enhance their ability to work with clients through a continuum of care approach. Students must be prepared to travel beyond the Halifax metropolitan area for part or all of this experience.

FORM: Clinical practicum 40 hours/week for 6 weeks

NURS 3310.03: Health Informatics.

This nursing elective provides an overview of information technology and systems as they relate to practice, research, and education. Students are introduced to information technology and provided with opportunities to use critical thinking in applying the implications of information systems.

FORM: Distance

NURS 3320.03: Acute Care Specialty Nursing.

This course introduces students to acute care specialty nursing. Students will further develop, critically analyze, and apply knowledge gained in previous courses with a focus on the management of critically ill adult clients in specialized settings. Emphasis will also be placed on interpersonal and interprofessional relationships within specialty practice.

FORM: Distance

NURS 3330.03: Fundamentals of Oncology Nursing.

This nursing elective provides an oncology nursing elective with a review of the physiology of the cancer cycle, the course considers cancer control related to: prevention, screening, early detection, diagnosis, treatment, supportive care/haematology, palliative care. The focus of the course is to provide
an opportunity for students to understand the cancer experience from the perspective of the patient and their families.

**FORMAT:** Lecture 3 hours
**PREREQUISITE:** NURS 2220.06
**EXCLUSION:** NURS 2350.03

**NURS 3350.03: Family Centered Supportive Care for Those Who Are Living with Cancer.**

This course focuses on families connected to an oncology experience. A family assessment model forms the role of the nurse in family-centered supportive care. Supportive care is the provision of the necessary services as defined by those living with or affected by cancer to meet their physical, social, emotional, nutritional, informational, psychological, spiritual, and practical needs throughout the spectrum of the cancer experience. These needs may occur during the diagnostic, treatment, or follow-up phases and encompass issues of survivorship, recurrence, palliative care and bereavement.

**NOTE:** This course fulfills the requirement for NURS 3270.

**FORMAT:** Lecture 3 hours
**PREREQUISITE:** NURS 2220.06
**CO-REQUISITE:** NURS 3330.03

**NURS 3360.03: Alternative and Complementary Therapies: Implications for Nursing Practice.**

This elective course is designed to advance student knowledge and competencies in caring for clients and families who choose to use complementary and alternative therapies. The use of alternative and complementary therapies is prevalent and popular. Issues such as patient autonomy, freedom of choice, and the principle of non-maleficence are a few of the ethical challenges faced by nurses and other healthcare practitioners. This course introduces students to alternative/complementary therapies and their associated nursing implications. The primary therapies to be examined include mind-body interventions, manual healing therapies, biological healing therapies, diet therapy, native healing and spiritual therapies. Students will also have the opportunity to research non-conventional therapies in relation to cancer treatment and health promotion. This course fills a pressing need for graduating nurses to have a full understanding of these therapies so that they will be prepared to work with clients and families who have chosen to use complementary health practices.

**FORMAT:** Distance
**PREREQUISITE:** NURS 2260.03; or completion of second-year of study in any Health Professions program

**NURS 4030.03: Collaborative Leadership for Nursing Practice.**

Based on the view that leadership is integral to the practice of every nurse, the focus of this course is on the development of leadership theories and behaviors essential to nursing practice. Critical thinking, decision-making processes and other leadership behaviors are fostered through experiential and simulated learning methods.

**FORMAT:** Lecture 2 hours
**PREREQUISITE:** NURS 3290.06; Second and third year Nursing courses are strongly recommended for Post-Diploma; Post-BSN NURS 2250.01

**NURS 4050.03: Advanced Communication and Counselling.**

This course explores theory related to the counselling role of the nurse and addresses the dynamics of therapeutic communication in complex collaborative situations. Counselling occurs within the nurse-patient relationship viewed as a collaborative partnership which requires the active participation, involvement, and agreement of all partners.

The course is designed to assist students to facilitate and encourage individuals, families or client groups to effectively deal with change related to complex health situations. Application of course content in simulated nurse-client interventions in home, clinic or institutional settings enables the student to develop interactive skills in dealing with complex, collaborative health situations such as those requiringsympathy, confirmation, advocacy, conflict resolution and crisis intervention.

**FORMAT:** Lecture 2 hours, lab 2 hrs
**PREREQUISITE:** NURS 2220.06

**NURS 4060.03: Palliative Care Nursing.**

This course provides an overview of the significant issues facing individuals and their families related to life threatening illness, dying, and the promotion of quality of life. An exploration of one's own attitudes, beliefs, and values regarding death and dying provide a foundation for examination and discussion of course content. An analysis of the principles and standards of palliative care, principles of primary healthcare, methods of assessment, and means of pain and symptom management and delivery of care. Emphasis on communication, collaboration within teams, ethical issues, spiritual and cultural influences, and grief and coping provide opportunities for reflection and discussion. Online resources offer opportunities for students to enhance their knowledge and understanding of course content.

**FORMAT:** May be offered in class (2 hour lecture) and/or on-line
**PREREQUISITE:** NURS 2220.06 or permission of course instructor for non-nursing student

**NURS 4210.03: Nursing Practice: Children and Families.**

Students focus on nursing practice in the care of children and families. The determinants of children and family healthcare are examined, as well as the role of nursing practice in health promotion and illness prevention for children. Clinical and family issues associated with childhood illness and hospitalization draw on knowledge of child and family development as well as the art and science of nursing knowledge. Students work in clinical settings where care is provided to children and families experiencing illness.

**FORMAT:** Lecture 2 hours, 78 clinical hours total
**PREREQUISITE:** NURS 3290.06

**NURS 4220.03: Mental Health Nursing Practice.**

Integrating a holistic perspective within a primary healthcare philosophy, this course focuses on the promotion of the individual and community well-being. Through selective practice the use of nursing theories and effective communication, students assist clients through the challenges of mental health problems, crisis, and mental disorders. Students critique the social responsibility of the nursing profession through not only direct care, but also client advocacy.

**FORMAT:** Lecture 2 hours, 78 clinical hours total
**PREREQUISITE:** NURS 3290.06

**NURS 4240.06: Nursing Practice IV Internship.**

Nursing 4240, a clinical internship prior to graduation, provides students with the opportunity to consolidate and apply knowledge and processes within the domains of nursing practice. Students integrate leadership knowledge and behaviours within social healthcare systems. Collaboration and advocacy with clients, other healthcare professionals and others are emphasized. Students are preceptored with a staff nurse and work the full-time hours of the preceptor. Students have input into their clinical placements, based on their learning needs and interests. Students must be prepared to travel beyond the Halifax metropolitan area for part or all of this experience.

**FORMAT:** Clinical internship consists of a minimum of 260 hours
**PREREQUISITE:** All other nursing and non-nursing requirements for the BScN Program must be completed.

**NURS 4250.03: Community Health Assessment.**

Community health is a vital component of primary healthcare. The focus of this course is on the integration of community assessment theory and nursing practice in health promotion and illness prevention. Primary healthcare and population-focused health strategies are used as students collaborate with individuals, families, groups, communities and other healthcare professionals in working towards community health goals. Students apply critical thinking in assessing needs and strengths for community development in a variety of community settings.

**FORMAT:** Lecture 2 hours, clinical 6 hours, tutorial 1 hour
**PREREQUISITE:** NURS 3290.06; Post-Diploma students NURS 2250.01
NURS 4260.03: Community Development and Advocacy.
This course builds on the content of NURS 4250.03. The focus is on critical thinking, intervention, and the evaluation of community health nursing strategies with client groups and communities. Community development is used as a strategy to put primary healthcare principles into nursing practice. Students are encouraged to work with communities using an empowerment and advocacy approach. Current local, national and international health issues are explored. Clinical experience in a variety of community settings allows students to practice nursing in a reflective manner to improve the health of the community as a whole.
FORMAT: Lecture 2 hours, clinical 6 hours, tutorial 1 hour
PREREQUISITE: NURS 4250.03

NURS 4350.03: Self-Directed Learning.
Students may carry out independent studies or projects related to the theory or practice of nursing, under the direction of a faculty facilitator. Students are encouraged to systematically identify, plan, execute and evaluate a learning project that is relevant to nursing practice.
FORMAT: Flexible according to study/project
PREREQUISITE: NURS 2220.06
CROSS-LISTING: NURS 5950.03

NURS 4551.03: Specialty Practice of Oncology Nursing.
This nursing elective challenges learners to consider the comprehensive care of a range of health and illness needs of individuals at risk or living with cancer within the existing infrastructure for cancer care. While the focus of this course is on the context of adults with cancer, the course reflects a critical analysis of the existing theoretical and evidence-based perspectives influencing health-related behaviours of health promotion, illness prevention and decision-making that span from individual to organizational levels.
FORMAT: Lecture 2 hours
PREREQUISITE: NURS 3330.03 (or NURS 2150.03) and NURS 3350.03

NURS 4360.03: Management - The Process in Health Care Agencies.
This nursing elective focuses on management of resources to achieve goals within healthcare agencies and institutions. The agency/institution is viewed as a system with managers, employees and managers exchange services in a system of theory and practice-based techniques to establish goals, plan and utilize resources and evaluate outcomes. Emphasis is placed on the day-to-day use of management strategies, techniques and skills. Relevant theoretical constructs and research are explained and discussed while examining their implications for practice. Current management problems in nursing are explored through this introductory course in management.
FORMAT: Lecture/seminar
PREREQUISITE: NURS 4010.03, or instructor's permission
NURS 4370.03: Women and Aging.
This interdisciplinary nursing elective explores the issues related to socio-economic factors that are major determinants of the well-being of aging women. Topics include: aging as a process, menopause, violence against older women, elder women and housing, self-image and sexuality, health and the aging woman; and older women and poverty.
FORMAT: Lecture/discussion/seminar 2 hours
PREREQUISITE: NURS 2220.03. Non-nursing students should have completed 2 years of university study
CROSS-LISTING: SORA 3248.03/3249.03, GWST 3810.03, NURS 5810.03

NURS 4371.03: Addictions Nursing Practice.
This nursing elective introduces major concepts associated with addiction nursing practice. It provides a foundation for students pursuing careers in addictions-related care. Within a primary healthcare perspective, students critique models and theories of addiction, consider the interplay between social, gender, cultural environments and addictions and become knowledgeable of a variety of treatment approaches. Universal, selective, and prevention activities at an individual, family and community level are explored.
FORMAT: Distance
PREREQUISITE: NURS 2090.03, NURS 2290.03 strongly recommended for Post RNs
CROSS-LISTING: NURS 5871.05

NURS 4380.03: Introduction to Epidemiology Methods in Nursing Practice.
This introductory course intended to provide students with a working knowledge and understanding of the basic concepts and methods of epidemiology. The focus of this course will be the acquisition and application of information about disease and other health-related occurrences at a population level within a public health nursing context. This course will also introduce students to concepts for planning, evaluating, and controlling health programs.
FORMAT: Lecture 3 hours
PREREQUISITE: NURS 2220.03
CROSS-LISTING: NURS 5950.03

NURS 4390.03: Intermediate Pathophysiology and Nursing.
This nursing elective is intended to provide a more indepth examination of selected human physiological function in disease than the Introductory Pathophysiology and Nursing (N2090.03). Emphasis is placed on the study of pathological physiology of the diseases prevalent in Canada. This course introduces students to up-to-date concepts involved in research on these diseases. In addition, it examines various therapeutic strategies used in treating these diseases and their implications for nursing care.
FORMAT: Lecture/discussion 3 hours per week
PREREQUISITE: Basic - PHYL 1010.06, ANAT 1010.05, MICI 1000.03, NURS 2090.03, and NURS 2960.03

NURS 4800.03: Interdisciplinary Class in Human Nutrition.
This interdisciplinary nursing elective is an interdisciplinary study of the basic principles of nutrition needs throughout the life cycle. Physiological, psychological, socio-economic, physical, educational and cultural determinants are explored to explain why the nutritional status of Canadians vary and how this variation affects the development of chronic disease. Special emphasis is given to community nutrition in the Atlantic Region.
FORMAT: Lecture 3 hours, week
PREREQUISITE: BIOX 1000.06 or by faculty permission
CROSS-LISTING: PHAR 4950.03, PHYT 3930.03, HPRO 2250.03, NURS 5990.03

PHYL 1010X/1016: Human Physiology.
See course description in the Physiology section of calendar.

STAT 1000.03: Introductory Statistics for Science and Health Sciences.
See course description in the Statistics section of calendar.

NOTE: A “strong recommendation” to complete one course before another means that some of the content of the new course draws directly on knowledge, skills and experience gained in a previous course. Students should realize that they may have to work some supplementary work in order to meet the expectations of the new course.

I. Introduction

The Atlantic School of Occupational Therapy was established in 1982 as the only occupational therapy education program in Atlantic Canada. The School exists in response to strong regional advocacy, particularly since 1958 when a School was approved in principle by the University Senate. The regional orientation of the School fosters collaborative teaching, research and professional activities linking those at the university with occupational therapy and other service providers, government workers, and citizens in the four Atlantic Provinces. This regional mandate is combined with an international perspective linking Dalhousie with universities and communities for fieldwork and research.

Occupational Therapy is a health profession concerned with social inclusion. Practitioners enhance the occupational performance engagement, health and well-being of individuals, groups, and organizations, particularly where inequities or injustice limit opportunities for meaningful participation in daily life occupations. Occupational Therapy is an occupation-focused profession concerned with social inclusion. Practitioners enhance the occupational performance engagement, health and well-being of individuals, groups, and organizations, particularly where inequities or injustice limit opportunities for meaningful participation in daily life occupations. Occupational Therapy is an occupation-focused profession concerned with social inclusion. Practitioners enhance the occupational performance engagement, health and well-being of individuals, groups, and organizations, particularly where inequities or injustice limit opportunities for meaningful participation in daily life occupations.
The role of the occupational therapist is varied and challenging. Occupational issues are never the same because no two people or environments are ever exactly the same. The challenge for occupational therapists is to plan and implement the “just right” program or strategy for each and every client so that everyone can achieve just opportunities to participate in society.

II. Degrees Offered

In concert with national standards and requirements for occupational therapy education, the School of Occupational Therapy at Dalhousie University only offers graduate level degree programs. For further information on our occupational therapy degree programs, please refer to the Graduate Calendar.

1. Certificate in Disability Management

The School of Occupational Therapy offers a Certificate Program in Disability Management to students currently enrolled in an academic program at Dalhousie or another Canadian university. The Certificate Program is built around the philosophy of disability management and early assistance as the most effective means by which to assist injured and ill workers to attain their maximum level of functioning and ability to return to work. Disability Management is designed to benefit injured workers through its participatory and proactive problem-solving process incorporating strategies that ensure workers timely and safe return to work. All courses in the Certificate Program are offered completely on-line.

Please refer to the Disability Management section in this calendar for additional information.

2. Post Professional Certificates

These certificates are for people who are working in health, social, or community services whose professional preparation has normally included a bachelor’s degree or higher in a relevant field. The following certificates are being offered in the School:
- Chronic Condition Self-Management
- Aging and Continuing Care
- Diversity and Inclusion

Please refer to the Occupational Therapy section in the Graduate Calendar for additional information.

3. Master of Science (Occupational Therapy) - MSc (OT):

Master’s Program to Enter the Profession

a. MSc (OT) First course accepted into the program in September 2006.

4. Master of Science (Occupational Therapy—Post-Professional): Post Professional Master’s program for qualified occupational therapists.

a. Research Thesis Stream
b. Practice Leaders Stream
c. Single graduate courses (with instructor’s permission)

5. PhD

Faculty in the School of Occupational Therapy welcome applications for PhD studies focused on occupational therapy or occupational science. Interested persons should contact individual faculty at the School. Applications will be submitted either to the Faculty of Graduate Studies Interdisciplinary PhD program or the Faculty of Engineering Biomedical Engineering PhD program. Prospective students may be eligible for funding through scholarship programs at NSERC, SSHRC, CIHR, or from the Nova Scotia Health Research Foundation (NSHRF). Dalhousie University does not currently offer a PhD program in occupational therapy. For further information, please contact the Graduate Coordinator.

III. Course Descriptions

The School does not currently offer an undergraduate degree.

We offer undergraduate courses for continuing professional development, refresher education and to advance one’s knowledge of occupational science. Not all courses are offered each year. Please contact the School for the current course offerings and enrollment in single course.

OCCU 2000.03: Occupation and Daily Life.

This introductory course for students in arts, social sciences, science and other fields is designed to explore the meaning of occupation in everyday life. Typically, the term “occupation” refers to categories of paid work. This course will explore a broader meaning of occupation: namely, purposeful activity. This concept of occupation will include everything we do to look after and develop ourselves, be involved in meaningful endeavours, contribute to our communities, promote health, advocate for opportunities, generate income and more. Students will be exposed to a broad range of literature on occupation; the motivation, organization and performance of occupation; the environment as a context for occupational performance; and the promotion of health through occupation. Students will gain an appreciation of occupation as the foundation of everyday life through sociological, anthropological and narrative analysis, and experiential activities.

PREREQUISITE: None. This course is OPEN to non-Occupational Therapy students

OCCU 2207.03: Occupational Development Across the Life Span.

Theories and processes that explain the complexity and dynamics of occupational development across the lifespan are introduced. The course explores typical patterns of physical, cognitive, and psychosocial development and their occupational implications, as well as contexts for occupational development including roles and environments.

PREREQUISITE: Instruc. permission

OCCU 4402.03: Program Design and Evaluation for Enabling Occupation.

This course enables students to critically assess, plan and design an evaluation for occupational therapy programs in a variety of settings. Students will be provided with the basic knowledge and skills of: strategic planning; program development; resource management; and program evaluation. As part of this course, students will complete a novice consulting project. This project will provide students with the opportunity to explore the provision of occupational therapy in a non-traditional setting.

PREREQUISITE: Instruc. permission

OCCU 4420.00: Fieldwork III.

This eight week fieldwork placement introduces students to occupational therapy practice outside the Atlantic region. There are a limited number of opportunities for International options outside Canada and expanded fieldwork with an off-site occupational therapist preceptor within Atlantic Canada. Students develop competence and increased independence in integrating theoretical knowledge and skills through the full process of Occupational Therapy practice. Under supervision, students assume responsibility for a case load of approximately 40-60% of that of an entry level therapist. All expenses are the responsibility of the student including a placement fee, travel, accommodations, etc.

PREREQUISITE: Instruc. permission

OCCU 4422.00: Fieldwork Level III (Continued).

During this six week fieldwork experience students focus on refining professional competencies and seeking new challenges with minimum guidance from a preceptor. Students are expected to develop the capacity to carry 75% or more of the responsibilities of an entry level occupational therapist by the completion of this fieldwork education placement.

PREREQUISITE: Instruc. permission

OCCU 4423.00: Fieldwork Level IV.

This six week fieldwork placement provides experience in setting up and managing an independent occupational therapy practice in a non-traditional setting. Students are expected to develop the capacity to carry 100% of the responsibilities of an entry level occupational therapist by the completion of this fieldwork education placement.

PREREQUISITE: Instruc. permission

OCCU 4424.00: Fieldwork Level V.

This eight week fieldwork placement provides students with the opportunity to work in settings such as a hospital, long-term care facility, or community agency. Students develop competence and increased independence in integrating theoretical knowledge and skills through the full process of Occupational Therapy practice. Under supervision, students assume responsibility for a case load of approximately 40-60% of that of an entry level therapist. All expenses are the responsibility of the student including a placement fee, travel, accommodations, etc.

PREREQUISITE: Instruc. permission

OCCU 4425.00: Fieldwork Level VI (Continued).

This experiential course for students in arts, social sciences, science and other fields is designed to explore the meaning of occupation in everyday life. Typically, the term “occupation” refers to categories of paid work. This course will explore a broader meaning of occupation: namely, purposeful activity. This concept of occupation will include everything we do to look after and develop ourselves, be involved in meaningful endeavours, contribute to our communities, promote health, advocate for opportunities, generate income and more. Students will be exposed to a broad range of literature on occupation; the motivation, organization and performance of occupation; the environment as a context for occupational performance; and the promotion of health through occupation. Students will gain an appreciation of occupation as the foundation of everyday life through sociological, anthropological and narrative analysis, and experiential activities.

PREREQUISITE: None. This course is OPEN to non-Occupational Therapy students

OCCU 4426.00: Fieldwork Level VII (Continued).

This twelve week fieldwork placement provides experience in setting up and managing an independent occupational therapy practice in a non-traditional setting. Students are expected to develop the capacity to carry 100% of the responsibilities of an entry level occupational therapist by the completion of this fieldwork education placement.

PREREQUISITE: Instruc. permission

OCCU 4427.00: Fieldwork Level VIII.

This twelve week fieldwork placement is designed to culminate students’ education in occupational therapy practice. Under supervision, students assume responsibility for a case load of approximately 100% of that of an entry level therapist. All expenses are the responsibility of the student including a placement fee, travel, accommodations, etc.

PREREQUISITE: Instruc. permission
I. History

Formal pharmacy education in the Maritime provinces began in 1908, with evening classes in pharmacy and chemistry conducted in the Nova Scotia Technical College. Success of these courses encouraged the Nova Scotia Pharmaceutical Society to establish the Nova Scotia College of Pharmacy in 1911. The College was affiliated with Dalhousie University in 1912.

The New Brunswick Pharmaceutical Society and the Prince Edward Island Pharmaceutical Association were admitted to affiliation with the College in 1917 and 1930, respectively. With the affiliation of the former society, the College was renamed the Maritime College of Pharmacy.

In 1961, the Maritime College of Pharmacy was admitted into Dalhousie University as the College of Pharmacy, a constituent part of the new Faculty of Health Professions. A four-year baccalaureate program was introduced.

In 1966, a Master’s program was established, followed by a Doctor of Philosophy program in 1977.

In 1972, a twelve month pharmacy residency program was initiated by Camp Hill Hospital in cooperation with the College of Pharmacy. Programs were initiated at the Halifax Infirmary in 1974, at the Victoria General Hospital in 1981 and at the Saint John Regional Hospital in 1982.

In 1975, the Prince Edward Island Pharmaceutical Society to establish the Nova Scotia College of Pharmacy in 1911. The College was affiliated with Dalhousie University in 1912. In 1961, the Maritime College of Pharmacy was admitted into Dalhousie University as the College of Pharmacy, a constituent part of the new Faculty of Health Professions. A four-year baccalaureate program was introduced.

In 1966, a Master’s program was established, followed by a Doctor of Philosophy program in 1977.

In 1972, a twelve month pharmacy residency program was initiated by Camp Hill Hospital in cooperation with the College of Pharmacy. Programs were initiated at the Halifax Infirmary in 1974, at the Victoria General Hospital in 1981 and at the Saint John Regional Hospital in 1982.

In the fall of 1968, the College of Pharmacy moved into the George A. Burbidge Pharmacy Building. This building, the former Medical Sciences Building was renamed in honour of the first Dean of the College, in recognition of his contribution to pharmacy education in the Maritimes. Present facilities accommodate approximately 360 undergraduate students.

II. College of Pharmacy Mission Statement

Mission

Enhancing health through pharmaceutical education, community service and research.

Vision

The College of Pharmacy is a leader in practice-based pharmacy education and is respected for pharmacy research. The College is also a major enabler in advancing the practice of pharmacy.

We are highly responsive to patient-needs and changes in the health care environment. Our graduates are well prepared to become effective practitioners, researchers and future leaders.
Accreditation
The Bachelor of Science in Pharmacy Program of the College of Pharmacy, Dalhousie University, has been granted Full Accreditation Status by the Canadian Council for Accreditation of Pharmacy Programs for a six year term, 2010-2016.

III. College of Pharmacy Regulations
All students are required to observe the University Regulations and Academic Regulations as described in this Calendar. The academic performance of each student in the College is assessed by the Student Promotions Committee.

A. Academic Requirements

1. Workload
The curriculum is a problem-based learning (PBL) program and other courses, which may include tutorials, lectures, labs, practice experience and other components. (See IV. Programs offered). To satisfy the requirements for the degree of Bachelor of Science in Pharmacy, a student must achieve a grade of Pass in each prescribed component. PBL courses vary in length from three to seven weeks, and are weighted as either 1.5, 3, or 6 credit hours. Each academic year totals 27, 31.5, or 33 credit hours, with the program total being 123 credit hours.

Students are required to successfully complete all practice experience rotations. These placements may be outside the Halifax/Dartmouth area. Students are responsible for any travel, accommodation and any other costs associated with practice experience rotations.

2. Academic Recognition

1. Awards
The College of Pharmacy Awards Committee administers a number of awards, each with defined criteria. Selection of award recipients described as the “student who excels” is based on a combination of performance in knowledge assessments and in tutorials. Eligibility for in-course Scholarships is determined on the basis of knowledge assessments alone.

2. Dean’s List
Students will be assessed for Dean’s List based on their knowledge assessments and class standing in the annual “Progress Exam.” No student who has obtained a failing grade (F) will be eligible for the Dean’s List in the year in question.

3. Distinction
Students who have been on the Dean’s List for three of the four years of the Pharmacy Program and a cumulative GPA of 3.70 or higher will graduate with Distinction.

C. Assessment

1. Grading
Grading is on a Pass/Fail basis, and grades recorded on the official University transcript are “Pass” or “Fail” (P, F). Students must pass all components of the year in which they are registered to proceed to the next year. The passing grade for knowledge assessments is 60% unless otherwise indicated.

2. Formal Assessment
Assessment will be based on both the learning process and the knowledge/skills achieved. Tutors will provide informal assessment of the student’s learning process throughout a PBL course and a formal assessment (student tutorial performance assessment) at the completion of a course. Knowledge/skills will be assessed as described in the syllabus provided for each course.

3. Remedial Work
If a PBL course, a student must pass both the student tutorial performance assessment and the course knowledge assessment.

4. A student who fails an academic course must meet with the Associate Director, Undergraduate Education to discuss remediation and/or support.

5. The Student Promotions Committee of the College of Pharmacy is responsible for monitoring the academic progress of students and providing recommendations to faculty regarding promotion and graduation of students. Students who seek advice for the application of the regulations of the College of Pharmacy should refer to the appeals process described in Appeals section below.

6. Attendance at the tutorials, skills laboratory and practice experience program (PEP) is mandatory. Absence must be supported with a valid reason, such as illness with a medical certificate or other reason approved by the Undergraduate Education Committee. Other absence will be reported to the Student Promotions Committee and may be reason for failure.

D. Reassessment of a Grade
See Academic Regulation 16.7. In all cases of reassessment, the calculations used to arrive at the final grade will be checked. In those courses where the student has had ample time to consider marks obtained for all work done, except for the final examination, reassessment in such courses shall be done on the final examination only. For other courses, a reassessment shall include the results from all work not previously available to the student during the term.

E. Supplemental Assessment

1. A student who receives a grade of F in no more than one course is eligible for remedial work and supplemental assessment.

2. A student who fails one PBL student tutorial performance assessment must undertake remedial work during the following course, organized by the Associate Director, Undergraduate Education. If the failure occurs in the final course of the year, remediation will occur during the summer. The student must successfully complete the remedial work and supplemental assessment to achieve a Pass.

3. A student who fails the knowledge/assessment or other requirement outlined in the syllabus of a PBL or non-PBL course will be required to do remedial work and must pass a supplemental assessment, which will be scheduled by the course coordinator in consultation with the Associate Director, Undergraduate Education and the students involved.

4. If a student successfully completes the remedial work and supplemental assessment, the passing grade will then be added to the transcript and recorded as “P” with a notation that the grade was earned by supplemental assessment.

5. Failure in a second course (either a PBL or non-PBL course) will result in a fail grade that may have been achieved by supplemental assessment in the first failed course. (See F.1.a below.)

F. Repeating the Year

1. Subject to eligibility, a student will be required to repeat the year if:
   a) the student has failed any two courses (PBL or non-PBL courses) or
   b) the student has failed one course and has not successfully completed the prescribed remedial work and supplemental assessment.

2. To be eligible to repeat a year, a student who has failed two courses must satisfactorily complete all other year requirements except the Practice Experience Program. However, a student with two failures will not be eligible to register in the Practice Experience Program.

3. Application to repeat the year must be made in writing to the Associate Director, Undergraduate Education by a predetermined date.

4. Any student who withdraws voluntarily, due to illness or other personal circumstances, and is allowed to repeat the year, will be considered a student in a repeat year unless the student withdraws before the last day of the first PBL course of the academic year, or the student tutorial performance assessment, if the two do not coincide.

5. No student will be allowed more than one repeat year during the undergraduate program. All students who repeat the year will be assessed on performance in the repeated year.

G. Leave of Absence
A student who needs to take leave from the pharmacy program must apply to the Director to do so. A leave of absence must be approved in advance by the Director of the College of Pharmacy. Normally, a student who absents himself/herself from the College of Pharmacy without prior permission for an extended period (four weeks or greater) will be presumed to have withdrawn and will have to re-apply for admission to the College of Pharmacy. A leave of absence will be limited to one leave period and will not normally exceed one academic year. A leave of absence will not count towards time in the Pharmacy program.

H. Dismissal from the Study of Pharmacy

1. Any student who fails two or more courses (PBL or non-PBL courses) of the curriculum in one year will be dismissed from the study of pharmacy.

2. A student in a repeat year who does not meet the criteria for promotion will be dismissed. The normal regulation allowing remedial work and supplemental assessment in one course will apply.

3. Students are also referred to University Regulations: Suspension or Dismissal from a Program on the Grounds of Professional Unsuitability - Faculty of Health Professions.
Faculty of Health Professions

Pharmacy under the control of the provincial regulatory authority concerned; a period of related to licensing or to registration as a Pharmacist. These functions are entirely. The College of Pharmacy, being purely educational, has no jurisdiction in matters related to licensing or registration as a Pharmacist. For those who wish to practice as licensed pharmacists. A Bachelor of Science in Pharmacy is necessary for those who wish to practice as licensed pharmacists. Failure to provide this information may result in a student being denied access to a placement site. Each student is required to maintain their personal immunization record, and submit a copy by a set deadline for their student file. Individual sites may require students to present immunization records prior to acceptance at a practice site. Individual clinical practice sites may have additional immunization requirements. Students must show proof of current immunization against tetanus, diphtheria, pertussis, polio, measles, mumps, rubella, Hepatitis B, varicella (if non-immune) and a negative two-step Mantoux (TUB) test prior to admission to the College. Evidence of a negative two-step tuberculin testing (Mantoux) is required before all hospital rotations. Students are responsible for the cost of all tests and immunizations.

A. Immunization

B. Career Opportunities

Pharmacy is a health profession in which pharmacists provide care for their patients as one member of the health care team. This care focuses on the patient for the appropriate use and prescription of drug therapies. The pharmacist is responsible to prevent and resolve patient drug therapy problems. Specific activities include: taking medication histories, identifying goals for drug therapy, providing recommendations and education to patients regarding self-medication, providing recommendations to other health care providers on drug therapy, working with patients to maximum benefit and minimize adverse effects of drug therapy, monitoring patient drug profiles, counseling patients on prescribed medication, monitoring drug interactions, adverse drug reactions and patient compliance with their drug treatment. Other activities include the provision of information on drugs to patients and other health professionals, the preparation of suitable materials for use as medicines from natural and synthetic sources, the compounding of drugs and the dispensing of suitable medication. Pharmacy graduates have a wide range of career opportunities. The majority enter community pharmacy practice. Hospital pharmacy also provides an interesting challenge for pharmacists, particularly in view of their expanding role within the clinical setting. The pharmaceutical industry provides opportunities for pharmacists in analytical laboratories and in administrative positions as consultants, government inspectors and health officers. Opportunities may also be available in universities as teachers and researchers. A Bachelor of Science in Pharmacy is necessary for those who wish to practice as licensed pharmacists. For those who wish to enter research or teaching, a Master of Science degree and the Master of Science degree is usually required. Practice Requirements

1. License in Pharmacy

The College of Pharmacy, being purely educational, has no jurisdiction in matters related to licensing or registration as a Pharmacist. These functions are entirely under the control of the provincial regulatory authority concerned; a period of practical training or apprenticeship is required by the provincial regulatory authority before a graduate in pharmacy is licensed as a pharmacist. Information regarding licensing or registration in each province may be obtained from the respective provincial regulatory authority. New Brunswick Pharmaceutical Society, Unit 69, 1224 Mountain Road, Moncton, NB E1C 2T6; Prince Edward Island Pharmacy Board, PO Box 89, Crapaud, PE C0A 1C0; Nova Scotia College of Pharmacists, Suite 200, 1559 Brunswick Street, Halifax, NS B3J 2G1.

2. Pharmacy Examining Board of Canada (PEBC)

The Pharmacy Examining board of Canada was created by Federal Statute on December 21, 1961, to establish qualifications for pharmacists acceptable to participating pharmacy provincial regulatory authorities. The Board provides for annual examinations and issues a certificate to the successful candidate, which may be filed with a Canadian provincial regulatory authority in connection with an application for license to practice pharmacy under the laws of that province. Graduates of Faculties of Pharmacy accredited by Examinations of Pharmacy Programs are eligible to write the examinations. Successful completion of these examinations is a prerequisite to licensure in Canada. Individuals who are not graduates of an accredited Canadian Faculty of Pharmacy must first complete the PEBC Qualifying Exam.

D. Student Pharmacy Society

The basic aims of the Student Pharmacy Society are to promote a closer liaison with the other societies on campus, to give the pharmacy students a strong voice with regard to Student Council activities, to provide a means of communications between students and their respective provincial regulatory authorities in the Maritimes, and to provide an organizational body which plans and finances the various unique Pharmacy Society activities. Membership in the Pharmacy Society includes membership in the Canadian Association of Pharmacy Students and Intern and membership in the Canadian Pharmacists Association.

V. Programs Offered

The College of Pharmacy offers a four-year program, following at least one year of general science, leading to the degree of Bachelor of Science (Pharmacy). The undergraduate program has a patient-oriented curriculum integrating clinical pharmacy with the pharmaceutical sciences. The curriculum includes an integrated problem-based learning format. Year 1 includes pharmacy law and health care ethics, biomedical and physical sciences (anatomy, biochemistry, microbiology, pharmacology and physiology) in discrete three-to seven-week courses. The pharmaceutical sciences (biopharmaceutics and pharmacokinetics, medicinal chemistry, drug metabolism, toxicology, pharmacokinetics and physical pharmacy) with necessary reviews of biomedical content, are integrated in Year 2 through 4, with therapeutics, pharmacoeconomics, pharmacoeconomics, pharmacoeconomics, communications, interprofessional relations, law and ethics, social and administrative pharmacy issues, and the role of pharmacy in the health care system. The College participates with the Queen Elizabeth II Health Science Centre, Halifax, NS, and the Horizon Health Network, NS in providing a Canadian Hospital Pharmacy Residency Board accredited twelve-month post graduate hospital pharmacy residency program. Through structured rotations in various areas of pharmacy practice, the program aims to prepare pharmacists for exemplary pharmacy practice. Areas of rotation include patient care, drug information, drug distribution, pharmacy administration, a research project and in-service and education. The emphasis is on providing exemplary patient care. Practitioner role models/preceptors are utilized throughout the program to mentor the necessary skills, knowledge and values required to be a pharmacist for application by the resident. A stipend is provided and a certificate is presented to candidates successfully completing the program.

Undergraduate Curriculum Structure

The PBL curriculum, within the College of Pharmacy, may be scheduled past the posted exam periods. Students are responsible for all costs associated with expenses during this time (i.e., meal plan expiration, residence closure, etc.).
A. Tutorials
The principal feature of the curriculum is problem-based learning (PBL). Students learn together in tutorial groups of eight to ten. Each group is facilitated by a trained non-content expert tutor who may be faculty, sessional tutors, practitioners or graduate students. Two-hour tutorials are held three times a week. In tutorial sessions students are presented with a situation for which they must identify their own prior knowledge and set specific learning objectives. Students use the time between tutorial sessions for self-directed learning of the objectives that they have set. Subsequent tutorials consist of discussion and application of knowledge.

B. Courses
A minimal number of courses explain difficult concepts and summarize learning modules. Science laboratory sessions are limited to experiments and demonstrations that enhance student learning of concepts.

C. Skills Laboratory
The skills laboratory focuses on practical skill development and application of knowledge acquired in the PBL curriculum and critical appraisal series. Activities required for successful completion of the practical experience program are introduced and practiced. Content includes but is not limited to: extemporaneous compounding, prescription filling and assessment, written and verbal communication skills, patient education, device training, injection training, and jurisprudence.

D. Practice Experience Program (PEP)
A progressive professional field experience complements the PBL curriculum as follows:

**Year 1 - Community Experience Program (CEP)**
- the equivalent of a half day per week in a goal-related service learning in a non-pharmacy health-oriented community site.

**Year 2 - Practice Experience Program (PEP)**
- PHAR 2062.03 - Community Rotation (two consecutive weeks)
- PHAR 2082.03 - Community Rotation (two consecutive weeks)

Second year rotations are completed during the months of May - August, after successful completion of all other second year courses. Each rotation is two weeks in length, at a minimum of 35 hours/week. Second year rotations provide students with an opportunity to see pharmacists practice patient focused care in both community and hospital practice settings. Time is also spent on the distributive, legislative and administrative components of pharmacy practice.

**Year 3 - Practice Experience Program (PEP)**
- PHAR 3080.03 - Community Rotation (four consecutive weeks)

This rotation is completed during the months of May - August, after successful completion of all other third year courses. This rotation is four weeks in length at a minimum of 35 hours/week and introduces students to the practical application of the pharmacist’s patient care process in a community pharmacy. Rotation objectives address drug information, prescription and non-prescription medications, patient education, and health promotion presentations to community groups. This rotation is intended to provide an introductory experience to clinical activities including: monitoring patients, identifying drug-related problems, and defining and measuring patient goals and outcomes.

**Year 4 - Practice Experience Program (PEP)**
- PHAR 4080.045 - Hospital Rotation (six consecutive weeks)
- PHAR 4085.045 - Community Rotation (six consecutive weeks)

These six-week rotations are the culmination of the student's study. Experiential rotations in hospital and community practice sites allow students the opportunity to apply all the knowledge, skills and values they have developed to the provision of total pharmacy care. The focus of these rotations is patient-based and primarily clinical. Each rotation is six-weeks, at a minimum of 40 hours/week.

For each rotation, from year 2 through to year 4, students are required to travel to sites outside of the Halifax area and will be responsible for any costs incurred as a result of the program.

Students should note that there are very limited PEP rotation sites outside the Maritime Provinces. All PEP rotations must take place within Canada. Students must be prepared to complete all PEP rotations within the Maritimes.

E. Prescribed Courses

**Year 1**
- PHAR 1010.03
- PHAR 1020.03
- PHAR 1030.03
- PHAR 1040.03
- PHAR 1050.03
- PHAR 1060.03
- PHAR 1070.03
- PHAR 1090.00
- PHYL 1480.06

**Year 2**
- PHAR 2010.03
- PHAR 2020.03
- PHAR 2035.06
- PHAR 2040.03
- PHAR 2045.03
- PHAR 2050.03
- PHAR 2055.015
- PHAR 2060.03
- PHAR 2070.03
- PHAR 2081.03
- PHAR 2082.03

**Year 3**
- PHAR 3010.03
- PHAR 3020.03
- PHAR 3030.03
- PHAR 3040.06
- PHAR 3050.03
- PHAR 3055.06
- PHAR 3060.03
- PHAR 3070.03
- PHAR 3080.03
- PHAR 3085.03

**Year 4**
- PHAR 4010.03
- PHAR 4025.06
- PHAR 4045.03
- PHAR 4060.03
- PHAR 4070.03
- PHAR 4080.03
- PHAR 4085.03

F. Interprofessional Health Education
Students are required to maintain enrolment in IPHE 4900.00 (see calendar section on Health Professions, Interprofessional Health Education) for the duration of their studies. Please register in IPHE 4900.00 (section 5). Successful completion of this course is a requirement for graduation and will be recognized further with the awarding of a special Certificate in Interprofessional Collaboration to be presented by the Faculty of Health Professions. Students are asked to consult with their individual school colleges to determine the specific guidelines and expectations regarding the required portfolio.

VI. Course Descriptions
ANAT 1040.03: Basic Human Anatomy for Pharmacy Students.
This course is offered by the Department of Anatomy and Neurobiology to students in the College of Pharmacy. Upon successful completion of the class, the
PHAR 1060.015: Pharmacy Law and Health Care Ethics.
This course provides an introduction to the legal and ethical aspects of pharmacy practice, focusing on the legal and ethical implications of patient care. Students will learn about the legal and ethical principles that govern the practice of pharmacy and the responsibilities of pharmacists. The course will cover topics such as patient confidentiality, prescription practices, and the legal requirements for the dispensing of pharmaceutical products. Coordinators: J. McDougall and J. Pelisi.

PHAR 1060.03: Pharmacy Skills Lab I.
Students will have the opportunity to practice and develop their skills in pharmacy practice through hands-on experiences in a simulated pharmacy setting. The lab aims to provide students with the opportunity to apply theoretical knowledge to practical situations. Coordinators: S. Mansour.

PHAR 1060.06: Biological Chemistry and Metabolism for Students of Pharmacy.
The course focuses on the biochemical processes that occur in the human body, with an emphasis on the role of medicines in these processes. Students will learn about the mechanisms of drug action and the principles of pharmacokinetics and pharmacodynamics. Coordinators: L. Walker and J. McDougall.

PHAR 1070.01: Pharmacology for Pharmacy.
This course provides an introduction to the mechanisms of drug action and the principles of pharmacokinetics and pharmacodynamics. Students will learn about the principles of drug therapy and the evaluation of drug therapy. Coordinators: N. Harris.

PHAR 2010.03: Critical Appraisal Series I.
This course is designed to provide students with the skills necessary to critically appraise the literature in the field of pharmacy. Students will learn how to evaluate research studies and how to use this information to inform their practice. Coordinators: S. Mansour.

PHAR 2020.03: Respiratory Tract Complaints.
This course focuses on respiratory tract complaints, their diagnosis, and management. Students will learn about the common respiratory tract disorders, their causes, and the appropriate treatment options. Coordinators: S. Mansour.

PHAR 2035.06: Respiratory Tract Complaints.
This course is designed to provide students with an overview of respiratory tract complaints and their management. Students will learn about the common respiratory tract disorders, their causes, and the appropriate treatment options. Coordinators: S. Mansour.

PHAR 2035.08: Respiratory Tract Complaints.
This course is designed to provide students with an overview of respiratory tract complaints and their management. Students will learn about the common respiratory tract disorders, their causes, and the appropriate treatment options. Coordinators: S. Mansour.

PHAR 2040.03: Gastrointestinal Disorders.
This course focuses on gastrointestinal disorders, their diagnosis, and management. Students will learn about the common gastrointestinal disorders, their causes, and the appropriate treatment options. Coordinators: S. Mansour.

PHAR 2045.015: Nutrition.
This course is designed to provide students with an overview of nutrition and its role in health and disease. Students will learn about the principles of nutrition, the role of nutrients in health and disease, and the methods for assessing nutritional status. Coordinators: S. Mansour.

PHAR 2055.015: Drug Disposition.
The course is designed to provide students with an overview of drug disposition, including the principles of pharmacokinetics and pharmacodynamics. Students will learn about the factors that influence drug disposition and how these factors are used in the development of drug therapy. Coordinators: S. Mansour.

PHAR 2080.00: Community Experience Program.
This course provides students with an opportunity to apply their knowledge and skills in a real-world community setting. Students will work as part of a multidisciplinary team in a community health organization to provide pharmacy services to the community. Coordinators: N. Harris.

PHIC 1050.03: Basic Microbiology and Immunology for Pharmacy.
This course provides an introduction to the principles of microbiology and immunology as they relate to the practice of pharmacy. Students will learn about the diagnostic tests used in pharmacy, the role of microorganisms in disease, and the principles of immunology. Coordinators: S. Mansour.

PHIC 1100.06: Pharmacology and Pathophysiology.
This course focuses on the mechanisms of drug action and the principles of pharmacokinetics and pharmacodynamics. Students will learn about the principles of drug therapy and the evaluation of drug therapy. Coordinators: E. Credman.
PHAR 2060.015: Medication Use Management.
This course introduces the pharmacy student to the "big picture" issues of the medication-use system. The three parts of the course are as follows: (1) an overview of the medication-use system, (2) discussion of the problems with the medication-use system and (3) exploration of potential solutions to these problems.
COORDINATOR: A. Murphy
FORMAT: Lecture, small group work, self-directed learning, approx. 27 hrs. 3 weeks
PREREQUISITE: Successful completion of all first year pharmacy.

PHAR 2070.03: Pharmacy Skills Lab II.
Skills Lab II expands upon the skills earned in Skills Lab I. Students are introduced to the Dalhousie College of Pharmacy’s Patient Care Process. Written and verbal communication skills and patient assessment techniques are taught to support this process. Students learn to identify drug therapy problems and develop therapeutic management and monitoring plans. Knowledge obtained in the Problem Based Learning (PBL) and Critical Appraisal Series (CAS) components of the program are applied. Students will examine social, ethical and professional practice issues. Successful completion of a courtroom presentation (CPP) level I HCP and standard first aid course is a requirement for a passing grade.
COORDINATOR: N. Kenne-Kelchbaur
FORMAT: Lecture lab - 4 hours
PREREQUISITE: Successful completion of all first year courses

PHAR 2081.03: Practice Experience Program (PEP) I.
This rotation provides students with an opportunity to see patient centered pharmacy care in a hospital practice setting. Specic speci c units focus on drug information, hospital pharmacy services provided as part of the healthcare team, sterile procedures and IV admixtures, medication safety, and interprofessional collaboration. Students are required to travel to sites outside the Halifax area and are responsible for all associated costs.
COORDINATOR: H. Davies
FORMAT: Minimum 35 hours/week x 2 consecutive weeks (May-Aug)
PREREQUISITE: Successful completion of second year courses (see College of Pharmacy Regulations F2)

PHAR 2082.03: Practice Experience Program (PEP) II.
This rotation provides students with an opportunity to participate in patient care in a community pharmacy setting. Pharmacy law, narcotics and controlled drugs, third party insurance, processing prescriptions, provincial formularies, drug information and systems management are key areas of this rotation. This rotation provides students with an opportunity to participate in patient care in a community pharmacy setting. Students are required to travel to sites outside the Halifax area and are responsible for all associated costs.
COORDINATOR: H. Davies
FORMAT: Minimum 35 hours/week x 2 consecutive weeks (May-Aug)
PREREQUISITE: Successful completion of second year courses (see College of Pharmacy Regulations F2)

PHAR 3010.03: Critical Appraisal Series II.
This course advances and reinforces the topic learned in PHAR 2010.03. The first term focuses on research methods and biostatistics seen in various trial designs. Students will critically evaluate the medical literature and write a term paper reviewing the evidence behind a clinical decision. The second term will focus on applying the elements of evidence-based clinical practice. Through a journal club setting, students will evaluate the strength and weaknesses seen in the literature as they relate to a clinical situation. Students are expected to use these skills in their problem-based learning courses.
COORDINATOR: D. Gauthier
FORMAT: Lecture and small group work – 2 hours
PREREQUISITE: PHAR 2010.03 or consent of instructor

PHAR 3020.03: Women’s Health Issues.
Students learn the medicinal chemistry, pharmacokinetics, biopharmaceutics and pharmacokinetics, and pharmacology, as well as the pathophysiology and pharmacotherapeutic principles pertaining to the problems and products discussed. PHAR 3020.03 deals with common women’s health issues such as contraception, osteoporosis and menopause and the management of these problems.
COORDINATOR: H. Deal
FORMAT: Lecture 3-5 hours, tutorial 6 hours
PREREQUISITE: Successful completion of all second year courses

PHAR 3030.03: Infectious Diseases.
This rotation focuses on the practical implementation of patient centered pharmacy care in community practice. Students will complete a variety of patient care work-sites. Provision of drug information, prescriptions and non-prescription medications, patient education and health promotion are integral components of this rotation. Students are required to travel to sites outside the Halifax area and are responsible for all associated costs.
COORDINATOR: H. Deal
FORMAT: Minimum 35 hours/week x 4 consecutive weeks (May-Aug)
PREREQUISITE: Successful completion of third year courses (see College of Pharmacy Regulations F2)

PHAR 3040.06: Cardiovascular Diseases.
Students learn the medicinal chemistry, pharmacokinetics, biopharmaceutics and pharmacokinetics, and pharmacology, as well as the pathophysiology and pharmacotherapeutic principles pertaining to the problems and products discussed. PHAR 3040.06 covers cardiovascular diseases such as hypertension, ischemic heart disease, congestive heart failure and thrombembolism, and the pharmacologic management of these conditions.
COORDINATOR: H. Deal
FORMAT: Lecture 5-6 hours, tutorial 6 hours
PREREQUISITE: Successful completion of all second year courses

PHAR 3050.03: Pain and Rheumatology.
Students learn the medicinal chemistry, pharmacokinetics, biopharmaceutics and pharmacokinetics, and pharmacology, as well as the pathophysiology and pharmacotherapeutic principles pertaining to the problems and products discussed. PHAR 3050.03 deals with the understanding and management of acute and chronic pain of various origins.
COORDINATOR: H. Deal
FORMAT: Lecture 5-6 hours, tutorial 6 hours
PREREQUISITE: Successful completion of all second year courses

PHAR 3055.06: CNS and Behavioral Disorders.
Students learn the medicinal chemistry, pharmacokinetics, biopharmaceutics and pharmacokinetics, and pharmacology, as well as the pathophysiology and pharmacotherapeutic principles pertaining to the problems and products discussed. PHAR 3055.06 involves the study of an array of conditions ranging from depression to seizure disorders.
COORDINATOR: H. Deal
FORMAT: Lecture 5-6 hours, tutorial 6 hours
PREREQUISITE: Successful completion of all second year courses

PHAR 3060.03: Endocrine Disorders.
Students learn the medicinal chemistry, pharmacokinetics, biopharmaceutics and pharmacokinetics, and pharmacology, as well as the pathophysiology and pharmacotherapeutic principles pertaining to the problems and products discussed. Disorder included in PHAR 3060.03 are diabetes and thyroid conditions.
COORDINATOR: H. Deal
FORMAT: Lecture 5-6 hours, tutorial 6 hours
PREREQUISITE: Successful completion of all second year courses

PHAR 3070.03: Pharmacy Skills Lab III.
Skills Lab III expands on the concepts learned in skills lab I and II. An added emphasis will be placed on written communication skills and prescription therapeutics as covered in the PBL curriculum. Students are expected to use Knowledge from CAS for the purposes of therapeutic-decision making and patient education. Lectures and device training will compliment the PBL curriculum. Standardized patients will be used for teaching purposes as well as for the final objective structured clinical exam.
COORDINATOR: K. Spanjol
FORMAT: Lecture/lab seminar - 4 hours
PREREQUISITE: Successful completion of all second year courses

PHAR 3080.03: Practice Experience Program (PEP) III.
This rotation focuses on the practical implementation of patient centered pharmacy care in community practice. Students will complete a variety of patient care work-sites. Provision of drug information, prescriptions and non-prescription medications, patient education and health promotion are integral components of this rotation. Students are required to travel to sites outside the Halifax area and are responsible for all associated costs.
COORDINATOR: H. Deal
FORMAT: Minimum 35 hours/week x 4 consecutive weeks (May-Aug)
PREREQUISITE: Successful completion of third year courses (see College of Pharmacy Regulations F2)

PHAR 3080.015: Medication Use Management.
This course introduces the pharmacy student to the "big picture" issues of the medication-use system. The three parts of the course are as follows: (1) an overview of the medication-use system, (2) discussion of the problems with the medication-use system and (3) exploration of potential solutions to these problems.
COORDINATOR: A. Murphy
FORMAT: Lecture, small group work, self-directed learning, approx. 27 hrs. 3 weeks
PREREQUISITE: Successful completion of all first year pharmacy.

PHAR 3090.03: Pain and Rheumatology.
Students learn the medicinal chemistry, pharmacokinetics, biopharmaceutics and pharmacokinetics, and pharmacology, as well as the pathophysiology and pharmacotherapeutic principles pertaining to the problems and products discussed. PHAR 3090.03 is devoted to musculoskeletal infections.
COORDINATOR: H. Deal
FORMAT: Lecture 5-6 hours, tutorial 6 hours
PREREQUISITE: Successful completion of all second year courses
PREREQUISITE: successful completion of fourth year classes (see College of Pharmacy Regulation F2)

This clinical rotation focuses primarily on the practical provision of patient centered pharmacy care in community practice. As with the hospital rotation, students will apply the knowledge, skills and values that have been acquired throughout academic study and previous PEP rotations using a patient-centered approach. Interaction with family physicians and other healthcare professionals in the community is a key component of this rotation. Students should have the opportunity to interact with patients in the physician’s office, pharmacy and/or home environment. Students will serve as a member of the healthcare team and incorporate professionalism, ethical principles, drug information, patient education and health promotion in the application of patient focused pharmacy care. Students will be required to complete full patient care work-ups on several patients and present the cases to a health professional audience. Students will expand their educational role by preparing and presenting a relevant health promotion/disease prevention topic to a community audience. Students are required to travel to sites outside the Halifax area and are responsible for all associated costs.

COORDINATOR: H. Davies

FORMAT: Minimum 40 hours/week x 6 consecutive weeks (first or second rotation in 4th year, second term)

PREREQUISITE: Successful completion of fourth year classes (see College of Pharmacy Regulation F2)

PHYL 1400.06: Human Physiology.

This course is designed to give Pharmacy students a broad understanding of the normal human physiology using pathophysiologic scenarios. Selected topics in physiology and biophysics will be presented in tutorials as case studies and in lectures. The central themes include: respiratory, endocrine/reproductive, gastrointestinal, neuromuscular, nervous system, renal and cardiovascular. Students will be provided with means for self-evaluation throughout the unit. Evaluation will be based on tutorial performance as well as mid- and end-of-unit examinations. This class is only for Pharmacy students.

DIRECTOR: M. Murphy and other staff members

FORMAT: A 7-week comprehensive unit with 6 hours tutorial and 4 hours lecture per week

PREREQUISITE: ANAT 1040/03

PHAR 4085.045: Practice Experience Program (PEP) V.

This clinical rotation focuses primarily on the practical provision of patient centered pharmacy care in community practice. As with the hospital rotation, students will apply the knowledge, skills and values that have been acquired throughout academic study and previous PEP rotations using a patient-centered approach. Interaction with family physicians and other healthcare professionals in the community is a key component of this rotation. Students should have the opportunity to interact with patients in the physician’s office, pharmacy and/or home environment. Students will serve as a member of the healthcare team and incorporate professionalism, ethical principles, drug information, patient education and health promotion in the application of patient focused pharmacy care. Students will be required to complete full patient care work-ups on several patients and present the cases to a health professional audience. Students will expand their educational role by preparing and presenting a relevant health promotion/disease prevention topic to a community audience. Students are required to travel to sites outside the Halifax area and are responsible for all associated costs.

COORDINATOR: H. Davies

FORMAT: Minimum 40 hours/week x 6 consecutive weeks (first or second rotation in 4th year, second term)

PREREQUISITE: Successful completion of fourth year classes (see College of Pharmacy Regulation F2)

Nolan, A.

O'Brien, M.

Perry, M.

West, E.

Agency Field Instructors

Many individuals throughout the municipality, province, and country contribute to the education of Social Work students through offering and supervising student placements. They represent a wide range of agencies and organizations including: community based, non-profit, government, physical/mental health and addiction prevention and treatment services. Their invaluable assistance is gratefully acknowledged and appreciated.

I. Introduction

The School of Social Work's vision is a commitment to building a socially just society, defined as one that upholds and validates the values of equality, diversity, inclusiveness, democracy and concern for human welfare. We manifest and advance curricula, scholarship and school culture that are congruent with these values.

The BSW degree program is accredited by the Canadian Association for Social Work Education. It embraces a critical and anti-oppressive approach to social work practice that includes an emphasis on social policy, research skills and critical analysis, professional values, theoretical perspectives and practice methods. While the program has evolved within the context of the people, communities and service network of the Maritime Provinces, graduates are qualified to practice social work throughout Canada and beyond.

A. BSW Delivery Options

The BSW is a 20 credit degree program and is offered on campus and by distance delivery online. Both delivery methods include field placement experience. The application deadline is February 15th of each year.

B. Relationship to the MSW Program

The School of Social work offers a Master of Social Work degree for advanced specialized study in social work practice. The academic prerequisite for the MSW degree is a BSW or a Bachelor's degree in a related field of study.

C. Continuing Education

The School offers a Continuing Education Program (non-credit) of thematic workshops.

D. Nova Scotia Association of Social Workers

Provincial legislation requires that only persons who are registered with the Nova Scotia Association of Social Workers (NSASW) can practice as social workers within Nova Scotia. To become fully registered and use the title of Social Worker after award of the BSW degree, at least 3,858 hours of paid supervised social work experience is necessary.

II. Bachelor of Social Work Degree Program Admission

Information on academic preparation, admission and application procedures is contained in the Admission Requirements section of the calendar. Enrolment is limited to a specified number of places that are offered once a year to the best qualified candidates, selected by the School's Admissions Committee. Equal consideration is given to part-time and full-time applications.

Prior Criminal Conviction

BSW applicants should be aware that a prior criminal conviction may render them unable to obtain a license in their field of study upon graduation, or unable to participate in some clinical field work experiences throughout their course of study.

A. Affirmative Action

The School of Social Work has an affirmative action policy for applicants who are Acadian, Aboriginal, African Canadian, members of other racially visible groups, and persons with (dis)Abilities. The school is committed to admitting and graduating the highest possible number of students who qualify under this policy. Members of these groups who have five general (non social work) university credits that average B- are encouraged to apply under this policy. Applicants may self-identify in a place provided on the Social Work Statement cover sheet, which is part of the BSW application package. Each candidate is considered individually on the basis of her/his qualifications, rather than in relation to other applicants. The admissions prerequisites and selection criteria are otherwise the same for all candidates.
B. Program Objectives

Upon successful completion of the BSW program, students will:

1. Have an understanding of equity and justice through critical analysis.
2. Develop intellectual skills, scholarly attributes, and professional characteristics and values, including but not limited to, curiosity, openness, mindfulness, effective communications, judgment, respect, humility, embracing of difference, acceptance, integrity, compassion, self-care and ethical action.
3. Develop insight into the complex, contextual, and sometimes contradictory nature of social work theory, practice, policy, ethics and research.
4. The development of practice theory and skills "required to analyze situations, establish accountable relationships, intervene appropriately with clients and related systems and evaluate one's social work interventions" (CASWE, 2007).
5. This includes an understanding of a range of life events and processes that may impact people’s development, personalities and potential.
6. Develop a critical understanding of the personal and professional “use of self.”

C. Program Requirements

The five admission credits that form the basic BSW academic prerequisite reduce the 20 degree requirements to 15 credits for all students.

Required Courses
- SLWK 2310.03: Introduction to Community Social Work
- SLWK 2311.03: Development of Canadian Social Work and Social Welfare
- SLWK 2222.03: Advancing Social Justice
- SLWK 2333.06: Beginning Social Work Practice or SLWK 2334.03/2335.03
- SLWK 3010.06: Theoretical Foundations of Social Work Practice
- SLWK 3022.01: Perspectives on Social Welfare Policy
- SLWK 3033.03: Introduction to Research Methods and Statistics
- SLWK 3044.03: Understanding Research Methods in Social Work
- SLWK 3220.03: Cross-Cultural Issues in Social Work Practice
- SLWK 4010.06: Advanced Social Work Practice
- SLWK 4030.03: Field Practicum and Seminar or SLWK 4034.03/4035.03
- Social Work Elective

Social Work elective and Field Practicum and Seminar.

Distance students are required to take SLWK 2335.03, Beginning Social Work Practice which is the second half of 2314. The course is a combination of online study in the winter term with a two week on-campus (Dalhousie, Halifax, NS) residency component in the spring session, normally in early May.

Intermediate Health Education

Students are required to maintain enrollment in IPHE 4800 (see calendar section on Health Professionals, Interprofessional Health Education) for the duration of the program. Please register in IPHE 4900-00 (section 6). Successful completion of this course is a requirement for graduation, and will be recognized further with the awarding of a special Certificate in Interprofessional Collaboration to be presented by the Faculty of Health Professions. Students are asked to consult with their individual school/collage to determine the specific guidelines and expectations regarding the required portfolio.

Because of the nature of this course, registration in IPHE 4900 does not constitute a course overload.

Transfer Credit Policy

The 15 credits may be further reduced by the amount of transfer credits for which a student is eligible. Suitable university credits that have been completed with a grade of 60 (or better) are eligible for transfer credit consideration. The following procedure guides the assignment of transfer credit:

a. A maximum of five transfer credits (30 credit hours) be awarded.

b. As a general rule, transfer credit is assigned first to Elective Courses and then to Required Courses within the BSW curriculum.

c. Transfer credit for university Social Work courses taken prior to a student’s admission to the SSW may be assigned to required courses within the BSW curriculum. For 1st- to-2nd-year students are required to submit the course outlines for these courses (calendar descriptions are not sufficient).

d. No matter where transfer credit is assigned, all students must complete at least 10 credits offered by the SSW to complete the BSW degree.

e. The only exception to the above will be students transferring from other BSW programs. Transfer credits for these students will be assigned following an individual file review of the student’s previous course outlines to determine equivalency of content and credit value within the SSW curriculum. Transfer credit is assigned as fairly and appropriately as possible, although some loss of equivalency is necessary. Students who transfer from other BSW degree programs are governed by the regulation that any student with a previous degree is required to complete a minimum of six credits (36 credit hours) under Dalhousie instruction, and that any student without a degree is required to complete a minimum of 7.5 credits (45 credit hours) under Dalhousie instruction.

D. Course Load and Sequencing

1. Length of Program

Most students accepted to the BSW program have a degree on entry with the required cumulative grade point average. Such students normally require 10 credits (60 credit hours) to complete the BSW degree. Students studying on campus may register on a full-time basis for two years of study, or on a part-time basis (to a maximum of ten years). Distance students may register for a two-year (24 month) full-time program of study, or a three-year part-time program of study (to a maximum of 10 years).

Students registered who have only five credits on entry (usually persons with related work experience) are required to complete three full-time years of study (90 credit hours) or the part-time equivalent. Students registered with six credits or more on entry but less than 15 credits, (16-90 credit hours), complete a two-to-three program as determined by the number of prior credits in relation to the School's transfer credit policy. Course load and sequencing may vary from student to student depending upon the number of transfer credits and full or part-time status.

2. On-Campus Delivery

- For full-time students the normal load is 15 credit hours (i.e., five 0.3 credit courses) in the Fall and Winter terms.

- For part-time study the course load may be as minimal as one .03 credit course per term.

- The only Social Work courses offered in the Spring semester consist of one Social Work elective and Field Practicum and Seminar.

- It is important to pay close attention to the pre and co-requisites for each course.

- These are indicated in the course descriptions.

3. Distance Delivery

Distance Students are strongly encouraged to maintain their course sequencing schedule. Any changes must be in accordance with pre- and co-requisites as outlined in the calendar and are dependent upon availability of course offerings, especially electives. Students studying by distance will be assessed distance delivery fees in addition to tuition.

E. Registration

Registration is completed online for all students regardless of delivery method. For more information, go to:

The academic timetable is available online each year. On-campus Social Work courses have section numbers of 01 or 02. Online Distance Social Work courses have section numbers of 07 or 08, and a notation of “DIE.”

IMPORTANT: Please note that it is not possible to transfer between onsite and the online delivery or to register for courses other than those which apply to the delivery method for which the student has been accepted.

F. Field Education

The Field Practicum and Seminar course consists of a 700 hour placement at a community agency plus participation in a concurrent integrated seminar. For a full explanation of the placement process, rules and responsibilities please download the Field Manual at http://socialwork.dal.ca/Prospects%20Students.html.

Field Placements are organized by the Field Education Coordinator at the School of Social Work.
G. Advising Sessions for New Students

New on-campus students are expected to attend Orientation which is scheduled prior to the commencement of courses. Students may consult individually with the Student Services Coordinator to review the curriculum, advising forms and ask questions pertaining to the BSW program. Distance students are provided with an online orientation and information site and should contact the Distance Coordinator regarding their program schedule and questions.

III. School of Social Work Regulations: BSW Degree Program

All Bachelor of Social Work students are required to observe the University and Academic Regulations of Dalhousie University and the Faculty of Health Professions set forth in the annual Undergraduate Calendar. The website location is http://www.registrar.dal.ca - Undergraduate Calendar - Academic Regulations, University Regulations.

1. Grade Point Average Requirements

Faculty of Health Professions’ academic regulations apply to the BSW degree requirements. Students require a cumulative GPA of 2.0 to graduate. In addition, the School’s grade requirements specified in Items 2 and 3 below apply to components of the Social Work curriculum.

2. Grade Requirements for Social Work Courses

The minimum requirements for satisfactory completion of a Social Work course is C-.

• In the case of a core course, a student who earns a grade of less than C-, but is otherwise still eligible to continue in the program, must repeat the course until a grade of C- is attained.
• In the case of an elective, a student who earns a grade of less than C-, but is otherwise still eligible to continue in the program, must repeat the same elective or if not offered during the student’s course of study, a different elective until a grade of at least C- is attained. Social Work courses are all courses taken under BSW study other than those designated as general admission credits.

3. Required Withdrawal: Academic Dismissal

A student who fails to meet sessional GPA standards as defined in the Academic Regulations - Faculty of Health Professions must withdraw from the School for at least 12 months. (Please refer to Academic Regulations - Good Standing, Probation and Academic Dismissal, Dalhousie Undergraduate Calendar).

• A student who fails a repeated academic course must normally withdraw from the BSW Program.
• A student who fails SULWK 4013, Field Practice and Seminar is required to withdraw from the BSW Program.

4. Required Withdrawal on Grounds of Unsuitability

See University Regulations: Suspension or Dismissal from a Program on the grounds of Professional Unsuitability - Faculty of Health Professions.

5. Consideration of Readmission

Students are normally required to complete their undergraduate studies within ten years of their first registration and comply with the program requirements at the time of first registration. If a student is readmitted and cannot complete the program within 10 years they may be required to comply with the program requirements.

5.a Request for Readmission After Dismissal

Students who have been required to withdraw from the School of Social Work on the basis of academic dismissal may apply for readmission by the annual February 15 admissions deadline date that follows a minimum of 12 month’s absence from the School. Due to the competitive nature of the enrollment process, readmission of students is not guaranteed.

5.b Request for Readmission After Voluntary Withdrawal

Students who have voluntarily withdrawn from the School of Social Work prior to the establishment of a fixed withdrawal date may apply for readmission by the annual February 15 admissions deadline date. The application and all supporting documentation must be accompanied by a letter explaining the reasons for the interruption in the student’s studies and the decision to request readmission to the BSW degree program.

6. Appeals

A student wishing to appeal a decision based on School regulations, should consult with the Chair of the Committee on Undergraduate Studies for advice on appeal procedures.

7. Duration of Undergraduate Study

Students are normally required to complete the BSW degree within 10 years of their first registration (see Academic Regulations—Duration of Undergraduate Studies).

8. Workload Regular Academic Year

Five full-credit (i.e., 30 credit hours) per academic year shall be regarded as containing a normal workload. Permission for the Undergraduate Program Coordinator is required if this workload is to be exceeded, or if the planned workload in any one term (Fall or Winter) would amount to more than five half-credits (i.e., 15 credit hours per term).

• On-campus, part-time students may register for a minimum of one (0.5 credit (three credit hours) per term. Part-time status applies to students registered for no more than a total of 2.5 credits (15 credit hours) in the Fall and/or Winter terms. All new students are required to register in the first Fall term following their acceptance in order to maintain their place in the program.

9. Workload Summer Session (includes May-June and July-August)

Dalhousie regulations permit students to take one full credit (a total of six credit hours) in each of the May-June and July-August parts of Summer term. Social Work students may, following consultation with the Field Coordinator, register for the Field Practicum and Seminar course during this session.

The School usually offers one (0.5 credit Social work course in the May/June period for BSW campus students, provided that minimum enrollment requirements are met. Students in distance delivery take their elective courses in the summer sessions. Consult the timetable for current course offerings.

Permission of the Undergraduate Program coordinator is required to exceed the maximum credit unit value for Social Work courses. Any additional Social Work courses would be considered on an individual basis at the discretion of the Program Coordinator.

10. Students in Other Degree Programs (applicable for on-campus students only)

Students enrolled in degree programs at Dalhousie may, in conformance with their program regulations, choose their degree electives from Social Work Field of Practice electives. Permission from the instructor is required; course prerequisites and class size limitations apply. Students are able to enroll in Social Work electives only to the maximum credit value allowable for open electives by their degree requirements. Any additional Social Work coursework would be considered on the same basis as “No Degree.”

11. Special Students “Non-Degree” (applicable for on-campus students only)

Social Work courses are not available to persons on a “no degree” basis, with the exception of agency field instructors and other qualified Social Work professionals who are able to satisfy normal admission requirements. Permission of the Undergraduate Coordinator is also required.

Students enrolled in other Social Work degree programs may be permitted to enroll in specific courses, by application for admission as a visiting student with letter(s) of permission from the home university. Course prerequisites and size limitations apply. Further information may be obtained from the Student Services Coordinator.

12. Deferral Policy

Newly accepted applicants who, for reasons beyond their control, are unable to take up their position on the date from which they were accepted, may request a deferral of one, two, or three terms. No student may receive more than one deferral.

Requests for a deferral of admission should be sent in writing to the Admissions Coordinator of the School of Social Work by August 15th for the year in which they were offered admission. When a deferral is requested, the applicant should clearly state the reason for the deferral and, when relevant or appropriate, provide additional documentation to support the request for
example, medical certification. All defenses are subject to the approval of the Undergraduate Program Coordinator.

13. Audit by Agency Field Instructors

The School of Social Work permits Agency Field Instructors to audit Social Work courses. Prior permission of the instructor concerned is required. In order for the audit to show on a University transcript, the agency field instructor must abide by the University’s regulations as outlined in Academic Regulations—Audit of Courses.

14. Tuition Fees

Detailed information concerning tuition and fees is available in the Fees section of this calendar as well as [link to University regulations].

IV. Course Descriptions

The following courses are restricted to Social Work students.

SLWK 2010.03: Introduction to Community Social Work.

Community Development within social work is the facilitation of meaningful change within communities to improve the quality of life for members of those communities. This course considers various conceptions of community, elements of change processes, and specific change strategies. PREREQUISITE: /Co-requisite: SLWK 2111, SLWK 2222

SLWK 2111.XY.06: Development of Canadian Social Work and Social Welfare.

This course is delivered online for campus students. It is an introductory survey course, offering a beginning examination of topics and issues that will be examined in greater depth in other courses during the BSW program. By reviewing the historical development of the politics, principles, policies, practices, values, and ethics of a Canadian social work and social welfare students appreciate the contextual, complex, and sometimes contradictory nature of the social work profession. NOTE: Credit can only be given for the course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.

SLWK 2222.03: Advancing Social Justice.

This course introduces students to the current concepts of a social justice perspective including historical and current manifestations of inequality and injustice. It considers how the profession of social work has both advanced and impeded social justice. Particular attention is given to exploring the role of individuals in the promotion of equitable social relationships. This is a Prac/Field course that attends to cognitive, affective, and spiritual learning processes.

SLWK 2333.XY.06 (SLWK 2334/2335): Beginning Social Work Practice.

This course introduces students to the processes and practices of the social work profession including a range of beginning practice skills, social work values and ethics, the varied contexts of social work practice, and the roles and responsibilities of professional social workers. This multi-faceted course may include classroom instruction, simulations, seminars, workshops, contact with practicing social workers, visits to various social service agencies, and exposure to “first voice” experiences. This course requires 40 hours of self-directed learning activity time to be completed outside regularly scheduled class time. NOTE: Credit can only be given for the course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.

PREREQUISITE: /Co-requisite: SLWK 2111, SLWK 2222

SLWK 2444.03: Life Processes; Conceptualizations and practices for Critical Social Work.

This course critically explores a range of life events and processes that may impact people's development, personalization and potentials. Attention is given to how ethnicity, race, social class, ability, gender, sexual orientation, age, religion, and other social variables interact with the individual development. The need for differential reactions from workers in response to clients varied life experiences will also be considered.

PREREQUISITE: /Co-requisite: SLWK 2111, SLWK 2222

SLWK 3012.03: Perspectives on Social Welfare Policy.

As an introduction to social policy analysis, this course surveys a variety of perspectives on social problems and social policy issues, with a focus on contemporary debates. The impact of policy on service users is a central theme of the course.

PREREQUISITE: /Co-requisite: SLWK 2111, SLWK 2222

SLWK 3030.06: Theoretical Foundations of Social Work Practice.

The central theme of this course is the integration of theory and practice, recognizing that theory guides practice and practice informs theory. The first term consists of the theoretical foundations of social work, understanding their relation to social work practice from social, political, economic and historical positions. The second term offers an in-depth examination of the theoretical foundations of a variety of critical perspectives. Case applications are explored from a variety of practice situations and problem definitions.

PREREQUISITE: /Co-requisite: SLWK 2111, SLWK 2222

SLWK 3083.03: Introduction to Research Methods and Statistics in Social Work.

This course provides an introduction to both quantitative and qualitative research methods, with particular attention to examples from social work research. Students become familiar with the whole of the research process from the identification of the problem to the presentation of results, including the application of statistics. Students will be exposed to the full range of alternative research designs, including both quantitative and qualitative research methods.

SLWK 3084.03: Understanding Research and Research Methods in Social Work.

This course provides students with the research methods required to evaluate social work practice at the case and program level. Students will learn how to evaluate organizations, casework, plan evaluations, and analyze quantitative and qualitative approaches to evaluations. Emphasis will be placed on evaluating benefits and outcomes of interventions for clients.

PREREQUISITE: SLWK 3030.03 is required.

SLWK 3220.03: Cross-Cultural Issues and Social Work Practice.

This course provides an opportunity to critically examine theoretical frameworks for viewing marginalized racial, ethnic and cultural groups in society, to examine personal values as they relate to the above groups, to develop skills in working effectively with these groups, and to understand related social policies.

PREREQUISITE: SLWK 2222, SLWK 2111, SLWK 2233, SLWK 3012

SLWK 4010.06: Advanced Social Work Practice.

Building on a number of the foundational courses, this course focuses on advanced practice theories and skills including a critical analysis of ethics. Student will become proficient in applying a critical social work practice framework at the beginning practitioners’ level.

PREREQUISITE: SLWK 2111, SLWK 2222, SLWK 2233, SLWK 2444

CO-REQUISITE: SLWK 3030

SLWK 4033.09 (SLWK 4034/4035): Field Practicum and Seminar.

This course includes a 500 hour agency based practice placement, integrated seminars and the opportunity to develop a broad range of practice knowledge and skills sufficient to meet the requirements for entry level professional position. The field practicum is done at the end of a student’s program. Students are responsible to stay in touch with the Field Coordinator during the placement process and comply with various requirements of placement sites (for example: immunizations, CRC, Child Abuse Registry). Some sites may require separate disability insurance in lieu of eligibility for Worker Compensation Coverage. Such costs are the responsibility of the student.

PREREQUISITE: SLWK 2111.03, SLWK 2222.03, SLWK 2233.03, SLWK 2444.03

CO-REQUISITE: SLWK 3030.03, SLWK 4010.03

V. Electives

In keeping with the overall program goals of the BSW program of ISW, all elective courses are designed to help students develop a critical analysis of the major themes and current issues related to the course topics. In addition, all electives explore the differential impact of social constructs such as race, gender, class, age, sexual orientation, and ability on the particular issue or practice field. There are no pre or co-requisites for Social Work Field of Practice Electives. The format is generally a combination of lecture, discussions and small group.
activities. Participation of non-social work students is dependent upon approval of their home School/Department, course enrollment and the permission of the instructor. Not all electives are offered every year; check the timetable for each year’s offerings.

Possible Elective Offerings

- SLWK 3100: Africentric Perspectives in Social Work
- SLWK 3120: International Social Work
- SLWK 3130: Women and Violence
- SLWK 3135: Social Work and Mental Health
- SLWK 3140: Crisis Counseling
- SLWK 3150: Poverty and Inequality
- SLWK 3160: Social Work with Aboriginal Populations
- SLWK 3170: Feminist Counselling (Cross Listed with GWST)
- SLWK 3200: Law and Social Work
- SLWK 3220: Women and Social Change
- SLWK 3240: Queer-Centred Social Work Practice
- SLWK 3250: Social Work in Corrections
- SLWK 3270: Social Work in Addictions
- SLWK 3290: Advanced Counselling in Social Work Practice
- SLWK 3320: Social Work and Aging
- SLWK 3330: Independent Study
- SLWK 3350: Social Work with Groups
- SLWK 3360: Social Work and Adolescents
- SLWK 3370: Child Welfare
- SLWK 3375: Child Welfare with Aboriginal Populations
- SLWK 4180: Disability Policy and Service
The Faculty of Management includes four schools - Rowe School of Business, School of Information Management, School of Public Administration, and School for Resource and Environmental Studies, as well as the Marine Affairs Program. The commerce degree has a mandatory co-operative education format.

Students wishing to enrol in programs offered by the Faculty should address themselves directly to the Schools concerned for further information or for help in planning courses of study; for the Undergraduate Programs, contact the Undergraduate Academic Advising Office at (902) 494-3710.

Dalhousie's Norman Newman Centre for Entrepreneurship, in collaboration with the Centre for Entrepreneurship Education and Development (CEED), offers a Certificate Program in entrepreneurship – the Entrepreneurial Skills Program (ESP), which is open to all Dalhousie University students. ESP facilitates the development, growth and success of student-run ventures. Through extracurricular, individualized, experiential learning, you will apply skills learned in the classroom to your own ventures. Students participating in the program develop personal portfolios that illustrate their entrepreneurial capabilities.

What is the Entrepreneurial Skills Program (ESP)?
The program is designed to be taken over the length of your time as a student at Dalhousie and therefore shouldn't extend time to degree completion. Successful students will earn a certificate in entrepreneurship in addition to their associated Dalhousie University academic degree in their field of study. The program culminates in the development of a personal portfolio that illustrates an student's entrepreneurial capabilities which is then presented to an accreditation panel. Upon successful completion of ESP, students are accredited and receive a certificate indicating venture readiness.

How do I know if ESP is for me?
Like most things, you probably won't know till you know. What we can say is that ESP typically appeals to those students who have an interest in being the masters of their own destiny. If you've got an idea for a business that you want to start, either during University or after graduation, then you owe it to yourself to get involved with ESP.

What's in it for me? Why would I want to be part of ESP?
Being part of ESP introduces you to a network of like-minded individuals. It's no surprise that successful people surround themselves with talented, energetic and visionary people. If you want to learn more about being in business for yourself, or if you want to get better at being an entrepreneur, then ESP is a good start.

By enrolling in ESP, you become part of a growing cohort of students that are interested in making a difference in their own lives and the lives of others. Aside from networking and peer-to-peer learning opportunities, you will also have access to training subsidies, business coaching, and skills development opportunities that you can leverage to make yourself a better business owner (or make yourself more marketable as an employee). If you participate in Dr. Leach’s classes you may be able to pursue your venturing interests while at the same time fulfilling some of the class assignment requirements.
If I sign up, how big a commitment are we talking about?  
Students enrolled in ESP are free to choose their degree of involvement. Many students become heavily involved, attending most, if not all, ESP-sponsored events. Others attend a limited number of events. ESP is flexible enough to accommodate you and your personal, academic and professional schedules.

Is Dalhousie the only University that offers ESP?  
No. Mount Saint Vincent University also has an active ESP program. On occasion, Dalhousie and MSVU partner to run ESP-sponsored events that are attended by students from both Universities.

ESP sounds like a lot of work – what if it gets too much for me?  
Involvement in ESP is entirely optional. You are free to leave the program at any point. Unlike most academic programs, there’s no downside risk (mark-related/ academic) associated with dropping ESP.

Commerce

Rowe School of Business

Location: 6100 University Avenue
PO Box 15000
Halifax, NS B3H 4R2
Telephone: (902) 494-7080
Fax: (902) 494-1107

The Rowe School of Business provides quality programs at both the undergraduate and master’s levels that prepare students to contribute to and take leading positions in business and society. Graduates of the programs are competitive in the global, diverse and continually changing workplace. Teaching, scholarship and service link theory and practice to benefit students, the University and the business community in Canada and abroad.

Specific objectives are to:
• Attract, retain and educate students of high calibre from Nova Scotia, elsewhere in Canada and internationally.
• Develop students’ knowledge of key concepts and issues in business operations, as well as in-depth knowledge within specialized business disciplines.
• Develop students’ analytical and decision-making skills through a mix of theoretical and applied approaches including lectures, discussion groups, individual research projects, team projects and coursework, as well as comprehensive field projects.
• Enhance students’ team and communication skills, which are needed to succeed in careers and management.
• Develop knowledge through research and association with the academic and professional communities.
• Maintain strong ties with both the private and public sectors.

The undergraduate commerce program includes studies in the humanities and social sciences as well as in the functional areas of business. It is offered on a co-operative education (work/study) basis.

I. Bachelor of Commerce Program

The Rowe School of Business offers a four-year Bachelor of Commerce (Co-operative Education) Program that is accredited by both the Association to Advance Collegiate Schools of Business (AACSB) and the Canadian Association for Co-operative Education (CAFCE). It is one of the few mandatory co-op business degree programs in Canada. Cooperative education is an academic strategy that integrates on-campus study with off-campus work experience. The schedule for the Bachelor of Commerce Co-op Program includes seven academic terms (AT) and three work terms (WT), as follows:

- Year 1: AT1, AT2, FREE
- Year 2: AT3, WT1
- Year 3: WT2, AT5, WT3
- Year 4: AT6, AT7

The co-op program in Commerce requires a broad and general range of studies, including required and elective courses provided by the Faculty of Arts and Science. The program also allows students to choose a major in a variety of special areas. The Commerce program does not offer Minors or Double Majors.

The three work-terms each receive credit, but constitute a full work load. (See the Regulations section of this calendar for "overload" limits and conditions.)

A. Degree Requirements

- Four-year program - seven academic terms and three work-terms
- Total credits required - 20 full credits
- Required GPA for graduation 2.00
- Required work terms - 1 ½ credits
- Required core area courses - 10 ½ credits

Note: A suitable replacements for MATH 1115.03 is MATH 1100.03

- Commerce electives - four credits,
  - Work terms - 1 ½ credits

• Non-commerce electives - three full credits (of which 1½ credits must be at or above the 2000 level) selected from all courses offered in the University other than commerce, management and business.
• Free electives - one full credit (can be commerce, at or above the 2000 level, or non-commerce at any level)

NOTE: Students readmitted to the Commerce program will be subject to the Academic Regulations as stated in the Calendar for the year of readmission. For further information, contact the Rowe School of Business, Undergraduate Advising Office, 6100 University Avenue, Suite 2086, (902) 494-3710. Email: bcomadvising@dal.ca

B. Program Guide

Students normally follow a fixed program of study, as outlined below:

Academic Term One
• COMM 1010.03: Business in a Global Context
• COMM 1101.03: Financial Accounting
• COMM 1502.03: Core Business Applications
• ECON 1101.03: Principles of Microeconomics
• One non-commerce elective

Academic Term Two
• COMM 1710.03: Business Communications I
• COMM 2102.03: Managerial Accounting
• ECON 1102.03: Principles of Macroeconomics
• MATH 1115.03: Mathematics for Commerce
• One non-commerce elective

Work Term I - COMM 2801.03

Academic Term Three
• COMM 1720.03: Business Communications II
• COMM 2202.03: Finance I
• COMM 2401.03: Intro to Marketing
• COMM 2501.03: Statistics I
• One non-commerce elective

Academic Term Four
• COMM 2203.03: Finance II
• COMM 2204.03: Organizational Behaviour
• COMM 2502.03: Statistics II
• COMM 2603.03: Legal Aspects of Business
• PHIL 2011.03 Business Ethics

Work Term II - COMM 3801.03

Academic Term Five
• COMM 3100.03: Operations Management
• COMM 3311.03: Management Information Systems
• Three commerce electives
• One non-commerce elective

Academic Term Six and Seven
• COMM 4311.03 and 4312.03: Competitive Strategy & Strategic Mgmt
• Five commerce electives
• Two non-commerce electives
• Two free electives

During their fifth, sixth and seventh academic terms, students can either pursue a customized program of study, by choosing electives from a wide range of the functional areas of business, or they can follow a more specialized program, taking their elective courses towards a major.

Major in Accounting

Students must complete the following six courses:
• COMM 3100.03
• COMM 3111.03
• COMM 3114.03
• COMM 3115.03
• COMM 4101.03
• COMM 4125.03

Plus two of:
• COMM 3201.03
• COMM 3401.03
• COMM 4102.03
• COMM 4126.03
• COMM 4511.03

The professional accounting bodies allow certain exemptions in respect of courses taken in the Rowe School of Business. These differ from province to province. Particulars can be obtained from the provincial offices of the Association of Certified General Accountants, the Institute of Chartered Accountants, the Society of Management Accountants, and the Chartered Institute of Secretaries.

Students must obtain COMM 1101 and 2102 with an average of at least B-.

Major in Entrepreneurship

Students must complete the following six courses:
• COMM 3507.03
• COMM 3508.03
• COMM 3509.03
• COMM 3200.03 or COMM 3400.03
• COMM 3401.03 or COMM 3402.03
• COMM 4501.03

Note: Students must also complete either an entrepreneurial work term, as defined by the Norman Newman Centre for Entrepreneurship and Management Career Services; or an approved work term in an entrepreneurial setting.

Major in Finance

Students must complete the following three courses:
• COMM 3203.03
• COMM 3206.03
• COMM 4240.03

Plus three of:
• COMM 3207.03
• COMM 3208.03
• COMM 3209.03
• COMM 3100.03 or COMM 3105.03 or COMM 4540.03 or ECON 2200.03 or ECON 2201.03

Note: Courses outside of commerce, such as economics, are counted as non-commerce electives or free electives.

Major in International Business

Students must complete the following:
• Language Requirement; six credit hours (at a level appropriate to knowledge, as determined by department concerned)

Plus the following:
• COMM 3400.03
• COMM 4201.03
• COMM 4701.03

Plus one of the following:
• ECON 2213.03
• ECON 2219.03
• ECON 2334.03

Students must also complete one academic term or one work term in a country that is not their primary residence.

Note: Courses outside of commerce, such as economics, are counted as non-commerce electives or free electives.

Major in Managing People and Organizations

Students must complete the following:
• SOSA 1002.03 and SOSA 1003.03 or SOSA 1100.06 or SOSA 1200.06 or PSYO 1011.03/1021.03 and PSYO 1012.03/1022.03
• COMM 3300.03
• COMM 3310.03
• COMM 4315.03
Major in Marketing Logistics

Students must complete the following five courses:

- COMM 4401.03
- COMM 4402.03
- COMM 4404.03
- COMM 4406.03
- COMM 4407.03

Plus one of:

- COMM 4401.03
- COMM 4402.03
- COMM 4404.03
- COMM 4406.03
- COMM 4407.03

**Note:** Courses offered only in alternate years.

Major in Marketing Management

Students must complete the following five courses:

- COMM 1401.03
- COMM 1402.03
- COMM 3401.03
- COMM 3402.03
- COMM 3403.03

Plus one of:

- COMM 1401.03
- COMM 1402.03
- COMM 3401.03
- COMM 3402.03
- COMM 3403.03

**Note:** Courses offered only in alternate years.

Co-op Work Terms

(For more information visit: [http://www.dal.ca/comm](http://www.dal.ca/comm))

A work term is a period of time when a student gains practical experience in a business-related work environment. Each passed work term is an academic half credit and must meet the requirements listed below. Three passed work terms are required to graduate.

**During a work term a student is considered an employee of their work term employer with reference to the conditions of their employment and is a student with respect to academic evaluation only. The university does not accept liability for the student’s work environment.**

Students are remunerated according to employer policy and the labour laws of the jurisdiction in which they work.

Career and Recruitment Specialists conduct mid-term reviews with both the employees and students to ensure the work term objectives are being met.

**Work Term Requirements**

Students receive academic credit upon completion of the following for each work term:

1. Students must register for each work term (Comm 2801, Comm 3801 and Comm 3802) via Dal on-line.
2. Students must participate in co-op orientation.
3. Each work term must be completed within the designated semester with one employer. A work term must total at least 12 weeks with a cumulative total of 42 weeks over three work terms. A work term must be a minimum of 35 hours per week.
4. All jobs, including self-developed jobs, must be approved by Management Career Services.
5. Students are responsible for finding suitable employment and students sign a Co-op Education Program Agreement prior to the first work term accepting this responsibility. (Support for the job search is provided by Management Career Services and some job opportunities are posted on the myCareer job posting system.)
6. Employers commit to completing and submitting an evaluation detailing the student’s performance level which must be assessed as satisfactory to receive academic credit.
7. Students must submit a satisfactory work term report for each work term.

**Work Term Eligibility**

Only students who meet the prerequisites (see Section II. Courses Offered of this calendar) are eligible to go out on a work term. Students whose grades drop below a 1.70 GPA overall will be required to withdraw from the program. Also refer to the university regulation regarding probation.

Co-operative Education Fee

Students are charged a Co-operative Education Fee. In an effort to balance the cost, the fees are charged on each academic term until completion of the degree. While no fee is charged for the actual work term, any student taking an academic course during the work term will be charged an additional pro-rated fee. Co-op fees are prorated for part-time students.

These fees are non-refundable after the deadline dates listed in the University Calendar. Students who transfer into the program from another department or another institution are responsible for back payments.

Students taking a full academic term on a Letter of Permission are also responsible for the payment of co-op fees. Before the Letter of Permission can be granted, students must sign a form available from the Undergraduate Advising Office, which states they will pay the full co-op fees for terms done at another university.

Payment of all installments is required to obtain a Bachelor of Commerce Degree. Consult the Fees section of the Dalhousie University Calendar for details.

The Co-op fee covers:

- Administration of the co-op work term including, but not limited to:
  - Job search assistance (cover letters and resume building, interview preparation and debrief, coaching for self-developed job search strategies)
  - Orientation workshops and other training
  - Networking opportunities with employers (including special events, competitions, information sessions, corporate tours, mentoring etc)
  - Work term monitoring and mediation of unanticipated situations
  - Post work term debrief
  - Development of job opportunities
  - Access to on-line job posting site and job posting administration
  - Interview space and co-ordination
  - Facilitation of job offers
  - Tracking of eligibility and job search activity

**D. Management Information Systems**

All faculty members and staff have their own personal computers and students have access to a computer lab with 63 personal computers. All personal computers in the School are based on the latest family of processors (currently Pentium IV, 1.6 GHz). They are fully networked and run Windows software and the latest Windows-based applications. All machines have full access to the Internet and students have a choice of web browsers. Students have a choice of printing on black-and-white or colour laser printers. There is also a full-sized color scanner available free of charge.

**E. Exchange Programs**

Dalhousie offers Commerce students the opportunity to study abroad in a variety of countries all over the world, including Denmark, France, Sweden, Norway, Korea and Germany (a complete list of partnerships can be found at cimit.management.dal.ca). While participating in this extremely popular program, students develop international contacts, immerse themselves in a different culture, and gain valuable international experience. For more information, please contact Tim Richard, Student Exchange Coordinator, by email at tim.richard@dal.ca or by telephone at (902) 494-2224.

**II. Course Descriptions**

**Courses Offered**

Consult the current timetable to determine in which term(s) each course is offered. It may not be possible to offer all the electives listed below every year.

Students should bear this in mind when planning their program.
COMM 1010.03: Business in a Global Context.

The course provides an introduction to the international context of Canadian political, economic and business activity. It presents a sampling of the most salient issues facing managers in business, labour and public service organizations. Emphasis is placed on developing an understanding of Canada’s competitive position today, and of the historical background and current influences on this position. The focus of the course will be on lectures, the text, guest speakers, and more specifically what is said in class by your instructor as well as in tutorials by your tutorial leader and your colleagues. Leading edge ideas and concepts - many of which are not written exclusively to any one particular text or article - will be introduced by your instructor during the lectures, and may be reiterated through hand-out notes in time to time.

NOTE: Students in BCom Program can not receive credit for Mgmt 1003.03 or Mgmt 1001.03.

FORMAT: Lecture 3 hours
EXCLUSION: COMM 1003.03

COMM 1101.03: Introductory Accounting I. (Financial).

An introduction to the principles and practices used by accountants in processing and communicating data, both within and outside the organization. Emphasis is on financial accounting and reporting, with the following objectives:

• To introduce the theoretical framework upon which financial statements are based, and examine the major underlying concepts and principles;
• To demonstrate basic financial accounting methodologies, and develop the analytical and procedural skills related thereto;
• To understand the information content of conventional financial statements, and the inherent limitations of accounting data.

FORMAT: Lecture 3 hours. Plus tutorials, as required. Written and computer-based assignments.
EXCLUSION: MGMT 2101.03

COMM 1502.03: Core Business Applications: Introduction to Computers.

The course focuses on how business applications, namely Word Processors, Spreadsheets, Enterprise Resource Planning (ERP) systems e.g. SAP and Dino. Visualization (tools) contribute to the management, analysis and reporting of data with respect to business processes and how they can aid in solving the business problems. This course begins with an overview of Management Information Systems, before proceeding through several modules that involve data-to-document transformations, along with data integrations between various applications. We use spreadsheets to perform routine business calculations, and various online data sources using business digital dashboards. The analyses are then collated and summarized using features of word processors to produce a final report for each case. In the course, the choice of an appropriate methodology will increase the complexity of the analyses and reports. As the course progresses, business simulations will be used to provide experiential and immersive learning opportunities. The course is taught with both in-class lectures and self-paced computer laboratory exercises.

NOTE: MGMT 1601.03, ASSC 1000 or CSCI 1200 will not be counted in the Commerce program.
EXCLUSION: COMM 1801.03, MGMT 1601.03, INFO 1601.03, ASSC 1000, CSCI 1200.03

COMM 1700.03: Preparing for Business in Canada.

This course is a mix of lectures, seminars, workshops and guest presentations. Activities covered in course will be targeted towards a Canadian workplace environment. Students are expected to participate in class discussions, presentations and group projects. The activities in class will be based on practical applications of business communication strategies and language skills. Students will demonstrate their progress in-class activities and take home assignments.

FORMAT: Seminar

COMM 1710.03: Business Communications I.

Students will learn how to be effective speakers and presenters. The primary goal of this course is to introduce the first-year students to the types of oral communication used in today’s workplace. The course will start with introducing a philosophy for clear, effective, and ethical communication, how to construct analyses, develop arguments and use to self-reflection and individual or group projects. The course will cover a variety of topics such as networking, creating effective job application cover letters and resumes, interviewing, formal and informal presentations, job-search skills, learning, teams, dynamics and conducting meetings, while doing research on potential employers. Students will have the opportunity to practice their skills and evaluate the skills of others.

FORMAT: Lecture 3 hours

COMM 1720.03: Communications II.

This course follows COMM 1710.03. While the primary goal of this course is to teach students how to properly prepare written business correspondence, second-year students will also learn about academic writing (the concept of intellectual property, library resources, essay writing, and critical thinking). The course will again start with introducing a philosophy for clear, effective and ethical communication, how to construct analyses, develop arguments, make strategic choices on an audience, structure, choice of channel, type of message, gain an understanding of the audience, the content and context culturally sensitive and ethically correct messages in the appropriate channel and form. Additionally, they will learn about communication theory and the importance of communication in the workplace so that they will learn about critical listening, critical thinking, and how to be strategic writers. By the end of the course, students will be able to understand business contexts and learn how to make choices of medium, channel, form and also how to write business messages, e-mail messages, letters, reports, and proposals, analytical reports, participate and learn about group work.

FORMAT: Lecture 3 hours
PREREQUISITE: COMM 1710.03
EXCLUSION: INFO 1003.03, ENGL 2100.03, CSCI 2100.03
Students taking COMM 1720 cannot receive credit for these courses

COMM 2102.03: Introductory Accounting II. (Managerial).

An introduction to the use of accounting information by managers, within the organization. Emphasis is on management accounting and analysis, with the following objectives:

• To develop an understanding of the kinds of accounting information managers need;
• To examine managerial accounting methodologies and develop the analytical and procedural skills related thereto;
• To prepare accounting reports which are useful for management planning, control and decision-making;
• To develop an awareness of the limitations of managerial accounting information.

FORMAT: Lecture 3 hours. Plus tutorials as required. Written and computer-based assignments.
PREREQUISITE: COMM 1103.03 or MGMT 2001.03
EXCLUSION: MGMT 2002.03

COMM 2202.03: Finance I.

An introduction to the problems faced by business managers in the acquisition and effective use of the firm’s assets, and its application to the problems faced by financial managers. This course covers an in-depth study of capital budgeting and long-term investment decisions in national and international contexts, financial analysis and its application to the problems faced by financial managers. This course covers an in-depth study of capital budgeting and long-term investment decisions in national and international contexts, capital structure, dividend policy, and the fundamentals of options and futures.

FORMAT: Lecture 3 hours
PREREQUISITE: COMM 1103.03, ECON 1101.03 and ECON 1102.03, MATH 1151.03 or MATH 1000.03
EXCLUSION: MGMT 2201.03

COMM 2203.02: Finance II.

This course provides students with an overview of the theory of corporate finance and its application to the problems faced by financial managers. This course covers an in-depth study of capital budgeting and long-term investment decisions in national and international contexts, capital structure, dividend policy, and the fundamentals of options and futures.

FORMAT: Lecture 3 hours
PREREQUISITE: COMM 2202.03
EXCLUSION: MGMT 2201.03

COMM 2303.03: Introduction to Organizational Behaviour.

This course will provide an overview of organizational behavior theory, as well as an introduction to the practical applications of that theory, within the context of the external and organizational forces that impact management. Through mini lectures, cases and discussion, students will be introduced to the theoretical basis of managing people in organizations. Key topics will include individual factors, such as personality and performance management; and contextual issues, such as organizational culture and change as well as the interactions of individual factors. Additionally, they will learn about communication theory and the importance of communication in the workplace so that they will learn about critical listening, critical thinking, and how to be strategic writers. By the end of the course, students will understand business contexts and learn how to make choices of medium, channel, form and also how to write business messages, e-mail messages, letters, reports, and proposals, analytical reports, participate and learn about group work.

FORMAT: Lecture 3 hours
PREREQUISITE: COMM 2302.03
EXCLUSION: MGMT 2301.03

COMM 2303.04: Business Communication I.

Students will learn how to be effective speakers and presenters. The primary goal of this course is to introduce the first-year students to the types of oral communication used in today’s workplace. The course will start with introducing a philosophy for clear, effective, and ethical communication, how to construct analyses, develop arguments and use to self-reflection and individual or group projects. The course will cover a variety of topics such as networking, creating effective job application cover letters and resumes, interviewing, formal and informal presentations, job-search skills, learning, teams, dynamics and conducting meetings, while doing research on potential employers. Students will have the opportunity to practice their skills and evaluate the skills of others.

FORMAT: Lecture 3 hours
The objective of the course is to familiarize you with marketing's mode of inquiry-the way marketers look at the world. As a marketer you should be able to: 1) ask the right questions about markets, 2) analyze data into relevant information, 3) discover market opportunities, 4) set goals, 5) create a marketing plan that includes clear target markets, as well as product, price, distribution and communication strategies, and 6) implement and control a marketing program. Students will be expected to apply their knowledge to real world scenarios. This provides students with hands-on group decision making and data analysis skills, and they are specifically responsible for creating product, pricing, promotion and placement strategies for a brand or group of brands. The course will also train you in a number of skills that are necessary for higher level courses and career advancement (i.e., case analysis and analytical report writing).

FORMAT: Lecture 3 hours

COMM 2100.03: Corporate Investments.

This course is intended to provide an understanding of the corporate financial reporting model and related conceptual issues. The course develops essential financial statement comprehension skills, revenue and expense recognition and a wide range of asset accounting issues, including receivables and inventories, long-term investments, property, plant and equipment, leases, intangibles, share capital, and retained earnings. The course emphasizes Canadian generally accepted accounting principles (GAAP) and the role of financial statements in decision making.

FORMAT: Lecture 3 hours

COMM 2003.03: Legal Aspects of Business.

This course provides an overview of some of the major legal problems that might be faced by the business community. It examines the meaning and sources of law, the legal remedies, the justice of the law, the role of courts in an orderly society, the law of contracts and application of principles from equity, the law of the agency, the law relating to the sale of goods, bailment, contracts of employment, negotiable instruments, real property, mortgages, partnerships, international transactions, corporations and secured transactions. Students must make extensive use of the law library in written reports on a series of cases.

FORMAT: Lecture 3 hours

COMM 2001.03: Work-Term One, Bachelor of Commerce Co-op.

Unless written permission is obtained, in advance, from the Commerce Program Manager, this must be done in the Winter term of the second year.

PREREQUISITE: At least 6.2 full credits, which must include COMM 1502.03, COMM 1710.03 and COMM 3720.05 plus at least 4 other full credits which must be in the Com. Area (ECON, COMM 1101.03 and ECON 1002.03 and MATH 1115.03 or MATH 1000.03).

COMM 3103.03: Financial Reporting and Statement Analysis.

This course is intended for students who are not majoring in accounting. The approach to this course is analytical rather than procedural, with an emphasis on a user perspective. Topics include analysis of financing, investing and operating activities, profitability, and credit risk. Accounting topics include pensions, intercompany transactions, leases, currency translation, and cash flow.

FORMAT: Lecture 3 hours

COMM 3105.03: Intermediate Financial Accounting I.

This course covers the theory and practice of public auditing according to generally accepted auditing standards (GAAS). The course emphasizes Canadian Auditing Standards (CASS) and considers the effects impacting on the setting of standards and the current level of standards. This includes pronouncements of the accounting profession, reporting standards, professional ethics, audit planning, risk assessment, and examination of internal control in both manual and computerized environments, standards for the quality of evidence, statistical sampling and the sufficiency of evidence, documentation and working papers. The course considers typical audit programs for examination of financial statement elements and fraud awareness.

FORMAT: Lecture 3 hours

COMM 3104.03: External Auditing.

The major objective of this course is to develop a deeper understanding of the key topics in cost management accounting and their management applications. The selected topics to be covered include costing systems, cost-volume-profit analysis, cost and profit variance analysis, control and performance evaluation in decentralized organizations. This course is intended primarily for students who plan to major in the accounting area.

FORMAT: Lecture/course discussions 3 hours

COMM 3203.03: Financial Institutions.

This course is intended to introduce students to the structure and operations of financial institutions and the role they play in the growth and operation of capital markets. The course concentrates on reviewing the operation and functioning of various types of financial institutions and their roles in the economy. An emphasis will be put on measuring different types of risks and methods for managing these risks for financial institutions, particularly the banks. The topics include (but are not limited to) interest rate risk management, credit risk management, liquidity risk management, market risk management, and so forth. The role of derivative securities in various hedging strategies will also be reviewed.

FORMAT: Lecture 3 hours

COMM 3206.03: Investment and Money Management.

This course is designed to provide the student with an overview of current investment theories and the application to the real world. In particular, a considerable effort will be made to compare and contrast the activities of money managers with the ones that are suggested in various theoretical models. The intention is to provide our students with the needed skills to successfully face the challenging world of portfolio and money management.

FORMAT: Lecture/seminar 3 hours

COMM 3207.03: Canadian Securities.

This course is intended for students who are not majoring in accounting. The approach to this course is analytical rather than procedural, with an emphasis on a user perspective. Topics include analysis of financing, investing and operating activities, profitability, and credit risk. Accounting topics include pensions, intercompany transactions, leases, currency translation, and cash flow.

FORMAT: Lecture 3 hours

COMM 3208.03: Cost Management.

EXCLUSION: MGMT 1501.03 and MGMT 2502.03; MATH 1060.03; STAT 1060.; ECON 2260.03; ENGM 2032.03

COMM 3209.03: Financial Institutions.

This course is designed to provide students with an overview of current investment theories and the application to the real-world. In particular, a considerable effort will be made to compare and contrast the activities of money managers with the ones that are suggested in various theoretical models. The intention is to provide our students with the needed skills to successfully face the challenging world of portfolio and money management.

FORMAT: Lecture 3 hours

COMM 3210.03: Corporate Investments.

This course is intended to provide students with an overview of current investment theories and their application to the real world. In particular, a considerable effort will be made to compare and contrast the activities of money managers with the ones that are suggested in various theoretical models. The intention is to provide our students with the needed skills to successfully face the challenging world of portfolio and money management.

FORMAT: Lecture 3 hours

COMM 3211.03: Intermediate Financial Accounting II.

This course is a follow-up to COMM 2100.03. It concerns mostly the relationship of two or more measurements. Topics covered in detail are analysis of variance, regression, correlation, and multiple regression, and time series. Statistical software is featured prominently throughout the course for statistical computations.

FORMAT: Lecture 3 hours

COMM 3201.03: Investment and Money Management.

This course is designed to introduce students to the structure and operations of financial institutions and the role they play in the growth and operation of capital markets. The course concentrates on reviewing the operation and functioning of various types of financial institutions and their roles in the economy. An emphasis will be put on measuring different types of risks and methods for managing these risks for financial institutions, particularly the banks. The topics include (but are not limited to) interest rate risk management, credit risk management, liquidity risk management, market risk management, and so forth. The role of derivative securities in various hedging strategies will also be reviewed.

FORMAT: Lecture 3 hours

COMM 3204.03: External Auditing.

The major objective of this course is to develop a deeper understanding of the key topics in cost management accounting and their management applications. The selected topics to be covered include costing systems, cost-volume-profit analysis, cost and profit variance analysis, control and performance evaluation in decentralized organizations. This course is intended primarily for students who plan to major in the accounting area.

FORMAT: Lecture/course discussions 3 hours

COMM 3205.03: Financial Institutions.

This course is designed to introduce students to the structure and operations of financial institutions and the role they play in the growth and operation of capital markets. The course concentrates on reviewing the operation and functioning of various types of financial institutions and their roles in the economy. An emphasis will be put on measuring different types of risks and methods for managing these risks for financial institutions, particularly the banks. The topics include (but are not limited to) interest rate risk management, credit risk management, liquidity risk management, market risk management, and so forth. COMM 3206.03: Investment and Money Management.

This course is designed to provide the student with an overview of current investment theories and the application to the real-world. In particular, a considerable effort will be made to compare and contrast the activities of money managers with the ones that are suggested in various theoretical models. The intention is to provide our students with the needed skills to successfully face the challenging world of portfolio and money management.

FORMAT: Lecture/seminar 3 hours

COMM 3207.03: Canadian Securities.

The topics covered in the course include an overview of capital markets and the financial services industry; financial statement analysis; an overview of the Canadian economy; financial institutions; securities; investment funds; derivatives; security analysis; financing, listing and regulation; financial planning.
Course focuses on the study of leadership as a process of influencing people, COMM 3310.03: Reflections on Leadership.

EXCLUSION: MGMT 3309.03
PREREQUISITE: COMM 2303.03
FORMA T: Lecture/discussion 3 hours and three or four 1.5 hour tutorials early in the semester.

COMM 3307.03: Managing the Family Enterprise. The course has two purposes. First, it provides an organized framework for students to understand the dynamics and special issues of family firms. Second, it is designed to help students develop skills in analysing and communicating with family members. Therefore, it is especially intended for students who come from families which are in business or for students considering joining a family business. Others who wish to explore a key segment of Canadian business are also welcome.

The course relies on field projects, guest speakers, case studies, videos, research papers and extensive discussion to explore the territory of managing family businesses.

FORMA T: Lecture/discussion 3 hours
PREREQUISITE: COMM 1010.03 and COMM 2401.03
COMM 3403.03: Consumer Behaviour. This course will introduce students to knowledge, skills, and attitudes (KSAs) that are critical to managing human resources effectively. Topic areas include: understanding what the successful manager needs to know, understanding the self, communications, interpersonal negotiations, goal setting, managing innovation and change, handling conflict and anger, performance evaluation, counselling and feedback, and management attitudes needed for success. Significant amounts of classroom time will be devoted to behaviour modelling exercises, role plays, case studies, and group discussions. Course participation forms a significant part of final course grade.

FORMA T: Lecture/discussion 3 hours
PREREQUISITE: COMM 2303.03
COMM 3310.03: Reflections on Leadership. Course focuses on the study of leadership as a process of influencing people, rather than dealing with leadership at the organizational level. The course will comprise a) a study of leadership theory, b) an opportunity to observe leadership through case studies, films, and various exercises, and c) an opportunity to practice leadership by leading a group in a short course-related project. The parameters of ethical leadership will be emphasized.

PREREQUISITE: COMM 1010.03 and COMM 2303.03 or (MGMT 2303.03 and MGMT 2304.03)
COMM 3401.03: Consumer Behaviour. In view of the very competitive situation in modern business, the firm that is successful designs and sells products that meet the desires of specific consumer segments. Thus, analysis and prediction of consumer behaviour are increasing in importance and sophistication. An extensive body of research evidence from marketing and the behavioural sciences is explored and evaluated to assess the marketing implications of elements of consumer behaviour. Emphasis in course will be focused on how to incorporate an understanding of consumer behaviour into strategic marketing plans.

FORMA T: Lecture/discussion 3 hours
PREREQUISITE: COMM 3307.03

COMM 3402.03: Marketing Communications. This course is designed to provide students with an understanding of how the major types of marketing communications messages are created and delivered. This means students should come away knowing the strengths and weaknesses of the major marketing communication functions (e.g., advertising, public relations, direct response, sales promotion, social marketing, publicity, etc.) and the major media used by them. By the end of the course, the student will have the ability to: (1) establish a knowledge base of researching and evaluating a company’s marketing and promotional situations; (2) gain hands-on experiences in the creation of an integrated marketing communication campaign that impact customer relationships and brands; and (3) develop effective communication strategies and programs for real company situations. For those students who are not marketing majors, this course will also provide a basic understanding of persuasive skills which can be used no matter what career they choose in the future.

FORMA T: Lecture/case method/ applied project work 3 hours
PREREQUISITE: COMM 2401.03
COMM 3404.03: Marketing Research. Students learn the scientific method in solving marketing problems and creating marketing intelligence from it. The course is designed to teach the scientific method in solving marketing problems and creating marketing intelligence from it. COMM 3408.03: Transportation Modes and Policy.
This course will introduce the student to the business of managing a transport enterprise. It will focus on understanding the regulatory (policy) environment and competition associated with transportation. The course will also explore operational considerations across a number of transport modes. The intent will be to explore the impacts of policy and model structure on marketing the transportation company and attracting it for growth. The course is suitable for students wishing to work in the transport industry, in the supply chain, activities of a transport customer or, tangentially, in the strategic management of any service business.
PREREQUISITE: COMM 2401.03
COMM 3409.03: Personal Selling and Sales Management.
This course is designed to provide an understanding of the tools and problems facing today's sales professionals and sales managers and to familiarize one with current personal selling and sales force management practices. Specifically, this course provides an exposure to personal selling concepts, techniques and procedures used in buyer-seller relations such as prospecting, sales call planning, negotiation skills, overcoming obstacles, persuasion and closing skills. It also covers sales management topics including the organization of the sales force, personnel management, selection, sales training, motivation, compensation, evaluations and supervision, budgets, quotas, territories and sales control. Sales role-plays, mock sales presentations, case studies and classroom discussion are used to extend the basic text material and encourage other points of view.
PREREQUISITE: COMM 2401.03
COMM 3410.03: Services Marketing.
This course is designed to provide an understanding of the marketing of intangible goods and services (versus tangible goods) share a number of attributes that present unique challenges for marketing. The course seeks to prepare students to face these challenges. It is ideal for students who wish to work in a service industry (e.g., banking, insurance, travel, hospitality, consulting) or in a service capacity in a manufacturing sector (e.g., sales, customer relations). Emphasis will be placed on understanding the distinctive characteristics of services, the implications of these distinctions for marketing, the role of service quality as a determinant of customer satisfaction, and the measurement of these phenomena. Examples will be drawn from the North American and European service industries.
PREREQUISITE: COMM 2401.03
COMM 3411.03: Direct Marketing.
The focus of this course is on the role of advertising, promotion and new distribution channels to enable direct communications and distribution. These changes have been a result of the increasing power of the consumer, among channel members and the manufacturers of products and services, where manufacturers have sought to maintain direct contact with their customer. The course will focus on the development of a direct marketing strategy by introducing students to the tools of direct marketing, the strategic management of the household and the development of relationship marketing, and the introduction of new media such as the Internet. The skills required in direct marketing are in strong demand within the Canadian economy. This course will focus on the development of a direct marketing strategy that requires an understanding of the tools of direct marketing, the creative process, and the development of a strategic marketing plan. This course will focus on the role, their use, and their role in supporting business operations and decision making, how they need to be managed, and the impact that they can have on organizations' and professionals' competitive positions. Students will be exposed to SAP ERP systems and Business Analytics tools via hands-on lab work and exercises.
PREREQUISITE: COMM 1001.03, COMM 1002.03
COMM 3801.03: Work-Term Two, Bachelor of Commerce Co-op.
Unless written permission is obtained, in advance, from the Commerce Program Manager, this must be done in the Fall term of the third year.
PREREQUISITE: At least 9 full credits earned, including COMM 2001.03 and at least 2 full credits in the Core Area (Commerce, ECON 1101.03 and ECON 1102.03, MATH 1113.03 or MATH 1000.03, PHIL 2001.03)
COMM 3802.03: Work-Term Three, Bachelor of Commerce Co-op.
Unless written permission is obtained, in advance, from the Commerce Program Manager, this must be done in the Summer term of the third year.
PREREQUISITE: At least 11 full credits earned, including COMM 3001.03 and at least 10 other credits in the Core Area (Commerce, ECON 1101.03 and ECON 1102.03, MATH 1113.03 or MATH 1000.03, PHIL 2001.03)
COMM 4000.03: Directed Reading and Research.
This course offers the student the opportunity to explore in greater detail a particular area of interest. The content of the course is negotiated with the individual instructor involved. The student and instructor must develop a proposal and submit it to the Curriculum Committee for approval. Guidelines are available from the Undergraduate Advising Office, Suite 2086, Rowe Building.
COMM 4101.03: Advanced Topics in Accounting I.
This course provides a theoretical framework for the study of accounting policy. Cases analysis is an integral part of the course. Topics covered include accounting policy choice in a dynamic framework, an introduction to the impact of accounting policy choice in the market, the role of the professional accountant in the market, and the role of the professional accountant in the market. As well, the course may consider various practical and theoretical topics, including the role of the professional accountant in the market, and the role of the professional accountant in the market. As well, the course may consider various practical and theoretical topics, including the role of the professional accountant in the market, and the role of the professional accountant in the market.
PREREQUISITE: COMM 3005.03 and COMM 3011.03
CROSS-LISTING: BUSI 6101.03
EXCLUSION: COMM 3113.03

COMM 4102.03: Advanced Topics in Accounting II. 
This course provides an in-depth study of the interrelated topics of intercorporate investments, business combinations, consolidated financial statements, foreign currency transactions, and foreign operations. The course also covers segmented reporting and bankruptcy, and not-for-profit accounting and fund accounting. PREREQUISITE: COMM 2202.03 and COMM 3111.03

COMM 4112.03: Accounting Research.
This course focuses on the fundamentals of financial reporting, establishing the context in which financial reporting is developed and how financial reporting can best describe the economic value and economic performance of enterprises. Topics include accounting under ideal conditions, complications caused by information asymmetry, adverse selection and moral hazard challenges in the decision-based models of accounting information users, standard-setting frameworks and mechanisms, governance and social responsibility implications of reporting issues. The course will follow a seminar format, including presentations and analysis of current events. Students will be required to formulate a research proposal as a major course deliverable. PREREQUISITE: COMM 2202.03, COMM 3105.03, COMM 3111.03

COMM 4125.03: Taxation.
This course is an introduction to the taxation system in Canada, with a focus on personal income tax. The course will be a mixture of lecture style classes and problem solving classes. The class will be interactive and students will be expected and encouraged to participate. By the end of the course students should be able to:

- Calculate income tax payable for individuals
- Identify and analyze tax issues both orally and in writing

PREREQUISITE: COMM 1101.03 or MGMT 2101.03; and ECON 1101.03 and ECON 1102.03 and COMM 3105.03

COMM 4126.03: Taxation II.
This course is a follow up to COMM 4125 and focuses on corporate income tax. The course will be a mixture of lecture style classes and problem solving classes. The class will be interactive and students will be expected and encouraged to participate. By the end of the course students should be able to:

- Calculate income tax payable for corporations
- Identify and analyze tax issues both orally and in writing

PREREQUISITE: COMM 4125.03 or COMM 4120.03 EXCLUSION: COMM 4121.03

COMM 4201.03: International Financial Management.
This course is an introduction to derivatives and the main applications of derivatives for both investment purposes and corporate finance use. As an introductory or first course in derivatives, the goal is to cover the central concepts and issues that will permit the student to start using the products and understanding the profit advantages, as well as the issues with derivative transactions. The course covers both quantitative pricing issues, as well as the many practical qualitative issues involved with the use of derivatives. Students should be comfortable with basic statistics and algebra. Knowledge of calculus is not required for this course. Students should also be comfortable with Excel spreadsheets and basic Excel mathematical functions.

PREREQUISITE: COMM 2202.03 and COMM 2205.03

COMM 4240.03: Advanced Corporate Finance. 
This course will help students learn to apply fundamental ideas of corporate finance to real-life problems of business and personal financial decision making. Topics that will be discussed include valuation, mergers and acquisitions, financial distress, capital structure, dividend policy, and corporate governance. The course builds on concepts and techniques that students have learned in finance, accounting, statistics, and economics. Case studies will be used to bridge the gap between finance theory and its applications to practical problems in corporate finance.

PREREQUISITE: COMM 2202.03 and COMM 2205.03

COMM 4250.03: Theory of Finance. 
This course is designed to complement other finance courses that have been previously offered to finance majors. It covers core theory of capital markets and corporate finance. Topics include functions and operations of capital markets, analysis of consumption-investment decisions, diversification and portfolio selection, valuation theory and equilibrium pricing of risky assets, and investment and financing decisions of firms. Theoretical foundations for further study and practical applications will be emphasized. PREREQUISITE: COMM 2202.03 and COMM 2205.03

COMM 4310.03: Managing the Venturing Process. 
Managing the Venturing Process is a capstone course that explores the strategic elements required to venture successfully. By linking theory and practice, the course is designed to familiarize students with entrepreneurial strategies for the emerging venture, for the growing venture, and for sustaining growth in the established venture. Venturing will be explored in the context of both for-profit and non-for-profit objectives and will examine nurturing single entrepreneurs as well as organizational entrepreneurs. As this is a capstone course students will be expected to use knowledge acquired in other business courses.

PREREQUISITE: COMM 3305.03 or MGMT 3907.03 CROSS-LISTING: MGMT 4901.03

COMM 4306.03: Organizational Change, Theory and Design. 
This course will provide students with an understanding of contemporary organizational theories and their application to organizational structure, design and change. The main thrust of the course will be a practical analysis of why organizations change, why organizational structures and processes evolve, and how change affects individuals. The objective of the course is for students to be able to understand and to analyse change and decision making skills necessary for the effective introduction of change into complex organizations.

NOTE: This course replaces COMM 4305.03 PREREQUISITE: COMM 2205.03 and COMM 3309.03 EXCLUSION: COMM 4305.03, COMM 4302.03, MGMT 3320.03

COMM 4315.03: International and Intercultural Management. 
This senior level course is designed to provide students with the knowledge and skills necessary for effective management and leadership styles, training for international assignments, cross-cultural staffing, inter-cultural negotiations, ethics and social responsibility, expatriate and repatriation management, and designing global structures.

RECOMMENDED: COMM 3301.03 and COMM 3309.03

FORMA T: Lecture 3 hours, cases, exercises PREREQUISITE: COMM 2205.03
COMM 4340.03: Corporate Governance.

The course focuses on corporate governance in the relationship between the top management team (TMT), the board of directors (BoD), and other stakeholders, especially shareholders. The collapse of once successful, large corporations across the globe illustrates the precariousness of their board members and the degree of their lack of concern for stakeholders’ interests. The reputation of audit and consulting companies associated with these ill-fated corporations suffered a great setback, leaving stakeholders wondering whom to trust to safeguard their interests.

Students will take an in-depth look at corporate governance tried, as indicated above, that controls the modern corporation. Accordingly, this course will deal with the current corporate world and provide students with a broad view of board, board responsibility and accountability, CEO tenure and compensation, shareholder and other stakeholder representation, corporate board’s vis-a-vis social responsibility and ethics, and competitive corporate governance across North America, Europe, and selected Asian countries.

FORMAT: Lecture
PREREQUISITE: COMM 4511.03

COMM 4351.03: Competitive Strategy

Competitive Strategy focuses on how a firm competes at various levels that is, functional, business, and corporate. The course is designed to analyze the sources of competitive advantage among firms and to develop knowledge and skills necessary for effectively analyzing and formulating strategy. Accordingly, the course examines the role of the general manager in the organization, environmental and industry factors; organizational resources and capabilities, the creation of value through functional, business, and corporate-level strategies, and, finally, how an organization leverages its resources and capabilities to extend in product and geographic scope internationally. Building upon this foundation, students will practice formulating well thought-out strategy recommendations that are specific and actionable. Throughout the term, students will be exposed to a wide variety of organizations through readings, case studies, and experiential exercises.

PREREQUISITE: At least 12.5 full credits earned, including COMM 3002.03 and at least 9 other full credits in the area core (Commerce, ECON 1101.03 and ECON 1102.03, MATH 1000.03, PHIL 2081.03 and any area courses)
EXCLUSION: COMM 4601.05

COMM 4352.03: Strategic Management.

Strategic Management builds on COMM 4351.03: Competitive Strategy. After a short review of the external environment faced by the organizations, the focus of this course turns to the examination of the internal workings of organizations. Mindful of the fact that the general manager’s job includes the task of implementing competitive strategy and managing strategic changes. This Strategic Management course will deal with the organization as a holistic entity.

In COMM 4352.05, various pedagogical methods are used to develop and engage students, including presentation and skills required to build and grow a business environment. It also emphasizes analytical tools and conceptual frameworks that are used to develop and grow the organization. This course will be taught in the teaching lab with a combination of individual and group simulations interspersed with short lectures. An active learning approach in this course will include hands-on learning using SAP ERP, as well as ERP plans, a game-based SAP ERP simulation. There will be a combination of learning opportunities from previous experiences, conceptually and skillfully learning the procedures and technical skills with SAP and playfully learn how Enterprise Systems facilitate Business Intelligence which can be used to lead a company in a competitive environment.

PREREQUISITE: COMM 4351.03 and COMM 3111.03

COMM 4510.03: Corporate Communication.

This course offers an introduction to principles, concepts, and software applications as well as an actual experience of project management in a practical project team setting. The course also introduces theories and practices of project management as related to project objectives, lifecycle stages, and control variables such as time, cost, and scope. Students will gain insight into the realities of managing a project and will learn to adapt to varying financial, political and cultural challenges encountered within project teams and organizations.

PREREQUISITE: COMM 3101.03 and COMM 3111.03
CROSS-LISTING: MGMT 4335.03

COMM 4523.03: Information Technology Project Management.

The course will provide an introduction to the use of systems used in production and service organizations. The course will focus on the role of the information system in the overall strategy of the organization and the development of strategic plans for information systems. The course will also cover the specific applications of information systems in the areas of production and service organizations.

PREREQUISITE: COMM 4501.03 and COMM 4506.03
CROSS-LISTING: BUSI 6504.03
COMM 4701.03: International Business Strategy.
The objective of this course is to help the students understand why firms expand overseas and how foreign operations differ from domestic ones. It provides the students with the necessary knowledge for a career or further study in international business. The course introduces the basic concepts of international business from a manager’s perspective. It examines the causes and problems that arise when business operations extend across national boundaries and become international in scope or character. The emphasis is two-fold. First, consideration is given to the characteristics and contemporary dynamics of the world economy. Second, analysis is made of the development of the multinational firm and of the adaptation of the basic managerial functions due to internationalization. The course orientation is pragmatic and managerial. Through case studies, class discussions, assigned readings, and lectures, the students are expected to develop the skills for analyzing situations and formulating solutions in an international business context.
PREREQUISITE: COMM 3802.03 or MGMT 4001.03
EXCLUSION: COMM 3701.03
A. Degree Requirements

- Four-year program
- Total credits required: 20
- Required core area courses: 10.5 credits:
  - ECON 1100.03
  - MGMT 1000.03
  - MGMT 1001.03
  - MGMT 1002.03
  - MGMT 1003.03

  - MGMT 3204.03
  - MGMT 3205.03
  - MGMT 3206.03
  - MGMT 4901.03

- Required Management electives:
  - Three half-credit courses in management electives are required
  - One full-credit Writing Course (see Section C.)

- Open Electives:
  - No credit required
  - Seven full credits (14 half credits), chosen from all courses offered in the University

- Management electives:
  - A minimum of three full credit (six half credit) courses at the 1000 level is permitted.
  - A minimum of three full credit (six half credit) courses in Commerce is permitted.

- Writing Requirement:
  - One full credit Writing Course (see Section C.)

- GPA requirements:
  - Required GPA for graduation: 2.00
  - Total credits required: 20
  - Four-year program

- Majors:
  - One of the first five credits chosen should be selected from a list of courses in which written work is considered frequently and in detail. These writing courses are approved by the Writing Across the Curriculum committee and are listed on page 125 of the academic calendar. Courses which satisfy the Writing Requirement are identified by the following symbol and notation in their formal description: W: Writing Requirement

D. Combined Degree

The School of Health and Human Performance and the Faculty of Management offer a five-year program in which a student graduates with both degrees, Bachelor of Science (Recreation)/Bachelor of Management. Please consult the School of Health and Human Performance in the calendar (page 395) for more information.

E. Majors

During their fifth, sixth, seventh and eighth academic terms, students can either pursue a general program of study, by choosing electives from a wide range of the functional areas, or they can follow a more specialized program, taking their elective courses towards a major. Seven interdisciplinary thematic majors are available to students who focus their studies in specific aspects of management.

Entrepreneurship and Innovation Major

Required Courses:
- SOSC 1010.03: Introduction to Anthropology
- SOSC 1100.06: Introduction to Sociology
- PSYO 1011.03/1012.03: Introduction to Psychology and Neuroscience 1 and II
- PSYO 1021.03/1022.03: Introduction to Psychology and Neuroscience 1 and II

Leadership and Organization Major

Required Courses:
- COMM 3308.03: Managing the Family Enterprise
- MGMT 3100.03: Management Skills Development
- MGMT 3120.03: Organizational Theory
- MGMT 3503.03: Human Resource Management

Management and Globalization Major

Required Courses:
- One of:
  - SOSC 1000.06: Introduction to Anthropology
  - SOSC 1200.06: Introduction to Sociology
  - PSYO 1011.03/1012.03: Introduction to Psychology and Neuroscience 1 and II
  - PSYO 1021.03/1022.03: Introduction to Psychology and Neuroscience 1 and II

Economics of Global Warming or ECON 2217.03: Women and the Economy

Public Sector Management Major

Required Courses:
- MGMT 2501.03: Statistics for Managers I
- MGMT 2502.03: Statistics for Managers II
- MGMT 3601.03: Government Policy towards Business
- MGMT 3602.03: Government Policy
- ECON 2216.03: Economics of Global Warming or ECON 2217.03: Women and the Economy

Knowledge Management Major

Required Courses:
- MGMT 3503.03: Human Resource Management
- MGMT 4501.03: Advanced Knowledge Management
- MGMT 4540.03/INF 6504.03: Database Management Systems or INFX 2640.03: Use and Design of Databases

Sustainable Resources and the Environment Major

Required Courses:
- MGMT 3308.03: Managing the Venturing Process
- MGMT 3309.03: Advanced Resource/Environmental Management 1
- MGMT 4702.03: Advanced Resource/Environmental Management 2

The College of Sustainability offers a Major in the BMgmt program. For complete details about the College, its programs and courses please see the College of Sustainability section on page 44 of the Calendar.

#### Required Courses:
- SUST 1000.06  
- SUST 2000.06 or SUST 2001.06

These full credits from the Approved ESS Electives list: at least two of these credits must be above 2000 level, and at least two of these credits must be from outside MGMT.

See the College of Sustainability on page 44 for course descriptions and the list of Approved ESS Electives.

### F. Majors - Electives

#### Major in Entrepreneurship and Innovation

Students need four half credits from list. A minimum of one half credit from each of columns A and B.

### G. Minors

#### For Bachelor of Management students

Bachelor of Management students can undertake a minor from various departments within the Faculty of Arts and Social Science, the Faculty of Science or the Faculty of Computer Science. They should consult advisors in those faculties for the most current information on the requirements for particular minors.

### H. Optional Internship

The Bachelor of Management (BManag) internship is a minimum of 32 weeks (approximately eight months) of consecutive, full-time work experience related to your studies. Internships can be at large multi-national corporations or small offices, at a not-for-profit organization or a government department. We will work with you to find the right internship for you.

Bachelors of Management students currently in the second year of their program are eligible to apply for the Internship Program.  Please meet with your Program Administrator/Academic Advisor, Margie Muise (margie.muise@dal.ca) or Katie Haigh (katie.haigh@dal.ca) to discuss your course plan.

Acceptance to participate in the Internship Program will be assessed on the following criteria:

1. Completion of Application Form
2. Statement of Intent
3. Resume
4. GPA of 2.70 or higher in the two terms preceding application submission
5. Positive recommendations from references
6. Personal interview with Management Career Services (to be arranged once complete application is reviewed)
7. Full participation in the Internship Prep Seminar, MGMT 4895 (no credit value) which is held each fall

#### Internship Fee

Students accepted into the Internship Program are charged an Internship Fee. This fee is non-refundable after the deadline date provided by Management Career Services.

#### Full participation in the Internship Prep Seminar, MGMT 4895 (no credit value) which is held each fall

#### Minor Programs

For a current list of minors please see "Minor Programs" on page 126 of the Undergraduate Calendar

For students registered in the BA, BSc, Blinf and BCSc programs:

The minor in management is available to students registered in the BA, BSc, Blinf and BCSc programs. The requirements are as for the appropriate degree program with completion of the following courses:

**Required courses:**

- MGMT 1001.00: Introduction to Management Issues
- MGMT 1002.00: Introduction to Management Issues II
- ECON 1101.03: Micro Economics
- ECON 1102.03: Macro Economics
- MGMT 1103.00: Statistics for Managers
- MGMT 2102.03: Resource and Environmental Management
- MGMT 2801.03: Government Structure

Plus an additional two full credits of MGMT courses at or above the 2000 level.

through the payment of a mandatory Management Career Services Fee. This fee is
provided for part-time students. The fee covers the following:
• Individual Resume and Cover Letter Reviews
• Career Recruitment Workshops including: Winning Resumes, Effective
Interviewing, Job Search Strategies and Networking
• On Campus Job Recruitment
• Employer Information Sessions
• Special Events (i.e. Interview Competition, Recruiting Events such as Super
Wednesday and Tap the Talent and Corporate Tours, both locally and in other
cities)
• Strong Interest Inventory (career assessment tool)
• Bachelor of Management Internship Program Application Processing

Students have access to a Career & Recruitment Specialist within Management
Career Services. There are six Career & Recruitment Specialists (CRS), each
responsible for a specific area, and currently there are two CRS staff dedicated to
work with Bachelor of Management students and are responsible for the
administration of the optional internship program. Bachelor of Management
students may also access another CRS if they require specific information on an
area.

Career & Recruitment Specialists work with students individually or in group
sessions to help with the following:
• Identifying student strengths, interests and priorities
• Helping students establish which career path and work environment is right for
them.
• Planning a job search strategy
• Writing effective resumes and cover letters
• Building and interacting with a network of contacts
• Preparing for interviews
• Providing support, advice and monitoring of the work term
• Providing job search assistance for graduating students

Career Recruitment Specialists are also trained to mentor and guide students during the
often frustrating time when students are trying to make career decisions and are
searching for the right job. In typical situations, they assist by:
• Listening to the student’s concerns
• Providing feedback to help students gain insight
• Advising students on how to develop strategies
• Supporting and encouraging students to meet their individual goals.

III. Course Descriptions

MGMT 1000.03: Managing Organizational Issues I.
The course places management in its broadest context and helps students from
different disciplinary backgrounds understand the complex social, economic, ecological, political
and technological forces shaping 21st century leadership in the public, private and
non profit sectors. Key themes explored in the course include systems thinking, value-based approaches to management, and personal and professional
development. We use those who successfully complete MGMT 1000/1003 as holistic, critical and strategic thinkers, acting with urgency to engage
stakeholders, individually and in teams, to achieve personal, organizational and societal goals through interdisciplinary approaches. MGMT 1000/1003 graduates
will possess the ability to think globally, strategically, boldly, holistically and
inter-disciplinarily, while considering local ecological, economic and cultural
differences.

MGMT 1001.03: Managing Organizational Issues II.
A continuation of the concepts and principles from the first term of the course, with emphasis on making inferences based on observed data. Topics
covers include descriptive statistics, probability, random variables, estimation, hypothesis testing and statistical software.

NOTE: Students enrolled in the Bachelor of Management must register for this
course.
EXCLUSION: COMM 2101.03 and COMM 2102.03, MATH 1060.03 or STAT
1060.03, ECON 2260.03, ECON 2222.03
PREREQUISITE: MGMT 1000.03

MGMT 1601.03: Electronic Information Management.
This course will teach students how to use computer applications to record and
process data to create and communicate information and knowledge. Students will also
learn the fundamentals of database design. They will also learn to design and create web pages with html.

NOTE: ASCS 1000 or CSCL 1200 will not be counted in the Bachelor of
Management program.

MGMT 1702.03: Ecosystem Goods and Services.
The course explores the ecosystem goods and services on which our societies and
economies depend, and the environmental basis of those goods and services. The course will cover the nature and function of matter, energy, ecosystems, primary
producers, natural resources, biodiversity, ecological footprints, and feedback loops, and their importance for managers.
EXCLUSION: MGMT 1700.06, ENV 1100/CYI/6, ENV 1000/06

MGMT 2101.03: Financial Accounting.
This course covers the basic financial accounting methodologies and accounting
principles used in the measurement and reporting of an organization’s operating,
financing and investing activities to external parties. Students develop an
understanding of the information content of financial statements and techniques
for analyzing the financial statements. The organizational context includes
business, government and not-for-profit settings. The coverage includes
examination of the accounting process, basic issues in financial reporting, and the
financial statement disclosure requirements.
PREREQUISITE: MGMT 1000.03, MGMT 1001.03
EXCLUSION: COMM 2101.03/COMM 1101.03

MGMT 2102.03: Managerial Accounting.
This course examines how accounting can provide information to assist
management in their planning, decision-making and performance evaluation
activities – whether for businesses, governments, not-for-profit organizations
or special projects. Both qualitative and quantitative information supports the
decision-making. Topics will include the understanding and determination of cost
behaviours, an examination of the problems of tracing and allocating costs to the
purpos(es) their incurrence was intended to serve, and the criteria for determining which costs are relevant in answering types of decisions or areas of responsibility.
PREREQUISITE: MGMT 2101.03
EXCLUSION: COMM 2102.03

MGMT 2104.01: Public Sector Financial and
Managerial Accounting.
This is required for all students who have completed COMM 2101.03 or COMM
1101.03. It covers the components that are covered in the MGMT courses and
absent from typical private sector accounting courses.
PREREQUISITE: COMM 2101.03 or COMM 1101.03

MGMT 2303.03: People, Work, and Organizations:
Micro Organizational Behaviour.
Organizational behaviour and the study of work organizations and management
draw on a number of disciplines within social sciences to help us understand
and make sense of individual behaviour and human action in groups and
organizations. Through a combination of individual and group work and a blend
of classroom-based activities supplemented by additional resources and materials
available via BLS, this course will explore concepts and theories relating to micro
aspects of organizational behaviour. Topics include: individual motivation,
personality, perception, attitudes and values, and the relationships between
individual choices and actions. Links will also be made to practice and processes
in organizations (e.g. rewards, appraisal, feedback, performance appraisals and
organizational commitment).
PREREQUISITE: MGMT 1000.03 and MGMT 1001.03
EXCLUSION: COMM 2303.03

Students who have taken COMM 3101.03 Introduction to Managing People are
currently required to take MGMT 3309.03 (Management Skills Development)
for full exclusion to MGMT 2303.03 and MGMT 2304.03.
MGMT 2304.03: People, Work and Organizations: Macro Aspects of Organizational Behaviour.
Profit Sectors.
Management principles. Discussion also covers new organizations and intellectual
activities might include: lectures, videos, seminars, internet exercises, and
processes, leadership, power and politics; organizational cultures, processes of organizational
change, and legal and ethical issues and frameworks. To achieve a balance between theoretical and practical learning, the teaching methods will combine mini-lectures with in-class/on-line exercises, cases, presentations and group facilitated discussions.
PREREQUISITE: MGMT 2303.03 or equivalent. MGMT 2304.03 is a
alternative to the ways in which organizations create, identify, capture, process, and distribute knowledge. Topics include knowledge generation and classification, knowledge markets, knowledge transfer and skills, and knowledge management principles. Discussion also covers new organizations and intellectual capital, the integration of human resources, training and development, information systems and security, and business units to implement knowledge management strategies, and new roles and responsibilities for knowledge workers.
PREREQUISITE: MGMT 1001.03, MGMT 1002.03. Second year students
MGMT 2702.03: Resource and Environmental Management.
This course provides an overview of principles and techniques and explores challenging issues of environmental and resource management. Sustainable development provides a framework for examining the issues involved in the extraction, manufacture, use and disposal of materials, energy, and products, and the management tools available for addressing these issues.
PREREQUISITE: MGMT 1702.03
EXCLUSION: MGMT 1700.06, ENV 1100.06 or ENV 1000.06
MGMT 2801.03: Government Structure.
The course introduces students to the organizing principles and structures of the three levels of Canadian government, federal, provincial and municipal. The focus is particularly directed at the permanent public service and seeks to examine the collective “whole of government” influence on Canadian affairs. For those interested in business this is an important course as it provides an understanding of the core structures business must understand when dealing with government. As citizens this course provides a framework for understanding how you might protect your rights.
PREREQUISITE: Second year student; MGMT 1000 and MGMT 1001
EXCLUSION: PUB 2201.03
MGMT 2803.03: Management in the Public Sector.
This course provides an introduction to the principles and methods used in the management of financial, human, and information resources in public sector organizations, with an emphasis on leadership in the Canadian context. It is designed to meet the educational needs of undergraduate students who are interested in a career in public service, the arts, or non-profit organizations, and who wish an exposure to modern management practices in the public sector.
FORMAT: WebCT
PREREQUISITE: MGMT 2303.03
MGMT 3201.03: Financial Management.
This course is an introduction to the techniques and core principles for making optimal financial decisions for profit, not for profit and public sector organizations. The emphasis is on understanding the role of finance in an integrated management framework. Concepts covered include stakeholder analysis, financial planning, valuation and investment, financial statements, and financial markets.
PREREQUISITE: ECON 1001.03, ECON 1002.03, MGMT 2303.03, MGMT 2304.03
EXCLUSION: COMM 2202.03 and COMM 2203.03
MGMT 3308.03: Managing the Family Enterprise.
The course relies on field projects, guest speakers, case studies, videos, research papers and student case discussions to explore the territory of managing family businesses.
PREREQUISITE: MGMT 2303.03
MGMT 3309.03: Management Skills Development.
This course will expose students to key knowledge, skills, and attributes (KSAs) considered critical to managerial success. Such an exposure is designed to provide the students with behaviours which will help ensure that, when managing human resources, staff will perform at or near peak capabilities. Topics include: understanding the successful manager needs to know, understanding personal selves, communication, interpersonal negotiations, goal setting, managing innovation and change, handling conflict and anger, performance evaluation,
counselling and feedback, and management attitudes needed for success. Significant amounts of classroom time will be devoted to behaviour modeling exercises, role plays, case studies, and group discussions.

**FORMAT**: Lecture/discussions/live-class activities

**PREREQUISITE**: MGMT 2300.03 and MGMT 2304.05

**CROSS-LISTING**: COMM 3300.03

**MGMT 3320.03**: Organizational Theory.

In this course we will examine how organizations function, how the environment in which they operate changes and how organizational design and change strategies can increase their effectiveness. The objective of the course is to provide students with conceptual skills to understand organizations and practical skills to influence organizational behavior.

**PREREQUISITE**: MGMT 2303.03, MGMT 2304.05

**EXCLUSION**: COMM 4306.03

**MGMT 3400.03**: Introduction to Real Estate Management.

The purpose of this course is to provide students with an overview of the various aspects of property management in the Canadian environment. Topics include: Residential Management, Building Operations, Lease Programs, and Initiatives, Facility Management, and Site Development.

**PREREQUISITE**: Mgmt 2101 and Mgmt 2102 or Comm 2111, 2201 and 2205

**MGMT 3501.03**: Operations Management.

This course introduces the student to some of the standard techniques used in managing operations in manufacturing, services, as well as non-profit organizations. Topics include: inventory, supply chain, project management, quality and operations. Cases are used to build general skills, illustrate the application of techniques and general approaches to managing operations in the practical work environment.

**PREREQUISITE**: MGMT 1000.03, MGMT 1001.03, MGMT 2401.03, MGMT 1500.03, MGMT 3201.03

**EXCLUSION**: COMM 3401.03

**MGMT 3601.03**: Information in a Networked World.

This course provides an introduction to the economic, political, and social dimensions of today’s networked information economy. It considers the historical development of information and knowledge production, issues related to control versus the free flow of information, the ethical and legal aspects of information management, and organizational use of information management for storing and processing information, managing knowledge, and making decisions.

**PREREQUISITE**: MGMT 2601.03

**MGMT 3602.03**: Professional Communication Skills.

This course will introduce students to the broad range of written and oral communication skills needed by managers, including how to adapt a document or presentation for particular audiences and purposes; how to select a suitable method of organization, how to make good use of graphics, how to work effectively as part of a collaborative project team. Students will have the opportunity to practice their communication skills and techniques in small groups, and in formal presentations before the whole class.

**PREREQUISITE**: Writing Requirement

**EXCLUSION**: COMM 1701.03 and COMM 1702.03 or (LIBS 1002.03 and LIBS 1003.03 or INFO 1002.03 and INFO 1003.03) or (MGMT 1002.03 and MGMT 1003.03)

**RESTRICTION**: Third-year student

**MGMT 3603.03**: Beyond Google.

Contextually relevant information is essential to support decision making and strategic planning by individuals, groups, and organizations. This course discusses the theory and practice of searching for information. From the level of searches assessment through systematically scanning through electronic, print and human sources effectively, efficiently and ethically. The use of technologies to streamline search processes will be emphasized, as well as the behavioral, affective and cognitive aspects of human information behavior.

**PREREQUISITE**: MGMT 2601.03

**MGMT 3620.03**: User-Centred Design.

This course takes a human-centred perspective in an analysis of the design of the technologies we use, from our cell phones to web pages and the tools of everyday life. Throughout the course term, students will examine what makes good and bad design and will explore how to integrate ultimate use into the design process. Students will learn how to use simple prototyping techniques and how to evaluate interfaces.

**FORMAT**: Lecture/discussions/live-class activities

**PREREQUISITE**: MGMT 1601.03 or permission of instructor.

**MGMT 3701.03**: Resource/Environmental Problem-Solving 1: Sustainable Ecosystems.

The course introduces students to concepts and methods for analyzing ecosystem sustainability across a spectrum of intended use from full legal protection to intensive urban and industrial development. Students learn how the abiotic and biotic components of the environment interact, and how to integrate analyses of biodiversity, soil, air, and water in assessing ecosystem sustainability. Climate change is explored in a major driver of ecosystem change. A range of management and policy mechanisms for protecting ecosystems and fostering their sustainability in the face of multiple stresses is explored.

**PREREQUISITE**: MGMT 1700.06 or ENVs 1000.06 or ENVs 1001.06 or MGMT 1502.03 and MGMT 2702.03

**MGMT 3702.03**: Resource/Environmental Problem-Solving 2: Sustainable Industries.

The course introduces students to concepts and methods for analyzing industrial sustainability based on both renewable (e.g., forests, fisheries, agriculture) and non-renewable (e.g., minerals, fossil fuels) resources. Students learn how natural resources are managed and used, and how sustainable businesses and innovative economic enterprises can be based on sustainable resource use. A range of management and policy mechanisms for ensuring resource sustainability is explored.

**PREREQUISITE**: MGMT 1700.06 or ENVs 1000.06 or ENVs 1001.06 or MGMT 1502.03 and MGMT 2702.03

**MGMT 3802.03**: Public Policy.

This course serves as an introduction to the public policy process with an emphasis on the interplay between policy and the four thematic areas of study and professional practice upon which the Faculty of Management has been formed – the private sector, the environment, the public sector and information technology. Students assume the role of a policy analyst during the course and pursue a policy problem of their choosing through the policy process that culminates in a policy project briefing and paper.

**PREREQUISITE**: MGMT 2601.03 and MGMT 2602.03 or equivalent political science courses with a focus on Canada, with the permission of the instructor.

**MGMT 3810.03**: Government Policy Toward Business.

The focus of this course is twofold: first, how governments shape business behaviour through policy, regulation, state ownership, and other forms of intervention; and secondly, how collaboration is a growing reality among public sector and private sector organizations and the implications for each sector and society as a whole. The course aims to understand the fundamental difference between the public interest and the private interest and how each are served through contemporary governance systems involving public, private and civic sectors. While the emphasis will be on the Canadian environment, a comparative perspective will also be used in light of many issues that are increasingly transnational in scope. Students will be able to develop a critical view of government interventions and also get a sense of what's been and where government action is warranted and where it is not.

**FORMAT**: Lecture/seminar

**PREREQUISITE**: MGMT 2601.03, MGMT 2602.03, ECON 1101.03, ECON 1102.03 or equivalent

**MGMT 3902.03**: Starting Lean.

This course provides real-world, hands-on learning on what it's like to actually start a scalable company or venture. This course is not about how to write a business plan. It's not an exercise on how smart you are in a classroom, or how well you use the research library to size markets. And the end result is not a PowerPoint slide deck for a VC presentation.

This is a practical course – essentially a lab, not a theory or 'book' course. You will be putting your hands dirty talking to customers, partners, and competitors, as you encounter the chaos and uncertainty of how a startup actually works. You'll work in teams learning how to turn a great idea into a great company. You'll learn how to use a business model to brainstorm each part of a company and customer development to get out of the classroom to see whether anyone other than you would want/use your product. Each day will be a new adventure outside the
Managing a project and will learn to adapt to varying financial, political and such as time, cost, and scope. Students will gain insight into the realities of project team setting. The course also introduces theories and practices of project applications as well as an actual experience of project management in a practical environment. The course is designed to introduce internship students to aspects of career development and preparation for their internship experience. Upon acceptance into the Bachelor of Management Optional Internship Program (Winter Term), students register for MGMT 4895 for the Fall Term. This course is designed to introduce internship students to aspects of career development and preparation for their internship experience. NOTE: This course carries no credit hours. Details on the Bachelor of Management Internship Program are available at www.dal.ca/mcs/internship.

MGMT 4985.03: Internship Prep Seminar.

The optional internship will take place between academic year 3 and the final academic year. It is designed to offer opportunity to combine relevant job experience with classroom studies. Students can work with professionals in their chosen field which will increase employability after graduation. NOTE: This is a Pass/Fail course with only a maximum of six credit hours to be applied to the Bachelor of Management degree.

MGMT 4986.03: Management Internship.

The optional internship will take place between academic year 3 and the final academic year. It is designed to offer opportunity to combine relevant job experience with classroom studies. Students can work with professionals in their chosen field which will increase employability after graduation. NOTE: This is a Pass/Fail course with only a maximum of six credit hours to be applied to the Bachelor of Management degree.

MGMT 4987.03: Management Internship.

The optional internship will take place between academic year 3 and the final academic year. It is designed to offer opportunity to combine relevant job experience with classroom studies. Students can work with professionals in their chosen field which will increase employability after graduation. NOTE: This is a Pass/Fail course with only a maximum of six credit hours to be applied to the Bachelor of Management degree.

MGMT 4988.03: Management Internship.

The optional internship will take place between academic year 3 and the final academic year. It is designed to offer opportunity to combine relevant job experience with classroom studies. Students can work with professionals in their chosen field which will increase employability after graduation. NOTE: This is a Pass/Fail course with only a maximum of six credit hours to be applied to the Bachelor of Management degree.

MGMT 4999.03: Management Internship.

The optional internship will take place between academic year 3 and the final academic year. It is designed to offer opportunity to combine relevant job experience with classroom studies. Students can work with professionals in their chosen field which will increase employability after graduation. NOTE: This is a Pass/Fail course with only a maximum of six credit hours to be applied to the Bachelor of Management degree.
MGMT 4901.03: Managing the Venturing Process.

Managing the Venturing Process is a capstone course that explores the strategic elements required to venture successfully. By linking theory and practice, the course is designed to familiarize students with entrepreneurial strategies for the emerging venture, for the growing venture, and for sustaining growth in the established venture. Venturing will be explored in the context of both for-profit and not-for-profit objectives and will examine nurturing single entrepreneurs as well as organizational entrepreneurs. As this is a capstone course, students will be expected to use knowledge acquired in other business courses.

I. General Information
Dalhousie Medical School was organized in 1868, but medical teaching was carried out by the independent Halifax Medical College from 1875 to 1911, when the Faculty of Medicine was re-established by the University.

The Faculty provides a complete medical training leading to the degree of Doctor of Medicine (MD). Nationally accredited postgraduate training in Family Medicine and specialty training is provided in University-affiliated hospitals in Nova Scotia, Prince Edward Island and New Brunswick. Continuing Medical Education is provided to the practitioners of the three Maritime Provinces.

The Faculty is fully accredited by the Liaison Committee on Medical Education and the Committee on Accreditation of Canadian Medical Schools.

The Medical School has strong research programs in basic biomedical sciences, clinical sciences, population health and medical education.

A. Mission Statement
Serving Maritime Canada, the Faculty of Medicine enables excellence in health care through our medical education and research programs in partnership with government, health authorities and health care providers.

The Department of Medical Neurosciences provides facilities for advanced study and research in Neuroscience, Histology, Embryology, Cell Biology, Neuroendocrinology and Evolutionary Biology. The goals of the graduate program are to provide in-depth research training in a particular aspect of anatomy, neurobiology or a related field, and to introduce the student to methods of teaching anatomy.

I. Course Descriptions

ANAT 1010.03: Basic Human Anatomy.
This course is offered by the Department of Medical Neuroscience primarily to students in the Schools of Nursing (Section 01). A limited number of seats are available for Special Health Professions, Arts and Science, or Non-Degree students. Note that this course is also offered by DISTANCE EDUCATION (ANAT 1010.03, Section 02) during the Regular Term (Fall or Winter). Upon successful completion of this course, the student will be able to explain and describe, at a basic level, the gross anatomy and histology of the human body. This course uses an online Virtual Anatomy Laboratory.

ANAT 1020.03: Basic Human Anatomy.
This course is offered by the Department Medical Neuroscience primarily to students in Recreation, Physical and Health Education and Kinesiology. A limited number of seats are available for Special Health Professions, Arts & Science, or Non-Degree students. Note that this course is also offered by DISTANCE EDUCATION (ANAT 1020.03, Section 02) during the Regular Term (Fall or Winter). Upon successful completion of this course, the student will be able to explain and describe, at a basic level, the gross anatomy and histology of the human body. This course uses an online Virtual Anatomy Laboratory.

ANAT 2160.03: Introduction to Human Histology.
Histology is the study of the structure of cells, tissue and organ systems, and utilized information derived from both light and electron microscopy. This course complements studies in anatomy, cell biology, physiology, and biochemistry, broadening the understanding of how organisms function. Cross-listed with BIOL 2160.03.

ANAT 3421.03: Comparative Vertebrate Histology.
An advanced histology course surveying the whole range of vertebrate tissues and organs. The material is approached from a comparative perspective, considering tissue and organ histology throughout the major vertebrate classes. Cross-listed with BIOL 3421.03.

Rauk, R., BA (Toronto), PhD (Berkeley), Major Appointment in Departments of Psychiatry and Psychology

I. Introduction

Pharmacology is the study of the actions and fates of drugs in biological systems. Studies of the interaction of drugs with their receptors and the elucidation of the cellular mechanisms underlying the resulting responses are central to Pharmacology. It is also important to understand how drugs are handled in the body, why they produce adverse effects, and how they interact with each other. In addition, scientists often use drugs as tools to determine the basic mechanisms that underlie both normal and pathological conditions in biology. A solid understanding of the principles of Pharmacology is essential for any scientist who wishes to use drugs as tools properly. The experimental approaches used in Pharmacology are varied, ranging from bioassay, electrophysiology, chemical and biochemical analysis to molecular biology.

II. Degree Programs

Students intending to pursue graduate training in Pharmacology are encouraged to study Pharmacology at the undergraduate level. In addition, a solid background in pharmacology can open the door to employment in numerous sectors, most notably the pharmaceutical industry. The Department of Pharmacology does not offer an honors pharmacology degree program as such. However, it does provide courses that may be taken for credit within various other honors degree programs, including Biology, Biochemistry, Psychology (Neurosciences) and Microbiology and Immunology. In addition, students can conduct honors thesis research projects in the laboratories of Pharmacology faculty. Finally, undergraduate students may, with permission of their home department and the course instructor, take certain graduate specialty courses which are offered in the Department of Pharmacology.

III. Course Descriptions

BIOL 4404.03: Introduction to Pharmacology I.

This introductory course is designed to acquaint students with the action of drugs on physiological and biochemical functions in mammals including humans. Factors which affect the blood levels of drugs (absorption, distribution, metabolism, and elimination) will be considered, together with the mechanisms by which drugs act and their potential uses. The interaction of drugs with various body systems is covered, including the central and peripheral nervous systems and the cardiovascular system. Drugs that assist or regulate host defence mechanisms will also be studied.

FORMAT: Lecture 3 hours

PREREQ/SITE: MATH 1010.03 is recommended. Extra reading will be required of students without these courses.

CROSS-LISTING: PHAC 4406.03, BIOC 4406.03, and NES 4734.03

BIOL 4407.03: Introduction to Pharmacology II.

This course is intended to cover specific aspects of drug action not covered in BIOL 4404.03. The course includes: signaling by receptors and ion channels, sex hormones, pharmacokinetics and special populations, as well as considerations of drugs used for pain, immune diseases, diabetes, cancer and asthma.

FORMAT: Lecture 3 hours

PREREQ/SITE: BIOL 4404.03 (with a grade of B or better)
CROSS-LISTING: PHAC 4409.03, BIOC 4409.03, and NES 4736.03
EXCLUSION: BIOL 4405.03

Senior Instructor
Penney, C., BSc, PhD (Dalhousie)

I. Introduction
The Department of Physiology and Biophysics offers a wide range of undergraduate courses in addition to those restricted to students in the faculties of Medicine and Dentistry. Students who have previously taken biology, chemistry, physics will be best equipped to study physiology.

The courses listed below are aimed at providing the student with an understanding of the functioning of the human body. The Distance Education course 1000X/Y.06 is open to all students. PHYL 2030 or its component parts 2031.03 or 2032.03 is the recommended prerequisite for science students interested in taking higher level physiology courses. Students wishing to enrol in other specialized courses require permission from the Course Director or Department Head.

II. Course Descriptions

PHYL 1000X/Y.06: Human Physiology.
A full-credit Distance Education course equivalent to PHYL 1010X/Y.06. The functions of body organs and body systems, as well as integrative functions of the whole organism are examined. The course is based on a selected textbook and is supported by extensive blackboard content including a stop-by-stop guide, learning objectives, assignments, and virtual laboratories. The course is normally given in the Regular session (Sept - Apr), as well as in the Summer session (May - June). Distance Education courses have an additional fee over and above the listed tuition fees.

DIRECTOR: C. Penney
NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.

PHYL 1010X/Y.06: Human Physiology.
This is a full-credit introductory human physiology course equivalent to PHYL 1000X/Y.06. The functions of body organs and body systems, as well as integrative functions of the whole organism are examined. This course is intended primarily for students in the Health Professions.

DIRECTOR: C. Penney
NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term. This course cannot be used as a prerequisite course for 3rd and 4th year physiology courses, nor as a corequisite for PHYL 2570.03 (Cellular Neurophysiology).

FORMAT: Lectures 3 hours/weekly assignments and readings/virtual labs, and

PHYL 1400.06: Human Physiology.
This course is designed to give Pharmacy students a broad understanding of normal human physiology using pathophysiological scenarios. Selected topics in physiology and biophysics will be presented in tutorials as case studies and in lectures. The central themes include: respiratory, endocrine/reproductive, gastrointestinal, immunological, nervous system, renal and cardiovascular. Students will be provided with means for self-evaluation throughout the unit. Evaluation will be based on tutorial performance as well as mid- and end-of-unit examinations. This course is only for Pharmacy students.

DIRECTOR: M. Murphy and other staff members

FORMAT: A 7-week comprehensive unit with 6 hours tutorial and 4 hours lecture per week.

PREREQUISITE: ANAT 1040X/1040Y

PHYL 2031.03: Human Physiology A.
The aim of this course is to understand the functional mechanisms of the human nervous and muscular systems, together with their clinical significance. The class covers the electrical and chemical properties of neurons and glia, and how neurons communicate with one another and with muscle cells. The physiology of autonomic, smooth and cardiac muscles will also be covered. It will review the sensory and higher integrative functions of the central nervous system, and the closely related autonomic nervous system. It will survey the physiology and functional anatomy of the somatosensory, visual, auditory, vestibular and chemical senses.
Both normal functions and selected pathologies of these systems will be discussed. The class also surveys important investigative techniques in neuroscience and includes a laboratory component. The overall objective is to provide a solid, factual foundation of knowledge in nerve and muscle physiology as well as their underlying principles.

**PHYL 2032.03: Human Physiology B.** The human body consists of billions of cells organized into a number of organ systems. The aim of this course is to explore how these organ systems (respiratory, cardiovascular, renal, gastrointestinal, endocrine and reproductive) function to allow us to live and carry out our daily activities. Although emphasis is on normal function there is also discussion of selected pathologies. An accompanying laboratory component underscores the clinical relevance of the physiology taught in lecture.

**PHYL 2570.03: Cellular Neurophysiology.** This course provides an introduction to the function of the nerve cells of the brain, which forms the basis for explaining features of brain function in terms of activity of individual cells and their membrane properties, as well as small networks of neurons. The course is designed for all students wishing to take more advanced courses in, or to major in, Neuroscience. Although the course covers topics of neuroscience at all levels, the content is directed towards cellular neuroscience; detailed coverage of the strictly developmental systems or molecular levels of neuroscience is provided in other courses.

**PHYL 3120.03: Exercise Physiology in Health and Disease.** The function and dysfunction of body organ systems are reviewed, and the short- and long-term consequences of these events to health are analyzed. Factors affecting physical performance are considered, and the preventive and therapeutic use of exercise for a wide range of clinical conditions is examined.

**PHYL 3320.03: Human Cell Physiology.** Events at the cellular and molecular level determine the activities of tissues, organs, and systems. This course examines key physiological principles at the cellular level, and uses this information to develop understanding of important body functions. Lectures focus on signaling within individual cells, membrane transport, electrical excitability and electrical signaling, communication between cells, osmotic contractility, and epithelial transport. **DIRECTOR:** P. Linsdell

**PHYL 3420.03: Sensory Physiology.** This course will describe the physiological and biophysical basis of human sensory systems (including vision, audition, taste, smell, and somosensory). Emphasis will be on the transduction of physical stimuli and the early neural processing that occurs in sensory cells and immediately associated tissues.

**PHYL 3520.03: Core Concepts in Medical Physiology.** Through didactic (lecture) and problem-solving (tutorial) sessions, students will gain a deep understanding of the functions of various organ system physiologies. In addition, the integration of a number of organ system functions will also be discussed. Where appropriate, the physiology of disease processes will underscore the consequences of a malfunctions of a physiological process. Organ systems covered include cardiovascular, renal, respiratory and gastrointestinal. A firm understanding of physiological principles is essential for any student contemplating a career in the health professions.

**PHYL 4000.03: Current Advances in Synaptic Function and Plasticity.** This course is designed to provide intermediate and advanced undergraduates with a basic understanding of the function of the endocrine system. The course will progress from a consideration of basic concepts and mechanisms to the physiological function of specific endocrine systems. Interactions between organ systems will be emphasized.

**PHYL 4324.03: Endocrine Physiology.** This course is designed to provide intermediate and advanced undergraduates with a basic understanding of the function of the endocrine system. The course will progress from a consideration of basic concepts and mechanisms to the physiological function of specific endocrine systems. Interactions between organ systems will be emphasized.

**PHYL 4328X/Y.03: Directed Project in Physiology.** This course allows the advanced undergraduate student to pursue more specialized work in physiology under the supervision of a faculty member. Students wishing to take this course must find a faculty member who is prepared to supervise a directed project. Before registering for this course, a student must provide the Course Director with a letter from the faculty member describing the project and agreeing to serve as supervisor. Credit approval will not be given until this is done.

**PHYL 4680.03: Cardiovascular Physiology.** This course provides an overview of key principles of cardiovascular physiology. Topics include cardiac anatomy/ultrastructure, cardiac pump-function, cardiac electrophysiology, excitation-contraction coupling, cardiac mechanics, cardiac energy metabolism and regulation of the vasculature. Cardiovascular disease will be addressed.

**PHYL 4000.03: Current Advances in Synaptic Function and Plasticity.** This course will provide an introduction to the function of the endocrine system. The course will progress from a consideration of basic concepts and mechanisms to the physiological function of specific endocrine systems. Interactions between organ systems will be emphasized.

**PHYL 4324.03: Endocrine Physiology.** This course is designed to provide intermediate and advanced undergraduates with a basic understanding of the function of the endocrine system. The course will progress from a consideration of basic concepts and mechanisms to the physiological function of specific endocrine systems. Interactions between organ systems will be emphasized.

**PHYL 4328X/Y.03: Directed Project in Physiology.** This course allows the advanced undergraduate student to pursue more specialized work in physiology under the supervision of a faculty member. Students wishing to take this course must find a faculty member who is prepared to supervise a directed project. Before registering for this course, a student must provide the Course Director with a letter from the faculty member describing the project and agreeing to serve as supervisor. Credit approval will not be given until this is done.

**PHYL 4680.03: Cardiovascular Physiology.** This course provides an overview of key principles of cardiovascular physiology. Topics include cardiac anatomy/ultrastructure, cardiac pump-function, cardiac electrophysiology, excitation-contraction coupling, cardiac mechanics, cardiac energy metabolism and regulation of the vasculature. Cardiovascular disease will be addressed.

I. Introduction
Dalhousie’s Faculty of Science, the primary centre in the region for science education and research, is part of the College of Arts and Science and consists of 10 departments and three programs. The principal mission of the Faculty is the discovery, organization, dissemination and preservation of knowledge and understanding of the natural world. The Faculty is dedicated to excellence in the pursuit of this mission. Students in the Faculty of Science develop a capacity for inquiry, logical thinking and analysis; cultivate an ability to communicate with precision and style; and acquire skills and attitudes for lifelong learning.

Undergraduate students in the Faculty of Science normally develop these abilities by concentrating their studies in one or more of the following areas: Biochemistry and Molecular Biology, Biology, Chemistry, Earth Sciences, Economics,

II. Departments and Programs of the Faculty of Science

Departments:
Biochemistry and Molecular Biology* (also in the Faculty of Medicine), Biology*, Chemistry*, Earth Sciences*, Economics*, Mathematics and Statistics*, Microbiology and Immunology* (also in the Faculty of Medicine), Oceanography, Physics and Atmospheric Science*, and Psychology

Programs:
Environmental Science*, Marine Biology*, Medical Sciences, Neuroscience

* Co-op Option available.
Biochemistry and Molecular Biology

I. Introduction

Biochemistry is the study of biological function at the molecular level. Although biochemical processes follow the basic laws of physics and chemistry, living organisms, because of their complexity, operate on a set of distinct principles that are not found in simple isolated chemical systems. The goal of biochemistry is to elucidate these principles. The Department offers an integrated series of courses that will provide students with an up-to-date view of modern biochemistry and molecular biology ranging from evolution of genomes to structure-function relationships in macromolecules to the dynamic aspects of metabolism. The core programs can be adapted to emphasize different biochemical specialties such as structural biology, metabolism, molecular biology and cell signaling. Students wishing to pursue advanced studies in Pharmacology or related sciences for which there is no undergraduate program can include courses in Physiology, Pharmacology and/or Pathology in their programs. Greater flexibility is available in combined degree programs of Biochemistry and Molecular Biology with another subject, most often with Chemistry, Microbiology, Biology, Neuroscience, Psychology or Environment, Sustainability and Society. Specific programs developed with the Department of Microbiology and Immunology provide coordinated studies of metabolism, enzymology and molecular biology with bacteriology, virology and immunology. These programs provide the foundation for molecular genetics, genetic engineering, biotechnology, biomedical research and medicine.

Laboratory Exercises: Some of the courses offered by the Department of Biochemistry and Molecular Biology include a laboratory component. The laboratory exercises provide an opportunity to develop laboratory skills, as well as to illustrate the theoretical principles taught in course. This process culminates in the fourth year, with a supervised research project required for honours Biochemistry and Molecular Biology students. Although no exercise involves live animals, experiments may use materials derived from animal sources, as well as from plants and micro-organisms. Laboratory experiments will often be performed in groups, but writing of reports is expected to be an individual effort, meeting the guidelines on plagiarism set out in the University Regulations in the Calendar and Department Policy on Plagiarism.

II. Degree Programs

NOTE: Students interested in a Biochemistry and Molecular Biology degree should first read the Undergraduate handbook on the Department website that describes all of the programs available and the special requirements relating to them. Degree programs must be planned in consultation with a departmental advisor (advisor@webmail.biochem.dal.ca)

A. BSc (20 credit) Honours in Biochemistry and Molecular Biology

This is a special concentrated Honours Program in which emphasis may be placed on different areas of biochemistry such as protein chemistry, metabolism or molecular genetics. Because Biochemistry and Chemistry are closely interwoven both conceptually and experimentally, the list of required courses includes both subjects. Additional chemistry courses beyond those required for the honours degree may be taken as electives. For entrance to BiOC 2300/03 and BiOC
2010.03, students require minimum grades of B- in BIOL 1010.03 and BIOL 1011.03, or CHEM 1011.03 and 1012.03 (or equivalents). Students should also note the minimum grade requirements specified in the prerequisites for all third year and some fourth year Biochemistry and Molecular Biology courses. Honours students must meet the general degree requirements of the Faculty.

Departmental Requirements

1000 level
- CHEM 1011.03 and 1012.03 (or equivalent) - minimum passing grade B-
- BIOL 1010.03 and 1011.03 (or equivalent) - minimum passing grade B-
- MATH 1000.03 or 1205.03 and MATH 1010.03 or 1060.03

2000 level
- BIOL 2020.03
- BIOL 2030.03
- BIOC 2300.03
- BIOC 2610.03
- CHEM 2201.03
- CHEM 2401.03 and 2402.03

3000 level
- BIOL 3300.03
- BIOL 3400.03
- BIOL 3700.03
- BIOC 3601.03 or one half credit in Biochemistry at the 3000 or 4000 level
- BIOC 3700.03
- BIOC 3801.03 and 3802.03

4000 level
- BIOC 4604.03 and 4605.03
- One and a half credits from BIOC 40XX, 43XX, 44XX, 45XX, 47XX
- One additional credit in BIOC at the 4000 level.

Other requirements
A pass is required in the Honours Qualifying examination. Students should also ensure that they have enrolled in any 2000 or 3000 level courses that are prerequisites for advanced courses they intend to take (see appropriate calendar entries).

B. BSc or BA (20 credit) Combined Honours in Biochemistry and Molecular Biology and Another Subject

Biochemistry and Molecular Biology may be chosen along with one of Biology, Chemistry, Environmental Science, Mathematics, Microbiology, Neuroscience, Psychology, or possibly another subject, for a Combined Honours Program.

Departmental Requirements

1000 level
- As specified in A except MATH 1000 and 1010 are required when combined with Chemistry

2000 level
- BIOL 2020.03
- BIOL 2030.03
- CHEM 2201.03 and 2402.03
- BIOC 2300.03
- BIOC 2610.03

3000 level
- BIOL 3300.03
- BIOL 3400.03
- BIOL 3700.03
- BIOC 3601.03 or one half credit in Biochemistry at the 3000 or 4000 level
- BIOC 3700.03
- BIOC 3801.03 and 3802.03

4000 level
- Two full credits in BIOC at the 4000 level
- One half credit in BIOC 3XXX or 4XXX

Consult an Undergraduate Advisor for details of recommended courses of study.

C. BSc or BA (20 credit) Major in Biochemistry and Molecular Biology

Please consult the Degree Requirements section II., for detailed information.

Although Dalhousie University does not require formal application for its 20 credit Major programs, this Department requires that all those registering with a view to completing such a degree must first consult with an Undergraduate Advisor from the Department of Biochemistry and Molecular Biology.

The department offers a four-year, 20-credit program of study leading to a BSc major degree. The program, while not designed as a preparation for graduate study in Biochemistry and Molecular Biology, nonetheless introduces students to all main aspects of the subject, as well as meeting the general degree requirements of the Faculty. Students should also note the minimum grade requirements specified in the prerequisites for all third year and some fourth year Biochemistry courses.

Departmental Requirements

1000 level
- BIOL 1010.03 and 1011.03 (or equivalent) - minimum passing grade B-
- CHEM 1011.03 and 1012.03 (or equivalent) - minimum passing grade B-
- One full credit in mathematics
- or, in lieu of the above, SCIE 15XX

2000 level
- BIOL 2020.03
- BIOL 2030.03
- BIOC 2300.03
- BIOC 2610.03
- CHEM 2201.03
- CHEM 2401.03 and 2402.03

3000 level
- BIOC 3300.03
- BIOC 3400.03
- BIOC 3700.03

4000 level
- A minimum of one full credit in BIOC at the 4000 level.

Although Dalhousie University does not require formal application for its 20 credit Major programs, this Department requires that all those registering with a view to completing such a degree must first consult with an Undergraduate Advisor from the Department of Biochemistry and Molecular Biology.

The department offers a four-year, 20-credit program of study leading to a BSc major degree. The program, while not designed as a preparation for graduate study in Biochemistry and Molecular Biology, nonetheless introduces students to all main aspects of the subject, as well as meeting the general degree requirements of the Faculty. Students should also note the minimum grade requirements specified in the prerequisites for all third year and some fourth year Biochemistry courses.

Departmental Requirements

1000 level
- BIOL 1010.03 and 1011.03 (or equivalent) - minimum passing grade B-
- CHEM 1011.03 and 1012.03 (or equivalent) - minimum passing grade B-
- One full credit in mathematics
- or, in lieu of the above, SCIE 15XX

2000 level
- BIOL 2020.03
- BIOL 2030.03
- BIOC 2300.03
- BIOC 2610.03
- CHEM 2201.03
- CHEM 2401.03 and 2402.03

3000 level
- BIOC 3300.03
- BIOC 3400.03
- BIOC 3700.03

4000 level
- One credit from BIOC 40XX, 43XX, 44XX, 45XX, 47XX
- One additional credit in BIOC at the 4000 level.

D. BSc or BA (20 credit) Double Major in Biochemistry and Molecular Biology and Another Subject

*See notes in C, above.

The Department will approve the combination of Biochemistry with a wide variety of other fields of study, subject to confirmation by an Undergraduate Advisor from the Department of Biochemistry and Molecular Biology.

Departmental Requirements

1000 level
- as for Single Major, above

2000 level
- BIOL 2020.03
- BIOL 2030.03
- BIOC 2300.03
- BIOC 2610.03
- CHEM 2201.03
- CHEM 2401.03 and 2402.03

3000 level as for Single Major, above

4000 level
- A minimum of one full credit in BIOC at the 4000 level.

Consult an Undergraduate Advisor for details of recommended courses of study.
E. Co-operative Education in Biochemistry and Molecular Biology

Co-operative Education in Science (SCIE Co-op) is a program where academic study is combined with paid career-related work experience. Students alternate these work terms throughout their academic study terms and graduate with a Bachelor of Science Co-op. Science Co-op enables students to apply their knowledge directly while providing them with work experience that assists in making educated career choices. Students should apply to join Science Co-op before their second year of study. If accepted into the Science Co-op program, students are required to register for and attend the Science Co-op Seminar Series (SCIE 2800.00) in the fall term of the year they join.

See the “Co-operative Education in Science” section of this calendar, or http://www.sciencecoop.dal.ca, for information on Science Co-op such as Science Co-op requirements, eligibility, how to apply, deadlines and other related information.

For further information, please see http://www.sciencecoop.dal.ca

Co-op Academic Advisor in Biochemistry: Dr. McLeod
Email: roger.mcleod@dal.ca

F. Minor in Biochemistry and Molecular Biology

Students in other 20-credit programs may choose to include a Minor in Biochemistry and Molecular Biology in their program. Requirements are outlined in the College of Arts and Science Minors section of this Calendar starting on page 129.

G. Minors available to students in Biochemistry and Molecular Biology

Minor programs allow students to develop subject specialities in addition to their major or honours subjects. Minors in other subjects are normally added to a four-year major or honours program.

Minor programs cannot be used to fulfill the requirements of a Minor program.

H. Diplomas, Certificates, and Language Proficiency

Certificates

In combination with a BSc in Biochemistry and Molecular Biology, there are several certificates of completion that can be obtained to emphasize areas of proficiency. Courses counted toward a Major, Honours or Minor program may also be used to fulfill the requirements of a Certificate. For a complete list and details refer to the College of Arts and Science Degree Requirements starting on page 129 of the catalog.

III. Course Descriptions

The Department also teaches students in Dentistry and Medicine; these courses are described in the appropriate sections of the catalog.

NOTE: Not all courses are offered every year. Please consult the current timetable for this year's offerings.

BIOC 1420.03: Introductory Biochemistry for Nursing Students

Topics discussed include the structure, biosynthesis and functions of biologically important compounds, enzymes, control of metabolism, genetic engineering and nutrition. Medical aspects are stressed.

NOTE: This course cannot be used as a prerequisite for any other biochemistry course and is not normally accepted by Faculties of Dentistry or Medicine in fulfillment of the requirement of biochemistry course for admission.

FORMAT: Lecture 3 hours, tutorial 2 hours

RESTRICTION: This class is restricted to students in the BScN and BHSc programs.

BIOC 2300.03: Introduction to Biochemistry

This course surveys basic topics and concepts of Biochemistry. The structures, properties and metabolic inter-relationships of proteins, carbohydrates and lipids are considered together with an introduction to nutrition and metabolic control. Although mammalian examples predominate some consideration of special aspects of biochemistry of microorganisms is included.

COORDINATOR: D. Byers

NOTE: Students are advised to also take CHEM 2401.03 and 2402.03, or CHEM 2441.03. CHEM 2441 does not satisfy the prerequisite requirement for BIOC 3300.03 and BIOC 3700.03.

FORMAT: Lecture 3 hours

PREREQUISITES: BIOL 1010.03 and 1011.03 (or equivalent), CHEM 1011.03 and 1012.03 (or equivalent), all with grades of B- or higher, or instructor's consent.

EXCLUSION: BIOC 2200.03

BIOC 2310.03: Introductory Biochemistry Lab.

An introduction to fundamental techniques in Biochemistry through the exploration of the properties of essential biomolecules. This course is intended for students in Biochemistry and Molecular Biology and Microbiology Programs.

FORMAT: Lab 3 hours

PREREQUISITE: BIOL 1010.03 and 1011.03 (or equivalent), CHEM 1011.03 and 1012.03 (or equivalent), all with grades of B- or higher, or instructor's consent.

EXCLUSION: BIOC 2200.03

BIOC 2610.03: Introduction to Biochemistry for Nursing Students

This course covers synthesis and catalysis of carbohydrates, lipids and some nitrogen compounds. Metabolic regulation is emphasized, including factors influencing the rate at which compounds flow through selected pathways. compartmentalization of, inter-relationships between and environmental impact on metabolic pathways are considered. Laboratory exercises examine the techniques used to study metabolic pathways.

COORDINATOR: R. McLeod

FORMAT: Lecture 3 hours, lab 3 hours

PREREQUISITE: BIOC 2300.03 and BIOC 2402.03 (both with grades of B- or higher), BIOL 2020.03 and BIOL 2030.03 and CHEM 2401.03 and CHEM 2402.03, or instructor's consent.

BIOC 3300.03: Intermediary Metabolism.

This course covers synthesis and catalysis of carbohydrates, lipids and some nitrogen compounds. Metabolic regulation is emphasized, including factors influencing the rate at which compounds flow through selected pathways. compartmentalization of, inter-relationships between and environmental impact on metabolic pathways are considered. Laboratory exercises examine the techniques used to study metabolic pathways.

COORDINATOR: R. McLeod

FORMAT: Lecture 3 hours, lab 3 hours

PREREQUISITE: BIOC 2300.03 and BIOC 2402.03 (both with grades of B- or higher), BIOL 2020.03 and BIOL 2030.03 and CHEM 2401.03 and CHEM 2402.03, or instructor's consent.

BIOC 3400.03: Nucleic Acid Biochemistry and Molecular Biology

This course focuses on the relationship of structure to function in RNA and DNA. Methods for studying the primary, secondary, and tertiary structures of nucleic acids are explored in lectures and in the laboratory. Topics covered include enzymatic mechanisms for biosynthesis, reactivation, depurination, repair of nucleic acid molecules, and processes of replication, transcription, and translation. Nucleic acid biochemistry is emphasized as a basis for understanding storage and transfer of biological information.

COORDINATOR: J. Archibald

FORMAT: Lecture 3 hours, lab 3 hours

PREREQUISITE: CHEM 2401.03 and CHEM 2402.03, or CHEM 2441.03, BIOL 2020.03 and BIOL 2030.03 (both with grades of B- or higher), BIOC 2300.03, or instructor's consent.
BIOC 3620.03: Experiential Learning in Biochemistry and Molecular Biology.
This course is an outside the classroom learning experience in which the student works in a research laboratory an average of one day per week acquiring biochemistry or molecular biology knowledge and skills.
COORDINATOR: M. Dobson
NOTE: To register in this course, students must first find a faculty member from the Department of Biochemistry & Molecular Biology willing to supervise the student. Grading is Pass/Fail.
FORMAT: A minimum of 72 hours for the term, representing at least 6-8 hours weekly, working in a research laboratory, an activity log and a final written report.
PREREQUISITE: BIOC 3590.03, BIOC 3600.03, BIOL 2400 and BIOL 2402. EXCLUSION: The following may not be used towards BIOC 3620: lab work that is part of another scheduled course at a learning institution, an internship, a co-op or a research experience.
FORMA T: Lecture 3 hours, labs 3 hours
BIOC 3700.03: Biomolecular Chemistry.
The course covers structural and functional properties of biomolecules, including the physical basis for these characterization, thermodynamic principles of protein folding and biomolecular interactions, and the kinetics and mechanisms of enzyme catalysis.
FORMAT: Lecture 3 hours, labs 3 hours
PREREQUISITE: BIOC 3900.03, 3910.03, CHEM 2401.03, and CHEM 2402.03 (all with a grade of B or higher), or instructor's consent
EXCLUSION: BIOC 3800.03.
BIOC 4001.03: Special Topics in Biochemistry.
Students interested in topics not covered in formal courses may ask the department for special courses to meet their needs. An Undergraduate Advisor will assist students to ascertain if faculty expertise is available to direct reading and the preparation of papers and seminars in a particular subject area.
COORDINATOR(S): C. Tao
PREREQUISITE: BIOC 3300.03, 3400.03, and 3700.03 (average of B or higher and consent of coordinator)
BIOC 4100.03: Bioinformatics.
This course presents the theory and practice of bioinformatics. Topics include: rate of mutation, sequence alignment, database searching, phylogenetic analysis, bioinformatic tools for analyzing genes, genomes and proteins.
FORMAT: Lectures 3 hours with some computer-based labs.
PREREQUISITE: BIOC 3400.03 or instructor's consent
FORMA T: Lecture/BIOC 5000.03
BIOC 4207.03: Molecular Mechanisms of Cancer.
The course focuses on the molecular mechanisms of cancer. Topics include: receptors and downstream signaling, oncogenes and tumor suppressors, cancer metastasis and angiogenesis, cell cycle control, and apoptosis.
FORMAT: Lectures, student presentations, discussion
PREREQUISITE: Minimum grades of B in a 3000 level Biochemistry class and another 3000 level Biochemistry, Microbiology or Pathology class. Permission of instructor required.
FORMA T: Lecture/BIOC 5027.03 and MCI 4927.03 or 4927.05
BIOC 4302.03: Biochemistry of Lipids.
The biochemistry and metabolism of a variety of lipids is studied, especially those, such as fatty acids, glycerolipids, eicosanoids, steroids and phospholipids, with specialized physiological or lipid-second messenger functions. Intracellular and inter-tissue transport and regulatory processes are emphasized. The chemistry and physics of insoluble lipids in an aqueous environment are explored and problems in the interaction of lipids with soluble and insoluble enzymes are considered.
FORMAT: Lecture 3 hours
PREREQUISITE: BIOC 3300.03 and 3700.03
BIOC 4305.03: Mechanisms of Signal Transduction.
The emphasis of this course is to introduce concepts and key mediators of signal transduction. Topics include protein kinases, tumour suppressors, enzymes, G-protein coupled receptors, calcium signalling, lipid signalling, integration of signalling cascades, cytokinetic reorganization, cellular mutation, apoptosis, anoikis, generic stability, and stem cell biology.
FORMAT: Lecture 3 hours, and presentations
PREREQUISITE: BIOC 3300.03, 3400.03, and 3700.03 or instructor's consent
ENCLUSION: BIOC 4360.03.
BIOC 4360.03: Nutritional Biochemistry.
Appropriate nutrition is essential for health and reflects the basic biochemistry of the organism. Changes in the human diet can impact health and disease. This course considers the principles of optimal nutrition in a biochemical context and the role of nutrition in disease as it pertains to nutrition, the organ system or organ systems.
FORMAT: Lectures/student presentations.
PREREQUISITE: BIOC 3300.03, BIOC 3400.03, BIOC 3700.03 or instructor's permission
BIOC 4403.03: Genes and Genomes.
This course discusses the organization of genes into genomes. It deals with (i) compartmentalization of genetic material in nuclear and organelar genomes, (ii) the structure, behaviour and origin of components of both nuclear and organelar genomes which are not genes (transposable and other repetitive elements, introns), (iii) genetic and physical methods for mapping genomes, and (iv) the significance of genetic organization and higher order chromosomal structure and function. The methodology and prospects of genomics are discussed at some length.
FORMAT: Lecture 3 hours
PREREQUISITE: BIOC 3400.03 or instructor's consent
FORMA T: Lecture/BIOC 5040.03
BIOC 4404.03: Gene Expression.
The different mechanisms for regulation of gene expression in bacterial and eukaryotic cells, and their viruses, are emphasized. Particular topics include genomic, transcriptional, and post-translational modes of regulation.
PREREQUISITE: BIOC 3400.03 or instructor's consent
FORMA T: Lecture/BIOC 5040.03
BIOC 4501.03: Medical Biotechnology I.
This course covers fundamental principles of biotechnology from a medical perspective. Topics discussed include: recombinant DNA technology, polymerase chain reaction-based applications, DNA microarrays, DNA sequencing, immunological, chemical, and biochemical techniques for the production of transgenic organisms, genetic engineering techniques, and the ethical issues of human and animal cloning, cloning, and genetic engineering. Students will write a term paper on a chosen topic.
FORMAT: Lecture 3 hours, discussions, presentations
PREREQUISITE: BIOC 3400.03 or instructor's consent
FORMA T: Lecture/BIOC 5015.03 and BIOC 5016.03
BIOC 4604.03: Research Project I.
This course requires original biochemical research in the laboratory of a faculty member. This course is intended to be taken in conjunction with BIOC 4605.03 and BIOC 4606.03. The work undertaken in this course is intended to be submitted as part of the thesis. A report is submitted at the end of the term.
COORDINATOR(S): R. Singer
NOTE: This course is intended to be taken in conjunction with BIOC 4604.03 and no credit can be given for one course without the other. The two research projects can be done outside the Department of Biochemistry and Molecular Biology. Prior approval must be obtained from the course coordinator.
FORMAT: Lab 1 day
PREREQUISITE: Permission of coordinator and a member of the Department who will serve as supervisor. At least a B average for BIOC 3300.03, 3400.03 and 3700.03.
BIOC 4605.03: Research Project II.
This course requires original biochemical research in the laboratory of a faculty member, and requires the equivalent of at least one day per week to be spent in the laboratory. A report is submitted at the end of the term.
COORDINATOR(S): R. Singer
NOTE: This course is intended to be taken in conjunction with BIOC 4604.03 and no credit can be given for one course without the other. The work undertaken in this course should be a continuation of that initiated in BIOC 4604.03 and hence the report submitted for BIOC 4605.03 may include data and analysis incorporated in the BIOC 4604.03 report. In exceptional cases the research course considers the principles of optimal nutrition in a biochemical context and the role of nutrition in disease as it pertains to nutrition, the organ system or organ systems.
FORMA T: Lecture 3 hours, labs 3 hours
project can be done outside the Department of Biochemistry & Molecular Biology. Prior approval must then be obtained from the course coordinator.

**BIOC 4700.03: Proteins.**

Our theme is the relationship between structure and function. The kinetic and thermodynamic determination of the protein fold is explored. Specific details of how form determines function in binding other molecules both small and large in number, and in energy transduction are provided. Protein evolution and turnover are examined.

**NOTE:** Some weeks, in addition to lectures, students will independently research and write about specialized topics suggested by the instructor and occasionally present these in class discussion group format.

**FORMAT:** Lecture 3 hours

**PREREQUISITE:** BIOC 3700.03 or CHEM 3601 AND CHEM 2301 AND CHEM 2304, all with grades of B or higher or instructor's consent.

**CROSS-LISTING:** BIOC 4701.03

**BIOC 4701.03: Enzymes.**

Fundamental principles of enzyme catalysis and its regulation are examined. Topics include enzyme kinetics, enzyme inhibition and inactivation, isotope effect measurements, site-directed mutagenesis, and the active site architecture and transition state stabilization of selected enzymes. Classic and current papers in the literature are reviewed and the experimental and conceptual approaches are critically appraised.

**FORMAT:** Lecture 3 hours

**PREREQUISITE:** BIOC 3700.03 or CHEM 3601 AND CHEM 2301 AND CHEM 2304, all with grades of B or higher or instructor's consent.

**CROSS-LISTING:** BIOC 4700.03

**BIOC 4702.03: Biophysical Characterization of Macromolecules.**

This course covers methods allowing determination of sub-molecular and atomic-level structure and dynamics of biomacromolecules in physiological settings (e.g. solution-state or lipid bilayers) including: fluorescence, electronic and vibrational circular dichroism and NMR spectroscopy; light vs. X-ray vs. neutron scattering; and, single molecule methods.

**FORMAT:** Lecture 2.5 hours Seminar/tutorial 0.5 hours

**PREREQUISITE:** BIOC 3700.03 or CHEM 3601 AND CHEM 2301 AND CHEM 2304, all with grades of B or higher or instructor's consent.

**RECOMMENDED:** PHYS 1200.03/1201.03 or 1300.06

**CROSS-LISTING:** BIOC 4703.03, CHEM 4602.03

**BIOC 4804.03: Introduction to Pharmacology I.**

This introductory course is designed to acquaint students with the actions of drugs on physiological and biochemical functions in mammals including humans. Factors which affect the blood levels of drugs (absorption, distribution, metabolism, and elimination) are considered, together with the mechanisms by which drugs act and their potential uses. The interaction of drugs with various body systems is covered, including the central and peripheral nervous systems and the cardiovascular system. Drugs that assist or regulate host defence mechanisms are also studied.

**COORDINATOR(S):** M.E.M. Kelly

**FORMAT:** Lecture 3 hours

**PREREQUISITE:** This course is restricted to third- or fourth-year students, or graduate students. Other students may be admitted with permission of the course coordinators. A previous class in biochemistry and in physiology is recommended. Extra studying will be required of students without these courses.

**CROSS-LISTING:** PHYS 4404.03, BIOG 4604.03, and NESC 4714.03

**BIOC 4806.03: Introduction to Pharmacology II.**

This course covers specific aspects of drug action not covered in BIOC 4804.03. This course includes: drug receptor signaling, ion channels, second messengers, G-proteins, plus specific consideration of drugs used for pain, inflammation, cancer, diabetes, asthma, and diseases of the thyroid, eye and gastrointestinal tract. Special pharmacological topics including addiction and drug abuse, treatment of Parkinson's disease, treatment of epilepsy and the use of stem cells in modern medicine are included.

**COORDINATOR(S):** D. Duper

**FORMAT:** Lecture 3 hours

**PREREQUISITE:** BIOC 4804.03 (with a grade of B or better)

**CROSS-LISTING:** PHYS 4409.03, BIOG 4607.03, and NESC 4716.03

**BIOC 4813.03: Biochemistry of Clinical Disorders.**

This course is an introduction to the pathophysiology of disease. It provides the clinical and biochemical background to disease groups and system disorders and the laboratory approaches to their diagnosis. Topics include cardiovascular, renal, gastrointestinal and hepato-biliary disorders, addiction, and acid-base, carbohydrate, lipid and amino acid disorders, endocrine and rheumatological diseases, as well as tumor markers and toxicology, blood and immune abnormalities.

**FORMAT:** Lecture and case discussion

**PREREQUISITE:** BIOC 3200.03 and BIOC 3201.03 and BIOC 3202.03 or consent of instructor

**CROSS-LISTING:** PATH 5101.03, BIOC 5811.03

**EXCLUSION:** BIOC 4811.03 and BIOC 4812.03

**BIOC 4835.03: Human Genetics.**

For science students with special interest in human genetics. Topics include errors of metabolism, human development, transmission genetics, DNA structure, gene function, mutation and chromosomal alterations, population genetics, genetics of immunity and cancer, genetic technology in medicine, and ethical and social issues related to medical genetics.

**COORDINATOR(S):** W.L. Grey

**FORMAT:** Lecture 5 hours, tutorial 2 hours

**PREREQUISITE:** BIOC 4800.03 or permission from instructor

**CROSS-LISTING:** BIOL 4035.03, 5035.03, PATH 5035.03

**BIOC 8891.00: Co-op work term 1.**

**BIOC 8892.00: Co-op work term 2.**

**BIOC 8893.00: Co-op work term 3.**

Dean
Mason, C., BA (Hons) (Cambridge), PhD (Cambridge), Professor (Psychology)

Chair
MacRae, T. H., MSc, PhD (Western)

Biology Majors Program Advisors
Bishop, T. (494-1696)
Cooper, M. (494-8436)
Gass, G. (494-8445)
Gibson, L. (494-8517)
McCarrick, M. (494-8702) (Biology Co-op Academic Advisor)
Staples, E. (494-2464)
Van Dommelen, J. (494-1584)
Welsh, E. (494-1110)

Biology Honours Program Advisors
Crossin, G. (494-4258)
McCarrick, M. (494-2735) (Honours Co-op)
Polubriak, B. (494-8333)
Wright, J. (494-6488)

Marine Biology Major Program Advisors
Gass, G. (494-8445)
Schreiber, B. (494-2296)
Schmidt, A. (494-1636)

Marine Biology Honours Program Advisors
Crossin, G. (494-4258)
McCarrick, M. (494-2753) (Honours Co-op)
Polubriak, B. (494-1833)
Wright, J. (494-6488)

Members of Biology Faculty

- Weight, J. M., PhD (MUN), Associate Professor
- BuzIOvskii, J. P., PhD (Texas A&M), Associate Professor
- Gannawarra, A., PhD (Oxford Brookes), Assistant Professor
- Herbsprung, C. M., PhD (Dalhousie), Assistant Professor
- Latta, R., PhD (Colorado), Assistant Professor
- Leitch, H. K., PhD (Kiel), Assistant Professor
- Pinder, A., PhD (Mass), Assistant Professor
- Romanuk, T. D., PhD (McMaster), Assistant Professor
- Simpson, A. G. B., PhD (Sydney), Assistant Professor
- Stone, S., PhD (York), Assistant Professor
- Worm, B., PhD (Kiel), Assistant Professor

Assistant Professors
- Cout, P., PhD (McGill), Assistant Professor
- Crossin, G., PhD (Dalhousie), Assistant Professor
- Stacpoole, C., PhD (UMass-Amherst), Assistant Professor

Stacpoole, C., PhD (UMass-Amherst), Director

Adjunct Professors
- Adl, S., MSc (UBC), PhD (Peru-VI), Adjunct Professor
- Bowes, W. D., PhD (UBC), BSc, Adjunct Professor
- Breck, H., BSc (Acadia), MSc (Memorial), PhD (UNB), Adjunct Professor
- Brown, D. T., BSc (Dalhousie), MSc, PhD (Dalhousie), Adjunct Professor
- Frenkel, A., BSc (Saskatchewan), MSc (Dalhousie), PhD (California), Adjunct Professor
- Jones, I., PhD (Alberta), Adjunct Professor
- Kelling, T., MSc (Dalhousie), PhD (Dalhousie), Adjunct Professor
- Leboeuf, N., PhD (Dalhousie), Adjunct Professor
- MacAllister-Irwin, N., PhD (Dalhousie), Adjunct Professor
- Pinder, A., PhD (Mass), Adjunct Professor
- Roy, D., PhD (University of Toronto), Adjunct Professor
- Shutler, D., BSc, MSc (Dalhousie), Adjunct Professor
- Stacpoole, C., PhD (UMass-Amherst), Adjunct Professor

Honorary Research Associates
- Horn, A., PhD (Toronto), Honorary Research Associate
- Wellmer, L., PhD (Dalhousie), Honorary Research Associate

Senior Instructors
- Beauchamp, C., BSc, MSc (Memorial), BEd (Dalhousie), Senior Instructor
- Bredemeier, R. P., PhD (McGill), Senior Instructor
- Carrel, L., BSc (Dalhousie), Senior Instructor
- Davidson, T., BSc (Dalhousie), Senior Instructor
- Donovan, J. A., BSc, MSc (Dalhousie), Senior Instructor
- Eddy, T., PhD (UVic), Senior Instructor
- Liu, H., PhD (China Agricultural University), Senior Instructor
- Park, J. S., PhD (Seoul), Senior Instructor
- Roy, D., PhD (Victoria), Senior Instructor
- Shutler, D., BSc, MSc (Dalhousie), Senior Instructor
- Smith, D., PhD (Dalhousie), Senior Instructor
- Tittensor, D., PhD (Dalhousie), Senior Instructor

Post Doctoral Fellows
- Elsdon, T., PhD (UVic), Post Doctoral Fellow
- Liu, H., PhD (China Agricultural University), Post Doctoral Fellow
- Roy, D., PhD (Victoria), Post Doctoral Fellow
- Tittensor, D., PhD (Dalhousie), Post Doctoral Fellow

Areas of Speciality of Biology Faculty
- Cell Biology: P. Côté, T. MacRae, B. Polubriak, A. Gannawarra, S. Stone
- Marine Biology: G. Gass, R. Scheibling, A. Schmidt, D. Walde, B. Pohajdak

**I. Degree Programs**

The department offers the following degree programs in Biology:

- **BA or BSc (20 credit) Honours (Concentrated, Combined, or Multidisciplinary)**
- **BA or BSc (20 credit) Major**
- **BA or BSc (20 credit) Double Major**
- **BA or BSc (15 credit) Minor**

Departmental requirements for these programs are described below. In addition to the departmental requirements listed below, students must satisfy the requirements outlined in the Degree Requirements section of this calendar.

Please note that a student is governed by the academic regulations in place at the time of initial enrolment as long as the degree is completed within the time permitted, and that subsequent changes in regulations shall apply only if the student so elects. Students applying the old academic regulations should consult the calendar of the appropriate year.

Students should plan their program of study carefully and are encouraged to do so in consultation with a departmental academic advisor.

The department also offers degree programs in Marine Biology. Please consult the Marine Biology section of this calendar.

* BSc Co-op option available.

**A. Co-operative Education Program in Biology**

The Department of Biology offers a Co-operative Education Program for Biology Major, Double Major, and Honours students.

Co-operative Education in Science (Science Co-op) is a program where academic study is combined with paid career-related work experience. Students alternate their work terms throughout their academic study terms and graduate with a Bachelor of Science, Co-op. Science Co-op enables students to apply their knowledge directly while providing them with work experience that assists in making educated career choices. Students can apply to join the Science Co-op Program at the end of either their first or second year. If accepted into the Science Co-op program, students are required to register for and attend the Science Co-op orientation seminar (SCIE 2000.03) in the fall term of the year they join.

See the “Co-operative Education in Science” section of this calendar, or visit http://sciencecoop.dal.ca, for information on Science Co-op such as Science Co-op requirements, eligibility, how to apply, deadlines and other related information.

Students interested in pursuing a Biology Co-op Degree should contact the Biology Co-op AcademicAdvisor, Mindy McCaville (Mindy.McCaville@dal.ca) DURING THEIR FIRST OR SECOND YEAR OF STUDY for program details. A limited number of students will be admitted into this program each year.

**B. BA or BSc (20 credit) Honours Biology**

(Concentrated, Combined or Multidisciplinary)

Students in a concentrative Honours program must take a minimum of nine and a maximum of 11 credits in their honour subject (Biology) above the 1000 level in addition to the general rules of the College of Arts and Science (see degree requirements in the College of Arts and Science section of this calendar).

**Departmental Requirements**

Admission to and graduation from the Honours program requires a B+ average (3.3) in the core program courses at the time of application, with no grade below a C. Furthermore, students must also have a cumulative B+ average (3.3) at the time of application and at graduation.

Students interested in the Honours program must do the following: At the end of their third year, students must have identified and gained the support of a Dalhousie or external faculty member who will supervise their thesis research. If students choose an external supervisor, they must make certain that the supervisor meets the basic criteria as identified by the honour committee (details about external supervisor suitability can be found on the honours homepage - see link below). With the supervisor’s input, the student must then draft a thesis proposal and submit it to the honours committee for approval. This proposal must be signed by both the student and the supervisor and submitted by April 30th. Students who do not meet this deadline will not be permitted to enrol in the Honours course (BIOL/MARR 4900). For students seeking a Co-op Honours degree, contact a Coop advisor for details about proposal submission. For information about who can serve as an honours supervisor, contact an honours advisor.

Regarding the specifics of the thesis proposal, it should: (a) very briefly review the background literature relevant to the student’s research topic; (b) present the specific questions, with clearly articulated hypotheses and predictions (if warranted), that will be addressed by the research; and (c) present an overview of the methods that will be used to address those questions, hypotheses, and predictions. The proposal should be 1-2 pages in length and must be signed by both the student and supervisor. Additional information about the proposal, and about the Honours program in general, can be found on the departmental website: http://biology.dal.ca/honours/

In addition to the University requirements for an Honours degree, students taking ANY TYPE of Biology Honours Program, even if Biology is the second subject of a Combined program, MUST take the following courses.

**Core Program Courses required in all Biology Honours Programs:**

**1000 level**

- BIOL 1010.03 or BIOL 1020.03 (minimum grade of C+)
- BIOL 1011.03 or BIOL 1021.03 (minimum grade of C+)
- CHEM 1011.03 and CHEM 1012.03
- OR: DSP (SCIE 15XX) (minimum grade of C+)

**2000 level**

- BIOL 2005.03
- BIOL 2006.03
- BIOL 2020.03
- BIOL 2030.03
- BIOL 2040.03
- BIOL 2045.03

**3000 level**

- At least one course from BIOL 3050.03, BIOL 3070.03 and BIOL 3079.03, and PHYL 2030X/306 (PHYL 2030X/306 will be counted as a second year level Biology credit)
- See recommendations under II. course Selection Guidelines

**4000 level**

- BIOL 4000X/406 (for those in Concentrated Honours and Combined Honours programs in which Biology is the major area of study)
- Honours Qualifying exams (graded as Pass/Fail and based on participation in BIOL 4000X/406 course and the Cameroon Conference for Honours students)
- NOTE: A minimum of one credits in Biology above the 3000 level, including two credits above the 2000 level are required for the Honours degree.

**Other Recommended Courses**

- PHYC 1300X/06 and PHYC 1200.03
- MATHSTATS 1400.05 and MATH 1001.03 or MATH 1215.03
C. BA or BSc (20 credit) Major in Biology

Departmental Requirements

1000 level
• BIOC 1010.03 or BIOC 3020.03 (minimum grade of C+)
• BIOC 1011.03 or BIOC 1021.03 (minimum grade of C+)
• CHEM 1011.03 and CHEM 1022.03
OR
• SCIE 1505.18, or SCIE 1515.36, SCIE 1520.30 or SCIE 1540.27 (minimum grade of C+)

2000 level
• BIOC 2020.03
• BIOC 2020.03
• BIOC 2040.03
• Any two of BIOC 2003.03, BIOC 2004.03, BIOC 2060.03
• One additional half (0.5) Biology credit at or above the 2000 level

3000 level
• Minimum of three full credits at or above the 3000 level for a BA
• Minimum of four full credits at or above the 3000 level for a BSc
• See recommendations under B, course Selection Guidelines

D. BA or BSc (20 credit) Double Major in Biology

Departmental Requirements

1000 level
• BIOC 1010.03 or BIOC 1020.03 (minimum grade of B-)
• BIOC 1011.03 or BIOC 1021.03 (minimum grade of B-)
• CHEM 1011.03 and CHEM 1022.03

2000 level
• BIOC 2020.03
• BIOC 2020.03
• BIOC 2040.03
• Any two of BIOC 2003.03, BIOC 2004.03, BIOC 2060.03
• One additional half (0.5) Biology credit at or above the 2000 level

3000 level
• Minimum of two Biology full credits at or above the 3000 level
• See recommendations under B, course Selection Guidelines

E. BSc or BA (15 credit) with Minor in Biology

Students in other 20 credit degree programs with a Minor in Biology is available to students in the Faculty of Science.

Departmental Requirements

• A minimum of 18 credit hours in Biology (BIOC) courses at the 2000 level or higher

Note that there are prerequisite requirements for entry into upper level Biology classes.

F. Minor in Biology

Students in other 20 credit degree programs may choose to include a Minor in Biology in their program. Requirements are outlined in the College of Arts and Science Minors section of this Calendar starting on page 129.

G. Minors available to students in Biology

Minor programs allow students to develop subject specialties in addition to their major or honours subjects. Minors in other subjects are normally added to a four-year major or concentrated honours program (including co-op programs).

Students in a 20 credit BSc or BA program in Biology may choose to include a Minor selected from the list of approved Minors beginning on page 132 in this Calendar (note that courses counted toward your Major or Honours program cannot be used to fulfill the requirements of a Minor program).

H. BSc/Engineering or BA/Engineering Concurrent Programs

Students will normally complete the requirements for a 15 credit BSc or 15 credit BA, and the first two years of engineering studies leading to the Diploma in Engineering. The concurrent program can be completed in three years. Details are provided in the College of Arts and Science Degree Requirements in the calendar.

I. Diplomas, Certificates, and Language Proficiency Certificates

Certificates offered by the Biology Department:

Certificate in Animal Behaviour

The certificate program is a collaborative effort of both the Biology and Psychology departments. It provides students an opportunity to take, within their BA or BSc Honours or Major program, a set of courses and a research project that will accord them an animal behaviour specialization. Completion of the Certificate will be shown on a student’s transcript.

Certificate requirements:

1. A minimum grade of a B- is required in four mandatory courses:
   - NESC/PSYO 2160.03 Animal Behaviour
   - PSYO 2101.03 Statistical Methods 1 or Stat 2080.03 Statistical Methods for Data Analysis and Inference
   - BIOL 3063.03 Field Methods in Animal Behaviour or NESC/PSYO 3161.03 Measuring Behaviour

2. A grade of B- in two full credits of elective courses chosen from the following list. One of the two full credits must be at the 3000-4000 level.

2000 Level
- PSYO 2101.03 Statistical Methods 1 or Stat 2080.03 Statistical Methods for Data Analysis and Inference
- BIOL 3063.03 Field Methods in Animal Behaviour or NESC/PSYO 3161.03 Measuring Behaviour
- NESC/PSYO 2470.03 Systems Neuroscience

3000 Level
- BIOL 3067.03 Ecology and Evolution of Fishes
- BIOL 3622.03 Ornithology
- BIOL 3062.03 Behavioral Ecology
- PSYO 2160.03 Animal Behaviour
- BIOL 3630.03 Field Methods in Animal Behaviour or NESC/PSYO 3161.03 Measuring Behaviour
- BIOL 3626.03 Field Studies of Marine Mammals
- ANSC 2003.03 Companion Animal Behaviour
- BIOL 3632.03 Applied Field Methods in Fish Ecology
- BIOL 3633.03 Field Studies of Marine Mammals
- NESC/PSYO 2470.03 Systems Neuroscience

4000 Level
- BIOL 4000.03 Topics in Behavioural Ecology
- BIOL 4060.03 Marine Mammalogy
- BIOL 4003.03 Field Methods in Animal Behaviour or NESC/PSYO 3161.03 Measuring Behaviour
- BIOL 4007.03 Special topics (Animal Behaviour)
- BIOL 4006.03 Marine Mammalogy
- BIOL 4003.03 Field Methods in Animal Behaviour or NESC/PSYO 3161.03 Measuring Behaviour
- BIOL 4006.03 Marine Mammalogy
- BIOL 4007.03 Special topics (Animal Behaviour)

3. A grade of B- in one half credit or more of independent research in Animal Behaviour:

Students are encouraged to complete their Honours thesis on a topic in Animal Behaviour to fulfill this requirement.
Table 2. Theory-Based Courses (minimum of 1.5 credits from the following list)

BIOL/BIOL 3607.03 Ecology and Evolution of Fishes
BIOL/BIOL 3701.03 Marine Ecology
MGMT 3301.03 Resource and Environmental Problem Solving 1: Sustainable Ecosemotes
MGMT 3302.03 Resource and Environmental Problem Solving 2: Sustainable Communities
OCEA 3001.03 Introduction to Physical Oceanography
OCEA 3002.03 Introduction to Chemical Oceanography
PLAN 3010.03 Urban Ecology
SOSA 2200.03 Society, Politics and Culture
SOSA 3000.03 Social Change and Development
SUST 3000.03 Global Approaches to Environmental Decision-Making

Table 3. Field and Methods-Based Courses (minimum of 0.5 credits from the following list)

BIOL 2060.03 The Flora of Nova Scotia
BIOL/MARI 3003.03 Dynamics of Biological Oceanography
BIOL 3065.03 Plant Ecology
BIOL/MARI 3221.03 Diversity of Algae
BIOL/MARI 3301.03 Invertebrate Biology
BIOL 3217.03 Entomology
BIOL/ENV/ENVS/MARI 3603.03 Methods in Ecology
BIOL 3201.03 Field Survey of Territorial Biodiversity
BIOL 3622.03 Ornithology
BIOL/ENV/ENVS/MARI 3623.03 Applied Coastal Ecology
BIOL/ENV 3624.03 Urban Freshwater Systems
BIOL/MARI 3625.03 Field Studies of Marine Mammals
BIOL 3630.03 Field Methods in Animal Behaviour
BIOL/ENV/ENVS/MARI 3632.03 Applied Field Methods in Fish Ecology
BIOL/ENV/ENVS 3633.03 Spatial Information and GIS in Ecology
BIOL 3634.03 Agroecology
BIOL/ENV/ENVS/MARI 3644.03 Interdisciplinary Ecology and Evolution
BIOL 3665.03 Food Web Assembly and Modelling
BIOL 3666.05 Species Invasions
BIOL/MARI 3668.03 Scientific Diving Methods for Marine Ecology
BIOL 3762.03 Terrestrial Ecology
BIOL/MARI 3767.03 Ecology and Evolution of Fishes
BIOL/MARI 4060.03 Marine Mammalogy
BIOL/MARI 4065.03 Sustainability and Global Change
MARI/MARI 4661.03 Biological Oceanography (BIOL/MARI 4661.03)

Note: As usual, students will be required to meet the stated pre-requisites of all courses counted toward the certificate.

Certificate Requirements:

1. Required EIA course: BIOL 4001.03 or ENVS 4001.03 or ENVY 4772.03 (0.5 credits) to be taken in the fourth year.
2. Introductory course in Science or IDS (Table 1) (minimum of 0.5 credits)
3. 3rd Level Environmental courses with largely theoretical content from Table 2 (minimum of 1.5 credits)
4. 3rd Level Methods courses that provide field, laboratory, statistical, modelling and related experience from Table 3 (minimum of 0.5 credits)
5. 3rd and 4th Level Supplementary courses in Major and Related Disciplines (minimum of 1.5 credits)
6. 3rd Level Environmental courses with largely theoretical content from Table 2 (minimum of 1.5 credits)

Students are also encouraged to further develop their study design and analysis skills by taking additional courses such as BIOL 4001.03 (Design of Biological Experiments) or BIOL 4062.03 (Analysis of Biological data).

Enrollment in the Certificate in Animal Behaviour program should be undertaken by students in their third or fourth year of studies when they are seeking approval of the research topic by the Certificate Coordinator.

Experiments) or BIOL 4061.03 (Analysis of Biological data).

Enrollment in the Certificate in Animal Behaviour program should be undertaken by students in their third or fourth year of studies when they are seeking approval of the research topic by the Certificate Coordinator.

Experiments) or BIOL 4061.03 (Analysis of Biological data).

Enrollment in the Certificate in Animal Behaviour program should be undertaken by students in their third or fourth year of studies when they are seeking approval of the research topic by the Certificate Coordinator.
Faculty of Science offers a Certificate in Geographic Information Science. The certificate is intended to reflect that the student has completed courses of study in geographic information systems and geomatics that are appropriate for further study or employment related to geographic information science.

Certificate in Geographic Information Science

Students completing an undergraduate program in a discipline other than those listed above will need to complete the project through a directed readings or honors thesis component. Contact the Certificate Coordinator for program requirements. Completion of each Certificate would be noted on the student’s transcript.

The purpose of a “Certificate in Geographic Information Science” is to show that the graduate has training in geographic information science; in addition to their academic program requirements. Students should enrol in the “Certificate in Geographic Information Science” by contacting the Certificate Coordinator. Contact information for the Coordinator is available on the Faculty of Science website. Students can enrol when in their second, third or fourth year of their undergraduate program. Early enrolment is advised.

Certificate Requirements:
1. Students must complete the following courses, with a minimum grade of B- in each:
   - SUST 4900.06: Honours Thesis
   - ERTH 4000.06: Research Project
   - GEOG 4000.03: GIS Applications to Environmental and Geographical Science

2. In addition, students must complete at least two of the following courses, with a minimum grade of B- in each:
   - GEOG 2000.03: Cartography
   - BIO/BKLM 3000.03: Environmental Decision Making
   - ENVS 3400.03: Environment and Human Health
   - SUET 5000.03: Environmental Decision Making

3. In addition, students must complete a research project with an emphasis in geomatics or geographic information science (as pre-approved by the Certificate Coordinator) via one of the following sets of courses, with a minimum grade of B-:
   - BIO/BKLM 4000.03 or 4901.03/4902.03: Honours Thesis
   - BIO/BKLM 4800.03 or 4907.03: Special Topics
   - ENVS 3000.03: Directed Readings
   - GEOG 4001.06: Research Project
   - ERTH 4200.06: Honours Thesis
   - ERTH 4510.03 or 4511.03: Directed Studies
   - SUST 4000.03: Independent Study
   - SUST 4900.06: Honours Thesis

Students completing an undergraduate program in a discipline other than those listed above will need to complete the project through a directed readings or honors thesis course listed within their home department. The project must be approved by the Certificate Coordinator.

Research Project Guidelines for the Certificate in Geographic Information Science

In the research project in GIS students learn how to design, manage and complete a research project that emphasizes the use of a geographic information system (GIS). Projects can be completed individually or in groups and will proceed with the identification of a suitable research problem. Students will work to solve the problem through acquiring, organizing, analyzing and presenting data using GIS.

Projects must include a substantive analytical component where GIS is central to the methods employed.

The focus of project evaluation is on the methodological and organizational dimensions and the appropriate application of appropriate GIS techniques, and proper reporting of the results. The GIS component is accomplished through independent work. It is assumed that students already know the GIS concepts and functions required or are capable of learning them, and are proficient in the use of at least one GIS package.

Supervision and evaluation of research projects should include, at minimum, input from a professor or GIS technician competent in geographic information science, methods and technologies. Evaluation of the research project should ideally include three written components: a proposal, a final report and a presentation. In group evaluation the supervisor may adjust final grades based on performance and contribution to the group.

II. Course Selection Guidelines

The Faculty of Science offers a Certificate in Geographic Information Science. The Certificate in Geographic Information Science is available to students in programs other than those where GIS is a course requirement. Students completing an undergraduate program in a discipline other than those listed above will need to complete the project through a directed readings or honors thesis component. Contact the Certificate Coordinator for program requirements. Completion of each Certificate would be noted on the student’s transcript.

The purpose of a “Certificate in Geographic Information Science” is to show that the graduate has training in geographic information science; in addition to their academic program requirements.

Students should enrol in the “Certificate in Geographic Information Science” by contacting the Certificate Coordinator. Contact information for the Coordinator is available on the Faculty of Science website. Students can enrol when in their second, third or fourth year of their undergraduate program. Early enrolment is advised.

Certificate Requirements:
1. Students must complete the following courses, with a minimum grade of B- in each:
   - SUST 4900.06: Honours Thesis
   - ERTH 4000.06: Research Project
   - ERTH/GEOG 4520.03: GIS Applications to Environmental and Geographical Science

2. In addition, students must complete at least two of the following courses, with a minimum grade of B- in each:
   - GEOG 2000.03: Cartography
   - BIO/BKLM 3000.03: Environmental Decision Making
   - ENVS 3400.03: Environment and Human Health
   - SUET 5000.03: Environmental Decision Making

3. In addition, students must complete a research project with an emphasis in geomatics or geographic information science (as pre-approved by the Certificate Coordinator) via one of the following sets of courses, with a minimum grade of B-:
   - BIO/BKLM 4000.03 or 4901.03/4902.03: Honours Thesis
   - BIO/BKLM 4800.03 or 4907.03: Special Topics
   - ENVS 3000.03: Directed Readings
   - GEOG 4001.06: Research Project
   - ERTH 4200.06: Honours Thesis
   - ERTH 4510.03 or 4511.03: Directed Studies
   - SUST 4000.03: Independent Study
   - SUST 4900.06: Honours Thesis

Students completing an undergraduate program in a discipline other than those listed above will need to complete the project through a directed readings or honors thesis course listed within their home department. The project must be approved by the Certificate Coordinator.

Research Project Guidelines for the Certificate in Geographic Information Science

In the research project in GIS students learn how to design, manage and complete a research project that emphasizes the use of a geographic information system (GIS). Projects can be completed individually or in groups and will proceed with the identification of a suitable research problem. Students will work to solve the problem through acquiring, organizing, analyzing and presenting data using GIS.

Projects must include a substantive analytical component where GIS is central to the methods employed.

The focus of project evaluation is on the methodological and organizational dimensions and the appropriate application of appropriate GIS techniques, and proper reporting of the results. The GIS component is accomplished through independent work. It is assumed that students already know the GIS concepts and functions required or are capable of learning them, and are proficient in the use of at least one GIS package.

Supervision and evaluation of research projects should include, at minimum, input from a professor or GIS technician competent in geographic information science, methods and technologies. Evaluation of the research project should ideally include three written components: a proposal, a final report and a presentation. In group evaluation the supervisor may adjust final grades based on performance and contribution to the group.
B. Organismal Biology

Organismal biology includes areas such as development, physiology and anatomy, as well as the study of particular taxonomic groups. Students interested in organismal biology are encouraged to select courses from the following:

1. Cell Biology (BIOC): All BIOC courses 1000 level or higher
2. Anatomy (ANAT): All ANAT courses 2000 level or higher
3. Physiology (PHYL): All PHYL courses 2000 level or higher
4. Microbiology (MCRA): All MCRA courses 2000, 3000, 4000
5. Genetics (GENE): 3000, 3001, 4000, 4003, 4004
6. Environmental Science (ENVS): 3217, 3225, 3226, 3615, 3623, 3624, 3632, 3664, 4374, 4375, 4376, 4377
7. Biochemistry (BIOC): All BIOC courses 2000 level or higher

C. Cell/Molecular Biology

Cell/molecular biology includes areas such as cell biology, molecular biology, genetics, biochemistry, microbiology, development, evolution and histology. Students interested in cell/molecular biology are encouraged to consider the courses listed below. Note that Biology credit can be obtained for Microbiology, Biochemistry and Physiology courses above the 2000 level.

1. Microbiology (MCRA): All MCRA courses 2000 level or higher
2. Cell Biology (BIOC): All BIOC courses 1000 level or higher
3. Physiology (PHYL): All PHYL courses 2000 level or higher

III. Enrolment Limitations

Students intending to enrol in programs in Biology and Marine Biology should note that there are limitations on the number of students that can be accepted into 2000 and higher level courses in any given year. Passing the introductory Biology courses with the required grade of C- does not guarantee a place in any of these courses. Lecture courses are limited by room size. Additional size restrictions are imposed on laboratory courses because of equipment limitations and the much closer supervision required. Size limitations on 2000 and 3000 level laboratory courses are specified under the timetable listings for those courses.

Students are advised to register as early as possible during the registration period to secure their space within their desired courses.

Please note also that being registered for a course does not guarantee late admission. Students not appearing on the first day of course may be deleted from course lists. Students are advised that being signed into a course is no guarantee of late admission.

Biology courses are grouped into four general categories:

1. 1000 Level Courses

   (BIOI 1010.03 or 1020.05 and BIOI 1011.05 or 1021.05). These courses are the introductory university-level courses in biology.

2. 2000 Level Courses

   All Biology majors (15, 20 credit and Honours) are required to take a core program at the 2000 level. Students should normally complete these core courses in their second year. The core program is designed to provide a basis for more advanced studies in Biology as well as to ensure that all majors are exposed to the general discipline or subject areas of biology. A variety of skills including writing, oral presentation, computer literacy, library use, and problem solving are integrated into the curriculum of these core courses along with ‘hands-on’ activities in the laboratory or field. The second-year core program covers five discipline areas:

   1. Cell Biology - BIOI 2020.03
   2. Diversity of Organisms (animals, plants and microorganisms)
      • BIOI 2003.03
      • BIOI 2004.03
   3. Ecology - BIOI 2006.03
   4. Evolution - BIOI 2040.03
   5. Genetics and Molecular Biology - BIOI 2100.03

   Students interested in biochemistry are advised to take the second-year biochemistry course offered by the Biochemistry and Molecular Biology department. This course is not part of our core program but is a prerequisite for entry into some higher level courses.

   Students majoring in subjects other than Biology can design their own programs and will not have to conform to these 2000 level core requirements. All students should ensure they have the necessary prerequisite courses required for entry into 3000 level courses.

3. 3000 Level Courses

   These courses are mainly for second- and third-year students. No student whose minor is in Biology will be allowed to register in any 3000 or 4000 level course without having completed, or being registered in 2000 level courses in biology totalling at least two full credits.

4. 4000 Level Courses

   These courses are primarily for honours or major students. They are open to others with the permission of the instructor. Where biology courses are identified as being given in another department (eg. Anatomy), that department should be consulted for details.

5. Other Courses

   The following courses, given by other departments may be taken as a Biology course toward BA, BSc, and BIE (Honours) Biology degrees.

   These courses are available as listed in a Biology course.

   Agriculture (AGRI): 1000
   Anatomy (ANAT): All ANAT courses 2000 level or higher
   Aquaculture (AQUA): 2000, 3000
   Biochemistry (BIOC): All BIOC courses 2000 level or higher
   Environmental Science (ENVS): 4092, 4093, 4097
   Environmental Science (ENVS): 2127, 2128, 3615, 3623, 3624, 3632, 3664, 4000
   Genetics (GENE): 3000, 3001, 4000, 4003, 4004
   History (HIST): 2074, 2091, 3073, 3074
   History of Science and Technology (HIST): 1200, 2200, 3212, 3331
   Microbiology (MICR): All MICR courses 2000 level or higher
   Microbiology (MICR): 2000, 3000, 4000
   Marine Biology (MAR): All MARX courses
   Neuroscience (NEUR): 3123, 3440
   Nutrition (NUTR): 4374, 4375, 4376, 4377
   Oceanography (OCEA): 3063
   Physiology (PHYL): All PHYL courses 2000 level or higher
NOTE: Students planning to take further courses in Biology or Marine Biology are recommended. Learning activities include readings, eukaryotic life, ecology, and plant and animal biology. High school mathematics, chemistry, and biology is offered in the fall, winter and summer terms. Topics include diversity of non–animal life forms. Reviews the origins of the main lineages of living things – Archaea, Eukarya, and Eukarya, as well as the main groups of eukaryotes.

NOTE: Students who took a Biology 1000 level prerequisite prior to September 2013 and did not get a grade of C+ or higher should contact an advisor in the Biology Department preferably before registration begins.

BIOL 2040.03: Diversity of Life II.
Introduces the main domains of plant, fungal and microbial life, based on modern phylogenetic taxonomy. Examines the diversity, structure, physiology and ecology of non–animal life forms. Reviews the origins of the main lineages of living things – Archaea, Eukarya, and Eukarya as well as the main groups of eukaryotes.

NOTE: Students who took a Biology 1000 level prerequisite prior to September 2013 and did not get a grade of C+ or higher should contact an advisor in the Biology Department preferably before registration begins.

FORMAT: Lecture 3 hours, Lab 3 hours
PREREQUISITE: BIOL 1031.03 or BIOA 1002.03 and BIOL 1011.03 or BIOL 1021.03 or BIOL 1000.03 or DISP (SCIE 15XX) or STAT 1000.03
EXCLUSION: BIOL 1000.03, BIOL 1001.03, BIOL 1020.03, BIOL 1021.03 or DISP (SCIE 15XX)

BIOL 2050.03: Cell Biology.
An introduction to the eukaryotic cell. Major cell components and activities are described at intracellular and molecular levels with emphasis on mammalian systems. The concept of the cell as an integrated, functional unit is developed.

NOTE: Students who took a Biology 1000 level prerequisite prior to September 2013 and did not get a grade of C+ or higher should contact an advisor in the Biology Department preferably before registration begins.

FORMAT: Lecture 3 hours, Lab 3 hours
PREREQUISITE: A grade of C+ or higher in BIOL 1000.03 or BIOL 1010.03 or BIOL 1020.03 or BIOL 1021.03 or BIOL 1000.03, DISP (SCIE 15XX) or equivalent
RECOMMENDED: CHEM 1011.03 and CHEM 1012.03
EXCLUSION: BIOL 2004.03

BIOL 2003.03: Diversity of Life I.
Surveys the diversity of forms and functions in invertebrate and vertebrate animals. Emphasis is placed on the invertebrate phyla and fish of marine environments, and on arthropods, birds and mammals on land. The course takes a phylogenetic approach, exploring the evolutionary relationships, and introduces examples of the different life forms. Students who took a Biology 1000 level prerequisite prior to September 2013 and did not get a grade of C+ or higher should contact an advisor in the Biology Department preferably before registration begins.

FORMAT: Lecture 3 hours, Lab 3 hours
PREREQUISITE: None
EXCLUSION: BIOL 1000.03, BIOL 1001.03, DISP (SCIE 15XX)

BIOL 1030.03: Organismal Biology & Ecology.
Introduces the main domains of plant, fungal and microbial life, based on modern phylogenetic taxonomy. Examines the diversity, structure, physiology and ecology of non–animal life forms. Reviews the origins of the main lineages of living things – Archaea, Eukarya, and Eukarya, as well as the main groups of eukaryotes.

NOTE: Students who took a Biology 1000 level prerequisite prior to September 2013 and did not get a grade of C+ or higher should contact an advisor in the Biology Department preferably before registration begins.

FORMAT: Lecture 3 hours, Lab 3 hours
PREREQUISITE: A grade of C+ or higher in BIOL 1000.03 or BIOL 1010.03 or BIOL 1020.03 or BIOL 1021.03 or BIOL 1000.03, DISP (SCIE 15XX) or equivalent
RECOMMENDED: CHEM 1011.03 and CHEM 1012.03
EXCLUSION: BIOL 2004.03

BIOL 2020.03: Cell Biology.
An introduction to the eukaryotic cell. Major cell components and activities are described at intracellular and molecular levels with emphasis on mammalian systems. The concept of the cell as an integrated, functional unit is developed.

NOTE: Students who took a Biology 1000 level prerequisite prior to September 2013 and did not get a grade of C+ or higher should contact an advisor in the Biology Department preferably before registration begins.

FORMAT: Lecture 3 hours, Lab 3 hours
PREREQUISITE: A grade of C+ or higher in BIOL 1000.03 or BIOL 1010.03 or BIOL 1020.03 or BIOL 1021.03 or BIOL 1000.03, DISP (SCIE 15XX) or equivalent
RECOMMENDED: CHEM 1011.03 and CHEM 1012.03
EXCLUSION: BIOL 2004.03

BIOL 1021.03: Introductory Biology II: Organismal Biology & Ecology.
Biological 2020.03 is the online distance education equivalent of BIOL 1011.03 and is offered in the fall, winter and summer terms. Topics include diversity of eukaryotic life, ecology, and plant and animal biology. High school mathematics, chemistry, and biology are recommended. Learning activities include readings, quizzes, interactive multimedia, online labs and home labs.

NOTE: Students planning to take further courses in Biology or Marine Biology should read the Program Requirements for these degrees.
BIOL 2030.03: Genetics and Molecular Biology. The power and prominence of modern genetics have grown from a blend of classical and molecular approaches; both approaches are emphasized. Topics include: Mendelian population and quantitative genetics, chromosomes, structure and variation, structure and function of nucleic acids, DNA replication, transcription and translation, gene expression, gene mutations, and genetic engineering.

NOTE: Students who took a Biology 1000 level prerequisite prior to September 2013 and did not get a grade of C+ or higher should contact an advisor in the Biology Department preferably before registration begins.

FORMAT: Lecture 3 hours, lab/tutorial 3 hours
PREREQUISITE: A grade of C+ or higher in BIOL 1010 or BIOL 1020.03 or 1031.03, or BIOL 1021.03 or DSP (SCI 15XX)
RECOMMENDED: CHEM 1011.03 and CHEM 1012.03
EXCLUSION: GENE 2000.03

BIOL 2040.03: Evolution. A thorough overview of the process of evolution. Generic variation and changes in generic composition of populations, the relationship between generic and phenotypic change. Adaptation at various levels of organization (DNA to species), speciation, phylogeny, and macro-evolutionary patterns. Introduces the full breadth of concepts, preparation to more advanced courses.

NOTE: Students who took a Biology 1000 level prerequisite prior to September 2013 and did not get a grade of C+ or higher should contact an advisor in the Biology Department preferably before registration begins.

FORMAT: Lecture, 3 hours, lab/tutorial 2 hours
PREREQUISITE: A grade of C+ or higher in BIOL 1010.03 or BIOL 1020.03 or BIOL 1031.03 or BIOL 1021.03 or DSP (SCI 15XX) or equivalent
EXCLUSION: BIOL 3041.03

BIOL 2600.03: Introductory Ecology. Ecology examines interactions of plants and animals, including humans, with each other and with their non-living environment. Topics include population growth, competition, predation, food webs, metapopulation dynamics, biodiversity, and ecosystem function. The course has a quantitative approach providing a foundation for further work in ecology, marine biology and environmental science.

NOTE: Students who took a Biology 1000 level prerequisite prior to September 2013 and did not get a grade of C+ or higher should contact an advisor in the Biology Department preferably before registration begins.

FORMAT: Lecture 3 hours, lab/tutorial 2 hours
PREREQUISITE: A grade of C+ or higher in one of: BIOL 1011.03, BIOL 1021.03, BIOL 1031.03, BIOL 1010.03, BIOL 1020.03, SCI 15XX, ENVS 1000.06 and (MATH/STAT 1060.03 or MATH/STAT 2080.03) or equivalent

BIOL 2601.03: The Flora of Nova Scotia. Introduction to the biodiversity of flowering plants (Angiosperms) found in Nova Scotia. A wide range of plant communities are visited on several day-long field trips. A focus on plant identification is supplemented with lessons in plant ecology, floral biology, pollination mechanisms, natural history, and human uses (e.g., edible, poisonous, medicinal).

NOTE: Offered in summer through SEASIDE. An auxiliary fee is charged to cover field expenses. For dates, times and special registration procedures, see Biology Department preferably before registration begins.

FORMAT: Lecture/lab/field
PREREQUISITE: A grade of C+ or higher in BIOL 1011.03 (or BIOL 1021.03), BIOL 1031.03 or BIOL 1020.03, or BIOL 1010.03 (or BIOL 1020.03)
EXCLUSION: BIOL 2061.03

BIOL 2605.03: Introduction to Marine Life of Nova Scotia. Introduction to the variety of marine life found in Nova Scotia. The diversity and zonation of invertebrates and macroalgae is explored on field trips to different shore environments, including a salt marsh, rocky shore and sandy beach. Lectures and laboratory-based investigations on live marine organisms complement the field trips.

NOTE: Offered in summer through SEASIDE. An auxiliary fee is charged to cover field expenses. For dates, times and special registration procedures, see Biology Department preferably before registration begins.

FORMAT: Lecture/lab/field
PREREQUISITE: A grade of C+ or higher in BIOL 1011.03 (or BIOL 1021.03), BIOL 1031.03 or BIOL 1020.03, or BIOL 1010.03 (or BIOL 1020.03)
EXCLUSION: BIOL 2061.03

BIOL 3003.03: Introduction to Field Oceanography. See course description for OCEA 3003.03 in the Oceanography section of the calendar.

BIOL 3020.03: Advanced Cell Biology. The eukaryotic cell is a unique array of interconnected organisms. Topics include the processing of proteins during trafficking, how the cell interacts with its environment and how it integrates information, with an emphasis on signalling pathways. Lectures are supplemented with assigned readings of original research articles for discussion.

FORMAT: Lecture 1.5 hours/discussion 1.5 hours
PREREQUISITE: BIOL 2020.03 or BIOL 2040.03 with a minimum grade of B or instructor's consent

BIOL 3024.03: Microscopy. See course description for MIER 3024.03 in the Microbiology and Immunology section of the calendar.

BIOL 3036.03: Transgenic Organisms. Transgenics are created by inserting foreign genes into organisms by genetic engineering. This course will include: Recombinant DNA technology, the history of transgenics, methods of production/salutation (plant and animal) and human gene therapy. Problems, ethics and controversy (e.g., Frankenfood) associated with this technology will be discussed.

NOTE: Students who took a Biology 1000 level prerequisite prior to September 2013 and did not get a grade of B- or higher should contact an advisor in the Biology Department preferably before registration begins.

FORMAT: Lecture 3 hours
PREREQUISITE: A grade of C+ or higher in BIOL 1010.03 (or BIOL 1020.03) or BIOL 1021.03, and BIOL 1011.03 (or BIOL 1021.03) or DSP (SCI 15XX)

BIOL 3042.03: Molecular Ecology. We survey techniques of molecular genetic analysis and consider how they can be used to identify species, populations, sexes, individuals and family relationships, and study population attributes such as historical dispersal, contemporary connectivity, mating behaviour and effective population size. Evaluation is based on assignments, a test and a final exam.

PREREQUISITE: A grade of B- or better in each of BIOL 2030.03 (or GENE 2000.03), BIOL 2040.03, and BIOL 2060.03.
CROSS-LISTING: MARE 3042.03
EXCLUSION: BIOL 4042.03

BIOL 3044.03: Ecological Genetics. An advanced examination of genetic variation in ecologically important (especially quantitative) traits. Topics will include determining whether a trait is inherited, natural selection in the wild, specialist vs. generalist strategies, how variation is maintained in the face of selection, trade-offs between competing selective pressures and selection for diversification.

FORMAT: Lecture 3 hours
PREREQUISITE: BIOL 2400.03 or BIOL 3401.03
EXCLUSION: BIOL 4044.03

BIOL 3046.03: Molecular Evolution. This course examines the process of evolutionary change at the molecular level. It begins with the sources of mutation, and moves on to dynamics of population variation. The course culminates with a macro-evolutionary perspective on topics such as adaptive evolution and genetic co-option. This course is complementary to BIOL 4010 (Genetics).

FORMAT: Lecture 3 hours
PREREQUISITE: BIOL 2030.03 or GENE 2000.03, BIOL 2040.03

BIOL 3050.03: Developmental Biology. Lectures describe development as a sequence of processes and events, in which 'simple' structures such as fertilized eggs are progressively transformed into complex organisms. These events are governed by developmental 'rules' which specify the temporal and spatial patterning of development.

PREREQUISITE: BIOL 2020.03 or BIOL 2030.03 or GENE 2000.03
Biol 3060.03: Environmental Ecology.
The ecological effects of pollution, disturbance, and other stresses, both anthropogenic and natural. Major subject areas are air pollutants, toxic metals, acidification, nutrient runoff, oil spills, pesticides, forestry, warfare, urban ecology, risks to biodiversity, and resource degradation. The overarching context of the course is the concept of sustainability and laboratory work focuses on these themes. 

**Format:** Lecture 3 hours, tutorial 3 hours

**Prerequisite:** BIOL 2003.03 or BIOL 3001.03 (or see instructor)
**Cross-listing:** BIOL 3060.03

Biol 3061.03: Communities and Ecosystems.
Part 1 includes community history and theory, complex systems, community structure descriptors, interactions, stability, and food webs. Part 2 discusses the ecosystem approach, environmental management, ecosystem health and integrity, environmental indicators, ecologicalfootprint, and resilience theory.

**Format:** Lecture 3 hours and BIOL 3061.03

**Prerequisite:** BIOL 2060.03 or BIOL 3001.03, or INTD 2001.03 or INTD 2002.03

Biol 3062.03: Behavioral Ecology.
This course examines animal behavior from an evolutionary perspective. Using the theory of natural selection as a basis, we will examine foraging, grouping patterns, territorial behavior, parenting, mating behavior, social organization, aggression and cooperation. There will be tutorials and essay assignments.

**Format:** Lecture 3 hours

**Prerequisite:** BIOL 2060.03 or (see BIOL 3001.03)

Biol 3063.03: Resource Ecology.
The course considers the ecology, utilization, and management of natural resources in fisheries, wildlife and forest management, agriculture and aquaculture. Topics include population dynamics, community interactions, and ecosystem-support of resources as well as the history of resource utilization, practices of controlling production, pests, and predators, and sustainable management strategies.

**Format:** Lecture 3 hours, tutorial 2 hours

**Prerequisite:** BIOL 2003.03 or BBA 3001.03, MATH 1000.03 or MATH 1215.03 or DSSP, STAT 1000.03 or DSSP (SCIE 15XX)

Biol 3065.03: Conservation Biology.
The course offers an introduction to conservation biology: the science of understanding and conserving biodiversity on Earth. Students learn how biodiversity change is assessed and what tools are used to prevent the extinction of species and the disruption of ecosystems. Tutorials involve oral presentations as well as a written essay.

**Format:** Lecture 3 hours, tutorial 2 hours

**Prerequisite:** BIOL 2060.03 or BIOL 3001.03

Biol 3067.03: Ecology and Evolution of Fishes.
This course will examine selected topics on the ecology and evolution of marine and freshwater fishes. Topics shall include systematics, functional morphology, evolutionary ecology, behavior, life history strategies, population biology, fisheries science, and conservation biology.

**Format:** Lecture 3 hours, lab 2.5 hours

**Prerequisite:** BIOL 2060.03 or BIOL 2061.03 or BIOL 3001.03

**Cross-listing:** BIOL 3067.03, MARI 3067.03

An examination of selected topics in population ecology, including the effects of species interactions on population fluctuations, cycles and extinction. Case studies (hare cycles, forest insect outbreaks and elephant dynamics) will be studied in light of current ecological theory. Written assignments and exams will contribute to evaluation.

**Format:** Lecture/tutorial 3 hours

**Prerequisite:** BIOL 2003.03 or BIOL 3001.03 minimum grade of B, STAT 1040.03 and MATH 1000.03 or MATH 1215.03 or DSSP.

Biol 3078.03: Principles of Animal Physiology Part I.
Lectures on the mechanisms which coordinate the activities of cells within multicellular organisms and permit such organisms to remain in homeostatic balance. The emphasis is on the mechanisms most widely distributed throughout the animal kingdom. The laboratories are designed to illustrate these principles in a variety of organisms.

**Note:** Students must complete 3078.03 before 3079.03

**Format:** Lecture 3 hours, lab 3 hours

**Prerequisite:** BIOL 2003.03, BIOL 2020.03 or (see BIOL 3001.03)

Biol 3079.03: Principles of Animal Physiology Part II.
This course is a continuation of the mechanisms which coordinate the activities of cells within multicellular organisms which began in BIOL 3078.03. This term emphasizes the circulatory, cardiovascular and respiratory systems. The laboratories reflect the approaches taken to study these systems in a variety of organisms.

**Format:** Lecture 3 hours, Lab 3 hours

**Prerequisite:** BIOL 3078.03 or (see BIOL 3074.03

**Exclusion:** MARI 3065.03, BIOL 3067.03

Biol 3101.03: Microbial Ecology.
Lectures on the ecology of bacteria, viruses and protists. Community structure, food web nutrient cycling, biogeochemical cycles, competition, succession and symbiosis are discussed with examples from marine, fresh water and soil habitats. There is an emphasis on marine organisms.

**Format:** Lecture 3 hours

**Prerequisite:** BIOL 2004.03 or (MCI 2100.03), and BIOL 2060.03 or (see BIOL 3001.03)

**Cross-listing:** MARI 3101.03

Biol 3102.03: Microbial Eukaryotes: Biodiversity and Evolution.
Microbial eukaryotes are of tremendous ecological, evolutionary and medical/veterinary importance. This course provides a comprehensive understanding of the biodiversity and evolution of both algal and protozoan eukaryotes, and examines important impacts of their organismal biology, including cell and genome organization, life histories, trophic strategies, locomotion and symbiosis.

**Format:** Lecture/4 hours (alternate weeks: 2 hour lab or lecture)

**Prerequisite:** BIOL 2060.03 or (see BIOL 2001.03) and BIOL 2060.03 or (MCI 2100.03)

Biol 3221.03: Diversity of Algae.
This is a taxonomic introduction to the major algal groups (macrophytic and microscopic) with an emphasis on the marine seaweeds. Basic taxonomic differences are covered, along with an introduction to macrophytic ecology, human uses and symbioses. Laboratory sessions focus on morphology and reproduction.

**Prerequisite:** BIOL 2004.03 or equivalent

**Cross-listing:** MARI 3221.03

**Exclusion:** BIOL 3212.03, MARI 3212.03

Biol 3226.03: Economic Botany: Plants & Civilization.
See course description for EVNS 3226.03 in the Environmental Studies section of the calendar.

Biol 3301.03: Invertebrate Biology.
A survey of the diversity, ecology, and evolutionary history of the major invertebrate groups. Lectures will emphasize phylogenetics and diversity of body plans, labs will emphasize identification and anatomy through dissections and observations.

**Format:** Lecture 2 hours, lab 3 hours

**Prerequisite:** BIOL 2003.03

**Cross-listing:** MARI 3301.03

Biol 3322.03: Parasitology.
The course emphasizes the parasite-host relationships, evolution of the parasites and adaptations to the host, modifications of physiology, structure and life cycles for a parasitic existence. Since the most extensive research pertains to parasites of man, the emphasis is on human parasites.

**Format:** Lecture 2 hours, lab 3 hours

**Prerequisite:** A grade of B- or higher in BIOL 1010 or BIOL 3072.03, and BIOL 3011.03 or BIOL 1021.03 or BIOL 1065.03, or SCIE 1515.18 or SCIE 1515.36 or SCIE 1520.30 or SCIE 1540.27

Biol 3326.03: Vertebrate Design: Evolution and Function.
Vertebrate Design explores 600 million years of vertebrate evolution, with particular attention to origins of major groups and the anatomical and functional innovations associated with their rise and diversification. Functional morphology of living systems, flying and terrestrial locomotion is also covered, along with the effect of body size on function.

**Format:** Lecture 3 hours

**Prerequisite:** BIOL 2003.03 and BIOL 2040.03
Biol 3327.03: Entomology. The course is an introduction to the study of insects. Topics include insect classification, evolutionary diversity, biology, ecology, behavior, and various applied aspects. Through this survey of the insects, students will gain an appreciation of insect biodiversity as well as their economic and ecological importance. 

NOTE: Offered in summer through SEASIDE. An auxiliary fee is charged to cover field expenses. For dates, times and special registration procedures, see seaside.science.dal.ca.

Prerequisite: BIOL 2003.03
Exclusion: BIOL 3300.03

Biol 3328.03: Medical Entomology. Medical Entomology covers direct injuries caused by arthropods such as phlebotomus, araneous, lice, ticks, venomous and myiasis, arthropod transmission of vertebrate parasites, epidemiology of arthropod-borne diseases. Students study transmission of diseases, methods of surveillance of diseases, management by vector control and other methods of arthropod-borne diseases.

NOTE: Offered in summer through SEASIDE. An auxiliary fee is charged to cover field expenses. For dates, times and special registration procedures, see seaside.science.dal.ca.

Prerequisite: BIOL 3327.03 or BIOL 3322.03 or BIOL 3000.03, or permission of instructor

Biol 3329.03: Applied Entomology. Insects not only comprise more than half of the world’s biodiversity, but influence human health and economic well-being in many ways. In this course students are introduced to insect pest management, agricultural, forest and medical entomology, forensic entomology, and insects as food science, beneficial and harmful insects.

NOTE: Offered in summer through SEASIDE. An auxiliary fee is charged to cover field expenses. For dates, times and special registration procedures, see seaside.science.dal.ca.

Prerequisite: BIOL 3327.03 or BIOL 3322.03 or BIOL 3000.03 or permission of instructor

Biol 3421.03: Comparative Vertebrate Histology. See course description for ANAT 3421.03 in the Anatomy and Neurobiology section of this calendar.

Biol 3430.03: Introduction to Human Histology. See course description for ANAT 2160.03 in the Anatomy and Neurobiology section of this calendar.

Biol 3503X/Y.06: Introduction to the History of Science. See course description for HIST 2200X/Y.06 in the History of Science & Technology section of the calendar.

Biol 3580.03: Philosophy of Biology. See course description for PSBL 3420.01 in the Philosophy section of this calendar.

Biol 3600.03: Aquaculture. Through lectures, laboratories and field trips (additional fees apply), this course offers an introductory overview of aquaculture, the culturing of aquatic plants and animals. The following topics are covered with both a Maritimes and global perspective: overview, physico-chemistry of water, engineering, culture techniques, health, nutrition, genetics, environmental and socio-economic considerations.

FORMAT: Lectures, labs, field trips
Prerequisite: BIOL 3327.03 or BIOL 3322.03 or BIOL 3000.03
Exclusion: BIOL 3601.03

Biol 3601.03: Nature Conservation. This interdisciplinary course explores relationships between humans and the natural world, including damage caused to species and ecosystems. The course looks at environmental ethics and world views, environmental philosophy, sustainability, the cultural expression of natural values (literature, music, art) and conservation science and actions, including the establishment of protected areas.

FORMAT: Lecture 3 hours, tutorial 1 hour
BIOL 3665.03: Food Web Assembly and Modelling. In “Food Webs” the student will examine the structure and functioning of ecological communities through a lens of “who eats whom” predator-prey feeding interactions through field studies, experiments, and computer simulations. 

NOTE: Offered in summer through SEASIDE. An auxiliary fee is charged to cover field expenses. For dates, times and special registration procedures, see seaside.science.dal.ca.

BIOL 3666.03: Species Invasions. Students will examine species invasions, the establishment of non-native species in new communities, using an interdisciplinary framework incorporating impacts, theory, and management of invasive species.

NOTE: Offered in summer through SEASIDE. An auxiliary fee is charged to cover field expenses. For dates, times and special registration procedures, see seaside.science.dal.ca.

BIOL 3680.03: Scientific Diving Methods for Marine Ecology. This course introduces students that are certified divers to the practice of underwater research using SCUBA. It combines lectures with supervised dives in various marine habitats to demonstrate the application of standard sampling and experimental procedures in marine ecology, with an emphasis on logistical considerations and diving safety.

NOTE: Offered in summer through SEASIDE. An auxiliary fee is charged to cover field expenses. For dates, times and special registration procedures, see seaside.science.dal.ca.

BIOL 3761.03: Marine Ecology. Building upon an understanding of basic ecological and evolutionary principles, and a familiarity with the major marine invertebrate and algal taxa, this course examines patterns and processes at the organismal, population and community levels that determine the diversity and distribution of life in the sea.

FORM: Field Intensive, Lecture, Lab and Lecture

BIOL 3762.03: Terrestrial Ecology. This course provides a conceptual framework for understanding the function of terrestrial ecosystems. One week at a field station in Nova Scotia provides a hands-on approach to understanding and using spatial information, this course introduces students to Geographic Information Systems (GIS) as a tool to answer ecological questions. Together, students conduct a major field project, collecting data, creating maps using GIS, and interpreting spatial patterns, to address and apply problem in ecology.

NOTE: Offered in the summer through SEASIDE, an auxiliary fee is charged to cover field expenses. For dates, times and special registration procedures, see seaside.science.dal.ca.

BIOL 3646.03: Intertidal Ecology and Diversity. Hands-on, intensive introduction to ecological research on rocky shores, tidal flats, and sandy beaches. Relevant ecological concepts, sampling techniques for flora and fauna, and statistical skills are learned. Field sampling on a regular basis that permits a follow up of lab work (e.g., identification of seaweed, invertebrates), statistical analysis, and report preparation.

NOTE: Offered in summer through SEASIDE. An auxiliary fee is charged to cover field expenses. For dates, times and special registration procedures, see seaside.science.dal.ca.

BIOL 3766.03: Food Web Assembly and Modelling. In “Food Webs” the student will examine the structure and functioning of ecological communities through a lens of “who eats whom” predator-prey feeding interactions through field studies, experiments, and computer simulations. 

NOTE: Offered in summer through SEASIDE. An auxiliary fee is charged to cover field expenses. For dates, times and special registration procedures, see seaside.science.dal.ca.

BIOL 3665.03: Food Web Assembly and Modelling. In “Food Webs” the student will examine the structure and functioning of ecological communities through a lens of “who eats whom” predator-prey feeding interactions through field studies, experiments, and computer simulations. 

NOTE: Offered in summer through SEASIDE. An auxiliary fee is charged to cover field expenses. For dates, times and special registration procedures, see seaside.science.dal.ca.

term or complete the 96 hours in a more concentrated period during the summer. Grading is pass/fail.
PREREQUISITE: Students must be registered in a Biology or Marine Biology program, have completed a minimum of three full credits in Biology above the 1000 level and have a minimum cumulative GPA of 2.4 or permission of co-
ordinator.
CROSS-LISTING: MAR 3800.03
EXCLUSION: Scheduled courses at a learning institution, study that would qualify for a Special Topics course, an Honours project, co-op work terms and any other course at the undergraduate level.

Biology

BIOL 4001.03: Environmental Impact Assessment.
This course provides an opportunity to explore all aspects of environmental impact assessment (EIA) as practiced in Canada and in other countries. The course traces the development of EIA over the past 30 years and critically examines the scientific, procedural and political dimensions.
NOTE: All students taking BIOL 4001.03 or ENVIS 4001.03 must have completed 90 credits and be in their fourth year of study or have permission of instructor.
FORMAT: Lecture 3 hours
PREREQUISITE: ENVIS 1000Y.06 or BIOL 3001.03 or BIOL 3002.03, or EQUA 2201.03 or GEOG 2100Y.06 or GEOG 2201.03 or GEOG 2202.03 or INTD 2001.03 or INTD 2002.03 or OCEA 2001.03 and OCEA 2002.03 or SUST 2000.06 or SUST 2001.06.
CROSS-LISTING: BIOL 5001.03
BIOL 4002.03: The Science of Wetland Ecosystems.
See ENVIS 4002.03 in the Environmental Science section of the calendar.

BIOL 4035.03: Human Genetics.
See BIOL 4035 in the Biochemistry section of the calendar.

BIOL 4050.03: Advanced Topics in Developmental Biology.
This course examines the molecular-genetic basis of development using model organisms, e.g., Drosophila and Arabidopsis, and the use of current techniques to identify key genes controlling development and explores how genes, proteins and cells interact in development of animals and plants.
FORMAT: Lecture 3 hours
PREREQUISITE: BIOL 3001.03 or instructor’s permission and BIOL 2020.03, BIOL 2020.03 or GENE 2000.03
CROSS-LISTING: BIOL 5009.03

BIOL 4060.03: Marine Mammalogy.
The course will examine the characteristics that mammals brought with them when they returned to the ocean, the evolution of the different groups of marine mammals, some of their special adaptations, the roles of marine mammals in oceanic ecosystems and general principles of the marine mammal population biology. Students will use information on the biology of marine mammals to explore conservation/management issues.
FORMAT: Lecture 3 hours
PREREQUISITE: BIOL 2060.03 or BIOL 3001.03
CROSS-LISTING: BIOL 5050.03

BIOL 4061.03: Design of Biological Experiments.
This course introduces students with previous training in univariate statistics to the practice and pitfalls of experimental design and data analysis in biology. Lectures and take-home exams are used to demonstrate the fundamentals of design and analysis, with emphasis on potential problems and how they are overcome.
FORMAT: Lecture 3 hours
PREREQUISITE: MATH 2000.03 or STAT 2000.03 or ECON 2200.03 (Grades of B+ or higher) offered to well prepared honors students as well as graduate students.
CROSS-LISTING: BIOL 5061.03

BIOL 4062.03: Analysis of Biological Data.
The course introduces students to techniques available for the analysis of biological data, including regression, general linear models and multivariate methods. Emphasis is on the practical use of these techniques rather than derivations. Students analyze real and realistic data sets, and are assessed on write-ups of these analyses.
PREREQUISITE: STAT 2000.03 or ECON 2200.03
CROSS-LISTING: BIOL 5062.03

BIOL 4065.03: Sustainability and Global Change.
Sustainability emphasizes equitable social, protected environments, and robust economies. Most countries pursue Sustainable Development yet the concept remains controversial, and defined differently in the North and the South. The global media focus on those that relate to environment and sustainability. Discussion format with Blackboard Learning Internet assignments.
FORMAT: Lecture and discussion 3 hours
PREREQUISITE: BIOL 2000.03 or BIOL 3001.03 and one of BIOL 3005.03, BIOL 3060.03, BIOL 3061.03, BIOL 3062.03, BIOL 3063.03, BIOL 3065.03, BIOL 3066.03, BIOL 3067.03, BIOL 3068.03, BIOL 3069.03, BIOL 3101.03, BIOL 3102.03, BIOL 3161.03, BIOL 3162.03, BIOL 3163.03, BIOL 3170.03 or BIOL 3171.03, BIOL 3560.03 or BIOL 3762.03, or INTD 2001.03 or INTD 2002.03 or permission of instructor
CROSS-LISTING: BIOL 5065.03

BIOL 4160.03: Political Ecology.
Political ecology (PE) examines the politics of the environment but not on specific policies, political theories, or ideologies. PE considers an interesting array of political and socio-economic forces that shape human-environmental relationships. International case studies will be evaluated using several PE tools.
Discussion format with Blackboard Learning Internet assignments.
FORMAT: Discussion 3 hours in class and BIOL 2000.03 or BIOL 3001.03 and one of BIOL 3003.03, BIOL 3060.03, BIOL 3061.03, BIOL 3062.03, BIOL 3063.03, BIOL 3065.03, BIOL 3067.03, BIOL 3069.03, BIOL 3101.03, BIOL 3062.03, BIOL 3264.03, BIOL 3760.03 or BIOL 3762.03, or INTD 2001 or INTD 2002 or consent of instructor
CROSS-LISTING: BIOL 5160.03

BIOL 4220.03: Plant Cell Biology.
This course covers the structure, function, and dynamic properties of plant cellular components including constituent organelles, cytoskeleton, and the cell wall. Current areas of research such as programmed cell death, cell signaling and cellular trafficking are discussed in depth. The course consists of lectures, student seminars, and report writing.
FORMAT: Lecture 3 hours
PREREQUISITE: BIOL 2060.03 or BIOL 2001.03 and one of BIOL 3003.03 or INTD 2000.03 or BIOL 2060.03 or BIOL 3001.03 or BIOL 3002.03 or BIOL 3060.03 or BIOL 3061.03, BIOL 3062.03, BIOL 3063.03, BIOL 3065.03, BIOL 3067.03, BIOL 3069.03, BIOL 3101.03, BIOL 3062.03, BIOL 3264.03, BIOL 3761.03, BIOL 3762.03, or INTD 2001 or INTD 2002 or consent of instructor

BIOL 4302.03: Molecular Immunology.
See course description for MSCI 4302.03 in the Microbiology and Immunology section of this calendar.

BIOL 4323.03: Biologging in Ecology.
This course explores the fundamentals and applications of biologging and biotelemetry: the use of electronic tags to study free-ranging animals and their environment. Students are introduced to the wide range of tags and their diverse applications in biology.
FORMAT: In-class and BIOL 4323.03 or BIOL 5000.03 and BIOL 3018.03 with a minimum of B- in these classes or permission of the instructor
CROSS-LISTING: BIOL 5323.03

BIOL 4335.03: Environmental Impacts in Marine Ecosystems.
See course description for OCEA 4335.01 in the Oceanography section of this calendar.

BIOL 4369.03: Fisheries Oceanography.
See course description for OCEA 4360.03 in the Oceanography section of this calendar.

BIOL 4370.03: Deep Sea Biology.
See course description for MARA 4370.05 in the Marine Biology section or OCEA 4370.03 in the Oceanography section of this calendar.

BIOL 4404.03: Introduction to Pharmacology I.
See course description for PHAC 4404.03, in the Pharmacology section of this calendar.

BIOL 4407.03: Introduction to Pharmacology II.
See course description for PHAC 4407.03, in the Pharmacology section of this calendar.
BIOC 4444.03: Leadership in Science. 
Students will develop leadership skills and build confidence while applying their scientific knowledge. Through in-class activities and a science-based practicum, students gain experience with various aspects of leadership, allowing for integration and application of their expertise. 
PREREQUISITE: Instructor permission. Students should complete at least three (3) third-year courses in their declared major and have a minimum of 3.5 average in their major.

BIOC 4661.03: Biological Oceanography. 
See course description for OCEA 4410.03 in the Oceanography section of this calendar.

BIOC 4662.03: Biology of Phytoplankton. 
See course description for OCEA 4101.03 in the Oceanography section of this calendar.

BIOC 4663.03: History of Marine Sciences. 
See course description for MARI 4444.03 in the Marine Biology section, or SCIE 4001.03 in the Science, Interdisciplinary section of this calendar.

BIOC 4666.03: Benthic Ecology. 
See course description for OCEA 4661.03 in the Oceanography section of the calendar.

BIOC 4667.03: Census of Marine Life. 
The Census of Marine Life recorded over 250,000 known species of eukaryotes in the world’s oceans. In this course, the Senior Scientist for Census 2010 examines the diversity, distribution, and abundance of marine life globally and reviews new approaches to discover new species and to monitor responses to climate change. 
FORMA: Lecture with discussion.
PREREQUISITE: BIOL 2003.03 and BIOL 2060.03 or BIOA 3001.03 and six half credits of BIOL, MARI, or OCEA courses

BIOC 4806.03: Special Topics in Biology. 
Independent study designed for students who wish to study an area of biology not covered in other courses. Students should first consult with a faculty member to arrange the topic of study. An outline of the course content must be approved by the Chair of the Biology Undergraduate Curriculum Committee.
NOTE: For registration forms and further information see: http://biology.dal.ca/Undergraduate/index.htm

BIOC 4807.03: Special Topics in Biology. 
Independent study designed for students who wish to study an area of biology not covered in other courses. Students should first consult with a faculty member to arrange the topic of study. An outline of the course content must be approved by the Chair of the Biology Undergraduate Curriculum Committee.
NOTE: For registration forms and further information see: http://biology.dal.ca/Undergraduate/index.htm

BIOC 4809.03: Special Topics in Biology. 
Independent study designed for students who wish to study an area of biology not covered in other courses. Students should first consult with a faculty member to arrange the topic of study. An outline of the course content must be approved by the Chair of the Biology Undergraduate Curriculum Committee.
NOTE: For registration forms and further information see: http://biology.dal.ca/Undergraduate/index.htm

This course is required of, and restricted to, all Biology Honours programs in which Biology is the major area of study. Students conduct a research project supervised by a research scientist and attend weekly meetings of the class.
NOTE: The course grade is based on the results of the research which are submitted in April as an Honours Thesis, an oral presentation about the research to the class, and an oral or poster presentation at the Honours Cameron Conference in February. Co-op students attend the class by registering for Biology 4901 and 4902. See details about selecting a supervisor for the honours research under the general requirements for Biology honours programs at the beginning of Biology’s calendar entry or on the honours page of Biology’s website http://biology.dal.ca/honours/index.htm

BIOC 4901.03: Honours Research and Thesis I. 
This course is for students who have completed one Special Topics course. For registration forms and further information see: http://biology.dal.ca/Undergraduate/index.htm

FORMAT: Weekly class meetings (1.5 - 3.0 hrs) and an independent research project
CROSS-LISTING: MARI 4901.03
RESTRICTION: Honours students normally in their final year of study.

BIOC 4902.03: Honours Research Thesis II. 
This is the second half of the required course for Biology Co-op honours students. The course description is the same as for Biology 4900X.Y. Students attend BIOC 4901 in the Winter term of their 4th year and BIOC 4902 in the Fall term of their 5th year to accommodate their work terms.
NOTE: 4901 and 4902 must be taken in consecutive winter/fall terms to get a grade for either course. No grade will be recorded for BIOC 4901 until 4902 is also completed and the final Honours Thesis has been evaluated - usually in April following the fall course of 4902. Students normally give a poster presentation about their previous work term at the Honours Cameron Conference in February.
FORMAT: Weekly seminars 1.5 - 3.0 hours
CROSS-LISTING: MARI 4902.03
EXCLUSION: BIOC 4900.06 and MARI 4900.06
RESTRICTION: Students in the Biology Co-op Honours Programme, normally in their final year of study.

For the Honours degree, all credits in the honours subject must be passed with a
course selection.

This program is intended to provide a broad training in chemistry while at the
A. Concentrated Honours Degree (20 Credit)

the department and speak with a Chemistry Advisor if necessary.

each course of study. For further information, it is suggested that students contact
should consult the Undergraduate Calendar for first-year course equivalencies in
participated in the Dalhousie Integrated Science Program (DISP) in their first year
requirements that are outlined in the Undergraduate Calendar. Students who
programs. In addition, students must satisfy the College of Arts and Science
3.00.

for chemistry as the central science because of its relevance to so many
other disciplines. Understanding the composition and properties of matter, as well
as the manner in which one substance is transformed into another, is essential to
the study of our physical and natural worlds. As such, chemistry is often a starting
point for many different careers in science. A variety of programs are available,
ranging from focused studies to interdisciplinary options to suit the interests of the
student.

A chemistry degree involves considerable breadth of training in the major
branches of chemistry. These include organic, inorganic, physical, analytical and
biological chemistry. In addition to establishing a solid foundation in the
fundamental principles of chemistry, students who undertake a chemistry degree
develop essential skills that include problem solving, critical thinking,
organization, data analysis, and written and oral communication. The laboratories
associated with courses develop the necessary experience with laboratory
procedures, equipment and safety, and serve to reinforce the concepts learned in
lecture.

II. Degree Programs

The Department of Chemistry offers five main degree programs as either a BSc or
BA: an Honours degree, a Combined Honours degree, a 20 Credit Major degree, a
20 Credit Double Major degree and a 15 Credit degree. Other programs include a
Science Co-op degree, a 15 Credit degree concurrent with a Diploma in
Engineering, a Multidisciplinary Honours degree, and a Minor in Chemistry.

The Honours degree and 20 Credit Major degree in Chemistry, as well as the
Corresponding Co-op programs, are accredited by the Canadian Society for
Chemistry (CSC). CSC accreditation ensures that graduates of these programs have
certain criteria concerning the quantity and quality of their instruction. It
qualifies such graduates for membership in the CSC and to practice chemistry as
professionals.

The sections below list the specific departmental requirements for various degree
programs. In addition, students must satisfy the College of Arts and Science
requirements that are outlined in the Undergraduate Calendar. Students who
participated in the Dalhousie Integrated Science Program (DISP) in first year shall consult the Undergraduate Calendar for first-year course equivalents in
each course of study. For further information, it is suggested that students contact
the department and speak with a Chemistry Advisor if necessary.

A. Concentrated Honours Degree (20 Credit)

This program is intended to provide a broad training in chemistry while at the
same time making provision for the individual interests of students. All honours
students must consult with an academic advisor and obtain approval of their
course selection.

For the Honours degree, all credits in the honours subject must be passed with a
grade of at least C, except CHEM 4901, which requires a minimum grade of B-
for honours students. The minimum GPA for courses in the honours subject is
3.00.

Departmental Requirements

• CHEM 1011.03 or CHEM 1021.03, or CHEM 2021.03 or 2022.03, or DSPF (SCIE 15XX)
• CHEM 2101.03, CHEM 2201.03, CHEM 2301.03, CHEM 2401.03, CHEM 2402.03
• CHEM 3013.03, CHEM 3201.03 or CHEM 3202.03, CHEM 3301.03, CHEM 3401.03 or 3404.03, CHEM 3601.03
• A minimum of 2.5 additional credits in chemistry above the 1000 level
• CHEM 4901.06
• Combined lab hours across CHEM 3XXX and 4XXX must be ≥90.

Other Required Courses

• MATH 1000.03 or 1010.03 or equivalent
• MATH 2101.03
• PHYC 1100.06 or PHYC 1300.06 or PHYC 1280.03 or 1290.03 or equivalent

B. Combined Honours Degree (20 Credit)

Students who wish to study chemistry in conjunction with another subject may
wish to pursue a Combined Honours degree program. The other subject may be
any discipline from the Faculty of Science or the Faculty of Arts and Social
Sciences, or may be a program in Computer Science or Environment,
Sustainability and Society. Chemistry may be the primary subject (defined as the
subject with the larger number of honours credits), or the secondary subject. If the
primary subject area is from the Faculty of Arts and Social Sciences, the degree
granted will be a BA. Students are advised that some of the College of Arts and
Science requirements for a Combined Honours degree differ for the BA and BSc
(see Undergraduate Calendar). Students enrolled in the Combined Honours program must have their program of study approved by advisors in both subject areas. A minimum GPA of 3.00 is
required for science courses in the honours subject(s); a minimum GPA of 2.70 is
required for Arts and Social Sciences courses in the honours subject.

Students must complete an Honours Qualifying Examination in one of the two
subject areas with a minimum grade of B+ for honours qualification. This
requirement is usually, but not necessarily, completed in the primary subject area.
For chemistry, this requirement is satisfied through CHEM 4901.06.

For chemistry as the primary subject area, the requirements are listed below
Departmental Requirements (Chemistry as Primary Subject)

• CHEM 1011.03 or CHEM 1021.03, or CHEM 2021.03 or 2022.03, or DSPS (SCIE 15XX)
• CHEM 2101.03, CHEM 2201.03, CHEM 2301.03, CHEM 2401.03, CHEM 2402.03
• A minimum of three additional credits in chemistry above the 1000 level, including two credits above the 2000 level
• Honours Qualifying Examination (if taken in chemistry through CHEM 4901.06, this counts as one of the three additional credits above).

Other Required Courses (Chemistry as Primary Subject)

• MATH 1000.03 or 1010.03
• A minimum of five credits in the secondary subject above the 1000 level, including two credits above the 2000 level. Consult with the secondary
department for specific requirements.

For chemistry as the secondary subject area, the first-year requirements are as
listed above. A minimum additional five unspecified credits in chemistry are
required beyond the 1000 level, including two credits beyond the 2000 level.

For the Combined Honours degree, a minimum of 11 credits beyond the 1000
level are required in the two subject areas, with not less than five or more than
nine in either. At least two credits in each subject must be above the 2000 level.
Students are advised to consult the specific requirements of the other department
involved.

C. Major Degree (20 Credit)

The 20 Credit Major degree is suited to students who want to focus on chemistry
but wish to have a program that is somewhat less constrained than the Honours
degree. Like the Honours degree, this program is accredited by the Canadian
Society for Chemistry. The departmental requirements are listed below.
Departmental Requirements

• CHEM 1011.03 or CHEM 1022.03
• CHEM 1012.03 or CHEM 1023.03
• MATHE 1100.03 or equivalent
• A total of at least 17 credits in chemistry above the 2000 level

Other Required Courses

• CHEM 1011.03 or CHEM 1022.03 or equivalent
• CHEM 1012.03 or CHEM 1023.03

A limited number of additional credits in chemistry above the 2000 level is required, including a half credit in chemistry above the 2000 level.

D. Double Major Degree (20 Credit)

As with the Combined Honours degree, the Double Major degree allows students to combine a program of study in chemistry with another subject area, but with fewer constraints than the Honours program. The other subject may be any discipline from the Faculty of Science or the Faculty of Arts and Social Sciences, or may be a program from Computer Science or Environment, Sustainability and Society. Chemistry may be the primary subject (defined as the subject with the larger number of credits), or the secondary subject. If the primary subject area is from the Faculty of Arts and Social Sciences, the degree granted will be a BA. Students are advised that some of the College of Arts and Science requirements for a Double Major degree differ for the BA and BSc (see the Undergraduate Calendar).

For Chemistry as the primary subject area, the requirements are listed below:

Departmental Requirements (Chemistry as Primary Subject)

• CHEM 1011.03 or CHEM 1022.03 or equivalent
• CHEM 1012.03 or CHEM 1023.03
• CHEM 3041.03 or CHEM 3042.03
• A minimum of three additional credits in chemistry above the 2000 level, including two credits in chemistry above the 2000 level.

Other Required Courses (Chemistry as Primary Subject)

• MATH 1000.03 or equivalent
• A total of at least 17 credits in chemistry above the 2000 level, including two credits in chemistry above the 2000 level. Consult with the secondary department for specific requirements.

For Chemistry as the secondary subject area, the first-year requirements are as listed above. A minimum addition of five unspecified credits in chemistry are required above the 2000 level, including a minimum of two credits beyond the 2000 level.

For the Double Major degree, a minimum of 15 credits beyond the 2000 level are required in the two subject areas, with not less than five or more than nine in each subject. Students must consult with the Chemistry Co-op Academic Advisor to have their program of courses and work-terms approved.

486 Chemistry
briefly described in this section. More detailed information can be found on the Undergraduate website.

III. Course Descriptions

In rare cases, students may want to study chemistry in conjunction with two or more other subject areas. For these students, the College of Arts and Science offers a Multidisciplinary Honours BSc degree program that may be appropriate. (see the Undergraduate Calendar for more details). Because of the complex nature of this program, students who are considering the Multidisciplinary Honours BSc should consult with an advisor in each of the departments involved to ensure that their program of study is acceptable.

J. BSc Multidisciplinary Honours (20 Credit)

Recommended Electives: BIOC 2300, BIOC 2610, BIOC 3200, BIOC 4701

Other Required Courses

Certificate in Medicinal Chemistry

The Department of Chemistry offers a Certificate in Medicinal Chemistry in conjunction with its 20 credit degree programs. This certificate is intended to reflect that the student has completed a course of study in chemistry that is appropriate for employment or further study related to pharmaceutical development and production. Once the requirements have been fulfilled, the certificate will be noted on the student’s transcript and presented at convocation.

The requirements include the completion of a 20 credit degree program in Chemistry (20 credit major, 20 credit honours, double major, combined honours, etc.), that includes the following courses.

Required courses:

- CHEM 1011.03/1012.03 or CHEM 1021.03/1022.03 or DISP (SCIE 15XX)
- CHEM 2101.03, CHEM 2201.03, CHEM 2301.03 and 2304.03, CHEM 2401.03 and 2402.03
- CHEM 2500.03, CHEM 3401.03 and 3404.05, CHEM 3401.03
- CHEM 4401.03, CHEM 4401.03
- Any two of: CHEM 3301.03, CHEM 4201.03, CHEM 4206.03, CHEM 4301.03, CHEM 4402.03

Recommended Electives: BIOC 2300, BIOC 2610, BIOC 3200, BIOC 4701

Chemistry 487

To be awarded the Certificate in Medicinal Chemistry, students should contact their advisor in the Department of Chemistry no later than four weeks after the start of the term in which they intend to graduate, indicating that they wish to have their qualifications for the certificate assessed.

Il. Course Descriptions

Undergraduate courses that are regularly offered by the Chemistry Department are briefly described in this section. More detailed information can be found on the departmental website at http://chemistry.dal.ca. Students should note the following:

Not all courses are offered every year. Please consult the Academic Timetable for the details of courses offered in a particular academic year.

The first digit of the course number is the year of a student’s program that a course would typically be taken, but this is not meant to be restrictive if a student has the necessary prerequisites or permission of the instructor. For example, a 3000 level course can be taken in the fourth year and 4000 level can be taken in the third year.

The second digit of the course number defines the general sub-discipline:

0 = General Chemistry
1 = Inorganic Chemistry
2 = Analytical Chemistry
3 = Physical Chemistry
4 = Organic Chemistry
5 = Interdisciplinary
6 = Biological Chemistry
7 = Environmental Chemistry
8 = Research Classes
9 = Research Courses

EXCLUSION: Credit will be given for only one of the following combinations:

CHEM 1011.03/1012.03 or CHEM 1021.03/1022.03 or DISP (SCIE 15XX)

The extension following the course number (e.g., XXXX.03) indicates the number of credit hours assigned to the course (e.g., three credit hours). Note that six credit hours are equivalent to one credit.

All chemistry courses, unless stated otherwise, have a minimum grade requirement of C- for their prerequisite chemistry courses. Students with grades below C- in the prerequisite chemistry courses can only register with the permission of the instructor for the course.

Unless stated otherwise, the minimum grade requirement for credit in a chemistry course is a D, except for Honours programs, where the minimum grade requirement for chemistry credit is a C (B- for Honours Qualifying Examination).

Chemistry Resource Centres

The First-Year and Advanced Chemistry Resource Centres are located in Rooms 122 and 115, respectively. The former is staffed with advanced undergraduate and graduate students to help with both lab and course material. First-year students are encouraged to make use of the Concept Room, which is located in the First-Year Resource Centre. Here, first-year instructors will be available at regularly scheduled times to provide aid with course material in a small group or one-on-one atmosphere.

The First-Year Chemistry Resource Centre also houses a number of computers with chemistry-specific programs for students to use. Additionally, there is a selection of reference materials such as molecular model kits and reference texts available to students.

The electronic structures of atoms and molecules are used to explain the reactivity and properties of chemicals. Topics include atomic structure, bonding models, structure and shape of molecules and ions, and acid-base chemistry. It is recommended that students have Nova Scotia grade 12 chemistry or equivalent before taking this course.

CHEM 1011.03, 1021.03 or 4000.03

EXCLUSION: Credit will be given for only one of the following combinations:

CHEM 1011.03/1012.03 or CHEM 1021.03/1022.03 or DISP (SCIE 15XX)

CHEM 1012.03: Concepts in Chemistry: Energy and Reactivity.

The principles of thermodynamics and kinetics are used to explain chemical reactivity and the principles of organic chemistry are used to develop an understanding of organic synthesis. Special topics include electrochemistry, spectroscopy, chirality, polymers, and the chemistry of living systems to illustrate the relevance of chemistry in everyday life.

COORDINATORS: S. Budowski, P. Laws

FORMATS: Lecture 5 hours, lab 3 hours

EXCLUSION: Credit will be given for only one of the following combinations:

CHEM 1011.03/1012.03 or CHEM 1021.03/1022.03 or DISP (SCIE 15XX)

CHEM 1021.03: Engineering Chemistry I.

The electronic structures of atoms and molecules are used to explain the reactivity and properties of chemicals. Topics include atomic structure, bonding models, structure and shape of molecules and ions, and acid-base chemistry. It is recommended that students have Nova Scotia grade 12 chemistry or equivalent before taking this course.
Organic chemistry is introduced through an examination of bonding, conformation and stereoisomerism. Spectroscopic methods (MS, IR, 1H and 13C NMR) are used to determine the structures of compounds. Alkanes, alkenes, aldehydes and ketones are examined with an emphasis on the mechanisms of their reactions.

COORDINATORS: S. Boudreau, P. Laws
FORMATE: Lecture 3 hours, lab 3 hours
EXCLUSION: Credit will be given for only one of the following combinations: CHEM 2401.03/1021.03 or 1022.03 or DISP/SCIE 15XX

CHEM 2401.03: Introductory Organic Chemistry I

Building on CHEM 2401, the properties and reactions of alcohols, ethers, amines, nitro compounds, and aromatic compounds are examined. The reactions are used in synthetic sequences, and reaction mechanisms are studied. The concepts of resonance and acidity become familiar. The use of spectroscopic methods is reinforced.

FORMATE: Lecture 3 hours, lab 3 hours
PREREQUISITE: CHEM 2401.03

CHEM 1022.03: Engineering Chemistry II

The fundamentals and postulates of quantum mechanics are developed from first principles, with applications to illustrative model systems, vibrations, rotations, and optical properties. All phases of matter are examined: gases, liquids, films, and solids, with emphasis on selection of appropriate techniques with practical examples.

FORMATE: Lecture 3 hours, five 4-hour labs every second week; total 20 hours

PREREQUISITE: CHEM 2201.03

CHEM 2201.03: Introductory Analytical Chemistry

The first principles underlying chemical systems and reactivity are explored, with an emphasis on the forces between molecules and the properties of matter. Principles of thermodynamics are presented, including thermochromy, entropy and free-energy relationships. Applications include phase equilibria, chemical equilibria, weather, colloidal properties and electrochemistry.

FORMATE: Lecture 3 hours, lab 4 hours every second week

PREREQUISITE: CHEM 1011.03/1012.03 or equivalent

CHEM 2301.03: Quantum Mechanics and Chemical Bonding

The fundamentals and postulates of quantum mechanics are developed from first principles, with applications to illustrative model systems, vibrations, rotations, and optical properties. All phases of matter are examined: gases, liquids, films, and solids, with emphasis on selection of appropriate techniques with practical examples.

FORMATE: Lecture 3 hours, five 4-hour labs every second week

PREREQUISITE: CHEM 1011.03/1012.03 or equivalent; MATH 1000.03 and MATH 1001.03 or equivalent

CHEM 2304.03: Introductory Physical Chemistry II

The first principles underlying chemical systems and reactivity are explored, with an emphasis on the forces between molecules and the properties of matter. Principles of thermodynamics are presented, including thermochromy, entropy and free-energy relationships. Applications include phase equilibria, chemical equilibria, weather, colloidal properties and electrochemistry.

FORMATE: Lecture 3 hours, lab 4 hours

PREREQUISITE: CHEM 1011.03/1012.03 or equivalent; MATH 1000.03 and MATH 1001.03 or equivalent

CHEM 2401.03: Introductory Organic Chemistry: Structure, Concepts of Mechanisms and Spectroscopy

Organic chemistry is introduced through an examination of bonding, conformation and stereoisomerism. Spectroscopic methods (MS, IR, 1H and 13C NMR) are used to determine the structures of compounds. Alkanes, alkenes, aldehydes and ketones are examined with an emphasis on the mechanisms of their reactions.

FORMATE: Lecture 3 hours, lab 3 hours

PREREQUISITE: CHEM 1011.03/1012.03 or equivalent

CHEM 2402.03: Introductory Organic Chemistry: Reactivity of Functional Groups

The fundamentals and postulates of quantum mechanics are developed from first principles, with applications to illustrative model systems, vibrations, rotations, and optical properties. All phases of matter are examined: gases, liquids, films, and solids, with emphasis on selection of appropriate techniques with practical examples.

FORMATE: Lecture 3 hours, five 4-hour labs every second week; total 20 hours

PREREQUISITE: CHEM 2301.03 or PHYC 2201.03 or PHYC 2202.03 or ENG 2200.03 or permission of instructor

EXCLUSION: PHYC 3301.03, CHEM 3103.03
CHEM 3401.03: Intermediate Organic Chemistry. Topics presented include aromatics, heterocyclic, amino, enolate anions and other methods for forming C-C bonds, concerted reactions, carbohydrates and some topics in natural product chemistry. There is a continuing emphasis on the principles of mechanistic organic chemistry. Students work independently in the laboratory on the synthesis of organic compounds.
FORMA T: Lecture 3 hours, lab 4 hours; total 44 hours
PREREQUISITE: CHEM 2401.03/2402.03
CHEM 3404.03: Intermediate Organic Chemistry: Physical Organic and Spectroscopy. This course provides an introduction to concepts in physical organic chemistry that are used to explain structure-reactivity relationships. Spectroscopic techniques are also described with an emphasis on NMR spectroscopy. The organic laboratory will focus on organic compound separation and identification.
FORMA T: Lecture 3 hours, lab 4 hours; total 44 hours
PREREQUISITE: CHEM 2401.03/2402.03
EXCLUSION: CHEM 3402.03
CHEM 3601.03: Chemistry of Living Systems. The chemical principles governing a wide variety of biological processes are discussed. Structure and mechanism are emphasized in explanations and predictions of the behavior of organic compounds in nature. Specific topics include proteins, activation of carbonyl groups, peptide synthesis and hydrolysis, enzyme catalysis, coenzymes and prochirality.
FORMA T: Lecture 3 hours
PREREQUISITE: CHEM 2402.03
CHEM 4101.03: Advanced Main Group Chemistry. Following a brief overview of the fundamental aspects of preparation, structure and bonding for familiar systems, selected topics are examined in some detail. An emphasis is placed on novel structure and bonding arrangements in comparison with carbon chemistry.
FORMA T: Lecture 3 hours
PREREQUISITE: CHEM 3100.03
CHEM 4102.03: Advanced Transition Metal Chemistry. Various themes of modern transition metal chemistry are examined, including but not restricted to: geometrical structure and bonding, spectroscopic characterization methods, as well as reactivity and reaction mechanisms.
FORMA T: Lecture 3 hours
PREREQUISITE: CHEM 3100.03
CHEM 4120.03: Advanced Organometallic Chemistry. Catalytic and stoichiometric transition metal mediated reactions of fundamental significance in synthetic chemistry are surveyed. Molecular orbital theory is used to understand structure and bonding in metal complexes and the reactivity properties of these species. Relevant examples from the current chemical literature are introduced.
FORMA T: Lecture 3 hours
PREREQUISITE: CHEM 3100.03
CHEM 4205.03: Chemometrics. The application of statistical tools to univariate and multivariate chemical measurements is explored. Topics include descriptive statistics, probability and probability distributions, propagation of errors, hypothesis testing, analysis of variance, experimental design, multivariate and univariate calibration, pattern recognition, exploratory data analysis and mixture analysis. Students are introduced to programming in MATLAB.
FORMA T: Lecture 3 hours
PREREQUISITE: CHEM 2201.03
CHEM 4206.03: Analytical Mass Spectrometry. This course offers a thorough treatment of modern analytical mass spectrometry instrumentation, with applications towards chemical and biochemical analysis. Specific examples include characterization of pharmaceuticals and biomolecules (proteins, carbohydrates), and discussion of field portable instruments. Reaction mechanisms and spectral interpretation are discussed, but are not emphasized in this applied course.
FORMA T: Lecture 3 hours
PREREQUISITE: CHEM 3100.03
CROSS-LISTING: CHEM 5206.03
CHEM 4301.03: Theory of Chemical Bonding. This course develops molecular orbital theory from both qualitative and quantitative perspectives. Topics include the basic principles of the LCAO (Linear Combination of Atomic Orbitals)/MO method, qualitative understanding of MOs in simple molecules, orbital symmetries, through to state-of-the-art techniques for computer computations of molecular properties.
FORMA T: Lecture 3 hours
PREREQUISITE: CHEM 3800.03
CROSS-LISTING: CHEM 5301.03
CHEM 4311.03: Fundamental and Applied Electrochemistry. This course provides a broad introduction to the fundamentals of electrochemistry, including electrochemical theory, double layer modelling and electrochemical methods. Additionally, input to government applications is developed, including corrosion, energy production and energy storage (fuel cells, batteries and supercapacitors).
FORMA T: Lecture 3 hours
PREREQUISITE: CHEM 2301.03 and CHEM 2304.03
CROSS-LISTING: CHEM 5331.03
CHEM 4401.03: Synthesis in Organic Chemistry. A number of important organic reactions are examined in depth with particular attention to regioselectivity and the development of relative or absolute stereochemistry. Applications of these reactions in the synthesis of complex molecules are illustrated with recent examples from the literature.
FORMA T: Lecture 3 hours
PREREQUISITE: CHEM 3801.03 or equivalent
CROSS-LISTING: CHEM 5401.03
CHEM 4402.03: Organic Structure Determination. Nuclear magnetic resonance spectroscopy and mass spectrometry are emphasized in solving structural problems. Topics include 2D NMR, correlation of structure with chemical shifts and coupling constants, operation of NMR spectrometers, NMR relaxation, analysis of spectral patterns, the vector model of 1D and 2D experiments and ionization methods in mass spectrometry.
FORMA T: Lecture 3 hours
PREREQUISITE: CHEM 2304.03 or CHEM 3401.03
CROSS-LISTING: CHEM 5402.03
CHEM 4502.03: Polymer Science. Aspects of synthesis, analysis, characterization, structure and uses of synthetic and naturally occurring macromolecules are explored. Emphasis is on the applications of standard methods of organic synthesis, analytical separations, and physico-chemical characterization. There is no laboratory, but students will do an independent literature project.
FORMA T: Lecture 3 hours
PREREQUISITE: CHEM 2201.03 and 2301.03 and 2304.03 and 2402.03
CHEM 4504.03: Diffraction Techniques in Solid State Chemistry. All chemical elements and compounds can exist as crystaline solids. This course studies the arrangements of atoms and molecules in such solids and examines the methods used to determine these structures. Particular emphasis is placed on the techniques of X-ray crystallography.
FORMA T: Lecture 2 hours, lab 3 hours
PREREQUISITE: CHEM 2101.03 and MATH 2011.03 and 2012.03
FORMA T: Lecture 3 hours
PREREQUISITE: Math 1000, PHYS 1200.03/1290.03 or PHYS 1300 and CHEM 1011/1012
CROSS-LISTING: PHYS 4905.03, OCS 4995.03, OCS 5995.03
CHEM 4601.03: Principles of Biomolecular and Drug Molecule Design. The course covers both general principles and biochemical considerations in drug design. The fundamental topics provide evidence to design new chemical structures as putative therapeutics for a human or veterinary organism.
pathological problem. Students in chemistry are strongly recommended to take CHEM 3601.03 prior to registering in this course.

**CHEM 4002.03: Biophysical Characterization of Macromolecules.** Covers methods allowing determination of sub-molecular and atomic-level structure and dynamics of biomacromolecules in physiological settings (e.g. solution-state or lipid bilayers) including: fluorescence, electronic and vibrational (circular dichroism and NMR) spectroscopy; light vs. X-ray vs. neutron scattering; and, single molecule methods.

**CHEM 4003.03: Research Project in Chemistry I.** Students carry out research projects under the supervision of a faculty member, and submit a report and make an oral presentation.

**CHEM 4801.03: Research Project in Chemistry II.** Students carry out research projects under the supervision of a faculty member and submit a report and make an oral presentation. This course is intended for those students in the Major program who wish greater exposure to independent scientific research.

**CHEM 4802.03: Research Project in Chemistry III.** Students carry out research projects under the supervision of a faculty member and submit a report and make an oral presentation. This course is intended for those students in the Major program who wish greater exposure to independent scientific research.

**CHEM 4901X/Y.06: Honours and Major Research Project.** This course is required for students in the latter stages of the honours program. Students carry out research projects under the supervision of a faculty member and submit reports and make oral presentations to the Department. NOHE Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.

**Science Co-operative Education**

Science Co-operative Education (Science Co-op) is an academic program where academic study is combined with career-related work experience. Students complete three work terms throughout their academic study terms and graduate with a Bachelor of Science, Co-op. Science Co-op is available in Biochemistry and Molecular Biology, Biology, Chemistry, Earth Sciences, Environmental Science, Economics, Marine Biology, Mathematics, Microbiology and Immunology, Physics and Atmospheric Science, and Statistics. Students may choose a Major, Honours, or Double Major (where only one of the disciplines is a recognized Science Co-operative Education program).

Students who are accepted into Science Co-op generally begin their first work term in January or May of Year II. Work terms are paid employment related to the student's field of study. The program includes three work terms and a minimum of eight academic terms comprising 20 academic credits. The Science Co-operative Education degree program normally takes approximately four and a third years, depending upon the field of study chosen.

Students in Science Co-op must plan their academic course load carefully under the guidance of the departmental Co-op Academic Advisor. Science Co-op students have limited opportunity to take certain numbered courses and the choice of courses in the summer academic term may be limited. It is important that students realize that successful completion of the work terms is an integral part of their academic studies and degree.

**A. Eligibility**

Students must be eligible to work in Canada and demonstrate sufficient academic potential (B average or better, consult departmental listings). Students apply to this program and approval of the academic department and Science Co-op Office is required for entry. Applications must be received by April 15. With the permission of the Co-op Academic Advisor, some students may be admitted on a
probationary basis pending an improvement in their grades. Co-op students whose grades drop below a B average (3.00 GPA) overall may be required to withdraw from the Science Co-op program. Academic departments may, at their discretion, allow a probationary period before the requirement to withdraw is enforced. During this probationary period, the student may not undertake any new work term commitments, but may honour pre-existing arrangements.

B. Science Co-op Seminar Series, SCIE 2800.00

This online course is a required prerequisite to the first work term and is a mandatory component of the Science Co-op program. All Science Co-operative Education students are required to register for, and complete this course, upon acceptance into the program. A grade of Pass is required before students participate in the job competition for the first work term experience. This course is designed to introduce Science Co-op students to aspects of career development and preparation for their work terms. SCIE 2800.00 is a required non-credit course which is offered every term. Students must complete this course at least four months prior to the first work term. More detailed information about the course may be found at http://www.sciencecoop.dal.ca

C. Work Terms

A work term is a period of study conducted in an employment environment and each work term is offered as a course listing within each academic discipline for registered Science Co-operative Education students only. Although the Co-op Office seeks to provide an adequate number of job postings, it is ultimately the responsibility of the student to arrange their work term. Students are expected to conduct their own job search as well. During a work term, the student is an employee in matters pertaining to the conditions of employment and is a student for the purpose of academic evaluation. The university accepts no liability for the working environment of the students work term. Students are remunerated according to employer policy and the labour laws of the province in which the work term takes place. Students must be remunerated, unpaid work terms are not permitted. During the work term the student and employer normally receive contact from a Co-op staff member to ensure that the academic objectives of the work term are being met. Failure to complete all requirements of a work term will result in a grade of F.

Work terms must be a minimum of 14 weeks at 35 hours per week, or an equivalent combination of hours and weeks worked. Three work terms are required for graduation with a Bachelor of Science, Co-op.

D. Work Term Sequence

Work terms alternate with study terms in a pattern set by you and your Co-op Academic Advisor, for each program. The work term sequence must be noted on the application to Science Co-op. Any request for change of work term sequence must be approved by the departmental Co-op Academic Advisor and the Director, Science Co-op. Requests must be received by the Science Co-op office 14 weeks before the next scheduled work term i.e., before January 15, May 15, or September 15. Two consecutive work terms are permitted. Three consecutive work terms may not be permitted.

Please consult with the Co-op Academic Advisor, in your discipline of choice, regarding your work term sequence. Work term sequences must be set and approved with your Co-op Academic Advisor and Science Co-op office.

E. Work Term Reports

At the end of each work term, each student must submit an acceptable work term report. Specific guidelines for writing this report and submission deadlines are available on the Science Co-op website (http://www.sciencecoop.dal.ca). Satisfactory work term reports are required for continuation and graduation in the Co-op program. Satisfactory performance in the work place is also required and Co-op employers submit an Employer Evaluation for students in the program. The grade for the work term is based upon the work term report, employer and student evaluations of the work term, and the work term visit. Failure to complete the work term requirements will result in the student being required to withdraw from the Science Co-op program and a failure mark would be given for the work term.

F. Fees

Science Co-op students are required to register for their work terms and pay Co-op Fees regardless of whether the services of the Co-op office are used. Co-op Fees are program fees, not work term fees, and are due and payable even if the student withdraws, does not secure a work term, or is required to withdraw, from their work term once employment has begun. Consult the Science Co-op office or website for complete details.

Dean
Moncur, C., BA (Hons), PhD (Cambridge), Professor (Psychology)

Chair of Department
Jamison, R. A., BSc (Dalhousie), PhD (MUN)

Undergraduate Advisor
Plug, L. (494-1200)

Co-op Academic Advisor
Walls, C., BSc, MSc (Dalhousie)

Graduate Coordinator
Gamo, J. (494-6612)

Professors Emeriti
Cooke, H. B. S., MSc, BSc (Winchester)-remand
McColl, I. S., PhD (Stevens)
Milligan, G. C., MSc (Dalhousie), PhD (Harv)
Raymond, P. H., BSc (Toronto), PhD (UCB)
Scott, D. B., BSc (Washington), MSc (Washington State), PhD (Dalhousie)
Sterling, S., PhD (Queens), Plano

Professors
Gibbings, M. R., BA (Ottawa), PhD (Ottawa)
Grujic, D., BSc (Belgrade), MSc (ETH Zurich)
Wach, G. D., BA (Watershed), MSc (Dalhousie), PhD (Dalhousie)

Associate Professors
Cadeau, N., BA (Ottawa), PhD (Ottawa)
Fedorchuk, Y., MSc (Moscow State Univ), PhD (Victoria)
Gamo, J., BSc (Dalhousie), PhD (Dalhousie)
Nedimovic, M., BSc (Belgrade), MSc (Tokyo)

Assistant Professors
Coady, L., BSc (Queen's), MSc (Dalhousie), PhD (Dalhousie)
Kellman, L., BA (Hons), MSc (Dalhousie)

Senior Instructors
Greene, C., BSc (Dalhousie), MSc (Dalhousie)
Ryan, A. M., BSc (Dalhousie), MSc (Dalhousie), PhD (Dalhousie)

Instructors
Cor, R., BSc (Dalhousie), MSc (Dalhousie)

Cross Appointment
Kashima, D., PhD (Ottawa), Major appointment in Environmental Science

Adjunct Professors
Adams, J., Dip in Geology (Univ. of Clausthal), PhD (Tec. Univ. of Berlin), Royal Holloway
Anderson, A., BSc (Univ. of Windsor), MSc (Munster), PhD (Queens'), St. Francis Xavier
Bass, S., BSc (Honours), BSc, MSc (Dalhousie), PhD (Dalhousie), Canada-NS Offshore Petroleum Board
Brown, D., BSc (Dalhousie), MSc (Dalhousie), Canada-NS Offshore Petroleum Board
Clarke, R., BSc, MSc (Univ. of Edinburgh), PhD (Edinburgh)
DeBaptiste, M., BSc (St. Mary's), PhD (Dalhousie), Canada-NS Offshore Petroleum Board
Donohue, J., BSc (Dalhousie), PhD (Dalhousie), Canada-NS Offshore Petroleum Board
Dowling, J., BSc (Dalhousie), PhD (McMaster), St. Mary's University
Fedak, T. J., BA (NSCAD), PhD (Dalhousie)
Fernandez, R., BSc (Lebanon), MSc (Dalhousie), PhD (Dalhousie)
Francois, D. G., BSc (Univ of Laval), MSc, PhD (Dalhousie)
Garde, C., BSc (Abbotsford College), MS (U. of Victoria), PhD (Univ of Maine)
Harley, J., PhD (Toronto), St. Mary's University
Janus, L., BSc, MSc (Masaryk State U, Czechoslovakia), PhD (Charles), GSC Atlantic
Kellman, L., BA (Hons), MSc (Dalhousie)
Kettner, Y., BSc (Binghamton Univ), PhD (Calgary), University of Saskatchewan
Kosten, E., BSc (Groningen), MSc (Univ of Amsterdam), PhD (Dalhousie)

I. Introduction

Earth Science is a holistic discipline whose focus of study is the Earth System. It includes the geosciences which address the solid earth, but necessarily also may extend to study of the atmosphere, hydrosphere, oceans and biosphere. Broadly, Earth scientists work to understand 1) how the Earth System works; 2) how it evolved to its current state; 3) the processes and distribution of Earthly physical resources such as fossil fuels, minerals, and water; and 4) limits to and consequences of the use of physical resources by humans. Examples of specific questions within Earth Sciences include: How was the Earth formed? What is its composition? Where do we look for oil? For reliable water supplies? What are the relationships between glaciers, rivers, and climate, both now and in the deep past? To answer questions such as these, Earth scientists typically use methods from the foundation sciences -- physics, chemistry, biology, mathematics -- along with discipline-specific methods and modern tools including computing and satellite mapping. Some Earth scientists also need to consider or draw expertise from the
social sciences, particularly as humans collectively become a significant agent in modifying components of the Earth System.

Earth Science is of tremendous importance to Canadians and can be an immensely satisfying profession. Earth scientists are employed in universities, government agencies, the oil, gas and mineral industries, environmental consulting, and beyond.

The Earth Sciences department offers programs and courses designed to meet the needs of students with varying goals for her/his undergraduate education. In general, the following summary-recommendations can be made:

- To prepare to become a professional geoscientist, students should enroll in a 20 credit BSc or BA degree (Major, Honours or Combined) and must know the requirements for professional registration by completing one or both of the Certificates for Geoscientists.
- To prepare for postgraduate study (MSc or PhD) in Earth Sciences or a related field, students should pursue a BSc Concentrated Honours in Earth Sciences or Combined Honours with a related subject, and consider one of the Certificates listed above.
- Students seeking an undergraduate preparation for Law, Education, or another professional program outside of Earth Sciences, or to complement another subject, should consider a BSc or BA Major or Double Major.
- Electives courses and Minor. Earth Sciences is about understanding how the Earth 'works'. As such it makes an excellent general education subject. Several ERTH courses that may be suitable electives are listed below.

High School Preparation

Students in high school who plan a career in Earth Sciences, should have Advanced Math or Pre-calculus Math, plus Chemistry and Physics. Note that only Mathematics is a prerequisite, but the others are recommended. The student should ideally aim to make up deficiencies in high school preparation in the first year at Dalhousie.

II. Degree Programs in Earth Sciences

In addition to the departmental requirements for each program, which are listed below, students must satisfy the requirements outlined in the "Degree Requirements" section of this calendar.

A. Core Requirements for all BSc and BA (20 credit) Degrees

All 20 credit degrees in Earth Sciences share the following requirements:

1000 level

- ERTH 1000.03 and ERTH 1001.03, or equivalent. Students in the Integrated Science Program should consult the department regarding equivalencies.
- ERTH 2000.015: Earth Sciences Field School
- ERTH 2812.03: Earth Minerals Science I
- ERTH 2813.03: Earth Minerals Science II
- ERTH 2111.03: Field Methods (Prerequisite: ERTH 2000.015)
- ERTH 2201.03: Sediments and Sedimentary Rocks
- ERTH 2500.03: Geochronology

2000 level

- ERTH 3140.03: Structural Geology
- ERTH 3301.03: Stratigraphy

Other required courses

- MATH 1000.05 (recommended) or MATH 1215.03 or equivalent
- CHEM 1011.03 and CHEM 1012.03

B. BSc or BA (20 credit) Major

Complete the core requirements (Section A), plus

- MATH 1010.03, or MATH 2010.03, or MATH 2300, or STAT 1000.03 or STAT 2000.03 (BSc only)
- ERTH 3000.015: Intermediate Field School
- Advanced ERTH electives: 18 to 36 credit hours in ERTH courses beyond the 1000-level, including at least 18 credit hours beyond the 2000-level.

C. BSc or BA (20 credit) Double Major

Complete the core requirements (Section A), plus

- MATH 1010.03, or MATH 2010.03, or MATH 2300, or STAT 1000.03 or STAT 2000.03 (BSc only)
- ERTH 3000.015: Intermediate Field School or a field course in the other subject
- Advanced ERTH electives: 6 to 36 credit hours beyond the 1000-level, including at least six credit hours above the 2000-level.

Students in Double Majors should consult the department when choosing their sequence of courses. Exceptions to requirements may be made where justified by a student's particular subject combination.

D. BSc or BA (20 credit) Honours

The Honours programs are intended for students who combine a high level of academic achievement with a desire to complete independent research during an undergraduate degree. Students who plan to pursue a postgraduate degree (MSc and/or PhD) are recommended to complete an Honours degree.

The department offers both Concentrated Honours and Combined Honours degrees. The Concentrated program provides a broad education in Earth Sciences while allowing for the individual interests of students. In the final year, students in Concentrated Honours complete an independent research project leading to a thesis (ERTH4200X/Y) on a topic within the broad realm of Earth Sciences.

Combined Honours programs allow students to combine Earth Sciences with another subject. The other subject may be from any discipline within the Faculty of Science or the Faculty of Arts and Social Sciences, or may be a program in Computer Science or Environment, Sustainability and Society (ESS). Common "other subjects" include Ocean Sciences, Chemistry, Physics, Biology, and ESS.

The thesis may be completed in either Earth Sciences (ERTH4200X/Y) or the other subject, and usually in the subject in which the student has the greatest number of courses. The department in which the thesis is written should be chosen in consultation with both departments during the student's third year.

Students will not normally be officially registered into an Honours program until their third year, at which time they have completed most of the required second and third year courses. Students should register to do Honours at that time by contacting the department's undergraduate advisor.

It is the responsibility of students to arrange for a supervisor for their thesis research. Theses in Earth Sciences may be supervised by a faculty member of the department or by an external scientist, subject to the approval of the Honours coordinator. Students should begin to search for a supervisor during their third year and should have a project and supervisor in place by May of their third year, i.e., preceding the year in which the thesis is completed. A list of potential thesis and supervisors are posted by the department during the winter semester, but students are encouraged to begin an independent search prior to this posting.

An oral defence follows completion of the thesis. The defence is graded independently from the thesis and comprises a student's Honours Qualifying Examination. A grade of B- or better must be achieved on the Honours Qualifying Examination. The thesis and defence must be completed by the posted deadline in March. Students who complete after this date must re-register for the following academic year in EARTH4200X/Y, pay the fees, and graduate at the spring convocation of the next academic year.

Combined Honours students who complete a thesis in the other subject should consult that department for policies and deadlines regarding their thesis course.

Departmental Requirements for Honours

Honours students are required to achieve a GPA of 3.5 for courses in the honours subject(s), and a grade of C or better in each ERTH course. For First-Class Honours, students must achieve a GPA of 3.70 in the honours subject(s) and a grade of A- or better on the Honours Qualifying Examination.

Honours students who intend to pursue registration as a professional geoscientist, or wish to leave that option open, should complete the Certificate in Environmental Geoscience, Certificate in Geology, or both, in addition to satisfying Honours requirements.
Concentrated Honours, BA or BSc

- Core requirements (Section A)
  - MATH 1010.03, or MATH 2010.03, or STAT 1003.03 or STAT 2003.03
  - PHYS 1190.03 and PHYS 1290.03, or PHYS 1300X.06
  - ERTH 1000.05: Intermediate Field School
  - ERTH 4200X.06: Honours Thesis
  - Additional ERTH electives: 2 to 3 credit hours in ERTH courses beyond the 1000 level, including at least 15 credit hours beyond the 2000 level.

Combined Honours, BA or BSc

- Core requirements (Section A)
  - MATH 1010.03 or MATH 2010.03 or STAT 1003.03 or STAT 2003.03 (BSc only)
  - PHYS 1190.03 and PHYS 1290.03 or PHYS 1300X.06
  - ERTH 1270.03: Intro to Applied Geophysics
  - ERTH 3000.05: Intermediate Field School or a field course in the other subject.
  - ERTH 4200X.06: Honours Thesis, or a thesis in the other subject and six credit hours of ERTH electives above 3000.
  - Advanced ERTH electives: 3 to 21 credit hours in ERTH courses beyond the 1000 level, including at least 3 credit hours beyond the 2000 level.

Students in Combined Honours should consult the department when choosing courses. Exceptions to requirements may be made where justified by a student's particular subject combination.

E. Co-op Education in Earth Sciences

Co-operative Education in Science (Science Co-op) is a program where academic study is combined with paid career related work experience. Students alternate three workterms throughout their academic study terms and graduate with a Bachelor of Science Co-op. Science Co-op enables students to apply their knowledge directly while providing them with work experience that assists in making educated career choices. Students apply to join Science Co-op before their second year of study. A minimum GPA of 3.5 is required. If accepted into the Science Co-op program, students are required to register for and attend the Science Co-op Seminar Series (SCIE 2000.00) in the fall term of the year they join.

See the “Co-operative Education in Science” section of this calendar, or https://www.sciencecoop.dal.ca for information on Science Co-op such as Science Co-op requirements, eligibility, how to apply, deadlines and other related information.

F. BSc or BA (15 credit) Minor in Earth Sciences

A BSc or BA (15 credit) degree program with a Minor in Earth Sciences is available to students in the Faculty of Science.

Departmental Requirements

- six credit hours of ERTH courses at the 1000 level, including ERTH 1080.03 (Geology I)
- a minimum of 18 credit hours in Earth Sciences (ERTH) courses at the 2000 level or higher, must include at least six credit hours at the 2000 level or higher

G. Minor in Earth Sciences

Students in other 20 credit degree programs may choose to include a Minor in Earth Sciences in their program. Requirements are outlined in the College of Arts and Science Minors section of this Calendar starting on page 129.

H. Minors available to students in Earth Sciences

Minor programs allow students to develop subject specialties in addition to their major or honours subjects. Minors in other subjects are normally added to a four-year Major or Concentration Honours program (including co-op programs).

Students in a 20 credit BSc or BA program in Earth Sciences may choose to include a Minor selected from the list of approved Minors beginning on page 126 in this Calendar. Note that courses counted toward your Major or Honours program cannot be used to fulfill the requirements of a Minor program.

I. Other Programs

BSc/Engineering or BA/Engineering Concurrent Programs

Students normally complete the requirements for a 15 Credit BSc or 15 Credit BA, and the first two years of engineering studies leading to the Diploma in Engineering. The concurrent program can be completed in three years. Details are provided in the College of Arts and Science Degree Requirements section of the calendar.

Diplomas, Certificates, and Language Proficiency Certificates

In combination with a BSc or BA in Earth Sciences, there are certificates and diplomas that can be obtained to emphasize areas of proficiency. Courses counted toward a Major, Honours or Minor programs may also be used to fulfill the requirements of a Certificate. For a complete list and details refer to the College of Arts and Science Degree Requirements starting on page 129 of the calendar.

Certificates offered by the Department of Earth Sciences include:

Certificates for Geoscientists

Knowledge Requirements for Professional Practice as a Geoscientist

Geoscience is a regulated profession in most of Canada. Individual provinces and territories have acts that restrict the practice of geoscience to individuals who are registered members of professional associations. In Nova Scotia, the Association of Professional Geoscientists of Nova Scotia (APGNS) is the licensing body which fulfills this mandate. APGNS and other provincial geoscience associations, under the guidance of Geoscientists Canada, have high standards of geoscience practice and education.

Students who intend to pursue geoscience as a profession, or simply want the most in-depth education in geoscience, should complete the Certificate in Geology, or Certificate in Environmental Geoscience, or both. These Certificates are comprehensive courses of sequences intended to prepare a student for professional practice in modern geoscience, and to meet formal requirements for registration in the Geology and Environmental Geoscience streams, respectively.

Certificate requirements are more specific and stringent than degree requirements in terms of the courses required in Earth Sciences and in the Foundation Sciences. However, registration occurs in steps after graduation and is judged by a student needing extra courses (beyond the 20 credit degree) in order to complete the Certificate(s) and meet knowledge requirements for registration.

These Certificates have been developed within Dalhousie University with the intention of meeting the knowledge requirements for registration for Professional Geoscientists. However, registration occurs in steps after graduation and is administered by professional associations whose requirements may change over time and may vary between jurisdictions. Consult the professional associations – Geoscientists Canada and APGNS – for additional information on registration.

Shared requirements for the Certificate in Geology and the Certificate in Environmental Geoscience

Students should take the 1000 level ERTH prerequisites for ERTH 2000 and 2001 in year one of their program. As of 2015, this is ERTH 1080 and ERTH 1090. For prior years, ERTH 1080 and one of ERTH 1030, ERTH 1090 or ERTH 1090 are acceptable.

Foundations Sciences

- CHEM 1011.03 and CHEM 1021.03
- PHYS 1190.03 and PHYS 1290.03
- MATH 1100.03 or MATH 1200.03 or STAT 1003.03
- MATH 1010.03 or MATH 1290.03 or MATH 1500X.03
- MATH 2300.05, MATH 2100.03, MATH 2200.03, STAT 1001.03
- an additional two courses from MATH, PHYS, CHEM, STAT, CSCI, or BIOL.

Each course must count toward a BSc degree in that subject.

Earth Sciences

- ERTH 2000.03: Field School
- ERTH 2001.03: Earth Materials Science I
3. In addition, students must complete a research project with an emphasis in geographic information science.

2. In addition, students must complete at least two of the following courses, with a minimum grade of B- in each:

- ERTH 2203.03: Sediments and Sedimentary Rock
- ERTH 2270.03: Introduction to Applied Geophysics
- ERTH 2300.03: Geochronology
- ERTH 3400.03: Computer Camp
- ERTH 3410.03: Structural Geology
- ERTH 3503.03: Stratigraphy
- ERTH 3480.03: Geomorphology

*an additional five courses in ERTH beyond the 1000 level, including three courses beyond the 2000 level. An Honours thesis (ERTH 4200X/Y) counts as two courses towards this requirement.

Certificate in Geology (in addition to shared requirements):
- ERTH 1010.03: Igneous Petrology
- ERTH 3020.03: Metamorphic Petrology
- ERTH 4505.03: Tectonics

Certificate in Environmental Geoscience (in addition to shared requirements):
- two courses from: ERTH 3400.03 (Fundamentals of Hydrogeology), ERTH 3402.03 (Practical Hydrogeology), ERTH 3701.03 (Fundamentals of Hydrology), ERTH 4520.03 (GIS Applications to Geological Sciences), ERTH 4530.03 (Environmental Remote Sensing). NOTE: ERTH 3500 is a prerequisite for 4520 and 4530.
- ERTH 4410.03: Environmental Geoscience.

Certificate in Geographic Information Science

Faculty of Science offers a Certificate in Geographic Information Science. The certificate is intended to reflect that the student has completed courses of study in geographic information systems and geomatics that are appropriate for further study or employment related to geographic information science.

A Certificate can be completed by a student in an undergraduate program, in addition to the student's regular program requirements. Completion of each Certificate would be noted on the student's transcript. The purpose of a "Certificate in Geographic Information Science" is to show that the graduate has training in geographic information science, in addition to their academic program requirements.

Students should enrol in the “Certificate in Geographic Information Science” by contacting the Certificate Coordinator. Contact information for the Coordinator is available on the Faculty of Science website. Students can enrol when in their second, third or fourth year of their undergraduate program. Early enrolment is advised.

Certificate Requirements:
1. Students must complete the following courses, with a minimum grade of B- in each:
   - ENVS/ERTH/GEOG 3500.03: Geoscience Information Management
   - ERTH/GEOG 4520.03: GIS Applications to Environmental and Geologic Science

2. In addition, students must complete at least two of the following courses, with a minimum grade of B- in each:
   - GEOG 2000.03: Cartography
   - GEOG 2000.03: Space, Place and GIS
   - BIOL/ENVS/GEOG 3033.03: Spatial Information and GIS in Ecology
   - ERTH/GEOG 4530.03: Environmental Remote Sensing
   - ENV 2100.03: Environmental Informatics
   - ENVS/GEOG 3400.03: Environment and Human Health
   - SUST 3000.03: Environmental Decision Making

3. In addition, students must complete a research project with an emphasis in geomatics or geographic information science (as pre-approved by the Certificate Coordinator) in one of the following sets of courses, with a minimum grade of B-:
   - BIOL/MARI 4900.06 or 4901.03+4902.03: Honours Thesis
   - BIOL/MARI 4800.03 or 4801.03: Special Topics
   - ENV 3001.03: Directed Readings
   - ENV 4901.03+4902.03: Honours Thesis
   - ERTH 4100.06: Research Project
   - ERTH 4200.06: Honours Thesis
   - ERTH 4513.03 or 4515.03: Directed Studies
   - SUST 4800.03: Independent Study
   - SUST 4900.09: Honours Thesis

Students completing an undergraduate program in a discipline other than those listed above will need to complete the project through a directed readings or honours thesis course listed within their home department. The project must be approved by the Certificate Coordinator.

Research Project Guidelines for the Certificate in Geographic Information Science

In the research project in GIS students learn how to design, manage and complete a research project that emphasizes the use of a geographic information system (GIS). Projects can be completed individually or in groups and will proceed with the identification of a suitable research problem. Students will work to solve the problem through acquiring, organizing, analyzing and presenting data using GIS. Projects must include a substantive analytic component where GIS is central to the methods employed.

The focus of project evaluation is on the methodological and organizational design, the application of appropriate GIS techniques, and proper reporting of the results. The GIS component is accomplished through independent work. It is assumed that students already know the GIS concepts and functions required or are capable of learning them, and are proficient in the use of at least one GIS package.

Supervision and evaluation of research projects should include, at minimum, input from a professor or GIS technician competent in geographic information science, methods and technologies. Evaluation of the research project should ideally include three written components: a proposal, a final report and a presentation. In group evaluations the supervisor may adjust final grades based on performance and contribution to the group.

Certificate in Environmental Impact Assessment (EIA)

The Faculty of Science offers a Certificate in Environmental Impact Assessment for students majoring in environmental areas and wishing to pursue additional training in EIA. This certificate is also available for students in International Development Studies (IDS) in the Faculty of Arts and Social Sciences and the College of Sustainability. Completion of the Certificate will be shown on a student’s transcript. For further information, contact Pat Lane (patricia.lane@dal.ca).

Students must have received a minimum grade of B for all courses counted toward the certificate.

Certificate Requirements:
- 4. Required EIA CLASS: BIOL 4001.03 or ENVS 4001.03 or ENVS 4772.03 (minimum of 1.5 credits) to be taken in the fourth year.
- 5. Introductory Class in Science or IDS (Table 1) (minimum of 0.5 credits)
- 6. 3rd Level Environmental courses with lengthy theoretical content from Table 2 (minimum of 1.5 credits)
- 7. 3rd Level Methods courses that provide field, laboratory, statistical, modelling and related experience from Table 3 (minimum of 0.5 credits)
- 8. 3rd and 4th Level Supplementary courses in Major and Related Disciplines from Table 4 (minimum of 1.0 credits)

Note: As usual, students will be required to meet the stated pre-requisites of all courses listed below or the permission of the instructor. Several courses on Tables 1-4 include cross-listings that are given in parentheses. No course may be included twice for the Certificate using different cross-listings.

Disclaimer: This Certificate in EIA has been developed within Dalhousie University and it is not designed to fulfill any governmental and/or professional requirements outside of the university in Canada or abroad.

Certificate Requirements:
Table 1. Introductory Courses (minimum of 0.5 credits from the following list):

- BIOL 2000.03: Introductory Ecology
- ERTH 2410.03: Environmental Issues in Earth Science
- ENVS 1010X/Y: Introduction to Environmental Science
- GEOG 2100X/Y: Environment and Culture (SOSA 2100.06)
- INTD 2001.03 Introduction to Development 1 (GEOG 2201.03)
- INTD 2002.03 Introduction to Development 2 (GEOG 2202.03)
- OCEA 2000X/Y.06 (or OCEA 2000.03 + OCEA 2002.03) The Blue Planet
- SUST 2000.06 HumanitY in the Natural World

Certificate in IT (Earth Sciences)

To recognize students who have completed courses with a substantial Information Technology component, and to provide these students with a document to present to potential employers who seek graduates with IT skills, the Department of Earth Sciences will award a Certificate in Information Technology to students who meet the following requirements:

- completion of the 20 Credit Major or Honours program in Earth Sciences;
- completion of the following courses, with a minimum grade of B, identified by the Department of Earth Sciences as teaching a set of IT skills particularly relevant to geoscientists:
  - ERTH 2001.03
  - ERTH 3440.03
  - ERTH 3400.03
  - ERTH 3500.03
  - ERTH 3000.03
  - OCEA 2000.03
  - OCEA 3000.03
  - OCEA 4000.03

III. Courses for those whose Major is not Earth Sciences

These courses are specially designed for those who want to know something about the Earth, but whose major field of study at Dalhousie will lie elsewhere, e.g., an economics student concerned with resources, a history student interested in the role played by Canada’s geological framework in the development of transportation, a biology student interested in natural environments on the seafloor.

A. Courses with prerequisites

- ERTH 1900.03: Geography 2 (lab course)
- ERTH 2400.03: Environmental Issues
- ERTH 2420.03: Dinosaurs
- ERTH 2430.03: Introduction to Palaeontology (lab course)
- ERTH 3400.03: Introduction to Hydrogeology
- ERTH 3440.03: Geomorphology

IV. Special Information for Earth Sciences Programs

A. Field Work

Field excursions are part of many courses and are conducted at appropriate times during the session. In addition, some optional field excursions may be held each year. Note that some mandatory field trips may be held on Saturdays or Sundays. Field Schools (ERTH 2000 and ERTH 3000), which are required for most degree programs, are offered for about 10 days in late August, just before the start of the university fall term.
V. Course Descriptions

NOTE: Not all courses are offered every year; please check the current timetable for current course offerings. Note also that some mandatory field trips may be held on Saturdays or Sundays. Check with Instructor.

ERTH 1030.03: Introduction to Physical Geography.
This non-lab science course examines the nature of weather and climate, earth's surface features and processes, and internal processes that contribute to landscape development. An integral component of the course is an exploration of the representation and interpretation of physical geographic data through the examination of a variety of maps.

NOTE: There are no co-requisites for this course, and students may take this course in addition to any other first year Earth Science course.

FORMAT: Lecture-class 3 hours each week and 1 hour tutorial weekly. Some classroom lectures may be recorded.

CROSS-LISTING: GEOG 1030.03

ERTH 1060.03: Earthquakes, Volcanoes and Natural Disasters.
Earthquakes, meteorite impacts, rapid climate change, volcanic eruptions, hurricanes, landslides, solar flares, and floods are natural disasters that affect our economy, public policy, and safety. Where, why and how frequently do natural disasters occur? Are predictions possible? Are media portraits of risk and damage realistic? This course, aimed at the non-specialist, investigates these intriguing questions. Examples of "disaster films", in conjunction with lectures and discussions are used to identify the causes, consequences and sometimes erroneous perceptions of natural hazards. Examples from Atlantic Canada and contemporary disasters are used to assess local risk and real-time events worldwide.

FORMAT: Lecture 3 hours

CROSS-LISTING: GEOG 1060.03

ERTH 1080.03: Geology I.
This course focuses on the solid earth (geosphere) and how it evolved throughout earth's vast history, and continues to evolve today. The processes involved are recorded in the rocks and minerals of our earth, and we explore these natural processes and their effects as a way to understand our earth.

The course meets the needs of students who require a science course with a lab component. It is a non-technical course for all Earth Science majors, and serves as an introduction for all those interested in Earth Science. No previous knowledge of geology is required.

FORMAT: Lecture 3 hours, lab 3 hours

EXCLUSION: Credit can be given for only one of ERTH 1080 1090, 1040 or 1041.

ERTH 1090.03: Geology II.
Earth science is a study of Earth as a system. Geology is explored in greater detail, with an emphasis on earth resources, and geological systems that are connected to human activity. This course provides a strong background to pursue further work in the environmental sciences and is the recommended course for Earth Sciences majors.

FORMAT: Lecture 3 hours, lab 3 hours

PREREQUISITE: ERTH 1080 or permission of the instructor

ERTH 1091.03: Geology I.
ERTH 1091 provides a strong background for students who wish to pursue further work in the environmental sciences and is the recommended course for Earth Sciences majors. This course is a prerequisite for some third-year Earth Science courses.

FORMAT: Lecture 3 hours, lab 3 hours, field trips

PREREQUISITE: ERTH 1001.03, GEOL 1020.03 or ERTH 1050.03

ERTH 1090.03: Geology II.
ERTH 1090 has the same lecture content and lecture time as 1090, but does not have a corresponding lab session.

NOTE: This course is not offered every year. Please consult department.

FORMAT: 3 hours lecture

PREREQUISITE: ERTH 1001.03 or permission of instructor

EXCLUSION: Credit can be given for only one of ERTH 1090 1091, 1020, or 1095.

ERTH 1091.03: Geology II.
ERTH 1091 provides a strong background for students who wish to pursue further work in the environmental sciences and is the recommended course for Earth Sciences majors. This course is a prerequisite for some third-year Earth Science courses.

FORMAT: Lecture 3 hours, lab 3 hours, possible field trip

PREREQUISITE: ERTH 1080 or permission of the instructor

EXCLUSION: Credit will only be given for one of ERTH 1090, 1091, 1020, or 1095.

ERTH 2000.03: Earth Sciences Field School.
This course provides 10 to 11 days of introductory field methods in a broad range of Earth Science disciplines. A wide variety of Earth materials and geological processes are examined in the field through thematic excursions throughout southern Nova Scotia. Field components include laboratory skills taught in soil, sediment and rock classification, note-taking, compass, map-reading and traversing, and geological analysis and report writing. The course is held at the end of summer before regular courses in the Fall term and should be taken by those enrolling in second-year level Earth Sciences courses: ERTH 2001.03, 2002.03, 2100.03, 2200.03.

FORMAT: Day-long (8-10 hours) field trips based out of Halifax for the duration of the field school.

PREREQUISITE: ERTH 1080.03 and one other 1st year ERTH course; ERTH 1090.03, 2100.03, 2200.03 or permission of instructor

ERTH 2001.03: Earth Materials Science I.
Materials from the Earth - including minerals, rocks, and the ore and petroleum resources they contain - form the basis of our industrial society and are vital to the Canadian economy. ERTH 2001/2002 introduce students to the origin, identification, and chemical and physical properties of some important Earth materials. Lectures in the fall term focus on minerals as naturally occurring crystalline materials. Special attention is paid to the fundamental structures and composition of common rock-forming minerals such as quartz, feldspar, and mica, and to minerals with special value in society, including iron, copper, and gemstones. Labs include the identification of minerals in hand sample, elements of crystallography, and an introduction to the use of the petrographic microscope. Students gain practical experience in the use of instrumental techniques such as X-ray diffraction and/or electron microprobe analysis to identify one or more unknown minerals. A weekend field trip may be included. This course is a prerequisite for ERTH 2002 and most third-year Earth Science courses. Students who have not already taken CHEM 1010 for its equivalent are strongly encouraged to take this concurrently.

FORMAT: Lecture 3 hours, lab 3 hours, weekend field trip

PREREQUISITE: ERTH 1080 and one other 1st year ERTH course; 1090 recommended; or SCIE 1520.21, 1530.27, 1510.33, 1515.36, or 1520.27, and CHEM 1011.03/1012.03 or CHEM 1021.03/1022.03; Chemistry majors should consult the department.

ERTH 2002.03: Earth Materials Science II.
This course explores the relationships between minerals and rocks, building on the knowledge of mineral chemistry, crystal structure, and identification techniques gained in ERTH 2001. Lectures cover topics such as simple phase diagrams and their application to mineral chemistry and texture, crystal defects and their role in deformation of minerals and rocks, and radioactivity in minerals and its use in geochronology. The use of mineral assemblages and textures to classify rock types is discussed in class and labs. In the labs, students use the petrographic microscope to look at a variety of igneous, sedimentary, and metamorphic rocks in thin section to identify minerals and diagnostic textures. Students are introduced to the use of reflected light microscopy to identify minerals and to materials with special value to society, including iron, copper, and gemstones. This course is a prerequisite for some third-year Earth Science courses.

FORMAT: Lecture 3 hours, lab 3 hours, field trip

PREREQUISITE: ERTH 2001.03

ERTH 2110.03: Field Methods.
This is intended as an introduction to field techniques useful to the practicing geologist, particularly those concepts essential for the accurate field description and identification of rocks and minerals. Students are expected to attend field trips. Computer techniques and elementary structural geology are also considered.

NOTE: Attendance at the Field School (ERTH 2000.03) is mandatory prior to attendance at this course.

FORMAT: Lecture 3 hours, lab 3 hours, field trips

PREREQUISITE: ERTH 2000.01

ERTH 2200.03: Sediments and Sedimentary Rocks.
The course deals with physical, chemical and biological processes that generate modern sediments, and their conversion to sedimentary rocks through time. Labs provide a practical introduction to sediment analysis and to a range of sedimentary structures and rock types. Fieldwork includes description of beaches and boulder in the Halifax area.

FORMAT: Lecture 3 hours, lab 3 hours

PREREQUISITE: ERTH 1080 and one other 1st year ERTH course; ERTH 1090 recommended; or SCIE 1520.36 and SCIE 1530.27

ERTH 2205.03: Introduction to Paleontology.
This course encompasses an introduction to all the major invertebrate groups that are important in the fossil record. It begins with introduction of the first life forms, basic taxonomy and uses of fossils followed by lectures and laboratories on each major group.

FORMAT: Lecture 3 hours, lab 3 hours, possible field trip

PREREQUISITE: ERTH 2200.03 or permission of instructor

ERTH 2270.03: Introduction to Applied Geophysics.
An introduction to using physical principles to explore the Earth's subsurface, with an emphasis on near-surface applications. Topics include seismic, gravity, magnetics, electrical, and electromagnetic surveying techniques, and their
application in prospecting, hydrotechnology, environmental assessments, and well-logging. The geophysics field school, normally conducted during the last week of April, is an integral part of this course.

FORMAT: Lecture 3 hours, tutorial 2 hours, 3-day field school
PREREQUISITE: First year Mathematics and PHYC 1280.03, 1290.03 or PHYC 1300.03
CROSS-LISTING: PHYC 2270.05

ERTH 2380.03: Geochemistry.
An introduction to the principles of chemistry applied to geologic systems, including an overview of the chemistry of rocks and minerals, isotopes in the geological environment, processes that control the mobility of contaminants in the environment, and the use of geochemical data in solving geologic and environmental problems.
FORMAT: Lecture, 3-week tutorial
PREREQUISITE: ERTH 1080.03, ERTH 2001.03, CHEM 3011/3012 or equivalent, or permission of the instructor

ERTH 2410.03: Environmental Issues in Earth Sciences.
Geology underlies many of the environmental problems facing humanity today. Topics include environmental aspects of energy and mineral resources, geologic hazards, geologic connections to pollution and waste disposal, and the role that water plays in its various guises. Canadian examples are incorporated where appropriate. Approved with Canadian Studies.
NOTE: This course is not offered every year. Please consult department in the spring for further information.
FORMAT: Lecture 3 hours
PREREQUISITE: One of: ERTH 1010, ERTH/3EGG 1050, ERTH/EGG 1060, ENVS 1000, SUST 1001 with a grade of B or above, or DSP with Earth Science.
CROSS-LISTING: CANA 2410, ENVS 2410
EXCLUSION: This class is not available for Earth Science Majors

ERTH 2420.03: Dinosaurs.
Students will consider the origin, evolution and extinction of non-avian dinosaurs. What are dinosaurs? Why were some dinosaurs so big? What did dinosaurs eat? How fast could dinosaurs run? Were dinosaurs good parents? To answer these questions, we will examine the nature of evidence gathered from dinosaur fossils and their surrounding rocks.
FORMAT: Lecture 3 hours
PREREQUISITE: ERTH 1080.03 or any two of ERTH 1010, 1020, 1040, 1041, 1050, 1090, 1099, 1091, or SCIE 1920.25, 1904.27 or 1510.33, or permission of instructor

ERTH 2430.03: Forensic and Medical Geology.
Designed for non-earth sciences majors, this course explores the evolving fields within the realm of forensic. Forensic and medical geology share a common thread in that both depend upon identifying potential geologic and geoscientific sources of evidence, and applying this information to solve a larger problem, either legal or health-related.
NOTE: This course is not offered every year. Please consult department in the spring for further information.
FORMAT: Lecture/tutorial
PREREQUISITE: ERTH 1080 and one other Earth Sciences course or instructor’s permission.

The course provides 10 days of geological mapping in the field and entails (1) identifying, measuring and locating rocks and geological structures, (2) drawing geological logs of map units, and (3) writing a report describing and interpreting the data. Strong mapping skills are crucial to future geologists. This class is held at the end of summer before regular classes in the fall term and is required for BSc Major and Honours programs.
FORMAT: 0C Campus, 10 days
PREREQUISITE: ERTH 2000.015, 2001.03, 2002.03, 2100.03, 2200.03, 2205.03

ERTH 3010.03: Igneous Petrology.
Igneous petrology is the study of the field relations, mineralogy, texture, and geochemistry of volcanic and plutonic rocks. Lectures discuss the classification and graphical representation of igneous rocks; the production, differentiation, and evolution of magmas in different tectonic environments. Practical work consists of laboratory petrographic examination and two field trips.
FORMAT: Lecture 3 hours, lab 3 hours, field trips
PREREQUISITE: ERTH 2001.03, 2002.03 and 2380.05

ERTH 3020.03: Metamorphic Petrology.
Metamorphic petrology is the study of the way in which pre-existing igneous, sedimentary, and metamorphic rocks respond to changes in pressure, temperature, metamorphic fluid and geochemical environment. Metamorphic reactions, deformation and recrystallization, the stability relations of minerals and mineral assemblages under various physical and chemical conditions, and the concept of metamorphic facies are discussed. The relationship of metamorphism to other geological processes is considered. In the labs, microscopic mineralogy and textural are used to decipher the metamorphic history of rocks.
FORMAT: Lecture 3 hours, lab 3 hours
PREREQUISITE: ERTH 3010.03

ERTH 3140.03: Structural Geology.
Introduction to the behaviour of rocks during deformation, stressing the geometrical aspects of rock formation. Students learn: (a) geometrical principles to identify, describe, and interpret common types of structures in outcrop and hand sample; (b) to interpret the mechanical properties of rocks based on their microstructure; (c) construction techniques to calculate and interpret stress and strain in deformed rocks.
FORMAT: Lecture 3 hours, lab 3 hours, possible field trips
PREREQUISITE: ERTH 2001.03, ERTH 2100.03, ERTH 2210.03, ERTH 2220.03, ERTH 2230.03

ERTH 3270.03: Solid Earth Geophysics.
An introduction to global geophysics, including the workings of both the Earth’s surface and its deep interior. Starting from plate tectonics, this course explores the Earth as a unified dynamic system. The course includes seismology, earthquakes, mantle convection, crustal accretion, isostasy, the Earth’s magnetic field, radioactivity, and the Earth’s heat budget.
FORMAT: Lecture 3 hours, tutorial 2 hours
PREREQUISITE: ERTH 2270.03
CROSS-LISTING: PHYC 3270.03

ERTH 3302.03: Quaternary Sedimentary Environments.
The course deals with facies models for Quaternary glacial, coastal, deep sea and alluvial sediment. Emphasis is placed on sedimentation processes typical of each depositional setting and the geometry of the resulting deposits. Ancient deposits, including those resulting from glacial events, are examined, and their association with hydrocarbons, coal and uranium are discussed. The labs provide practical experience of techniques used in facies analysis.
FORMAT: Lecture 3 hours, lab 3 hours
PREREQUISITE: ERTH 2230.03, ERTH 2230.05

ERTH 3303.03: Stratigraphy.
Stratigraphy is the backbone of the geological sciences; it brings together sedimentology, palaeontology, petrology, and structural geology to reconstruct Earth history. We survey the impact of sea-level change, tectonics and climate on sediment accumulation, with emphasis on sequence stratigraphy. Case studies focus on sedimentary basins across Canada, and practical work includes laboratory and class exercises, as well as field excursions.
FORMAT: Lecture 3 hours, lab 3 hours, field trips
PREREQUISITE: ERTH 2230.03, ERTH 2230.05

ERTH 3400.03: Fundamentals of Hydrogeology.
The availability of clean water is absolutely essential for the development and maintenance of modern societies. This course deals with the mathematical description of groundwater movement, geophysical and geological methods for groundwater exploration, regional occurrence and chemical quality of groundwater, and the effects of waste disposal on chemical quality. Laboratory work stresses familiarity with techniques employed in the assessment and exploration of groundwater resources, as well as the analysis and interpretation of water quality data.
FORMAT: Lecture 3 hours, lab 3 hours
PREREQUISITE: ERTH 2001.03, ERTH 2023.03, ERTH 2023.05 or permission of instructor

ERTH 3402.03: Practical Hydrogeology.
This course is designed to build on ERTH 3400.03 to familiarize the student with the practical aspects of groundwater resource development and monitoring system installation, including drilling methods, well design, well hydraulics and aquifer analysis, slug testing, data interpretation, and introduction to groundwater modelling. Actual case history data and problem assignments with practical applications are emphasized.
FORMAT: Lecture 3 hours, lab/tutorial
PREREQUISITE: ERTH 3400.03

498 Earth Sciences
ERTH 3420.03: Geochemistry of Aquatic Environments.

Given the abundance of water at the earth’s surface and the wide use both humans and other organisms make of surface waters, it becomes imperative for environmentally-oriented scientists to understand the chemistry of natural bodies of water. In particular, we need to comprehend the processes that lead to the observed composition of groundwaters, lakes, rivers, and oceans. We also need to be aware of how human activities can alter these natural systems. Water is also an agent for geologic and environmental change, both on short and long time-scales.

Earth and environmental scientists should have an appreciation of these processes (sources, sinks and transport mechanisms) and the resulting geochemical cycles. This course is an introduction to the governing principles and processes of aquatic geochemistry. Specific topics will include chemical composition of natural waters, kinetics (mechanisms & rates) of geochemical reactions, the hydrologic cycle, the dissolved carbonate system and pH controls, rainfall reactions and the influence of life, rainer and acid rain, weathering and the formation of soils, mineral-solution equilibria, controls on the composition of rivers, lakes and oceans, sediments and their after-burial changes, and the global cycles of carbon, nitrogen, and sulfur. Students will be taught to approach problems quantitatively through the principles of mass action (Equilibrium and activity diagrams) and of mass balance (box models and conservation equations).

FORMAT: Lecture 3 hours
PREREQUISITE: CHEM 1011.03/1012.03 or equivalent and ERTH 1080/1090 or ERTH 1010.01/02
CROSS-LISTING: OCEA 3420.03

ERTH 3440.03: Geomorphology.

Geomorphology is the quantitative study of Earth’s surface processes and landforms with applications to geomorphology, civil engineering, hydrogeology, and environmental management. We investigate the processes of landscape instability, weathering and soils, sediment production, wind-driven and coastal environments, tectonic landforms, and river, glacial and periglacial processes.

FORMAT: Lecture 3 hours, lab 3 hours including mandatory field trips
PREREQUISITE: ERTH 1080 and one other 1st year ERTH course: ERTH 1090 recommended; or SCIE 1522.21, 1504.27 or 1510.33 or permission of instructor AND completion or concurrent enrollment of a 1000-level mathematics class, a 1000-level physics class and a 1000-level chemistry class.

CROSS-LISTING: GEOG 3440.03

ERTH 3500.03: Geoscience Information Management.

Geographic Information Systems (GIS) is a tool for the management of geospatial data, and have become indispensable for disciplines whose location of objects and patterns of processes is important. GIS serves a significant role in a wide range of applications, from modeling, to analysis and prediction, to decision making. The course is aimed at a broad base of potential users and draws on the concepts of GIS in global change, mineral exploration, preservation of biodiversity, coastal zone management, resource depletion, and many other present and future environmental issues. The course material will be of interest to those studying geoscience, environmental science, ecology, marine biology, oceanography, epidemiology, urban and rural planning, civil engineering, and any other field involving spatial data. Laboratory exercises emphasize the integration of vector and raster GIS, and the integration of databases and GIS (global positioning systems) data into GIS. Exercises draw on the diversity of GIS applications in a number of application areas.

FORMAT: Lecture 3 hours, lab 3 hours
PREREQUISITE: Two years of university study or equivalent or instructor’s permission

CROSS-LISTING: ERTH 5000, GEOG 3500, ENV 3500
EXCLUSION: Credit will only be given for one of ERTH 3500.03, ERTH 5600.03; GEOG 3500.03, GEOG 3500.03 or ENV 3500.03

ERTH 3601.03: Global Biogeochemical Cycles.

This course currently deals with environmental challenges at the global scale that are expected to worsen in the 21st century, including a global water crisis, climate change and pollution of our waters and atmosphere; this course examines the science behind these environmental issues from the multidisciplinary framework of global biogeochemical cycling. With the global scale as the focus, this course will cover the many dynamical fields that are encompassed by the broad reach of biogeochemistry. You will learn about the processes that drive the movement of carbon, nitrogen, phosphorus and sulfur in the earth system, and the residence of these elements in the atmosphere, soils, lithosphere, oceans and freshwater/terrestrial biota. The course is quantitative and analytical exercises you calculate and compare the effects of industrial-emissions, land clearing, agriculture, and rising population on the processes driving the Earth’s chemical cycles. Weekly journal readings for discussion in laboratory group cover the latest developments in this exciting and rapidly changing field. This course provides an excellent framework for those interested in the science of global change.

PREREQUISITE: An introductory Chemistry class and one of ENVS 1000.06, MATH 1000.06, or MATH 1000.06, or MATH 1000.05 and one of OCEA 2001.03 and OCEA 2002.03.

CROSS-LISTING: ENV 3601.03

ERTH 3701.03: Fundamentals of Hydrology.

This course is an introduction to hydrology, emphasizing surface processes and water resources. In this course we learn about both the pure and applied uses of hydrology. The course is quantitative and introduces hydrologic processes in the atmospheric, on the land surface, in groundwater and in surface channels.

FORMAT: Lecture 3 hours, tutorial 1.5 hours
PREREQUISITE: MATH 1000.03 or MATH 1214.03 and one of ENVS 1000.06, SUST 1000.06, ERTH 1080.03, or ERTH 1090.05 or one of SSCI 1515X.21, SSCI 1530.27, SCIE 1504X.Y.33 and completion of 2 years of arts under-graduate degree. PHYS 1200 and PHYS 1290.03 or (PHYS 1300X.01 or PHYS 1300X.03) are recommended.

CROSS-LISTING: ENV 3701.03

ERTH 4001.03: Sponsored Geologic Experience.

This Field Trips & Tours Laboratory Seminar introduces students to some of the following: Practical exploration techniques, field and laboratory skills, familiarization with deposit models, related economic and environmental geology, and the business side of Earth-science industries.

FORMAT: At least 10 days in the field. Student presents a report (written and oral presentation) after returning to Dublin.

ERTH 4002.03: Advanced Field School.

This course is aimed at a broad base of potential users and draws on the diversity of GIS applications, from modeling, to analysis and predictions, to decision making. The course is aimed at a broad base of potential users and draws on the principles of GIS in global change, mineral exploration, preservation of biodiversity, coastal zone management, resource depletion, and many other present and future environmental issues. The course material will be of interest to those studying geoscience, environmental science, ecology, marine biology, oceanography, epidemiology, urban and rural planning, civil engineering, and any other field involving spatial data. Laboratory exercises emphasize the integration of vector and raster GIS, and the integration of databases and GIS (global positioning systems) data into GIS. Exercises draw on the diversity of GIS applications in a number of application areas.

FORMAT: Off campus, four weeks
PREREQUISITE: ERTH 1080.03, ERTH 1090.03 or permission from instructor

ERTH 4100X/Y.06: Research Project.

This course allows students who are not in an Honours program to do a research project. See course description for ERTH 4200X/Y.06.

NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.

FORMAT: Lecture 3 hours

ERTH 4110.03: Geological Oceanography.

This course is intended to give a broad survey of topics in marine geology and geophysics. The course content covers recent methods and observations with quantitative applications to an understanding of geophysical and geological processes. Some topics covered are: plate tectonics and seismic, heat flow, gravity, and magnetic methods, patterns and processes of sediment transport and deposition. Note: some laboratory exercises augment the lectures, including a field cruise to local beaches. Third year and honors undergraduates will be admitted by consent of the instructor. No previous background in Geology or Geophysics is required.

FORMAT: Lecture 3 hours
CROSS-LISTING: OCEA 5110.03, OCEA 4110.03

ERTH 4131.03: Advanced Petroleum Geoscience.

This is an advanced course to provide graduate students with an understanding of field observations and interpretations for basin/prospect evaluation. Students work in a team interpreting industry data, including well log and reflection seismic, in a collaborative environment. The team submits its findings and recommendations in written and oral presentations.

FORMAT: Lecture/group research project
PREREQUISITE: ERTH 3140.03, or permission of instructor
CROSS-LISTING: ERTH 5131.03
ERTH 4141.03: Applied Geology, Mineralogy and Geochemistry.

This course is an introduction to various concepts and techniques used by geologists in the search for and evaluation of mineral concentrations, in mining and metallurgy, as well as in environmental aspects of these activities. The course provides an introduction to tectonic processes and the ways in which these processes create and modify the Earth's crust. We cover the fundamental geological, geophysical, and geochemical controls that operate today, including plate tectonics, and the ways in which these might have differed in the geological past. The tectonic evolution of specific ore deposits is discussed, including both modern and ancient examples from Canada and other parts of the world.

FORMA T: Lecture 3 hours
PREREQUISITE: ERTH 2270.03, 3140.03
CROSS-LISTING: ERTH 5400.03

ERTH 4440.03: Geomorphology and Landscape Evolution.

This course deals with selected topics in geomorphology and is chosen to reflect current topics of interest in the disciplines and/or specific interests of participants. The focus is on the interaction of geomorphological processes with the environment and the ways in which they are related to other factors such as climate and vegetation change, and rock character. The concepts of equilibria, stability, and environmental sustainability are examined. Examples of topics that might be covered include: environmentally sensitive elements and minerals, geologic hazards, water, soil, mineral and energy issues, use of isotopes as tracers, as well as waste management, rehabilitation, and the urban environment.

PREREQUISITE: ERTH 3020.03, ERTH 3140.03 (or equivalent) 
NOTE: This course is not offered every year. Please consult department in the spring for further information.

FORMA T: Lecture 3 hours

ERTH 4450.03: Introduction to Landscape Simulation.

Examine different approaches to numerical modeling of earth-surface processes such as erosion and landslides, melting permafrost, and braided rivers. Using class and/or individual projects as examples, the selection of variables, sensitivity testing, and methods for testing models against nature are discussed. We use Matlab, programming experience is very useful but not essential.

FORMA T: Lecture 3 hours

PREREQUISITE: ERTH 3440.03, MATH 1001 or 1400, PSYC 1201/3.

ERTH 4460.03: Geology and Landscape Evolution.

This course deals with advanced-level aspects of earth-surface processes and the ways in which these processes create and modify the Earth’s crust. The course provides an introduction to tectonic processes and the ways in which these processes create and modify the Earth’s crust. We cover the fundamental geological, geophysical, and geochemical controls that operate today, including plate tectonics, and the ways in which these might have differed in the geological past. The tectonic evolution of specific ore deposits is discussed, including both modern and ancient examples from Canada and other parts of the world.

FORMA T: Lecture 3 hours

PREREQUISITE: ERTH 2270.03, 3140.03
CROSS-LISTING: ERTH 5500.03

ERTH 4480.03: Environmental Geoscience.

Environmental geoscience integrates various aspects of earth sciences to critically examine the interaction between humans and the geologic environment. Topics include environmentally sensitive elements and minerals, geologic hazards, water, soil, mineral and energy issues, use of isotopes as tracers, as well as waste management, rehabilitation, and the urban environment.

PREREQUISITE: ERTH 3020.03, ERTH 3140.03 (or equivalent) 
NOTE: This course is not offered every year. Please consult department in the spring for further information.

FORMA T: Lecture 3 hours

ERTH 4500.03: Applied Geology, Mineralogy and Geochemistry.

This course provides an overview of metamorphic processes and their causes, with emphasis on the role of metamorphic processes in the formation of ore deposits. The course includes studies of metamorphic rocks and their mineralogy, and the processes that create and modify the Earth’s crust. We cover the fundamental geological, geophysical, and geochemical controls that operate today, including plate tectonics, and the ways in which these might have differed in the geological past. The tectonic evolution of specific ore deposits is discussed, including both modern and ancient examples from Canada and other parts of the world.

FORMA T: Lecture 3 hours

PREREQUISITE: ERTH 2270.03, 3140.03
CROSS-LISTING: ERTH 5500.03

ERTH 4510.03: Mineral Deposits.

The course provides an introduction to the geology of mineral deposits and is aimed at students interested in the exploration and exploitation of mineral resources. The course integrates many Earth Science disciplines. Laboratory work introduces students to the study of reflected light microscopy. This course is not offered every year. Please consult department in the spring for further information.

FORMA T: Lecture 3 hours

ERTH 4515.03: Petroleum Geology - Field Methods and Economic Evaluation.

This course introduces students to petroleum geology and petroleum systems with a focus on basin analysis, source rock evaluation, and well log analysis. The course is offered as number warrant (4 students minimum). It is suitable for students who are doing honours or graduate work in the general areas of petroleum and/or structural geology and/or tectonics.

NOTE: This course is not offered every year. Please consult department in the spring for further information.

FORMA T: Lecture 3 hours, Lab 3 hours

ERTH 4517.3: Petroleum Geoscience Field Methods.

This course provides an advanced-level overview of petroleum geology and petroleum systems, with a focus on basin analysis, source rock evaluation, and well log analysis in addition to other topics.

PREREQUISITE: ERTH 3140.03
CROSS-LISTING: ERTH 5517.03

ERTH 4520.06: Honours Thesis.

This course provides an introduction to petroleum geology, basin analysis, source rock evaluation, and well log analysis. The course is offered as number warrant (4 students minimum). It is suitable for students who are doing honours or graduate work in the general areas of petroleum and/or structural geology and/or tectonics.

NOTE: This course is not offered every year. Please consult department in the spring for further information.

FORMA T: Lecture 3 hours, Lab 3 hours

ERTH 4525.03: Advanced Metamorphic Petrology.

This course deals with selected topics in metamorphism and microtectonics, chosen to reflect current topics of interest in the disciplines and/or specific interests of participants. The focus is on the interaction of metamorphic processes with the environment and the ways in which they are related to other factors such as climate and vegetation change, and rock character. The concepts of equilibria, stability, and environmental sustainability are examined. Examples of topics that might be covered include: environmentally sensitive elements and minerals, geologic hazards, water, soil, mineral and energy issues, use of isotopes as tracers, as well as waste management, rehabilitation, and the urban environment.

PREREQUISITE: ERTH 3300.03, 3140.03
CROSS-LISTING: ERTH 5525.03

ERTH 4530.03: Tectonics.

This is a required course for Earth Sciences honours students. It is intended to synthesize the various aspects of geology covered in the third year core program.
ERTH 4470.3: Introduction to Seismic Imaging.
This course teaches the basic techniques of the reflection seismic method for imaging of earth structures such as those used in hydrocarbon exploration. Lectures introduce concepts and techniques that are applied in computer lab to the processing of a multi-channel seismic dataset. Concepts covered include: source and receiver geometry, digital filtering, deconvolution, velocity analysis, stacking, and migration.

FORMAT: Lecture/lab
PREREQUISITE: ERTH 3270.03 or consent of instructor
CROSS-LISTING: ERTH 5470.03, OCEA 4470.03, PHYC 4470.03, PHYC 5470.03

ERTH 4480.03: Advanced Seismic Imaging.
This course teaches more advanced techniques of seismic imaging of earth structures. Lectures introduce techniques that will be applied in the computer lab to the processing of multi-channel reflection and wide-angle refraction seismic datasets. Concepts covered include: multiple removal, pre-stack migration in time and depth, amplitude analysis, velocity modeling and inversion.

NOTE: This course is not offered every year. Please consult department in the spring for further information.

FORMAT: Lecture 3 hours, lab 3 hours
PREREQUISITE: ERTH 4470.03 or consent of instructor
CROSS-LISTING: ERTH 5480.03, OCEA 4480.03, PHYC 4480.03, PHYC 5480.03

ERTH 4502.03: Micropaleontology and Global Change.
This course provides a systematic study of major groups of microfossils (principally foraminifera, ostracoda and calcareous nanoplankton). Particular emphasis is placed on the distribution and ecology of recent microfossils, and on laboratory techniques for sampling and studying them. Quaternary paleo-oceanography and faunal distribution is examined based on knowledge of the tolerances of the living organisms.

NOTE: This course is not offered every year. Please consult department in the spring for further information.

FORMAT: Lecture 3 hours, lab 3 hours
PREREQUISITE: ERTH 3302.03/3303.03
CROSS-LISTING: ERTH 5502.03, OCEA 4115.03

ERTH 4510.03/4511.03: Directed Reading.
This course is intended to permit further study of a specific topic of interest, or to correct a deficiency in a student’s program. The course is supervised by a regular faculty member and the course content and marking scheme must be submitted to and approved by the chairperson in the first week of classes. Further guidelines for directed reading courses are available from the undergraduate advisor or the Earth Sciences office.

FORMAT: As required
PREREQUISITE: Permission of Department

ERTH 4520.03: GIS Applications to Environmental and Geological Sciences.
Geographic information systems (GIS) provide a rich set of new tools to the geologist and environmental scientist, not only to solve conventional problems, but also to explore questions not readily answered by other means. This course builds on the fundamentals of GIS taught in ERTH 3500.03 to explore analytical tools that aid in decision-making processes encountered in mineral exploration, hydrogeology, site selection, environmental assessment, and global change analysis. The course concentrates on case studies and problem solving, including those requiring multi-criteria and multi-objective decision making processes.

NOTE: This course is not offered every year. Please consult department in the spring for further information.

FORMAT: Lecture 3 hours, lab 3 hours
PREREQUISITE: GEOG 3500.03, ENVS 3500, ERTH 3500.03 or ERTH 5600, or SCIE 3600.03
CROSS-LISTING: GEOG 4520.03, ERTH 5520.03

ERTH 4530.03: Environmental Remote Sensing.
The goal of this course is to introduce students to the role of remote sensing as a technique provide environmental and geologic information. Particular emphasis will be placed on examining the potential and limitations of remote sensing methods and data in this context. The lectures discuss the fundamentals of remote sensing with an emphasis on multi-spectral satellite systems. In the lab, students use computerized techniques of digital image enhancement and thematic information extraction to process images derived from optical, radar, and hyperspectral remote-sensing systems. The integration of remote-sensing information with GIS (Geographic Information Systems) is stressed in both the labs and lectures.

NOTE: This course is not offered every year. Please consult department in the spring for further information.

FORMAT: Lecture 3 hours, lab 3 hours
PREREQUISITE: GEOG 3500.03, ENVS 3500, ERTH 3500.03, ERTH 5600, or SCIE 3600.03
CROSS-LISTING: GEOG 4530.03, ERTH 5530.03

VI. Co-op Workterms
Each work-term is a prerequisite of the succeeding work-term.

ERTH 8891.00: Work-Term I.
ERTH 8892.00: Co-op Work-Term II.
ERTH 8893.00: Wo-op Work-Term III.
I. Introduction
Economics is a social science—a science because it involves a rigorous intellectual effort to derive logical conclusions from basic facts and propositions; a social science because it has human beings and their welfare as its ultimate concern. The basic facts of Economics cannot be knowable and measurable with the same precision as those of the physical sciences—human society and its motivations are far too complex to permit this—but none of the sciences surpasses economics in its relevance to our needs, problems and goals.

Economics analyzes the equity, efficiency, and sustainability of human behavior in the production, distribution, and consumption of commodities. Economics is not an easy science; indeed, it is one of the most complex, difficult (and fascinating) areas of study when you pursue it beyond its elementary levels, but some basic knowledge of economics is essential for any educated person. A more extensive knowledge of the subject is an invaluable complement to other fields of specialization such as law, commerce, politics and other studies in social sciences or humanities, and a specialization in the field can lead to a variety of interesting career opportunities.

II. Degree Programs
The department offers BA and BSc programs, described below. A student may graduate with either a BA or a BSc degree, but not both. In all programs, the student must ensure that the courses selected satisfy the overall faculty requirements for the relevant general degree (BA or BSc).

In addition to the departmental requirements listed below, students must satisfy the requirements outlined in the Degree Requirements section, page 125 of this calendar.

A. General Principles
Two principles have particular weight: (a) students should strike a balance between breadth of coverage among disciplines and depth of specialization in economics; (b) students taking economics as a minor or as a component of another specialization should be allowed a reasonable degree of flexibility in their choice of economics courses.

B. BSc (20 credit) Honours Degree in Economics

Departmental Requirements

1800 level
- ECON 2201.03
- ECON 2202.03
- ECON 2339.03
- ECON 3339.03
- ECON 3550.03
- One half credit in ECON 3310.03 or ECON 3349.03 or ECON 2233.03 or 2239.03

4800 level
- ECON 4200.06
- ECON 4420.03
- ECON 4421.03
- 3.5 other Economics credits at or above the 2000 level for a minimum of nine advanced Economics credits.
Other required courses
- MATH 1000.03
- MATH 1010.03
- MATH/STAT 1060.03
- MATH 2030.03
- MATH/STAT 2080.03 (ECON 2280.03)
- An Honours Thesis is also required

Admission to and graduation with Honours requires a B+ average (3.3) in Economics courses at the 2000 level and above, with no grade lower than a C.

Departmental Requirements

C. BA (20 credit) Honours Degree in Economics

Departmental Requirements

1800 level
- ECON 1010.03
- ECON 1020.03

2000 level
- ECON 2200.03
- ECON 2290.03

3000 level
- ECON 3338.03
- ECON 3339.03
- ECON 3700.03
- One half credit in ECON 3310.03 or ECON 3349.03 or ECON 2233.03 or ECON 2239.03

4000 level
- ECON 4200.06
- ECON 4420.06
- ECON 4421.06
- 3.5 other Economics credits at or above the 2000 level for a minimum of nine advanced Economics credits

Other required courses
- MATH 1000.03
- MATH 1010.03
- MATH/STAT 1060.03
- MATH 2030.03
- MATH/STAT 2080.03 (ECON 2280.03)
- An Honours Thesis is also required

Admission to and graduation with Honours requires a B+ average (3.3) in Economics courses at the 2000 level and above, with no grade lower than a C.

For current deadlines, requirements, and application forms, see the department’s website (http://economics.dal.ca)

D. Combined Honours

Combined honours programs, BA or BSc, may be arranged with other departments such as Biology, Earth Sciences, History, Journalism, Mathematics, Political Science, Statistics, or Sociology. For combined honours programs with Economics, students must also consult the other departments concerned.

Students doing Combined Honours have the same Economics requirements as students doing Single Honours, but only write an Honours Thesis in one of the two subjects.

E. BSc (20 credit) Major in Economics

Departmental Requirements

1800 level
- ECON 1010.03
- ECON 1020.03

2000 level
- ECON 2200.03
- ECON 2290.03
- Three other advanced credits at or above the 2000 level

3000 level
- ECON 3338.03
- 2.5 other Economics credits at or above the 3000 level, for a minimum of seven advanced credits in Economics

Other required courses
- MATH 1000.03
- MATH 1010.03
- MATH/STAT 1060.03
- MATH 2030.03
- MATH/STAT 2080.03 (ECON 2280.03)

A student who wants the option of converting a Major to an Honours degree should select courses in accordance with the list of honours core courses given above and should consult regulations 11.4 and 22. Besides additional core courses, the Honours program requires an honours thesis and a higher academic standing than the Major. An Honours program can be converted to a Major at the student’s discretion. The Major, however, allows a maximum of only 10 credits in economics while the Honours program allows a maximum of 11.

F. BA (20 credit) Major in Economics

Departmental Requirements

1800 level
- ECON 1010.03
- ECON 1020.03

2000 level
- ECON 2200.03
- ECON 2290.03
- Two other credits in Economics at or above the 2000 level

3000 level
- Three credits in Economics at or above the 3000 level, for a minimum of six advanced credits in Economics

Other required courses
- MATH 1000.03
- STAT 1060.03

While the total number of credits required for the Major is the same as for an Honours degree, the honours program in economics requires an honours thesis and includes a larger core of courses in economics. In addition, the Honours program requires a higher academic standing than does the Major. However, the Major provides a comprehensive program not available with the 15-credit minor. Major students are strongly encouraged to consult with members of the department to ensure an integrated and coherent program.

A student who wants the option of converting a Major to an Honours degree should select courses in accordance with the list of honours core courses and should consult regulations 11.4 and 22. An Honours program can be converted to a Major at the student’s discretion. The Major allows a maximum of nine or 10 credits in economics while the honours program allows a maximum of 11.

Combined programs may also be arranged with economics as the major or minor subject in association with other fields such as political science, sociology, history, earth sciences, biology, mathematics, statistics - and possibly others.

G. BSc or BA (20 credit) Double Major

Economics is available as part of a BSc or BA double major program. All of the requirements for a single major apply. The student must complete a minimum of 10 advanced credits in the two subjects together.

H. Co-op Education in Economics

Co-operative Education in Science (Science Co-op) combines academic study with paid career-related work experience. The program integrates eight academic terms with three work terms. On completion of a Science Co-op program, a student graduates with a Bachelor of Science Co-op. Science Co-op enables students to apply their knowledge directly while providing them with work experience that assists in making educated career choices. Students who apply to join Science Co-op by August 1st of their second year of study. If accepted into the Science Co-op program, students are required to register for, and attend, the Science Co-op Seminar Series (SCS 2800.06) in the fall term of the year they join.
The co-operative education program begins in the second year of study, and a GPA of 3.0 is required for admission. In addition to completing three to four work terms, a student must fulfill the requirements for either a 20-Credit BSc Major program while maintaining at least a B average, or a 20-Credit BSc Honours Program. Departmental approval and Science Co-op Program approval is required to obtain admission to the Co-operative Education Program in Economics. Interested students should inquire about the program before beginning their second year of study.

See the “Co-operative Education in Science” section of this calendar, or http://www.science.dal.ca, for information on Science Co-op such as Science Co-op requirements, eligibility, how to apply, deadlines and other related information.

I. BSc or BA (15 credit) with Minor in Economics

A BSc or BA (15 credit) degree program with a Minor in Economics is available to students in the Faculty of Science. Departmental Requirements

- ECON 1101.03/1102.03
- A minimum of 18 credit hours in Economics (ECON) courses at the 2000 level or higher.

J. Minor in Economics

Students in other 20-credit degree programs may choose to include a Minor in Economics in their program. Requirements are outlined in the College of Arts and Science Minors section of this Calendar starting on page 129.

K. Minors available to students in Economics

Minor programs allow students to develop subject specialties in addition to their major or honours subjects. Minors in other subjects are normally added to a four-year major or concentrated honours program (including co-op programs). Students in a 20-credit BSc or BA program in Economics may choose to include a Minor selected from the list of approved Minors beginning on page 152 in this Calendar. Note that courses counted toward your Major or Honours program cannot be used to fulfill the requirements of a Minor program.

L. Interdisciplinary Opportunities

BSc/Engineering or BA/Engineering Concurrent Programs

Students will normally complete the requirements for a 15 Credit BSc or 15 Credit BA in the first two years of engineering studies leading to the Diploma in Engineering. The concurrent program can be completed in three years. Details are provided in the College of Arts and Science Degree Requirements starting on page 125 of the calendar.

Diplomas, Certificates, and Language Proficiency Certificates

In combination with a BA or BSc there are certificates or diplomas that can be obtained to emphasize areas of proficiency. For a complete list and details refer to the College of Arts and Science Degree Requirements starting on page 125 of the calendar.

M. Graduate Studies

The Department offers a graduate program leading to the MA, MDE and PhD degrees. Details of these programs, including a list of graduate courses, are given in the Calendar of the Faculty of Graduate Studies. Senior undergraduates may be admitted to some graduate courses at the discretion of the instructors concerned.

III. Course Descriptions

Not all courses are offered on a regular basis. Please consult the department for details. Recent course outlines are available on the department’s website (http://economics.dal.ca).

All Economics courses, unless stated otherwise, have a minimum grade requirement of C for their prerequisite courses.

ECO1101.03: Principles of Microeconomics

How do you decide whether or not to go to university? Why does the price of pizza change so much less than the price of oil? What will better help prevent climate change: a carbon tax, or a cap-and-trade system? Microeconomic analysis, which considers the behavior of individuals and businesses, can answer questions like these.

FORMAT: Lecture 5 hours

ECO1102.03: Principles of Macroeconomics

Why are some countries rich and others poor? Why do high oil prices cause the home to rise, how are Ontario manufacturers affected? Why were mortgage interest rates above 20% in 1981 but below 3% in 2017? Macroeconomic analysis, which considers the behavior of the entire economy, can answer questions like these.

NOTE: ECON 1101.03 and ECON 1102.03 (together) satisfy the Principles of Economics requirement for Economics majors and for Bachelor of Commerce and Bachelor of Management students.

FORMAT: Lecture 5 hours

ECO2200.03: Intermediate Microeconomics

This course covers consumer behavior, the theory of the firm, factor markets, and general equilibrium welfare analysis. The course serves as the microeconomic prerequisite for higher-level courses in economics.

FORMAT: Lecture 3 hours

PREREQUISITE: ECON 1101.03

ECO2201.03: Intermediate Macroeconomics

An extension of macroeconomic theory of income, unemployment, the exchange rate, inflation and financial markets that satisfies the minimum macroeconomic theory requirement for majors in economics. Serves as the macroeconomic prerequisite for higher-level courses in economics.

FORMAT: Lecture 3 hours

PREREQUISITE: ECON 1102.03

ECO2213.03: Emerging Giants: The Economic Rise of China and India

This course examines the economic history, current issues, and future trends of China and India, answering such questions as: What explains China’s and India’s growth? How is climate change affected by this growth? How are global labour markets affected? Most growth lead to rising inequality? Is democracy required for development?

FORMAT: Lecture 5 hours

PREREQUISITE: ECON 1101.03, ECON 1102.03

CROSS-LISTING: CHIN 2290.03

ECO2216.03: Economics of Global Warming

This course uses economic principles to investigate such questions as: What are the benefits and costs of various time paths for suffering emissions? How do we value the well-being of future generations? How do we balance the costs of global warming with environmental sustainability? What policies can align incentives with environmental sustainability?

FORMAT: Lecture 3 hours

PREREQUISITE: ECON 1101.03

EXCLUSION: ECON2000.06, PHYC2090.06

ECO2217.03: Women and the Economy

This course uses economic principles to investigate such questions as: What explains the benefits and costs of various time paths for suffering emissions? How do we value the well-being of future generations? How do we balance the costs of global warming with environmental sustainability? What policies can align incentives with environmental sustainability?

FORMAT: Lecture 3 hours

PREREQUISITE: ECON 1101.03

EXCLUSION: ECON2000.06, PHYC2090.06

ECO2218.03: The Canadian Economy in the New Millennium: Economic Policy Debates

Canada’s economy today faces many problems: unemployment, productivity, income distribution, environmental protection, trade relations, federal-provincial fiscal relations, maintenance of social programs, etc. What are the most important economic policy issues that Canada now faces? What is the appropriate policy role for government?

NOTE: Approved with Canadian Studies.

FORMAT: Lecture 3 hours

PREREQUISITE: ECON 1101.03, ECON 1102.03

CROSS-LISTING: CANA 2218.03

504 Economics
ECON 2219.03: Euros and Cents: From Common Market to European Union.
The European Union is a grand experiment to unite countries in a single market. The surprise evolution from customs union to common market to economic and monetary union with a single currency, the Euro, is examined and analyzed. Learn more about the economic integration that is unparalleled in history.
FORMAT: Lecture 3 hours
PREREQUISITE: ECON 1101.03, ECON 1102.03 or permission of instructor
ECON 2220.03: Microeconomic Theory.
This course focuses on the economic behavior of individual decision-makers, such as a consumer, a worker or a firm. Emphasis is on theoretical ideas, while applications of these ideas are also considered. Of particular interest is those planning to major or to do business in economics.
NOTE: Students may not receive credit for both 2200.03 and 2220.03.
FORMAT: Lecture 3 hours
PREREQUISITE: Econ 1101.03, MATH 1000.03 (or equivalent)
ECON 2231.03: Health Economics.
This course introduces students to the role of economics in health care, health, and health policy. It comprises a survey of major topics in health economics and an introduction to the ongoing debates over health care policy. Topics include the economic determinants of health, the market, the market for medical care, the market for health insurance, the role of government in health care, and health care reforms.
FORMAT: Lecture 3 hours
PREREQUISITE: ECON 1101.03, ECON 1102.03
ECON 2333.03: Canadian Economic History.
An examination of the economic history of Canada from the time of Confederation to WWII. Major topics explored include: the economic reasons for Confederation, the building of the CPR, the Wheat Boom, foreign trade and investment, and the role of governmental policy. NOTE: Approved with Canadian Studies. The student is recommended to have some knowledge of history prior to taking this course.
FORMAT: Lecture 3 hours
PREREQUISITE: ECON 1101.03, ECON 1102.03
ECON 2339.03: The European Economy Since 1900.
This course applies economic theories to interpret quantitative economic changes in major European countries during the turbulent 20th century. Issues addressed include sources of growth and unevenly improved welfare, war, inflation, depression, 'lost' economy: Communism's nature, success, and ultimate failure; reparations and the transition; and the integration.
NOTE: Approved with Canadian Studies
FORMAT: Lecture 3 hours
PREREQUISITE: ECON 1101.03, ECON 1102.03
ECON 2200.03: Statistics I.
See course description for MATH 2090.03, in Mathematics section of this calendar.
PREREQUISITE: MATH 1000.03 or MATH 1215.03 and either MATH 1010.03 or 2010.03 or DEIS
CROSS-LISTING: MATH 2090.03, STAT 2090.03
EXCLUSION: ENOM 2002.03
ECON 2280.03: Statistics II.
See course description for MATH 2090.03, in Mathematics section of this calendar.
PREREQUISITE: STAT 2090.03 or Econ 1101.03
CROSS-LISTING: MATH 2880.03, STAT 2090.03
ECON 2334.03: Globalization and Economic Development: Current Debates.
Economists have debated whether the task of development should be entrusted largely to market forces, or whether there was role for the state in directing a nation's economic affairs. These debates over development continue. We assess critiques of the economic analysis of development. Students will be encouraged to debate these issues and come to their own conclusions.
FORMAT: Lecture 3 hours
PREREQUISITE: ECON 1101.03, ECON 1102.03
ECON 2336.03: Regional Development.
Why are some countries or regions poor? Why have the relative positions of different countries and regions shifted over the last several decades? Economic development issues, policies, and theories are analyzed to answer these questions.
FORMAT: Lecture/seminar 3 hours
PREREQUISITE: ECON 1101.03, ECON 1102.03
EXCLUSION: GEOG 2336.03
ECON 2400.03: Economics of Retirement.
This course aims to explain how households plan for retirement and manage their finances once retired. It applies a modified version of standard economic theory of the life cycle to the adequacy of household discussion-making. It appraises defined benefit and defined contribution pensions, and proposes ways of mitigating their shortcomings.
FORMAT: Lecture
PREREQUISITE: ECON 1101.03 and ECON 1102.03
ECON 2850.06: The Science and Economics of Climate Change.
This course examines how climate change will impact the environment and human activities, and how to formulate and implement economically realistic solutions. It integrates the physical and biological science with economics in order to analyze the response options as we move towards a carbon-neutral society.
FORMAT: Lecture
PREREQUISITE: PHYS 2850.06
ECON 3111.03: Writing in Economics.
This course provides instruction in principles and practice of good writing about economics. Students read and examine writing samples and practice writing for various venues (such as government, firms, and news media) in various formats (such as opinion editorials, government policy papers, economics blogs, and journal articles).
PREREQUISITE: ECON 2200.03, ECON 2201.03 and a Dalhousie writing course
ECON 3310.03: Economic Growth in Historical Perspective.
This course examines the sources of long-run economic growth and development in a historical perspective. Topics covered include: invention, innovation, culture, legal institutions governing access to resources, democracy, fertility, mortality, and alternative modes of production.
FORMAT: Lecture 3 hours
PREREQUISITE: ECON 2200.03 or ECON 2220.03, and ECON 2201.03
ECON 3315.03: Labour Economics.
This course considers the theories, evidence and policy of labour economics from a Canadian perspective. Topics include: How does EI affect the Canadian labour market? Do minimum wages reduce employment? What is economic discrimination and does it exist in Canada? How well do immigrants fare in the Canadian labour market? Does employer-mandated retirement reduce productivity?
FORMAT: Lecture 3 hours
PREREQUISITE: ECON 2200.03 or ECON 2220.03, and ECON 2201.03
ECON 3317.03: Poverty and Inequality.
Why are some people poor, while others are rich? Why do some nations have more poverty or inequality than others? What can or should be done? This course examines the extent of poverty and inequality in contemporary societies, and the theories underlying alternative measures and explanations.
NOTE: Approved with Canadian Studies
FORMAT: Lecture 3 hours
ECON 3319.03: Industrial Organization.
The course provides an overview of the organization of production. Market structure, firm conduct, and performance affect each other in complex ways, the degree of horizontal and vertical integration affects the ability to set prices, for example. Governments regulate firms in order to reduce socially harmful anticompetitive behavior.
NOTE: Approved with Canadian Studies.
ECON 3263.03: Money and Banking.
This course concerns the nature and operation of the financial system, with particular reference to Canadian experience. It treats financial instruments (including money) and institutions and the social control of the supply of money and credit.
NOTE: Approved with Canadian Studies.
FORMAT: Lecture 3 hours
PREREQUISITE: ECON 2201.03

ECON 3303.03: International Trade.
This course examines the theory and empirical evidence of international trade, including historical trade theory, recent theories, and evidence regarding these theories. The course investigates factors which influence trade flows, and trade policies in both industrial and developing countries, and the institutions that have developed to regulate these policies.
FORMAT: Lecture 3 hours
PREREQUISITE: ECON 2200.03 or ECON 2203.03

ECON 3311.03: International Finance.
This course examines the determination of exchange rates, international capital flows, and risk; the effectiveness of fiscal and monetary policy in an open economy; modern international policy coordination; and the determination of the current account and net foreign assets.
FORMAT: Lecture 3 hours
PREREQUISITE: ECON 2203.03

ECON 3312.03: Resource Economics.
This course focuses on environmental economics and the economics of market failure as they pertain to the use of natural resources. A selection of resource sector will also be discussed. Fisheries, agriculture, forestry, and energy supply possibilities, but this will vary from year to year.
NOTE: Approved with Canadian Studies.
FORMAT: Lecture 3 hours
PREREQUISITE: ECON 2200.03 or ECON 2203.03, MATH 1000.03 or equivalent.

ECON 3333.03: Theories of Economic Development.
This course examines applications of economic theory to the problems of development and underdevelopment. Topics covered include growth theory, trade theory, distribution theory, resource mobilization, and the microeconomics of peasant agriculture.
FORMAT: Lecture 3 hours
PREREQUISITE: ECON 2200.03 or 2221.03, ECON 2201.03

ECON 3335.03: Environmental Economics.
The course covers an introduction to environmental economics. Topics include social decision making, externalities and public goods, regulatory approaches (standards, charges, tradable permits), forms of value derived from the environment and measurement techniques.
FORMAT: Lecture 3 hours
PREREQUISITE: ECON 2200.03 or 2221.00

ECON 3338.03: Econometrics I.
The theory of some quantitative methods commonly used by economists is discussed in the context of the classical linear model. Estimation problems caused by violations of the assumptions of the classical model are studied including heteroscedasticity and autocorrelation.
FORMAT: Lecture 3 hours
PREREQUISITE: MATH 1000.03 (or equivalent) and ECON 2200.03 or MATH 2000.03 or STAT 2000.03

ECON 3339.03: Econometrics II.
This course is an extension of ECON 3338.03 and covers a range of econometric methods that are used in economic research. The topics for this course include: Logit, Probit, Tobit, Distributed Lags, Panel Data, Simultaneous Equations and Time series.
FORMAT: Lecture 3 hours
PREREQUISITE: ECON 3338.03

ECON 3344.03: Public Finance.
This course studies the economics of public expenditure, tax and transfer programs in a federal state such as Canada. The core issue addressed is when and how public policy can (or cannot) improve equity and efficiency.
NOTE: Approved with Canadian Studies. In addition to the prerequisites, the student is advised to take ECON 2201.03 before taking ECON 3344.03.
FORMAT: Lecture 3 hours
PREREQUISITE: ECON 2200.03 or ECON 2203.03

ECON 3345.03: Public Finance II.
This course studies the economics of taxes and transfers. Equity and efficiency effects of both are examined. Approved with Canadian Studies.
FORMAT: Lecture 3 hours
PREREQUISITE: ECON 2200.03, or ECON 2201.03 and ECON 2203.03

ECON 3349.03: History of Economic Thought.
This course will examine theories of value, production, distribution, and growth as developed in classical political economy and neoclassical economics. Topics of equilibrium and stability, the links between classical political economy and macroeconomic theory, and reactions to classical and neoclassical economists will be considered as time permits.
FORMAT: Lecture 3 hours
PREREQUISITE: ECON 2200.03 or ECON 2201.03

ECON 3350.03: Social Cost Benefit Analysis.
Social cost benefit analysis is used to evaluate public projects and private sector regulations. It is similar to the revenue cost accounting used by firms but takes into account external costs and benefits such as environmental damages. This course explains the methodology in the context of case studies after which students apply the method to evaluate a public policy problem.
FORMAT: Lecture 3 hours
PREREQUISITE: ECON 2200.03 or 2221.03

ECON 3360.03: Ethics, Justice, and Economics.
Assumptions of Neoclassical economic theory are critically examined, with a focus on the ethical and distributional consequences of using markets as an allocation mechanism. We discuss the major conceptions of economic justice, including utilitarianism and social justice theory, Rawlsian egalitarianism, Nozickian libertarianism, Sen's capabilities approach, and equality of opportunity.
PREREQUISITE: ECON 2200.03, ECON 2201.03
CROSS-LISTED: PHIL 1341.03

ECON 3500.03: Public Economics.
This course examines the role of government in problems of resource allocation due to market failure. Concentrates on theories of public goods, collective action, potential of conflict and cooperation in individually-motivated actions, incentives structures capable of reducing rational, cooperative, group outcomes. Provides theoretical underpinnings of many applied fields. Involves mathematical methods.
NOTE: While a background of ECON 3700 is helpful, it is not a prerequisite.
FORMAT: Lecture 3 hours
PREREQUISITE: ECON 2200.03 or ECON 2221.03, MATH 1000.03 or instructor permission.

ECON 3600.03: Strategic Behaviour in Economics.
This course will examine theories of value, production, distribution, and growth as developed in classical political economy and neoclassical economics. Topics of equilibrium and stability, the links between classical political economy and macroeconomic theory, and reactions to classical and neoclassical economists will be considered as time permits.
FORMAT: Lecture 3 hours
PREREQUISITE: ECON 2200.03 or ECON 2203.03, MATH 1000.03 or instructor permission.

ECON 3700.03: Mathematics for Economists.
This course provides mathematical methods used in modern economics. The lectures concentrate on the basic concepts of analysis, comparative statics and optimization theory. Topics include an introduction to set theory and matrix algebra, the implicit function theorem, unconstrained optimization, constrained optimization with equality and inequality constraints, and intertemporal choice.
FORMAT: Lecture
PREREQUISITE: ECON 2200.03 or ECON 2221.03, MATH 1000.03 or permission of the instructor
CROSS-LISTED: MATH 3700.03
ECON 3800.03: Financial Economics.
This course is an introduction to decision making by investors under uncertainty, portfolio theory, asset pricing, financial markets, and instruments. The course covers both the theoretical and practical aspects of investment, surveys the techniques available for economists, and emphasizes "hands-on" learning using Canadian and international case studies.
FORMA T: Lecture 3 hours
PREREQUISITE: ECON 2200.03 or ECON 2220.03, ECON 2201.03
CROSS-LISTING: MATH 3800.03

ECON 3900.03: Financial Mathematics.
See course description for MATH 3900.03 in the Mathematics section of this calendar.
PREREQUISITE: MATH 2060.03 and (MATH 2120.03 or MATH 3110.03) or instructor’s permission
CROSS-LISTING: MATH 3900.03

ECON 4002.03: Experiential Learning (in Economics).
Experiential learning recognized the learning experience relevant to the program outside the scheduled curriculum. Students are responsible for drafting a learning agreement with the course coordinator and supervisor to specify learning outcomes, activities designed to accomplish these outcomes, a quantifiable assessment strategy and timetable.
PREREQUISITE: ECON 1101.03, ECON 1102.03, ECON 2200.03 or ECON 2220.03, ECON 2201.03, ECON 3338.03, ECON 3339.03. To be eligible, students should have a minimum average GPA of 3.0 in Economics.
EXCLUSION: Scheduled classes at a learning institution, study that would qualify for co-op work terms and paid work. Only one experiential learning class per degree is permitted.

ECON 4200.06: Honours Thesis.
This course is required for honours students, and helps students define, research, and write an original research project under the supervision of an economics faculty member. Students develop a topic, critique current literature, run statistical tests, and present their results in a public conference. Attendance at weekly department seminars is mandatory.
NOTE: To be given permission to take the Honours Thesis course, students should have completed the Dalhousie writing requirement, with a grade of B or higher in at least one Dalhousie writing course.

ECON 4420.03: Microeconomic Theory.
In-depth study of outcomes of decision-making by agents, individually, collectively or as an interdependent system. Selects topics from: linear and non-linear optimization and applications to theory of consumers and firms, general equilibrium, game theory, alternative solution concepts, comparative statics, stability, welfare, market failures, collective choice, intertemporal economies, uncertainty. 
FORMA T: Lecture 3 hours
PREREQUISITE: ECON 2200.03 or ECON 2220.03, ECON 2201.03, ECON 3318.03, ECON 3319.03 and permission of instructor

ECON 4421.03: Macroeconomic Theory.
Students are introduced to contemporary issues in macroeconomics including aggregate growth accounting; neoclassical growth models; monetary policy, inflation and unemployment; theories of consumption and investment; and trade and exchange rates. Mathematical methods are applied extensively and their application to economic problems will be stressed at both the theoretical and intuitive levels.
FORMA T: Lecture 3 hours
PREREQUISITE: ECON 2202.03 or ECON 2222.03, ECON 3300.03, MATH 1000.03 (or equivalent), MATH 1010.03

ECON 4426.03: Monetary Policy.
Assuming a basic knowledge of monetary institutions and macroeconomics, a critical analysis of the objectives and effectiveness of monetary policy is developed. Particular attention is given to the Canadian experience and the effectiveness of Canadian policy. Approved with Canadian Studies.
FORMA T: Lecture 3 hours
PREREQUISITE: ECON 2201.03 and ECON 3326.03

ECON 4440.03: Time Series in Economics.
This is a course in econometrics that focuses on time series models. The topics cover estimation and inference procedures for univariate and multivariate time series models with stationary and nonstationary data, including various vector autoregressive models, Markov switching models, and fractionally integrated processes.
FORMA T: Lecture
PREREQUISITE: ECON 3338.03 (grade of C or higher), ECON 3339.03 (grade of B or higher)

ECON 4700.03: Advanced Mathematics for Economists.
This is an advanced course in mathematics for economists, with an emphasis on dynamic optimization. The topics include vector spaces, multivariate calculus, difference and differential equations, and discrete/continuous dynamic optimization (including the optimal control theory and calculus of variations).
PREREQUISITE: ECON 3700.03 (grade of C or higher)

ECON 8891.00: Co-op Work-Term I.
ECON 8892.00: Co-op Work-Term II.
ECON 8893.00: Co-op Work-Term III.
Environmental Science

I. Introduction
Environmental Science in the Faculty of Science offers several programs. These include a BSc Honour’s Major in Environmental Science, a Minor in Environmental Science, a Double Major in Environmental Science and Community Design, and a BSc or BA Double Major or Combined Honours in Environmental Science and any Major/Honours subject in the Faculty of Science, Faculty of Arts and Social Sciences (FASS) or with Environment, Sustainability and Society (ESS). The Faculty of Arts and Social Sciences (FASS), the Faculty of Science, the Faculty of Computer Science and the Faculty of Architecture and Planning also offer a Minor in Environmental Studies which is administered through Environmental Science.

Environmental Science applies the findings and principles from multiple disciplines to environmental questions and problems. Environmental Science, by nature, is multidisciplinary and interdisciplinary. Most environmental scientists develop expertise in a particular discipline, and work co-operatively with specialists in other disciplines to solve environmental problems. They work in a variety of institutions in both the public and private sector: municipal, provincial and federal government departments, consulting and engineering companies, development aid organizations in the non-governmental sector and active community organizations. In all of these institutions they must integrate their scientific knowledge into the prevailing political, economic and legal systems.

The courses required for the BSc Environmental Science stress the links among the fields of study that the students acquire. Thus, students graduate with a combination of depth and breadth of knowledge and the ability to solve problems in the real world.

II. Degree Programs
A strong high school background in science (mainly Biology, Chemistry, Physics) is an asset, as are senior high school courses in Geography, Mathematics and English. For those considering these programs it is important to keep a number of options open as long as possible by taking the appropriate courses in Year 1.

In addition to the departmental requirements listed below, students must satisfy the requirements outlined in the Degree Requirements section, page 125 of this calendar. SCIE 1111.03 is recommended to satisfy the writing requirement in all programs.

A. BSc (20 credit) Major and Honours in Environmental Science

Departmental Requirements

1. 1000 Level

- DISP (SCIE 1505.18, 1515.36, 1520.30, 1530.27, 1540.27)

OR

- BIOL 1001.03 or BIOL 1002.03
- MATH 1000.03 or MATH 1213A.03
- STAT 1060.03 or MATH 1010.03 or MATH 2030.03
- CHEM 1011.03
- CHEM 1012.03
- EARTH 1000.03
- ENVS 1000.06
- SCIE 1111.03*

*An alternative writing course may be taken - see list on page 123 of this calendar.

Students are encouraged to take one half of their language/humanities requirement (which is one credit in total) in their first year.

The courses listed above should be taken in the first year, if possible, if ENVS 1000.06 is not taken in the first year, it should be taken in the second year. Also required but usually taken in the second year:

- ECON 1001.03 or ECON 1002.03

2. Common Core Courses

Completed at various times over a four year degree program, the Common Core Courses introduce students to the scope and magnitude of environmental science and are designed to provide students with an appreciation of the scientific, cultural, economic, historic, legal and social aspects of environmental issues.
• STAT 2000.03*
• BIOL 1020.03
• PHIL 2480.03**
• PHYC 2310.05
• ENVS 2000.03
• ENVS 2100.03
• ENVS 301.03
• ENVS 3200.03
• ENVS 3500.03
• ENVS 3501.03
• ENVS 3500.03
• ENVS 300.03
• ENVS 301.03
• ENVS 400.03

*This constitutes the writing course. An alternative writing course may be taken—see list on page 329 of this calendar. Students are encouraged to take one half of their language/humanities requirement (which is one credit in total) in their first year.

**PHIL 2480.03 satisfies half of the degree requirement of one full credit in Language and Humanities.

3. Electives

By presenting a wide range of topics inherent in the theme of human-environment relationships in the Common Core, students will be encouraged to assess their own interests and learning goals. Through the selection of electives, students can prepare themselves for learning experiences and careers that will meet their individual needs.

4. Honours Program

Students must have a minimum of nine and maximum of 12 credits of required ENVS courses above the 1000 level. In addition to the Common Core courses, students must choose enough electives from the list of Approved Environmental Science Equivalent Courses to meet this requirement (courses do not have to be picked from a list of approved electives to count toward the minimum and maximum requirements for the program). A list of approved Environmental Science Equivalent Courses is available from the Environmental Science Undergraduate Advisor or online (http://www.dal.ca/ess). Each ENVS and ENVS-equivalent course above the 1000 level must be passed with a grade “C” or better, and the average GPA for these courses must be at least 3.5. A cumulative GPA of 3.5 in the first two years is required to enter the Honours Program.

5. Major Students

Students must have a minimum of six and maximum of 10 credits of ENVS or ENVS-equivalent courses above the 1000 level. Students will fulfill this minimum requirement with the Common Core courses.

B. BSc (20 credit) Double Major or Combined Honours in Environmental Science

Students may complete a BSc Double Major/Combined Honours in Environmental Science and any Major/Honours subject offered in the Faculty of Science, Faculty of Arts and Social Science (FASS), or Environment Sustainability and Society (ESS). See section C for combinations with ESS.

Besides the general requirements for all BSc programs, students must meet the Faculty degree requirements for the BSc with Double Major, which includes 10-14 full credits in the major subjects beyond the 1000 level, with no more than nine nor fewer than five in either subject. Students must complete at least two full credits beyond the 2000 level in each major subject. Combined honours require 11-14 credits in the honours subjects beyond the 1000 level, with no more than nine nor fewer than five in either subject.

Departmental Requirements

1. 1000 Level

• DISP (SCE 1505.10, SCE 1515.16, 1520.30, 1530.27, or 1540.27) OK
• MATH 1000.03 or MATH 1215.03
• STAT 1000.03 or MATH 1010.03 or MATH 2030.03
• CHEM 101.03
• CHEM 102.03
• ENVS 1000.06
• SCE 1111.03*

*This constitutes the writing course. An alternative writing course may be taken—see list on page 329 of this calendar. Students are encouraged to take one half of their language/humanities requirement (which is one credit in total) in their first year.

Also required but normally taken in the second year:
• ENVS 1000.06

2. Common Core Courses

Common Core Courses listed in Section A.2, with the exception of PHYC 2310.03 and a choice of ENVS 2000.03 or ENVS 3001.03.

3. Subject B Courses

Chosen from any Major/Honours subject in the Faculty of Arts and Social Science, Faculty of Science, or Environment Sustainability and Society. A minimum of five and maximum of seven credits above 1000-level are required. See Subject B department academic advisor for specific requirements.

4. Electives

By presenting a wide range of topics inherent in the theme of human-environment relationships in the Common Core courses, students will be encouraged to assess their own interests and learning goals. Through the selection of electives, students can prepare themselves for learning experiences and careers that will meet their individual needs.

C. 20 Credit BSc Double Major and Combined Honours in Environmental Science (ENVS) and Environment, Sustainability and Society (ESS)

ENVS as (A) subject, ESS as (B) subject

Departmental Requirements

1. 1000 Level

• ENV 1000.06
• BIOL 1010.03 or BIOL 1020.03
• MATH 1000.03 or MATH 1215.03
• STAT 1060.03 or MATH 1010.03 or MATH 2030.03
• CHEM 101.03
• CHEM 102.03
• ERTH 1001.03
• SUST 1000.06*

*This course also serves as the writing course.

Also required but usually taken in the second year:
• ECON 1101.03 or ECON 1102.03

2. Common Core Courses

Common Core Courses listed in Section A.2, with the exception of PHYC 2310.03 and a choice of ENVS 2000.03 or ENVS 3001.03.

3. Subject B Courses

Chosen from any Major/Honours subject in the Faculty of Arts and Social Science, Faculty of Science, or Environment Sustainability and Society. A minimum of five and maximum of seven credits above 1000-level are required. See Subject B department academic advisor for specific requirements.

4. Electives

By presenting a wide range of topics inherent in the theme of human-environment relationships in the Common Core courses, students will be encouraged to assess their own interests and learning goals. Through the selection of electives, students can prepare themselves for learning experiences and careers that will meet their individual needs.

Departmental Requirements

1. 1000 Level

• ENV 1000.06
• BIOL 1010.03 or BIOL 1020.03
• MATH 1000.03 or MATH 1215.03
• STAT 1060.03 or MATH 1010.03 or MATH 2030.03
• CHEM 101.03
• CHEM 102.03
• ERTH 1001.03
• SUST 1000.06*

*This course also serves as the writing course.

Also required but usually taken in the second year:
• ECON 1101.03 or ECON 1102.03

2. Common Core Courses

Common Core Courses listed in Section A.2, with the exception of PHYC 2310.03 and a choice of ENVS 2000.03 or ENVS 3001.03.

3. Subject B Courses

Chosen from any Major/Honours subject in the Faculty of Arts and Social Science, Faculty of Science, or Environment Sustainability and Society. A minimum of five and maximum of seven credits above 1000-level are required. See Subject B department academic advisor for specific requirements.

4. Electives

By presenting a wide range of topics inherent in the theme of human-environment relationships in the Common Core courses, students will be encouraged to assess their own interests and learning goals. Through the selection of electives, students can prepare themselves for learning experiences and careers that will meet their individual needs.
• BIOL 1010.03 or BIOL 1020.03
• STAT 1060.03
• ERTH 1080.03
• SUST 1000.06*
• SUST 1001.06
* This course also serves as the writing course.

Common Core Courses
• BIOL 2060.03
• ENVS 2000.03 or ENVS 3001
• ENVS 2000.03
• ENVS 3000.03
• ENVS 3901.03
• ENVS 4001.03
• 1.0 credits of other ENVS courses above the 1000 level including at least 0.5 credits above 2000 level
• PHYC 2310.03
• STAT 2080.03
• SUST 2000.06
• SUST 2001.06
• SUST 3000.03
• SUST 3502.03
• SUST 4000.06
• three credits taken from the list of approved ESS electives (see page 44 of this calendar), not including required ENVS courses.

D. BSc (20 credit) Double Major in Environmental Science and Community Design

Space in this program is limited. Students must receive approval from the School of Planning Undergraduate Coordinator for admission to this program.

Departmental Requirements
1. 1000 Level
   • DISP (SCIE 1505.18, 1515.36, 1520.30, 1530.27, 1540.27)
   • ECON 1101.03 or ECON 1102.03
   • PLAN 1001.03 and 1002.03
   OR
   • BIOL 1010.03 and 1011.03 or 1020.03 and 1021.03
   • MATH 1000.03 or MATH 1215.03
   • MATH 1010.03 or MATH 2030.03 or STAT 1060.03
   • ERTH 1030.03
   • PLAN 1001.03
   • PLAN 1002.03
   • ECON 1101.03 or ECON 1102.03*
   * one full credit in a first-year single subject chosen from chemistry, physics, environmental science OR one additional half-credit in Earth Sciences.

2. Common Core Courses
   Common Core Courses listed in Section A.2, with the exception of PHYC 2310.03, and a choice of ENVS 2000.03 or ENVS 3001.03.

3. Community Design Courses (four credits)
   • PLAN 2001.03
   • PLAN 2002.03
   • PLAN 2005.03
   • PLAN 3001.03
   • PLAN 3002.03
   • PLAN 3005.03
   • PLAN 3006.03
   • One additional half-credit in PLAN

4. Electives
   By presenting a wide range of topics inherent in the theme of human-environment relationships in the Common Core courses, students will be encouraged to assess their own interests and learning goals. Through the selection of electives, students can prepare themselves for learning experiences and careers that will meet their individual needs.

E. BA (20 credit) Double Major or Combined Honours in Environmental Science

Students may complete a BA Double Major/Combined Honours in Environmental Science and any Major/Honours subject from the Faculty of Science, Faculty of Arts and Social Sciences (FASS), or Environment, Sustainability and Society (ESS).

Besides the general requirements for all BA programs, students must meet the Faculty degree requirements for the BA with Double Major, which include 10-14 full credits in the major subject(s) beyond the 1000 level, with no more than eight nor fewer than five in either subject. Students must complete at least two full credits above the 2000 level in each major subject.

Combined Honours requires 11-14 credits in the honours subjects beyond the 1000 level, with no more than eight nor fewer than five in either subject.

For the BA Double Major/Combined Honours in Environmental Science and Faculty of Arts and Social Sciences (FASS), the following are required:

Departmental Requirements
1. 1000 Level
   • ENVS 1000.06 (B or better)
   • One credit in a first-year science subject chosen from BIOL, CHEM, PHYC, ERTH, ECON
   • STAT 1060.03

2. 2000 Level
   • ENVS 2000.03
   • ENVS 2100.03
   • One credit chosen from:
     • BIOL 2003.03
     • BIOL 2004.03
     • BIOL 2060.03
     • GEOG 2800.03
     • CHEM 2505.03
     • OCEA 2000.06
     • ECON 2216.03
     • ECON 3000.06
     • ERTH 2410.03
     • PHYC 2310.03
     • PHIL 2400.03
     • PHIL 2401.03

3. 3000 and 4000 Level
   • ENVS 3200.03
   • ENVS 3500.03
   • ENVS 3601.03
   • ENVS 4210.03
   • ENVS 4220.03
   • BIOL 3060.03
   • BIOL 3061.03
   • BIOL 4160.03
   * If ESS is the A subject, this requirement is waived.

4. At least one credit from:
   • ENVS 3000.03
   • ENVS 3001.03
   • ENVS 3225.03
   • ENVS 3226.03
   • ENVS 3301.03
   • ENVS 3400.03
   • ENVS 3500.03
   • ENVS 3601.03
   • ENVS 3801.03
   • ENVS 4210.03
   • ENVS 4220.03
   • BIOL 3060.03
   • BIOL 3061.03
   • BIOL 4160.03

5. Subject B Courses
   Chosen from any Major/Honours subject in the Faculty of Arts and Social Sciences. A minimum of five and maximum of seven credits above 1000 level are required. See Subject B department academic advisor for specific requirements.
6. Electives
By presenting a wide range of topics inherent in the theme of human-environment relationships in the Common Core courses, students will be encouraged to assess their own interests and learning goals. Through the selection of electives, students can prepare themselves for learning experiences and careers that will meet their individual needs.

F. Minor in Environmental Science
Students in other 20-credit degree programs may choose to include a Minor in Environmental Science in their programs. Requirements are outlined in the College of Arts and Science, Minors section of this Calendar starting on page 129.

G. Minors
Minors program allows students to develop subject specialties in addition to their major or honours subjects. Minors in other subjects are normally added to a four-year major or concentrated honours program (including co-op programs).

Students in a 20-credit BSc program in Environmental Science may choose to include a Minor selected from the list of approved Minors beginning on page 132 in this Calendar. Note that courses counted toward four Major or Honours program cannot be used to fulfill the requirements of a Minor program.

Bachelor of Computer Science (BCS) with a Minor in Environmental Studies
BCS students must take three full credits of required courses, plus two full credits from the approved list of elective courses below. Note: In planning their programs students must take into account the prerequisites which apply to many of the elective courses listed below. The following rules apply to the selection of courses for the Minor:
- No class can fulfill a requirement of both the Major or Honours subject and the Minor.
- At least one full credit beyond the required courses must be at the 3000 level or above.
- Additions to the following lists will be made as relevant classes become available.

Required courses:
- ENVS 1080.00: Introduction to Environmental Science OR DISP (SCIE 1515.36, 1520.30, 1540.27)
- ENVS 2480.03: Environmental Ethics
- ENVS 3501.03: Environmental Problem-Solving I
- ENVS 3502.03: Environmental Problem-Solving II
- ENVS 3200.03: Introduction to Environmental Law

Electives (two full credits from the list):
- BIRD 2803.03: Introduction to Marine Life of Nova Scotia
- BIRC 3065.03: Resource Ecology
- BIRC 3225.03: Plants in the Human Landscape
- BIRC 3226.03: Economic Botany, Plants and Civilization
- BIRC 3601.03: Nature Conservation
- BIRC 4040.03: Sustainability and Global Change
- CHEM 2503.03: Environmental Chemistry I
- CHEM 4020.03: Environmental Chemistry II
- CHEM 4903.03: Atmospheric Chemistry
- CTMP 3210.03: Introducing Bodies, Scales and Environments
- ECON 2213.03: Emerging Giant: The Economic Rise of China and India
- ECON 2216.03: Economics of Global Warming
- ECON 3352.03: Resource Economics
- Econ 3330.03: Environmental Economics
- ERTH 2410.03: Environmental issues in Earth Sciences
- ERTH 3440.03: Geomorphology
- ERTH 4495.03: Introduction to Landscape Simulation
- ERTH 4520.03: GIS Applications to Environmental and Geological Sciences
- ERTH 4530.03: Environmental Remote Sensing
- ENVN 2180.03: Environmental Informatics
- ENVN 3000.03: Environmental Science Internship
- ENVN 3220.03: International Law for Environmental Scientists
- ENVN 3226.03: Economic Botany, Plants and Civilization
- ENVN 3300.03: Contaminated Site Management
- ENVN 3301.03: Enterprise Sustainability
- ENVN 3400.03: Human Health and Sustainability
- ENVN 3500.03: Geoscience Information Management
- ENVN 3601.03: Dendrochronology
- ENVN 4210.03: Administrative Environmental Law: Natural Justice and Unnatural Acts
- INTD 2001.03: Introduction to Development I
- INTD 2002.03: Introduction to Development II
- OCLA 2000.03: The Blue Planet
- OCLA 2080.03: Climate Change
- PHIL 2475.03: Justice in Global Perspective
- PHIL 2485.03: Technology and the Environment
- PHYC 2310.03: Energy and the Environment
- PHYC 2400.03: Climate Change
- PLAN 3010.03: Urban Ecology
- POLI 3360.03: Politics of Climate Change
- POLI 3583.03: Politics of the Environment
- POLI 3589.03: Politics of the Sea I
- SOSA 2100.06: Environment and Culture
- SOSA 3211.03: Community and Change in Rural Society
- SOSA 3220.03: Coastal Communities in the North Atlantic

H. Co-operative Education Program in Environmental Science
Co-operative Education in Environmental Science (Co-op) is a program that combines academic study with career-related work experience. Students complete three workterms and graduate with a BSc, Co-op. The program requires a minimum of three workterms. A student in the co-op program must complete SCI 2800.00, a mandatory non-credit interdisciplinary seminar in the fall semester of their second year. The student must also register each workterm as ENVS 8891.00, ENVS 8892.00, ENVN 8893.00, or ENVN 8894.00, depending on how many workterms have already been completed. At least one workterm must not be during the summer term.

Co-op begins in the second year of study. A GPA of at least 3.0 for the first year of study is required for admission. In addition to completing at least three workterms, a student in the co-op must fulfill the requirements of either a 20 Credit BSc Major/Honours or a 20 Credit BSc Combined Honours or Double Major in Environmental Science while maintaining a minimum GPA of 3.0. Departmental and Science Co-op Office approval is required to be admitted to Co-op in Environmental Science. Interested students should inquire about the program before beginning their second year of study. Application deadline is August 1st.

Additional information may be found in the calendar under the heading “Co-operative Education” or visit [https://www. Dal.vu/education/co-op].

I. Other programs
BSc/Engineering or BA/Engineering Concurrent Programs
Students will normally complete the requirements for a 15 Credit BSc or 15 Credit BA, and the first two years of engineering studies leading to the Diploma in Engineering. The concurrent program can be completed in three years. Details are provided in the College of Arts and Science Degree Requirements starting on page 125 of the calendar.

J. Diplomas, Certificates, and Language Proficiency Certificates
In combination with a BA or BSc these are certificates or diplomas that can be obtained to emphasize areas of proficiency. For a complete list and details refer to the College of Arts and Science Degree Requirements starting on page 125 of the calendar.

Certification that may be of particular interest to students in Environmental Science include:
- Certificate in Environmental Impact Assessment
- Certificate in Geographic Information Science

Lists of requirements and checklists can also be found on the Environmental Science website [http://www.dal/vu/environment].
Students should enroll in these certificates by contacting C. Wells or D. Rainham (for GIS Certificate), P. Lane (for EIA Certificate), or the Environmental Science Advisor. Students can enrol when in their second, third or fourth year of the BSc program; however, early enrolment is advised because it may otherwise be difficult to meet the requirements within four years.

III. Course Descriptions

ENVS 1000/X/Y.06: Introduction to Environmental Science.
This full year course introduces numerous topics including biogeochemical cycles, food webs, biodiversity, human population growth, soil, agriculture, climate, pollution, toxicology, energy, water, forests, oceans, minerals, law, waste management and urban issues. Tutorials reinforce and supplement lectures and allow small group discussion and debate.
NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.
FORMA T: Lecture 3 hours, tutorial
EXCLUSION: ENVI 1000/Y.06

ENVS 2000.03: Urban Field School.
This field course offers an introduction to urban environmental science by examining the role of humans in ecosystems and how human change ecosystem processes and functions within urban areas. Students gain hands-on experience in environmental science techniques during excursions in different urban settings within the Halifax Regional Municipality.
NOTE: Offered in early May. Daily field trips and/or labs. An auxiliary fee is charged to cover field expenses.
FORMA T: Field intensives, labs, lectures
PREREQUISITE: ENVS 1000.06 or SCIE 1505.18 or equivalent and open only to students in the BSc or BA Environmental Science Programs

ENVS 2100.03: Environmental Informatics.
Environmental Informatics is the knowledge, skills and tools which enable information to be collected, managed and disseminated to support research in environmental science. Students develop skills for the analysis, evaluation and synthesis of knowledge in environmental science. Information systems, tools, and techniques are introduced and applied to current environmental challenges.
FORMA T: Lecture/tutorial
PREREQUISITE: ENVS 1000/X/Y.06 or SCIE 1505.18 or equivalent

ENVS 2410.03: Environmental Issues in Earth Sciences.
Geology underlies many of the environmental problems facing humanity today. Topics include environmental aspects of energy and mineral resources, geologic hazards, geologic connections to pollution and waste disposal, and the role that water plays in its various guises. Canadian examples are incorporated wherever appropriate. Approved with Canadian Studies.
NOTE: This course is not offered every year. Please consult department in the spring for further information.
FORMA T: Lecture 3 hours
PREREQUISITE: One of: ERTH 1080, ERTH/GEOG 1030, ERTH/GEOG 1060, ENVS 1000, SUST 1001 with a grade of B or above, or DSPM with Earth Sciences
CROSS-LISTING: CANA 2410, ERTH 2410
EXCLUSION: This course is not available for Earth Sciences Majors

ENVS 3000.03: Environmental Science Internship.
This course allows students to gain hands-on experience while addressing a question of personal and academic interest relevant to the field of environmental science by working as interns for 8 hours a week over a twelve-week period on a specific project at a sponsoring agency. Approved with Canadian Studies.
NOTE: It is the student's responsibility to consult with Environmental Program at least 3 weeks prior to the term in which the internship will take place to arrange for a placement and to make sure that the details of the internship are in accordance with university standards.
FORMA T: Internship
PREREQUISITE: Open ONLY to students in Minor in Environmental Studies, Honours/Major Double Major Combined Honours in Environmental Science

ENVS 3001.03: Environmental Science Field School.
Daily field trips introduce methods used in environmental science and environmental processes at diverse sites within Nova Scotia. Involves full-day trips from Halifax and a multi-day camping trip away from Halifax. Offered during the last 2 weeks before Labour Day.
FORMA T: Full-day and overnight field trips.
PREREQUISITE: Open ONLY to students in BSc or BA Environmental Science

ENVS 3200.03: Introduction to Environmental Law.
This course will take a look at how environmental law operates in Nova Scotia within the Federal framework and it will illustrate some of the multi-disciplinary aspects which make this area of law part science, part art and part soothsaying.
FORMA T: Lecture 3 hours
PREREQUISITE: Must be a third year student

ENVS 3225.03: Plants in the Human Landscape.
The use of plants for human recreation and aesthetic purposes in gardens, public parks, suburbs and urban landscapes. Topics include: history of gardens, garden design, plant materials, abode landscaping, plants and human health. The course includes field trips and group work and students complete a design project.
FORMA T: a 405279 الزمن יום鲨鱼
PREREQUISITE: A405279/BIOL 1010.03 or BIOL 2020.03 (C- or better) and BIOL 1011.03 or BIOL 1021.03 (C- or better) or DSPM or PLAN 2001.03
CROSS-LISTING: A405279 PLAN 3225, BIOL 3225

ENVS 3226.03: Economic Botany, Plants and Civilization.
The story of the human use of plants for food, fibre and fuel including the botany, domestication, development, distribution, production, processing, history, economic and social impacts of the major world crops (cereal, fruits, vegetables, flowers and industrial crops) and the development of novel plant based bioproducts (bio-fuels, etc).
FORMA T: Lecture/lab
PREREQUISITE: ENVS 1000.06 or BIOL 1010.03 or BIOL 1021.03 (C- or better) and BIOL 1011.03 or BIOL 1021.03 (C- or better) or DSPM or PLAN 2001.03
CROSS-LISTING: BIOL 3226.03

ENVS 3300.03: Contaminated Site Management.
This course examines the relationships between the health of populations and health determinants in the context of environmental sustainability. Weekly laboratory exercises will teach students how to use these tools for environmental health research.
FORMA T: Lecture/tutorial
PREREQUISITE: PREREQUISITE: CHEM 1011.03 or ENVS 1000/Y.06 or ENVS 2001.03

ENVS 3400.03: Environment and Human Health.
This course examines the relationships between the health of populations and health determinants in the context of environmental sustainability. Weekly laboratory exercises will teach students how to use these tools for environmental health research.
FORMA T: Lecture/tutorial
PREREQUISITE: C3-REQUISITES: ENVS 1000/Y.06 or ENVS 2001.03

ENVS 3500.03: Geoscience Information Management.
See course description for ERTH 3500 in the Earth Sciences section of the calendar.

ENVS 3501.03: Environmental Problem Solving I.
This course introduces students to concepts and methods for analyzing environmental problems. Students will learn analytical approaches for problem solving that are appropriate for a wide range of environmental issues. Weekly laboratory exercises will teach students how to use these tools for environmental health research.
FORMA T: Lecture, Lab
PREREQUISITE: Must be a third year student or have permission of instructor
CROSS-LISTING: GEOG 3401.03

ENVS 3600.06: Geoscience Information Management.
See course description for ERTH 3500 in the Earth Sciences section of the calendar.

ENVS 3501.03: Environmental Problem Solving II.
This course introduces students to concepts and methods for analyzing environmental problems. Students will learn analytical approaches for problem solving that are appropriate for a wide range of environmental issues. Weekly laboratory exercises will teach students how to use these tools for environmental health research.
FORMA T: Lecture, Lab
PREREQUISITE: PREREQUISITE: ENVS 1000.06 (with a grade of B or better) or ENVS 2001.03.
Must be a 3rd year student OR have permission of instructor
ENVS 3502.03: Environmental Problem Solving II: The Campus as a Living Laboratory.
In this course the campus serves as a living laboratory for identifying, evaluating and assessing indicators of progress toward greater campus sustainability. Working in groups, students apply problem solving models to case studies using qualitative and quantitative research methods and make recommendations for improvements on campus based on their analyses.
PREREQUISITE: ENVS 3501.03 or permission of instructor
CROSS-LISTING: SUST 3502.03

ENVS 3601.03: Global Biogeochemical Cycles.
An interdisciplinary course that examines examples of the cycling of water, carbon, nitrogen, phosphorus, and other elements and human impacts on these cycles, as manifested in our atmospheric, soil, ocean and freshwater environments. This course involves discussion of the latest developments in this rapidly changing field and will provide a framework for those interested in global change.
PREREQUISITE: An introductory Chemistry class and one of ENVS 1000.06, SUST 1001.06, ERTH 1080.03, or ERTH 1090.03, and OCEA 2000.06, or OCEA 2001.05 and OCEA 2002.05
CROSS-LISTING: ERTH 3601.03

ENVS 3615.03: Methods in Ecology.
See course description for BIOL 3615 in the Biology section of the calendar.

ENVS 3624.03: Urban Freshwater Systems.
See course description for BIOL 3624 in the Biology section of the calendar.

ENVS 3632.03: Applied Coastal Ecology.
See course description for BIOL 3632 in the Biology section of the calendar.

ENVS 3633.03: Spatial Information and GIS in Ecology.
A hands-on approach to understanding and using spatial information, this course introduces students to the use of Geographic Information Systems (GIS) as a tool to answer ecological questions. Together, students conduct a major field project, collecting data, creating maps using GIS, and interpreting spatial patterns, to address and apply problem in ecology.
NOTE: Students may only be admitted through DEASIDE, an auxiliary fee is charged to cover field expenses. For dates, times and special registration procedures, see semester dates.
PREREQUISITE: BIOL 2060.03
CROSS-LISTING: BIOL 3633.03, GEOG 3633.03

ENVS 3664.03: Interlaced Ecology and Diversity.
See course description for BIOL 3664 in the Biology section of the calendar.

ENVS 3701.03: Fundamentals of Hydrology.
This course is an introduction to hydrology, emphasizing surface processes and watershed responses. In this course we learn about both the pure and applied uses of hydrology. The course is quantitative and introduces hydrologic processes in the atmosphere, on the land surface, in groundwater and in stream channels.
FORMAT: Lecture 3 hours, tutorial 1.5 hours
PREREQUISITE: MATH 1000.03 or MATH 1214.03 and one of ENVS 1000.06, SUST 1001.06, ERTH 1080.03, or ERTH 1090.03 or one of SCI 115X/1Y, SCI 150X/1Y, SCI E 150X/1Y, SCI 150X/2, SCI 154X/33 and completion of 2 years of an undergraduate degree.
PHYS 1280 and PHYS 1290 (or PHYS 1300X-Y) and MATH 1015X-Y are recommended.
CROSS-LISTING: ERTH 3701.03

ENVS 3801.03: Directed Readings in Environmental Science.
This course is intended for third and fourth-year students who wish to study in an area of environmental science not covered in other courses offered at the university. It involves independent study supervised by a faculty member. Class content and marking scheme must be approved by the Director of Environmental Programs during the first week of the academic term in which the credit is being sought. It is the student's responsibility to consult with Environmental Programs at least 2 weeks prior to the term in which the Directed Readings course will take place.
PREREQUISITE: ENVS 1000X/1Y or ENV 2001.03 and third year student status.

ENVS 4001.03: Environmental Impact Assessment.
This course provides an opportunity to explore all aspects of environmental impact assessment (EIA) as practiced in Canada and in other countries. The course traces the development of the EIA over the past 30 years and critically examines the scientific, procedural and political dimensions.
NOTE: All students taking BIOL 4001.03 or ENVS 4001.03 must have completed 90 credits and have permission of instructor.
FORMAT: Lecture 3 hours and lab 4 hours (winter only)
PREREQUISITE: ENVS 1000X/1Y or BIOL 2001.03 or ERTH 2410.03 or ERTH 2420.03 or GEOL 2100X/0Y or GEOL 2200.03 or ERTH 2200.03 or INTD 2001.03 or INTD 2002.03 or OCEA 2000X/0Y or OCEA 2001.03 and OCEA 2002.03 or SUST 2000.06 or SUST 2001.06.
CROSS-LISTING: ENVS 4730.03 (winter session only), BIOL 4001.03

ENVS 4002.03: The Science of Wetland Ecosystems.
An interdisciplinary introduction to wetland ecosystems, with emphasis on the relationships between wetlands and the surrounding watershed. This relationship determines wetland type, function and is developed landscapes. Students will gain an appreciation of the physical relationship through an examination of wetland hydrology, chemical cycling, and ecology. Management of wetlands in the landscape through policy and engineering will also be studied.
FORMAT: Lecture
PREREQUISITE: CHEM 1011.03 or CHEM 1021.03 or CHEM 1022.03 and BIOL 2001.03

Environmental Science in Canada is largely defined by statutes and regulations. The course will consider administrative processes, the role of legislation, the function of administrative boards and tribunals and the general principles of judicial review. Offered every odd winter term.
FORMAT: Lecture 3 hours
PREREQUISITE: ENVS 3200.03 with a grade of A-

ENVS 4220.03: International Environmental Law for Scientists.
The problems posed by environmental issues are global requiring solutions that are only achievable through multi lateral collaboration. Over 20 years, there has been an explosion of international agreements intended to either redress or avoid environmental disaster. Some of these laws are based on sound science, others based on politics. How do these two elements mix at the international level? Can international law accommodate the inherent uncertainty in scientific hypotheses? Offered every even winter term.

ENVS 4901.03: Honours Thesis Part A.
A four month period of independent research project carried out under the supervision of an approved faculty member. The project involves research design and methodologies, and an independent environmental science research project carried out under the supervision of an approved faculty member. Required for Honours Environmental Science.
FORMAT: Lecture/seminar
PREREQUISITE: CHEM 3200.03 or a grade of A-

ENVS 4902.03: Honours Thesis Project B.
Independent research project carried out under the supervision of an approved faculty member or affiliated research scientists. Required for Honours Environmental Science.
PREREQUISITE: ENVS 4901.03

ENVS 4903.03: Advanced Topics in Environmental Science.
This course will address current interdisciplinary issues in environmental science with topics varying each semester. Details as to the content of the course will be announced by Environmental Programs at least one month in advance of the
The course will be taught by Dalhousie faculty, and/or visiting scholars. 

**FORMAT:** Lecture/seminar

**PREREQUISITE:** This class is restricted to students in the Honours/Major/Double Major in Environmental Science, or permission of the Director of Environmental Programs.

**IV. Co-op Workterms**

Each workterm is a prerequisite of the succeeding workterm. See Environmental Programs Co-op Academic Advisor for details.

- **ENVS 8891.00:** Co-op Workterm 1.
- **ENVS 8892.00:** Co-op Workterm 2.
- **ENVS 8893.00:** Co-op Workterm 3.

**Environment, Sustainability and Society**

**I. Degree Programs**

The College of Sustainability offers a BSc Double Major and Combined Honours with any major/honours subject in the Faculty of Science and the Faculty of Computer Science. For complete details about the College, its programs and courses please see the College of Sustainability section on page 44 of the Calendar.

**A. BSc, Double Major/Combined Honours, Environment, Sustainability and Society**

- **i. Environment, Sustainability and Society as Subject A**
  - **Subject A: Environment, Sustainability and Society**
    - SUST 1000.06 (one full credit in fall term)
    - SUST 1001.06 (one full credit in winter term)
    - SUST 2000.06 (one full credit in fall term)
    - SUST 2001.06 (one full credit in winter term)
    - SUST 3000.03
    - SUST 3502.03
    - SUST 4000X/Y.06
  - For Double Major:
    - three full credits from the approved list of ESS Electives (at least two credits outside subject B)
  - For Combined Honours:
    - two full credits from the approved list of ESS Electives (at least one credit outside Subject B)
  - Cumulative GPA in Honours subject courses above 1000 level of 3.3, with no individual grade less than C.

- **Subject B: Any Major/Honours subject in the Faculty of Science**
  - For combined requirements please consult the calendar and academic advisor for your allied subject.

- **ii. Environment, Sustainability and Society as Subject B**
  - **Subject A:** Any Major/Honours subject in the Faculty of Science or the Faculty of Computer Science
  - For detailed requirements please consult the calendar and academic advisor for your allied subject.
  - Additional requirements for Combined Honours: Must comply with Honours requirements for Subject A.
  - Subject B: Environment, Sustainability and Society
    - SUST 1000.06 (one full credit in fall term)
    - SUST 1001.06 (one full credit in winter term)
    - SUST 2000.06 or SUST 2001.06
    - one additional full credit in SUST at the 2000 level or above
    - three credits (18 credit hours) from the approval list of ESS elective (at least two credits outside subject A and at least two credits at the 3000 level or above)

**B. Minor in Environment, Sustainability and Society**

- a minimum of three full credits (18 credit hours) and a maximum of 4.5 credits at the 2000 level or above in SUST courses
- prerequisites: SUST 1000.06 and SUST 1001.06
I. Minor in Food Science for BSc Major or Honours
See Minors in the College of Arts and Science section of this calendar (page 128).

II. Course Descriptions

GEOG 1030.03: Introduction to Physical Geography.
This non-lab science course examines the nature of weather and climate, Earth's surface features and processes, and internal processes that contribute to landform development. An integral component of the course is an exploration of the representation and interpretation of physical geographic data through the examination of a variety of maps.

NOTE: There are no pre-requisites for this course and students may take this class in addition to any other first year Earth Sciences class.

FORMAT: Lecture-class 3 hours each week, and 1 hour tutorial weekly. Some classes may include map work.

CROSS-LISTING: ERTH 1030.03

GEOG 1035.03: Introduction to Human Geography.
Human geography examines the ways that people perceive, use, and alter the landscapes they occupy. Two themes run throughout the course. One theme deals with the aspects of culture that characterize different social groups. These are matters of material culture as well as group behaviour, and belief systems. The second theme has to do with the systems of production, livelihood, spatial organization, and administration that societies erect. Interwoven with these themes is the interaction of human societies with each other and their environment. The class introduces the principal tools of human geography: maps, demography, and analysis of cultural patterns.

Geography

Location: School of Planning
5410 Spring Garden Road
PO Box 15000
Halifax, NS B3H 4R2

Telephone: (902) 494-2100
Fax: (902) 423-6672
Website: http://archplan.dal.ca/planning

There is no degree in Geography at Dalhousie University, however, it is possible to do a Minor in Geography through the Faculty of Science, Faculty of Arts and Social Science, and Faculty of Architecture and Planning. Courses in geography may be taken by students in any program, and if cross-listed with science courses, may be used to meet the life or physical science subject requirement of a BA degree. Similarly, courses in geography cross-listed in the Faculty of Arts and Social Science may be used to meet the Social Sciences and Humanities requirement of a BSc degree.

Geography at Dalhousie University is overseen by the Faculties of Architecture and Planning, Arts and Social Sciences and Science, and each Faculty has a Geography Coordinator.

Deans
Macy, C., BA (Arch) (Calif. At Berkeley), MArch (MIT)
Moore, C., BA (Hons), PhD (Cambridge) Professor, Psychology
Summerby-Murray, R., ARCL Dip (Trinity College, London), BA, MA (Canterbury), PhD (Toronto)

Geography Coordinators
Architecture and Planning: Manuel, P., BA (Carleton), MSc (McGill), PhD (Dalhousie), MCIP, LPP (patricia.manuel@dal.ca)
Arts and Social Sciences: Summertime-Murray, R., ARCL Dip (Trinity College, London), BA, MA (Canterbury), PhD (Toronto) (fassdean@dal.ca)
Science: Ryan, A. M., BSc (Univ College Dublin), MSc, BEd (Acadia), MEd (MSVU), PhD (Dalhousie) (amryan@dal.ca)

I. Minor in Geography
See Minors in the College of Arts and Science section of this calendar (page 128).

II. Course Descriptions

GEOG 1030.03: Introduction to Physical Geography.
This non-lab science course examines the nature of weather and climate, Earth's surface features and processes, and internal processes that contribute to landform development. An integral component of the course is an exploration of the representation and interpretation of physical geographic data through the examination of a variety of maps.

NOTE: There are no pre-requisites for this course and students may take this class in addition to any other first year Earth Sciences class.

FORMAT: Lecture-class 3 hours each week, and 1 hour tutorial weekly. Some classes may include map work.

CROSS-LISTING: ERTH 1030.03

GEOG 1035.03: Introduction to Human Geography.
Human geography examines the ways that people perceive, use, and alter the landscapes they occupy. Two themes run throughout the course. One theme deals with the aspects of culture that characterize different social groups. These are matters of material culture as well as group behaviour, and belief systems. The second theme has to do with the systems of production, livelihood, spatial organization, and administration that societies erect. Interwoven with these themes is the interaction of human societies with each other and their environment. The class introduces the principal tools of human geography: maps, demography, and analysis of cultural patterns.
GEOG 1060.03: Earthquakes, Volcanoes and Natural Disasters.

Earthquakes, meteorite impacts, rapid climatic change, volcanic eruptions, hurricanes, floods, and floods are natural disasters that affect our economy, public policy, and safety. Where, when and how frequently do natural disasters occur? Are predictions possible? Are media portrayals of risk and damage realistic? This course, aimed at the neophyte, investigates these intriguing questions. Examples of "disaster films," in conjunction with lectures and discussions are used to identify the causes, consequences and sometimes erroneous perceptions of natural hazards. Examples from Atlantic Canada and contemporary disasters are used to assess local risk and real-time events worldwide.

FORMA T: Lecture 3 hours

CROSS-LISTING: ERTH 1080.03

GEOG 2000.03: Cartography.

Maps, which are visual representations of our world, are essential tools to disciplines that upon archaeology to zoology. Navigation is the art and science of finding one's way through both natural and built landscapes. This class primarily uses hands-on assignments to investigate how maps are constructed and interpreted (including concepts of spatial reference systems, scale, projections, symbols, and design), how maps can distort perceptions, and can influence one's decisions. Students also study navigation by compass, global positioning systems (GPS), and deal-reckoning.

FORMA T: Lecture 3 hours plus occasional field trips as appropriate

PREREQUISITE: ERTH/GEOG 1010, or ERTH 1010

GEOG 2001.03: Landscape Analysis.

Designers and planners need to understand the influence of physical, biological, and cultural systems in landscape evolution, and the relevance of that information in analyzing land capability. Students develop inventory and analysis tools for understanding environmental processes and their implications for design and planning. There will be field trips and a lab component.

FORMA T: Laboratory 1 or 4 hours

PREREQUISITE: ERTH 1010

CROSS-LISTING: PLAN 2001.03

GEOG 2006.03: Space, Place and Geographic Information Systems.

Planners use Geographical Information Systems (GIS) for data collection, communication, and data analysis. Properly interpreted, GIS data contribute to informed decision-making. This course explores the application of GIS in planning within a project planning and setting. GIS are used in urban and geographical planning issues. The course also considers mapping standards used within the field of planning, and examines legal, privacy, and ethical implications of using GIS data in the public realm.

FORMA T: Lecture/labs

This three-weeks lecture

PREREQUISITE: PLAN/GEOG 2001

CROSS-LISTING: PL 2006.03

GEOG 2070.03: Area Studies on Mexico and Central America.

Following an examination of the indigenous heritage, and the colonial legacy of the Aztecs and the Spanish conquistadors, the class deals principally with the contemporary period, examining the Mexican Revolution and its aftermath, the Somosa dynasty, the Sandinistas in Nicaragua under the Sandinistas, the U.S. role in the region, the human rights situation in Central America, and probable developments in the region. The class is designed to provide an understanding of the contemporary reality of this volatile region, in many ways a microcosm of the crucial situation of Latin America in a whole.

FORMA T: Lecture/discussion 2 hours/conducted in English

PREREQUISITE: No prerequisites. Open to students in all departments. No knowledge of Spanish necessary

CROSS-LISTING: HIST 2283.03

GEOG 2100.XXY.06: Environment and Culture.

Concern about the environment is a widespread phenomenon as virtually everyone is confronted by environmental issues -- for they global warming, the depletion of the ozone layer or the continuing problems of water pollution and solid waste disposal. Furthermore, we are becoming increasingly aware of that environmental issues often have global implications. The efforts of citizens in Canada to deal with environmental pollution, for example, may lead to conflicts with rural regions. Similarly, rural regions, in their use of various chemical agents, may find themselves affecting the lives of city dwellers. This class will explore key relationships between human culture and the physical environment. Topics to be examined include: historical, social, and legal aspects of contemporary environmentalism, food and agriculture, environmental ethics, health, traditional ecological knowledge, sustainable forestry, waste management, public participation and environmental movements.

NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.

FORMA T: Lecture

CROSS-LISTING: One of SOSA 1000.XY.06, SOSA 1050.XY.06, SOSA 1100.XY.06, SOSA 1200.XY.06

GEOG 2201.03: Introduction to Development I.

Poverty, inequality and injustice are widespread throughout the contemporary developing world. This course will examine how this situation came to be. It begins by analyzing the different meanings of the term "development" and then examines the major approaches that have shaped practical development initiatives on the ground in the Global South over the past 50 years. The course also examines the legacies of history for contemporary development efforts in the Global South through specific case studies.

FORMA T: Lectures/tutorial

PREREQUISITE: Completion of six credits at the 1000 level or permission of the instructor

CROSS-LISTING: INTD 2001.03

GEOG 2202.03: Introduction to Development II.

This course builds upon the core concepts and approaches studied in INTD 2001 (i.e., different theoretical approaches to development and the historical creation of underdevelopment). The course examines key contemporary issues in the field of development and analyses the connections between these: debt, global trade rules, foreign aid, hunger and malnutrition, rural and urban livelihoods, population growth. The course also examines the principle actors involved in development and the strategies they have used to promote and resist development, including governments, non-governmental organizations (NGOs), the World Bank and IMF, and popular social movements in the Global South and North.

FORMA T: Lectures/tutorial

PREREQUISITE: Completion of six credits at the 1000 level or permission of the instructor

CROSS-LISTING: INTD 2002.03

GEOG 2206.03: Africa: An Introduction.

This course will focus on contemporary Africa. Stereotypical portrayals of Africa will be examined and critiqued with the goal of understanding Africa's diversity and complexity of the continent in order to better understand the historical, contemporary, and future development of Africa.

FORMA T: Lectures/tutorials

CROSS-LISTING: INTD 2106.03

GEOG 2236.03: Regional Development.

Most countries have richer and poorer regions. Economic development issues, such as economic, social, and gender factors, area and local patterns of development and analyses the connections between them: debt, global trade rules, foreign aid, hunger and malnutrition, rural and urban livelihoods, population growth. The course also examines the principle actors involved in development and the strategies they have used to promote and resist development, including governments, non-governmental organizations (NGOs), the World Bank and IMF, and popular social movements in the Global South and North.

FORMA T: Lectures/tutorial

PREREQUISITE: Completion of six credits at the 1000 level or permission of the instructor

CROSS-LISTING: INTD 2106.03

GEOG 2370.03: Regional Development.

Most models of the atmosphere predict that increasing concentrations of greenhouse gases will continue to warm the surface of the earth and the oceans in the twenty-first century. The magnitude of the warming and its consequences are still very controversial. This class will address, mainly from a non-skeptical viewpoint, the reasons for the greenhouse effect, the current warming in the context of the historical record of climate change, and sources of natural climate variability such as the El Nino Southern Oscillation. It will also review arguments that attribute the warming that has occurred in the Twentieth century to natural variability, and those that attribute the warming to increased human emission of greenhouse gases.

FORMA T: 3 hours

CROSS-LISTING: PHYC 2000.03

EXCLUSION: ECON 2000.06, PHYC 2000.06

516 Geography
GEOG 3001.03: Landscape Ecology. 
Landscape reflect the interaction of natural and cultural processes. This course introduces the principles of ecology to landscape analysis. It explores relationships between environmental components in the landscape to inform community design and land use planning applications. 
PREREQUISITE: PLAN 3001.03 or GEOG 2001.05 or permission of the instructor. 
CROSS-LISTING: PLAN 3001.03

GEOG 3002.03: Reading the City. 
Any city reflects the history of its topography, cultural traditions, and design interventions. This course introduces the principles, theories, and methods of urban form analysis in the local urban context. Students explore the local urban environment to interpret what the city means, and how it comes to take the shape it does. 
FORMAT: Lecture/lab 3 or 4 hours 
CROSS-LISTING: PLAN 3002.03

GEOG 3005.03: Cities and the Environment. 
The contemporary landscape reflects a long history of human activities on the land and design and planning interventions through time. Civilizations rise and fall, often because of their degradation of the ecosystems that support them. This course examines the relationship of cities with the environment to enhance our understanding of landscape change, urban form and patterns as human settlements through the ages. 
FORMAT: Lecture/seminar 3 hours 
CROSS-LISTING: PLAN 3003.05

GEOG 3006.03: Reading the Landscape. 
Any landscape reflects in natural and cultural history. This course explores principles, theories, and methods of landscape interpretation. These approaches will be applied to community design problems in local landscapes. 
FORMAT: Lecture/seminar 3 hours 
CROSS-LISTING: PLAN 3006.03

GEOG 3110.03: Migration and Development. 
The purpose of this course is to explore and better understand the connections between migration and development in contemporary societies. Classes will introduce or further explore one main theme or issue, such as development- induced displacement, labor migration, and HIV/AIDS and migration. Each class will center on one or more discussion questions, exchange insights from relevant experiences of class participants or focus on a case study. 
FORMAT: Lecture/seminar 
CROSS-LISTING: INTD 3010.03

GEOG 3114.03: Environment and Development. 
This course will examine the interconnections between the natural environment and different forms of social and economic development with a specific focus on developing countries. Various perspectives will be used to analyze the links between environmental issues and poverty, inequality, wealth, economic globalization and the ways in which different cultures understand and interact with the environment. 
FORMAT: Lecture/seminar 
CROSS-LISTING: INTD 3114.03

GEOG 3165.03: Peoples and Cultures of the World: Selected Area Studies. 
This class examines a specific geographic and/or culture area. The class begins with background material on geography and history. Its focus is on the people therein, their social organization and political, economic, and cultural systems. How they relate to globalization and development will also be examined. Consult the Department for tactics which topics to be covered in a particular year. Approved with International Development Studies. 
FORMAT: Lecture 
PREREQUISITE: S OSA 1000Y/06, 1010X/06, 1100Y/06; 1200Y/06 
CROSS-LISTING: SOSA 3165.03 
EXCLUSION: SOSA 2370.03

GEOG 3210.03: Canadian Cultural Landscapes. 
This course explores the origins of one “signature” landscape in each province. Context with different geographies shaped distinctive regional histories, but at the same time, the story of each place is tied to the national narrative. These landscapes also illustrate how nature has been understood, used, and transformed since the fifteenth century. 
FORMAT: Lecture and discussion 
CROSS-LISTING: HIS 3210.03, CAN 3202.03

GEOG 3220.03: Coastal Communities in the North Atlantic. 
Coastal communities as a social-ecological type are examined in populations, and social structures (territorial, economic, occupational, political) as they have developed in response to particular ecological and social circumstances. Various perspectives which have been applied to coastal communities are examined with regard to the contributions they may make to understanding the dynamics of these communities. The focus on North Atlantic communities. 
FORMAT: Lecture 
PREREQUISITE: One of SOSA 1000Y/06, 1010X/06, 1100Y/06 or 1200Y/06. 
CROSS-LISTING: SOSA 3220.03

GEOG 3284.03: Living in Cities. 
2008 marked the first time in history that more of the global population (lived in cities than in rural areas. What perspectives to anthropologists and sociologists offer on cities and their inhabitants? This course explores the social dynamics that constitute the city and serves as a venue for students to explore and understand the ways in which different cultures understand and interact with cities and city-dwellers. It approaches the city both as a whole and through its constituent parts: people and places. Examples may be drawn from cities large and small, near and far - including Halifax. 
FORMAT: Lecture and seminar 
PREREQUISITE: One of SOSA 1000Y/06, S OSA 1050.06, SOSA 1100.06 SOSA 1200Y/06 FYP or PLAN 2005.06 
CROSS-LISTING: SOSA 3284.03

GEOG 3370.03: North American Landscapes. 
Landscapes are the product of human culture ordering nature for economic, social, political, religious, recreational, and artistic purposes. Landscape history analyzes and interprets the use and design of landscape features such as fields and woodlands, roads and waterways, settlements and buildings, towns and suburbs, and parks and cities. This class examines the use and meaning of the spatial environment among the various societies in North America from the sixteenth to the twentieth centuries. Among the topics are the meaning of areas for indigenous peoples, the occupation and settlement of colonial populations, transportation and colonial expansion, town planning, the politics of water and land in the West, preservation movements, scenic tourism, and the history and artistry of landscapes. The class welcomes non-history students with an interdisciplinary interest in issues regarding planning and design, cultural ecology, and the governance of resources. 
FORMAT: Lecture and discussion 3 hours 
CROSS-LISTING: HIS 3370.03

GEOG 3400.03: Human Health and Sustainability. 
This course examines the relationships between the health of populations and health determinants in the context of environmental sustainability. Weekly laboratory exercises will teach students how to use geomatics (GIS, GPS, and remote sensing technologies) and epidemiological tools can be used to assess the links between the health of human populations and the environment, and how to use these tools for environmental health research. 
FORMAT: Lecture 2 hours, Lab 1 hours 
PREREQUISITE: Must be a third year student or have permission of instructor 
CROSS-LISTING: ENV 3400.03

GEOG 3440.03: Geomorphology. 
Geomorphology is the quantitative study of Earth’s surface processes and landforms applies to geology, civil engineering, hydrology, and environmental management. We investigate slope stability, weathering and soils, sediment production, wind-driven and coastal environments, tectonic landforms, and river, glacial and periglacial processes. 
FORMAT: Lecture 3 hours, lab 3 hours including mandatory field trips 
PREREQUISITE: ENERGY 1000 and one other first year ENERGY course, 1100 recommended, or SCI 1302.01, or SCI 1302.11, or SCI 1302.27, or SCI 1310.11 or permission of the instructor AND completion or concurrent enrollment of a 1000-level mathematics class, a 1000-level physics class, and a 1000-level chemistry class. 
CROSS-LISTING: ENERGY 3440.03
GEOG 3500.03: Exploring Geographic Information Systems.
Geographic Information Systems (GIS), as a tool for the management of georeferenced data, have become indispensable for disciplines where location of objects and patterns of processes is important. GIS plays a significant role in a wide range of applications, from modeling, to analysis and problem-solving, to decision-making. The class is aimed at a broad base of potential users and draws on examples of the role of GIS in global climate change, mineral exploration, preservation of biodiversity, coastal zone management, resource depletion, and many other present and future environmental issues. The course material will be of interest to those studying environmental science, ecology, marine biology, oceanography, epidemiology, urban and rural planning, civil engineering, and any other field involving spatial data. Laboratory exercises emphasize the principles of raster and vector GIS, and the integration of databases and GPS (global positioning systems) data into GIS. Exercises done on the diversity of GIS applications in a number of application areas.

FORMAT: Lecture 3 hours, lab 3 hours
PREREQUISITE: Two years of university study or equivalent or instructor’s permission.
CROSS-LISTING: ERTH 3500, ERTH 5600, ENVS 3500.
EXCLUSION: Credit will only be given for one of GEOG 3500, SCIE 3600, ERTH 3500, ERTH 5600, or ENVS 3500.

GEOG 3633.03: Spatial Information and GIS in Ecology.
A hands-on approach to understanding and using spatial information, this class introduces students to Geographic Information Systems (GIS) as a tool to answer ecological questions. Together, students conduct a major field project, collecting data, creating maps using GIS, and interpreting spatial patterns, to address and apply ecological problem in ecology.

GEOG 4440.03: Geomorphology and Landscape Evolution.
Ripple-to mountain range-scale landforms evolve under predictable internal and external forces that are mediated by the physical and chemical properties of the rock. The purpose of this course is to provide a thorough examination of the development of landscapes by tectonics and surficial processes involving weathering, mass wasting, streams, and glaciation. The concepts of equilibrium, climate and vegetation change, and rock cycles are recurring themes throughout the course. Dating and thermochronology methods are discussed in the context of landscape change. Early classes viewpoints of landform development are contrasted with the latest numerical simulations of landscape evolution. The labs are mostly field-oriented with emphasis on Quaternary stratigraphy, describing and interpreting soils, glacial geomorphology, and geomorphometics.

FORMAT: Lecture 3 hours, lab 3 hours
PREREQUISITE: ERTH 1080 and one other 1st year ERTH course; 1090 recommended. Must be a 4th year Science student familiar with excel, or with instructor’s permission.
CROSS-LISTING: ERTH 4440.03.

GEOG 4530.03: Environmental Remote Sensing.
The goal of this class is to introduce students to the role of remote sensing as a technique to provide environmental and geologic information. Particular emphasis will be placed on examining the potential and limitations of remote sensing methods and data in this context. The lectures discuss the fundamentals of remote sensing with an emphasis on multi-spectral satellite systems. In the labs, students use computerized techniques of digital image enhancement and thematic information extraction to process images derived from optical, radar, and hyperspectral remote-sensing systems. The integration of remote-sensing information with GIS (Geographic Information Systems) is stressed in both the labs and lectures.

FORMAT: Lecture 3 hours, lab 3 hours
PREREQUISITE: ERTH 3500.03, ENVS 3500.03, or ENVS 3500.03, or SCIE 3600.03 or GEOG 3500.03.
CROSS-LISTING: ERTH 4530.03.

GEOG 4550.03: Introduction to Landscape Simulation.
We examine different approaches to numerical modelling of earth-surface processes such as erosion and landslides, melting permafrost, and braided rivers. Using class and/or individual projects as examples, the selection of variables, sensitivity testing, and methods for testing models against nature are discussed.

FORMAT: Lecture 3 hours, lab
PREREQUISITE: ERTH 3440.03, MATH 1010 or 1400, PHYC 1260.03, 1290.03 (Y) and three courses at the 3000 level in the physical sciences (chemistry, earth science, physics) or with consent of instructor.
CROSS-LISTING: ERTH 4550.

GEOG 4520.03: GIS Applications to Environmental and Geological Sciences.
Note: This class is not offered every year. Please consult department in the spring for further information.
Humanistic Studies in Science

Attention is drawn to the following courses, offered in several departments. All of these courses are concerned with the humanistic aspects of scientific thought and its development. For complete course descriptions please consult the appropriate department listing in this calendar.

NOTE: Not all courses are offered every year. Please consult the current timetable for this year’s offerings.

History of the Sciences
- BIOL 3503.06, HSTC 2200.06, SCIE 2000.06: Introduction to the History of Science
- BIOL 4664.03/OCEA 4331.03/SCHS 3073.03/HIST 3311.03: History of Marine Sciences

Philosophy of the Sciences
- PHIL 3420.03, BIOL 3580.03: Philosophy of Biology
- PHIL 2560.03: Minds & Machines: Introduction to cognitive Science
- PHIL 2660.03 Logic: Understanding Scientific Reasoning
- BIOL 3601.03: Nature Conservation
- PHIL 2130.03: Logic
- PHIL 3051.03: Epistemology
- PHIL 3670.03: Philosophy of Science

Integrated Science Program (New sections to completely replace old sections)

I. Introduction

Dalhousie’s Integrated Science Program is an alternative and unique way for a serious, well-prepared student to complete the first year of a BSc. In addition to learning the core material of several first-year science subjects, students gain an interdisciplinary perspective, develop transferable skills, and conduct research, all in their first year. The goals of the program are:

1. To engage students in the process of scientific inquiry and provide them with hands-on experience in scientific research skills.
2. To provide sufficient background to enter second-year courses in the specific disciplines included in the program.
3. To point out the interrelationships among the science disciplines.
4. To indicate how the history and philosophy of scientific thought helps us to understand science.
5. To show the relevance of science in students' lives and the links between science and society.

This first-year program exposes students to a broader range of science disciplines than is possible in regular courses and does so in an integrated manner. Students learn from a team of instructors from different departments in the Faculty of Science. Instructors meet weekly to coordinate their teaching efforts and track learning outcomes. While teaching the material from regular first-year science courses, Integrated Science instructors highlight the natural links among their disciplines and help students apply the scientific method and quantitative techniques to topics and questions across the sciences.
Integrated Science students are members of a small cohort (minimum 70-80) of BSc students who take their courses, field trips and labs together. The course schedule varies each week, to see the time available efficiently for lectures, labs, and field-trips, and to allow flexibility to link particular topics when appropriate. The flexible schedule also allows field trips to be scheduled without interfering with other courses. The course takes field trips approximately weekly throughout the first six weeks of fall term.

A companion course, Ethics in Science, provides an introduction to ethical questions that arise in the practice of science and uses examples that link to topics studied in the science components of the program. Regular instruction, practice, and feedback in writing are integrated across Ethics in Science and the Writing in Science component of Integrated Science. Students develop scientific writing skills through formal writing assignments in the fall and a series of research project assignments in winter.

Emphasis on scientific research methods and communication skills, along with a broad introduction to science, makes Integrated Science an excellent foundation for most Honours or Combined Honours BSc, or Major or Double Major BSc degrees. The broader exposure to science is helpful for students who are interested in many sciences and want to see what different subjects have to offer. Integrated Science is also excellent preparation for professional graduate programs, such as Law or Medicine. Integrated Science candidates should be highly-motivated and have a strong interest in science. They should find the idea of being immersed in science very stimulating; they should want to learn to think across the discipline boundaries as well as to master discipline-specific material at the first-year level; they should be enthusiastic about being part of a small cohort of students intent on learning how to work and think like scientists; they should want to be cooperative and effective team members; they should have good study, work, and time-management skills; and they should welcome challenges to work hard, to think critically, and to solve problems.

Students wishing to enter this program normally must have a minimum Grade 12 average of 80%, with a minimum of 80% in Mathematics and 70% English, and a minimum of 70% in Grade 12 Chemistry plus Grade 12 Biology or Grade 12 Physics. The average high school marks of incoming Integrated Science students is 89%.

Integrated Science students can expect a higher course load (more credits) and heavier workload than regular first-year BSc students. A heavier workload is unavoidable considering the larger number of disciplines studied, the integrated writing course, and the research project component. The workload of Integrated Science is managed, however, as students have less work than if taking all of the equivalent components as separate courses. Also, assignments and tests are spread out as evenly as possible throughout the week and term. Students should note that the heavier workload is excellent preparation for higher workloads in second year of the BSc.

Option A (Physical Sciences and Engineering) is recommended preparation for professional science BSc degrees (e.g., Atmospheric Science, Chemistry, Earth Sciences, Physics and Atmospheric Science) or Engineering degrees, because this option includes a full year of Calculus (MATH 1000/1010) and full year of a calculus-based Physics course with content needed for Engineering (PHYC 1190/1290). For BSc degrees or minors in Economics, Mathematics, or Statistics, students need a full year of Calculus, so could take Option A or B.

Option B (Biomedical Sciences) is intended for students who are mainly interested in the life sciences but want to keep their options open by taking a full year of Calculus (MATH 1000/1010) and full year of Physics for the Life Sciences (PHYC 1300). Option B is recommended preparation for BSc degrees in Biology, Biochemistry and Molecular Biology, Environmental Science, Microbiology and Immunology, Marine Biology, Medical Science, Neuroscience, Ocean Science, or Psychology. This option is intended for life and medical sciences students who want a more normal workload and typical selection of courses, or want room in their schedule to take an elective in place of Physics. Option C is recommended for students interested in Pharmacy. Any option will provide a solid foundation for professional degrees, such as Law or Medicine.

III. Choosing an Integrated Science Option

The program includes SCE 1505.18 (the core Integrated Science component), a companion, half-credit humanities course, PHEL 1010, and one to three science co-requisites. The schedules of SCE 1505 plus PHEL 1010 are coordinated with the timetable of regular science courses to ensure that first-year Chemistry, Mathematics, and Physics will fit into student schedules. A student can choose one of three Integrated Science Options in which to register. Each incorporates a different suite of co-requisite science courses and is designed to prepare students for a range of degree programs at Dalhousie. Contact the Program Directors to discuss other possibilities.

The flexible schedule also allows field trips to be scheduled without interfering with other courses. The course takes field trips approximately weekly throughout the first six weeks of fall term.

First-year pre-requisites. All three options fulfill several first-year requirements for the BSc. The full-year Psychology component of SCE 1505 fulfills the Social Science requirement. The Statistics component of SCE 1505 plus one Calculus course (MATH 1000 or 1215) fulfills the full-year of Mathematics requirement. The integrated Writing in Science component of SCE 1505 and the companion Humanities course (PHEL 1010) together compose a full-year Writing Requirement Course at Dalhousie University. The Integrated Writing in Science writing course serves in lieu of ENGL 1000 for entry to the School of Pharmacy at Dalhousie University. Note that PHEL 1010 also satisfies half of the full-credit Humanities or Language requirement at Dalhousie; before they graduate, students will need to take another half-credit course in a Humanities or Language.

Integrated Science students can expect a higher course load (more credits) and heavier workload than regular first-year BSc students. A heavier workload is unavoidable considering the larger number of disciplines studied, the integrated writing course, and the research project component. The workload of Integrated Science is managed, however, as students have less work than if taking all of the equivalent components as separate courses. Also, assignments and tests are spread out as evenly as possible throughout the week and term. Students should note that the heavier workload is excellent preparation for higher workloads in second year of the BSc. Some of a student’s actual workload will depend on the Option (science co-requisites) selected to complete the first-year program.

Option A (Physical Sciences and Engineering) is recommended preparation for physical science BSc degrees (e.g., Atmospheric Science, Chemistry, Earth Sciences, Physics and Atmospheric Science) or Engineering degrees, because this option includes a full year of Calculus (MATH 1000/1010) and full year of a calculus-based Physics course with content needed for Engineering (PHYC 1190/1290). For BSc degrees or minors in Economics, Mathematics, or Statistics, students need a full year of Calculus, so could take Option A or B.

Option B (Biomedical Sciences) is intended for students who are mainly interested in the life sciences but want to keep their options open by taking a full year of Calculus (MATH 1000/1010) and full year of Physics for the Life Sciences (PHYC 1300). Option B is recommended preparation for BSc degrees in Biology, Biochemistry and Molecular Biology, Environmental Science, Microbiology and Immunology, Marine Biology, Medical Science, Neuroscience, or Psychology. This option is intended for life and medical sciences students who want a more normal workload and typical selection of courses, or want room in their schedule to take an elective in place of Physics. Option C is recommended for students interested in Pharmacy. Any option will provide a solid foundation for professional degrees, such as Law or Medicine.

On their transcripts, students receive a single letter grade for SCE 1505 because the content and skills practiced are integrated across these components (i.e., SCE or AP credits cannot be used in lieu of Biology, Earth Science, Philosophy, Psychology, or Stats courses). On their transcripts, students receive a single letter grade for SCE 1505 and separate grades for their other courses. A breakdown of subject marks in SCE 1505 is provided, upon request, for the purpose of applying for scholarships or professional programs or transferring other universities.
III. Course Description

SCIE 1505X/Y.18: Integrated Science.
This program provides comprehensive first-year preparation for science major or honours degrees and includes a full-year writing course and research project in the sciences. Concepts and techniques are taught in Biology, Earth Science, Psychology, and Statistics and are linked to material taught in separate Chemistry, Mathematics, and Physics courses.

NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.

FORMAT: Writing requirement; Lecture approx. 9 hours/lab and other activities approx. 5 hours.

CROSS-LISTING: BIOL 1010.03/1011.03 or BIOL 1020.03/1021.03; ERTH 1080.03; PSYO 1011.03/1012.03 or PSYO 1021.03/1022.03; SCIE 1111.03; STAT 1060.03.

CO-REQ: HIST 1200.05 and CHEM 1010.03 or CHEM 1020.03 or MATH 1000.03 or MATH 1008.03 or MATH 1215.03; STAT 1060.03.

Recommended: PSYO 1011.03/1012.03 or PSYO 1021.03/1022.03; SCIE 1111.03; STAT 1060.03.

Marine Biology

Location: Biology Department, Life Sciences Centre
1555 Oxford Street
PO Box 15000
Halifax, NS B3H 4R2
Telephone: (902) 494-3822
Fax: (902) 494-3736
Website: http://marine.biology.dal.ca

Dean
Moore, C., BA (Hons), PhD (Cambridge), Professor (Psychology)
Undergraduate Program Co-ordinator
Pinder, A. (pinder@dal.ca) (494-3822)

Program Advisors
Gues, G. (902-448-440) (gues@dal.ca), 20 credit majors
Herbininger, C. (902-448-1297) (christopher.herbininger@dal.ca), Regular Honours
McAllister-Irwin, N. (902-361-146) (nancy.mcallister-irwin@dal.ca), Co-op Academic Advisor, Honours and 20 credit majors
Pinder, A. (902-3822) (alan.pinder@dal.ca), Regular Honours
Scheibling, R. (902-226-206) (robert.scheibling@dal.ca), 20 credit majors
Schmidt, A. (902-448-1298) (allison.schmidt@dal.ca), 20 credit majors
Worm, B. (902-448-1293) (boris.worm@dal.ca), 20 credit majors

I. Introduction

The Marine Biology Program is an integral part of the Biology department at Dalhousie. Students obtain a basic grounding in Biology in their first two years, and use their third and fourth years to study in greater depth the diversity, ecology, physiology, and other aspects of marine animals and plants. Marine Biology students often also take courses in the biology, chemistry or physics of the ocean, offered through the Oceanography department. A Combined Honours in Marine Biology and Oceanography is available. "Ocean studies" is an area of special emphasis for Dalhousie University, and thus many faculty members have active research programs in marine science. In addition, many marine scientists at local research institutions, including the Bedford Institute of Oceanography and the Institute for Marine Biosciences are affiliated with us, and serve as supervisors of our Honours and graduate students. Our students thus participate in research on a broad range of marine-related topics; examples can be viewed on our website.

The Biology department is located adjacent to the sea in the Life Sciences Centre. All eight floors have running sea water, and we have a 15m pool tank and a 10m deep tower tank. Within a 30 km radius there are salt marshes, rocky shores, estuaries, and sand beaches for field work.

We offer Honours and 20 credit major degree programs in both a regular and Co-operative Education format in Marine Biology. The 20 credit major degree prepares students for technical positions in government laboratories, research institutes, scientific consultants, and aquaculture facilities. The Honours degree requires more Marine Biology credits, a GPA of 3.0 or higher, a research project and thesis in the final year, and should be taken by students wishing to continue on to graduate studies. The Co-operative Education degree provides an integrated program of eight academic terms with three to four workterms in industry, government or university laboratories, conservation, etc. The workterms, each of four months duration, enable students to apply their knowledge of marine biology while providing them with work experience for making informed career choices. The Co-op degree normally takes four and 1/3 years to complete.

High School preparation

Students from Canadian high schools are recommended to take the following subjects in high school: Biology, Chemistry, Pre-calculus Math, English, plus Physics (optional) or other acceptable courses (see list in the Admissions section of the undergraduate calendar) and obtain an overall average of 75%, with 65% or higher in English and Math.

Marine Biology 521
II. Degree Programs

In addition to the departmental requirements listed below, students must satisfy the requirements outlined in the Degree Requirements section, page 125 of this calendar.

A. Co-operative Education BSc (20 credit) Program in Marine Biology, Honours and Major

Co-op Academic Advisor in Marine Biology: N. McAllister-Irwin
Email: nancy.mcallister-irwin@dal.ca

Co-operative Education in Science (Science Co-op) is a program where academic study is combined with paid career-related work experience. Students alternate three workterms throughout their academic study terms and graduate with a Bachelor of Science Co-op. Science Co-op enables students to apply their knowledge directly while providing them with work experience that assists in making educated career choices. Students apply to join Science Co-op typically before their second year of study.

See the “Co-operative Education in Science” section of this calendar, or http://biology.dal.ca/honours/ for information on Science Co-op such as Science Co-op requirements, eligibility, how to apply, deadlines and other related information.

AT = Academic Term
WT = Work Term

The academic program and required courses for Co-op students are essentially the same as those for the non-Co-op program (listed below). Students in the third and fourth year of their Science Co-op program will have difficulty taking fall-year courses during the academic year because of their work terms.

To ensure employment opportunities, Science Co-op students may include some courses (or minor) in business, computer science, environmental science, microbiology, or statistics as employers are often seeking expertise in these areas.

ADMISSION to the Marine Biology Science Co-op program should be sought in winter of first year. Applications must be submitted by August 1st.

Science Co-op application forms for Marine Biology are available from the Science Co-op website: http://www.sciencecoop.dal.ca. A limited number of students will be accepted into the programs each year to reflect the current job market. Students must be eligible to work in Canada. Students wishing to apply for the Honours and Major Co-op programs should have at least an overall average of 3.00 or higher from all first-year courses and a grade of B+ in BIOL 1010.03/MARI 1074.03 and BIOL 1020.03/MARI 1075.03 or equivalent. Successful applicants will be notified in late August before the beginning of the fall term.

For further information, please see http://www.sciencecoop.dal.ca.

B. BSc (20 credit) Honours in Marine Biology

Program Advisor:
A. Pinder (494-3822) alan.pinder@dal.ca.

Honours students must take a minimum of nine and a maximum of 11 credits in their honours subject (Marine Biology/Biology) above the 1000 level in addition to the general rules of the College of Arts and Science (see degree requirements in the College of Arts and Science section of this calendar).

Departmental Requirements

Admission to and graduation from the Honours program requires a B+ average (3.3) in the core program courses at the time of application, with no grade below a C. Furthermore, students must also have a cumulative B average (3.0) at the time of application and at graduation.

Students interested in the Honours program must do the following: At the end of their third year, students must have identified and gained the support of a Dalhousie or external faculty member who will supervise their thesis research. If students choose an external supervisor, they must make certain that the supervisor meets the basic criteria as identified by the honours committee (details about external supervisor suitability can be found on the honours homepage - see link below). With the supervisor’s input, the student must then draft a thesis proposal and submit it to the honours committee for approval. This proposal must be signed by both the student and the supervisor and submitted by April 20th. Students who do not meet this deadline will not be permitted to enrol in the Honours course (BIOL/MARI 4900). For students seeking a Co-op Honours degree, contact a Co-op advisor for details about proposal submission. For information about who can serve as an honours supervisor, contact an honours advisor.

Regarding the specifics of the thesis proposal, it should: (i) very briefly review the background literature relevant to the student’s research topic, (ii) present the specific questions, with clearly articulated hypotheses and predictions (if warranted), that will be addressed by the research, and (iii) present an overview of the methods that will be used to address these questions, hypotheses, and predictions. The proposal should be 1-2 pages in length and must be signed by both the student and supervisor. Additional information about the proposal, and about the Honours program in general, can be found on the departmental website: http://biology.dal.ca/honours/.

Core Program Courses required in the Marine Biology Concentrated Honours Program

1800 level
- BIOL 1010.03 or 1020.03 (minimum grade of C+)
- BIOL 1011.03 or 1021.03 (minimum grade of C+)
- CHEM 1010.03 and CHEM 1020.03
- COMM 1002.03 (recommended for students not fully familiar with microcomputers, but not required)
- MATH 1009.03 or MATH 1213.03
- MATH/STAT 1060.03
- DSP (SCIE 15X5) (minimum grade of C+)

2000 level
- BIOL 2001.03
- BIOL 2006.03
- BIOL 2016.03
- BIOL 2021.03
- BIOL 2040.03
- BIOL 2040.03
- OCEA 2000.06 or OCEA 2001.03 and OCEA 2020.03
- MATH/STAT 2030.03

At the 3000 level and 4000 level, students doing a concentrated Honours degree in Marine Biology must complete three full credits from the following list:

BIOL/MARI 3042.03 Molecular Ecology
BIOL 3084.03 Molecular Evolution
BIOL/MARI 3103.03 Resource Ecology
BIOL/MARI 3167.03 Ecology and Evolution of Fishes
MARI 3074.03 and MARI 3075.03 Physiology of Marine Animals, Parts I & II
BIOL/MARI 3101.03 Marine Biology
BIOL/MARI 3221.03 Diversity of Algae
BIOL/MARI 3501.03 Invertebrate Biology
MARI/MARL 3690.03 Aquaculture
BIOL/MARI 3626.03 Field Studies of Marine Mammals or BIOL/MARI 4060.03 Marine Mammalogy
BIOL/MARI 1761.03 Marine Ecology
BIOL/MARI 1762.03 Marine Biology

A half credit MARI 4903.03 Marine Biology course

In addition, students must complete an Honour’s Thesis: MARI 4900 X/500 or MARI 4901.03 and MARI 4902.03.

In addition, students should complete at least another two full credits in Marine Biology or Biology with strong Marine emphasis to achieve the minimum of nine credits in their honours subject (Marine Biology/Biology) above the 1000 level.
Other Biology courses with some marine emphasis: BIOL 3042.03, 3102.03, 3326.03, 3613.03, 4061.03, 4063.03, 4074.03, 4661.03. Please speak with an advisor for a more comprehensive list of acceptable courses.

C. Honours Co-op BSc in Marine Biology

Program Advisor: N. McAllister Irwin

Departmental Requirements

Same as for regular Marine Biology Honours as above in addition to the following:

- SCIE 2800.00 (Science Co-op Seminar Series)
- MARI 8891.00, 8892.00, 8893.00, 8894.00 (Co-op Work terms)

Co-op students will normally do their Honours research in the summer of their fourth year or in their fifth year and should arrange this with the Honours co-op advisor. To obtain the Honours research and thesis credits, co-op students normally attend and register for MARI 4901.03 in the Winter term of their fourth year and MARI 4902.03 in the Fall term of their fifth year to accommodate their workterms.

If students wish to be supervised by someone external to the department, they must consult with the honours advisor, prior to starting the research, to determine supervisor and project's eligibility.

D. Combined Honours BSc in Marine Biology and Another Subject

Students planning a Combined Marine Biology program should consult with a Marine Honours advisor before registering for their third year courses.

Departmental Requirements

Same as for regular Marine Biology Honours as above in addition to the following:

If Marine Biology is chosen as the primary subject in Combined Honours degree, at least six and no more than nine credits in Biology and Marine Biology beyond the 1000 level including the following core program courses:

Core Program Courses required in the Combined Honours in Marine Biology:

1000 level
- BIOL 1010.03 or 1020.03 (minimum grade of C+)
- BIOL 1011.03 or 1021.03 (minimum grade of C+)
- CHEM 1011.03 and CHEM 1012.03
- MATH 1000.03 or MATH 1213.03
- MATH/STAT 1060.03
- OR
- DISP (SCIE 15XX) (minimum grade of C+)

2000 level
- BIOL 2003.03
- BIOL 2040.03
- BIOL 2060.03
- BIOL 2080.03
- BIOL 2090.03
- BIOL 2400.03

At the 3000 level and 4000 level, students doing a Combined Honours degree in Marine Biology must complete two full credits from the following list:

- BIOL/MARI 3042.03 Molecular Ecology
- BIOL 3046.03 Molecular Evolution
- BIOL/MARI 3063.03 Resource Ecology
- BIOL/MARI 3067.03 Ecology and Evolution of Fishes
- MARI 3074.03 and MARI 3076.03 Physiology of Marine Animals, Parts I & II
- BIOL/MARI 3101.03 Microbial Ecology
- BIOL/MARI 3221.03 Diversity of Algae
- BIOL/MARI 3301.03 Invertebrate Biology
- BIOL/MARI 3302.03 Aquaculture
- BIOL/MARI 3620.03 Field Studies of Marine Mammals or BIOL/MARI 4060.03 Marine Mammalogy
- BIOL/MARI 3761.03 Marine Ecology
- a half credit MARI SEASIDE course

In addition, students must complete an Honours Thesis:
- MARI 4900 X/Y 06 or MARI 4901.03 and MARI 4902.03

Please note: A Combined Honours in Marine Biology and Biology is not offered.

E. BSc or BA (20 credit) Major in Marine Biology

Program Advisors: R. Scheibling (494-2286) robert.scheibling@dal.ca
B. Wasmund (494-2478) berta.wasmund@dal.ca
G. Gass (494-6445) gillian.gas@dal.ca
A. Schmidl (494-1630) alison.schmidl@dal.ca

Major students are required to take a minimum of seven and a maximum of 10 credits above the 1000 level in their major subject (Marine Biology) including four credits above the 2000 level, in addition to the general rules for Majors which are listed in the degree requirements section of the College of Arts and Science regulations in this calendar.

Courses required in Major

1000 level
- BIOL 1010.03 or 1020.03 (C+ or better)
- BIOL 1011.03 or 1021.03 (C+ or better)
- CHEM 1011.03 and CHEM 1012.03
- COMM 1502.03 (recommended for students not fully familiar with microcomputers)
- MATH 1000.03 or MATH 1213.03
- STAF 1064.03
- OR
- DISP (SCIE 15XX) (C+ or better)

2000 level
- BIOL 2003.03
- BIOL 2040.03
- BIOL 2060.03
- BIOL 2080.03
- BIOL 2090.03
- OR
- NSCI 2000.06

1000 and 2000 level
- Minimum of four full credits, or an equivalent number of half credits, to be selected from Marine Biology (MARI) courses or any “marine emphasis” field course offered by our summer field course Institute, SEASIDE, or any other recognized field course institution in Canada or overseas.

F. BSc (20 credit) Major Co-op in Marine Biology

Departmental Requirements

Same as for regular Major in Marine Biology as above in addition to the following:
- MARI 8891.00, 8892.00, 8893.00, 8894.00 (Co-op Work terms)

G. BSc (20 credit) Double Major in Marine Biology

Department Requirements

1000 Level
- BIOL 1010.03 and BIOL 1011.03 (or BIOL 1020.03 and 1021.03) and CHEM 1011/1012.03, MATH 1000.03 or MATH 1213.03, MATH/STAT 1060.03 or DISP (SCIE 15XX) (with a minimum grade of C+)

2000 Level

3000 and 4000 Level
- Minimum of 2.5 full credits at or above the 3000 level from Marine Biology (MARI) courses

Please note: A double major in Marine Biology and Biology is not offered.
H. Minor in Marine Biology

Students in other 20-credit degree programs may choose to include a Minor in Marine Biology in their program. Requirements are outlined in the College of Arts and Science: Minor section of this Calendar starting on page 129.

I. Minors available to students in Marine Biology

Minor programs allow students to develop subject specialties in addition to their major or honours subjects. Minors in other subjects are normally added to a fourth-year major or concentrated honours program (including co-op programs).

Students in a 20-credit BSc program in Marine Biology may choose to include a Minor selected from the list of approved Minors beginning on page 132 in this Calendar. Note that courses toward your Major or Honours program cannot be used to fulfill the requirements of a Minor program.

J. BSc/Engineering or BA/Engineering Concurrent Programs

Students will normally complete the requirements for a 15 credit BSc or 15 credit BA, and the first two years of engineering studies leading to the Diploma in Engineering. The concurrent program can be completed in three years. Details are provided in the College of Arts and Science Degree Requirements on page 129 of the calendar.

K. Diplomas, Certificates, and Language Proficiency Certificates

A number of certificate programs are available to students enrolled in an Honours, Major or Minor program in Marine Biology. Please see page 141 for a full listing of available certificates. Note: Courses counted toward a Major Honours or Minor program may also be used to fulfill the requirements of a Certificate.

III. Course Descriptions

The normal entry requirement for upper level courses in Biology and Marine Biology is a grade of B- or better in BOTH terms of first year Biology or in DISP. Students with extenuating circumstances may appeal to the departemental curriculum committee.

NOTE: Not all courses are offered every year. Please consult the current timetable for this year’s offerings.

MARI 3003.03: Introduction to Field Oceanography

See course description for OCEA 3003.01 in the Oceanography section of the calendar.

MARI 3042.03: Molecultural Ecology

We survey techniques of molecular genetic analysis and consider how they can be used to identify species, populations, sexes, individuals and family relationships, and study population attributes such as historical dispersal, contemporary connectivity, mating behaviour and effective population size. Evaluation is based on assignments, a test and a final exam.

PREREQUISITE: A grade of B- or better in each of BIL 2001.03, BIL 2401.03, and BIL 2001.05

CROSS-LISTING: BIL 3042.03

EXCLUSION: BIL 4042.03

MARI 3063.03: Resource Ecology

This course considers the ecology, utilization, and management of natural resources in fisheries, wildlife and forest management, agriculture and aquaculture. Topics include population dynamics, community interactions, and ecosystem support of resources as well as the history of resource utilization, practices of controlling production, pests, and predators, and sustainable management strategies.

FORMAT: Lecture 2 hours, tutorial 2 hours

PREREQUISITE: BIL 2001.03 or (BIA 3001.05), MATH 1000.03 or (MATH 1213.03 or DISP), STAT 1000.03 (or DISP)

CROSS-LISTING: BIL 3063.03

MARI 3067.03: Ecology and Evolution of Fishes

This course will examine several topics on the ecology and evolution of marine and freshwater fishes. Topics will include systematic, functional morphology, evolutionary ecology, behavior, life history strategies, population biology, fisheries science, and conservation biology.

FORMAT: Lecture 3 hours, lab 2.5 hours

PREREQUISITE: BIL 2003.03, BIL 2006.03 or BIOA 3001.03

CROSS-LISTING: BIL 3067.03

MARI 3074.03: Physiology of Marine Animals, Part I

Animals in a marine environment are quite different from those found in air or fresh water, but the “physiological principles” are similar. This course deals with the same principles as BIL 3079, but emphasizes the special characteristics of marine animals and the techniques necessary to study them in laboratories.

FORMAT: Lecture 3 hours, Lab 3 hours

PREREQUISITE: BIL 2003.03 and BIL 2020.03 or BIOA 2001.03

EXCLUSION: BIL 3079.03, BIOA 3003.03

MARI 3076.03: Physiology of Marine Animals Part II

Animals in a marine environment are quite different from those found in air or fresh water, but the “physiological principles” are similar. This course deals with the same principles as BIL 3079, but emphasizes the special characteristics of marine animals and the techniques necessary to study them in laboratories.

FORMAT: Lecture 3 hours, Lab 3 hours

PREREQUISITE: BIL 2003.03 and BIL 2020.03 or BIOA 2001.03

EXCLUSION: BIL 3079.03, BIOA 3003.03

MARI 3101.03: Microbial Ecology

Lectures on the ecology of bacteria, viruses, protists. Community structure, food web nutrient cycling, biochemical cycles, competition, succession and symbiosis are discussed with examples from marine, fresh water and soil habitats. There is an emphasis on marine organisms.

FORMAT: Lecture 3 hours

PREREQUISITE: BIL 2004.03 or MUL 2100.03, and BIL 2006.03 or BIOA 3001.03

CROSS-LISTING: BIL 3101.03

MARI 3221.03: Diversity of Algae

This course is a taxonomic introduction to the major algal groups (macrophytic and microscopic) with an emphasis on the marine seaweeds. Basic taxonomic differences are covered, along with an introduction to macrophytic ecology, human uses and symbioses. Laboratory sessions focus on morphology and reproduction.

PREREQUISITE: BIL 2004.03 or equivalent

CROSS-LISTING: BIL 3221.03

EXCLUSION: BIL 3101.03, MARI 3121.03

MARI 3301.03: Invertebrate Biology

A survey of the diversity, ecology, and evolutionary history of the major invertebrate groups. Lectures will emphasize phylogenetics and diversity of body plans. Labs will emphasize identification and anatomy through field trips to local sites, computer assisted learning, and group projects to construct food webs for local invertebrate communities.

FORMAT: Lecture 3 hours, Lab 3 hours

PREREQUISITE: BIL 2001.03

CROSS-LISTING: BIL 3301.03

EXCLUSION: BIL 3031X/303Y

MARI 3600.03: Aquaculture

Through lectures, laboratories and field trips (additional fees apply), this course offers an introductory overview of aquaculture, the culturing of aquatic plants and animals. The following topics are covered with both a land-based and global perspective: overview, physico-chemistry of water, engineering, culture techniques, health, nutrition, genetics, environmental and socio-economic considerations.

FORMAT: Lecture 3 hours, Lab 3 hours, Field trips (2 Sundays)

PREREQUISITE: BIL 2003.03

CROSS-LISTING: BIL 3600.03

MARI 3623.03: Applied Coastal Ecology

Impacts of anthropogenic inputs on the structure and function of coastal ecosystems. Through field trips and other coursework, students examine ecosystem health, e.g., mesocosm communities on rocky shores, in seagrass beds on sedimentary shores, and learn basic experimental designs, principles of environmental assessment and monitoring, and coastal habitat remediation. NOTE: Offered in summer through SEASIDE. An auxiliary fee is charged to cover field expenses. For dates, times and special registration procedures, see seasonal science.ca. Not offered every year.

FORMAT: Field and Lab

PREREQUISITE: BIL 2003.03 and BIL 2006.03 or BIOA 3001.03

CROSS-LISTING: BIL 3623.03, INVS 3623.03
MARI 3626.03: Field Studies of Marine Mammals. Hands-on experience conducting field research on underwater mammals. Students are introduced to the techniques of photographic identification of individuals. On a several-day field trip, students conduct research on the ecology of bottlenose dolphins in the Bay of Fundy. Grading is pass/fail. NOTE: Offered in summer through SEASIDE. A student must be registered in a Biology or Marine Biology program, have completed a minimum of three full credits in Biology above the 1000 level and have a minimum cumulative GPA of 2.4 or permission of the instructor. CROSS-LISTING: BIOL 3626.03

MARI 3627.03: Biology and Conservation of Sharks, Skates and Rays. This course offers a combination of lectures, labs, and field projects that explore the role of sharks and rays in marine ecosystems. Students are introduced to current methods used in shark research, such as tagging, and learn about the role of sharks in ecosystems. NOTE: Offered in summer through SEASIDE. An auxiliary fee is charged to cover field expenses. For dates, times and special registration procedures, see seaside.science.dal.ca. FORMAT: Lectures, labs, and field trips. PREREQUISITE: BIOL 2003.03 or BIOL 3001.03 and BIOL 3003.03

MARI 3632.03: Applied Field Methods in Fish Ecology. Practical experience conducting field research on fishes with field trips to streams and shallow water marine/freshwater habitats. Techniques include collecting fish, designing and conducting surveys, studying behavior, measuring phenotypic variability, quantifying temporal and spatial variation, planning for statistical analysis, and weighing tradeoffs between data quality, quantity, costs and ethical/environmental considerations. NOTE: Offered in summer through SEASIDE. An auxiliary fee is charged to cover field expenses. For dates, times and special registration procedures, see seaside.science.dal.ca. FORMAT: Field intensive, lecture and lab. PREREQUISITE: BIOL 2003.03 or BIOL 3001.03 or STAT 1060.03 or PSYO/NESC 2160.03 (or equivalent)

MARI 3680.03: Scientific Diving Methods for Marine Ecology. This course introduces students that are certified divers to the practice of scientific diving in various marine habitats to demonstrate the application of standard sampling and analysis techniques of photographic identification of individuals. On a several-day camping trip, students observe marine mammals from vehicle-watch boats and conduct research projects. NOTE: Offered through SEASIDE. An auxiliary fee is charged to cover field expenses. For dates, times and special registration procedures, see seaside.science.dal.ca. FORMAT: Lab and field intensive PREREQUISITE: BIOL 2003.03 or BIOL 3626.03 or BIOL 3632.03 or PSYO 2160.03, STAT 1060.03 (or equivalent) CROSS-LISTING: BIOL 3626.03

MARI 3761.03: Marine Ecology. Building upon an understanding of ecological and evolutionary principles, and a familiarity with the major marine invertebrates and algal taxa, this course examines patterns and processes in the population, community and ecosystem levels that determine the diversity and distribution of life in the sea. FORMAT: Lectures/lab. PREREQUISITE: BIOL 2003.03 or BIOL 3001.03, or BIOL 3003.03, or OCEA 2000/2016 or OCEA 2011.03 and OCEA 2021.03 CROSS-LISTING: BIOL 3761.03 RESTRICTION: This class is restricted to 3rd and 4th year students.

MARI 3800.03: Experiential Learning. Experiential Learning recognizes the learning experience relevant to the program outside the scheduled curriculum. Students are responsible for drafting a learning agreement between the course coordinator and supervisor to specify learning outcomes, activities designed to accomplish these outcomes, a quantifiable assessment strategy and a timetable. NOTE: To register in this course, a student must first find a suitable supervisor and sign a learning agreement between the course coordinator, the student and the supervisor. FORMAT: A minimum of 84 hours of work experience should be documented. For example students could spend 8-10 hours throughout a regular term or complete the 84 hours in a more concentrated period during the summer. Grading is pass/fail. PREREQUISITE: Students must be registered in a Biology or Marine Biology program, have completed a minimum of three full credits in Biology above the 1000 level and have a minimum cumulative GPA of 2.4 or permission of the instructor. CROSS-LISTING: BIOL 3800.03 EXCLUSION: Scheduled classes at a learning institution, study that would qualify for a Special Topics class, an Honours project, coop-work terms and paid work. Only one experiential learning class per degree is permitted.

MARI 4060.03: Marine Mammalogy. The course examines the characteristics that mammals brought with them when they returned to the ocean, their evolution, special adaptations, and roles in marine ecosystems and general principles of the marine mammal population biology. The biology of marine mammals is used to explore conservation management issues. FORMAT: Lectures 3 hours PREREQUISITE: BIOL 2003.03 or BIOL 3001.03 or BIOL 3003.03 CROSS-LISTING: BIOL 5060.03, BIOL 4060.03

MARI 4323.03: Biologging in Ecology. This course explores the fundamentals and applications of biologging and bio-logging: the use of electronic tags to study free-ranging animals and their environment. Students are introduced to the wide range of tags and their diverse applications in biology. FORMAT: Lectures, presentations, labs PREREQUISITE: BIOL 2003.03 or BIOL 3001.03 or PSYO/NESC 2160.03 or permission of the instructor CROSS-LISTING: BIOL 4323.03
MARI 4335.03: Environmental Impacts in Marine Ecosystems.
See course description for OCEA 4335.03, in the Oceanography section of this calendar.

MARI 4369.03: Fisheries Oceanography.
See course description for OCEA 4369.03, in the Oceanography section of this calendar.

MARI 4370.03: Deep Sea Biology.
See course description for OCEA 4370.03, in the Oceanography section of this calendar.

MARI 4661.03: Biological Oceanography.
See course description for OCEA 4661.03, in the Oceanography section of this calendar.

MARI 4662.03: Biology of Phytoplankton.
See OCEA 4662.03 in the Oceanography section of the calendar.

MARI 4664.03: History of Marine Sciences.
This course describes the development of the marine sciences from biological, chemical, physical and geological knowledge going back to the 17th century or earlier. It includes the important voyages of exploration, the development of marine biology, ocean circulation and plate tectonics, also the importance of technological changes upon marine science.

FORMAT: Lecture 3 hours
PREREQUISITE: Instructor's consent
CROSS-LISTING: BIOL 4664.03, OCEA 4331.03, 5331.03, HIST 3073.03, HIST 3331.03, SCI 4681.03

MARI 4666.03: Benthic Ecology.
See course description for OCEA 4666.03, in the Oceanography section of this calendar.

MARI 4667.03: Census of Marine Life.
The Census of Marine Life recorded over 250,000 known species of eukaryotes in the world’s oceans. In this course, the Senior Scientist for Census 2010 examines the diversity, distribution and abundance of marine biota globally, and reviews new approaches to discover new species and to monitor responses to climate change.

FORMAT: Lecture with discussions
PREREQUISITE: BIOL 2003.03 and BIOL 2060.03 or BIOL 3013.03 and six full credits of BIOL, MARI, or OCEA classes.
CROSS-LISTING: BIOL 4667.03

MARI 4806.03: Special Topics in Marine Biology.
Independent study intended for students who wish to study an area of marine biology not covered in other courses. Students should first consult with a faculty member to arrange the topic of study. An outline of the course content must be approved by the Biology Undergraduate Curriculum Committee Chair.

NOTE: For registration forms and further information go to: http://biology.dal.ca/Undergraduate/index.htm

MARI 4807.03: Special Topics in Marine Biology.
Independent study intended for students who wish to study an area of marine biology not covered in other courses. Students should first consult with a faculty member to arrange the topic of study. An outline of the course content must be approved by the Biology Undergraduate Curriculum Committee Chair.

NOTE: This course is for students who have already completed one Special Topics Class. For registration forms and further information go to: http://biology.dal.ca/Undergraduate/index.htm

MARI 4900X/Y.06: Honours Research and Thesis.
This course is required of, and restricted to, all Marine Biology Honours programs in which Marine Biology is the major area of study. Students conduct a research project supervised by a research scientist and attend weekly meetings of the class.

NOTE: The course grade is based on the results of the research which are submitted in April as an Honours Thesis, an oral presentation about the research to the course, and an oral or poster presentation at the Honours Cameron Conference. Co-op students attend this course by registering for Marine Biology 4900X/4900Y.

See details about selecting a supervisor for the honours thesis in a previous work term at the Honours Cameron Conference in February.

MARI 4901.03: Honours Research and Thesis I.
This is required of, and restricted to, all Marine Biology Co-op Honours programs.
The course description is the same as for MARI 4900X/Y. Students attend MARI 4901 in the Winter term of their 4th year and MARI 4902 in the Fall term of their 5th year to accommodate their work terms.

NOTE: 4901 and 4902 must be taken in consecutive winter/fall terms to get a grade for either course. No grade will be recorded for MARI 4901 until 4902 is also completed and the final Honours Thesis has been evaluated - usually in April following the fall course of 4902.

MARI 4902.03: Honours Research Thesis II.
This is the 2nd half of the required course for Marine Biology Co-op honours students. The course description is the same as for MARI 4900X/Y. Students attend 4902 in the fall of their 5th year.

NOTE: 4901 and 4902 must be taken in consecutive winter/fall terms to get a grade for either course. No grade will be recorded for MARI 4901 until 4902 is also completed and the final Honours Thesis has been evaluated - usually in April following the fall course of 4902.

MARI 8891.00: Co-op Workterm I.
PREREQUISITE: SCI 2000.03

MARI 8892.00: Co-op Workterm 2.
PREREQUISITE: MARI 8891.00

MARI 8893.00: Co-op Workterm 3.
PREREQUISITE: MARI 8892.00

MARI 8894.00: Co-op Workterm 4.
PREREQUISITE: MARI 8893.00

MARI 8895.00: Co-op Workterm 5.
PREREQUISITE: MARI 8894.00

MARI 8896.00: Co-op Workterm 6.
PREREQUISITE: MARI 8895.00

MARI 8897.00: Co-op Workterm 7.
PREREQUISITE: MARI 8896.00

MARI 8898.00: Co-op Workterm 8.
PREREQUISITE: MARI 8897.00

MARI 8899.00: Co-op Workterm 9.
PREREQUISITE: MARI 8898.00

MARI 8900.00: Co-op Workterm 10.
PREREQUISITE: MARI 8899.00

MARI 8901.00: Co-op Workterm 11.
PREREQUISITE: MARI 8900.00

MARI 8902.00: Co-op Workterm 12.
PREREQUISITE: MARI 8901.00

MARI 8903.00: Co-op Workterm 13.
PREREQUISITE: MARI 8902.00

MARI 8904.00: Co-op Workterm 14.
PREREQUISITE: MARI 8903.00

MARI 8905.00: Co-op Workterm 15.
PREREQUISITE: MARI 8904.00

MARI 8906.00: Co-op Workterm 16.
PREREQUISITE: MARI 8905.00

MARI 8907.00: Co-op Workterm 17.
PREREQUISITE: MARI 8906.00

MARI 8908.00: Co-op Workterm 18.
PREREQUISITE: MARI 8907.00

MARI 8909.00: Co-op Workterm 19.
PREREQUISITE: MARI 8908.00

MARI 8910.00: Co-op Workterm 20.
PREREQUISITE: MARI 8909.00

Dean
Morris, C., BA (Hons), PhD (Cambridge), Professor (Psychology)

Chairperson of Department
Smith, B., MA (Calgary), PhD (Berkeley)

Professors Emeriti
Ford, C. A., MSc, PhD (Northwestern), MSc (Minneapolis), FRSC, Groningen, L., PhD (ETH Zurich)
Paz, R., MSc, PhD (McGill)
Radjavi, H., MA, PhD (Minneapolis)
Swaminathan, S. M., MSc, PhD (Medicine)
Thompson, A., Ph.D (Newcastle upon Tyne)

Professors
Brown, J., MSc, PhD (Toronto)
Coley, A. A., PhD (London)
Dilcher, K., MSc, PhD (Queens’s)
Hammond, D., MA, PhD (Queens’s) (Graduate Advisor Stats)
Janssen, J. C., PhD (Loughborough)
Johnson, K. P., MSc (Toronto), PhD (Boulder) (Graduate Advisor Math)
Mensken, J., MSc (McGill) (Director of Mathematics) (Co-op Academic Advisor)
Nuckowski, B. J., MSc, PhD (Calgary)
Selinger, P. (Dalhousie) (Director of Stats)
Smith, B., MA (Calgary), PhD (Berkeley)
Sanko, E., PhD (Waterloo)
Taylor, K., BSc (McGill), PhD (Dalhousie)
Thompson, K., PhD (Liverpool) (CRC Chair) (jointly with Oceanography)
Wood, E. J., MSc (McGill), PhD (Dalhousie)
Zay, Y., MSc (Western Kentucky), PhD (British Columbia) (cross appointment with Management)

Associate Professors
Brisko, R., PhD (Ottawa) (jointly with Computer Science)
Butiakw, J., MA, PhD (Queen’s) (Jointly with Biology)
Dawid, M., MBA, PhD (Dalhousie)
Fardis, S., MSc (Toronto), PhD (Mcgill)
Feist, A., MSc (Economics), PhD (Princeton)
Gu, B., MSc (Peking), PhD (Hong Kong) (Director of Stats)
Herbringer, C., MSc (Paris), PhD (Dalhousie) (jointly with Biology)
Ism, D., MSc, PhD (UBC) (Honors Advisor Math)
Kasden, J., MSc, PhD (UBC)
Mills-Fleming, J., MSc (UNBS) (Statistics)
Münch, A., PhD (Leningrad Inst. Mech. Eng.) (cross appointment with Department of Medicine)
Pronk, D., PhD (Utrecht)

Assistant Professor
Kenney, T., PhD (Cambridge)

Lecturers
Sarhan, A., PhD (Charles)
Sunseri, A., MA (U. Maine), AB (Boston)

Postdoctoral Fellows
Tan, J., PhD (Essex, IL, USA)
Wang, H., PhD (Ottawa)
Xu, X., PhD (Toronto)

Learning Centre Director
Steven, P., MSc (Delhi)

Statistical Consultant
Jones, C., MSc (Dalhousie)

Adjunct Professors
Beattie, M., PhD (Prince Edward Island), Mount Allison
Bonato, A., PhD (Waterloo) (University of New Brunswick)
Brunner, H., PhD (ETH Zurich) (Memorial)
Clark, N., PhD (Dalhousie) (Acadia)
Clements, J., PhD (Dalhousie) (Mount Allison University)
Conn, E., PhD (Regina) (Acadia)
Dawson, R., PhD (Cambridge) (Dalhousie)
Fenwick, S., PhD (Dalhousie) (University of Prince Edward Island)
Grant McLoughlin, J., PhD (UNB) (University of Fredericton)
Gu, B., PhD (Dalhousie) (Dalhousie)
Hartnell, B., PhD (Waterloo) (Dalhousie)
Haynes, R., PhD (Simon Fraser) (Memorial)
Herrick, S., PhD (Canbridge) (University of Wisconsin)
Hersom, G., PhD (University of St. Andrews) (Flagstone RE)
Irving, J., PhD (Waterloo) (Dalhousie)

Associate Professors
Beiko, R., PhD (Ottawa) (jointly with Computer Science)

Information concerning programs and courses in Mathematics follows immediately below. For Statistics, please refer to the Statistics section on page 575.
Mathematics

I. General Interest Courses

The Division offers several courses for non-majors who would like to know something about Mathematics:

- **MATH 1000.03/1001.03**: These core calculus courses are the starting point for any degree program in the sciences.
- **MATH 1001.03/1002.03**: This course is designed especially for BA students and others who wish to know about the historical and cultural aspects of mathematics.
- **MATH 1000.03**: This course serves as an introduction, through examples drawn from a wide variety of disciplines, to the basic ideas of statistics.
- **MATH 1100.03**: 1101.03**: Linear algebra and calculus are introduced to meet the needs of commerce students, but of interest to anyone wishing a brief introduction to either of these topics.

**Math 1215.03**: This course emphasizes the applications of calculus to the life sciences.

- **MATH 2101.03/2112.03**: Whereas calculus deals with continuous phenomena, this course deals with discrete objects, especially varieties of ways to count.
- **MATH 2120.03/2135.03**: This course introduces the basic ideas of matrix theory, linear equations and linear algebra. Topics of importance in many fields of study.

II. Degree Programs

One full credit in Mathematics is required for a BSc degree but none of the following courses may be used to satisfy this requirement:

- **MATH 1000.03/1001.03**: These core calculus courses are the starting point for any degree program in the sciences.
- **MATH 1001.03/1002.03**: This course is designed especially for BA students and others who wish to know about the historical and cultural aspects of mathematics.
- **MATH 1000.03**: This course serves as an introduction, through examples drawn from a wide variety of disciplines, to the basic ideas of statistics.
- **MATH 1100.03**: 1101.03**: Linear algebra and calculus are introduced to meet the needs of commerce students, but of interest to anyone wishing a brief introduction to either of these topics.

**Math 1215.03**: This course emphasizes the applications of calculus to the life sciences.

- **MATH 2101.03/2112.03**: Whereas calculus deals with continuous phenomena, this course deals with discrete objects, especially varieties of ways to count.
- **MATH 2120.03/2135.03**: This course introduces the basic ideas of matrix theory, linear equations and linear algebra. Topics of importance in many fields of study.

In addition to satisfying the Faculty of Science regulations for Honours Programs, all Honours programs in mathematics must include the following courses.

**Departmental Requirements**

**2000 level**

- **MATH 2040.03**
- **MATH 2050.03**
- **MATH 2112.03/3120.03**
- **MATH 2060.03/2080.03**
- **Two other credits in mathematics at or above the 2000 level - not including courses listed below**

**3000 level**

- **MATH 3000X/Y.06**
- **MATH 3000X/Y.06**

**4000 level**

- **MATH 4950.03**
- **Honours Research Project**
- **Two other credits at or above the 4000 level**

Students may choose programs with a concentration in Applied Mathematics or Pure Mathematics. Students wishing to include Computer Science should consider Combined Honours in Mathematics and Computer Science. Students wishing to include Statistics should consider Combined Honours in Mathematics and Statistics. All Honours programs must be approved by the Honours advisor.

Students interested in applied mathematics are advised to select a program that includes, in addition to the required courses above, courses from among the following:

- **MATH 2200.03**
- **MATH 2210.03/MATH 3120.03**
- **MATH 2220.03**
- **MATH 2240.03**
- **MATH 2300.03**
- **MATH 2300.06**
- **MATH 2330.03**
- **MATH 2330.06**
- **MATH 2360.03**
- **MATH 2360.06**
- **MATH 2380.03**
- **MATH 2380.06**
- **MATH 2400.03**
- **MATH 2400.06**
- **MATH 2400.09**
- **MATH 2400.12**
- **MATH 3400.03**
- **MATH 3400.06**
- **MATH 3400.09**
- **MATH 3400.12**
- **MATH 3500X/Y.06**

Students interested in pure mathematics are advised to select a program that includes, in addition to the required courses above, courses from among the following:

- **MATH 2200.03**
- **MATH 2210.03/MATH 3120.03**
- **MATH 2220.03**
- **MATH 2240.03**
- **MATH 2300.03**
- **MATH 2300.06**
- **MATH 2330.03**
- **MATH 2330.06**
- **MATH 2360.03**
- **MATH 2360.06**
- **MATH 2380.03**
- **MATH 2380.06**
- **MATH 2400.03**
- **MATH 2400.06**
- **MATH 2400.09**
- **MATH 2400.12**
- **MATH 3400.03**
- **MATH 3400.06**
- **MATH 3400.09**
- **MATH 3400.12**
- **MATH 3500X/Y.06**

**Honours Comprehensive Examination**

The Honours Comprehensive Examination in mathematics consists of a written paper of about 20-30 pages researched and prepared by the student. The topic is decided on in conjunction with the Honours advisor. The paper is also presented to the honours seminar. The work for this paper also constitutes the work for the required course MATH 4590.03.

**B. BSc Combined Honours**

A combined honours program may be appropriate for many students wishing to have a broad range of expertise.

Students interested in taking honours in mathematics and another subject as a combined program should consult the Mathematics Honours advisor. Combined programs in areas such as Mathematics and Statistics, Mathematics and Computer Science, Mathematics and Physics, Mathematics and Chemistry and Mathematics and Economics are common, but combined programs with Mathematics and any subject in the Faculty of Science, Faculty of Arts and Social Science, and Faculty of Computer Science can be arranged. These programs must satisfy University Regulations, but are designed to satisfy the interests and needs of the student.

Students contemplating a combined honours program in Mathematics and another subject should bear in mind that the work in either subject would probably be insufficient for admission to a regular graduate program. A qualifying year would usually be necessary.
C. BSc or BA (20 credit) Major in Mathematics

Departmental Requirements - Major

2000 level
• MATH 2030.03 and 2040.03
• At least one of MATH 2060.03 or 2080.03
• One additional half credit at or above 2000 level

3000 level
• Four other mathematics credits at or above the 3000 level. This selection may include MATH 3700, MATH 3800.

Students wishing to concentrate in Applied Mathematics should choose the extra mathematics courses from
• MATH 2000.03/MATH 2080.03
• MATH 2120.03
• MATH 2130.03
• MATH 2200.03
• MATH 2300.03
• At least one of MATH 2112.03, 2051.03 or 2505.03

Students wishing to concentrate in Pure Mathematics should choose the extra mathematics courses from
• MATH 2000.03/MATH 2080.03
• MATH 2112.03/MATH 2133.03
• MATH 2200.03
• MATH 2300.03
• MATH 2400.03

Students contemplating a career in Mathematics Education should choose the extra mathematics courses from
• MATH 2010.03
• MATH 2020.03
• MATH 2100.03
• MATH 2110.03
• MATH 2200.03
• MATH 2300.03
• MATH 2400.03

D. BSc Double Major in Mathematics and another Science subject, Double Major in Mathematics and a BA Subject

Student completing a double major with Mathematics can fulfill the Mathematics requirements by following one of two programs below. In both cases, students are advised to consult with the department.

Pure Mathematics

2000 level
• MATH 2000.03 and 2020.03
• At least one of MATH 2010.03 or 2135.03

3000 level
• Two other mathematics credits at or above the 3000 level. This selection may include MATH 3700, MATH 3800.

Applied Mathematics

2000 level
• MATH 2000.03
• MATH 2010.03, 2040.03
• MATH 2120.03
• At least one of MATH 2060.03 or 2080.03

3000 and 4000 level
• MATH 3120.03
• At least three of MATH 3080.03, 3210.03, 3250.03, 3300.03, 3330.03, 3400.03, 3900.03, 4190.03, 4220.03, 4230.03, 4250.03, 4540.03, 4560.03

E. Co-op Education in Mathematics

Co-operative Education in Science (Science Co-op) is a program where academic study is combined with paid career related work experience. Students alternate three work terms throughout their academic study terms and graduate with a Bachelor of Science Co-op. Science Co-op enables students to apply their knowledge directly while providing them with work experience that assists in making educated career choices. Students apply to join Science Co-op before their second year of study. If accepted into the Science Co-op program, students are required to register for and attend the Science Co-op Seminar Series (SCS) 2800.03 in the fall of the year they join.

See the “Co-operative Education in Science” section of this calendar, or http://www.sciencecoop.dal.ca, for information on Science Co-op such as Science Co-op requirements, eligibility, how to apply, deadlines and other related information.

For further information, please see http://www.sciencecoop.dal.ca

Co-op Academic Advisor in Mathematics
Dr. Milson (494-6366) rmilson@dal.ca

F. BSc or BA (15 credit) with Minor in Mathematics

A BSc (15 credit) degree program with a Minor in Mathematics is available to students in the Faculty of Science. Requirements are outlined in the College of Arts and Science Minors section of this Calendar starting on page 129.

Departmental Requirements
• MATH 1000.03/MATH 1010.03 or MATH 1500.00XY
• MATH 2051.03
• MATH 2100
• At least one of MATH 2112.03, 2051.03 or 2505.03

G. Minor in Mathematics

Minor programs allow students to develop subject specialities in addition to their major or honours subjects. Minors in other subjects are normally added to a four-year major or concentrated honours program. Students in other 20 credit degree programs may choose to include a Minor in Mathematics in their program. Requirements are outlined in the College of Arts and Science Minors section of this Calendar starting on page 129.

H. Minors available to students in Mathematics

Minor programs allow students to develop subject specialities in addition to their major or honours subjects. Minors in other subjects are normally added to a four-year major or concentrated honours program (including co-op programs).

Students in a 20 credit BSc program in Mathematics may choose to include a Minor in Mathematics in their program. Requirements are outlined in the College of Arts and Science Minors section of this Calendar starting on page 129.

I. BSc/Engineering or BA/Engineering Concurrent Programs

Students will normally complete the requirements for a 15 Credit BSc or 15 Credit BA, and the first two years of engineering studies leading to the Diploma in Engineering. The concurrent program can be completed in three years. Details are provided in the College of Arts and Science Degree Requirements on page 125 of this calendar.

The departmental requirements for this program are as outlined above for the 15 Credit BSc with Minor in Mathematics.

Alternatively, eligible students can complete the following departmental requirements:
The following three courses below the 1000 level are offered by the College of Continuing Education. Students register and pay for them at the College of Continuing Education located at 1220 LeMarchant Street, 2nd Floor or by calling (902) 494-2175 (see page 41, College of Continuing Education, for more details).

**MATH 0009.00: Academic Math.**  
This non-credit grade 12 math course is intended for students who want to upgrade their math skills for admission to the Bachelor of Commerce, Management or Nursing programs or the pre-calculus plus-math course. The course contains a thorough investigation of elementary functions, Probability and geometry topics round out this course.

**FORMAT: Class 3 hours, tutorial 1 hour**  
**PREREQUISITE: At least grade 10 academic math or equivalent**

**MATH 0010.00: Pre-Calculus Mathematics (NS Grade 12 Pre-Calculus Math).**  
This fast-paced 1 term course has been designed for calculus bound students who have a firm grasp of grade 11 and 12 math skills. Composite, inverse, polynomial and rational functions, exponential functions with base e, and trigonometry using radian measure are studied.

**FORMAT: Class 3 hours, tutorial 1 hour**  
**PREREQUISITE: Recommended at least 75% in grade 11 advanced and 12 advanced math**

**MATH 0011.00: Pre-Calculus Plus (NS Grade 12 pre-calculus).**  
This full year course has been designed for the majority of students, either requiring Pre-calculus for admittance to the Dalhousie BSc program or as preparation for Calculus 1000. In addition to a more in depth coverage of the pre-calculus topics presented in MATH 0010.00, a review of the relevant math 11 and 12 material is provided.

**FORMAT: Class 3 hours, tutorial 1 hour**  
**PREREQUISITE: Solid understanding of Grade 11 and 12 math or equivalent**

**MATH 1000.03: Differential and Integral Calculus I.**  
This course offers a self-contained introduction to differential and integral calculus. The topics include functions, limits, differentiation of polynomial, exponential and logarithmic functions, product, quotient and chain rules, applications of differentiation, antiderivatives and definite integrals, integration by substitution. A sequel to this course is MATH 1010.03. The XY version of this course covers the same material, but the course duration is spread over the Fall and Winter term. The format of the XY course (1.5 hour workshopping twice a week, and the smaller class size) allows for a more interactive learning environment than is a regular lecture format.

**PREREQUISITE: Nova Scotia Mathematics advanced 11 and 12 or pre-calculus.**

**EXCLUSION: MATH 1215.03, MATH 1210.03, MATH 1180X/Y.**

**MATH 1001.03: Mathematics for Liberal Arts Students I.**  
For students who wish to become acquainted with mathematics as an art rather than as a tool for the sciences. Selection of elementary topics will be discussed with a view to illuminating historical and cultural aspects of the subject. Required work will include a series of written reports on assigned readings and a major essay. This course cannot be used to partially satisfy the BSc mathematics requirement.

**FORMAT: Lecture 3 hours, MLC.**

**PREREQUISITE: Grade 12 math or equivalent.**

**MATH 1002.03: Mathematics for Liberal Arts Students II.**

Same as 1001.03 above, but with a different set of topics. Either one or both of 1001.03 and 1002.03 may be taken for credit. This course cannot be used to partially satisfy the BSc mathematics requirement.

**FORMAT: Lecture 3 hours, MLC.**

**MATH 1010.03: Differential and Integral Calculus II.**  
A continuation of the study of calculus with topics including: Riemann sums, techniques of integration, improper integrals, differential equations and applications, parametric equations and polar coordinates, sequences and series, Taylor series.

**PREREQUISITE: MATH 1006.03, or MATH 1215.03 with a grade of B- or better**
TABLE 1000.03: Introductory Statistics for Science and Health Sciences.
See course description for STAT 1000.03 in the Statistics section of this calendar.

MATH 1105.03: Mathematics for Commerce.
An introduction to matrices, linear programming, mathematics of finance, probability and differential calculus. All topics are taught with an emphasis on applications to business. This course cannot be used to partially satisfy the BSc Mathematics requirement.
FORMAT: Lecture 3 hours, MLC
PREREQUISITE: Nova Scotia Advanced Mathematics 11 or 12 or equivalent
EXCLUSION: MATH 1101.03, MATH 1200.03

MATH 1215.03: Life Sciences Calculus.
This course emphasizes the application of calculus to the life sciences. The concepts and content studied include derivatives, techniques of differentiation, exponential and logarithmic functions, optimization, basic ordinary differential equations, integration, and techniques and applications of integration.
NOTE: Students who have already received credit for MATH 1213.03 cannot subsequently receive credit for MATH 1113.03.
FORMAT: Lecture/tutorial
PREREQUISITE: Nova Scotia Mathematics 11 and 12 or pre-calculation is highly recommended.
EXCLUSION: MATH 1000.03, MATH 1500C/Y.06

MATH 1280.03: Engineering Mathematics I.
This forms an introduction to differential and integral calculus for Engineering students. All topics of Math 1000.03 are covered, but in greater depth. In addition, this course covers functions, differentiation of polynomial, trigonometric, exponential and logarithmic functions, product, quotient and chain rules, Taylor series, antiderivatives and definite integrals, Riemann sums, polynomial approximations, and numerical approximations of integrals.
NOTE: Students who have already received credit for MATH 1281.03 cannot subsequently receive credit for MATH 1000.03 or MATH 1115.03.
FORMAT: Lecture/tutorial 9hr.
PREREQUISITE: Nova Scotia Mathematics advanced 11 and 12 or pre-calculation is highly recommended.
EXCLUSION: MATH 1000.03, MATH 1215.03

MATH 1290.03: Engineering Mathematics II.
This course is a sequel to MATH 1280. All topics of MATH 1010.03 are covered, but in greater depth. This course also introduces the students to the application of mathematics in engineering problems.
NOTE 1: Students who have already received credit for MATH 1291.03 cannot subsequently receive credit for MATH 1010.03.
NOTE 2: MATH 1010.03 is not equivalent to MATH 1290.03.
FORMAT: Lecture/tutorial 9hr.
PREREQUISITE: MATH 1280.03

MATH 1500X/Y.06: Calculus.
This course is intended primarily for students who are considering a major or an honours program in the physical or mathematical sciences. The topics of MATH 1000/MATH 1010 are covered, but in greater depth. MATH 1500 is an equivalent as a credit to MATH 1000/MATH 1010.
NOTE: Credit can only be given for one of the courses 1000 or 1010 if X or Y are completed in consecutive terms and partial credit cannot be given for a single term.
FORMAT: Lecture 3 hours
PREREQUISITE: Nova Scotia Mathematics advanced 11 and 12 or pre-calculation is highly recommended.
EXCLUSION: Credit can be given for only one of MATH 1000/MATH 1010 and MATH 1100.

MATH 1600.03: Spectrum of Mathematics.
This course teaches basic mathematical reasoning, and highlights topics that are not part of the standard first-year mathematics curriculum. Topics may include: logic and computers, symmetry in science, prime numbers and cryptography, finite fields and communication error lists, surfaces and the shape of space.
FORMAT: Lecture 3 hours
PREREQUISITE: MATH 1000.03, advanced placement in Calculus, or permission of instructor.

MATH 2001.03: Intermediate Calculus I.
Topics include review of parametric equations, polar coordinates, conic sections, coordinate systems and vectors, dot product and cross product, vector functions, derivatives and integrals of vector functions, arc length and curvature, functions of several variables and partial derivatives, directional derivatives and double and triple integrals.
FORMAT: Lecture 3 hours
PREREQUISITE: MATH 1010.03

MATH 2002.03: Intermediate Calculus II.
Topics include multiple integrals and changes of variables, and vector calculus, with an emphasis on Green's and Stokes' theorems. The course also includes an introduction to second order ordinary differential equations.
FORMAT: Lecture 3 hours
PREREQUISITE: MATH 2001.03

MATH 2030.03: Matrix Theory and Linear Algebra I.
This course is a self-contained introduction to Matrix Theory and Linear Algebra. Topics include: subspaces, linear transformations, determinants, eigenvalues and eigenvectors, systems of linear equations. Students should note that this is a second-year course and, although it has no formal first-year prerequisites, certain mathematical maturity is expected.
FORMAT: Lecture 3 hours, MLC
PREREQUISITE: Nova Scotia advanced Mathematics 11 or 12

MATH 2040.03: Matrix Theory and Linear Algebra II.
This course is a continuation of MATH 2030.03. Topics include: vector spaces and linear transformations, eigenvalues and eigenvectors, similarity and diagonalization, inner product spaces and orthogonal transformations, diagonalization of symmetric matrices and quadric forms.
FORMAT: Lecture 3 hours
PREREQUISITE: MATH 2030.03, and 1000.03 or 1500C/Y.06 or 1215.03
EXCLUSION: MATH 2135.03

MATH 2051.03: Problems in Geometry.
This is a basic course for all students interested in geometry. Topics from Euclidean and non-Euclidean geometry may include: transformation geometry, symmetry groups, finite groups, wallpaper groups and the crystallographic restriction, similarities, projective geometry and the classical theorems of Minkows, Desargues, Pappus, Pascal, hyperbolic geometry.
FORMAT: Lecture 3 hours
PREREQUISITE: MATH 1000.03 or 1500C/Y.06

MATH 2060.03: Introduction to Probability and Statistics I.
See course description for STAT 2060.03 in the Statistics section of this calendar.

MATH 2080.03: Statistical Methods For Data Analysis & Inference.
See course description for STAT 2080.03 in the Statistics section of this calendar.

MATH 2112.03: Discrete Structures I.
This course continues CSCI2113.03/MA TH2113.03. This course covers some basic concepts in discrete mathematics which are of particular relevance to students of computer science, engineering, and mathematics. The topics to be covered include: induction, recurrence relations, relations, functions, algorithm structures and introductory graph theory. The topics to be discussed are fundamental to most areas of Mathematics and have wide applicability to Computer Science.
FORMAT: Lecture 3 hours
PREREQUISITE: Nova Scotia Mathematics 441 or equivalent
CROSS-LISTING: CSCI 2112.03

MATH 2113.03: Discrete Structures II.
This course continues CSCI2112.03/MATH2112.03. This course covers some basic concepts in discrete mathematics which are of particular relevance to students of computer science, engineering, and mathematics. The topics to be covered include: induction, recurrence relations, relations, functions, algorithm structures and introductory graph theory. The topics to be discussed are fundamental to most areas of Mathematics and have wide applicability to Computer Science.
FORMAT: Lecture 3 hours
CROSS-LISTING: CSCI 2113.03

MATH 2120.03: Methods for Ordinary Differential Equations.
A comprehensive introduction to the theory of ordinary differential equations (ODEs), which is a broad field in pure and applied mathematics with numerous applications in other sciences. The topics include: special types of ODEs of 1st order, exactness, linear independence, solutions of linear homogeneous and non-homogeneous equations, power series solutions, and the qualitative behavior of solutions.
FORMAT: Lecture 3 hours, MLC
PREREQUISITE: MATH 2001.03

Mathematics 531
MATH 3080.03: Introduction to Complex Variables.
An introduction to the basic elements of complex analysis. Topics include complex numbers, functions, differentiation and integration in the complex plane, some special mappings, series in general, Taylor and Laurent Series, residues, some principles of conformal mapping theory.
FORMAT: Lecture 3 hours
PREREQUISITE: MATH 2002.03
MATH 3120.03: Differential Equations.
The topics discussed are of great importance to any student interested in applied mathematics. Areas include Fourier series, orthogonal polynomials, Sturm-Liouville problems, the classical partial differential equations, and some applications to physics, chemistry and engineering.
FORMAT: Lecture 3 hours
PREREQUISITE: MATH 2120.03 or MATH 3110.03 or PHYS 2140.03
MATH 3140.03: Introduction to Wavelets.
Wavelet analysis provides an extremely powerful and highly flexible tool for the compression, denoising, and reconstruction of both audio and image signals. This course will develop many of the essential mathematical ideas behind Fourier analysis and wavelets. Many applications will also be discussed and examined.
FORMAT: Lecture 3 hours
PREREQUISITE: MATH 2002.03 and MATH 2100.03
MATH 3210.03: Introduction to Numerical Analysis.
This course covers the practice as well as theory of basic numerical techniques. Topics may include: root finding, interpolation, integration, initial value problems, linear and nonlinear fitting, boundary value problems. We will emphasize error analysis and stability of methods, as well as practical implementation on a computer.
PREREQUISITE: Math 2001.03 or (MATH 2100 and MATH 2100)
MATH 3260.03: Mathematical Modelling II.
The course looks at several different applications of differential equations. Each application is chosen to learn a basic mathematical technique. Topics include: dimensional analysis, phase plane methods, multiple scales, boundary layers, delay differential equations, synchronization, chaos.
PREREQUISITE: MATH 2520.03 or consent of the instructor
MATH 3300.03: Optimization.
An introduction to the concepts and applications of linear programming. Topics include the simplex method for linear programming, duality and sensitivity analysis. Some of these topics are illustrated by means of interactive computer packages.
FORMAT: Lecture 3 hours
PREREQUISITE: MATH 3380.03
MATH 3330.03: Applied Graph Theory.
This course offers an introduction to graph theory, with an emphasis on applications and modeling. Topics include: paths and cycles, shortest route problem, connectivity and trees, minimum spanning trees, network flow, planar graphs, matchings, assignment problem, graph colouring and applications to scheduling. Hamilton-cycles, and the Travelling Salesman Problem.
PREREQUISITE: MATH 2120.03 or MATH 2100.03
MATH 3340.03: Regression and Analysis of Variance.
See course description for STAT 3360.03 in the Statistics section of this calendar.
MATH 3350.03: Design of Experiments.
See course description for STAT 3350.03 in the Statistics section of this calendar.
MATH 3360.03: Probability.
See course description for STAT 3360.03 in the Statistics section of this calendar.
MATH 3380.03: Sample Survey Methods.
See course description for STAT 3380.03 in the Statistics section of this calendar.
MATH 3400.03: Classical Game Theory.
This course will cover the important concepts of classical game theory: game trees, dominance, zero-sum games, saddle points, utility theory, non-zero sum games, Nash equilibrium, non-competitive solutions. Prisoner’s dilemma, Chicken, Newcomb’s problem. There will be applications to many areas including anthropology, biology, business, economics and philosophy.
FORMAT: Lecture 3 hours
PREREQUISITE: MATH 2010.03, or permission of the instructor
MATH 3460.03: Intermediate Statistical Theory.

This course provides a logical development of some of the major concepts in statistical inference. Topics include: estimation, confidence intervals, hypothesis testing, goodness-of-fit, nonparametric methods, regression, analysis of variance, and design of experiments. The course is intended for students who have completed MATH 3030X/Y.06 or equivalent and who are interested in pursuing further studies in statistics.

MATH 4055.03: Advanced Algebra II.

Topics may include: groups, group actions, quotient groups, Sylow theorems, field theory and field extensions, and Galois theory. FORMAT: Lecture 3 hours

PREREQUISITE: MATH 3030X/Y.06

MATH 4065.03: Algebraic Geometry.

This is a first course in algebraic geometry and will introduce students to the basic properties of affine and projective varieties. Topics covered will include: solutions from local properties of plane curves, elliptic curves, Hirono's Theorem, Riemann-Roch Theorem. FORMAT: Lecture 3 hours

PREREQUISITE: MATH 3030X/Y.06

MATH 4066.03: Advanced Statistical Theory I.

See course description for STAT 4066.03 in the Statistics section of this calendar.

MATH 4070.03: Topics in Number Theory.

This course is an introduction to modern cryptographic techniques and its mathematical foundations. The material covered includes: elementary number theory and algebra, classical cryptosystems, probability, the Data Encryption Standard, prime number generation and primality tests, public key cryptosystems, and further applications, such as digital signatures and identification. PREREQUISITE: MATH 1000.03, 1010.03, 2020.03, and at least one full-year mathematics course beyond the first year or permission of the instructor

CROSS LISTED: CSC 4116.03

MATH 4120.03: Analytic Number Theory.

A discussion of Riemann's theory of number and integration. The topics include: measurable sets, functions and spaces, Lebesgue measure and the existence of non-measurable sets, the Lebesgue integral and convergence theorems, absolute continuity, the classical Lebesgue spaces, decomposition and generation of measures, product measures and Fubini's Theorem.

PREREQUISITE: MATH 3030X/Y.06

MATH 4135.03: Introduction to Category Theory.

A category is a collection of objects and morphisms between them. The morphisms must satisfy certain conditions that are modeled on the intuitive notion of a function. Categories are used to specify the structure of a mathematical theory and to study the relationships between different theories. Topics may include: categories, functors, natural transformations and adjointness are introduced with emphasis on examples drawn from undergraduate Mathematics and theoretical Computer Science. The calculus of diagram chasing, limits, colimits and Kan extensions is explained in detail.

PREREQUISITE: MATH 3030X/Y.06 or permission of the instructor

CROSS LISTED: MATH 5135.03

MATH 4136.03: Topics in Category Theory.

Topics of current interest in category theory will be discussed with an emphasis on open problems. No previous knowledge of category theory is required. The necessary concepts will be discussed in the context of their applications. However, a certain familiarity with the basic concepts of modern mathematics such as found in courses on algebra and topology would be an asset.

PREREQUISITE: MATH 3030X/Y.06 and consent of instructor

CROSS LISTED: MATH 5136.03

MATH 4140.03: Introduction to Functional Analysis.

An introduction to the basic principles of functional analysis including the following topics: infinite dimensional vector spaces, normed spaces, inter-product
spaces, Banach and Hilbert spaces, linear and continuous linear functionals, the Hahn-Banach Theorem, the principle of uniform boundedness, dual space, weak* topology, and the Alaoglu theorem, the open mapping and closed graph theorems, and consequences and applications.

FORMAT: Lecture 3 hours
PREREQUISITE: MATH 2135.03 and 3500X/Y06
cross-listing: MATH 3140.03

MATH 4200.03: Introduction to Partial Differential Equations.
This course is a basic introduction to the theory of partial differential equations. Topics covered include: modeling physical systems, method of characteristics, Laplace, wave and heat equations, separation of variables, eigenfunction expansions, integral transforms, maximum principles and Ritz-Raleigh theory.

FORMAT: Lecture 3 hours
PREREQUISITE: MATH 2120.03 or MATH 3110.03
cross-listing: MATH 3220.03

MATH 4220.03: Introduction to Partial Differential Equations.
This course is a basic introduction to the theory of partial differential equations. Topics covered include: modeling physical systems, method of characteristics, Laplace, wave and heat equations, separation of variables, eigenfunction expansions, integral transforms, maximum principles and Ritz-Raleigh theory.

FORMAT: Lecture 3 hours
PREREQUISITE: MATH 2120.03 or MATH 3110.03
cross-listing: MATH 3220.03

MATH 4230.03: Partial Differential Equations.
This course will provide students with an introduction to advanced topics in partial differential equations in a variety of settings. Topics may include: reaction diffusion systems, pattern formation, variational methods, applications to physical sciences, variational methods, Sobolev theory.

FORMAT: Lecture 3 hours
PREREQUISITE: MATH 3120.03 or permission of the instructor
cross-listing: MATH 3220.03

MATH 4250.03: Asymptotic Analysis.
Most mathematical models of physical systems cannot be solved exactly. Often such systems have a naturally occurring small parameter which may be exploited using asymptotic analysis techniques. In this course, we will study a variety of physical systems which illustrate many of the common approaches used in asymptotic analysis. Focus will be on applications to ordinary and partial differential equations.

FORMAT: Lecture 3 hours
PREREQUISITE: MATH 2022.03 or MATH 2120.03 and MATH 3110.03

MATH 4230.03: Partial Differential Equations.
This course will provide students with an introduction to advanced topics in partial differential equations in a variety of settings. Topics may include: reaction diffusion systems, pattern formation, variational methods, applications to physical sciences, variational methods, Sobolev theory.

FORMAT: Lecture 3 hours
PREREQUISITE: MATH 3120.03 or permission of the instructor
cross-listing: MATH 3220.03

MATH 4300.3: Topics in Graph Theory.
This course is intended for math and computer science students. Items to be selected from the following topics: graphs and matrices, graphs and groups, network analysis, extremal graph theory, enumeration problems, and algebraic graph theory.

FORMAT: Lecture 3 hours
PREREQUISITE: MATH 2113.03 or permission of the instructor
cross-listing: MATH 3320.03

MATH 4310.03: Introduction to Algebraic Topology. An introduction to algebraic topology, including the following topics: the fundamental group, covering spaces, simplicial complexes, with an emphasis on how to model these structures with other fields of mathematics, such as matrix theory and linear algebra, commutative algebra, topology, analysis, probability, and logic.

FORMAT: Lecture 3 hours
PREREQUISITE: MATH 3010X/Y06
cross-listing: MATH 5320.03

MATH 4330.3: Discrete Random Structures.
This course introduces a common framework for combinatorial structures (graphs, digraphs, hypergraphs, posets, matroids, lattices, finite topologies, simplicial complexes), with an emphasis on how to model these structures with other fields of mathematics, such as matrix theory and linear algebra, commutative algebra, topology, analysis, probability, and logic.

FORMAT: Lecture 3 hours
PREREQUISITE: MATH 2060.03 and MATH 3010X/Y06
cross-listing: MATH 5560.03

MATH 4360.03: Combinatorial Optimization.
Various graph algorithms will be presented and analyzed. Specifically we will use the algorithms for the problems: minimum spanning tree, shortest path, maximal flow, minimum cost flow, maximum matching. For each problem, various algorithms will be presented and compared. The link with Linear Programming, especially LP-Duality, will receive special attention.

FORMAT: Lecture 3 hours
PREREQUISITE: MATH 3330.03 or CSCE 3110.03 or permission of the instructor
cross-listing: MATH 5330.03, CSCE 4115.03

MATH 4370.03: Topics in Topology and Functional Analysis. Topology is the mathematical subject that allows one to make precise the concept of continuity. Rudin defines functional analysis as the study of certain topological-algebraic structures and of the methods by which knowledge of these structures can be applied to analytic problems. He adds that the subject is huge and growing rapidly and, accordingly, we offer a "topics" course.

FORMAT: Lecture 3 hours
PREREQUISITE: MATH 3120.03 and MATH 2905.03 or permission of the instructor
cross-listing: MATH 5190.03

MATH 4395.03: Topics in Topology and Functional Analysis. Topology is the mathematical subject that allows one to make precise the concept of continuity. Rudin defines functional analysis as the study of certain topological-algebraic structures and of the methods by which knowledge of these structures can be applied to analytic problems. He adds that the subject is huge and growing rapidly and, accordingly, we offer a "topics" course.

FORMAT: Lecture 3 hours
PREREQUISITE: MATH 3120.03 and MATH 2905.03 or permission of the instructor
cross-listing: MATH 5190.03

MATH 4400.03: Ordinary Differential Equations - Qualitative Theory. Qualitative theory is concerned with determining the behaviour of solutions of differential equations without finding explicit solutions. Topics are selected from Lyapunov stability theory, stable and unstable manifolds of singular points and periodic solutions, classification of planar singular points, structural stability and Hamiltonian systems. Other topics at the instructor’s discretion.

FORMAT: Lecture 3 hours
PREREQUISITE: MATH 4180.03
cross-listing: MATH 5200.03

MATH 4420.03: Ordinary Differential Equations - Qualitative Theory. Qualitative theory is concerned with determining the behaviour of solutions of differential equations without finding explicit solutions. Topics are selected from Lyapunov stability theory, stable and unstable manifolds of singular points and periodic solutions, classification of planar singular points, structural stability and Hamiltonian systems. Other topics at the instructor’s discretion.

FORMAT: Lecture 3 hours
PREREQUISITE: MATH 4180.03
cross-listing: MATH 5200.03

MATH 4420.03: Ordinary Differential Equations - Qualitative Theory. Qualitative theory is concerned with determining the behaviour of solutions of differential equations without finding explicit solutions. Topics are selected from Lyapunov stability theory, stable and unstable manifolds of singular points and periodic solutions, classification of planar singular points, structural stability and Hamiltonian systems. Other topics at the instructor’s discretion.

FORMAT: Lecture 3 hours
PREREQUISITE: MATH 4180.03
cross-listing: MATH 5200.03

MATH 4420.03: Ordinary Differential Equations - Qualitative Theory. Qualitative theory is concerned with determining the behaviour of solutions of differential equations without finding explicit solutions. Topics are selected from Lyapunov stability theory, stable and unstable manifolds of singular points and periodic solutions, classification of planar singular points, structural stability and Hamiltonian systems. Other topics at the instructor’s discretion.

FORMAT: Lecture 3 hours
PREREQUISITE: MATH 4180.03
cross-listing: MATH 5200.03
MATH 4370.03: Combinatorics: Techniques and Structures.
We introduce counting techniques and combinatorial structures, and show their applications and use in all branches of mathematics. Counting techniques include combinations and permutations, the pigeonhole principle, inclusion/exclusion. Advanced techniques include recurrence relations, generating functions and power series. Structures include partial orders, set systems and transversals, and finite geometries.
FORMAT: Lecture
PREREQUISITE: MATH 2122.03 or MATH 2501.03 or MATH 3501.03 or MATH 3502.03
CROSS-LISTING: MATH 5370.03

MATH 4410.03: Cosmology.
A self-contained introduction to cosmology will be given and no prior knowledge of differential geometry or general relativity will be assumed (although some knowledge of elementary differential equations will be useful). A cosmological model is a model of the universe, as a whole, on the largest scales; the emphasis of the course will be on the modelling aspects of cosmology.
FORMAT: Lecture 3 hours
PREREQUISITE: Instructor’s permission
CROSS-LISTING: MATH 5410.03, PHYC 4660.03/5660.03

MATH 4500.03: Introduction to Harmonic Analysis.
This course covers the basic elements of L-space, convolution, interpolation, maximal functions, Fourier analysis of functions, and the theory of generalized functions, or distributions. Further topics may include L2-Sobolev spaces, boundary values of harmonic functions, spherical harmonics, singular integral operators, or multipliers.
FORMAT: Lecture
PREREQUISITE: MATH 4010.03 or MATH 4500.03 with permission of instructor
CROSS-LISTING: MATH 5500.03

MATH 4530.03: Differential Geometry.
This course is a self-contained introduction to manifold theory. Topics include elements of surface theory, the tangent space, vector fields, differential forms and more general tensors, the Lie derivative, connections, Riemannian geometry, applications in mechanics and general relativity.
FORMAT: Lecture 3 hours
PREREQUISITE: MATH 3084.03 or MATH 3501.03 or permission of the instructor
CROSS-LISTING: MATH 5530.03

MATH 4540.03: Applied Analysis.
This course is an introduction to the methods of modern applied analysis. This course is suitable for advanced undergraduate and graduate students. The topics include classification of planar dynamical systems, non-linear dynamics, and equilibria, global non-linear techniques, closed orbits and limit cycles. Calculus of Variations: first and second variations, symmetries, conservation laws and Noether’s theorem, Hamiltonian formalism. Time permitting, other topics in Applied Analysis such as tensor calculus will be covered.
FORMAT: Lecture
PREREQUISITE: MATH 3120.03 or consent of instructor
CROSS-LISTING: MATH 5540.03

MATH 4560.03: General Relativity.
A review of differential geometry will be given followed by an introduction to the general theory of relativity. Various topics will be discussed, including: invariant theory and geometrodynamics, spherically symmetric metrics and the Schwarzschild solution, gravitational collapse, black holes, and cosmology.
FORMAT: Lecture 3 hours
PREREQUISITE: MATH 3045.03 or permission of the instructor
CROSS-LISTING: MATH 5560.03, PHYC 4660.03/5660.03

MATH 4600.03: Automata and Computability.
See course description for CSCI 4512.03 in the Computer Science section of this calendar

MATH 4680.03: Topics in Logic and Computation.
This course covers topics of current interest in logic and the foundations of computation. Suitable topics include: formal logic, soundness and completeness, Gödel’s incompleteness theorem, formal set theory, the Zermelo-Fraenkel axioms, non-standard models, independence of axioms, lambda calculus and foundations of functional programming languages, proof theory, semantics.

NOTE: Please consult the instructor for the topics offered in a particular year. This course is suitable for advanced undergraduates and graduate students from both mathematics and computer science.
FORMAT: Seminar
PREREQUISITE: MATH 3030/5030 or MATH 3501/5501 or CSCI 3110/5110 and CSCI 3136/5136, or permission of the instructor.
Suggested prerequisites for math students are algebra or analysis at honours undergraduate level. Students from computer science should be familiar with formal language theory and concepts of programming languages. All students should be comfortable with writing mathematical proofs. When in doubt about prerequisites, please consult the instructor.
CROSS-LISTING: MATH 5600.03

MATH 4800.03: Introduction to Mathematical Research.
This course is intended to introduce students to the science and methodology of research in the mathematical sciences. The course will be organized around topics from a wide spectrum of mathematics from which students will be guided to investigate open problems. Conjectures will be formulated and evidence will be developed.
FORMAT: Lecture 5 hours
PREREQUISITE: MATH 2002.03, 2040.03 or 2153.03, MATH 3030/5030 or permission of the instructor
CROSS-LISTING: MATH 5800.03, CSCI 4800.03

MATH 4900.03: Combinatorial Game Theory.
This course looks at 2-player games of strategy where there are no chance devices and both players have perfect information. The surprising mathematical structure underlying these games will be introduced along with the evaluation scheme and its application to specific games in the course of hot, all-small and impartial games.
PREREQUISITE: MATH 2010.03/2040.03, 2011.03/2041.03, 2001.03/2002.03
CROSS-LISTING: MATH 5900.03

MATH 4950.03: Honours Research Project.
A requirement for the mathematics honours degree, this course consists of a supervised research project culminating in a written report and an oral presentation in the honours seminar. Enrollment must be approved by the mathematics honours coordinator.
NOTE: Students will be required to take two full 4000-level courses in addition to this one.

MATH 8891.00: Co-op Work-Term I.
PREREQUISITE: SCIE 3700.03

MATH 8892.00: Co-op Work-Term II.
PREREQUISITE: MATH 8891.00

MATH 8893.00: Co-op Work-Term III.
PREREQUISITE: MATH 8892.00

Medical Sciences

* Pending SPHEC approval

I. Introduction

The Medical Sciences program is a new program at Dalhousie aimed at students who wish to initiate studies in medical science as undergraduates. The program will introduce students to subjects such as human anatomy and physiology, neuroscience, epidemiology, and medical ethics.

In the first two years of the program, students will take core courses in Biology, Chemistry, Math, Physics, Physiology, Microbiology, Social Determinants of Health, and Psychology. These courses will not only provide a solid background in basic sciences, but will prepare students for admission tests for various medical sciences disciplines (such as the MCAT), meet (or exceed) the early pre-requisites for acceptance into medically related professional faculties (such as Medicine, Dentistry, and Pharmacy) locally and across the country, and meet (or exceed) the early pre-requisites required for acceptance into biomedical sciences graduate programs at Dalhousie and across the country. In their third and fourth years, students take core and elective courses in various subjects within the medical sciences. Students will graduate with a broad biomedical science background that will prepare them for a variety of clinical/professional programs, graduate school, or employment in the biotechnology industry or government.

Career path advising and the course selection process are critical to the success of the Medical Sciences undergraduate program. In addition to guidance with respect to professional schools and their entry requirements, academic advising is provided so that students are aware of what courses are required should they want to enter graduate programs in the various biomedical science disciplines. Opportunities are available to concentrate in areas of special interest (e.g., Immunology, Microbiology, Pharmacology). In addition, students may choose to loop-out and join the undergraduate programs in Biology, Biochemistry & Molecular Biology, Microbiology & Immunology, or Psychology & Neuroscience, if that better suits their interests or career goals.

II. Degree Programs

The core required courses not only provide a broad background in biomedical science but they are also designed to meet prerequisites of more advanced selective courses and to provide a guided learning experience through the program content.

The program also includes “Selective” courses in a number of relevant biomedical fields (a selective is a course from a predetermined list provided by the program director). Students will be encouraged to choose their selective courses carefully such that they result in more specialized education in a particular area of emphasis (in Immunology or Biochemistry, for example). This will allow them to take advanced courses in the chosen area in their fourth year, to pursue Honours research if they wish, and to be excellent candidates for graduate programs in a specialized field at Dalhousie or elsewhere in Canada.

The program includes four full credits in open “Electives”, which allows students to take any course offered at Dalhousie (at the appropriate level). Students will be encouraged to fulfill the Writing requirement using one or both of the Electives in the first year. Students can fulfill the elective slot with selectives if they wish, the reverse will not be allowed.

NOTE: Most second and third year core courses in the Medical Sciences curriculum have pre-requisites with minimum grade requirements in those prerequisite courses. Please consult the appropriate calendar section for these requirements.

A. BSc (20 credit) Honours in Medical Sciences

An Honours degree in the Medical Sciences program aims to prepare students for graduate studies in a number of medically related fields. The Medical Sciences Honours program will be restricted to students with a minimum cumulative GPA of 3.3. Honours students will produce a research-based thesis that will represent a full credit in their program. Students will have the flexibility to ask their Honours research advisor in a laboratory of their choice, subject to agreement. Honours students will complete a seminar in which the research project is presented. Students will be encouraged to take an elective course in a field of special interest, and to be excellent candidates for graduate programs in a specialized field at Dalhousie or elsewhere.

In addition to the courses listed below, students must ensure that they satisfy the requirements outlined in the “Requirements” section for the College of Arts and Science (page 125). For the required Writing class, students can choose from the list of “Writing Across the Curriculum” approved courses. SCI 1111 allows BSc students to fulfill this requirement in a one-semester course.

Before selecting a writing course, students are encouraged to consult the advising sheet available on the Medical Sciences program website, as some professional schools require an ENG1 course.

Requirements

In addition to the courses listed below, students must ensure that they complete the requirements outlined in the “Requirements” section for the College of Arts and Science (page 125). For the required Writing class, students can choose from the list of “Writing Across the Curriculum” approved courses. SCI 1111 allows BSc students to fulfill this requirement in a one-semester course.

Before selecting a writing course, students are encouraged to consult the advising sheet available on the Medical Sciences program website, as some professional schools require an ENG1 course.

1800 Level

- BIOL 1010.03/1011.03 or BIOL 1020.03/1021.03 or SCI 1505X/Y.18
- Integrated Science
- CHEM 1011.03/1012.03
- MATH 1215.03 (or equivalent)
- STAT 1000.03 or SCIE 1505X/Y.18

2000 Level

- BIOL 2001.03
- BIOL 2040.03
- CHEM 2441.03 or CHEM 2401.03/2402.03
- BIOC 2300.03
- CHEM 2300.03
- PHIL 2102.03
- MICU 2100.03
- NSCI 2750.03
- PHIL 2510.03

Further courses may be approved as electives at the discretion of the program director.
Selective in the fourth year. For course descriptions, please see section of the following courses in their program, one of which must be at an Advanced Students in the Medical Sciences program must include at least seven of the Selectives

III. Course Descriptions

For course descriptions, please see sections of the calendar corresponding to the department offering the course (e.g. BIOL = Biology).

Selective:

• Biochemistry/ Molecular Biology
  BIOC 2610 - Introductory Biochemistry Lab
  BIOC 3300 - Intermediate Metabolism
  BIOC 3400 - Nucleic Acid Biochemistry & Molecular Biology
  BIOC 3700 - Biomolecular Chemistry

Biology

• BIOC 2000 - Evolution
  BIOC 2090 - Advanced Cell Biology
  BIOC 3050 - Tumourigenic Organisms
  BIOC 3060 - Molecular Evolution
  BIOC 3065 - Developmental Biology
  BIOC 3322 - Parasitology
  BIOC 3525 - Medical Entomology
  BIOC 3430/ANAT 2100 - Introduction to Human Histology
  BIOC 3421/ANAT 3421 - Comparative Vertebrate Histology

Chemistry

• CHEM 2301 - Introduction to Physical Chemistry I
  CHEM 2304 - Introduction to Physical Chemistry II

Medicine and Social Sciences

INTD 3115 - Global Health in the 21st Century
PSHE 2800 - Ethics and Health Care. Patient Care
SOIA 2400 - Health & Illness Across Cultures
SOIA 2900 - Biomedical and the Illness Experience
SOIA 3131 - The Social Organization of Health Care
SOIA 3141 - Sociology of Mental Disorders
SOIA 3143 - Health, Illness, and the World System
SOIA 3145 - Gender and Health (cross-listed with GWST 3145.03)
SOIA 3147 - Social Gerontology
SOIA 3148 - The Sociology of Addiction: Drugs, Health, and Society

Medical Neuroscience

ANAT 2100/BIOC 4340 - Introduction to Human Histology
ANAT 3421/BIOC 3421 - Comparative Vertebrate Histology

Microbiology/Immunology

MICI 3141 - Virology
MICI 3149 - Physiology of Prokaryotic Cell
MICI 4115 - Immunology of Host Resistance
MICI 4218 - Clinical Microbiology

Neuroscience

NSEC 2000 - Neuroscience Principles & Methods
NSEC 2470 - Systems Neuroscience
NSEC 3270 - Developmental Neuroscience
NSEC 3670 - Genes, Brain and Behaviour

Physics

PHYS 2250 - Physics of Biological and Medical Technology

Psychology

• PSY 2090 - Research Methods in Experimental Psychology
  PSY 2090 - Social Psychology
  PSY 2090 - Developmental Psychology
  PSY 2170 - Health Psychology
  PSY 2210 - Abnormal Behaviour
  PSY 2301 - Statistical Methods I
  PSY 2370 - Brain & Behaviour
  PSY 3042 - Experimental Social Psychology
  PSY 3122 - Methods in Experimental Clinical Psychology
  PSY 3129 - Child & Adolescent Psychology

IV. List of Selectives and Advanced Selectives

Students in the Medical Sciences program must include at least seven of the following courses in their program, one of which must be at an Advanced Selective in the fourth year. For course descriptions, please see sections of the 3000 and 4000 Level

• MSCI 3115.03
• BIOC 4404.03
• Social Determinants of Health*
• Anatomy*
• Introductory Pathology*
• Introductory Epidemiology*
• MSCI Honours thesis

B. BSc (20 credit) Major in Medical Sciences

Medical Sciences offers a 4-year, 20 credit Major program. Although the program does not provide the required preparation for graduate school, it will provide an educational experience that offers a broad, interdisciplinary background in all relevant subjects in biomedical sciences. The Major degree also meets the general degree requirements for the Faculty of Science.

Requirements

In addition to the courses listed below, students must ensure that they satisfy the requirements outlined in the “Degree Requirements” section for the College of Arts and Science (page 125). For the required Writing class, students can choose from the Writing Across the Curriculum approved courses. SCIE 1111 allows BSc students to fulfill this requirement in a one-semester course. However, before selecting a writing course, students are encouraged to consult the advising sheet available on the Medical Sciences program website, as some professional schools require an ENGL course.

3000 Level

• BIOC 1010.03/1011.03 or BIOC 1020.03/1021.03 or SCIE 1505X.Y 18 Integrated Science
• CHEM 1011.03/1012.03
• MATH 2115.03 (or equivalent)
• STAT 1060.03 or SCIE 1505X.Y 18 Integrated Science

• PSY 2210 - Abnormal Behaviour
• PSY 2301 - Statistical Methods I
• PSY 2370 - Brain & Behaviour
• PSY 3042 - Experimental Social Psychology
• PSY 3122 - Methods in Experimental Clinical Psychology
• PSY 3129 - Child & Adolescent Psychology
• PSY 3140 - Psychoneuroimmunology/Ecological Immunology
I. Introduction

The Department of Microbiology and Immunology is involved in teaching and research in several vital areas of biomedical endeavour including molecular and medical microbiology, virology, immunology and microbial genetics.

The program is designed to familiarize students with the biology and pathogenesis of viruses, bacteria, yeast and multicellular parasitic organisms. Advanced courses
and specifically with selected aspects of virology, molecular mechanisms of pathogenesis, microbial genetics, cell and molecular biology.

A set of courses in molecular genetics has been identified to meet the needs of honors Microbiology or Biochemistry students who hope to pursue further study in molecular and genetic approaches to fundamental problems. These courses provide solid grounding in bacterial and eukaryotic gene structure and function, regulation and evolution, and both practical and theoretical presentations of recombinant DNA methods (genetic engineering).

They can be taken along with courses in metabolism, enzymology, bacteriology, virology and immunology and provide a good practical grounding for fields as diverse as genetic diagnosis and gene therapy, forensics, industrial microbiology and molecular evolution (see below and the Biochemistry listings and consult departmental advisors).

The Department also has a significant teaching program in Cellular and Molecular Immunology. The Immunology program is designed for students interested in fundamental questions in molecular immunology, tumor immunology, autoimmunity or inflammation, and defenses against microbial infection.

These programs provide the education needed for graduate studies or for professional activities after graduation in microbiology and/or immunology.

II. Degree Programs

There are 20 Credit Major and Double Major programs in Microbiology and Immunology but no 15 credit degree is offered. MCT 2000.03 is a prerequisite for most other microbiology courses offered in this Department. Students oriented in an Honours program (see below) must consult a departmental advisor, preferably prior to registration for second year courses. Biology Majors are advised that many courses in Microbiology and Immunology do count toward a BSc in Biology even though they are not cross-listed with the Biology Department. In addition to the departmental requirements listed below, students must satisfy the requirements outlined in the Degree Requirements section, page 325 of this calendar.

The Department wishes to draw the attention of students to the course, SCIE 1111.00, which fulfills the writing course requirement for BSc students. However, the “subject groupings” requirements must still be met. The subject groupings are often satisfied within the first year.

A. BSc (20 credit) Honours in Microbiology and Immunology

This program is designed to give students the best possible preparation for future graduate work or a professional career in microbiology or immunology. Students applying for admission to this program must normally have obtained a grade of B in five and a minimum grade of B- in the sixth course.

Departmental Requirements

1000 level
- BIOC 1010.03/1011.03 or BIOC 1020.03/1021.03
- CHEM 1000.03 or MATH 1215.03 and MATH 1010.03 or STAT 1060.03

2000 level
- MCT 2100.03
- BIOC 2020.03
- BIOC 2300.03 and 2810.03
- CHEM 2401.03 and CHEM 2402.03

3000 level
- BIOC 3400.03
- MCT 3114.03
- MCT 3115.03
- MCT 3119.03

4000 level
- MCT 4000.06
- One half credit from a fourth year level MCT course

Notes:
- One half credit from any of the fourth year level courses listed below
- A minimum of one and a half additional credits (to make a total of nine) are to be taken from the list provided below (the courses listed are all considered to belong to the discipline of microbiology and/or immunology):
  - MCT 2115.03, 3244.03, 3620.03, 4027.03, 4033.03, 4100.03, 4114.03, 4115.03, 4116.03, 4118.03, 4210.03, 4210.03, 4210.03, 4302.03
  - BIOC 4010.03, 4800.03, 4801.03, 4501.03, 4810.03
  - BIOS 2406.03, 3101.03, 3102.03, 3122.03
  - PSYVZ 3180.03
  - FOSC 3080.03

B. BSc Combined Honours in Microbiology and Immunology and Biochemistry and Molecular Biology

Students in this program must complete 11 credits above the 1000 level in Microbiology and Immunology and Biochemistry and Molecular Biology.

Departmental Courses Required at Upper Levels
- CHEM 2401.03 and 2402.03
- BIOC 2500.03 and 2510.03
- MCT 2100.03
- BIOC 2300.03 and 2301.03
- BIOC 3300.03 and 3400.03, 3500.03
- MCT 3114.03, 3115.03, 3119.03
- one credit from BIOC 48XX, 45XX, 44XX, 45XX, or 47XX
- half credit from MCT 43XX

Either MCT 4900.06 or BIOC 4604.03 and BIOC 4605.03 (either of which, with approval, can be carried out in either department).

C. BSc Combined Honours in Immunology and Microbiology and Biology

Students in this program must complete the core requirements of each department. Students are required to maintain an average grade of B in core courses with no grade lower than B- (see note 1 above). BIOC 1010.03/1011.03 or BIOC 1020.03/1021.03 or BIOL 1001.06 should be taken in year one, and MCT 2100.03 in year two. Research thesis work can be carried out in either Department, subject to the approval of the Undergraduate Studies Committee.

D. 20 Credit Major and Double Major in Microbiology and Immunology

Students should consult a departmental Undergraduate Studies Advisor.

Departmental Core Courses Required

1000 level
- BIOC 1010.03/1011.03 or BIOC 1020.03/1021.03
- CHEM 1001.03/1012.03
- MATH 1000.03 or MATH 1215.03 and MATH 1010.03 or STAT 1060.03

2000 level
- MCT 2100.03, BIOC 2020.03, BIOC 2300.03 and 2301.03, BIOC 2500.03, BIOC 2610.03, CHEM 2401.03 and CHEM 2402.03.
Microbiology and Immunology

Microbiology or Immunology laboratories to engage in BSc. Medical Science (pending MPHEC approval for 2014). Students in the BSc. Medical Science program take a course offerings of the Bachelor of Science (Medical Sciences) program (pending). The Department of Microbiology and Immunology contributes to the course requirements, eligibility, how to apply, deadlines and other related information.

G. Minors available to students in Microbiology and Immunology

Minor programs allow students to develop subject specialties in addition to their major or honours subjects. Minors in other subjects are normally added to a four-year major or concentration honours program (including co-op programs). Students in a 20-credit BSc program in Microbiology and Immunology may choose to include a Minor selected from the list of approved Minors beginning on page 129. Honours research. If BSc. Medical Science undergraduates take sufficient Microbiology or Immunology electives in their final year they are well prepared to apply to the Microbiology and Immunology Graduate Studies Program.

III. Course Descriptions

For more detailed information on the following courses please see the departmental webpage: http://microbiology.medicine.dal.ca For more detailed information on the following courses please see the departmental webpage: http://microbiology.medicine.dal.ca

MICI 1050.03: Basic Microbiology and Immunology for Pharmacy.

This course is only for pharmacy students and involves problem based learning materials, lectures and laboratory sessions (demonstrations and exercises). Topics include: concepts of antibiotics and immunity, basic principles of microbial structure, physiology, and genetics in relation to microbial pathogenesis.

FORMAT: Lecture 3 hours, tutorial 4 hours. 3 weeks.

PREREQUISITE: BIOL 1000X or (BIOL 1010 or BIOL 1020 and BIOL 1011 or BIOL 1021) or instructor's consent.

MICI 1100.03: Health Science Microbiology.

An introduction to microbiology and infectious diseases designed for healthcare professionals. It includes a study of the structure and physiology of microorganisms, the ways microorganisms cause disease in man and the way they affect man's well being.

NOTE: This course is also offered by distance education. 

FORMAT: Lectures 3 hours.

RESTRITION: This class is restricted to students in 2nd Year Nursing, Kinesiology and Diagnostic Cytopathology.

MICI 1200.03: Introduction to General and Oral Microbiology.

See course description in the Dental Hygiene section of the Dentistry, Law and Medicine Calendar (DEEP 2013/14). 

MICI 2100.03: Introductory Microbiology and Immunology.

An introduction to the basic concepts of microbiology and immunology. Topics include: structure, genetics and biochemistry of microorganisms, basic immunology and host defence mechanisms. The course is designed to interrelate the major research themes within the Department (bacterial and microbial pathogenesis, immunology, microbial and molecular genetics, virology and cancer biology).

NOTE: Students cannot enter this course until labs have commenced.

FORMAT: Lecture 3 hours, lab 3 hours.

PREREQUISITE: Grade B or better in BIOL 1010X or BIOL 1011 and CHEM 1013 or BIOL 3012 or CHEM 3012.

MICI 2115.03: Human Organs and Tissues.

Using a histology approach, students look at how tissues and organs are constructed and function at the cellular level normally and in disease. The course does not cover all histology topics. Instead, the subject matter has been selected for its relevance and potential for complementing advanced courses in microbiology/immunology.

FORMAT: Lecture 3 hours.

PREREQUISITE: Grade B or better in MICI 2001-03.

MICI 3024.03: Microscopy.

Biological ultrastructural analysis concentrating on transmission and scanning electron microscopy. Topics include: physical and chemical principles governing technical procedures such as fixation, staining, freeze-fracture, immunocytochemistry, autoradiography, X-ray microanalysis and photography. During laboratory periods, students have the opportunity through individual projects to participate in some techniques covered in lectures.

FORMAT: Lecture 3 hours, lab project.

PREREQUISITE: Grade B or better in MICI 2100.03 and BIOL 2020.03.

CROSS-LISTING: BIOL 2024.03.

MICI 3143.03: Virology.

Virology play important roles in infectious diseases and cancer as well as in model systems for gene regulation, molecular evolution and gene therapy. Topics include: virus structure, assays, classification, gene organization and expression,
Inflammation.

MICI 4100.03: Processes and Mediators of Inflammation.
This advanced course focuses on the cellular and molecular mechanisms of inflammation and consists of lectures and student presentations based on review articles and current research papers. Topics include: inflammatory mediators and receptors, complement, starch, tissue remodeling and transplant resolution. Current research questions and emerging treatments are emphasized. FORMATT: Lecture/presentation/discussion.

PREREQUISITE: MICI 3119.03 with a grade of B+ or better and instructor’s consent is required.

MICI 4114.03: Advanced Topics in Molecular and Medical Virology.
This advanced course focuses on selected aspects of molecular and medical virology and consists of lectures and student presentations based on review articles and current research papers. Topics include: hepatitis C virus and innate immunity, influenza virus pathogenesis, virus interactions with host cells, viruses as vectors for gene therapy and vaccines.

FORMATT: Lecture/presentation/discussion. 3 hours

PREREQUISITE: Students enrolled in the Fall semester, but must attend the first class where final attendance is determined. Restricted enrollment based on performance in MICI 3114.03 (minimum A- or instructor’s consent) CROSS-LISTING: MICI 5114.03

MICI 4115.03: Immunology of Host Resistance.
This advanced course focuses on mechanisms involved in the host immune response to pathogens and tumor cells and consists of lectures and student presentations based on review articles and current research papers. Topics also include: allergic inflammation and transplant immunology.

FORMATT: Lecture/discussion. 3 hours

PREREQUISITE: Minimum grade of B+ in MICI 3115.03 or instructor’s consent

MICI 4116.03: Current Topics in Mucosal Immunology.
This advanced course focuses on the mucosal immune system, which maintains a state of tolerance to environmental antigens while mounting a strong immune response to infectious agents. The course consists of lectures and student presentations based on review articles and research papers. Topics include: innate immune mechanisms in the gastrointestinal tract and respiratory and genitourinary systems.

PREREQUISITE: MICI 3115.03 with a grade of B+ or better or instructor’s consent.

CROSS-LISTING: MICI 5116.03

MICI 4118.03: Molecular Bacterial Pathogenesis.
This advanced course focuses on the molecular basis of bacterial pathogenesis and consists of lectures and student presentations based on landmark articles and current research papers. Topics include: regulation of cytokines, antibody diversity by somatic hypermutation and antigen-driven affinity maturation, anti-inflammatory/anti-tumour mechanisms, tumor suppressors, cancer metastasis and angiogenesis, cell cycle control, and human papillomavirus infection.

FORMATT: Lecture/presentation/discussion.

PREREQUISITE: MICI 3115.03 with a grade of B+ or better or instructor’s consent.

CROSS-LISTING: MICI 5118.03

MICI 4210.03: Clinical Bacteriology.
This advanced course covers all aspects of clinical microbiology including bacteriology, virology, parasitology, mycology and molecular diagnostics. The emphasis will be placed on bacteriology. Topics include epidemiology and transmission, laboratory management and identification, antimicrobial testing and resistance, treatment and prevention of infectious diseases.

FORMATT: Lecture.

PREREQUISITE: A grade of B+ or better in MICI 3119.03 or Instructor’s consent.

EXCLUSION: MICI 3118

MICI 4211.03: Medical Virology.
This advanced course covers all aspects of clinical microbiology including bacteriology, virology, parasitology, mycology and molecular diagnostics. The emphasis will be placed on bacteriology. Topics include epidemiology and transmission, laboratory management and identification, antimicrobial testing and resistance, treatment and prevention of infectious diseases.

FORMATT: Lecture.

PREREQUISITE: A grade of B+ or better in MICI 3119.03 or Instructor’s consent.

EXCLUSION: MICI 3118.

MICI 4200X.06: Directed Research Project.
Students spend at least one day per week performing laboratory research in the lab of approved departmental faculty. The course is not for students in regular BSc program. Approval is required from the departmental undergraduate committee.

NOTE: Credit can only be given for this course if X and Y are completed in the same term and partial credit cannot be given for a single term.
I. Introduction

The last four decades have witnessed the emergence of a new, interdisciplinary field called Neuroscience. Its primary goal is the understanding of the brain. Neuroscience is a rapidly developing research area which includes all aspects of the structure and function of nervous systems. Neuroscience involves a variety of experimental strategies to understand nervous systems. These include molecular, biochemical, anatomical, physiological, and developmental approaches. Although firmly grounded in the natural sciences, the scope of Neuroscience also encompasses fundamentally important philosophical issues, such as the nature of human thought and its mechanism. The programs outlined below represent all of these approaches, with an emphasis on behaviour as the adaptive product of neural activity. Knowledge obtained from research in Neuroscience is applied to a variety of human health problems, including Alzheimer disease, Parkinson disease, and a variety of drug- or injury-induced behavioral disorders. Research in Neuroscience is also contributing new information related to the major psychiatric disorders, including affective disorders and the schizophrenias.

II. Degree Programs

In addition to the departmental requirements listed below, students must satisfy the requirements outlined in the Degree Requirements section, page 125 of this calendar.

A. BSc or BA (20 credit) Honours in Neuroscience

This program, which is offered through the Department of Psychology and Neuroscience, is intended to serve as a preparation for graduate work in Neuroscience, biological psychology, medicine, human communication disorders and related fields. Its interdisciplinary nature is reflected in the participation of faculty from several departments in the program.

Structure

In the first year of study, students are required to take courses which provide a firm grounding in the physical and biological sciences. In subsequent years, the program includes credits in courses drawn from Neuroscience, Psychology and Biology. These include a number of required core courses that emphasize the acquisition and application of laboratory skills.

It is recommended that students interested in taking an Honours degree in Neuroscience follow the course sequence specified for Honours students. They should consult with Dr. T. Perrot in January of their third year and complete a departmental Honours Application Form. Admission to Honours in January will require a grade of B or better in NESC 2007.03 and an A- average in the last six

To contact a program advisor, please go to the Psychology and Neuroscience website. For a complete listing of faculty members in the Department of Psychology and Neuroscience, please see the Psychology Program section on page 565.

542 Neuroscience
.completed Neuroscience half credits. Applications may be delayed until the end of the third year, in which case, a grade of B- or better in NES 3000.03 and an A- average in the last nine completed Neuroscience half credits will be required. 

Potential Neuroscience students should try to declare a their major and begin laying the groundwork for their thesis research (e.g., background reading, acquiring laboratory methodology) as early as possible in their third year. The supervisor should be a member (or eligible for membership) in the Neuroscience Institute. A detailed description of the Honours application process may be found on the departmental website www.dal.ca/psychandneuro

Grade Requirements

All students wishing to take Psychology/Neuroscience courses numbered 2000 or above for which Introductory Psychology or Introductory Biology or DISP is a prerequisite must have a grade of B- in the required course(s) (PSY 1011.03 or PSY 1021.03 and PSY 1012.03 or PSY 1022.03, or BIOC 1010.03 or 1020.03 and BIOL 1011.03 or 1021.03, or SCIE 1515X/Y, 1520X/Y, or 1540X/Y.27.

NOTE: PSY 2501.03 (Statistical Methods I) does not fulfill any part of the Faculty of Science Mathematics requirement.

Departmental Requirements

1000 Level
• MATH 1000.03 (preferred) or MATH 1215.03
• One other half credit in Mathematics (ideally, but not necessarily, MATH 1010.03)
• BIOC 1010.03 or BIOC 1020.03 and BIOL 1011.03 or BIOC 1021.03
• CHEM 1011.03 or CHEM 1021.03 
• Either PSY 1011.03 or PSY 1012.03 or PSY 1021.03 or PSY 1022.03, or PHYC 1280.03/1290.03 or 1300X/1300Y; or
• Or m in last of the above, SCIE 1515X/Y, 1520X/Y or 1540X/Y.27.

Students are strongly recommended to take both PHYC 1280.03/1290.03 or PSYC 1300X/1300Y and PSY 1011.03 or PSY 1021.03 prior to finishing their degree.

2000 Level
• NESC 2007.03
• NESC 2470.03
• NESC 2570.03
• PSY 2501.03 (or STAT 2080.03)
• BIOL 2020.03
• Two half credits selected from NESC 2130.03, 2140.03, 2150.03, 2160.03, BIOC 2300.03, BIOL 2300.03, PHYC 2280.03

3000 Level
• Two half credits of laboratory courses selected from NESC 3044.03, 3051.03, 3170.03, 3161.03, 3370.03, 3371.03, 3440.03, 3775.03
• PSY 3502.03
• At least one additional half credit selected from NESC 3043.03, 3102.03, 3103.03, 3113.03, 3114.03, 3120.03, 3121.03, 3140.03, 3170.03, 3180.03, 3190.03, 3220.03, 3237.03, 3240.03, 3257.03, 3260.03, 3262.03, 3266.03, 3270.03, 3270.03, 3275.03, 3280.03, BIOC 3200.01, BIOL 3020.03

4000 Level
• NESC 4500X/Y.06
• Two half credits selected from NESC 4000.03, 4007.03, 4070.03, 4101.03, 4106.03, 4170.03, 4173.03, 4185.03, 4230.03, 4374.03, 4376.03, 4470.03
• Two additional half credits from NESC 3005- or 4000-level courses
• Honours Qualifying Exams

B. BSc or BA (20 credit) Combined Honours in Neuroscience

It is possible for students to take an Honours degree combining Neuroscience with another Science subject (other than Psychology) such as Biology or Biochemistry. Students proposing to take such a course of study must consult with an Honours advisor in both departments to arrange program details.

If Neuroscience is chosen as the primary subject in a Combined Honours degree, the following courses are required.

1000 Level
• MATH 1000.03 (preferred) or MATH 1215.03
• One other half credit in Mathematics (ideally, but not necessarily, MATH 1010.03)
• BIOC 1010.03 or BIOC 1020.03 and BIOL 1011.03 or BIOC 1021.03
• CHEM 1011.03 or CHEM 1021.03
• Either PSY 1011.03 or PSY 1012.03 or PSY 1021.03 or PSY 1022.03, or PHYC 1280.03/1290.03 or 1300X/1300Y; or
• Or, in lieu of the above, SCIE 1515X/Y, 1520X/Y, or 1540X/Y.27 with a B- in the Psychology or Biology component.

Students are strongly recommended to take both PSY 1011.03 or PSY 1021.03 and PSY 1012.03 or PSY 1022.03, and PHYC 1280.03/1290.03 or PHYC 1300X/1300Y prior to finishing their degree.

2000 Level
• NESC 2007.03
• NESC 2470.03
• NESC 2570.03
• PSY 2501.03 (or STAT 2080.03)
• BIOL 2020.03*
• One half credit selected from NESC 2130.03, 2140.03, 2150.03, 2160.03, BIOC 2300.03, BIOL 2300.03, PHYC 2280.03

3000 Level
• Two half credits of laboratory courses selected from NESC 3044.03, 3051.03, 3170.03, 3161.03, 3370.03, 3371.03, 3440.03, 3775.03

4000 Level
• NESC 4500X/Y.06
• Two half credits selected from NESC 4000.03, 4007.03, 4070.03, 4101.03, 4106.03, 4170.03, 4173.03, 4185.03, 4230.03, 4374.03, 4376.03, 4470.03
• Honours Qualifying Exams

If Neuroscience is chosen as the secondary subject in a Combined Honours degree, the following second and third-year courses are required.

2000 Level
• NESC 2007.03
• NESC 2470.03
• NESC 2570.03
• PSY 2501.03 (or STAT 2080.03)
• BIOL 2020.03*

3000-4000 Level
• Two half credits of laboratory courses selected from NESC 3044.03, 3051.03, 3170.03, 3161.03, 3370.03, 3371.03, 3440.03, 3775.03
• One additional half credit (or two half credits in Neuroscience courses in the 3000-4000 level)

* If students undertake another program of study that requires BIOL 2020.03, they should substitute another half-credit elective in a Neuroscience topic at the 2000 level for BIOL 2020.03.

C. BSc or BA (20 credit) Major in Neuroscience

This program is intended to provide a four-year survey of Neuroscience, and is designed for students not anticipating subsequent experimental, graduate-level training in Neuroscience or related disciplines. The major program thus differs from the Honours program in not having thesis (and related) requirements, and is having fewer credits of required Neuroscience courses in each of the second, third and fourth years.

Grade Requirements

All students wishing to take Psychology/Neuroscience courses numbered 2000 or above for which Introductory Psychology or Introductory Biology or DISP is a prerequisite must have a grade of B- in the required course(s) (PSY 1011.03 or PSY 1021.03 and PSY 1012.03 or PSY 1022.03, or PHYC 1280.03/1290.03 or PHYC 1300X/1300Y).
Neuroscience

- Two more half credits selected from NESC 3043.03, 3052.03, 3131.03,
- Two half credits of laboratory courses selected from NESC 3044.03, 3051.03, 3000/4000 level
- BIOL 2020.03*
- NESC 2570.03
- NESC 2470.03
- NESC 2007.03

2000 level
- BIOL 2030.03, 3020.03, PHYC 2250.03.

Note: The following can be counted as NESC courses: BIOC 2300.03, 3200.03, 3137.03, 3161.03, 3370.03, 3371.03, 3440.03, 3757.03.

If Neuroscience is chosen as the primary subject in a Double Major degree, the following courses are required.

1000 level
- MATH 1000.03 (preferred) or MATH 1215.03
- One other half credit in Mathematics (ideally, but not necessarily, MATH 1010.03)
- BIOL 1010.03 or BIOL 1020.03 and BIOL 1011.03 or BIOL 1021.03
- CHEM 1011.03 or BIOL 1020.03
- PSYO 1011.03* and PSYO 1021.03 or 1022.03
- Or, in lieu of the above, SCI151XV/Y, 1520XV/Y, or 1540XV/Y.

Students are strongly recommended to take PHYC 1280.03/1290.03 or PHYC 1300X.06 prior to finishing their degree.

2000 level
- NESC 2007.03
- NESC 2470.03
- NESC 2570.03
- PSYO 2501.03 or STAT 2080.03
- BIOL 2020.03*
- Two half credits selected from: NESC 2130.03, 2140.03, 2150.03, 2160.03, 2180.03, 2374.03, 2375.03
- Two half credits of laboratory courses selected from NESC 3044.03, 3051.03, 3000/4000 level
- BIOL 2020.03*
- PSYO 2501.03 (or STAT 2080.03)
- OR, in lieu of the above, SCI151XV/Y, 1520XV/Y, or 1540XV/Y.27

If Neuroscience is chosen as the secondary subject in a Double Major degree, the following courses are required.

1000 level
- MATH 1000.03 (preferred) or MATH 1215.03
- One other half credit in Mathematics (ideally, but not necessarily, MATH 1010.03)
- BIOL 1010.03 or BIOL 1020.03 and BIOL 1011.03 or BIOL 1021.03
- CHEM 1011.03 or BIOL 1020.03
- PSYO 1011.03* or 1021.03 and PSYO 1022.03 or 1023.03
- Or, in lieu of the above, SCI151XV/Y, 1520XV/Y, or 1540XV/Y.

Students are strongly recommended to take PHYC 1280.03/1290.03 or PHYC 1300X.06 prior to finishing their degree.

2000 level
- NESC 2007.03
- NESC 2470.03
- NESC 2570.03
- PSYO 2501.03 (or STAT 2080.03)
- BIOL 2020.03*
- OR, in lieu of the above, SCI151XV/Y, 1520XV/Y, or 1540XV/Y.27

If students undertake, as part of a Double Major degree, another program of study that requires BIOL 2020.03, they should substitute another half-credit elective in a Neuroscience topic at the 2000 level for BIOL 2020.03.

E. Minor in Neuroscience

Students in other 20 credit degree programs may choose to include a Minor in Neuroscience in their program. Requirements are outlined in the College of Arts and Science Minors section of this Calendar beginning on page 129.

F. Minors available to students in Neuroscience

Minor programs allow students to develop subject specialities in addition to their major or honours subjects. Minors in other subjects are normally added to a four-year Major or Concentrated Honours program (including co-op programs). Students in a 20 credit BSc program in Neuroscience may choose to include a Minor selected from the list of approved Minors beginning on page 132 in this Calendar. Note that courses counted toward your Major or Honours program cannot be used to fulfil the requirements of a Minor program.

G. BSc/Engineering or BA/Engineering Concurrent Programs

Students will normally complete the requirements for a 15 Credit BSc or 15 Credit BA, and the first two years of engineering studies leading to the Diploma in Engineering. The concurrent program can be completed in three years. Details are provided in the College of Arts and Science Degree Requirements starting on page 125 of the calendar.

H. Diplomas, Certificates, and Language Proficiency Certificates

In combination with a BA or BSc there are certificates or diplomas that can be obtained to emphasize areas of proficiency. Courses counted toward a Major, Honours or Minor program may also be used to fulfill the requirements of a Certificate. For a complete list and details refer to the College of Arts and Science Degree Requirements starting on page 152 of the calendar.

Certificate in Animal Behaviour

(Contract Dir. Shelley Adams, shelley.adams@cidal.ca) The Certificate program is a collaborative effort of both the Biology and the Psychology and Neuroscience departments. It provides students an opportunity to take, within their BA or BScHonors or Major program, a set of courses and a research project that will accord them an animal behaviour specialization. Completion of the Certificate will be shown on a student’s transcript.
Note: It is the responsibility of students in the Certificate Program to complete the course sequence specified, and to provide the Certificate Coordinator with confirmation that the necessary courses have been taken, by the end of the examination period in their final year of study.

**Certificate requirements:**

1. A minimum grade of B- is required in all mandatory courses:
   - NESC/PSYO 2100.03: Animal Behaviour
   - PSYO 2100.03: Statistical Methods for Data Analysis and Inference
   - BIOL 3602.03: Behavioral Ecology or PSYO/NESC 3162.01: Advanced Animal Behaviour

2. A grade of B- or better in full credit of elective courses chosen from the following list. One of the full credit must be at the 3000/4000 level.

### 2000 level
- ANSC 2003.03: Companion Animal Behaviour
- NESC/PSYO 2140.03: Learning
- NESC/PSYO 2470.03: Systems Neuroscience

### 3000 level
- BIOL 3127.03: Embryology
- BIOL 3622.03: Ornithology
- BIOL 3624.03: Ecology and Evolution of Fishes
- BIOL 3625.03: Field Studies of Marine Mammals
- BIOL 3623.03: Applied Method in Fish Ecology
- NESC/PSYO 3000.03: Independent Research in Modern Psychology (Animal Behaviour topic)
- NESC/PSYO 3001.03: Directed Research Project in Psychology (Animal Behaviour topic)
- NESC/PSYO 3140.03: Neurobiology and Learning
- NESC/PSYO 3144.03: Laboratory Methods of Learning and Conditioning
- NESC/PSYO 3152.03: Advanced Animal Behaviour
- NESC/PSYO 3161.03: Neuroethology
- NESC/PSYO 3170.03: Hormones and Behaviour
- NESC/PSYO 3180.03: Psychoneuroimmunology/Ecological Immunology
- NESC/PSYO 3190.03: Genes, Brain and Behaviour

### 4000 level
- NESC/PSYO 4140.03: Topics in Behavioural Biology
- BIOL 4000.03: Marine Mammalogy
- BIOL 4132.03: Backcountry in Ecology
- BIOL 4004.03: Special Topics (Animal Behaviour topic)
- BIOL 4006.03: Special Topics (Animal Behaviour topic)

3. A grade of B- in one full credit or more of independent research in Animal Behaviour:
   - The research topic must be pre-approved by the Certificate Coordinator prior to the start of their research course (i.e., NESC/PSYO 3000.06, NESC/PSYO 3001.03, NESC/PSYO 4000.03, BIOL 4000.03, BIOL 4006.03, or BIOL 4008.03).
   - Honour students are encouraged to complete their Honours thesis on a topic in Animal Behaviour to fulfill this requirement.
   - Students are also encouraged to further develop their study design and analysis skills by taking additional courses such as BIOL 4061.03 (Design of Biological Experiments) or BIOL 4062.03 (Analysis of Biological Data).

4. Enrollment in the Certificate in Animal Behaviour program should be undertaken by students in their third or fourth year of studies when they are preparing for graduation. Students are also encouraged to further develop their study design and analysis skills by taking additional courses such as BIOL 4061.03 (Design of Biological Experiments) or BIOL 4062.03 (Analysis of Biological Data).

**III. Course Descriptions**

In 2006/2007, the full-credit introduction to Psychology courses were divided into two half-credit courses. PSYO 1000X/Y became PSYO 1011.03 and 1021.03, and PSYO 1001X/Y became PSYO 1011.03 and 1021.03. If a course now requires PSYO 1011.03 or 1021.03 of PSYO 1022.03 as prerequisites, this requirement may also be met by either PSYO 1012.03 or PSYO 1012.03.

**NESC 2007.03: Neuroscience Principles and Methods.**

This course introduces methods used to investigate contemporary issues in Neurobiology. Characteristics of these methods, including their strengths and limitations, are presented conceptually in lectures, and then practically in the form of supervised laboratory exercises where students implement in the lab what they encountered first in lectures.

**FORMAT:** Lecture 3 hours, Research Lab 2 hours

**PREREQUISITE:** PSYO 1011.03 or PSYO 1021.03 and PSYO 1012.03 or PSYO 1022.03, or SCIE 1515X/Y, 1520X/Y, or 1540X/Y, or BIOL 1001.03 or 1021.03 and BIOL 1011.03 or 1021.03 (with a grade of B- or better)

**EXCLUSION:** PSYO 2000.03

**NESC 2130.03: Introduction to Cognitive Psychology.**

Lectures focus on the processes involved in transforming sensory information into the meaningful everyday world that we know. Initially, emphasis is on the sensory system, and how information within that system is structured and organized, followed by a consideration of the character of internal representations used in thinking and remembering.

**FORMAT:** Lecture 3 hours

**PREREQUISITE:** PSYO 1011.03 or PSYO 1021.03 and PSYO 1012.03 or PSYO 1022.03, or SCIE 1515X/Y, 1520X/Y, or 1540X/Y, or BIOL 1001.03 or 1021.03 and BIOL 1011.03 or 1021.03 (with a grade of B- or better)

**CROSS-LISTING:** PSYO 2130.03

**NESC 2140.03: Learning.**

Lectures focus on several goals: (1) providing general principles of learning; (2) understanding the behaviour of particular species; (3) direct application to human problems. Emphasis is on understanding why researchers in animal learning do what they are currently doing (given the goals and the historical context).

**FORMAT:** Lecture 3 hours

**PREREQUISITE:** PSYO 1011.03 or PSYO 1021.03 and PSYO 1012.03 or PSYO 1022.03, or SCIE 1515X/Y, 1520X/Y, or 1540X/Y, or BIOL 1001.03 or 1021.03 and BIOL 1011.03 or 1021.03 (with a grade of B- or better)

**CROSS-LISTING:** PSYO 2140.03

**NESC 2150.03: Perceptual Processes.**

Perception deals with the way in which our senses provide us with information about our environment. This course focuses on the process by which sensory experiences are coded, how they are interpreted by the nervous system, and how experience modifies perception.

**FORMAT:** Lecture 3 hours

**PREREQUISITE:** PSYO 1011.03 or PSYO 1021.03 and PSYO 1012.03 or PSYO 1022.03, or SCIE 1515X/Y, 1520X/Y, or 1540X/Y, or BIOL 1001.03 or 1021.03 and BIOL 1011.03 or 1021.03 (with a grade of B- or better)

**CROSS-LISTING:** PSYO 2150.03

**NESC 2160.03: Animal Behaviour.**

Using concepts from behavioural biology and psychology, animal behaviourists attempt to explain why animals behave the way they do. The course examines topics such as mating and social systems, mate choice, the evolution of behaviour, and animal communication. The behaviour of a wide range of animals is studied.

**FORMAT:** Lecture 3 hours

**PREREQUISITE:** PSYO 1011.03 or PSYO 1021.03 and PSYO 1012.03 or PSYO 1022.03, or SCIE 1515X/Y, 1520X/Y, or 1540X/Y, or BIOL 1001.03 or 1021.03 and BIOL 1011.03 or 1021.03 (with a grade of B- or better)

**CROSS-LISTING:** PSYO 2160.03

**NESC 2470.03: Systems Neuroscience.**

This course provides an introduction to the functional systems of the brain. We examine neural systems (e.g., the sensory systems, motor systems, neurotransmitter-specific systems) individually. We explore their anatomy and function, neurological properties that make each unique, and factors that are common to all neural systems (e.g., development and plasticity).

**FORMAT:** Lecture 3 hours

**PREREQUISITE:** PSYO 1011.03 or PSYO 1021.03 and PSYO 1012.03 or PSYO 1022.03, or SCIE 1515X/Y, 1520X/Y, or 1540X/Y, or BIOL 1001.03 or 1021.03 and BIOL 1011.03 or 1021.03 (with a grade of B- or better)

**CROSS-LISTING:** PSYO 2470.03

**EXCLUSION:** PSYO 2750.03
CROSS-LISTING: PSYO 3043.03
PREREQUISITE: PSYO 2000.03 or NESC 2007.03, and one of NESC/PSYO 2140.03 or NESC/PSYO 2470.03 or PSYO 2770.03
FORMA T: PSYO 3043.X/Y
EXCLUSION: PSYO 3042.03
NESC 3051.03: Sensory Neuroscience I. Vision.
This course examines the neural basis for the perception of light, colour, movement, depth, and form. The course covers developmental events important for vision, and the extent to which vision is constrained by anatomical and physiological development.
FORMA T: Lecture 3 hours, Research Lab 1 hour
PREREQUISITE: PSYO 2000.03 or NESC 2007.03, NESC/PSYO 2470.03 or PSYO 2770.03, and NESC/PSYO 2150.03
CROSS-LISTING: PSYO 3051.03

NESC 3052.03: Sensory Neuroscience II. Hearing and Speech.
This course explores hearing at levels that include stimulus parameters and their psychophysical correlates, middle ear function, cochlear biophysics, central auditory neuropathology, and principles of speech perception. We emphasize mechanisms of normal hearing and speech, but address pathology whenever it helps us understand the relation between neuropathology and perception.
FORMA T: Lecture 3 hours
PREREQUISITE: PSYO 2000.03 or NESC 2007.03, and NESC/PSYO 2470.03
CROSS-LISTING: PSYO 3052.03

NESC 3131.03: Research Methods in Attention.
The methods, findings, and theories that underlie our understanding of attention (alertness, preemption, selection, and control of information processing) are covered. Behavioural and neuroscientific evidence as well as computational models are examined in the lectures. Laboratories emphasize behavioural methods used to isolate and reveal the components of attention.
FORMA T: Lecture 3 hours, Research Lab 2 hours
PREREQUISITE: PSYO 2000.03 or NESC 2007.03, PSYO 2501.03 or STAT 2080.03, and NESC/PSYO 2470.03 or PSYO 2780.03
CROSS-LISTING: PSYO 3132.03
EXCLUSION: NESC/PSYO 3130.06

NESC 3132.03: Research Methods in Visual Cognition.
Visual cognition is the study of how we extract meaning from our visual environment and use it to direct our behaviour. Emphasis is placed on object, face, and word recognition as revealed by normal behaviour, and by neuropsychological techniques and neuropsychological studies of brain-damaged individuals who have lost these recognition abilities.
FORMA T: Lecture 3 hours, Research Lab 2 hours
PREREQUISITE: PSYO 2000.03 or NESC 2007.03, PSYO 2501.03 or STAT 2080.03, and NESC/PSYO 2470.03 or PSYO 2780.03
CROSS-LISTING: PSYO 3132.03
EXCLUSION: NESC/PSYO 3130.06

NESC 3133.03: Research Methods in Memory.
This course examines human memory from the perspective of cognitive psychology and, to a lesser extent, cognitive neuroscience. Lectures emphasize cognitive approaches to the study of memory with an explicit focus on empirical research methods, data, and interpretation of results.
FORMA T: Lecture 3 hours, Research Lab 2 hours
PREREQUISITE: PSYO 2000.03 or NESC 2007.03, PSYO 2501.03 or STAT 2080.03, and NESC/PSYO 2470.03 or PSYO 2780.03
CROSS-LISTING: PSYO 3133.03
EXCLUSION: NESC/PSYO 3130.06
CROSS-LISTING: PSYO 3170.03

sex differences, and stress are also examined. Hormones control neural and behavioural development, sexual, aggressive, and other aspects of behaviour. How neurotransmitters, cytokines, and stress hormones interact in both vertebrates and invertebrates. Evolutionary forces that have led to the existence of these interactions are also examined.

FORMAT: Lecture 3 hours
PREREQUISITE: PSYO 3165.03 or NESC 2160.03, or BIOL 2010.03, OR BIOL 2530.03
CROSS-LISTING: PSYO 3180.03
EXCLUSION: NESC/PSYO 3130.06

NESC 3173: Research Methods in Cognitive Neuroscience.

An overview of neuroimaging and other techniques of cognitive neuroscience (including fMRI, ERP, and others) focusing on how they work, how they are applied, and their inherent limitations. Labs include experience collecting and analysing ERP data, demonstrations of fMRI scanning, and analyses of fMRI data.

FORMAT: Lecture 3 hours, Research Lab 2 hours
PREREQUISITE: PSYO 2165.03 or PSYO 3165.03; PSYO 2501.03 or STAT 2470.03, or PSYO 2770.03
CROSS-LISTING: PSYO 3173.03
EXCLUSION: NESC/PSYO 3134.03

NESC 3180.03: Psychoneuroimmunology/Ecological Immunology.

Our behaviour can influence how well we resist disease, and infection can alter behaviour. This course examines how immune systems and nervous systems interact in both vertebrates and invertebrates. Evolutionary forces that have led to the existence of these interactions are also examined.

FORMAT: Lecture 3 hours
PREREQUISITE: PSYO 3165.03 or NESC 2160.03, and either NESC/PSYO 2470.03 or PSYO 2770.03, OR BIOL 2100.03, OR BIOL 2530.03
CROSS-LISTING: PSYO 3180.03
EXCLUSION: NESC/PSYO 2190.03

NESC 3190.03: Psycholinguistics.

Explores the cognitive and neural bases of human language processing. Topics include: human language and other communication systems; phonology; morphology; semantics; syntax; discourse; first and second language acquisition; relationship of language to general cognitive functions such as music and mathematics; signed languages such as American Sign Language, and nonlinguistic gesture.

FORMAT: Lecture 3 hours
PREREQUISITE: PSYO 3165.03 or NESC 2160.03, and either NESC/PSYO 2470.03 or PSYO 2770.03
CROSS-LISTING: PSYO 3190.03
EXCLUSION: NESC/PSYO 2190.03

NESC 3227.03: Principles of Human Neuropsychology.

Clinical neuropsychologists study the organization of cognitive, emotional, and social functions in the brain to understand how brain damage alters human behaviour across the lifespan. We examine how clinicians diagnose and rehabilitate persons with brain diseases and disorders. Assignments emphasize application of textbook/literature-based knowledge, critical thinking, and group presentation skills.

FORMAT: Lecture 3 hours
PREREQUISITE: PSYO 3165.03 or NESC 2160.03, and either NESC/PSYO 2470.03 or PSYO 2770.03
CROSS-LISTING: PSYO 3227.03

NESC 3237.03: Drugs and Behaviour.

An introduction to behavioural psychopharmacology. The lectures involve basic anatomy, physiology, and chemistry of the nervous system. Behavioural effects and underlying mechanisms of various psychoactive drugs are discussed. Specific topics covered are alcohol, tobacco, amphetamines, cocaine, opiates, hallucinogens, tranquilizers, and antipsychotic drugs.

PREREQUISITE: PSYO 3165.03 or NESC 2160.03, and either NESC/PSYO 2470.03 or PSYO 2770.03
CROSS-LISTING: PSYO 3237.03

NESC 3260.03: Biological Rhythms.

Daily (circadian) clocks generate rhythms in many functions, including sleep, reproduction, and intellectual performance. This course examines the nature of these biological clocks, their neural mechanisms, and their role in regulating sleep and other aspects of physiology and in pathological conditions, including sleep disorders, jet lag, and psychiatric disorders.

FORMAT: Lecture 3 hours
PREREQUISITE: PSYO 3165.03 or NESC 2160.03, or BIOL 3074.03 and MARI 3075.03, or BIOL 3078.03 and BIOL 3079.03, or MARI 3074.03 and MARI 3076.03, or PSYO 3160.03
CROSS-LISTING: PSYO 3260.03

NESC 3264.03: The Science of Sleep.

This course reviews the history, methods and results of the scientific study of sleep. Topics include: circadian and homeostatic regulation; and the role of sleep in performance and health, theories of the functions of sleep.

FORMAT: Lecture 3 hours
PREREQUISITE: PSYO 3165.03 or NESC 2160.03, and either NESC/PSYO 2470.03 or PSYO 2770.03
CROSS-LISTING: PSYO 3264.03

NESC 3270.03: Developmental Neuroscience.

This course presents the fundamental principles of development in complex and simple nervous systems. Cell differentiation, pattern regulation, proliferation, migration, and circuit development are discussed. Special attention is given to later stages of development.
developmental events such as neuronal growth cones, cell death, growth factors, neuronal–glial interactions, and synapse formation.

NESC 3370.03: Neuroscience Laboratory I.
Introduction to several neurophysiological techniques used in contemporary neuroscience, employing extracellular and intracellular electrical recording and stimulation methods on nervous system preparations, both sensory and motor. Attention is directed to training students in groups of 2 to 3 and to perform state-of-the-art and sophisticated experimental practices themselves, enabled by computer-based data acquisition.

NESC 3371.03: Neuroscience Laboratory II.
Introduction to several techniques used in contemporary neuroscience. Students work under supervision in groups of 2 or 3 in regular labs that introduce neuroanatomical analyses using the following: Golgi impregnation, immunocytochemistry, dye-tracking of connections, electromicroscopy of the retina, and neurotransmitter determinations using HPLC.

NESC 3440.03: Neuroanatomy.
This is a survey of the structure and function of the human central nervous system (CNS, the brain and spinal cord). The laboratory component provides the opportunity to dissect the human brain and to study the microscopic anatomy of the CNS. This course provides the lecture and laboratory component for the graduate course ANAT 3100 Human Neuroanatomy.

NESC 3670.03: Genes, Brain and Behaviour.
The application of genetic techniques to the study of cognitive abilities, psychopathology, personality disorders, stress-related illnesses, and ethical issues in genetic research. The role of genetic factors in eating and drug abuse problems, as well as methods used to study gene–environment interactions are explored.

NESC 3770.03: Behavioural Neuroscience.
Behavioural neuroscience explores the neural and hormonal mechanisms underlying a variety of behavioural phenomena. The course focuses on neural correlates of social and emotional behaviour, motor behaviour and patterns, and behavioural toxicology processes (neurotoxins and endocrine disruptors).

NESC 3775.03: Behavioural Neuroscience Laboratory.
Students motivated to pursue a career in Neuroscience, or in a related biomedical discipline, gain direct experience studying the nervous system in relation to behaviour. Students acquire skills in animal handling, ethics, and measuring behaviour. Emphasis is placed on histological/molecular analysis of the brain including scanning microtome and mRNA levels.

NESC 3790.03: Neurolinguistics.
The course covers: (1) brain damage and language disorders; (2) aphasia; (3) localization of lesions in the human brain; (4) neuroimaging; (5) intracranial electric stimulation experiments; (6) event-related brain potential experiments; (7) PET, fNMR scan experiments; (8) neural models of language processing.

NESC 3970.03: Molecular Neuroscience.
This course examines the development, function, and pathology of the brain at the molecular level. Model systems are examined from the perspectives of ion channels, messengers, receptors, intracellular signalling cascades, transcription factors, and genes. The concepts underlying basic cellular and molecular neuroscience tools are emphasized.

NESC 4000.03: Senior Seminar.
An individually tailored reading or study course designed to allow Honours students to focus on a particular topic, or a set of related topics, that are not part of the regular program. Enrolment is contingent upon securing a faculty member to supervise the study program.

NESC 4007.03: Contemporary Issues in Neuroscience.
This is a seminar course that focuses on a significant theme or topic in the research literature in Neuroscience. Topics vary from year to year. Consult the department for the details about course content.

NESC 4050.03: Topics in Perception.
SIGNATURE REQUIRED
COORDINATOR: J. Christie
FORMAT: Seminar 2 hours
CROSS-LISTING: PSYO 4000.03

NESC 4070.03: Chemical Neurobiology.
The goal is to acquaint the student with neurotransmitters (excitatory amino acids, acetylcholine, monoamines, neuropeptides). Anatomical, biochemical, physiological, pharmacological, behavioral, and clinical aspects of individual neurotransmitter systems are discussed. Lectures are given by the instructors. Students are expected to write an examination and a review, and give a presentation.

CROSS-LISTING: Seminar 2 hours
SIGNATURE REQUIRED
COORDINATOR: J. Christie
FORMAT: Seminar 2 hours
CROSS-LISTING: PSYO 4000.03

NESC 4130.03: Topics in Human Information Processing.
SIGNATURE REQUIRED
FORMAT: Seminar 2 hours
CROSS-LISTING: PSYO 4130.03

NESC 4160.03: Topics in Behavioural Biology.
SIGNATURE REQUIRED
FORMAT: Seminar 2 hours
CROSS-LISTING: PSYO 4160.03
Neuroscience 549

NESC 4170.03: Topics in Behavioural Neuroendocrinology.
SIGNATURE REQUIRED
FORMAT: Seminar 2 hours
CROSS-LISTING: PSYO 4170.03
RESTRICTION: Restricted to NESC/PSYO Honours Students

NESC 4177.03: Theoretical Neuroscience.
An introduction to basic concepts and research questions in computational neuroscience. This includes cellular mechanisms such as spike generation and synaptic plasticity, network-level concepts such as perceptions and associative attractor networks, and system-level concepts such as memory, learning and anticipation. This course includes an introduction to MATLAB programming.
SIGNATURE REQUIRED
FORMAT: Seminar
PREREQUISITE: Intended for third- or fourth-year Neuroscience students.

NESC 4185.03: Current Advances in Synaptic Function and Plasticity.
Key recent research studies in cellular and system neurophysiology are presented and critically discussed. Emphasis is placed on plasticity, synaptic function, excitability, dendritic integration, neural networks and relevant advances in experimental methods. Newly published papers within these areas are reviewed weekly, followed by a more extensive critique of two publications.
FORMAT: Seminar 2 hours
PREREQUISITE: NESC 2570/PHYL 2570 or permission of course instructors
CROSS-LISTING: PHYL 4000.03

NESC 4230.03: Human Performance Topics.
SIGNATURE REQUIRED
FORMAT: Seminar 2 hours
CROSS-LISTING: PSYO 4230.03

NESC 4374.03: Introduction to Pharmacology I.
This introductory course is designed to acquaint students with the actions of drugs on physiological and biochemical functions in mammals including humans. Factors which affect the blood levels of drugs (absorption, distribution, metabolism, and elimination) will be considered, together with the mechanisms by which drugs act and their potential uses. The interaction of drugs with various body systems will be covered, including the central and peripheral nervous systems and the cardiovascular system. Drugs that assist or regulate host defence mechanisms will also be studied.
COORDINATOR: M.E.M. Kelly
FORMAT: Lecture 3 hours
PREREQUISITE: A previous course in physiology and biochemistry is recommended. Extra reading may be required for students without these courses.
CROSS-LISTING: PHAC 5406.03, BIOC 4804.03, and BIOL 4404.03

NESC 4376.03: Introduction to Pharmacology II.
This course is intended to cover specific aspects of drug action not covered in NESC 4374.03. The course includes: drug receptor signaling, ion channels, second messengers, G-proteins and immunopharmacology, plus specific consideration of drugs used for pain, inflammation, cancer, diabetes, and aneurism.
COORDINATOR: D. Dupre
FORMAT: Lecture 3 hours
PREREQUISITE: NESC 4374.03 (with a grade of B or better)
CROSS-LISTING: PHAC 5408.03, BIOC 4806.03, and BIOL 4407.03

NESC 4500X/Y.06: Honours Thesis.
Under a staff member’s supervision, each student conducts original research in experimental neuroscience. Students must describe their proposed research and progress. A formal written report of the completed research is required. The final grade is based on originality and skill with emphasis on the written and oral reports.
SIGNATURE REQUIRED
NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.
PREREQUISITE: Fourth-year Honours students, and instructor’s consent
CROSS-LISTING: PSYO 4500X/Y.06
RESTRICTION: Restricted to Honours students in their graduating year.
Ocean Sciences

See Oceanography for contact information and a list of faculty.

I. Introduction

Ocean Sciences includes study of the physics, biology, geology, chemistry, and meteorology of the marine environment. Topic areas include ocean currents, waves, tides, marine sediments, oceanic crustal structure, nutrient cycling, acoustics, ocean-atmosphere coupling, biological production, and seawater properties, among others. Students enrolled in the Ocean Sciences program will be educated in the core oceanographic sub-disciplines of physical, geological, chemical, and biological oceanography, while also being exposed to issues in marine policy, law, and management. Graduates of the Ocean Sciences program will have gained an appreciation of the interdisciplinary and collaborative approaches often required to arrive at meaningful solutions to environmental problems relating to the oceans. They will have developed strong quantitative and practical skills, as well as a breadth of knowledge across ocean science disciplines. Ocean scientists are employed in research laboratories, universities, government agencies, and private industry. Career paths include environmental prediction, environmental monitoring and assessment, marine technology, marine surveying, marine resource use and extraction, and marine conservation.

II. Degree Programs

The Department of Oceanography offers a number of degree programs in Ocean Sciences, including Major, Double Major, Concentrated Honours, Combined Honours, and Minor options. In addition to the departmental requirements detailed below, students must satisfy the degree requirements of the College of Arts and Science (outlined in the College of Arts and Science section of this calendar).

A. BSc (20 credit) Major in Ocean Sciences

Departmental Requirements

1000 level
• PHYC 1280.03/1290.03 or PHYC 1300.06
• MATH 1000.03/1010.03
• STAT 1060.03
• Any two of the following three course sequences: BIOL 1010.03/1011.03, CHEM 1011.03/1012.03, ERTH 1080.03/1090.03
OR
• One of: SCIE 1515.36, SCIE 1520.30, 1530.27
• MATH 1010.03
• PHYC 1320.03

2000 level
• OCEA 2000.06 or OCEA 2001.03/2002.03
• OCEA 2020.03/2021.03

3000 and 4000 level
• OCEA 3003.03
• A minimum of one credit each from three of the four Ocean Science Areas (three credits total). See III. Ocean Science Areas.
• One additional credit from the Ocean Science Areas. See III. Ocean Science Areas.
• OCEA 3001.03 or OCEA 4120.03 must be included in one of the preceding two requirements.
• OCEA 4001.03
• OCEA 4401.03/4402.03
• OCEA 4200.06

B. BSc (20 credit) Double Major in Ocean Sciences

Departmental Requirements

Same as for 20 credit BSc Major in Ocean Sciences.

C. BSc (20 credit) Concentrated Honours in Ocean Sciences

Departmental Requirements

1000 level
• PHYC 1280.03/1290.03 or PHYC 1300.06
• MATH 1000.03/1010.03
• STAT 1060.03
• Any two of the following three course sequences: BIOL 1010.03/1011.03, CHEM 1011.03/1012.03, ERTH 1080.03/1090.03
OR
• One of: SCIE 1515.36, SCIE 1520.30, 1530.27
• Any two of the following three course sequences: BIOL 1010.03/1011.03, CHEM 1011.03/1012.03, ERTH 1080.03/1090.03
OR
• One of: SCIE 1515.36, SCIE 1520.30, 1530.27
• SCIE 1540.27
• MATH 1010.03
• PHYC 1320.03

A “B+” average (3.7) must be attained in the following 2000-, 3000- and 4000-level courses. Additionally, a “B” (3.0) must be attained in the required 2000 courses.

2000 level
• OCEA 2000.06 or OCEA 2001.03/2002.03
• OCEA 2020.03/2021.03

3000 and 4000 level
• OCEA 3003.03
• A minimum of one credit each from three of the four Ocean Science Areas (three credits total). See III. Ocean Science Areas.
• One additional credit from the Ocean Science Areas. See III. Ocean Science Areas.
• OCEA 3001.03 or OCEA 4120.03 must be included in one of the preceding two requirements.
• OCEA 4001.03
• OCEA 4401.03/4402.03
• OCEA 4200.06

D. BSc (20 credit) Combined Honours in Ocean Sciences (A) and another subject (B)

Departmental Requirements

1000 level
• PHYC 1280.03/1290.03 or PHYC 1300.06
• MATH 1000.03/1010.03
• STAT 1060.03
• Any two of the following three course sequences: BIOL 1010.03/1011.03, CHEM 1011.03/1012.03, ERTH 1080.03/1090.03
OR
• One of: SCIE 1515.36, SCIE 1520.30, 1530.27
• Any two of the following three course sequences: BIOL 1010.03/1011.03, CHEM 1011.03/1012.03, ERTH 1080.03/1090.03
OR
• One of: SCIE 1515.36, SCIE 1520.30, 1530.27
• SCIE 1540.27
• MATH 1010.03
• PHYC 1320.03

A “B+” average (3.7) must be attained in the following 2000-, 3000- and 4000-level courses. Additionally, a “B” (3.0) must be attained in the required 2000 courses.

2000 level
• OCEA 2000.06 or OCEA 2001.03/2002.03
• OCEA 2020.03/2021.03

3000 and 4000 level
• OCEA 3003.03
• OCEA 3001.03 or OCEA 4120.03
• OCEA 4110.03, OCEA 4140.03
• One and one-half (1.5) additional credits from the Ocean Science Areas. See III. Ocean Science Areas.
• OCEA 4001.03
• OCEA 4401.03/4402.03
• OCEA 4200.06

Honours Qualifying exam (graded as Pass/Fail) based on participation in OCEA 4200.06
E. BSc (20 credit) Combined Honours in a subject (A) and Ocean Sciences (B)

Departmental Requirements

2000 level
- OCEA 2000.06 or OCEA 2001.03/2002.03
- OCEA 2020.03/2021.03

3000 and 4000 level
- OCEA 3003.03
- A minimum of one credit from each of three Ocean Science Areas (three credits total). See III. Ocean Science Areas.
- OCEA 4000.03

F. Minor in Ocean Sciences

Students in other 20 credit degree programs may choose to include a Minor in Ocean Sciences in their program. Requirements are outlined in the College of Arts and Science Minors section of this Calendar beginning on page 129.

G. Minors available to students in Ocean Sciences

Minor programs allow students to develop subject specializations in addition to their major or honours subjects. Minors in other subjects are normally added to a four-year Major or Honours program (including co-op programs).

Students in a 20 credit BSc program in Ocean Sciences may choose to include a Minor selected from the list of approved Minors beginning on page 132 in this Calendar. Note that courses counted toward your Major or Honours program cannot be used to fulfill the requirements of a Minor program.

H. BSc (20 credit) in Environmental Science: Oceans and Global Change

See Environmental Science Program.

I. Certificate programs

In combination with a BA or BSc, there are certificates that can be obtained to emphasize areas of proficiency. Courses counted toward a Major, Honours or Minor program may also be used to fulfill the requirements of a Certificate. For a complete list of offerings refer to Certificate Programs in the College of Arts and Science section of the calendar.

III. Ocean Science Areas

NOTE: Classes marked with an asterisk* are required in that area.

A. Physical Oceanography
- OCEA 3001.03 and/or OCEA 4120.03*, OCEA 4210.03, OCEA 4220.03, OCEA 4311.03, OCEA 4411.03, OCEA 4412.03, OCEA 4505.03, OCEA 4520.03, OCEA 4541.03, OCEA 4550.03

B. Biological Oceanography
- OCEA 4140.03*, OCEA 4160.03, OCEA 4230.03, OCEA 4330.03, OCEA 4335.03, OCEA 4370.03, OCEA 4380.03

C. Chemical Oceanography
- OCEA 3002.03*, OCEA 3420.03 (NOTE: this course may fulfill a half-credit requirement in either this Ocean Science Area or the Geological Oceanography Ocean Science Area, but not both), OCEA 4150.03, OCEA 4195.03

D. Geological Oceanography
- OCEA 3004.03, OCEA 3420.03 (NOTE: this course may fulfill a half-credit requirement in either this Ocean Science Area or the Chemical Oceanography Ocean Science Area, but not both), OCEA 4110.03*, OCEA 4115.03, OCEA 4470.03, OCEA 4480.03

See Oceanography section for course descriptions.

Dean
Moore, C., BA (Hons), PhD (Cambridge), Professor (Psychology)
Chairperson of Department
Lewis, M. R. (494-1435)

Graduate Studies Coordinator
Kelley, D. (494-1890)

Professors Emeriti
Bowen, A. J., MA (Cantab), PhD (Scripps), FRSC
Fournier, R. O., MSc (Wm. & Mary), PhD (URI)
Mills, E., BSc (CARL), MS, PhD (Yale), FLX

Professors
Beaumont, C., BSc (Sussex), PhD (Dalhousie), Canada Research Chair
Boudreau, B. P., BSc (UBC), MS (Texas A & M), PhD (Yale), FRSC Killam Professor and Dean of Graduate Studies
Grant, J., BSc (Dal), PhD (South Carolina)
Hay, A., BSc, MSc (Western), PhD (UBC)
Hill, P. S., AB (Dartmouth), MSc, PhD (Wash)
Kelley, D., BSc (Mt. A), PhD (Dalhousie)
Lewis, M. R., BS, MS (UMd), PhD (Dalhousie)
Metaxas, A., BSc (McGill), MSc (UBC), PhD (Dalhousie) (NSERC USA)
Ruddick, B. R., BSc (Univ), PhD (MIT)
Sheng, J., BEng (East China Tech Univ.), MSc, PhD (MUN) (LRIF Chair)
Tegart, J. T., BSc (Carlton), MSc (Yrk), PhD (McGill)
Thomas, H., MSc (Dundonald), PhD (Romk)
Thompson, K. R., BSc, MSc (Ulster), PhD (Lev) (jointly with Mathematics and Statistics), Canada Research Chair
Wallace, D. W., BSc (U of East Anglia), PhD (Dalhousie), Canada Excellence Research Chair (UBC)

Associate Professors
Fennel, K., MSc, PhD (Romk), Canada Research Chair
Gentleman, W. C., BEng (McGill), PhD (Dartmouth) (cross appointment with Engineering Mathematics)
Kienast, M., BSc (Clausthal), MSc (Karlsruhe), PhD (UBC) (CIFAR Scholar)
Ross, T., BSc (Manitoba), PhD (Victoria) (NSERC USA)

Assistant Professor
Kumar, S., MSc (Karlsruhe), PhD (UBC)

Instructor
deGelleke, L., BS (Univ of Hawaii at Manoa), MSc (Dalhousie)

Adjunct (FGS)
Arima-Sand, K., BSc, MSc (Japan), PhD (Dalhousie)
Crampton P., BSc, PhD (Dalhousie)
Difebush, C., BSc, MSc (Dalhousie), PhD (Scipps)
Frank, K. T., BSc, PhD (Sokol)
Greenberg, D. A., MMath (Waterloo), PhD (Liverpool)
Hobart, D., MS (U. Vic), PhD (Dalhousie)
The Department of Oceanography offers undergraduate training within a new Ocean Sciences program, and in Oceanography as part of a Combined Honours Degree and Double Major Degrees with the Departments of Marine Biology, Chemistry, Earth Sciences, Mathematics, Statistics, and Physics and Atmospheric Science. Honours students in these programs have an opportunity to complement their training in their chosen scientific field with a background in Oceanography, thus enhancing their career and employment opportunities. Students considering graduate study in Oceanography should consider an honours degree.

Oceanography is an inter-disciplinary science that includes studies of tides and currents, the chemistry of sea water, plants and animals that live in the sea, and ocean-bottom sediments and underlying crustal structures. Career oceanographers are employed in universities around the world, in various federal laboratories that are engaged in basic research, and applied problems which meet a national need, such as fisheries investigations, exploration for offshore mineral resources, and studies of ice in navigable waters. Other career opportunities exist in organizations dealing with marine policy and regulation, and in private companies interested in marine environmental technologies, protection or exploration.

The additional eight credits must be chosen in consultation with the two departments involved, specifically the Honours Student Advisor in Chemistry and the Undergraduate Coordinator in Oceanography before registering in the combined program. Students should also consult the handbook “Undergraduate Programs in Chemistry” for details. Some of the courses listed here are required for students seeking a Diploma in Meteorology. Details for this course of study are found in the Physics and Atmospheric Science Program section of this calendar.

A good background in basic science is a necessary prerequisite for students wishing to prepare for studies in Oceanography. There are introductory courses which survey the entire field and advanced courses in each of the major specialties -- physical, chemical, geological, biological, oceanography and atmospheric sciences. Students are encouraged to select electives from the 3000 and 4000 level courses below as appropriate to their selected Undergraduate Honours and/or Major degree.

II. Degree Programs

In addition to the departmental requirements listed below, students must satisfy the requirements outlined in the Degree Requirements section, page 125 of this calendar. The following Combined Honours Programs are only available to students currently in their 3rd or 4th year.

A. Combined Honours Program: Marine Biology/Oceanography

Oceanography is intended to be the second honours subject and Marine Biology is intended to be the primary honours subject. The requirements for a combined honours program in Marine Biology/Oceanography are that the students take a minimum of 11 credits beyond 1000 level in the two subjects with not more than nine credits in each. Core Biology requirements for the current Marine Biology Program (e.g. 1000-1999 level courses in the Calendar) are unchanged. Other courses currently required by the Marine Biology Program in Chemistry, Mathematics, and Statistics are unchanged; however, the Oceanography Department strongly recommends completion of higher level mathematics and statistics courses.

To fulfill the requirements for the combined program, students will take two credits from required courses listed below. In addition, students will need to choose a minimum of two elective credits either from the required courses or elective listed below to complete the program. Finally, students working with faculty in Oceanography or Marine Biology on their honours research would be required to enrol in BIOL 4900.06 as well as BIOL 4880.00.

Required Courses

- OCEA 2000/01: The Blue Planet
- OCEA 2003.03: Climate Change
- OCEA 3001.03: Introduction to Physical Oceanography
- OCEA 3002.03: Introduction to Chemical Oceanography
- OCEA 3003.03: Introduction to Biological Oceanography
- OCEA 3004.03: The Last Billion Years
- OCEA 4140.03: Biological Oceanography
- BIOL 4000.06: Honours Thesis Project
- BIOL 4880.00: Honours Qualifying Examination

Electives

- OCEA 3420.03: Gaschemistry of Aquatic Environments
- OCEA 4000.03: Oceans and Global Change
- OCEA 4103.03: Fisheries Oceanography
- OCEA 4230.03: Biology of Phytoplankton
- OCEA 4380.03: Benthic Ecology
- OCEA 4341.03: History of Marine Sciences
- OCEA 4353.03: Environmental Impacts in Marine Ecosystems
- OCEA 4710.03: Deep Sea Biology
- OCEA 4380.03: Marine Modelling

B. Combined Honours Program: Chemistry/Oceanography

Oceanography is designated as the second subject of the Combined Honours Degree. At least 11.5 credits beyond the 1000 level are required in Chemistry and Oceanography/Related Sciences. CHEM 2100.03, 2200.03, 2301.03, 2302.03, 2401.03, and 2402.03 must be part of this combined honours program and must be passed with a grade of C or better.

Courses for Combined Honours with Oceanography degree.

Required marked with an asterisk (*).  

First Year

- CHEM 1401.03 + 1402.03: Concepts in Chemistry I & II or CHEM 1101.03 + 1102.03: Engineering Chemistry I & II
- MATH 1000.03 + 1001.03: Differential and Integral Calculus I & II
- PHYS 1500.03 or 1500.03: Intro or Physics I and Intro to Astrophysics
- *Writing Course - Language or Humanities
- *Social Science

2000 level courses (chemistry)

- CHEM 2100.03 + 2202.03: Intro. Inorganic + Intro. Analytical
- *CHEM 2101.03 + 2204.03: Thermodynamics + Kinetics and Dynamics
- CHEM 2401.03 +2402.03: Organic Chemistry

3000 and 4000 level courses (chemistry)

- CHEM 3200.01: Spectroscopy & Separations
- CHEM 4202.03: Chromatronics
- *Three courses from CHEM 4010, 4100, 4200
- *CHEM 4901: Honours Research Project

Oceanography and related courses

- OCEA 3001.03: Climate Change
- ERTH 2400.03: Marine Geoscience
- OCEA 3002.03: Introduction to Physical Oceanography
- *OCEA 3003.02: Introduction to Chemical Oceanography

Courses for Combined Honours with Oceanography degree.

552 Oceanography
C. Combined Honours Program: Earth Sciences/ Oceanography
Oceanography is designated as the second subject of the Combined Honours Degree. At a minimum, students must choose 11 credits beyond 1000-level in the two subjects with not more than nine nor fewer than five in either; at a maximum, students will choose 13 credits beyond 1000-level in two subjects with not more than nine nor fewer than four in either.

Four Required Oceanography Credits from:
- OCEA 2000.06: The Blue Planet
- OCEA 2000.08: Climate Change
- OCEA 3001.03: Introduction to Physical Oceanography
- OCEA 3002.03: Introduction to Chemical Oceanography
- OCEA 3003.04: The Last Billion Years
- OCEA 3005.03: Geochemistry of the Aquatic Environments
- OCEA 4110.03: Geophysical Oceanography
- OCEA 4310.03: History of Marine Sciences
- OCEA 4470.03: Introduction to Geologic Processes and Sedimentology
- OCEA 4200.06: Honors Thesis *

*Students registered in this course must take instruction in thesis writing along with students registered in ERTH 4208.06

These Oceanography credits must be combined with core Earth Sciences courses, which constitute five credits:
- ERTH 2000.03: Field School
- ERTH 2001.03: Earth Materials Science I
- ERTH 2002.03: Earth Materials Science II
- ERTH 2003.03: Principles of Geophysics I
- ERTH 2110.03: Field Methods
- ERTH 2230.03: Sedimentary and Sedimentary Rocks
- ERTH 2235.03: Introduction to Palaeontology
- ERTH 3000.03: Computer Camp
- ERTH 3140.03: Structural Geology
- ERTH 3303.03: Stratigraphy
- ERTH 4000.03: Advanced Field School (NB: 0 credit hours)
- ERTH 4350.03: Tectonics

Additional credits ERTH credits will be chosen from the following list so that the total of OCEA and ERTH courses is between 11 and 13 credits.
- ERTH 2400.03: Marine Geoscience (recommended)
- ERTH 3010.03: Isotope Geology
- ERTH 3020.03: Isotope Geology

D. Combined Honours Program: Mathematics/ Oceanography
Mathematics is intended to be the primary honours subject and Oceanography the second subject. The requirements for a combined honours program in Mathematics/Oceanography are that the students take a minimum of 11 and a maximum of 14 credits beyond the 1000-level in the two subjects with not more than nine nor fewer than five in each. Oceanography courses must be chosen in consultation with the Honours Project advisors.

Recommended Mathematics Courses:
- MAT 2001.03/2002.03: Intermediate Calculus
- MAT 2130.03/2135.03: Linear Algebra
- MAT 2505.05: Analysis
- One of:
  - MAT 3010.06: Abstract Algebra
  - MAT 3100.06: Analysis
- One full credit in MATH at 4000 level.
- OCEA 2000.06: The Blue Planet
- OCEA 3001.03: Introduction to Physical Oceanography
- Plus MAT 4990 or OCEA 4200 (Honours Research Project)

Relevant pure courses (please review prerequisites):
- BIOC 1000, 3060, 4988
- BIOC 1000, 1090, 1090, 1490, 2410

E. Combined Honours Programs: Physics/ Oceanography
Oceanography is designated as the second subject of the Combined Honours Degree. At least 11 credits beyond the 1000-level are required in Physics and Oceanography. The additional one credit must be chosen in consultation with the two departments involved, specifically the Honours Student Advisor in Physics and the Undergraduate Coordinator in Oceanography, before registering in the combined program.

Required Physics courses are:
- PHYS 2140.05: Physics Tools I
- PHYS 2150.05: Physics Tools II
- PHYS 2215.05: Modern Physics
- PHYS 2510.05: Electricity and Magnetics
3000 level:
- PHYS 3000.03: 3010.03: Experimental Physics
- PHYS 3210.03: Thermodynamics
- PHYS 3100.03: Statistical Mechanics
- PHYS 3150.03: Advanced Classical Mechanics
- PHYS 3900.03: Optics and Photonics

4000 level:
- PHYS 4000.03: 4850.03: two Honours Projects
- PHYS 4000.03: Math Methods in Physics
- PHYS 4100.03: Electrodynamics.

Other required courses as detailed by pre-requisites for the different physics courses offered:
- CHEM 1011.03: Concepts in Chemistry I
- MATH 1000.03: Differential Calculus I
- MATH 2000.03: Intermediate Calculus I
- MATH 2001.03: Linear Algebra and Matrix Theory I
- MATH 2002.03: Linear Algebra and Matrix Theory II
- MATH 4000.03: Introduction to Numerical Computing
- MATH 3100.03: Differential Equations I

A full-credit course in computer programming (e.g. PHYS 2050: Computer Simulations in Science) is recommended to be taken before the end of the second year.

- OCEA 1000X/Y.06: Conversations with Ocean Environments (cross-listed as ENGM4680)

Required Statistics/Mathematics Courses
- MATH 2001.03: Intermediate Calculus I
- MATH 2002.03: Intermediate Calculus II
- MATH 2100.03: Matrix Theory and Linear Algebra I
- MATH 2101.03: Matrix Theory and Linear Algebra II
- STAT 2000.03: Exploratory Data Analysis
- STAT 2010.03: Introduction to Probability and Statistics
- STAT 2040.03: Statistical Methods for Data Analysis and Inference
- STAT 3140.03: Regression and Analysis of Variance
- STAT 3160.03: Probability
- STAT 3400.03: Intermediate Statistical Theory

- OCEA courses.

F. Combined Honours Program: Statistics/Oceanography

- OCEA 3000.06: The Blue Planet
- OCEA 4000.03: Fluid Dynamics 1

Elective Statistics/Mathematics courses taken from the following list so that the total number of OCEA credits is at least 40:

- STAT 3345.03: Environmental Risk Assessment
- STAT 3340.03: Regression and Analysis of Variance
- STAT 2080.03: Statistical Methods for Data Analysis and Inference
- STAT 2060.03: Introduction to Probability and Statistics
- STAT 2050.03: Exploratory Data Analysis
- STAT 2040.03: Statistical Methods for Data Analysis and Inference
- STAT 3140.03: Regression and Analysis of Variance
- STAT 3160.03: Probability
- STAT 3400.03: Intermediate Statistical Theory

- Students are responsible for fulfilling all pre-requisite courses or obtaining the permission of the instructor to enroll. Students in the program must consult regularly with the Undergraduate Coordinator in each Department.

Students should follow the requirements for a Combined Honours program (see sub-section B – G, above), but replace the Honours Thesis with other MARI/OCEA, CHEM/OCEA, ERTH/OCEA, MATH/OCEA, PHYC/OCEA, STAT/OCEA courses.

III. Course Descriptions

OCEA 1000XY.06: Conversations with Ocean Scientists.

Students engage with working ocean scientists about their research, its relevance, and how to communicate science to different audiences. In addition to regular writing exercises that include journaling, blogging, and lab reporting, students compose a research paper and follow it through the process of submission and peer-review for an in-class journal.
This course provides an overview of oceanography. It is designed to develop an understanding of the ocean and the science of oceanography. Students learn about the geological, physical, chemical, and biological processes at work in the ocean. Consideration is also given to human impacts.

NOTE: Credit can only be given for this course if the previous requirements are completed in consecutive terms. The exception is for Marine Biology Co-op students, who can enroll in OCEA 2001.X.03 and OCEA 2002.Y.03 in non-consecutive terms if their program demands conflict with a full-year enrollment.

FORMAT: Lecture 3 hours
PREREQUISITE: OCEA 2000.X.03 (or OCEA 2001.X.03/2002.Y.03); or permission of instructor
EXCLUSION: OCEA 2850.06, OCEA 2851.03/2852.03

OCEA 2001.03: The Blue Planet I.

This course provides a general survey of oceanography. It is designed to develop an understanding of the ocean and the science of oceanography. Students learn about the geological, physical, chemical and biological processes at work in the ocean. Consideration is also given to human impacts.

NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms. The exception is for Marine Biology Co-op students, who can enroll in OCEA 2001.X.03 and OCEA 2002.Y.03 in non-consecutive terms if their program demands conflict with a full-year enrollment.

EXCLUSION: OCEA 2000.06, OCEA 2800.06, OCEA 2811.03/2852.03

OCEA 2002.03: The Blue Planet II.

This course provides a general survey of oceanography. It is designed to develop an understanding of the ocean and the science of oceanography. Students learn about the geological, physical, chemical and biological processes at work in the ocean. Consideration is also given to human impacts.

NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms. The exception is for Marine Biology Co-op students, who can enroll in OCEA 2001.X.03 and OCEA 2002.Y.03 in non-consecutive terms if their program demands conflict with a full-year enrollment.

The Blue Planet I and II courses provide a broad overview of oceanography.

OCEA 2003.03: Tools and Concepts in Ocean Sciences I.

Students gain applications-based insights into concepts introduced in OCEA 2000.06 through hands-on experience with data acquisition and analysis, instrumentation, and wet-lab experiments. Quantitative skills are developed and applied to ocean problems. Topics include determining the age of the earth, seawater chemistry, acidification, water mass variation, waves and tides.

FORMAT: Lab 3 hours
PREREQUISITE: MATH 1000.X.03; STAT 1060.03; PHYC 1280/1290.03 (or PHYC 1000.06), at least 3 credits from GEOG 1010.01 or (Biol 1020.03, 1021.03), or CHEM 1011.03/1012.03, ERTH 1080.03/1090.03; or permission of instructor
CO-REQUISITE: OCEA 2000.06 (or OCEA 2001.03/2002.03); or permission of instructor

OCEA 2004.03: Tools and Concepts in Ocean Sciences II.

Following from OCEA 2000.06, students further develop quantitative skills applied to topics that include ocean optics, ocean productivity and biomass, solitation, remote sensing, and biophysical modelling. Students build their own ocean sensors that are used to measure various states and rates during labs throughout the term.

FORMAT: Lab 3 hours
PREREQUISITE: OCEA 2000.06
CO-REQUISITE: OCEA 2000.06 (or OCEA 2001.03/2002.03); or permission of instructor

OCEA 2000.03: Climate Change.

See course description for PHYC 2800.03 in the Physics and Atmospheric Science section of this calendar.

CROSS-LISTING: PHYC 2800.03, GEOG 2800.03
EXCLUSION: ECON 2800.06, PHYC 2800.06

OCEA 3001.03: Introduction to Physical Oceanography.

This course introduces Ocean Physics, focusing on issues of interest to undergraduates in ocean-related disciplines. The approach is to blend facts together with ideas, often starting with thought experiments and proceeding to simple mathematical models.
OCEA 4115.03: Micropaleontology and Global Change.
See course description for ERTH 4902 in the Earth Sciences section of this calendar.
CROSS-LISTING: ERTH 4902.03

OCEA 4120.03: Physical Oceanography.
This course introduces undergraduate students to the physical properties and dynamics of the oceans. Topics range from global circulation down to the small scales of turbulence. Fast and theory are blended throughout. Quantitative problem solving is emphasized in assignments.
FORMAT: Lecture 3 hours
PREREQUISITE: MATH 1000.03, MATH 1010.03, classic calculus or equivalent, and permission of the instructor.
CROSS-LISTING: OCEA 5120.03
RESTRICTION: Third- and fourth-year students only.

OCEA 4130.03: Chemical Oceanography.
This course covers the major and minor constituents of sea water, the controls on its chemical composition, nutrient cycling, gas exchange and the influence of the ocean on atmospheric chemistry. Other topics include chemical tracers, and radiochemical dating methods, stable isotopes studies, chemical speciation and chemical models of sea water.
FORMAT: Lecture 3 hours, some labs
PREREQUISITE: OCEA 2000; OCEA 3002 or instructor's consent.
CROSS-LISTING: OCEA 5130.03

OCEA 4140.03: Biological Oceanography.
The goal is to describe how physical, chemical and biological processes interact to determine the oceans' composition, biogeochemical activities, and trophic structure of marine communities. Outstanding problems currently facing biological oceanographers and earth systems scientists are discussed, as are current attempts and methodologies to address them.
NOTE: Biological oceanography is a quantitative science and extensive problem solving is required. Students should be competent in mathematics through calculus. Permission of instructor is required.
PREREQUISITE: OCEA 2000.06 (or OCEA 2001.03/2002.03); OCEA 2020.03; OCEA 2021.03; or permission of instructor.
CROSS-LISTING: OCEA 5140.03, BIOL 4661.03, 5661.03, MARI 4661.03

OCEA 4160.03: Fisheries Oceanography.
Oceanographic influences on ecology of marine fish on population dynamics, distribution, abundance, reproduction, life history, feeding, growth, metabolism, mortality, and recruitment. Emphasis on contemporary hypotheses and some on management. Primary-practical-style research paper required. Competence with fundamental population dynamics, ecology, physical oceanography, mathematics, and statistical analysis expected.
FORMAT: Lecture 3 hours, some practices/tutorials
PREREQUISITE: OCEA 2000.06 or 2001.03 or 2002.03; BIOL 2060.03 and/or 3067.03 or equivalent. MATH/STAT 1060.03 and/or 2080.03 or equivalent or instructor's consent.
CROSS-LISTING: BIOL 4369.03, MARI 4369.03, OCEA 5160.03

OCEA 4200X/YY.06: Honours Research.
The nature is required for students enrolled in the Combined Honours in Ocean Sciences, and certain streams of the Combined Honours in Oceanography program. It consists of a research project under the supervision of a faculty member, including an original component in oceanography. A written thesis is submitted to the Department.
NOTE: Credit can only be given for one of the X and Y. It can be completed in consecutive terms and partial credit cannot be given for a single term.
PREREQUISITE: Permission of Honours Coordinator.

OCEA 4210.03: Time Series Analysis in Oceanography and Meteorology.
This course describes the application of advanced time series analysis in oceanography and meteorology. Time and frequency domain approaches are covered. Students will develop their own computer programs to analyze real observations. Specific topics include stationarity, auto and cross-covariance functions, power and cross-spectra, and state space models.
FORMAT: Lecture 3 hours
PREREQUISITE: Instructor's consent
CROSS-LISTING: STAT 4390.03/5390.03, OCEA 5210.03

OCEA 4220.03: Numerical Modelling of Atmospheres and Oceans.
This course discusses numerical modelling techniques for simulating atmospheric and oceanic circulations. Material includes: review of governing equations, finite difference, finite element, and spectral methods; Eulerian, semi-implicit and semi-Lagrangian time integration techniques; accuracy and stability studies; data assimilation and ensemble prediction methods; and boundary treatment for ocean models.
FORMAT: Lecture 3 hours
PREREQUISITE: 1000-level calculus course and instructor's consent.
CROSS-LISTING: OCEA 5220.03

OCEA 4222.03: Estuary, Coast and Shelf Dynamics.
This course discusses the physical processes that operate on continental shelves to create long waves, tides, tidal mixing, thermohaline circulation, wind forcing, upwelling, etc. Both observations and models for these processes are discussed.
FORMAT: Lecture 3 hours
PREREQUISITE: OCEA 4120.03
CROSS-LISTING: OCEA 5222.03

OCEA 4230.03: Biology of Phytoplankton.
This course presents the phytoplankton in the context of their evolutionary history and ecological diversity, with an emphasis on their adaptations and acclimation to different environments and their role in food webs and in biogeochemical cycling.
FORMAT: Lecture 3 hours
PREREQUISITE: Instructor's consent.
CROSS-LISTING: BIOL 4662.03, OCEA 5230.03, MARI 4662.03

OCEA 4290.03: Advanced Chemical Oceanography.
This course presents research topics in chemical oceanography, taught as 3-4 self-contained modules. Examples include the oceanic CO2 system and its relation to climate change; chemical reactions in sediments; photochemistry in the upper ocean, and inferring the chemistry of ancient oceans through the isotope record in sediments.
PREREQUISITE: Students will have completed all required 3000 level courses in Oceanography, OCEA 4130, and have the consent of the instructor of this course.
CROSS-LISTING: OCEA 5290.03

OCEA 4311.03: Fluid Dynamics I.
An introduction to the theory of fluid dynamics, with some emphasis on geophysical aspects. Topics include tensor mathematics, flow kinematics, equations of motion, viscosity, potential flow, convection and turbulence, and basic aerodynamics. Occasional reference will be made to current research topics, especially those in Physical Oceanography.
FORMAT: Lecture 3 hours
PREREQUISITE: Open to first-year graduate students in physical oceanography, but graduate students or senior undergraduates in Mathematics or Physics are invited to take it (subject to instructor approval).
CROSS-LISTING: PHYC 4311.03, PHYC 5311.03, OCEA 5311.03

OCEA 4330.03: Benthic Ecology.
A graduate/fourth year undergraduate course on major problems of benthic ecology, such as food supply to benthic animals, and geomorphological processes in sediments. Course consists of two lecture per week and one journal paper discussion seminar. The last three weeks of the course are devoted to a class research project.
FORMAT: Lecture 3 hours
PREREQUISITE: Instructor's consent.
CROSS-LISTING: BIOL 4666.03, OCEA 5350.03, MARI 4666.03

OCEA 4331.03: History of Marine Sciences.
This course describes the development of the marine sciences from biological, chemical, physical and geological knowledge going back to the 17th century or earlier. It includes the important voyages of exploration, the development of
 marine biology, ocean circulation and plate tectonics, also the importance of
technological changes upon marine sciences.

FORMAL: Lecture 3 hours

PREREQUISITE: Instructor's consent

CROSS-LISTING: BIOE 4464.03, OCEA 5531.05, SICE 4481.03, HIST 3073.03, HIST 3331.03, MARI 4464.03

OCEA 4353.03: Environmental Impacts in Marine Ecosystems.

Course is directed to various activities in marine environments, with focus on
ecosystem level influences: dispersion, elemental fluxes, benthic impacts, food
webs, biodiversity. Simulation modelling of ecosystems in undertake using
SimaOOP software. Classes include lectures, modelling examples, and
discussion of research papers. Course requirements consist of problem sets and
modelling project.

FORMAL: Lecture

CROSS-LISTING: OCEA 5353.03, BIOE 4353.03, MARI 4353.03

CO-REQUISITE: BIOE 2060.03, MATH 1000.03, STAT 1060, or permission of
the instructor.

OCEA 4370.03: Deep Sea Biology.

We focus on the biology of organisms inhabiting the deep sea: physiological
adaptations to the physicochemical and geological environment: spatial and
temporal distributions of biological assemblages; and regulatory factors of these
assemblages, such as currents, food availability, reproduction and recruitment.
Also, we delve into unique habitats, such as hydrothermal vents.

PREREQUISITE: BIOE 2060.03 and OCEA 2000.06

CROSS-LISTING: BIOE 4370.03, MARI 4370.03, OCEA 5370.03

OCEA 4380.03: Marine Modelling.

This course provides a survey of modelling techniques applied to physical,
biological and biogeochemical problems in oceanography. Lecture material covers
the philosophy of modelling, dimensional analysis, parameterization of various
processes, numerical approaches to solving differential equations, etc. Students
are given the opportunity to study topics of particular interest to them.

FORMAL: Lecture 3 hours

PREREQUISITE: MATH 1000.03, MATH 1010.03, OCEA 2020.03; OCEA
2021.03, or permission of instructor

CROSS-LISTING: OCEA 5380.03

OCEA 4401.03: Marine Management I.

This course exposes students with a marine science background to the increasing
need for marine scientists and ocean managers and policy makers to work
collaboratively to address the interdisciplinary nature of the problems confronting
the world’s oceans. This course is restricted to 4th year students with a marine
science background.

FORMAL: Lecture

PREREQUISITE: OCEA 2000.06 (or OCEA 2001.03/2002.03)

RESTRICTION: Restricted to 4th year students

OCEA 4402.03: Marine Management II.

Students focus on the linkages between ocean governance and ocean science to
understand the role of marine science in informing and influencing decisions
affecting coastal and marine space and resources at multiple geographic and
jurisdictional scales. This course is restricted to 4th year students with a marine
science background.

PREREQUISITE: OCEA 2000.06 (or OCEA 1002.03/2002.03)

OCEA 4411.03: Atmospheric Dynamics I.

See course description for PHYC 4411.03 in the Physics and Atmospheric Science
section of this calendar.

PREREQUISITE: PHYC 2140.03 and MATH 3101.03, or instructor's consent

CROSS-LISTING: OCEA 5411.03, PHYC 4411.03/5411.03

OCEA 4412.03: Atmospheric Dynamics II.

See course description for PHYC 4412.03 in the Physics and Atmospheric Science
section of this calendar.

PREREQUISITE: OCEA 4411.03/5411.03 or PHYC 4411.03/5411.03, or
instructor's consent

CROSS-LISTING: OCEA 5412.03, PHYC 4412.03/PHYC 5412.03

OCEA 4470.03: Introduction to Seismic Imaging.

See course description for ERTH 4470.03 in the Earth Sciences section of this
calendar.

PREREQUISITE: ERTH 3270.03, or instructor's consent

CROSS-LISTING: OCEA 5470.03, ERTH 4470.03/5470.03

OCEA 4480.03: Advanced Seismic Imaging.

See course description for ERTH 4480.03 in the Earth Sciences section of this
calendar.

PREREQUISITE: ERTH 4470.03, or instructor's consent

CROSS-LISTING: ERTH 4480.03, ERTH 5480.03

OCEA 4505.03: Atmospheric Physics.

See course description for PHYC 4505.03 in the Physics & Atmospheric Science
section of this calendar.

OCEA 4520.03: Introduction to Atmospheric Science.

See course description for PHYC 4520.03 in the Physics and Atmospheric Science
section of this calendar.

PREREQUISITE: PHYC 2140.03, or instructor's consent

CROSS-LISTING: OCEA 5520.03, PHYC 4520.03/5520.03

OCEA 4541.03: Synoptic Meteorology I.

See course description for PHYC 4541.03 in the Physics and Atmospheric Science
section of this calendar.

PREREQUISITE: At least one third-year Physics course

CROSS-LISTING: OCEA 5541.03, PHYC 4541.03/5541.03

CO-REQUISITE: OCEA 4220.03

OCEA 4550.03: Synoptic Meteorology II.

See course description for PHYC 4550.03 in the Physics and Atmospheric Science
section of this calendar.

PREREQUISITE: OCEA 4541.03, or PHYC 4540

CROSS-LISTING: OCEA 5550.03, PHYC 4550.03/5550.03

OCEA 4595.03: Atmospheric Chemistry.

See course description for PHYC 4595.03 in the Physics and Atmospheric Science
section of this calendar.

PREREQUISITE: PHYC 2140.03 and a first-year chemistry course

CROSS-LISTING: OCEA 5595.03, PHYC 4595.03, PHYC 5595.03, CHEM
4595.03

OCEA 4596.03: Economic Impacts in Marine

See course description for PHYC 4596.03 in the Physics & Atmospheric Science
section of this calendar.
Physics and Atmospheric Science

I. Introduction

Physics is the study of the fundamental properties of energy and matter. It attempts to describe and explain the great diversity of nature with the fewest and simplest hypotheses, and to show the underlying similarities of seemingly diverse phenomena. It requires imagination and is its success is judged by whether or not nature confirms its predictions when tested by experiment. An understanding of phenomena. It requires imagination and its success is judged by whether or not nature confirms its predictions when tested by experiment. An understanding of
A BSc with Honours in Physics

All students who intend to take a BSc with Honours in Physics are encouraged to discuss their program with staff members of the department, and should consult with the Undergraduate Advisor by the beginning of the second year.

Departmental Requirements

A Concentrated Honour Program in Physics will normally include the following courses:

2000 level
• PHYS 2140.03/2150.03
• PHYS 2515.03/2510.03

3000 level
• PHYS 3010.03/3015.03
• PHYS 3660.03/3390.03
• PHYC 3320.03/3325.03

4000 level
• PHYS 4000.03/4005.03
• PHYS 4191.03
• PHYC 4160.03/4100.03

Courses from other departments
• CHEM 1011.03/1012.03
• MA TH 2001.03/2002.03
• MA TH 2030.03 and (MATH 2120.03 or MATH 2135.03 or MA TH 2300.03 or MATH 2400.03)
• MA TH 3120.03
• One or more of PHYS 3070.03, PHYS 3210.03, or PHYS 4250.03
• Two other physics half credits at the 3000 or 4000 level, other than PHYS 3146.03, PHYC 3170.03, PHYC 3310.03, PHYS 4540.03, PHYS 4550.03

A BSc (20 credit) Major in Physics

A BSc (20 credit) Major in Physics will normally include the following courses:

1000 level
• PHYS 1190.03/1290.03 or 1300X/Y.06 or SCIE 1501X/Y.27 or 1510X/Y.33

2000 level
• PHYS 2140.03/2150.03
• PHYS 2515.03/2510.03

3000 level
• PHYS 3010.03/3015.03
• PHYS 3660.03/3390.03
• PHYC 3320.03/3325.03

4000 level
• Eight physics half credits at the 3000 level or above; which must include one or more of PHYS 3070.03, PHYS 3210.03, or PHYS 4250.03

Courses from other departments
• CHEM 1011.03/1012.03
• MA TH 2001.03/2002.03
• CHEM 1011.03/1012.03
D. BSc (15 credit) with Minor in Physics

3000 level
- PHYC 1190.03/1290.03 or 1300X.Y.06 or SCE 1500X.Y.27 or 1510X.Y.33

2000 level
- PHYC 2140.03/2150.03
- PHYC 2180.03/2190.03

3000 level
- four physics half credits at the 3000 level or above, which must include one or more of PHYC 3003.03, PHYC 3250.03, or PHYC 4250.03

Courses from other departments
- MATH 1000.05/1010.05
- MATH 2001.03/2002.03
- CHEM 1011.05/1012.05

The BSc (15 credit) can be combined with a Diploma in Engineering (see also III below). Completion of the BSc (15 credit) with appropriate physics courses can lead to admission into the Diploma in Meteorology Program (see IV).

E. Co-op Education in Physics

Co-operative Education in Science (Science Co-op) is a program where academic study is combined with paid career related work experience. Students incorporate three work terms in their academic study terms and graduate with a Bachelor of Science Co-op. Science Co-op enables students to apply their knowledge directly while providing them with work experience that assists in making educated career choices. Students apply to join Science Co-op before their second year of study. If accepted into the Science Co-op program, students are required to register for and attend the Science Co-op Seminar Series (SCIE 2800.00) in the fall term of the year they join.

The scheduling of Science Co-op work terms must be taken into account in planning course selection. Consult with the Physics Co-op Academic Advisor for your work term sequence.

See the “Co-operative Education in Science” section of this calendar, or http://www.sciencecoop.dal.ca, for information on Science Co-op such as Science Co-op requirements, eligibility, how to apply, deadlines and other related information.

For further information on the Physics Co-op program, please see http://www.physics.dal.ca and follow the links to the Science Co-op website.

Co-op Program Advisor in Physics:
D. Labrie (494-2322) daniel.labrie@dal.ca

F. Honours Co-op in Physics

Departmental Requirements
Same as for the regular honours in Physics as above with the addition of the following:
- Three or four supervised work terms: PHYC 8991.00, 8992.00, 8993.00, 8994.00
- Co-op Seminar: SCE 2800.00

This is required and is a prerequisite to the first work term.

Continuous standing of at least B

It is strongly recommended that students take a full credit in scientific computer programming in their second year.

Please consult the Department’s website (http://www.physics.dal.ca) for complete program listings.

G. Minor in Physics

Students in other 20 credit degree programs may choose to include a Minor in Physics in their programs. Requirements are outlined in the College of Arts and Science Minors section of this Calendar beginning on page 120.

III. Interdisciplinary Opportunities

In addition to combined honours, opportunities exist to combine other degrees in physics with the many programs Dalhousie offers. Below are listed interdisciplinary opportunities which may be of particular interest. Please contact the Undergraduate Advisor for details.

A. Physics and Engineering Concurrent Programs

If you wish to enter one of these concurrent programs, you should register for the standard first year Engineering program and consult the Undergraduate Advisor in Physics in order to plan your course selection. Additional details, can be found in the Degree Requirements section.

The following Programs can be taken concurrently:
1. BSc/DepEng: Students can complete the requirements for the BSc (15 credit) and the DepEng in as little as three years.
2. BSc/BEng: Students can complete the BSc (15 credit) and the BEng degrees in as little as five years.
3. A BSc (Honours Physics)/BEng combination is also possible (see http://www.physics.dal.ca for more information).

B. Geophysics

For those interested in Geophysics, it is recommended that they take the courses required for a Combined Honours in Physics and Earth Sciences, or for Honours Physics, and choose as their electives a selection of the following courses: ERTH 2270.03, 3270.01, 4470.03, 4480.03.

C. Minors and Other Programs

Minor programs allow students to develop subject specialities in addition to their major or honours subjects. Minors in other subjects are normally added to a four-year major or concentrated honours program (including co-op programs).

Students in a 20 credit BSc program in Physics may choose to include a Minor selected from the list of approved Minors beginning on page 132 in this Calendar. Note that courses counted toward a Major or Honours program cannot be used to fulfill the requirements of a Minor program.

D. Diplomas, Certificates, and Language Proficiency Certificates

In combination with a BA or BSc there are certificates or diplomas that can be obtained to emphasize areas of proficiency. Courses counted toward a Major, Honours or Minor program may also be used to fulfill the requirements of a Certificate. For a complete list and details refer to the College of Arts and Science Degree Requirements starting on page 129 of the calendar.

The following certificates may be of particular interest to students in a BSc program in Physics.

Certificate in Information Technology (IT) - Physics

Students who complete a (20 credit) Major or Concentrated Honours program in Physics will receive an IT certificate if they have taken one of PHYC 3050.03, PHYC 3250.03, or PHYC 4250.03. Please contact the Physics undergraduate advisor prior to graduation if you qualify for the IT certificate.

Certificate in Materials Science

The Department of Physics and Atmospheric Science is a participant in a certificate program offered through the Faculty of Science - a Certificate in Materials Science. A Certificate can be completed by a student in a BSc Program, in addition to the student’s regular program requirement. Completion of such a Certificate would be noted at Convocation, and shown on the student’s transcript.

The purpose of a “Certificate in Materials Science” is to show that the graduate has appropriate training in the breadth and depth of materials science, in addition to their BSc program. It is particularly suited for students in Chemistry, Earth Sciences and Physics programs at Dalhousie University.

Students should enrol in the “Certificate in Materials Science” by contacting the Certificate Coordinator, Dr. Mary Anne White (mawan@dal.ca). Students can enrol when in their second, third and fourth year of the BSc Program, but early enrolment is advised.
IV. Diploma in Meteorology

A. BSc or BA (20 credit) Major in Physics combined with a Diploma in Meteorology

This is an integrated Physics/Meteorology program. The student follows the regular 20 Credit BSc in Physics. The minimum requirements are:

- PHYC 1000X/Y.06
- PHYC 1190.03/1290.03
- PHYC 1280.03
- PHYC 1310.03/1320.03

Hands-on labs. Students are encouraged to ensure that their program meets the requirements for the 15 Credit BSE, by the end of Year 3.

B. Diploma in Meteorology

For admission into this program, a general 15 Credit BSc degree in Physics, Mathematics, or Chemistry, with appropriate Physics courses, is required. A strong background in Physics and Mathematics is necessary, and courses taken should cover Vector Calculus and differential equations. To obtain the Diploma, the ten half-credit Meteorology courses listed above are required. More information on the Diploma in Meteorology program is available at: http://www.dal.ca/Diploma_in_Meteorology/

C. Atmospheric Science

After completion of the Diploma program, students are eligible to be considered for admission to a graduate program in Atmospheric Science at Dalhousie.

V. Course Descriptions

NOTE: Not all courses are offered every year. Please consult the current timetable for this year’s offerings.

PHYC 0010.00: University Prep Physics.

This course can be used as a prerequisite for PHYC 1190.03 and PHYC 1280.03. The course will develop problem-solving techniques in preparation for topics to be covered in PHYC 1190.03 and PHYC 1280.03. This course is offered by the College of Continuing Education. Students may register and pay for this course at the College of Continuing Education located at 1220 LeMarchant Street, 2nd Floor or by calling (902) 494-2375. This course is available in the summer and in the fall term. The College of continuing Education at: http://collegeofcontinuinged.dal.ca

EXCLUSION: Credit will be given for only one of 1190.03, 1290.03, or 1310.03

PHYC 1290.03: Introduction to Physics.

This course concentrates on oscillations and waves, optics, electricity and magnetism. Primarily for students entering Physical Science of Continuing Engineering. This course is required for all Engineering programs. Students entering this course must be familiar with calculus, graphs, and trigonometry, and should be taking calculus (MA TH 1000.03/1010.03 or MA TH 1280.03/1290.03) concurrently.

Ideas are introduced through in-class demonstrations enabling students to relate physical theory to events in the real world. Students explore many concepts via hands-on labs.

FORMAT: Lecture 3 hours, lab 3 hours (number of labs = 7)

PREREQUISITE: High School Physics equivalent to the Nova Scotia Grade 12 level. Students not having a physics credit equivalent to Nova Scotia Grade 12 Physics are strongly advised to take PHYC 0010.00 available in the summer and in the fall term. The College of continuing Education at: http://collegeofcontinuinged.dal.ca

EXCLUSION: Credit will be given for only one of PHYC 1000X/Y.06, 1190.03, 1290.03, or 1310.03

PHYC 1300X/Y.06: Physics in and Around You.

An introduction to physics for students in Biology, Psychology, Arts and Environmental Sciences, and for students preparing for MC-AL and Medicine, Dentistry and Applied Health Sciences. It is accepted as a prerequisite to advanced courses in physics when combined with MA TH 1000.03 and 1010.03. Basic concepts in physics are applied, where possible, to realistic biological models, e.g. forces and torques are related to muscles and joints, electricity to cellular activity, fluids to blood circulation, etc.

NOTES:
1. This course is not acceptable in the Engineering program.
2. Students taking this course must register in both X and Y in consecutive terms; credits will be given only if both are completed consecutively.
3. Labs do not start until the second week of classes.
4. Note: Credit can only be given for one of PHYC 1000X/Y.06, 1190.03 is strongly recommended. Students not having a physics credit equivalent to Nova Scotia Grade 12 Physics are strongly advised to take PHYC 0010.00 available in the summer and in the fall term. The College of continuing Education at: http://collegeofcontinuinged.dal.ca

EXCLUSION: Credit will be given for only one of PHYC 1000X/Y.06, 1190.03, 1290.03, 1300X/Y.06, or 1310.03

PHYC 1310.03/1320.03: Physics in and Around You.

These two half courses are, as a pair, equivalent to PHYC 1300X/Y.06. They are available ONLY to accommodate special circumstances; permission from the Department is required for students not in Kinesiology. PHYC 1310.03 is strongly recommended for all first year Kinesiology students. PHYC 1320.03 is strongly recommended for Kinesiology students considering the Ergonomics stream. See the Health and Human Performance section of this calendar.

EXCLUSION: Credit will be given for only one of PHYC 1000X/Y.06, 1190.03, 1290.03, 1300X/Y.06, or 1310.03

PHYC 1340X/Y.06: Physics in and Around You.

These two half courses are, as a pair, equivalent to PHYC 1300X/Y.06. They are available ONLY to accommodate special circumstances; permission from the Department is required for students not in Kinesiology. PHYC 1310.03 is strongly recommended for all first year Kinesiology students. PHYC 1320.03 is strongly recommended for Kinesiology students considering the Ergonomics stream. See the Health and Human Performance section of this calendar.

EXCLUSION: Credit will be given for only one of PHYC 1000X/Y.06, 1190.03, 1290.03, 1300X/Y.06, or 1310.03
PHYC 1450X/Y.06: Astronomy: The Evolving Universe. Both the universe and our understanding of it are evolving. Topics include naked eye astronomy, understanding stars, and our understanding of the solar system (planets, moons, and the recently discovered "other" planetary systems. We examine our advances in the study of stars, galaxies, and the universe at large. Finally, we introduce the idea that the universe may be infinite.

EXCLUSION: ECON2850.06, PHYC2850.06
CROSS-LISTING: GEOG 2800.03, OCEA 2800.03

PHYC 2452.03: Astronomy II: Stars and Beyond. This course is the second part of an introduction to astronomy for science students. This course builds on the knowledge gained in PHYC 2451.03 to study the nearest star (the Sun) and develops due to the behavior of objects outside the Solar System like stars, pulsars, quasars and black holes. Finally, galaxies and the Universe as a whole (cosmology) are studied with questions like, "will the universe expand forever - or will it collapse in the Big Crunch?". How do we know all of this and how well do we know it?

FORMAT: Lecture 3 hours, tutorial 1.5 hours
PREREQUISITE: PHYC 2451.03, or PHYC 1200.03 or PHYC 1201.03 and MATH 1000/1001 or permission of the instructor

PHYC 2450.03: Astronomy I : The Sky and Planets. An introduction to astronomy for science students. If you have ever marveled at the beauty of the night sky and yearned to learn a little about how Science can help us understand it, then this course (and its companion PHYC 2452.03) is for you. After learning the fundamentals, (observation, planetary motion, and telescopes), we will study the Solar System, primarily the planets and their major satellites.

FORMAT: Lecture 3 hours
PREREQUISITE: PHYC 2451.03 or permission of the instructor
EXCLUSION: PHYC 2450.06 XY

PHYC 2510.03: Electricity and Magnetism. This course will develop the vector calculus needed for the description of electric and magnetic fields. Other topics include scalar and vector potentials, force on charges, magnetic induction and Maxwell’s equations. The course will give students the necessary foundation for an understanding of more advanced topics in electricity and magnetism.

FORMAT: Lecture 3 hours, tutorial 1 hour
PREREQUISITE: PHYC 2150.03, a multi-variable calculus course (MATH 2001.03/2002.03), which can be taken concurrently, or permission of the instructor

PHYC 2515.03: Modern Physics. This course introduces two physics revolutions: Einstein's theory of special relativity and the theory of quantum mechanics. Important early experiments are considered throughout the course. We concentrate on length contraction, time dilation, and relativistic kinematics. Then, to account for wave-like properties of matter, we introduce complex wave functions in one dimension and show how these lead to energy quantization, Schrodinger's equation, and penetration into classically forbidden regions. Other topics of modern physics, such as random walks (transport theory) may be introduced. A tutorial is offered.

FORMAT: Lecture 3 hours, tutorial 1.5 hours
PREREQUISITE: PHYC 2150.03 or PHYC 1200.03 or PHYC 2450.03 or MATH 1500X/1501X or MATH 1502X/1503X or permission of the instructor

PHYC 2610.03: Introduction to Biomechanics. This course introduces two physics revolutions: Einstein's theory of special relativity and the theory of quantum mechanics. Important early experiments are considered throughout the course. We concentrate on length contraction, time dilation, and relativistic kinematics. Then, to account for wave-like properties of matter, we introduce complex wave functions in one dimension and show how these lead to energy quantization, Schrodinger's equation, and penetration into classically forbidden regions. Other topics of modern physics, such as random walks (transport theory) may be introduced. A tutorial is offered.

FORMAT: Lecture 3 hours, tutorial 1.5 hours
PREREQUISITE: PHYC 2150.03 or PHYC 2451.03 or PHYC 1200.03 or MATH 1500X/1501X or MATH 1502X/1503X or permission of the instructor

PHYC 2700.03: Introduction to Biomechanics. This course provides an introduction to mechanical and analytical concepts applied to the study of biological systems, particularly human movements and tissues. It expands on the knowledge acquired in PHYC 2701.03, the mechanics of the body, and deals with the mechanics of movement and muscle function in the human body. The primary goal of the course is to learn the basic mechanical concepts about the human body.

FORMAT: Lecture 3 hours
PREREQUISITE: PHYC 2701.03
EXCLUSION: PHYC 2701.03

PHYC 2800.03: Climate Change. The workings of the Earth's climate system are examined and then applied to help understand contemporary climate change. The role of numerical climate models is discussed with the aim of interpreting climate change predictions for the coming decades. Finally the impacts of climate change are studied with a focus on the various mitigation and adaptation strategies needed.

FORMAT: 3 hours
CROSS-LISTING: GEOG 2800.03, OCEA 2800.03
EXCLUSION: ECON2800.06, PHYC2850.06
PHYC 2850.06: The Science and Economics of Climate Change.
This course examines how climate change will impact the environment and human activities, and how to formulate and implement economically realistic solutions. It integrates the physical and biological science with economics in order to analyze the response options as we move towards a carbon-neutral society.
FORMA T: Lecture
CROSS-LISTING: ECOS 2850

PHYC 3000.03: Experimental Physics I.
This course introduces students to electronics and measuring techniques. Topics include digital electronics: logic gates, clocks, shift registers, counters, memory; analog electronics: R.C.L. circuits, operational amplifiers; electronic systems: A/ D and D/A chips, compute chips, and displays. The course also introduces students to modern data acquisition methods (including LabVIEW), skills which will be applied in the design and execution of experiments that illustrate fundamental concepts in physics. This course is open to Honours students only.
NOTE: This course has no final examination. Student evaluation is through performance on assignments and projects, and evaluation of written lab reports.
FORMAT: Lecture 3 hours, lab 6 hours
PREREQUISITE: PHYC 3000.03 with a minimum grade of B, or permission of the instructor.

PHYC 3050.03: Introduction to Numerical Programming.
This course explores computer programming for numerical computation. It introduces a modern programming language and it uses it to model simple physical systems (for example, projectile motion with realistic drag). Techniques are introduced to solve the governing equations. An important aspect is the interpretation of modelled results and comparison with experiment.
FORMAT: Lecture 1.5 hours, lab 6 hours
PREREQUISITE: PHYC 3000.03 with a minimum grade of B, or permission of the instructor.

PHYC 3180.03: Contemporary Physics.
This course covers a variety of topics related to areas of current interest in physics. Presently, topics include high temperature superconductivity, quantum hall effect, neutrino oscillations, gravitational radiation and fusion reactors.
FORMAT: Lecture 3 hours
PREREQUISITE: PHYC 1280.03/1290.03 or equivalent, or MATH 1010.03 or equivalent.

PHYC 3200.03: Thermodynamics.
An introduction to the basic concepts and laws of thermodynamics. There will be a short survey of required Mathematics (partial derivatives). Topics include thermometry, equations of state, entropy and entropy, thermodynamic potentials, heat engines, thermodynamic efficiency and phase transitions.
FORMAT: Lecture 3 hours, tutorial 1.5 hours
PREREQUISITE: PHYC 2140.03, MATH 2001.03/2002.03, or permission of the instructor.

PHYC 3210.03: Statistical Mechanics.
Using statistical entropy, we will explore how macroscopic thermodynamic behavior emerges from microscopic models. We will consider the statistical foundations, canonical, and the grand canonical statistical ensembles. We will examine two-state systems as well as non-interacting Fermionic and Bosonic systems. Finally, we will learn about descriptively simple animating systems such as the Ising model.
PREREQUISITE: PHYC 3200.03 or equivalent, MATH 2001.03/2002.03

PHYC 3250.03: Computational Methods in Physics.
The objective of this course is to teach students the use of computers in physical analysis. The UNICS operating system will be introduced and used throughout the course. A modern programming language will be applied to a selection of problems drawn from physical theory and experiment. This is a hands-on, practical, and interactive class with an emphasis on the development of computational skills that scientists use.
PREREQUISITE: PHYC 1280.03/1290.03 or equivalent, MATH 1010.03 or equivalent.

PHYC 3303.03: Materials Science.
The emphasis is on the principles involved in understanding physical properties of materials, such as ferromagnetism, mechanical stability, and electrical and optical properties. All phases of matter are examined: gases, liquids, films, liquid crystals, perfect crystals, defective solids, glasses. Important processes such as photography and Xerography are explained.
FORMAT: Lecture 3 hours
PREREQUISITE: CHEM 2101.03 or PHYC 2100.03 (which may be taken concurrently) or CHEM 2001.03/2002.03 or ENVG 2000.03 or permission of the instructor.
CROSS-LISTING: CHEM 3303.03

PHYC 3340.03: Electronics.
Topics include digital electronics: logic gates, clocks, shift registers, counters, memory; analog electronics: R.C.L. circuits, operational amplifiers; electronic systems: A/D and D/A chips, compute chips, and displays.
NOTE: Credit cannot be given for both PHYC 3300.03 and PHYC 3340.03.
FORMAT: Lecture 3 hours, lab 3 hours
PREREQUISITE: PHYC 2150.03, or ENGI 2001.03

PHYC 3640.03: Quantum Physics I.
This course introduces the formal structure of quantum mechanics as well as quantum mechanical calculations. The emphasis is on problem solving. The course starts with quantum mechanics, then considers particles in a box and the quantum harmonic oscillator. The course starts with one-dimensional quantum mechanics and ends with higher dimensional problems. The course introduces quantum mechanical operators, time-evolution, quantum angular momentum, and the solution of the hydrogen atom.
PREREQUISITE: MATH 2002.03, MATH 2010.03, PHYC 2150.03 and PHYC 2160.03

PHYC 3810.03: Microcomputers and the Real World.
Subject material: measurement theory, modern sensors, microcomputer architecture, and software simulation of digital electronic circuits. Interfacing techniques including PIC and microprocessor ports. The graphical programming language is used throughout.
FORMAT: Lecture 3 hours, computer lab 1.5 hours
PREREQUISITE: PHYC 2150.03, PHYC 3340.03
CROSS-LISTING: CSC 3120.03

PHYC 3900.03: Introduction to Soft Condensed Matter Physics.
The aim of this course is to provide an introduction to some concepts used in soft condensed matter physics through the study of three systems, polymers, colloids and liquid crystals.
The course will be divided in four modules:
I) Brownian dynamics and diffusion
II) Polymers shape, molecular mass distribution, osmotic pressure, gel, entropic elasticity
III) Colloids: van der Waals and electrostatic interactions, Hamaker constant, DLVO theory, polymer layers (brushes), gel electrophoresis
IV) Liquid crystals: order parameter, optical properties of nematics (birefringence), phase transitions, LCD

PREREQUISITE: MATH 2001.03, 2002.03, PHYC 2515.03 and PHYC 2150.03

PHYC 4151.03: Quantum Physics II.
This course is a continuation of PHYC 3640.03. Topics include: the spin-1/2 problem, quantum dynamics, entanglement and the EPR Paradox, perturbation theory, statistical mechanics, and the quantum radiation field.
PREREQUISITE: Lecture 3 hours
CROSS-LISTING: PHYC 3810.03

PHYC 4160.03: Mathematical Methods of Physics.
Topics discussed include: complex variable theory, Fourier and Laplace transforms, special functions, partial differential equations.
FORMAT: Lecture 3 hours
PHYC 411.03: Atmospheric Dynamics I.

The basic laws of fluid dynamics are applied to studies of atmospheric motion, including the atmospheric boundary layer and synoptic-scale weather disturbances. Emphasis will be placed on the blind of mathematical theory and physical reasoning which leads to the best understanding of the dominant physical mechanisms.

FORMA T: Lecture 3 hours

PHYC 441.03: Atmospheric Physics.

Most thermodynamics is applied to a variety of atmospheric phenomena. These include arotos, cloud droplets, precipitation formation, convection, superscripts, hurricanes, lightning, and the boundary layer. We also discuss the radar equation and the interpretation of radar images.

FORMA T: Lecture 3 hours

PHYC 450.03: Atmospheric Physics.

The general overview of the atmosphere provides the student with an understanding of the composition and physical structure of the atmosphere, air masses and frontal theory and weather generating physical processes and their consequences. Other topics include atmospheric radiation, dynamic meteorology, climatology and the physics of clouds and storms.

FORMA T: Lecture 3 hours

PHYC 460.03: Cosmology.

A self-contained introduction to cosmology will be given and no prior knowledge of differential geometry or general relativity will be assumed (although some knowledge of elementary differential equations will be useful). A cosmological model is a model of the universe, as a whole, on the largest scales; the emphasis of the course will be on the modeling aspects of cosmology.

FORMA T: Lecture 3 hours

PHYC 480.03: Honours Research Project I.

Students in the honours stream in Physics and Atmospheric Science will do a research project under the direction of a faculty member. A research plan, annual progress reports and a formal final report are required. The final grade will be based on an evaluation of the reports and an oral presentation. Students in the major stream can apply to the department to take this course.

PHYC 485.03: Cosmology.

A review of differential geometry will be given followed by an introduction to the general theory of relativity. Various topics will be discussed, including: linearized theory and gravitational radiation, spherically symmetric metrics and the Schwarzschild solution, gravitational collapse, black holes, and cosmology.

PHYC 495.03: Atmospheric Chemistry.

PHYC 4595.03: Atmospheric Chemistry.

plan, interim progress reports and a formal, final report are required. The final grade will be based on an evaluation of the reports and an oral presentation.

COORDINATOR: H. Rotermund

FORMAT: Independent research, typically 6 hours/week.

PREREQUISITE: PHYC 4800 and permission of the coordinator and supervisor.

PHYC 8891.00: Co-op Work-Term I.

PHYC 8892.00: Co-op Work-Term II.

PHYC 8893.00: Co-op Work-Term III.

VI. Graduate Studies

The Department of Physics and Atmospheric Science provides courses of study leading to MSc and PhD degrees. Areas of research include condensed matter, geophysics, medical physics, soft matter, low temperature physics, theoretical physics, atmospheric physics and oceanography. Consult the Graduate Studies Calendar, the Graduate Coordinator for the Physics and Atmospheric Science Department, or the Physics and Atmospheric Science Website at http://www.physics.dal.ca.

Adams, S., BSc (Toronto), PhD (McGill), Faculty of Science Killam Professor in Psychology

Brown, E. E., BSc (Victoria), MA, PhD (Dalhousie), University Research Professor

Bryson, R. E., BA (Queen’s), PhD (McGill), Major appointment in Pediatrics, Joan and Jack Craig Chair in Autism Research

Chambers, C. L., BSc (Dalhousie), MA, PhD (UBC), Joint appointment in Pediatrics, Canada Research Chair in Pain and Child Health

Doonan, S. H., BSc (UPEI), PhD (Oxon)

Finley, G. A., BSc, MD (Dalhousie), Major appointment in Anaesthesiology

Kay-Raining Bird, E., BA (Queen’s), MSc (Columbia Univ.), PhD (U. Wisconsin - Madison), Major appointment in the School of Human Communication Disorders

Kiefte, M., BA (Memorial), MSc, PhD (Alberta), Major appointment in the School of Human Communication Disorders

Klein, R. M., BA (SUNY), MA, PhD (Oregon), University Research Professor

McGrath, P., BA, MA (Queen’s), PhD (Queen’s), Canada Research Chair in Pediatric Pain

McMullen, P., BSc, MSc (Toronto), PhD (Waterloo)

Moore, C. L., BA, PhD (Cambridge)

Phillips, D. P., BSc, PhD (Memorial)

Pokorny-Eden, B., MD, PhD (Univ. of Heidelberg), Major appointment in Neurology

Rauck, R., BA (Toronto), PhD (Berkley), FRSC, Joint appointment in Psychiatry and Neurology

Sarno, K., Ph.D (Dalhousie), PhD (Rutgers), Major appointment in Medical Neuroscience

Stewart, S., BSc (Dalhousie), PhD (McGill), Joint appointment in Psychiatry

Taylor-Helmick, T. L., BA (Calgary), MSc, PhD (Dalhousie)

Tolivo, P., BSc (Mt. A), BMedSci, MD (Memorial), Major appointment in Psychiatry

Ungar, M., BA, BSW, MSW (McGill), PhD (Wilfrid Laurier), Major appointment in the School of Social Work
Associate Professors
Ahmed, A., BSc (Ottawa), MD (Dalhousie), FRCP(C) (Toronto), Major appointment in Psychiatry
Barnett, S. A., BA (McGill), MD (Dalhousie), Clinical PhD Program Director of Training
Calvert, P. V., BSc (Dalhousie), MA, PhD (Gillie) (Toronto), Clinical PhD Program Director of Training
Crowell, N. A., BSc, PhD (Alberta)
Duffy, K., BA (Toronto), MD (McMaster)
Eades, K. A., BA, PhD (Brock)
Edgar, J., BSc, MD (Newfoundland), MSc, PhD (Dalhousie)
Fekete, J., BSc, MD (Western), Major appointment in Psychiatry
Good, L., BSc (Winnipeg), MSc, PhD (Ottawa)
Jacques, S., BA (McGill), MA, PhD (Toronto)
Johnson, S., BA (Memorial), MSc, PhD (Dalhousie)
Henderson, A. J., BA (Winnipeg), MSc, PhD (Western)
Neumann, A. J., BA (Winnipeg), MSc, PhD (Harvard)
Perrett, T. S., BSc (Western)
Phillips, L., BA (Winnipeg), MA, PhD (Queen’s)
Richards, L., BSc (Dalhousie), MA, PhD (Simon Fraser), Major appointment in Psychiatry
Sherry, B. B., BA (York), MA, PhD (Dalhousie), Major appointment in Psychiatry
Uhr, R., MRCPsych (Royal College of Psychiatrists), PhD, MEd (Charles University), Major appointment in Psychology
Assistant Professors
Allen, S. A., BSc (Western), PhD (Toronto), Major appointment in the School of Human Communication Disorders
Boe, S., BSc (Brock), PhD, MPT (Western), Major appointment in the School of Family Medicine
Chorney, J., BSc (Dalhousie), MA, PhD (West Virginia), Major appointment in Anesthesiology
Durruthy, L., BA (Saint Mary’s), MA, PhD (Montreal), Major appointment in the School of Nursing
Dunn, S., BSc, MSc, PhD (Dalhousie), Major appointment in the School of Health and Human Performance
Ferguson, R., BSc (Victoria), MSc, PhD (Ottawa), Major appointment in Anesthesiology
Weaver, W. C. G., BC (Alberta), BSc (Brock), MA, PhD (McGill)
Westwood, D. A., BSc, MA, PhD (Waterloo), Major appointment in the School of Health and Human Performance
Senior Investigators
Gawdowski, S., BSc, MA, PhD (University of Toronto), MD (Dalhousie)
Jacobs, T., BA, MA (Natal), PhD (Dalhousie)
Ples, E., BS Education (Univ. of New Mexico), MA, PhD (Texas Women’s University)
Sampson, L. L., BSc (Dalhousie), PhD (Cambridge), Undergraduate Program Coordinator
Adjunct Professors
Bachman, J. L., BA (Dalhousie), MA, PhD (Carleton), Erica Biker Psychological Services
Baroni, J., BSc (Boston), MA (S. Carolina), MS, PhD (Wisc), Psychology and Neuroscience/Dalhousie
Chepman, K., BA (UPEI), MA, PhD (Western), Neuropsychology Service/Novascotia Health Sciences
Church, E., BA (St. John’s), MA, PhD (Toronto), School Psychology/Mount Saint Vincent
Cohen, A. J., BA (McGill), MA, PhD (Queen’s), Psychology/UPEI
D’Arms, R. H., BSc (Victoria), MSc, PhD (Dalhousie), Engineering and Computing Science/Simon Fraser
Ebert, P., BSc, MSc (Toronto), PhD (Victoria), Sensors Memory Clinic/Ontario Shores Centre for Mental Health Sciences
Ellsworth, C. B., BA (McMaster), MA, PhD (Queen’s), Psychology/WK Health Crimes

One type is a research laboratory in which students will conduct research, collect data and write reports on the results of the research. All Major and Honours students must take the second-year research laboratory course (PSYO 2000.03) and at least one third-year research laboratory course (full credit for Honours students).

The other type is a proficiency or skills laboratory, which usually involves additional work in computer exercises related to the lecture material and course readings.

II. Degree Programs

The department offers the following degree programs:
- BA and BSc (20 credit) Honours in Psychology
- BA (20 credit) Major in Psychology
- BA and BSc (15 credit) Minor in Psychology

While these programs are described below, a more detailed and up-to-date description is available from the Psychology and Neuroscience Main Office (Life Sciences Centre, Room 3263) in a pamphlet titled "A Student’s Guide to Psychology Classes" (also available online at the Department’s website: http://www.dal.ca/psychandneuro).

In addition to the departmental requirements listed below, students must satisfy the requirements outlined in the Degree Requirements section, page 123 of this calendar.

A. BA or BSc (20 credit) Honours in Psychology

Students enrolled in either the BA or BSc Honours program must take at least nine full credits (or half-credit equivalents) in Psychology courses beyond the 1000 level. BA Honours students can count no more than 11 full credits (or half-credit equivalents) beyond the 1000 level.

Students should follow the course sequence recommended below. Although there is considerable flexibility for the student, it is important to plan carefully (this is especially true for those considering graduate work in Psychology). Additional information or advice about the program can be obtained from an Honours Advisor. Students can be put in touch with an academic advisor by contacting the Psychology and Neuroscience Main Office (Life Sciences Centre, Room 3263 or 494-3417). Detailed descriptions of the Honours application process may be found on the departmental website: http://www.dal.ca/psychandneuro.

Registration Notes:
1. Students wishing to undertake an Honours program must meet with an Honours advisor, and complete a Departmental Honours Application form. The earliest students can apply for admission to the Honours program is in January of their third year of study. Admission to Honours in September will require a grade of B or better in PSYO 2000.03 and an A- average in the last six completed Psychology half credits. Application may be delayed until the end of the third year, in which case, a grade of B or better in PSYO 2000.03 and an A- average in the last nine completed Psychology half credits will be required. Both Departmental (and then University) approval is required for formal admission to the Honours program. A detailed description of the Honours application process can be found on the departmental website: http://www.dal.ca/psychandneuro.

2. It is recommended that students in the Honours program obtain the agreement of a willing thesis research supervisor, and begin laying the groundwork for their thesis research (e.g., background reading, locating laboratory methodology, submission of ethics forms, etc.) no later than during the summer preceding the thesis year.

3. Students taking an Honours degree in Psychology cannot use cross-listed Neuroscience courses as electives.

4. Laboratory courses focusing on human psychology typically require students to serve as participants and/or as experimenters in course projects. Students who do not wish to participate in such projects should ensure that they have the prerequisites necessary to register in alternative laboratory courses.

Departmental Requirements

1800 level
- PSYO 1011.03 or PSYO 1021.03 and PSYO 1012.03 or PSYO 1022.03, or SCI6 1515X/Y, 1520X/Y, 30 or SCI6 1540X/Y with a grade of B or better.

2000 level
- A normal second-year program will include three required half-credit courses and three elective half-credit courses in Psychology. Care should be taken in selecting

Dean
Moore, C. L., BA, PhD (Cantab)

I. Introduction

Psychology is an experimental science: Its purpose is to discover the conditions which control the activities of animals and people; to measure these conditions and the responses they produce, and to use this knowledge to invent ways of predicting behaviour and changing it. It is a subject for inventive but also scientifically rigorous people, better suited to those who want to find out for themselves than to those who want to be told what to believe.

Psychology at Dalhousie treats behaviour as a natural phenomenon, and that in some degree much with the other life sciences. Today, for example, the boundary that historically has separated psychology from zoology, physiology, or even cellular biology has begun to blur. On the other hand, important ties are being made to such disciplines as anthropology, sociology, and philosophy. The student will find that the diverse subject matter includes three major levels of analysis: the organism, the organism’s biological machinery, and the broader social-environmental context in which particular behaviour patterns are expressed. Meaningful integration of these diverse levels and forms of analysis is an intellectual challenge of major proportions. Similarly, the time perspectives of immediate causation, development, evolution, and function all contribute to the modern approach to behavioural science and each must be evaluated in relation to the others.

A. Enrolment Limitations

Psychology is a popular program, and we have a high enrolment of students. Potential Major and Honours students, and those intending to enrol in the 15 Credit BA or BSc Minor program, in Psychology should note that there are limitations on the number of students that can be accepted into these programs in any given year. Preventing introductory psychology courses with the required grade of B- and declaring an intent to Major in Psychology does not guarantee a place in any of these programs. Students are advised to register as early as possible for required courses to secure a space within a program.

There are strict size restrictions on individual courses. Lecture courses are limited by room size. Additional size restrictions are imposed on laboratory courses because of equipment limitations and the much closer supervision required. Neuroscience courses as electives.

B. Enrolment of Other Students

Only Major and Honours students in Psychology may enrol in PSYO 2000.03, 2770.03 and 2501.03, and such students are given preference in other second-year courses. All students must have at least a B- in a full-credit of introductory Psychology courses, or the psychology component of a DESP course, in order to register in any second-year course in Psychology.

C. Laboratories

Several courses include a laboratory component, of which there are two types. One type is a research laboratory in which students will conduct research, collect

---

Psychology 567
second-year elective courses to ensure they will provide the necessary prerequisites for courses intended to be taken in the third and fourth years of study.

Required Second-Year Courses are:

- PSYO 2501.03: Statistical Methods I (or STAT 2080.03)
- PSYO 2570.03: Systems Neuroscience

Note: PSYO 2770.03 will not be offered in 2014/2015.

Elective Second-Year Courses are:

- Three half credits required from:
  - PSYO 2770.03: Brain and Behaviour
  - PSYO 2501.03: Statistical Methods I (or STAT 2080.03)
  - PSYO 2000.03: Methods in Experimental Psychology, with a grade of B or better

If Psychology is chosen as the primary subject in a Combined Honours program, the following courses should be taken.

Overall Total = 7.5 full credits or 15 half-credit courses.

B. BA or BSc (20 credit) Combined Honours

It is possible for students to take an Honours degree combining Psychology with another subject (other than Neuroscience). Students proposing to take such a course of study must consult with an Honours advisor in both departments to arrange program details.

Overall Total = nine full-credit or 18 half-credit courses
Four full credits or eight half credits at or above the 3000 level are required.

3000 level
• Two full credits, or four half credits, at or above the 3000 level are required to graduate. Students must take a minimum of one half-credit course from each of Category A and Category B courses, and must complete a designated half-credit laboratory (LAB) course.

C. BA or BSc (20 credit) Major in Psychology
BA students must take at least seven and no more than nine full credits (or half-credit equivalents) in Psychology courses beyond the 1000 level. BSc students must take at least seven full credits (or half-credit equivalents) in Psychology courses beyond the 1000 level. All Major students must complete four full credits (or half-credit equivalents) in courses numbered 3000 or above. Students should plan carefully and, if required, obtain advice from an academic advisor.

3000 level
• PSYO 2770.03: Brain and Behaviour
• PSYO 2501.03: Statistical Methods I (or STAT 2080.03)

Required Second-Year Courses are:
• PSYO 2000.03: Methods in Experimental Psychology, with a grade of B or better
• PSYO 2140.03: Learning
• PSYO 2160.03: Animal Behaviour
• PSYO 2220.03: Abnormal Behaviour
• PSYO 2270.03: Cellular Neuroscience

Overall Total = four full or eight half credits

3000 level
• Two full credits, or four half credits, at or above the 3000 level are required to graduate. Students must take a minimum of one half-credit course from each of Category A and Category B courses, and must complete a designated half-credit laboratory (LAB) course.

C. BA or BSc (20 credit) Major in Psychology
BA students must take at least seven and no more than nine full credits (or half-credit equivalents) in Psychology courses beyond the 1000 level. BSc students must take at least seven full credits (or half-credit equivalents) in Psychology courses beyond the 1000 level. All Major students must complete four full credits (or half-credit equivalents) in courses numbered 3000 or above. Students should plan carefully and, if required, obtain advice from an academic advisor.

3000 level
• PSYO 2770.03: Brain and Behaviour
• PSYO 2501.03: Statistical Methods I (or STAT 2080.03)

Required Second-Year Courses are:
• PSYO 2000.03: Methods in Experimental Psychology, with a grade of B or better
• PSYO 2140.03: Learning
• PSYO 2160.03: Animal Behaviour
• PSYO 2220.03: Abnormal Behaviour
• PSYO 2270.03: Cellular Neuroscience

Overall Total = four full or eight half credits

D. BA or BSc (20 credit) Double Major in Psychology
Students may combine a Major in Psychology with a Major in another subject such as Biology or Biochemistry. A minimum of 10 full credits above the 1000 level are required in the two subjects chosen. No fewer than five full credits must be taken in each subject.

The minimum required courses in Psychology are:
• PSYO 2000.03: Methods in Experimental Psychology, with a grade of B or better
• PSYO 2140.03: Learning
• PSYO 2220.03: Animal Behaviour

Overall Total = seven full-credit or 14 half-credit courses

E. BA or BSc (15 credit) with Minor in Psychology
A BSc or BA (15 credit) degree program with a Minor in Psychology is available to students in the Faculty of Science.

Psychology 569
Departmental Requirements

- A minimum of 18 credit hours in Psychology (PSYO) courses at the 2000 level or higher, other than PSYO 2000.01 and PSYO 2801.03, which are restricted to students in a Major or Honours program.

Note that there are prerequisite requirements for entry into upper-level Psychology (PSYO) courses.

F. Minor in Psychology

Students in other 20-credit degree programs may choose to include a Minor in Psychology in their program. Requirements are outlined in the College of Arts and Science Minor section of this Calendar (page 141).

G. Minors available to students in Psychology

Minors allow students to develop skills in addition to their major or honours subjects. Minors in other subjects are normally added to a four-year major or concentrated honours program, including co-op programs.

Students in a 20 credit BSc or BA program in Psychology may choose to include a Minor selected from the list of approved Minors beginning on page 132 in this Calendar. Note that courses counted toward a Major or Honours program cannot be used to fulfill the requirements of a Minor program.

H. BSc/Engineering or BA/Engineering Concurrent Programs

Students will normally complete the requirements for a 15 Credit BSc or 15 Credit BA, and the first two years of engineering studies leading to the Diploma in Engineering. The concurrent program can be completed in three years. Details are provided in the College of Arts and Science Degree Requirements on page 132 of the calendar.

I. Certificate Programs

A number of Certificate programs are available to students enrolled in an Honours, Major, or Minor program in Psychology. Please click here for full listing of available certificates (see page 141).

NOTE: Courses counted toward a Major, Honours or Minor program may also be used to fulfill the requirements of a Certificate.

Certificates offered through the Department of Psychology and Neuroscience include:

Certificate in Animal Behaviour

(Contact Dr. Shelley Adamo, shelley.adamo@dal.ca)

The Certificate program is a collaborative effort of both the Biology and the Psychology and Neuroscience departments. It provides students an opportunity to provide the Certificate Coordinator with a research project that will accord them an animal behaviour specialization.

The Certificate program is a collaborative effort of both the Biology and the Psychology and Neuroscience departments. It provides students an opportunity to provide the Certificate Coordinator with a research project that will accord them an animal behaviour specialization.

Certificate Coordinator: L. Stevens

NOTE: To enrol in 2000-level Psychology courses, a grade of B- is required in the material covered in lectures. Instructors with expertise in the topics covered. Biweekly labs add depth to the material covered in lectures.

III. Course Descriptions

Note: Not all of the courses listed below are offered every year. Please consult the current timetable to determine if a course is offered.

In 2006-2007, the full credit Introduction to Psychology courses were divided into two half-credit courses, PSYO 1000.06 and PSYO 2801.03. Statistical Methods for Data Analysis and Inference

BIOL 2062.03: Behavioral Ecology on PSYO/NESC 3622.03: Advanced Animal Behavior: Theories and Applications

BIOL 3622.03: Ornithology

BIOL 3627.03: Ecology and Evolution of Fishes

BIOL 3629.03: Field Studies of Marine Mammals

BIOL 3803.03: Applied Field Methods in Fish Ecology

PSYO/NESC 3000.06: Independent Research in Modern Psychology (Animal Behaviour topic)

PSYO/NESC 3011.03: Directed Research Project in Psychology (Animal Behaviour topic)

PSYO/NESC 3019.03: Neuroscience and Learning

PSYO/NESC 3029.03: Laboratory Methods of Learning and Conditioning

PSYO/NESC 3121.03: Advanced Animal Behaviour

PSYO/NESC 3150.03: Neuroethology

PSYO/NESC 3170.03: Hormones and Behaviour

PSYO/NESC 3180.03: Psychoneuroimmunology/Ecological Immunology

PSYO/NESC 3870.03: Genes, Brain and Behaviour

4000 level

BIOL 4040.03: Topics in Behavioural Biology

BIOL 4060.03: Marine Mammalogy

BIOL 4230.03: Biostatistics in Ecology

BIOL 4800.06: Special Topics (Animal Behaviour topic)

BIOL 4800.03, 4867.03: Special Topics (Animal Behaviour topic)

3. A grade of B- in one half credit or more of independent research in Animal Behaviour.

The research topic must be pre-approved by the Certificate Coordinator prior to the start of their research course (i.e., PSYO/NESC 3000.06, PSYO/NESC 3011.03, PSYO/NESC 4800.06, BIOL 4060.03, BIOL 4087.03, or BIOL 4900.06). Honours students are encouraged to complete their Honours thesis on a topic in Animal Behaviour to fulfill this requirement.

Students are also encouraged to further develop their study design and analysis skills by taking additional courses such as BIOL 4060.03 (Design of Biological Experiments) or BIOL 4062.03 (Analysis of Biological Data).

4. Enrollment in the Certificate in Animal Behaviour program should be undertaken by students in their third or fourth year of studies when they are seeking approval of the research topic by the Certificate Coordinator.

The research topic must be pre-approved by the Certificate Coordinator prior to the start of their research course (i.e., PSYO/NESC 3000.06, PSYO/NESC 3011.03, PSYO/NESC 4800.06, BIOL 4060.03, BIOL 4087.03, or BIOL 4900.06). Honours students are encouraged to complete their Honours thesis on a topic in Animal Behaviour to fulfill this requirement.

Students are also encouraged to further develop their study design and analysis skills by taking additional courses such as BIOL 4060.03 (Design of Biological Experiments) or BIOL 4062.03 (Analysis of Biological Data).

4. Enrollment in the Certificate in Animal Behaviour program should be undertaken by students in their third or fourth year of studies when they are seeking approval of the research topic by the Certificate Coordinator.

The research topic must be pre-approved by the Certificate Coordinator prior to the start of their research course (i.e., PSYO/NESC 3000.06, PSYO/NESC 3011.03, PSYO/NESC 4800.06, BIOL 4060.03, BIOL 4087.03, or BIOL 4900.06). Honours students are encouraged to complete their Honours thesis on a topic in Animal Behaviour to fulfill this requirement.

Students are also encouraged to further develop their study design and analysis skills by taking additional courses such as BIOL 4060.03 (Design of Biological Experiments) or BIOL 4062.03 (Analysis of Biological Data).

4. Enrollment in the Certificate in Animal Behaviour program should be undertaken by students in their third or fourth year of studies when they are seeking approval of the research topic by the Certificate Coordinator.

PSYO 1012.03: Introduction to Psychology and Neuroscience I: From Neuron to Person.  
This course extends the coverage offered in PSYO 1011.03 or 1021.03 and includes material on development, cognition, intelligence, motivation, personality, social behaviour, and psychopathology. The course is taught by one or two different instructors with expertise in the topics covered. This course has no accompanying laboratory/tutorial. 
NOTE: To enrol in 2000-level Psychology courses, a grade of B- is required in PSYO 1011.02 or PSYO 1021.03 and PSYO 1012.03 or PSYO 1022.03. 
FORMAT: Lecture 3 hours

PSYO 2080.03: Social Psychology.  
The course undertakes a critical analysis of social theory and research promoting a better understanding of the complex social nature of human experience. 
NOTE: Restricted to students registered in Psychology Major or Honours programs. Students should endeavor to take PSYO 2500.03, Statistical Methods I, or STAT 2001.03 concurrently with PSYO 2080.03. Students must attend the first lecture session. 
FORMAT: Lecture 3 hours

PSYO 2090.03: Developmental Psychology.  
People change with age. This course examines the changes that occur in humans from conception through adolescence. Biological, social, cognitive, and linguistic aspects of development are considered. Theory, research, and practical implications are integrated throughout the course. 
PREREQUISITE: PSYO 1011.03 or PSYO 1021.03 and PSYO 1012.03 or PSYO 1022.03, or SCIE 1515X/Y.36, 1520X/Y.30 or 1540X/Y.27 (with a grade of B- or better) 
FORMAT: Lecture 3 hours

PSYO 2130.03: Introduction to Cognitive Psychology.  
Lectures focus on the processes involved in transforming sensory information into the meaningful everyday world that we know. Initially, emphasis is on the visual system, and how information within that system is structured and organized, followed by a consideration of the characteristic of internal representations used in thinking and remembering. 
FORMAT: Lecture 3 hours

PSYO 2140.03: Learning.  
Lectures focus on several goals: (1) providing general principles of learning, (2) understanding the behaviour of particular species, and (3) direct application to human problems. Emphasis is on understanding why researchers in animal learning do what they are currently doing (given the goals and the historical context). 
FORMAT: Lecture 3 hours

PSYO 2150.03: Perceptual Processes.  
Perception deals with the way in which our senses provide us with information about our environment. This course focuses on the process by which sensory experiences are coded, how they are interpreted by the nervous system, and how experience modifies perception. 
FORMAT: Lecture 3 hours

PSYO 2160.03: Animal Behaviour.  
Using concepts from behavioral biology and psychology, animal behaviorists attempt to explain why animals behave the way they do. The course examines topics such as mating and social systems, mate choice, the evolution of behavior, and animal communication. The behavior of a wide range of animals is studied. 
FORMAT: Lecture 3 hours

PSYO 2200.03: Methods in Experimental Psychology.  
This course provides a thorough grounding in scientific research methods used by psychologists. Lectures explore analytic procedures commonly employed to investigate human and animal behavior. Students conduct analysis in written reports a series of experiments in the laboratory to illustrate important concepts discussed in class. 
NOTE: Restricted to students registered in Psychology Major or Honours programs. Students should endeavor to take PSYO 2500.03, Statistical Methods I, or STAT 2001.03 concurrently with PSYO 2200.03. Students must attend the first lecture session. 
FORMAT: Lecture 3 hours

PSYO 2300.03: Systems Neuroscience.  
This course provides an introduction to the functional systems of the brain. We examine neural systems (e.g., the sensory systems, motor system, neurotransmitter-specific systems) individually. We explore their anatomy and function, neurological properties that make each unique, and factors that are common to all neural systems (e.g., development and plasticity).
572 Psychology

EXCLUSION: PSYO/NESC 3001.03
CROSS-LISTING: NESC 2470.03
EXCLUSION: PSYO 2770.03

PSY 2500.03: Contemporary Research Problems in Psychology
A continuation of PSY 2000.03, this course introduces prospective Honours students to the design, execution, and analysis of independent research projects. Each student works with a supervisor on a one-to-one basis preparing a research project that the student then conducts and describes in a formal written report. FORMAT: Lecture 2 hours, Lab 2 hours
PREREQUISITE: PSYO 2000.03 (with a grade of B or better); and permission of the instructor
SIGNATURE REQUIRED
NOTE: This course provides a half-year research experience. Students wanting a full-year research experience in a lab should register for PSYO 3001.03.
FORMAT: Lab 4 hours
PREREQUISITE: PSYO 2000.03 or NESC 2007.03, PSYO 2501.03 or STAT 2080.03, previous or concurrent enrolment in two other PSYO/NESC 3000-level courses, and Coordinator's consent.
CROSS-LISTING: NESC 2470.03
EXCLUSION: PSYO/NESC 3000X/Y.06
PSY 3010X/Y.06: Advanced General Psychology.
An active learning course for highly-qualified senior students. Students complete a series of oral and written assignments designed to consolidate critical thinking and communication skills in Psychology/Neuroscience. After instructional training, assignments include preparing and delivering lab material to a small group (< 30); of PSYO 2000.03 and 1021.03 students.
SIGNATURE REQUIRED
NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.
FORMAT: Lecture 2 hours, Skills Lab 1 hour
PREREQUISITE: PSYO 2000.03 or NESC 2007.03, advanced courses in Psychology or Neuroscience, and instructor's consent.
CROSS-LISTING: NESC 3010X/Y.06
PSY 3030.03: Psychometrics.
This course focuses on the theory and method of psychological measurement. Basic and advanced analytic methods employed in quantifying human abilities, traits, and syndromes are examined. Students contribute to the design of, and report on, a new measure of behavior in the laboratory component of the course.
FORMAT: Lecture 4 hours, Research Lab 2 hours
PREREQUISITE: PSY 2600.03 or NESC 2007.03, and PSY 2501.03 or STAT 2080.03
PSY 3043.03: Neurobiology of Learning.
This course examines the neurobiological processes underlying various forms of learning such as classical and operant conditioning, song learning by birds, spatial learning, and fear conditioning. Different methods used to study the neurobiology of learning, and the evolutionary origins of these systems are also considered.
FORMAT: Lecture 3 hours
PREREQUISITE: PSYO 2000.03 or NESC 2007.03, and one of PSYO/NESC 2140.03 or PSY 2770.03
CROSS-LISTING: NESC 3043.03
EXCLUSION: PSYO 3041.03
PSY 3044.03: Laboratory Methods of Learning and Conditioning.
A hands-on course on techniques used to test learning and memory in animals, including operant conditioning and spatial memory, and an exposure to the neurobiological processes involved. Students work in pairs to conduct a series of experiments, analyze data as a class, but write individual laboratory reports on each experiment. NOTE: Students should be aware that some data collection occurs outside of class time.
FORMAT: Research Lab 4 hours
PREREQUISITE: PSYO 2000.03 or NESC 2007.03, PSYO 2501.03 or STAT 2080.03, and one of PSYO/NESC 2140.03 or PSY 2770.03
CROSS-LISTING: NESC 3044.03
EXCLUSION: PSYO 3043.03
PSY 3051.03: Sensory Neuroscience I. Vision.
This course examines the neural basis for the perception of light, colour, movement, depth, and form. The course covers developmental events important for vision, and the extent to which vision is constrained by anatomical and physiological development.
PREREQUISITE: PSYO 2000.03 or NESC 2007.03, PSYO 2501.03 or STAT 2150.03

PSYO 3052.03: Sensory Neuroscience II. Hearing and Speech.
This course explores hearing at levels that include stimulus parameters and their psychophysical correlates, middle ear function, cochlear biophysics, central auditory neurophysiology, and principles of speech perception. We emphasize mechanisms of neural hearing and speech, but address pathology whenever it helps us understand the relation between neurophysiology and perception.
FORMAT: Lecture 3 hours
PREREQUISITE: PSYO 2000.03 or NESC 2007.03, and PSYO 2470.03
CROSS-LISTING: NESC 3052.03

PSYO 3082.03: Experimental Social Psychology.
The course attempts to develop students' skill level in empirical analysis of social psychology phenomena. Students complete two research projects during the term. The projects involve testing subjects, coding data, computer data analysis, and report writing. Familiarity with computer-based statistical analysis and text processing is strongly recommended.
FORMAT: Lecture 1 hour, Research Lab 2 hours
PREREQUISITE: PSYO 2000.03 or NESC 2007.03, PSYO 2501.03 or STAT 2080.03, and PSYO 2000.03

PSYO 3084.03: Social Cognition.
This course focuses on the understanding people develop of themselves and others as social beings. The contributions of evolution, historical, and cultural factors are considered. The ways in which human development of social perception and cognition differs from that of other species are also examined.
FORMAT: Lecture 3 hours
PREREQUISITE: PSYO 2000.03 or NESC 2007.03, and one of PSYO 2080.03 or PSYO 2090.03 or PSYO 2220.03

PSYO 3091.03: Methods in Developmental Psychology.
This course provides a survey of research methods in developmental psychology. It assumes knowledge of basic methodology and design, and concentrates on methods of relevance to the study of human development. In addition to lectures, students conduct a number of research exercises to gain experience in conducting research with children.
FORMAT: Lecture 2 hours, Research Lab 1 hour
PREREQUISITE: PSYO 2000.03 or NESC 2007.03, PSYO 2501.03 or STAT 2080.03, and PSYO 2090.03

PSYO 3092.03: Early Development.
This course examines development in infancy and the preschool period. The main theme of the course is to examine the integration of perceptual, cognitive, emotional, social, and linguistic changes occurring during the first five years of life.
FORMAT: Lecture 3 hours
PREREQUISITE: PSYO 2000.03 or NESC 2007.03, and PSYO 2000.03

PSYO 3093.03: Development of Language and Literacy Abilities.
This course examines the cognitive and linguistic processes underlying language acquisition and how they interact in influencing the development of language and literacy abilities.
FORMAT: Lecture 3 hours
PREREQUISITE: PSYO 2000.03 or NESC 2007.03, and PSYO 2000.03

PSYO 3122.03: Methods in Experimental Clinical Psychology.
Students learn how to conduct research on topics in applied clinical psychology. Students conduct a series of research projects in the laboratory, by serving both as subjects and experimenters, and analyze the results of these studies in written lab reports. Research studies serve to illustrate concepts discussed in class.
FORMAT: Lecture 2 hours, Research Lab 2 hours
PREREQUISITE: PSYO 2000.03 or NESC 2007.03, PSYO 2501.03 or STAT 2080.03, and PSYO 2220.03

PSYO 3129.03: Childhood Psychopathology.
The course examines a wide range of mental health disorders in children (e.g., reading disability, autism, ADHD). The goal is to gain a better understanding of nature of these disorders, to learn about evidence-based assessment and treatment, and to review research findings in relation to children's mental health.
FORMAT: Lecture 3 hours
PREREQUISITE: PSYO 2000.03 or NESC 2007.03; PSYO 2220.03 is recommended

PSYO 3131.03: Research Methods in Attention.
The methods, findings, and theories that underpin our understanding of attention, perception, selection, and control of information processing are covered. Behavioral and neuroscientific evidence as well as computational models are examined in the lectures. Laboratories emphasize behavioral methods used to isolate and reveal the components of attention.
FORMAT: Lecture 3 hours, Research Lab 2 hours
PREREQUISITE: PSYO 2000.03 or NESC 2007.03, PSYO 2501.03 or STAT 2080.03, and PSYO/NESC 2150.03 or PSYO/NESC 2130.03
CROSS-LISTING: NESC 3131.03
EXCLUSION: PSYO/NESC 3130.06

PSYO 3132.03: Research Methods in Visual Cognition.
Visual cognition is the study of how we extract meaning from our visual environment and use it to direct our behavior. Emphasis is placed on object, face, and word recognition as revealed by normal behavior, and by neuropsychological techniques and neuropsychological studies of brain-damaged individuals who have lost these recognition abilities.
FORMAT: Lecture 3 hours, Research Lab 2 hours
PREREQUISITE: PSYO 2000.03 or NESC 2007.03, PSYO 2501.03 or STAT 2080.03, and PSYO/NESC 2130.03 or PSYO/NESC 2150.03
CROSS-LISTING: NESC 3132.03
EXCLUSION: PSYO/NESC 3130.06

PSYO 3133.03: Research Methods in Memory.
The course examines human memory from the perspective of cognitive psychology and, to a lesser extent, cognitive neuroscience. Lectures emphasize cognitive approaches to the study of memory with an explicit focus on empirical research methods, data, and interpretation of results.
FORMAT: Lecture 3 hours, Research Lab 2 hours
PREREQUISITE: PSYO 2000.03 or NESC 2007.03, PSYO 2501.03 or STAT 2080.03, and PSYO/NESC 2150.03 or PSYO/NESC 2130.03
CROSS-LISTING: NESC 3133.03
EXCLUSION: PSYO/NESC 3130.06

PSYO 3134.03: Research Methods in Psycholinguistics.
Provides hands-on experience with various methodologies employed in the study of language processing, and uses these to explore topics in psycholinguistics in greater depth. Methods covered may include reaction time, priming, self-paced reading, computational modeling, corpus-based research, and event-related brain potentials. Students serve as experimenters and participate in class experiments.
FORMAT: Lecture 3 hours, Research Lab 2 hours
PREREQUISITE: PSYO 2000.03 or NESC 2007.03, PSYO 2501.03 or STAT 2080.03, and PSYO/NESC 2150.03 or PSYO/NESC 2130.03
CROSS-LISTING: NESC 3134.03
EXCLUSION: PSYO/NESC 3130.06

PSYO 3137.03: Research Methods in Cognitive Neuroscience.
An overview of neuroimaging and other techniques of cognitive neuroscience (including fMRI, ERP, and others) focusing on how they work, how they are applied, and their inherent limitations. Labs include experience collecting and analyzing ERP data, demonstrations of fMRI scanning, and analysis of fMRI data.
FORMAT: Lecture 3 hours, Research Lab 2 hours
PREREQUISITE: PSYO 2000.03 or NESC 2007.03, PSYO 2501.03 or STAT 2080.03, and PSYO/NESC 2150.03 or PSYO/NESC 2130.03
CROSS-LISTING: NESC 3137.03

PSYO 3161.03: Measuring Behaviour.
Measuring behaviour is essential in the study of ethology, behavioral neuroscience, developmental, social and clinical psychology. The function of this laboratory course is to teach methods of observing and scoring behaviour using...
This course focuses on advanced theories and applications of animal behaviour, with a focus on proximate, integrative, and applied questions. It offers a more in-depth analysis of topics covered in PSYO/NESC 2160.03 and explores trends and issues in contemporary ethology, animal psychology and behavioural ecology. FORMAT: Lecture 3 hours
PREREQUISITE: PSYO 2220.03 or PSYO/NESC 2030.03, 2060.03
CROSS-LISTING: NESC 3162.03

PSYO 3165.03: Neuroethology.
Neuroethology explores how neural systems of animals work together to produce behaviour. Neural control of selected behaviours from a wide range of animals, both invertebrates and vertebrates, are examined. From this comparative perspective an attempt is made to tease out common themes in the physiological control of behaviour. NOTE: All experiments in the accompanying lab involve insects. Students are required to handle insects during the lab. FORMAT: Lecture 2 hours, Research Lab 2 hours
PREREQUISITE: PSYO/NESC 2470.03 or BIOL 2020.03, and PSYO/NESC 2570.03 or BIOX 3070.03 and 3070.03, or MATH 3070.03 and 3070.03; and PSYO 2000.03 or NESC 2007.03 or one of following Biology classes: 2003.03, 2004.03, 2020.03 2005.03 2060.03
CROSS-LISTING: NESC 3165.03

PSYO 3170.03: Hormones and Behaviour.
How chemical signals of the endocrine, and immune systems interact to influence the brain and behaviour. How neurotransmitters, cytokines, and hormones control neural and behavioural development, sexual, aggressive, and maternal behaviour. Hormone receptors in the brain, reproduction, puberty, brain sex differences, and stress are also examined. FORMAT: Lecture 3 hours
PREREQUISITE: PSYO/NESC 2470.03 or BIOL 2020.03, and (PSYO/NESC 2770.03 or BIOX 3070.03 and 3070.03, or MATH 3070.03 and 3070.03; and PSYO 2000.03 or NESC 2007.03 or one of following Biology classes: 2003.03, 2004.03, 2020.03 2005.03 2060.03)
CROSS-LISTING: NESC 3170.03

PSYO 3180.03: Psychoneuroimmunology/Ecological Immunology.
Our behaviour can influence how well we resist disease, and infection can alter behaviour. This course examines how immune systems and nervous systems interact in both vertebrates and invertebrates. Evolutionary forces that have led to the co-existence of these interactions are also examined. FORMAT: Lecture 3 hours
PREREQUISITE: PSYO/NESC 2470.03 or BIOL 2020.03, and either PSYO/NESC 2770.03 or PSYO 2000.03 or NESC 2007.03 and either PSYO/NESC 2770.03 or BIOX 3070.03 and 3070.03, or MATH 3070.03 and 3070.03; and PSYO 2000.03 or NESC 2007.03 or (BIOX 3070.03, BIOX 3070.03, BIOX 3070.03, BIOX 3070.03); and PSYO 2000.03 or NESC 2007.03 or one of following Biology classes: 2003.03, 2004.03, 2020.03 2005.03 2060.03
CROSS-LISTING: NESC 3180.03

PSYO 3190.03: Psycholinguistics.
Explores the cognitive and neural bases of human language processing. Topics include: human language and other communication systems; phonology, morphology; semantics; syntax; discourse; first and second language acquisition; relationship of language to general cognitive functions such as music and mathematics; signal languages such as American Sign Language; and non-linguistic gesture. FORMAT: Lecture 3 hours
PREREQUISITE: PSYO 2000.03 or NESC 2007.03, and either PSYO/NESC 2770.03 or PSYO 2470.03 or MRCI 2100.03; OR BIOX 2020.03
CROSS-LISTING: NESC 3190.03

PSYO 3200.03: Clinical Psychology.
A survey of professional issues relevant to the practice of clinical psychology in hospitals, private practice, schools, the court system, and the community. Students gain knowledge about psychological services, and an understanding of the training, ethics, and expertise that clinical psychology brings to the delivery of mental health and healthcare. FORMAT: Lecture 3 hours
PREREQUISITE: PSYO 2000.03 or NESC 2007.03, and PSYO 2220.03
EXCLUSION: PSYO 2120.03

PSYO 3224.03: Forensic Psychology.
This course provides an introduction to the application of psychology to the justice arena of the criminal justice system (i.e., courts, corrections, policing). In addition, consideration is given to professional and ethical issues that arise when psychological knowledge is applied in forensic contexts. FORMAT: Lecture 3 hours
PREREQUISITE: PSYO 1011.03 or PSYO 1021.03 and PSYO 1012.03 or PSYO 1022.03, or SCIE 1515.V1.36, 1520.V1.35 or 1540.V1.27 (with a grade of B- or better), AND any 2000-level Psychology class.

PSYO 3225.03: Health Psychology.
A study of psychological influences on how people stay healthy and how they respond when they become ill. Using a biopsychosocial model, this course examines topics such as health behaviours and prevention, stress and coping, the patient in treatment settings, and management of chronic and terminal illness. FORMAT: Lecture 3 hours
PREREQUISITE: PSYO 2000.03 or NESC 2007.03, and PSYO 2220.03

PSYO 3227.03: Principles of Human Neuropsychology.
Clinical neuropsychologists study the organization of cognitive, emotional, and social functions in the brain to understand how brain damage alters human behaviour across the lifespan. We examine how clinicians diagnose and rehabilitate persons with brain diseases and disorders. Assignments emphasize application of textbook/literature-based knowledge, critical thinking, and group presentation skills. FORMAT: Lecture 3 hours
PREREQUISITE: PSYO 2000.03 or NESC 2007.03, and one of PSYO/NESC 2170.03, 2470.03, or PSYO 2770.03. PSYO/NESC 2130.03 is helpful.
CROSS-LISTING: NESC 3227.03

PSYO 3237.03: Drugs and Behaviour.
An introduction to behavioral pharmacology. The lectures involve basic anatomy, physiology, and chemistry of the nervous system. Behavioural effects and underlying mechanisms of various psychoactive drugs are discussed. Specific topics covered are alcohol, tobacco, amphetamines, cocaine, opioids, hallucinogens, tranquilizers, and antipsychotic drugs. FORMAT: Lecture 3 hours
PREREQUISITE: PSYO 2000.03 or NESC 2007.03, and one of PSYO/NESC 2170.03, 2470.03, 2570.03, or PSYO 2770.03
CROSS-LISTING: NESC 3237.03

PSYO 3260.03: Biological Rhythms.
Daily (circadian) clock genes rhythm in many functions, including sleep, reproduction, and intellectual performance. This course examines the nature of these biological clocks, their neural mechanisms, and their role in regulating sleep and other aspects of physiology and in pathological conditions, including sleep disorders, jet lag, and psychiatric disorders. FORMAT: Lecture 3 hours
PREREQUISITE: PSYO 2000.03 or NESC 2007.03 or (BIOL 1010.03 or BIOL 1021.03) and any 2000-level Psychology class.
CROSS-LISTING: NESC 3260.03

PSYO 3264.03: The Science of Sleep.
This course reviews the history, methods and results of the scientific study of sleep. Topics include: circadian and homeostatic regulation; developmental and cultural impact; normative and abnormal function of neural and other control mechanisms; effects of sleep loss on performance and health; theories of the functions of sleep. FORMAT: Lecture 3 hours
PREREQUISITE: PSYO 2000.03 or NESC 2007.03, and either PSYO/NESC 2170.03 or PSYO/NESC 2470.03, or BIOX 2020.03
CROSS-LISTING: NESC 3264.03

PSYO 3270.03: Developmental Neuroscience.
This course presents the fundamentals of development in complex and simple nervous systems. Cell differentiation, pattern regulation, proliferation, migration, and circuit development are discussed. Special attention is given to later developmental events such as neuronal growth cones, cell death, growth factors, neuron-target interactions, and synaptic formation. FORMAT: Lecture 3 hours
PREREQUISITE: PSYO 2000.03 or NESC 2007.03, and PSYO 2220.03
EXCLUSION: PSYO 2120.03

PSYO 3280.03: Neuroscience in Mental Health.
This course examines the fundamentals of development in complex and simple nervous systems. Cell differentiation, pattern regulation, proliferation, migration, and circuit development are discussed. Special attention is given to later developmental events such as neuronal growth cones, cell death, growth factors, neuron-target interactions, and synaptic formation. FORMAT: Lecture 3 hours
PREREQUISITE: PSYO 2000.03 or NESC 2007.03.

574 Psychology
PSYO 3280.03: Personality.
Personality deals with questions such as: Is a science of persons possible? Are there types of personalities, or is each individual's personality unique? Is an individual's life history an expression of his or her personality, or is personality description merely a summary statement of behaviour whose cause lies elsewhere?

FORMAT: Lecture 3 hours, Lab 3-4 hours, and one of PSYO 2080.03 or PSYO 2220.03 and PSYO 2570.03 or PSYO/NESC 3270.03

CROSS-LISTING: NESC 3270.03

PSYO 3370.03: Neuroscience Laboratory I.
Introduction to several neurophysiological techniques used in contemporary neuroscience, employing extracellular and intracellular electrical recording and stimulation methods on nervous system preparations, both sensory and motor. After introductory instruction, students in groups of 2-3 get to perform quite sophisticated practical experiments themselves, enabled by computer-based data acquisition systems.

FORMAT: Lab 3 hours

PREREQUISITE: PSYO 2000.03 or NESC 2007.03, PSYO 2570.03 and PSYO/NESC 3270.03

CROSS-LISTING: NESC 3370.03

PSYO 3371.03: Neuroscience Laboratory II.
Introduction to several techniques used in contemporary neuroscience. Students work under supervision in groups of 2-3 in regular labs that introduce neuropeptidological analyses using the following: Golgi impregnation, immunocytochemistry, dye-tracing of connections, electrophysiology of the retina, and neurotransmitter determinations using HPLC.

FORMAT: Lab 3 hours

PREREQUISITE: PSYO 2000.03 or NESC 2007.03, PSYO 2570.03 and PSYO/NESC 3270.03

CROSS-LISTING: NESC 3371.03

PSYO 3390.03: Cognitive Development.
In this course we trace the development of the child's knowledge from birth to adolescence. Piaget's theory provides the background for the study of recent progress in our understanding of children's concepts of the physical world.

FORMAT: Lecture 3 hours

PREREQUISITE: PSYO 2000.03 or NESC 2007.03, and PSYO 2090.03

PSYO 3502.03: Statistical Methods II.
This course is the continuation of PSYO 2501.03, with the examination of more complex, but commonly used, inferential statistics. Topics include factorial ANOVA, ANCOVA, MANOVA, and multiple regression. This course is intended primarily for Honours students in Psychology or Neuroscience. Class work includes computer-based assignments.

FORMAT: Lecture 3 hours, Skills Lab 1-2 hours

PREREQUISITE: PSYO 2000.03 or NESC 2007.03, PSYO 2501.03 or STAT 2100.03, and instructor's consent

PSYO 3581.03: History of Psychology I.
Drawing on writings from antiquity to the early years of the 20th century, we explore the nature of historical explanation, explanation in science, knowledge and truth, life, human nature, the domains of animal and man, neuroscience, and personality. Usually offered in the Fall term.

FORMAT: Lecture 3 hours

PREREQUISITE: PSYO 2000.03 or Instructor's consent

EXCLUSION: PSYO 3580.06

PSYO 3582.03: History of Psychology II.
Drawing on writings from antiquity to the early years of the 20th century, we explore the nature of learning, thinking, memory, intelligence, mental illness and treatment, unconscious, dreams, development, and the self. Usually offered in the Winter term. Familiarity with ideas developed in PSYO 3581 is helpful.

FORMAT: Lecture 3 hours

PREREQUISITE: PSYO 2000.03 or instructor's consent

EXCLUSION: PSYO 3580.06

PSYO 3670.03: Genes, Brain and Behaviour.
The application of genetic techniques to the study of cognitive abilities, psychopathology, personality disorders, stress-related illnesses, and ethical issues in genetic research. The role of genetic factors in eating and drug abuse problems, as well as methods used to study gene-environment interactions are explored.

FORMAT: Lecture 3 hours

PREREQUISITE: PSYO 2470.03 or PSYO 2770.03, and BIOL 1010.03 or BIOL 1020.01 and BIOL 1011.03 or BIOL 1021.01 or SCIE 1515.X/Y36, or PSYO 2770.03, or PSYO 2870.X/Y (with a grade of B- or better); BIOL 2014.03 are useful

CROSS-LISTING: NESC 3670.03

EXCLUSION: PSYO/NESC 2470.03 or PSYO 2770.03

CROSS-LISTING: PSYO 3770.03

PSYO 3770.03: Behavioural Neuroscience.
Behavioral neuroscientists examine the neuronal and hormonal mechanisms underlying a variety of behavioral phenomena. The course focuses on neural correlates of social and emotional behavior, motor behavior and patterns, and behavioral teletyping processes (motoric and endocrine disruptions).

FORMAT: Lecture 2 hours

PREREQUISITE: PSYO 2000.03 or NESC 2007.03, and PSYO/NESC 2470.03 or PSYO 2770.03

CROSS-LISTING: NESC 3770.03

PSYO 3775.03: Behavioural Neuroscience Laboratory.
Students motivated to pursue a career in Neuroscience, or in a related biomedical discipline, gain direct experience studying the nervous system in relation to behavior. Students acquire skills in animal handling, ethics, and measuring behavior. Emphasis is placed on histological/molecular analysis of the brain including examining protein and/or mRNA levels.

SIGNATURE REQUIRED

FORMAT: Research Lab 3-5 hours

PREREQUISITE: PSYO 2000.03 or NESC 2007.03, PSYO 2570.03 or PSYO/NESC 2470.03 or PSYO 2770.03, or one of PSYO/NESC 2160.03 or PSYO/NESC 2570.03, and instructor's consent

CROSS-LISTING: NESC 3775.03

PSYO 3790.03: Neurolinguistics.
The course covers: (1) brain damage and language disorders; (2) aphasia; (3) localization of lesions in the human brain; (4) neuromapping; (5) intracranial electric stimulation experiments; (6) event-related brain potential experiments; (7) PET, fNMR scan experiments; (8) neural models of language processing.

FORMAT: Lecture 2 hours

PREREQUISITE: PSYO 2470.03 or PSYO 2770.03 and PSYO/NESC 2160.03

CROSS-LISTING: NESC 3790.03

PSYO 3970.03: Molecular Neuroscience.
This course examines the development, function, and pathology of the brain at the molecular level. Model systems are examined from the perspective of ion channels, messengers, receptors, intracellular signalling cascades, transcription factors, and genes. The concepts underlying basic cellular and molecular neuroscience tools are emphasized.

FORMAT: Lecture 3 hours

PREREQUISITE: PSYO/NESC 2470.03 or PSYO/NESC 3770.03

CROSS-LISTING: NESC 3970.03

400-Level Seminars
The following seminars are intended for fourth-year Honours students. Third-year Honours students are eligible if they obtain permission from the instructor, and the needs of all the fourth-year Honours students have been met. The topics covered in these courses vary from year to year. Go to the departmental website (http://psychology.ualberta.ca) for more detail about the topics to be covered in the current academic year.

PSYO 4000.03: Senior Seminar.
An individually tailored reading or study course designed to allow Honours students to focus on a particular issue, or a set of related issues, that are not part of the regular program. Enrolment is contingent upon securing a faculty member to supervise the study program.

SIGNATURE REQUIRED

COORDINATOR: J. Stamp

CROSS-LISTING: NESC 4000.03

PSYO 4001.03: Contemporary Issues in Psychology.
SIGNATURE REQUIRED

CROSS-LISTING: NESC 4740.03

PSYO 4500X/Y.06: Honours Thesis.
Under a staff member’s supervision, each student conducts original research in experimental psychology. Students must describe their proposed research and progress. A formal written report of the completed research is required. The final grade is based on originality and skill with emphasis on the written and oral reports.
SIGNATURE REQUIRED
NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.
PREREQUISITE: Fourth-year Honours students, and instructor’s consent
CROSS-LISTING: NESC 4500X/Y.06
RESTRICTION: Restricted to Honours students in their graduating year
Science, Interdisciplinary

Dean
Moore, C., BA (Hons), PhD (Cambridge), Professor (Psychology)

I. Course Descriptions

SCIE 1111.03: Writing for the Sciences.
This course satisfies the Faculty of Science Writing Requirement. The course covers the history of writing and information theory, grammar and punctuation, sentences and paragraphs, scientific style, proposals, the scientific paper, citations and references, graphics, posters, and ethics. Weekly assignments/optional develop and reinforce writing skills introduced in lectures.

FORMAT: Writing requirement for Faculty of Science BSc students only. Lecture 3 hours/tutorial 1 hour (mandatory)

SCIE 1505X/Y.18: Integrated Science.
This program provides comprehensive first-year preparation for science major or honors degree and includes a full-year writing course and research project in the sciences. Concepts and techniques taught in Biology, Earth Science, Psychology, and Statistics are linked to material taught in separate Chemistry, Mathematics, and Physics courses.

NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.

FORMAT: Writing requirement; Lecture approx. 9 hours/lab and other activities approx. 5 hours

CROSS-LISTING: BIOL 1010.03/1011.03 or BIOL 1020.03/1021.03; ERTH 1000.03, PSYO 1011.03/1012.03 or PSYO1021.03/1022.03; SCIE 1111.03; STAT 1060.03

SCIE 2000X/Y.06: Introduction to the History of Science.
This course is a broad introductory survey of the central developments in the history of science, open to first and higher level students whatever their fields, and may be an introduction to further study in the history of science. It examines the most revolutionary figures from the Greeks to the modern period. The work of each of these had such a profound influence upon their own era and upon subsequent times that students in the humanities will find this course clarifies the nature of science and its cultural importance. Students in the course may be taken as an arts or science credit.

NOTE: Credit can only be given for this course if X and Y are completed in consecutive terms and partial credit cannot be given for a single term.

FORMAT: Lecture/tutorial

SCIE 2111.03: Communicating Science.
A course for senior science students to hone communication skills. Students (1) learn to communicate scientific information to various non-specialist audiences, and (2) prepare and deliver tutorials to small groups of SCIE 1111.03 students. The course allows students to use different communication styles and topics to build a portfolio.

FORMAT: Lecture 3 hours, tutorial 2 hours

SCIE 3600.03: Exploring Geographic Information Systems.
This course provides a general overview of Geographic Information Systems (GIS), examining what GIS is, what it can do, and how it works. The course is aimed at students studying in all disciplines and will involve creating, understanding, manipulating and displaying geographic data. Topics will include data models, analysis of vector and raster data, creation of spatial databases, the Global Positioning System and other aspects of spatial data. Lectures (7 per week) will explore basic aspects of GIS in detail and introduce material to be covered in the labs. Labs are held once per week and will provide practical experience in data manipulation and problem solving.

PREREQUISITE: Two years of university study

EXCLUSION: ERTH 3500.03, ENVS 3500.03, GEOG 3500.03, ERTH 5600.03

SCIE 4001.03: History of Marine Sciences.
Onedisc not take desirable form until late in the 19th century. Its roots lie not in the Challenger Expedition of the 1870s, the popular stereotype, but partly in ancient cosmologies and geography. In this course, the history of marine sciences, including oceanography, is traced from the ancient to the 20th century. The cosmologies of the ancient world, voyages of discovery from the 15th through the 18th centuries, the scientific revolution of the 17th century, the development of biology, physics, chemistry and geology in the late 18th and 19th centuries, all contributed to a gradual enlargement and transformation of human interest in the oceans.

FORMAT: Lecture 3 hours

PREREQUISITE: Instructor’s consent

CROSS-LISTING: BIOL 4444.03, OCEA 4331.03/4332.03, HIST 3073.03, HIST 3331.03, MEB 4664.03

SCIE 4444.03: Leadership in Science.
Students will develop leadership skills and build confidence while applying their scientific knowledge. Through in-class activities and a science-based practicum, students gain experience with various aspects of leadership, allowing for integration and application of their expertise.

FORMAT: Lecture/tutorial 2.5 hr/week; Practicum, 3hr/week

PREREQUISITE: Instructor’s consent

CROSS-LISTING: BIOL 4444.03

SCIE 2800.00: Science Co-op Seminar Orientation.
This course is designed to introduce Science Co-op students to aspects of career development and preparation for their work terms. This course is a prerequisite to the first work term and is a mandatory component of the Science Co-operative Education program; all Science Co-operative Education students are required to complete this course at least four months prior to the first workterm. A grade of Pass is required before students undertake the first work term experience.

FORMAT: This course is delivered primarily on-line with two mandatory in-person seminars.
I. Degree Programs

Statistics is the discipline which is concerned with the collection, organization, display and interpretation of data. Statisticians are in high demand in government, industry and in research institutions.

There are several honours programs, and a 20 Credit Major program in Statistics available to students. In addition, there is a Co-op program. Any student interested in such a course of study should consult the Undergraduate Advisor for Statistics, Department of Mathematics and Statistics.

In addition to the departmental requirements listed below, students must satisfy the requirements outlined in the Degree Requirements section, page 125 of this calendar.

A. Honours in Statistics

The Honours program in Statistics will provide students with a comprehensive knowledge of both theoretical and applied statistics and will enable students to move easily into challenging employment or graduate work in statistics.

Departmental Requirements

1000 level
• MATH 1000.03 or MATH 1215.03/1010.03
• STAT 1060.03*
• CSCI 1100.03/1101.03**

2000 level
• MATH 2001.03
• MATH 2002.03
• MATH 2010.03/2040.03 or 2135.03
• STAT 2060.03
• STAT 2080.03***
• Two to five other half credits in Statistics at or above the 2000 level but not including courses listed below.

3000 level
• STAT 3340.03
• STAT 3350.03
• STAT 3360.03
• STAT 3380.03 or 3350.03
• STAT 3460.03
• Two 3000 level Mathematics courses chosen in consultation with the statistics honors advisor.

4000 level
• STAT 4066.03
• One of STAT 4350.03, 4390.03, 4620.03
• STAT 4950.03

B. Combined Honours

Students interested in taking honours in Statistics combined with another subject should consult the Faculty Advisor through whom a suitable course of study can be arranged.

C. BSc or BA (20 credit) Major in Statistics

Departmental Requirements

1000 level
• MATH 1000.03/1010.03
• STAT 1060.03*
• CSCI 1100.03/1101.03**

2000 level
• MATH 2001.03
• MATH 2002.03
• MATH 2010.03/2040.03 or 2135.03
• STAT 2060.03
• STAT 2080.03

3000 level
• STAT 3340.03
• STAT 3360.03
• STAT 3380.03 or 3350.03
• STAT 3460.03
• At least two more credits in Statistics at or above the 3000 level

* At least two more credits in Statistics at or above the 3000 level
D. Co-op Education in Science
Co-operative Education in Science (Science Co-op) is a program where academic study is combined with paid career related work experience. Students alternate three work terms throughout their academic study terms and graduate with a Bachelor of Science Co-op. Science Co-op enables students to apply their knowledge directly while providing them with work experience that assists in making educated career choices. Students apply to join Science Co-op before their second year of study. If accepted into the Science Co-op program, students are required to register for and attend the Science Co-op Seminar Series (SCIE 2800.00) in the fall term of the year they join.

The scheduling of Science Co-op work terms must be taken into account in planning course selection. Consult with the Statistics Co-op Academic Advisor for your work term sequence. See the “Co-operative Education in Science” section of this calendar, or [http://www.sciencecoop.dal.ca](http://www.sciencecoop.dal.ca) for information on Science Co-op such as ScholarCo-op requirements, eligibility, how to apply, deadlines and other related information.

For further information, please see [http://www.sciencecoop.dal.ca](http://www.sciencecoop.dal.ca)

Co-op Academic Advisor in Statistics:
Dr. Dowel (904-106) mdowell@dal.ca

E. Honours Co-op in Statistics

Departmental Requirements
Same as for the regular Honours in Statistics as above with the addition of the following:
• Three Co-op Work Terms: STAT 8800.00, 8802.00, 8805.00

F. Major Co-op in Statistics

Departmental Requirements
Same as for the regular Major in Statistics with the addition of the following:
• Three Co-op Work Terms: STAT 8800.00, 8802.00, 8805.00
• Co-op Seminar: SCIE 2800.00

More details on the Co-op program appear under the Co-operative Education in Science entry in this calendar.

G. BSc (15 credit) with Minor in Statistics

A BSc (15 credit) degree program with a Minor in Statistics is available to students in the Faculty of Science.

Departmental Requirements
• A minimum of 18 credit hours in Statistics (STAT) courses at the 2000 level or higher.
• Students in Major/Honours programs other than Mathematics may count MATH 2001 and MATH 2003 among the 18 credit hours.

H. Minor in Statistics

Students in other 20 credit degree programs may choose to include a Minor in Statistics in their program. Requirements are outlined in the College of Arts and Science Minors section of this Calendar (page 140).

I. Minors available to students in Statistics

Minor programs allow students to develop subject specializations in addition to their major or honours subjects. Minors in other subjects are normally added to a four-year major or concentrated honours program (including co-op programs).

Students in a 20-credit BSc program in Statistics may choose to include a Minor selected from the list of approved Minors beginning on page 132 in this Calendar. Note that courses counted toward a Major or Honours program cannot be used to fulfill the requirements of a Minor program.

J. BSc/Engineering or BA/Engineering Concurrent Programs

Students will normally complete the requirements for a 15 Credit BSc or 15 Credit BA, and the first two years of engineering studies leading to the Diploma in Engineering. The concurrent program can be completed in three years. Details are provided in the College of Arts and Science Degree Requirements on page 122 of the calendar.

K. Diplomas, Certificates, and Language Proficiency Certificates

In combination with a BSc or BA there are certificates or diplomas that can be obtained to emphasize areas of proficiency. Courses counted toward a Major, Honours or Minor program may also be used to fulfill the requirements of a Certificate. For a complete list and details refer to the College of Arts and Science Degree Requirements on page 122 of the calendar.

II. Course Descriptions

Certain courses have been approved for use in fulfilling the educational requirements of the Associate Statistician (A.Stat.) designation of the Statistical Society of Canada (SSC). See the Department or the SSC website (http://www.statcan.ca/en/accreditation) for details.

Credit may not be obtained twice for the same course even if the numbers have been changed.

**STAT 1060.03: Introductory Statistics for Science and Health Sciences.**

This course gives an introduction to the basic concepts of statistics through extensive use of examples. The topics include experimental design, descriptive statistics, simple linear regression and the basics of statistical inference. Students will learn to use the statistical package MINITAB. NOTE: Students who have already taken university level Calculus should consider taking STAT 2060.03 instead of STAT 1060.03.

**FORMAT:** Lecture 3 hours, tutorial 1 hour, MLA.

**PREREQUISITE:** Academic or advanced Grade 12 Mathematics (or pre-calculus) or equivalent.

**CROSS-LISTING:** MATH 1003.00

**EXCLUSION:** COMM 2501.03, MGMT 2501.03, DISP.

**STAT 2060.03:** Introduction to Probability and Statistics.

Rigorous introduction to probability and statistical theory. Topics covered include elementary probability, random variables, distributions, estimation and hypothesis testing. Estimation and testing are introduced using normal likelihood and the generalized likelihood ratio. Natural sequels for this course are STAT 2080.03 and 3160.03.

**FORMAT:** Lecture 3 hours, MLA.

**PREREQUISITE:** MATH 1000.03 or MATH 1010.03 or equivalent.

**CROSS-LISTING:** MATH 2060.03, ECON 2200.03.

**EXCLUSION:** ECON 2202.03.

**STAT 2080.03:** Statistical Methods for Data Analysis and Inference.

The usual sequel to STAT 1060.03 or STAT 2060.03. This course introduces a number of techniques for data analysis and inference commonly used in the experimental sciences. Topics covered include model building in linear models, multiple regression, analysis of variance, factorial designs, analysis of covariance using the general techniques for linear models and two and three way tables along with logistic regression. A natural sequel for this course is STAT 3340.03.

**FORMAT:** Lecture 3 hours, MLA.

**Statistics 579**

---

---
STAT 2300.03: Introduction to Mathematical Modelling I.

See course description for MATH 2300.03 in the Mathematics section of this calendar.

PREREQUISITE: STAT 1060.03 or STAT 2060.03 or DISP (except SCIE 1540X/Y.27)
CROSS-LISTING: MATH 2300.03 or DISP
EXCLUSION: COMM 2302.03, MKOM 2302.03, PSYS 2301.03

STAT 2600.03: Theory of Interest.

See course description for MATH 2600.03 in the Mathematics section of this calendar.

This course provides an intermediate level coverage of statistical theory to provide

CROSS-LISTING: MATH 3380.03
PREREQUISITE: STAT 2060.03
FORMA T: Lecture 3 hours

natural and physical sciences.

The development of design and analysis techniques for sample surveys. Topics
to be discussed include survivorship and hazard functions and their
statistical theory behind the methods, and the application of various techniques.
This course is an introduction to survival analysis methods and will cover both the

CROSS-LISTING: MATH 3360.03
PREREQUISITE: STAT 2060.03 or DISP (except SCIE 1540.03)
FORMA T: Lecture 3 hours

STAT 3345.03: Environmental Risk Assessment.

Statistical methods for assessing risk are discussed, including dose-response
models, survival analysis, relative risk analysis, bioassay, estimating methods for
zero risk trend analysis and association risks. Case studies are used to illustrate the
methods.

PREREQUISITE: MATH 1060.03 or MATH 1215.03, STAT 2060.03 or equivalent

STAT 3350.03: Design of Experiments.

The aim of the course is to develop the fundamental statistical concepts required
for designing efficient experiments to answer real questions. The first main
subject is experimental design. The basic concepts of replication, blocking and
randomization are each examined. The second main subject is treatment
structure. The ideas of factorial designs, split-plot and incomplete
plot designs are presented. We conclude with a look at response surface
methodology.

PREREQUISITE: STAT 2060.03, MATH 2010.03 and either MATH 1010.03 or
STAT 2060.03 or DISP (except SCIE 1540.03/27)

CROSS-LISTING: MATH 3340.03

STAT 3360.03: Probability.

The concepts and application of probability. Topics include the classical discrete and
continuous distributions, including the binomial, hypergeometric, multinomial, Poisson,
beta, gamma, t, normal and several; definitions and properties of
random variables; independence; sums of independent random variables,
including the law of large numbers and central limit theorem; conditional
probability; and the bivariate normal distribution. Examples will be taken from the
natural and physical sciences.

PREREQUISITE: STAT 2060.03 and MATH 2001.03
FORMA T: Lecture 3 hours

CROSS-LISTING: MATH 3360.03

STAT 3380.03: Sample Survey Methods.

The development of design and analysis techniques for sample surveys. Topics
include simple, stratified and systematic random sampling, ratio and regression
estimation, sub-sampling with units of equal and unequal size, double-random
and multiphase sampling, non-sample errors and non-respondents.

PREREQUISITE: STAT 2060.03
FORMA T: Lecture 3 hours

CROSS-LISTING: MATH 3380.03

STAT 3460.03: Intermediate Statistical Theory.

This course provides an intermediate level coverage of statistical theory to provide
a framework for valid inferences from sample data. The methods developed are
based on the likelihood function and are discussed from the frequentist,
likelihood, and Bayesian approaches. The problems of point estimation, interval
estimation and hypothesis testing and the related topics of sampling distributions,
sufficiency, and Fisher Information are discussed.

PREREQUISITE: STAT 3360.03
FORMA T: Lecture 3 hours

CROSS-LISTING: MATH 3460.03

STAT 3703.03: Actuarial Models I.

This course builds on the material in STAT 3360 to develop the theoretical basis
for construction and evaluation of actuarial models. Topics covered include survival
models, probability distributions, dependencies and limits, and aggregate loss
models, with application to insurance.

CROSS-LISTING: ACSC 3703.03
EXCLUSION: STAT 4701.03

STAT 3720.03: Life Contingencies I.

This course introduces the student to the mathematical models for valuation of life
contingencies (e.g. life insurance policies). The course covers both the statistical
aspects of modelling survival data, and the financial aspects of valuing uncertain
future cash-flows.

PREREQUISITE: STAT 3360.03, STAT 2060.03
CROSS-LISTING: ACSC 3720.03

STAT 3750.03: Credibility Theory.

Credibility theory deals with the difficulty in combining information from two
samples, one of which is small but relevant, the other is large but less relevant. In
this course, we will study different approaches to dealing with this problem.

CROSS-LISTING: ACSC 3750.03
CO-REQUEST: STAT 3760.03

STAT 4001.03: AARMS Summer School I.

A Topics class given by leading researchers in the precise field, which varies from
year to year. Consult the Department for current details.

FORMA T: Lecture

PREREQUISITE: Permission of the Honours Advisor
CROSS-LISTING: MATH 4001.03

STAT 4002.03: AARMS Summer School II.

A Topics class given by leading researchers in the precise field, which varies from
year to year. Consult the Department for current details.

FORMA T: Lecture

PREREQUISITE: Permission of the Honours Advisor
CROSS-LISTING: MATH 4002.03

STAT 4066.03: Advanced Statistical Theory I.

This course, together with STAT 4007.03 provides a solid basis in the theory of
statistical inference. After a review of some probability and distribution theory,
the Frequentist and classical theories of estimation and testing are introduced.

PREREQUISITE: STAT 3360.03 or instructor's consent
CROSS-LISTING: MATH 4066.03/5066.03, STAT 4066.03

STAT 4070.03: Multivariate Distributions.

A Topics class given by leading researchers in the precise field, which varies from
year to year. Consult the Department for current details.

FORMA T: Lecture

PREREQUISITE: STAT 4066.03 or instructor's consent
CROSS-LISTING: MATH 4070.03/5070.03, STAT 4070.03

STAT 4090.03: Probability.

The theory of probability in Euclidean space. Topics include measure and
integration, probability measures, the definitions and properties of random
variables and distribution functions, convergence concepts, Bernstein polynomials,
characteristic functions and central limit theorems, conditional probability and expectation.

FORMA T: Lecture 3 hours

PREREQUISITE: STAT 3460.03 or instructor's consent
CROSS-LISTING: MATH 4090.03/5090.03, STAT 4090.03

STAT 4100.03: Survival Analysis.

This course is an introduction to survival analysis and will cover both the
statistical theory behind the methods, and the application of various techniques.
Topics to be discussed include survival risk and hazard functions and their
relationship to lifetime distributions and densities; modes of censoring; the
Kaplan-Meier estimate of the survivor function; parametric survival time
distributions; proportional hazard models and their semi-parametric estimation;
accelerated life models, log rank tests, including the Mantel-Haenszel test; and
goodness of fit measures.

**FORMAT**

**FORMAT**
- Lecture 3 hours

**PREREQUISITE:** STAT 3340.03 and STAT 3460.03

**CROSS-LISTING:** STAT 5360.03

**STAT 4370.03: Stochastic Processes.**

Statistical aspects of several ideas in genetics are discussed. Topics of some or all the following: gene frequency estimation, Hardy-Weinberg equilibrium, linkage analysis, association studies, quantitative traits, microarrays.

**FORMAT**
- Lecture 3 hours

**PREREQUISITE:** STAT 3460 or permission of instructor

**CROSS-LISTING:** STAT 5370

**STAT 4703.03: Actuarial Models II.**

This course focuses on the development of statistical methods for the estimation and validation of actuarial models. Topics to be discussed include: methods of estimation, properties of estimators, goodness of fit, credibility theory, survival estimators, measures of risk, estimation of severity and ruin models.

**FORMAT**
- Lecture 3 hours

**PREREQUISITE:** STAT 3460 or STAT 3703.01

**STAT 4720.03: Life Contingencies II.**

The course deals with the stochastic behaviour of several variables in systems where their interdependence is the object of analysis. Greater emphasis is placed on practical application than on mathematical refinement. Topics include classification, cluster analysis, categorical data, analysis of independence, structural simplification by transformation or modeling and hypothesis construction and testing.

**FORMAT**
- Lecture 3 hours

**PREREQUISITE:** STAT 3340.03 and STAT 3460.03

**CROSS-LISTING:** STAT 5390.03

**STAT 4950.03: Honours Research Project.**

This course is required for students in the honours program. It will consist of a research project carried out under the supervision of a faculty member. The results of the research will be submitted to the statistics honours advisor as a written report. Students wishing to enroll in this course must have a suitable background in statistics, and must meet with, and obtain the approval of, the statistics honours co-ordinator before undertaking their project.

**STAT 8892.00: Co-op Work-Term II.**

**STAT 8893.00: Co-op Work-Term III.**

**STAT 8993.00: Co-op Work-Term III.**
Centres and Institutes

A number of centres and institutes for study and research in specific fields are based at the University. These are:

Atlantic Health Promotion Research Centre
Managing Director: Sally Walker, PhD
Scientific Director: Lotte Schaal, PhD
Other: Project Coordinators, Research Associates, Research Assistants, and students
Tel: (902) 494-2240
Fax: (902) 494-3594
Website: http://www.ahprc.dal.ca

The Atlantic Health Promotion Research Centre (AHPRC) is a leading Canadian health promotion research centre based at Dalhousie University. AHPRC was established in 1993 to conduct interdisciplinary, collaborative population health and prevention research that informs policies and programs to improve the health of Canadians.

The centre is conducting research on health services and health systems, healthy eating and physical activity, knowledge translation, prevention of chronic illness and disability, oral health of seniors, youth obesity, aboriginal health, and harm reduction.

The AHPRC is currently supported by the Faculty of Health Professions, Dentistry and the Office of the Vice President Academic and Provost at Dalhousie University. Support for specific research projects comes from agencies such as Canadian Institutes for Health Research, Social Sciences and Humanities Research Council of Canada, Nova Scotia Health Research Foundation, and Heart and Stroke Foundation of Canada.

Our research associates hold appointments in the Faculties of Health Professions, Architecture, Management, Medicine, Dentistry and Science.

Atlantic Institute of Criminology
Director: D.H. Clairmont, BA, MA, PhD

The Atlantic Institute of Criminology (AIC) is a research institute that is heavily policy-oriented in the field of crime and the criminal justice system. Its mandate is to foster the exchange of information among researchers and policy makers in these areas. Consultative services are provided to fellow scholars and researchers, including graduate students and visiting professors, with respect to the planning and execution of research projects and related undertakings. The AIC is an entry that itself conducts extensive research in criminology, especially with respect to policing, the administration of justice, youth justice issues, race, ethnic and equity issues in justice. It has produced a significant body of policy-oriented research on Aboriginal and African-Canadian justice issues. The AIC Dalhousie website (Dalhousie - SOSA-AIC), which is regularly updated, provides a clear indication of the research products of recent years even though the website is largely restricted to research output that does not include articles in professional journals or edited books available elsewhere.

Atlantic Research Centre (ARC)
Managing Director: Nadia Ridgway
Phone: (902) 494-7113
Website: http://arc.medicine.dal.ca/

Established in 1967, the ARC conducts basic biomedical research in the fields of lipid metabolism and cell signalling, areas of fundamental importance to a variety of disorders including cancer, neurological, heart and infectious diseases. It also provides education and experience in these fields to undergraduate and graduate students, other researchers, and the general public. The ARC houses state-of-the-art facilities for biochemical and molecular biologic research, including a regional proteomics service facility (DalGEN). http://geomics.medicine.dal.ca/

582 Centres and Institutes
Canadian Institute of Fisheries Technology (CIFT)
Director: S. E. Paulson, PhD
Telephone: (902) 494-1260
Fax: (902) 426-0219
Website: http://cift.engineering.dal.ca

CIFT was established in 1979 at the former Nova Scotia Technical College (now TUNS). The federal Department of Fisheries and Oceans provided much of its early specialized laboratory and seafloor pilot-scale processing equipment, and Industry Canada provided start-up funding and designated CIFT a centre of excellence. As a government-approved laboratory for advanced technology, it also provides R&D services on a cost-recovery basis to industry and to various governmental agencies. The Institute promotes technology transfer and the development of advanced technologies aimed at more effective commercial utilization of both marine and terrestrial resources in Canada and throughout the world.

In addition, CIFT offers unique opportunities for post-graduate training and research through the Food Science program. Major areas of emphasis are: food biochemistry and microbiology; fats, oils, nutraceuticals and other bioactives; physical properties of foods; fish food processing engineering; food safety and preservation; food rheology, food fermentation and beverage science.

Facilities
CIFT is located in the MacDonald Building of Sexton Campus at 1360 Barrington Street in downtown Halifax. The Institute’s facilities include:

- fat and oil laboratory
- food chemistry laboratory
- food development laboratory
- sensory evaluation laboratory
- food process engineering pilot plant
- low temperature storage facility
- food physical properties laboratory
- food microbiology laboratory

These areas contain specialized instrumentation and food processing equipment to enable experimental processing, laboratory analysis, and product storage evaluation. In addition, a computer-controlled cold-storage facility, the pilot plant is equipped for experimental processing including freezing, thawing, thermal processing, drying, centrifugation, and meal-base manufacture.

The pilot plant is well equipped for thermal processing with an automated retort capable of steam, steam-air, or water immersion processing research. The specially designed cold-storage facility is computer controlled and particularly useful in monitoring changes in foods as a result of food storage history. The pilot plant is also equipped with a custom-built computer-controlled heat pump device that is used in food dehulling experiments. Specialized laboratory equipment includes: automated high performance and fast protein liquid chromatography systems, gas chromatography/mass spectrometry system, preparative ultracentrifuge, multi-purpose refrigerated centrifuge, multicell centrifuge, analytical and preparative electrophoresis/electroelution systems, pulse field electrophoresis system, thermocycler, DNA gel electrophoresis, HPLC/DLLC for 2D electrophoresis, Image Master 2D elite software, capillary electrophoresis system, ultra-low temperature freezer, universal texture testing machine, various colimeters, U.V. and visible spectrophotometer, spectromameter, electron microscopic analyser, workstations for mathematical modelling and computer simulation. Linkham stirring stage/microscope, Nikon microscope (various attachments), controlled stress rheometer with high temperature/pressure attachment, controlled size chromatometer, Viscometer, and a rolling bed viscometer.

Educational Opportunities
Graduate (MSc and PhD) programs are available through the Food Science and Technology program. Also post-doctoral research opportunities are offered. Graduate level classes in food science, food processing technology, marine oils, engineering design, packaging technology, fish post-mortem biochemistry, food microbiology, food rheology and food process science. Students with degrees in food science, engineering design, packaging technology, fish post-mortem biochemistry, food microbiology, food rheology and food process science. Students with degrees in food science, engineering, chemistry, biochemistry, microbiology or biology are invited to apply.

Centre for African Studies
Phone: (902) 494-3177
Fax: (902) 494-2105
Director: Theresa Ulicki, PhD

This Centre, established in 1975, advances instruction, publication, research and development education programs in African Studies. Associated affiliate offers courses through the Departments of History, International Development Studies, Political Science, French, Sociology and Social Anthropology and Philosophy. The Centre sponsors academic and non-academic symposium and policy conferences on Africa and encourages interdisciplinary interaction at all levels on African subjects and issues. It co-operates with the International Development Studies department and the International Research and Development Office.

Centre for Comparative Genomics and Evolutionary Bioinformatics
Director: Andre J. Roger, PhD
Coordinator: Wanda Danilchuk
Phone: (902) 494-3170
Fax: (902) 484-1355
Website: http://www.cgeb.dal.ca

The Centre for Comparative Genomics and Evolutionary Bioinformatics (Cgeb) at Dalhousie University encompasses an interdisciplinary group of researchers in the Faculties of Medicine, Science and Computer Science. Although microbial genome evolution and diversity are at the heart of many of the Cgeb researchers’ activities, our work spans computational biology, computer science, statistical modeling and comparative genomics, with a strong focus on method and theory. The application of DNA sequencing technologies to characterize the genomes of a wide diversity of microbes has generated vast quantities of genome sequence data. Now the computational challenge is to develop from this enormous resource more comprehensive and theoretically robust phylogenetic, genetic and ecological models to further our understanding of the many roles microbes in the biological world.

Cgebung researchers are united by the common goal of using this vast resource of genomic information to elucidate evolutionary patterns and processes: the pathways by which microbial organisms have diversified over the last 3.5 billion years of earth’s history and through which they continue to shape the global environment. Only through the integration of experimental genomic approaches and sophisticated bioinformatic modeling will we be able to achieve this goal.

Cgebung researchers and trainees are supported by grants from the Canadian Institutes for Health Research (CIHR), Natural Sciences and Engineering Research Council (NSERC), Biomedical Research Council of the Canadian Society for Clinical Research (CSFCR), the Nova Scotia Health Research Foundation (NSHRF). The Centre itself is supported by funding from the Tula Foundation (http://www.tula.ca), the Faculties of Medicine, Science and Computer Science. Cgebung is also supported by a large grant from the Tula Foundation (http://www.tula.ca) that provides funds for training top-notch postdoctoral and graduate students in the Cgebung research specialties. We also have a regular seminar series that brings world renowned scientists to speak at Dalhousie University and interact with faculty members and students.

Centre for Environmental and Marine Geology
Director: Professor D. B. Scott

This Centre was originally founded as the Centre for Marine Geology in 1983 to promote interdisciplinary studies of various types of problems in marine Geology, capitalizing on our unique position in Canada with links to related departments such as Oceanography, Physics, Biology, the Bedford Institute of Oceanography and our hosting of the Canadian office of the Ocean Drilling Program. Since 1983 the role of the Centre has changed, reflected in the new name, which better describes the work being done now where marine geology is combined with environmental problems. We have three new faculty that expand our expertise into new chronological techniques and permit us to strengthen our capacity in the petroleum-related environmental geology. Some of the objectives of the Centre are to: 1) continue to expand our participation in a revitalized east coast offshore energy related problem, 2) continue our climate-change work with a variety of approaches both offshore and on land, 3) expand into Arctic regions both with major oceanographic and shelf-based programs, and 4) continue our capacity to help solve some of the many environmental geology problems associated with urbanization.

Centres and Institutes 583
Centre for European Studies
Director: Jerry White
Email: jerry.white@dal.ca
The Centre for European Studies was established in 1971. The Centre is concerned with teaching, research, publication, policy advice and other professional activities in the fields of European studies and its relations with the rest of the world. The Centre is an integral part of the Department of Political Science. Centre faculty offer courses through the Department in foreign and defence policy, international relations and development, and maritime affairs at both undergraduate (majors and minors) and graduate (MA and PhD) levels. The Centre also supervises masters and doctoral theses in these fields.

For further information, consult the Centre’s website: http://centreforeuropeancalsses.dal.ca

Centre for Innovation in Infrastructure
Director: John Newhook, PhD, PEng
Location: Room B233, Sexton Campus
The Centre for Innovation in Infrastructure is an industry-oriented research centre with the Faculty of Engineering and with strong affiliations with the Department of Civil and Resource Engineering. Established in 1983 as the Nova Scotia CAD/CAM Centre, the Centre has acquired and maintained significant testing equipment related to these research areas and contributes to the maintenance and operation of the research facilities within the Department of Civil and Resource Engineering.

Centre for International Trade and Transportation
Location: Suite 2000, 6100 University Avenue
PO Box 1500
Halifax, NS B3H 0R2
Director: Daniel Lynch, PhD
Email: dlynch@dal.ca
Student Exchange Coordinator: Tim Richard
Phone: (902) 494-2224
Email: tim.richard@dal.ca
Fax: (902) 494-1483
Website: http://sit.dal.ca

The Centre was established in 1975 with a mission to foster international business teaching and research and enhance Canada’s global competitiveness through innovative programs and outreach services. CITT supports a wide range of learning experiences including academic exchanges, the Student Trade Symposium, the International Case Competition. The Centre recently partnered with Michigan State University’s Canadian Studies Program to work towards increasing global trade between the US and Canada (the world’s largest trading partners).

Centre for Marine Vessel Development and Research (CMVDR)
Contact: Josh Love, Dean of Engineering
The mandate for this Centre is under review.

Centre for Water Resources Studies
Director: Graham Gagnon, PhD, PEng
Location: Office D5-14
1360 Barrington Street
Telephone: (902) 494-2468
Email: cwrs@dal.ca
Fax: (902) 494-1483
Website: http://cwrs.dal.ca

The Centre for Water Resources Studies was established in December 1981, by a resolution of the Board of Governors (TUNS). The objectives of the Centre are to carry out applied research which contributes to the effective and sustainable protection of water resources in Atlantic Canada, nationally and internationally, and to facilitate the transfer of new knowledge to potential users. Research programs directed by the Centre address the design of cost-effective on-site wastewater systems and storm water treatment, the use of new water treatment facilities for drinking water, and the management and the computer modeling of hydrodynamic and hydrochemical processes. The Centre also has a number of research advisory panels, which involve professionals from industry, government and academia in applied research related to water use and water management.

Facilities
The Centre for Water Resources Studies is located on the fifth floor of “D” Building on Sexton Campus. Laboratory and office space is available for specific graduate research topics, as well as ongoing research carried out by Centre personnel. Analytical equipment includes instrumentation for determining low levels of major ions and nutrients, as well as trace quantities of metal ions in water. The Centre has apparatus for laboratory investigation and pilot scale testing of innovative water treatment methods using Dissolved Air Flotation (DAF) and ozonation and has worked with local consultants and municipalities to develop new applications of the technologies. The Centre is a North American leader in the development of on-site sewage disposal and has had an active research program in this area since 1987. In conjunction with the Faculty of Agriculture, the Centre has a field laboratory investigating sloping sand filters and septic disposal.

Educational Opportunities
The Centre co-operates with academic units in the training of undergraduate and graduate students who have an interest in water resources. The Centre also participates in the program leading to a dual degree in water resources engineering and planning, in conjunction with the School of Planning into the Faculty of Architecture and Planning.
Dalhousie Institute for Society and Culture (DISC)
Director: Danielle Dumoulin
Research in the Faculty of Arts and Social Sciences
Email: ddumoulin@dal.ca
Website: http://arts.dal.ca/Research

Established in 2006, the Dalhousie Institute for Society and Culture serves as the virtual home for the many research activities and initiatives within the Faculty of Arts and Social Sciences. Its primary function is to support research within the Faculty through various fellowship programs, publicly and fund raising initiatives, publishing ventures, conferences and lecture series, and interdisciplinary exchanges.

The Institute encompasses two broad and overlapping research clusters: Societies in Local, National, and Global Contexts, and Cultural Representations and Representativeness. The former cluster aims to develop new knowledge about political, social, and economic transformations, about national and regional identities, and about global relations, whereas the latter seeks to investigate and preserve cultural traditions, literatures, and languages, to foster studies and theories of cultural identity, to stimulate artistic innovation, to examine the shaping influence of beliefs and religions, and to contribute to the cultural life and profile of Canada. These two clusters, with a flexibility and health unequalled in Eastern Canada, are uniquely equipped to analyze social and cultural change.

European Union Centre of Excellence
Director: Robert Zouotth
Phone: (902) 494-7558
Fax: (902) 494-3600
Email: enor@dal.ca
Website: http://www.euce.dal.ca

Established in 2006, the European Union Centre of Excellence (EUCE) seeks to promote greater awareness of the European Union (EU) in Canada. The Centre coordinates academic and public outreach activities such as exchanges of faculty and students, conferences, workshops, symposia, and other projects involving the Faculties of Arts and Social Sciences, Law, Management and Science. The Centre supports research in areas such as health care policy and EU Copyright legislation, the EU and economics crisis, public health policy in EU and Canada.

Global Health Office
Director: Shannon O’Hearn
Location: 6500 University Avenue
PO Box 1500
Halifax, NS B3H 4R2
Email: po@medicine.dal.ca
Website: http://go.medicine.dal.ca

Working through an interprofessional lens, the Global Health Office is committed to training global health leaders who strengthen health systems for vulnerable populations in Canada and abroad. The office prepares students, residents and faculty doing clinical electives, training or research with our international partners as well as leads summer programs in Tanzania, Thailand and The Gambia.

• Events on relevant and timely global health issues are organized through the office including journal clubs, speaker series, conferences.
• Opportunities to become involved in research and mentorship.
• A certificate in “Advocates in Global Health”.
• Annual awards are presented to a student, resident and faculty member who demonstrate leadership in global health.
• Partnerships with organizations strengthen the global reach including CHSS (Canadian Society for International Health), CUGER (Canadian Coalition for Global Health Research), National Network on MNSHI (Maternal, Newborn and Child Health), ACIC (Atlantic Council for International Cooperation), GHEC (Global Health Education Consortium), and International Centre (Dalhousie)

Health Law Institute
Director: Constance Macdonald, BA, MA, LLB
Location: Dalhousie University
6500 University Avenue
PO Box 1500
Halifax, NS B3H 4R2
Phone: (902) 494-6130
Fax: (902) 494-6179
Email: hli@dal.ca
Website: http://www.hli.dal.ca

An Interdisciplinary Institute of the Faculties of Law, Medicine, Health Professions, and Dentistry, the Institute is committed to the advancement of health law and policy and the improvement of health care practice and health systems through scholarly analysis, professional education, and public service. Its objectives are:
1. To foster strong and innovative health law and policy scholarship by:
   • contributing to research in health law and policy
   • providing external consultation services on matters having a significant impact on health law or policy
2. To advance health law and policy education by:
   • designing and implementing education programs for law, medicine, health professions and dentistry students
   • providing continuing education opportunities for health professionals and legal practitioners
3. To serve the public in areas of expertise by:
   • contributing to the societal understanding of health law and policy issues
   • providing expertise to organizations in the public sector
   • engaging in the policy-making process at local, regional, and national levels.

Institute for Big Data Analytics at Dalhousie University
Director: Dr. Stan Marwin
Phone: (902) 494-6130
Location: Goldberg Computer Science Building
6500 University Avenue
PO Box 1500
Halifax, NS B3H 4R2
Email: bigdata@cs.dal.ca
Website: https://bigdata.dal.ca

Big data is not a single breakthrough invention, but rather a coming together and reaping of several technologies: huge, inexpensive data harvesting tools and databases, efficient, fast data analytics and data mining algorithms, the proliferation of user-friendly data visualization methods and the availability of affordable, massive and non-proprietary computing. Using these technologies in a knowledgeable way allows us to turn the masses of data that are created daily by businesses and government into an important asset that will result in better, more informed decisions. This could lead, for example, to intelligent, personalized electric power pricing for consumers, to optimized port traffic management or to the discovery of interesting patterns of migrations in marine life.

The Institute for Big Data Analytics (Big Data @ Dal) acts as a catalyst and a container in which a number of Dalhousie researchers and internationally renowned experts in all of the above areas can work together on Big Data.

The Institute has three main goals. Firstly, we want to become an international hub of excellence in big data research - a place to which scientists will come to work on interesting problems, but also in search of interesting, real-life applications. Our second goal is to make the Institute very relevant to local industry in Nova Scotia, and in Canada. To achieve this goal, we want to focus - for example - on interesting, real-life applications.

The Institute has three main goals. Institute for Research in Materials (IRM)
Director: Richard A. Dunlap, PhD
Administrative
Offices: 6414 Colby Road
PO Box 15000
Halifax, NS B3H 4R2
Phone: (902) 494-1469
Fax: (902) 494-4016
URL: http://irm.dal.ca

Established in 2002, IRM is made up of over 100 faculty members in seven faculties (Science, Engineering, Dentistry, Medicine, Architecture and Planning, Management and Health Professions) and 17 departments. The goals of the Institute include advancing the collective interdisciplinary research efforts in materials science and engineering at Dalhousie University, facilitating interdisciplinary teaching in materials science within the existing discipline structure, and enhancing interactions between materials researchers at Dalhousie University with relevant government laboratories and industry, especially within the region. The Institute funds collaborative research within the university on interdisciplinary applications to funding agencies for major equipment and research infrastructure, and collaborates with external organizations to pursue research opportunities.

All Dalhousie University faculty members carrying out research in the area of materials are eligible to be Members of IRM. Postdoctoral fellows and graduate students associated with these research groups are invited to become Associate Members of IRM.

In addition to equipment operated by individual members of the Institute, IRM has established (2003) the Facilities for Materials Characterization, an $11 million suite of instruments managed by the Institute. The equipment includes:
- High-field solid-state NMR spectrometer (managed jointly with the Nuclear Magnetic Resonance Research Resource)
- Scanning electron microscopes
- Focused ion beam
- X-ray photoelectron spectrometer (XPS)
- Secondary ion mass spectrometer (SIMS)
- Ultra-high speed optical systems
- Physical property measurement systems (PPMS)
- Scanning thermal microscopes (SThM)
- Hot press
- Grindle Sonoic
- High-speed motion record/analyser
- FT-Raman spectrometer

These facilities are open to external users. Please contact IRM@dal.ca for details.

IRM offers an NSERC CREATE program called DREAMS (Dalhousie Research in Energy, Advanced Materials and Sustainability). Students accepted into the program carry out collaborative interdisciplinary research in world-leading laboratories with innovative new equipment and direct experience working with industrial partners. DREAMS scholarships are available to graduate students in Chemistry, Physics and Mechanical Engineering. See DREAMS website for details at DREAMS.irm.dal.ca

Law and Technology Institute
Director: Robert J. Currie, BA, MA, LLB, LLM
Administrative
Location: Schulich School of Law
6061 University Avenue
Halifax, NS B3H 4R2
Phone: (902) 494-1398
Fax: (902) 494-1316
Email: lynda.corkum@dal.ca
URL: http://irm.dal.ca

The Institute participates, with the faculties of Computer Science and Management, in technology law issues to students, faculty members, and the practicing Bar. The Institute hosts an Eminent Speakers Series, which brings leading IT lawyers and academics to Dalhousie to share their expertise. The Institute is home to the Canadian Journal of Law and Technology, co-edited by Professors Currie and Coughlan. The CJLT is the pre-eminent technology law review in Canada.

Marine & Environmental Law Institute
Location: Schulich School of Law
6061 University Avenue
Halifax, NS B3H 4R2
Phone: (902) 494-1398
Fax: (902) 494-1316
Email: MELAW@dal.ca
Website: http://www.dal.ca/law/MELAW

The Institute, which is housed in the Law School, carries out research capacity-building and consultancy activities and also directs the MELAW academic specialization. MELAW provides a specialization in marine and/or environmental law to JD students. In addition to their scholarly research and publication activities, MELAW faculty, associates and staff carry out research projects and provide advisory services to agencies of the United Nations, international non-governmental organizations, and regional organizations as well as assisting government departments, private sector institutions and non-governmental organizations in Canada and overseas.

The Marine & Environmental Law Institute is also the editorial office of the Ocean Yearbook, a major international interdisciplinary annual, devoted to the publication of articles and book reviews on the environment and oceans.

The Marine & Environmental Law Institute is housed in the Law School, which is committed to the academic development of marine and environmental law. The Institute provides a specialization in marine and environmental law to JD students. Students have the opportunity to pursue specialized interests in fields such as criminal law, environmental law and internet and digital rights, as they relate to law and technology.
### Minerals Engineering Centre

**Director:** Josh Lemon, PhD, PEng  
**Phone:** (902) 494-617  
**Location:** 1360 Barrington Street  
**Website:** http://www.mineng.dal.ca

The Minerals Engineering Centre provides opportunities for undergraduate and graduate students to learn various analytical and testing techniques applicable in their course of studies. It also offers services to faculty members to assist in their teaching and research activities.

Further information may be obtained from the Director of the Centre.

### Neuroscience Institute

**Contact:** neuroscience@dal.ca  
**Website:** http://www.neuroscience.dal.ca

The Neuroscience Institute was established in 1990 to promote and coordinate research in neuroscience, the modern interdisciplinary study of the brain and nervous system.

It serves as an umbrella organization to foster research and training in neuroscience at Dalhousie. A major objective is to increase understanding of the functions of the nervous system in health and disease. To this end, the Institute coordinates the activities of neuroscientists in the Faculty of Medicine, the Faculty of Science, the Faculty of Computer Science and the School of Biomedical Engineering. Facilitating collaborations between clinical and basic scientists in these Faculties, some focus of current research activity includes: development and plasticity of the nervous system; cognitive neuroscience; motor control; autonomic function; synaptic function; and sensory physiology. The Institute also promotes and coordinates training programs in neuroscience currently offered through its constituent departments at both the undergraduate and graduate levels.

It sponsors seminar series annually, and coordinates a variety of community outreach events.

### Norman Newman Centre for Entrepreneurship

**Director:** Ed Louch, DComm (Dalhousie), MBA (Ivey), PhD  
**Facility Coordinator:** Pauline Dan  
**Entrepreneur in Residence:** Brian Lowe  
**Local Researcher:** Dr. Mary Kofidi  
**Website:** http://entrepreneurship.dal.ca

The mission of Norman Newman Centre for Entrepreneurship (NNCE) is "To build a vibrant entrepreneurial culture among students, faculty and the community at large that embraces innovation in creating value for society led by leaders who manage with integrity, focus on sustainability and make things happen." This will be accomplished by:

- Supporting the academic programs and courses taught within the Rowe School of Business.
- Supporting the entrepreneurial community.
- Providing opportunities for Dalhousie students to work with the entrepreneurial community.
- Facilitating the incubation of student business ideas.

The NNCE is attached to the Rowe School of Business, within the Faculty of Management, Dalhousie University. NNCE promotes entrepreneurship in many forms, through innovative curricular, applied research and collaborative extension work (outreach). Our definition of entrepreneurship is broad and includes the development or growth of enterprises for profit, for social benefit and for sustainability. Our research is field-based and involves working with real ventures, on real projects, using state-of-the-art methodologies. Our extension work is multi-disciplinary and ranges from internships with entrepreneurs to collaborations with other faculties throughout the university.

All of our programs are designed to enhance the student’s entrepreneurial knowledge, skills, and network. In addition to supporting technology and technical start-ups through mentoring, coaching and training efforts, the NNCE will provide mentoring, coaching and training to entrepreneurial students, create exemplars of technology and technical entrepreneurship through research projects and further expand the relationship with the business community.

### Nuclear Magnetic Resonance Research Resource (NMR³)

**Director:** J. K. Rainey, BSc, MSc, PhD  
**Faculty Coordinator:** M. D. Larned, BSc, PhD  
**Solid-state NMR Coordinator:** U. Werner-Zwanziger, BSc, PhD

Established in 1982 with assistance from the Natural Sciences and Engineering Research Council, the Resource is located in the Department of Chemistry and is used by faculty, researchers and graduate students in all Maritime universities, the NRC, local industry and many Dalhousie Departments. It is concerned with applications of magnetic resonance spectroscopy to problems in chemistry, minerals science, biology, biochemistry and related areas. Its current instrumentation includes Bruker Avance 500 and Avance 600 NMR spectrometers for liquids and Bruker Avance DX 400 and Avance 700 NMR spectrometers for solids. NMR users also have direct access to a Bruker Avance III 700 NMR spectrometer with cryoprobe capabilities for liquids experiments. The Avance 500 and Avance 600 NMR spectrometers were installed in 2003 with funding from NSERC, the Canadian Foundation for Innovation and the Atlantic Innovation Fund. The cryoTRUEX on the Avance III 700 were purchased in 2009 by Dalhousie University through an Atlantic Canada Opportunities Agency Grant. The Resource offers facilities for hands-on use by researchers and also provides NMR spectra and expertise to scientists throughout the Atlantic Region and beyond.

For more information see: http://nmr3.dal.ca

### Trace Analysis Research Centre

**Director:** A. Donato, BSc, PhD

The Trace Analysis Research Centre (TARC) was established in 1971 with the assistance of a grant from the Natural Research Council. Its mission is to train analytical chemists and, through research, to contribute to the advancement of analytical chemistry. Members of TARC from Dalhousie and associated institutions comprise a group with expertise in a wide range of chemical analysis techniques in areas such as spectroscopy, chromatography, mass spectrometry, electrochemistry, and nuclear analytical chemistry.

---

**Lead Researcher:** Dr. Mary Kilfoil  
**Residence:** Brian Lowe  
**Entrepreneur in Coordinator:** Paulette Dun  
**Director:** Ed Leach, BComm (Dalhousie), MBA (Ivey), PhD

It sponsors seminar series annually, and coordinates a variety of community outreach programs.
1. Advising and Access Services Centre (AASC)

Our academic advising team provides advising, academic planning and personal coaching to current Dalhousie University students. The Advising and Access Services Centre is also Dalhousie’s focal point for expertise on student accessibility and accommodation. As part of our ongoing efforts to facilitate a successful transition to and throughout your university experience, we offer several points of contact for students, including: summer transitions/orientation programs, ABL@Dal workshops exclusively for students with disabilities; and one-on-one advising appointments. Our programs are delivered through the “coaching as advising” model to help students develop strategies for academic success from first-year to graduation.

We help you build on your ability to make decisions that positively impact your academic and career success. We promote the Learn Well @ Dal philosophy by providing accessible and thorough advising and coaching for students accessing Dal services.

Early consultation is encouraged to ensure appropriate planning for any of your needs that may include accommodations. AASC advisors meet with you to determine areas to facilitate your success, and if accommodations are required, we ensure those accommodations are put into place by working with your course instructors.

For further information, please visit our website www.dal.ca/learnwell, call (902) 494-3077 or email access@dal.ca.

2. Alumni Association/Alumni Relations

The Alumni Association is comprised of over 110,000 graduates of Dalhousie University. A global network of volunteers keeps alumni informed and involved with the university. By providing many programs and services, the Association fosters a strong relationship between Dalhousie and its alumni.

Dalhousie alumni play a vital role in the health and future of the university. Many alumni return to Dalhousie regularly to hire graduating students. They also serve as advocates, ambassadors and student mentors. The financial support provided by our alumni helps ensure that Dalhousie will continue to provide exceptional post-secondary education to future generations.

The Alumni Association’s Board of Directors works with the Dalhousie Alumni Relations Office, located in the Macdonald Building (902 494-8881, t-800-565-9980, alumni@dal.ca). Together, the Association and Alumni Relations strive to identify opportunities for alumni involvement, and to foster an environment that invites alumni to participate fully in Dalhousie’s well-being. Visit the website at www.dal.ca/alumni.

3. Athletics and Recreational Services

Dalhousie offers a wide array of programs, facilities and services to visit the diverse sport, recreation and wellness needs of our students. Located on the Studley Campus, Dalplex is the university’s primary fitness centre. Dalplex membership is included in full-time student fees, so students can simply bring their DalCard and swipe it in the turnstile for access to: the Cardio Plus Centre; our eight-lane, 50m indoor pool; a 5.6-mile indoor track; drop-in times for recreational basketball and volleyball; racquet courts; an outdoor tennis and beach volleyball court; and the Fun Zone play area for children. The F. H. Seaton Memorial Gymnasium includes a fitness centre, a gym with hardwood courts, group fitness classes, two squash courts, and dance room with lockers for easy access for students on the Sexton Campus. The Langille Athletic Centre is the sport and recreation facility for students on the Agricultural Campus.

Athletics and Recreational Services also offers many climbing, fitness, and outdoor recreation programs, classes, and trips each term, along with a broad range of intramural leagues and tournaments. Intramural sports are fun, free and an excellent way to meet other students. Sports offered include soccer, flag football and hockey in the fall; curling, basketball and inneb tube water polo in the winter term—and that’s just the tip of the iceberg! Dal offers you the opportunity to take part in more than 20 different recreational and competitive sports clubs, which are organized and run by students. The Rams varsity program represents the Agricultural Campus, offering competitive teams in badminton, basketball, women’s rugby, volleyball, cross country, hockey, soccer, swimming, track and field, and volleyball; that compete regionally in the Atlantic University Sport (AUS) conference and nationally in Canadian Interuniversity Sport (CIS). For more information about sport, fitness and recreational opportunities at Dalhousie visit www.athletics.dal.ca.

4. Black Student Advising Centre (BSAC)

The Centre’s mission is to foster a sense of community among ALL students, especially those who are of black/African descent. The BSAC hosts programs such as peer and professional mentorship, in-house tutoring and writing support as well as events to promote intercultural awareness. Providing confidential counseling services, personal and community support, advocacy, and relevant resource materials are a few of the roles of the BSAC advisor. The advisor also provides information about scholarships, bursaries and employment, and makes referrals to additional resources for student success. The BSAC includes a study space, a small computer lab and a lounge. For more information, drop by the Centre in room 418 of the Student Union Building, contact us at (902) 494-6446 or bsac@dal.ca or visit us online at www.dal.ca/bsac.

5. Career and Leadership Development Centre (CLDC)

The Career and Leadership Development Centre (CLDC) assists you in:

- exploring a full range of career and work possibilities that match your career goals;
- preparing job-search documents to present yourself effectively as a candidate for employment;
- obtaining information on employment opportunities and prospective employers;
- connecting with career opportunities through campus interviews, job and volunteer listings, referrals, direct application, networking, job-search events, publications, and/or information technology;
- developing and maintaining relationships with organizations that provide career development and professional opportunities for you.

The Co-Curricular Record (CCR) is a document that officially recognizes your accomplishments and experiential learning outside the classroom. The CCR program is available to all Dalhousie students and acknowledges your accomplishments in leadership, campus and community engagement, course-related service learning or experiential learning, awards and recognition, and training and development. Visit www.dal.ca/ccc for more information.

The CLDC also runs the free DALConnects leadership certificate program for students interested in building stronger connections with their community and learn about leadership through volunteering. Participants are paired with community organizations for volunteer opportunities and attend various workshops on leadership. Visit www.dal.ca/ccc for more information.

Drop by the CLDC on the fourth floor of the Student Union Building in Halifax or in the Dairy Building on the Agricultural Campus, or visit us online at www.dal.ca/ccc for more information on programs and services.

6. Centre for Learning and Teaching

The Centre for Learning and Teaching (CLT) works in partnership with the Provost’s office, academic units, faculty members, and graduate students to enhance the practice and scholarship of learning and teaching at Dalhousie University. CLT takes an evidence-based approach to advocating for effective teaching practices and curriculum planning, services to support the use of technology in education, and institutional policies and infrastructure to enhance the Dalhousie learning environment. For further information, teaching resources, or a confidential consultation, you are invited to contact the Centre for Learning and Teaching, located at Suite 500, Killam Library, 6225 University Avenue, (902) 494-1622, CLT@dal.ca, or you can visit the CLT website at: www.learningandteaching.dal.ca

Programmes: Workshop series, presentations, discussion groups, and demonstrations are scheduled to address the full spectrum of educational issues.
and is available for individuals and on a group basis. Counselling is provided by professionally trained counsellors and psychologists who assists you in your educational and career decision-making. Confidentiality and collaboration are important features we offer, in which you work with a career counsellor who assists you in your educational and career decision-making.

Counselling Centre can pre-screen for learning disabilities, attention-deficit hyperactivity disorder (ADHD) and/or Asperger’s disorder, and can suggest strategies, e-learning and the effective integration of classroom technology.

Confidential Consultations: Educational developers at CLT provide confidential consultation services to teaching assistants, faculty, and administrators on a wide range of learning and teaching issues.

Annual Events: On an annual basis, CLT coordinates New Academic Staff Orientation, TA Day, Teaching Dossier Workshops, and the Dalhousie Conference on University Teaching and Learning that brings together participants from across the University and the country to explore issues related to specific themes.

Classroom Planning: CLT offers expertise and support to the university in the areas of classroom design, media production, presentation technology, and technical services.

- Video and Audio Production Services offers a full range of creative and production services for educational or other academic purposes.
- Technical Services provides expert advice on the design and installation of classroom technology systems, system programming, video conferencing and system repairs.

Teaching Awards: CLT administers several university-wide teaching awards, including the Dalhousie Educational Leadership Award, the Alumni Award of Excellence for Teaching, Sessional and Part-Time Instructor Award for Excellence in Teaching, and the President’s Graduate Teaching Assistant Award.

Certificate in University Teaching and Learning: The Certificate program is offered to graduate students by the CLT in partnership with the Faculty of Graduate Studies. The purpose of the program is to assist academic departments in preparing students for their teaching responsibilities and to enhance their professional development opportunities for both academic and non-academic careers.

Student Ratings of Instruction (SRI): Higher education institutions in Canada and abroad encourage faculty to use student evaluations to rate their teaching for effectiveness. The CLT is responsible for the administration of the university-wide Student Ratings of Instruction. The ratings are administered online towards the end of each term. Quantitative and qualitative data are collected and the opportunity for departments and individual instructors to add questions to the form is available. Students may access the results of the universal questions, Part A of the form, when instructors consent to release the results of their own courses.

Guest: CLT offers a number of Teaching and Learning Grants each year for instructors to develop and evaluate new teaching methods, curriculum innovation, and explore technology opportunities. The Centre also organizes the Change One Thing Challenge award, inviting instructors to submit their student engagement ideas that they have implemented into their teaching. The CLT Travel grants provide financial assistance to faculty members to travel to a teaching and learning conference.

Publications: The CLT newsletter, Focus on University Teaching and Learning, is published three times a year and is available online on the CLT website (www.learningandteaching.dal.ca). CLT’s leading library provides resources on topics related to teaching. CLT’s WeBSITE is a guide to links to electronic resources can be found at http://dept.dal.ca/clt/resources/.

7. Counselling Services

As a student you will find that most of the time you can deal with the everyday issues that pop up while attending university. But life sometimes challenge you in unexplored ways. And when it does, the Dalhousie Counselling Services Centre can help. We can help you resolve problems and learn new skills in a confidential, supportive environment. Also, if you are struggling with your classes or assignments and suspect you may have a learning disability, staff in the Counselling Centre can pre-screen for learning disabilities, attention-deficit hyperactivity disorder (ADHD) and/or Asperger’s disorder, and can suggest various learning strategies that you may find helpful. Career Counselling is a confidential and collaborative process we offer, in which you work with a career counsellor who assists you in your educational and career decision-making.

Counselling is provided by professionally trained counsellors and psychologists and is available for individuals and on a group basis.

For information about the making an appointment, hours of operation or any of the other services, programs and events provided by the Dalhousie Counselling Centre, please visit us online at www.dal.ca/counselling.

If you have feelings of depression, anxiety or stress, but you’re not in Halifax or are uncomfortable about sitting down one-on-one with a counsellor, you can register for SHEFT, an online self-help program at www.dal.ca/shelf. It includes modules that you work through at your own pace, along with phone or email contact with a program coach.

8. Dal Allies/LGBTQ Support

At Dalhousie we encourage and support a respectful and inclusive campus community. Allies work with students, staff and faculty to offer programs, services, training, support, referrals and resources to members of the Dalhousie Rainbow community. For confidential discussions find four to contact Dalhousie’s Peer Ally (www.dal.ca/peerally). We can help if you:

• question (or have questions about) sexuality, gender identity and sexual information
• need support in coming out
• need help dealing with issues you are experiencing on campus
• want to be yourself and not have to hide your identity when seeking services or support
• want to discuss issues without fear of judgment

Contact us dalally@dal.ca or visit us online at www.dal.ca/dalally for more information.

9. DalCard

The DalCard (also referred to as the Dalhousie University ID Card) is a convenient multi-purpose card, which gives the cardholder access to various facilities and services on and off campus. The DalCard is an identification card and also serves as a debit card for retail and vending purchases on and off campus; for printing at Academic Computer Labs; printing and photocopying at the Libraries; Dalplex membership and access card; and a residence meal plan and access card - all in one! The DalCard must be presented to write an officially scheduled examination or to use the library facilities. In addition, some services such as the issuance of library or scholarship cheques, require the presentation of a valid DalCard.

The DalCard Office is located at 1400 Seymour Street. Students on the Sexton campus may obtain the DalCard at the Student Service Centre, B Building, 1360 Barrington Street (accessible location). See www.dal.ca/dalcard for more information.

On the Agricultural Campus, students can obtain their DalCards at the Enrolment Services Centre, located in the Cox Institute, Room 100.

10. Dalhousie Arts Centre

Designed as a multipurpose facility, the Dalhousie Arts Centre is home to the Rebecca Cohn Auditorium, Dalhousie Art Gallery, and the Fountain School of Performing Arts. The Arts Centre is an integral part of the cultural experience on our community and studio as the arts complex of its kind in Nova Scotia. Of the numerous performing arts spaces in the Dalhousie Arts Centre, the Rebecca Cohn Auditorium, is the most familiar and prestigious. The 1,040 seat concert hall is the home of Symphony Nova Scotia, as well as the venue of choice for a wide variety of performers ranging from Ballet Jorgen, Just For Laughs, Indigo Girls, Serena Ryder, and the Trews to name a few. Other performing and visual arts spaces in the Arts Centre include: The Sir James Dunn Theatre (240 seats), the Rebecca Cohn Studio, Murray Studio, Studio II, The MacAloney Room, and the Art Gallery.

The Dalhousie Art Gallery offers the public access to national and international touring exhibitions and initiates many ambitious and exciting exhibition programs. The Fountain School of Performing Arts maintains a full production schedule including student theatre productions, faculty recital series and weekly student noon-hour recitals. Further information on the Fountain School of Performing Arts can be found at http://dal.ca/performings.
11. Dalhousie Multifacility Centre

The Dalhousie Multifacility Centre aims to explore the fundamental issues and concerns of the world from a religious perspective in a setting that encourages open and free thought and the mingling of religions, cultures, and ideas. It provides a non-threatening space where students, staff, and faculty can address the basic questions of meaning and purpose in their lives — no matter what their faith, philosophy, or doubt may be.

For more information about the services and supports we offer, or to speak with a chaplain, drop by the Centre at 1321 Edward Street or visit us online at www.idl.ca.

12. Dalhousie Student Union

Every Dalhousie student is automatically a member of the Dalhousie Student Union. The Student Union is recognized by an agreement with the University Administration and by an Act of the Nova Scotia legislature as the single voice of Dalhousie students. All student activities on campus are organized through the Student Union, and the Student Union is the focus of all student representation. The business of the Student Union is conducted by a Council made up of 40 members. Every student is represented by one or more representatives of their faculty, elected within their faculty in the spring. As well, a number of other constituency groups are represented on the Council because they are uniquely affected by many campus issues. Also on the Council are the student representatives elected to the Senate and Board of Governors.

One of the most important resources of the Student Union is the Student Union Building (O.S.U.) located at 63-36 University Avenue between Seymour and Loewen Streets. The SUB, which is owned by the University and administered, managed and controlled by the Student Union and is paid for through Student Union fees, was opened in 1968 as a centre for student activity on campus. The Student Union Building provides a wide range of services for students including the Student Advocacy Service, Travel Cuts, The Goodwood, Campus Upp, food services, and much more. Every student has the opportunity to take advantage of the Union’s financial, physical and organizational resources. Students have an opportunity to become involved in committees dealing with various student issues. The DSU also offers over 155 clubs, societies and organizations for students to participate in. All students are invited to satisfy their curiosity by visiting the Student Union Council offices. The Student Council office is located on the second floor of the SUB in room 222 and is open from 8:30 am to 4:30 pm Monday through Friday, telephone number (902) 494-1106 or email dsuinfo@dal.ca. Check out the website at www.dsu.ca or my.dsu.ca.

13. Dalhousie Student Union Health and Dental Plan

The DSU Health and Dental Plan is provided to all full-time students that begin their studies in the fall term. The fee for the DSU Health and Dental Plan and DSU International Health Plan is charged to each student’s account and is compulsory unless the student has comparable private health insurance or MSI. If students have comparable coverage or MSI, they may be eligible to opt out (cancel) of the DSU International Health Plan during the appropriate opt out period. Please contact the DSU Health Plan Office for the opt out period dates.

Students are also eligible to add immediate family members to the plan when they arrive in Nova Scotia by completing an application and paying an additional fee. The DSU Health and Dental Plan Office is located in the basement of the Student Union Building at 63-36 University Avenue. The Office is open Monday-Friday 9:30 am-4:30 pm. Should you need to contact the office please phone (902) 494-2850 or email dsuhealth@dal.ca. More information regarding coverage, opt out/in procedures and deadlines is available at www.studentvip.ca/dsu.

15. Housing/Residence Services

The University is pleased to guarantee residence in University-owned properties for all new Dalhousie undergraduate students who complete the residence application process by June 30th. It’s important that students planning to attend Dalhousie think well in advance about their accommodation needs.

Students should be aware of several important points of reference in regard to residence accommodation. Upon admission to a program of study, all students will receive university residence information. They will also be asked to pay an admission deposit. It’s important to apply to residence (online) and to pay the admission deposit promptly as the dates these are received will determine when the Residence Application is considered. Residence applications will not be considered from individuals who have not gained admission to a program of study, or paid their admission deposit and residence application fee.

Students with disabilities are encouraged to contact the Residence Office at (902) 494-1634, or email: residence@dal.ca for information and assistance. Students with disabilities are also encouraged to contact Advising and Access Services prior to moving into residence.

The traditional style residences at Dalhousie are chiefly for undergraduate students. All students living in traditional style residences are required to purchase one of the meal plan options available.

The information below gives a description of 1. traditional on-campus residences, 2. non-traditional on-campus residences, which includes apartment style housing owned by the university, 3. the services offered by the Off-Campus Housing office, and 4. general information. For information on residence fees, see the Fees section of the Calendar.

iii. Eliza Ritchie Hall
Opened in 1987, Eliza Ritchie Hall is a co-ed residence. It provides traditional residence accommodation for 92 students in predominantly single rooms. This three-storey building is located close to the Dalplex and to Shirreff Hall, where students normally have their meals. Facilities include study rooms, a multipurpose room, reception area, laundry facilities, leisure lounges with kitchenettes and, within each room, ResNet (high-speed Internet/wireless), *local telephone service and *cable TV service are also provided. * These services are subject to change.

iv. Residence Houses
Dalhousie also has two residence houses, which are co-ed. Formerly simple family homes, each house has kitchen, living room and washrooms facilities, which are shared among the residents in the house. The character of these homes has been maintained as much as possible. These houses have only single rooms, each with a bed, wardrobe, study desk, lamp and chair. Linen, cooking stovetops and small appliances are not provided. The Residence Houses are now part of the Mini-Residence community. All houses require meal plans. ResNet (high-speed Internet), *local telephone service and *cable TV service are provided in each room.
* These services are subject to change.

v. Ridley Hall
Ridley Hall is located on LeMarchant Street, behind the Student Union Building, and offers 490 single rooms, primarily to undergraduate students. Services include a dining room, laundry rooms, television lounges and a 24-hour front desk. Each room comes equipped with ResNet (high-speed Internet/wireless), *local telephone service and *cable TV service.
* These services are subject to change.

vi. Lynall House, DeMille House, Colpitt House
These properties, which were former faculty offices, have been converted into three mini-residences with a shared courtyard. There are a total of 49 single rooms in a small living arrangement. Like Residence Houses, these houses have all single rooms. Each room comes with a bed, wardrobe, study desk, lamp and chair. Each house has a kitchenette, living room and washroom facilities, which are shared among the residents in the house. All houses require meal plans. Each room comes with ResNet (high-speed Internet/wireless), *local telephone service and *cable TV service.
* These services are subject to change.

vii. LeMarchant Suite-Style Residence
The new LeMarchant Suite-style residence will open for the 2014/2015 academic year. While the bottom two floors of this building will be occupied by student services, the top five floors will serve as residence for 320 students.
LeMarchant Suite-style residence will feature a mix of two, three and four bedroom units. A number of single rooms sharing private bathrooms will be available as well as accessible rooms. Each floor will have a full community kitchen, a lounge and a laundry room.

LeMarchant Suite-style residence will have wireless Internet access throughout the building, as well as storage space for bicycles and hockey gear in the basement. The residence space will have its own secure lobby, separate from the student services offices. Residents will be able to collect their mail before getting onto one of two elevators dedicated specifically to the residence floors.
* These services are subject to change.

B. Sexton Campus

i. Gerard Hall
Gerard Hall is a 12-story traditional style co-ed residence that houses 241 students in single, super single, and double rooms. It is located in the heart of downtown Halifax. Collins on the corner of Morris and Quinan Streets. Gerard Hall offers laundry facilities, a big screen TV, DVD player and satellite access in the main lounge. Within residence rooms, ResNet (high-speed Internet/wireless), *local telephone service and *cable TV service are provided. Gerard Hall residents commonly use the O’Brian Hall dining hall, this sexes away, or may use the dining halls in Howe, Ridley or Shirreff Halls.
* These services are subject to change.

ii. O’Brien Hall
O’Brien Hall is a co-ed residence located in the heart of downtown Halifax. There are approximately 315 Dalhousie students residing in a combination of single and double rooms in O’Brien. Facilities include a dining hall and laundry facilities. Within-residence rooms, ResNet (high-speed Internet/wireless), *local telephone service and *cable TV service are provided.
* These services are subject to change.

C. Agricultural Campus - Truro
Trueman, Fraser and Chapman Houses all offer co-ed living with the option of same sex and quiet sections. These three houses are conveniently located around Homeschool Crescent, within a five minute walk of classes, labs, meal hall, the library, the farm and our athletic centre. Residence is a great place to meet new friends while developing a good study routine. Meal plans are mandatory. Each room is equipped with ResNet (high-speed Internet/wireless), *local phone and *cable TV service.
* These services are subject to change.

i. Fraser House
Fraser House accommodates 116 students in single, super-single, and double rooms. Services include comfortable lobby area, TV/games lounge, quiet/study lounge, laundry room and kitchenette. Fraser House has a small all-male section.

ii. Chapman House
Chapman House accommodates 125 students in single, super-single, and double rooms. Services include comfortable lobby area, TV/games lounge, quiet/study lounge, laundry room and kitchenette.

i. Trueman House
Trueman House accommodates 73 students in single, super-single, and double rooms. It is the smallest house in the complex and tends to offer quieter atmosphere. Services include comfortable lobby area, TV/games lounge, two small quiet/study lounges and a laundry room.

2. Non-Traditional On-Campus Housing

A. Studley (Main) Campus

i. Glengarry Apartments
Located on the Studley Campus on Edward Street, Glengarry Apartments is a four-storey brick building offering co-ed accommodation for 40 students.

Glengarry has 12 furnished apartments. Each apartment includes a kitchen, living room and bathroom. There are also four furnished bachelor apartments, which are always in high demand. Laundry facilities are located in the basement, but there is also a limited amount of storage space. ResNet (high-speed Internet/wireless), *local telephone and *cable TV service are provided in all apartments.
* These services are subject to change.

Meal Plans are mandatory, but may be purchased for use at any dining hall on campus.

B. Sexton Campus

i. Graduate House
This residence is home to 13 returning students, normally in single rooms. It is located next door to O’Brien Hall and is a short walk from Gerard Hall on Morris Street. ResNet (high-speed Internet/wireless), *local telephone service and *cable TV service are provided in each room.
* These services are subject to change.

Meal plans are not mandatory but may be purchased for use at any dining hall on campus including O’Brien Hall, which is next door.

C. Agricultural Campus - Truro

i. Trueman House/Graduate Unit
Located on the grounds, the Residence Houses in Trueman House are conveniently located around Homeschool Crescent, within a five minute walk of classes, labs, meal hall, the library, the farm and our athletic centre. Residence is a great place to meet new friends while developing a good study routine. Meal plans are mandatory. Each room is equipped with ResNet (high-speed Internet/wireless), *local phone and *cable TV service.
* These services are subject to change.

Resources and Services 591
592 Resources and Services

kitchen, tv lounge and laundry room (shared with all students living in Trueman House). Each room is equipped with ResNet (high speed internet/voice), local phone and cable tv service. A meal plan is not mandatory

3. Living Off-Campus

Dalhousie’s Off-Campus Housing has a website: http://www.dal.ca/oh. The site features a wide variety of housing resources available for students on both the Halifax and Truro campuses.

There is an Off-Campus Housing office for the Halifax campus located in Ridley Hall and offers help to students in finding off-campus accommodations.

The Off-Campus Housing Office provides centralized information on available housing. The office is responsible for all centrally managed computing, networking and staff through an overall focus on service, advising and consulting. ITS

16. Information Technology Services (ITS)

Information Technology Services (ITS) empowers the success of students, faculty and staff through an overall focus on service, advising and consulting. ITS supports university instructional, research and administrative requirements. The department is responsible for all centrally managed computing, networking and telecommunications facilities including university email, MyDal, the central information system (Runner), online learning systems, wired and wireless network connections and student computer labs.

Need help with a technical problem? Visit one of three Help Docks located on the Halifax campus, or our Help Desk at the Dalhousie Agricultural Campus in Truro.

Personal computers and related supplies can be purchased by students and Dalhousie employees through PCPL, the campus computer store (www.pcpcl.dal.ca).

With a range of new and emerging technologies, ITS staff will help you explore options to make the most of your experience at Dalhousie. See www.its.dal.ca for more information.

17. International Centre

The International Centre (IC) is committed to welcoming, supporting and serving the needs of new and continuing international degree-seeking and exchange students at Dalhousie. Advisors are available to meet with you on a variety of matters including finances, immigration, exchange opportunities, health insurance and personal issues. Referrals are made to other resources and services on campus as necessary. The IC organizes orientation activities that assist international and exchange students in adjusting to a new culture and in achieving their educational and personal goals. A variety of social, cultural and information programs are held throughout the year. During the fall and winter terms, an International student advisor is also available to meet, by appointment, at the Student Service Centre (Section Campus) at 1360 Barrington Street. Agricultural students may contact the International Student Coordinator on the Truro Campus at (902) 893-6905.

Student exchange and study-abroad services are facilitated by the Study Abroad and Exchange advisors at the IC. This branch of the office promotes student mobility by assisting departments and faculties with: the establishment of student exchange agreements; managing university-wide exchange programs; advising students on international study, work and volunteer opportunities; providing pre-departure and re-entry services; administering the Study Work International Fund (SWIF) and the George Bills Study in England Bursary; and maintaining the International Opportunities Resource Library.

Contact us at International.Centre@dal.ca or (902) 494-1566, or visit us online at www.dal.ca/international.

18. Libraries

The Dalhousie University Libraries accommodate the needs of the undergraduate teaching programs, graduate and faculty research projects, and professional schools. The Dalhousie Libraries are: the Killam Memorial Library – Humanities, Social Sciences, Management, Computer Science, and Science; the Sir James Dunn Law Library, the Kettlec Health Sciences Library; the MacEachr Agricultural Library, the Sexton Design and Technology Library – Engineering, and Architecture and Planning, as well as the University Archives and Geographical Information Sciences Centre (both located in the Killam Memorial Library).

Staff in all five libraries provide reference and research services. Access to materials outside of the Dalhousie Libraries is available through the Document Delivery Service. The libraries manage DalSpace, an institutional repository where many of Dalhousie’s researchers’ publications can be found. The libraries also use Open Journal Systems (OJS) software and provide digital publishing services to the university community.

All of the libraries have public access computers and Wi-Fi. Most of the libraries have bookable study rooms for groups as well as individual carrels for private study.

The website, libraries.dal.ca, provides access to collections, database, subject guides and other services. The Dalhousie Libraries also has a Copyright Office that provides guidance to students, faculty, and staff on copyright issues. The Killam and Sexton Libraries have Help Docks that offer general computer and software support, and 3D printing.

The Dalhousie Libraries are a member of Novanet, a network of all Nova Scotia university and college libraries, sharing a single automated online catalogue of the holdings of the member libraries. Users borrow from Novanet libraries upon presentation of their university ID card.

19. Mature Student Services

Applicants who are Canadian citizens or permanent residents and 21 years of age or older, by the first day of classes, and are not eligible for admission on the basis of regular admission requirements, may apply for admission as a mature applicant. In order to be eligible, the applicant must either have no university-level study, or...
have attempted less than one year of transferable coursework. The student cannot have been in full-time university-level study for a minimum period of two years.

Applicants must provide a completed application for admission, high school or post-secondary transcripts, any other relevant documents (e.g. SAT scores, if available), and a letter outlining life and work experiences since last attending full-time study. Applicants will be expected to clearly outline their education goals and motivation to succeed at university study. All factors will be considered in the admission decision.

Admission under this policy is restricted to first-year undergraduate programs. Applicants must have completed grade 12 English (or equivalent) with a minimum grade of 65. Admission to some programs will require completion of other required subjects.

A student admitted on this basis may be restricted in the number of classes he/she can register in during the first year. Otherwise, these students have the same rights, privileges and responsibilities as other students within their program.

Services include pre-admission counselling and university preparation courses such as Writing Skills for Academic Study, Chemistry, Academic Math and Pre-Calculus. For more information call (902) 494-2373 or visit http://collegeoffeetraitingsal.ca.

### 20. Native Post-Secondary Education Counselling Unit

The Native Post-Secondary Education Counselling Unit is open to students of First Nations descent. We can help you form support networks in your studies, and we also host social activities, cultural events and information sessions. Visit our Halifax office (6286 South Street, 2nd floor) to enjoy some coffee or tea, take advantage of advising with the Native Post-Secondary Liaison, and meet other Native students, or contact us by phone at (902) 494-8863. In Truro, Agriculture students can contact the Special Cohort Coordinator at havery@dal.ca.

### 21. Office of Human Rights, Equity & Harassment Prevention

The overall mandate of the Office of Human Rights, Equity & Harassment Prevention is to foster and support an inclusive working and learning environment where all members of the University community share responsibility for establishing and maintaining a climate of respect.

The Office is responsible for administering a number of University policies including: the Accommodation Policy; the Employment Equity Through Affirmative Action Policy; complaints based on the Statement on Prohibited Discrimination; the Personal Harassment Policy; and the Sexual Harassment Policy. The Human Rights & Equity Advisor and the Advisor, Harassment Prevention/Conflict Management also liaise with the Office of the Vice-President, Student Services, regarding the Code of Student Conduct.

Other initiatives in the Office of Human Rights, Equity & Harassment Prevention include education and training on topics such as diversity, accommodation, harassment awareness and prevention, conflict resolution and more. Workshops are offered regularly for students, faculty and staff.

The website for the Office of Human Rights, Equity & Harassment Prevention offers downloadable versions of each of the policies, information on the education and training opportunities offered, and additional resources including an annual Mosaic Calendar featuring a variety of religious and cultural holidays.

Contact: Lisa DeLong, Advisor, Human Rights & Equity (902) 494-2704
Guy Walton, Advisor, Harassment Prevention/Conflict Management (902) 494-3175

Phone: (902) 494-6472 (office line)
Fax: (902) 494-1179
Email: hrpe@dal.ca
Website: www.hrepe.dal.ca

### 22. Registrar’s Office

The Registrar’s Office is responsible for high school liaison, admissions, awards and financial aid, registration, maintenance of student records, scheduling and coordinating formal examinations, and co-ordination. Of greater significance to students, however, is the role played by members of the staff who provide information, advice, and assistance. They offer advice on admissions, academic regulations and appeals, financial aid and budgeting and the selection of programs. In addition, they are prepared to help students who are not quite sure what sort of assistance they are looking for, referring them as appropriate to departments for advice about specific major and honours programs or to the office of Student Services or to specific service areas such as the Counselling Services Centre.

Students can access the services of the Registrar’s Office at three locations. The main office is located in Room 335 of the Henry Hicks Academic Administration Building on the Stavely Campus. Students attending classes on the East or Agriculture Campus can also access Registrar’s Office services in Building B (Student Service Centre), Sexton Campus or Cox Institute (Enrolment Services Centre), Agricultural Campus.

Enquiries may be directed to:

The Registrar, Dalhousie University
PO Box (1500)
Halifax, NS Canada B3H 3B2
Telephone: (902) 494-2450
Fax: (902) 494-1630
Email: admissions@dal.ca

### 23. South House

A DSU service and Halifax’s only full-time women’s centre. A volunteer-driven, student-funded, gender-inclusive safe space for all members of the Dalhousie community. South House is a trans- and queer-positive, smoke-free space that offers a resource centre, library, and free meeting space for woman- and anti-oppression organizing and gathering. Visit us online at www.dalwomenscentre.ca or drop by the Centre on the first floor of 6268 South Street.

### 24. Student Advocacy Service

The Dalhousie Student Advocacy Service helps ensure that students receive fair and reasonable decisions on issues dealing with academic appeal and discipline matters. Our volunteer advocates advise students about their case, help them draft and submit any written submissions, prepare them for hearings and formal appeals, and provide support through the process and articulate matters of importance during the hearing. This year-round service is confidential and operates entirely by students. Contact us at the Student Union Building (Room 310), by phone at (902) 494-2305 or visit us online at www.dusu.ca.

### 25. Student Clubs and Organizations

Extracurricular activities at Dalhousie are as varied as the students who take part in them. Organizations range from small informal groups to large well-organized ones, from university-wide and interest based. Some are decades old with long traditions, others are new and disappear as students interests change. A list of clubs, societies and organizations is available every fall to new students who are encouraged to select and participate, this list can be found at http://students.dal.ca/clubs. If there is not a society that meets your interests, the Dalhousie Student Union encourages and will help you to make your own. For more information on DSU societies please contact the society coordinator at society.coordinator@dal.ca or by telephone at (902) 494-1106 or visit us online at www.dusu.ca.

### 26. Student Dispute Resolution

Dalhousie’s Office of Student Dispute Resolution works with students, community and campus partners to help resolve disputes in a restorative and respectful manner. Referrals come from Campus Security, Code of Conduct Complaints, Halifax Regional Police and the Crown Prosecution Office (as part of the Dalhousie Restorative Justice Pilot Project) and from Residence Life Managers.

Following the principles of respect, responsibility and community, we work with groups to help restore relationships and find satisfactory resolutions.

Visit us online to find out more about the resources available through the Student Dispute Resolution office at www.daluhrj.ca.

### 27. Student Health Promotion

Located in the Live Well @ Dal office on the 4th floor of the Student Union Building, Student Health Promotion staff and volunteers can give you unbiased advice and information to help you live a healthier lifestyle. Find out more about quitting smoking, rethinking your alcohol and substance use, managing your stress, increasing your personal fitness, coping with eating disorders and many...
28. Student Services
The Vice-President, Student Services (VPSS), is Dalhousie University’s chief officer of student affairs. Working with a dedicated team of specialists across campus, the office of the VPSS coordinates programs and delivers services in support of students’ academic, personal and professional development and community engagement.

Our efforts to enrich the Dalhousie student experience are focused in four key areas: Learning Connections, Community Connections, Wellness Connections, and Leadership and Career Connections. Within each area, professionally trained staff, counsellors and advisors are available to assist you at every step of your journey here at Dal, providing information, resources, programs and services that are tailored to your individual needs and consistent with your educational and life goals.

29. Studying for Success (SFS)
Our primary goal is to assist you in becoming a more efficient and effective learner. Studying for Success offers workshops to small groups of students to develop or enhance personal learning strategies and, when applicable, workbooks are customized to focus on particular disciplines or fields of study ensuring that the workshop content is relevant to your needs. Topics regularly covered include time management, getting the most from lectures, critical reading, problem-solving, preparing for and writing exams. Study Skills coaches offer personal coaching either by appointment or on a drop-in basis during regularly scheduled hours, and will refer students to other academic resources when appropriate. For further information, drop by our office at the Killam Library, call (902) 494-3077 to book an appointment or (902) 494-2468 to speak with the SFS coordinator, or visit us online at www.sfs.dal.ca.

30. University Bookstore
The University Bookstore, owned and operated by Dalhousie, is a service and resource centre for the university community and the general public. The Bookstore has required and recommended texts, reference books and supplies, as well as workbooks, self-help manuals and other reference material. As well, you can find titles by Dalhousie authors. The Bookstore carries all necessary and supplementary stationery and supplies. Also available are gift items, maps, clothing and schoolwear, cards, jewelry, clothing and gifts, including the Dalhousie-related merchandise. The Bookstore has a Special Order department located within the main Bookstore where you can place orders for customized clothing and customized general merchandise. We can also order and ship almost any book worldwide and work with faculties and departments to meet their specific needs.

The Bookstore Website has online ordering capabilities for both textbooks and general merchandise.

The main Bookstore is situated on the lower level of the Student Union Building on University Avenue, and is open year round, Monday to Saturday (hours vary throughout the year).

The Health Sciences Bookstore has the largest and most complete medical book section in Atlantic Canada, with over 2,000 titles in stock. Thousands of other titles are specially ordered annually, and the department ships out books to consumers and hospitals throughout the world. The Health Sciences Bookstore is located in the Dentistry building, 5011 University Avenue, and is open year round, Monday to Saturday. Hours vary throughout the year.

The Sexton Campus Bookstore is located in the Student Service Centre at 1360 Barrington Street (Building 8) and is open from 9 am – 4 pm Monday to Friday. It supplies texts and reference books required for Architecture and Engineering students as well as custom clothing, stationery, and other supplies.

The Dalhousie Agricultural Campus Bookstore is located in the Cox Institute at 50 Pictou Road, Room 142, Truro. The bookstore is open year round Monday to Friday. Hours vary throughout the year and is closed for a couple times during the summer months for about a week.

31. University Health Services
The University operates a medical clinic in Howe Hall staffed by family doctors and nurses. Further specialists’ services are available and will be arranged through Health Services when required. Student information collected by Health Services is completely confidential and may not be released without signed permission of the student.

Appointments are made during the clinic’s open hours, from 8:00 am to 10 pm, Monday to Friday, and 11 am to 5 pm, Saturday and Sunday, by calling (902) 494-2177. In the event of an urgent medical problem, students may seek medical advice during clinic hours. After hours, students should seek assistance by calling 911 to speak to a registered nurse, or visit the local emergency room. The QEII emergency rooms on Summer Street is the closest emergency room for students on the Halifax campus. For students in Truro, the clinic accepts walk-in patients and appointments. For details on the how the services are offered, please visit Health Services online via www.dal.ca/studenthealth. Any student who has had a serious illness within the last 12 months, or who has a chronic medical condition, may wish to contact and advise Health Services, preferably with a statement from the doctor.

All students must have medical and hospital coverage. All Nova Scotia students are covered by the Nova Scotia Medical Services Insurance. All other Canadian students must maintain coverage from their home provinces. This is especially important for residents of any province requiring payment of premiums. All non-Canadian students must be covered by medical and hospital insurance prior to registration. Details of suitable insurance may be obtained from the Student Accounts office prior to registration. Further information is available online at www.dal.ca/studenthealth.

32. University Secretariat
The University Secretariat provides professional and administrative support and advice to the Board of Governors and University Senate so as to facilitate their effective governance of the University.

The Secretariat manages, coordinates and informs the effective operation of the Board and Senate by:
• Supporting the operations of the University’s governance bodies and their respective standing and ad hoc committees;
• Preparing and developing objectives and plans to establish and achieve priorities;
• Advising on governance issues and developing and implementing policies, procedures and processes that reflect governance best practices;
• Developing, implementing, managing and coordinating the University’s academic integrity, student discipline and academic appeals policies and processes, and maintaining official records relative to these processes;
• Serving as a repository for University policies and information and data on matters related to University governance;
• Facilitating communications and collaboration with key stakeholders.

Visit the website at www.secretariat.dal.ca.

33. Writing Centre
The Writing Centre’s programs recognize that students in all disciplines are required to write clearly to inform, persuade, or instruct an audience in term papers, laboratory reports, essay examinations, critical reviews and other academic assignments. Students benefit from discussing their work with supportive instructors and peer tutors.

The Centre currently offers a number of services. The main office in the Killam Library’s Learning Commons allows students to obtain advice on writing issues. Tutors also work part of the week at Sexton and the Law School Library. Students on the Agricultural Campus can visit the Writing Centre on the main floor of the library. Seminars are held throughout the university year on topics such as essay writing, science writing, mechanics of writing, English as a second language issues, admissions applications, etc.

Contact the Writing Centre by visiting the main office in the Killam Learning Commons, calling (902) 494-3963 or emailing at writingcentre@dal.ca. For more information, online writing resources or to book an appointment online, visit www.dal.ca/writingcentre.

March
13 Last day for complete refund for winter term
NOTE: Please consult the online summer school timetable for the summer school registration schedule.

Website
http://www.moneymatters.dal.ca

I. Introduction
The following section of the calendar outlines the University Regulations on academic fees for both full-time and part-time students enrolled in programs of study during the fall, winter, and summer terms. A section on University residence and housing fees is also included. Students wishing to register for the summer term should consult the summer school timetable online at http://www.dal.ca for information on registration dates and fees.

All fees are subject to change with approval of the Board of Governors of Dalhousie University. The 2014/2015 Academic Fee Schedule will be available in June 2014, at http://www.moneymatters.dal.ca

NOTE: Student tuition fees and other fees published herein are applicable only to regular students admitted to a program through the normal application process. Other students who are admitted to Dalhousie under a special program or policy will be charged student tuition and other fees in accordance with such special program or policy. For further information regarding these fees, please contact the Student Accounts or the Dean’s office of the applicable faculty.

Students should make special note of the academic dates contained in the front section of the calendar as well as fee dates. Students should also be aware that additional fees and/or interest will be charged when deadlines for payment of fees as contained herein are not met.

All the regulations in this section may not apply to Graduate Students. Please refer to the Faculty of Graduate Studies section of the Graduate Calendar.

II. University Regulations
The following general regulations are applicable to all payments made to the University in respect of fees. Please refer to our website for additional information on payment options. http://www.moneymatters.dal.ca

• Fees must be paid in Canadian funds by cash, electronic bank transfer, interac, negotiable cheque or money order.
• Money transferred to a student’s account should not exceed the annual charges associated with tuition and ancillary fees.
• If payment by cheque is returned by the bank as non-negotiable, there will be an additional fee of $20 and the account will be considered unpaid. Furthermore, if the bank returns a cheque that was to cover payment of tuition, the student’s registration may be cancelled and, if re-submitted, a late fee will apply.
• Accounts in arrears must be paid by cash, certified cheque, money order or interac prior to registration in a future term.

A. Admission Deposits
A non-refundable deposit of $200 is payable on acceptance to all new undergraduate and graduate programs. Undergraduate students admitted by April 20 are required to pay the deposit by May 15. Undergraduate students accepted after April 20 must pay the deposit within three weeks of receiving an offer of admission. Graduate students must pay the deposit within four weeks of receiving an offer of admission. Undergraduate Medicine students are required to pay a $550 non-refundable, admission deposit. International Dentistry, Qualifying Dentistry and Internetworking students are required to pay a $2,500 non-refundable, admission deposit. Admission deposits are credited towards tuition and fees for the applicable term.

B. Registration
A student is considered registered after selection of course(s). Selection of course(s) is deemed to be an agreement by the student for the payment of all assessed fees. Non-attendance does not constitute withdrawal. Students must ensure that they cancel registration in all courses if they choose to withdraw.

1. Identification Cards (DaCard)
All full and part-time students should obtain identification cards upon registration and payment of appropriate fees. If a card is lost, a fee of $15 is charged. Regular session ID cards are valid until August 31.

2. Audit Courses
All students auditing a course pay one-half of the regular tuition fee plus full ancillary fees, if applicable. In such cases, the student is required to complete the usual registration process. A student who is registered to audit a course, who during the session wishes to change their registration to credit, must receive approval from the Registrar. This must be done on or before the last day for withdrawal without academic penalty.
The same deadline applies for a change from credit to audit. Graduate students please see Section 6.6-4-4 for audit information.

C. Late Registration

Students are expected to register on or before the specified registration dates. Students wishing to register after these dates must receive the approval of the Registrar. A late registration fee of $50 will apply if registration and payment of fees has not been completed by specified dates. This fee is payable at time of payment and will be in addition to regular fees.

1. Course Changes and Withdrawals

Students withdrawing from all courses must submit written notification to the Registrar’s Office. Non-attendance does not constitute withdrawal; you must formally withdraw to have your refund processed.

In the Faculty of Health Professions, students who wish to withdraw from the University must obtain written approval from the appropriate school or college and submit the appropriate forms to the Registrar. Students in these faculties should continue to attend course until their withdrawal has been approved.

D. Academic Fees

Note: Those rates are for 2013/2014 (for information only)

1. Fee Schedule

Upon approval of the 2014/2015 academic fees, a complete schedule showing the required payments of the academic fees and deposits will be available. The official schedule will be available in June 2014 at www.moneymatters.dal.ca.

Students withdrawing from all courses must submit written notification to the Registrar’s Office. Non-attendance does not constitute withdrawal; you must formally withdraw to have your refund processed.

For all courses, students should check that their courses are dropped. Refunds due to class withdrawals will be effective the date a course(s) is dropped online at http://www.dal.ca/online or written notification is received at the Registrar’s Office. Students in these faculties should continue to attend course until their withdrawal has been approved.

Upon approval of the 2014/2015 academic fees, a complete schedule showing the required payments of the academic fees and deposits will be available. The official schedule will be available in June 2014 at www.moneymatters.dal.ca.

Students withdrawing from all courses must submit written notification to the Registrar’s Office. Non-attendance does not constitute withdrawal; you must formally withdraw to have your refund processed.

For all courses, students should check that their courses are dropped. Refunds due to class withdrawals will be effective the date a course(s) is dropped online at http://www.dal.ca/online or written notification is received at the Registrar’s Office. Students in these faculties should continue to attend course until their withdrawal has been approved.

2. Exchange Students

Outbound exchange students whose fees are paid to Dalhousie University will be assessed tuition and fees for 15 credit hours in their faculty.
E. International Students

1. Differential Fee

Registered students, who are not Canadian Citizens or permanent residents, are required to pay an additional “Differential Fee” to a maximum of $4,101 per term, subject to change each year. In 2013/2014, there is an approximate charge for part-time international students. International Dentistry, Qualifying Dentistry and Internet working students are exempt. Graduate Students please see Section 5.7 of the Graduate Studies Calendar to determine the number of years a student is required to pay the differential fee.

If a student receives permanent resident status, the differential fee will not be assessed for the current term and beyond. In order to process a retrospective reimbursement of differential fees in a current term, acceptable proof of residency must be submitted to the Registrar’s Office prior to the last business day of December, April, and August for each term.

2. Health Insurance

International students will be charged for an International Student Health Insurance Plan when they register. If a student already has comparable health coverage, they can apply to opt out of the International Student Plan at the DSU Health Plan Office before September 19, 2014. Costs for the health plan change annually. More details on the international student health plan costs and opt out process can be found at www.dsu.ca. Full-time students will also be assessed the extended DSU Health and Dental plans, see 11.F.2.

Health Insurance – International Students (2013/2014 rates, for information only)

- Single - $491 per year
- Family - $1,227 per year

3. Health Insurance - International Students (2013/2014 rates, for information only)

- Single - $491 per year
- Family - $1,227 per year

4. University Bus Pass Fee (UPass)

All eligible, full-time students will receive a Metro-Transit bus pass (UPass). The fee in 2013/2014 is $145 and is effective September through April. Please refer to http://www.upass.dal.ca for further information.

5. Laboratory Deposits

A deposit for the use of laboratory facilities in certain departments is required. The deposit is determined and collected by these departments. Students will be charged for careless or willful damage regardless of whether or not a deposit is required.

6. Additional Student Fees

Departments may also charge additional fees on a cost recovery basis not included in the fee schedule. Examples include, but are not limited to, print or copy fees, transportation costs and material fees. Students registered in online courses and distance programs will be assessed additional fees for delivery of these courses.

G. Statements and Monthly Notices

Statements

Students with current activity will be issued electronic statements. Students will be notified through their official Dalhousie email account when a new statement is available. Subsequent monthly payment reminders will be sent to the student’s official Dalhousie email address. Refer to http://www.moneymatters.dal.ca for more information.

H. Release of Student Financial Information

Student Accounts is often asked to disclose financial information on a student’s account by parents and others to whom they can make accurate tuition payments. University policy recognizes the financial account as belonging to the student and therefore, to protect student privacy, account information is considered confidential. For more information on granting permission for financial information to be released to a third party (such as a parent), please contact Student Accounts at (902) 494-3990 or in Truro at (902) 893-6722 www.moneymatters.dal.ca.

I. Payment

The payment of academic fees will be received at the Student Accounts Office located on the basement level of the Harry Hicks Academic Administration building, the Student Service Centre on Sexton Campus or the Enrolment Services Centre, Truro.
The following regulations apply to the payment of academic fees. For further information on regulations regarding withdrawal of registration, please refer to II.K.

a. All students must pay the applicable deposit in accordance with Section A.

b. Those paying the account balance by Canada Student Loan must negotiate the loan by September 19 or January 16 for the respective term. Interest will be charged after these dates and a late registration fee will apply.

c. Those whose fees are paid by a government (or other agency) must have the third party billing form completed and submit to Student Accounts by September 19 or January 16 for the respective term. This form is available online at http://www.moneymanagement.dal.ca.

d. Those paying the account balance by Canada Student Loan must negotiate the loan by September 19 or January 16 for the respective term. Interest will be charged after these dates and a late registration fee will apply.

e. Those whose fees are paid by Dalhousie University staff tuition fee waiver must present the appropriate waiver form and pay applicable incidental fees by September 19 or January 16, for the respective term.

f. Those who are Canadian citizens (or permanent residents), 65 years of age (or over) and enrolled in an undergraduate degree program will have their tuition fees waived, but must pay the applicable incidental fees.

g. Scholarships or awards paid by, or through, Dalhousie University will be applied to academic and residence fees.

h. When a Canada Student Loan, provincial loan or co-payable bursary is presented at the Student Accounts Office, any unpaid charges will be deducted.

i. Fees cannot be deducted from salaries paid to students employed at Dalhousie University.

j. Any payments made to a student account is first applied to past due balances.

1. Canada Student Loans

Students planning to pay by Canada Student Loan should apply to their province in April or May so that funds will be available by the time payment is required. The University will deduct欢欢charges from the loan at the time of endorsement. Please contact the appropriate provincial office to determine eligibility as well as course load requirements. A late fee of $50 will apply if the loan is negotiated after September 19, 2016. (January 16, 2015 for students registered for winter term and May 11, 2015 for students registering for the summer term).

2. Provincial Bursaries and University Scholarships

These bursaries are distributed by the Student Accounts Office. Any unpaid fees and/or temporary loans along with charges, if applicable, are deducted and payment will be issued following endorsement for any balance remaining. A valid Dalhousie University ID and Social Insurance Number must be presented at the Student Accounts Office to determine eligibility as well as course load requirements. A late fee of $50 will apply if the loan is negotiated after September 19, 2016. (January 16, 2015 for students registered for winter term and May 11, 2015 for students registering for the summer term).

For more information on student loans, bursaries or scholarships, inquiries should be directed to the Registrar’s Office, Henry Hicks Academic Administration Building, Room 110.

3. Receipts

The amount of academic fees constituting an income tax credit is determined by the Student Accounts Office. Any unpaid fees and/or temporary loans along with charges, if applicable, are deducted and payment will be issued following endorsement for any balance remaining. A valid Dalhousie University ID and Social Insurance Number must be presented at the Student Accounts Office to determine eligibility as well as course load requirements for provincial bursaries.

For more information on student loans, bursaries or scholarships, inquiries should be directed to the Registrar’s Office, Henry Hicks Academic Administration Building, Room 110.

J. Receipts

The amount of academic fees constituting an income tax credit is determined by the Student Accounts Office. A special income tax certificate (T2202A) will be available annually through Web for Student at http://www.dal.ca/online no later than February 28 for the previous calendar year.

K. Refunds

Students withdrawing from all courses must submit written notification to the Registrar’s Office. No attendance does not constitute withdrawal, you must ensure courses are dropped. Refunds due to course withdrawals will be effective the date a course(s) is dropped online at http://www.dal.ca/online or written notification is received at the Registrar’s Office. Please contact Student Accounts to have your refund processed.

In the Faculty of Health Professions, students who wish to withdraw from the University must obtain written approval from the appropriate school or college and submit the appropriate forms to the Registrar. Students in those faculties should continue to attend class until their withdrawal has been approved.

1. Refund Conditions

Refunds will be processed as follows:

a. Based on the withdrawal date, tuition is refunded based on percentages outlined in the refund schedule at http://www.moneymanagement.dal.ca.

b. No fee adjustment will be made for a student changing their degree or program as follows:

   - Regular (Sept - April) and Full Terms: After September 19
   - Winter Term: After January 16

   c. No refunds will be made for 30 days when payment has been made by personal cheque or 60 days for a cheque drawn on a bank outside of Canada.

   d. Refunds will be made to the appropriate Student Loan service provider if a student has paid with a student loan and no longer meets eligibility criteria.

   e. A student who is dismissed from the University, for any reason, is not entitled to a refund of fees.

   f. Refunds will be prorated on fees paid by Dalhousie scholarships and/or tuition waivers.

   g. A valid Dalhousie University ID must be presented in order for the student to receive a refund.

2. Refund Schedule

The most current version of the refund schedule is available at http://www.moneymanagement.dal.ca.

Important Information Regarding Refunds

a. A portion of fees as outlined in the refund schedule will be assessed if withdrawn from a course occurs after September 19 (Fall Term) and January 16 (Winter Term). Withdrawals before these dates will be completely refunded, but no substitutions will be allowed from a financial perspective after these dates.

b. Non-attendance does not constitute withdrawal and fees will be payable.

c. The refund schedule does not apply to the University of King’s College Journalism Program.

d. For financial charge inquiries, contact Student Accounts at (902) 494-5998 or Student.Accounts@dal.ca.

L. Delinquent Accounts

Accounts are considered delinquent when the balance of fees has not been paid by September 19 for the fall term or January 16 for the winter term. Accounts are considered delinquent when the balance of fees has not been paid by September 19 for the fall term or January 16 for the winter term. Interest, at a rate set by the University, will be charged weekly on delinquent accounts for the number of days overdue.

Effective July 1, 2015 the rate of interest is 6.0% per annum, compounded daily.

A student whose account is delinquent for more than 30 days will be denied University privileges including access to transcripts. A student will be reinstated upon payment of the fees outstanding, the arrears interest and a $50 reinstatement fee. Students will not be permitted to register in future terms until all outstanding amounts are paid in full. Subsequently, if the bank does not honour the payment, the student may be deregistered.

Graduating students whose accounts are delinquent on April 15 will not receive their degree/diploma parchment. For fall graduation the deadline is September 1. Transcripts are withheld until payment is received in full.

Accounts which become seriously delinquent may be placed in collection or further legal action may be taken against the individual. Students will be responsible for charges incurred as a result of such action.

III. Residence Fees

Residence rates vary depending on the location and style of accommodations available. For up-to-date residence options and rates, please visit http://www.dal.ca/residence. All residence rates include local telephone service with voice mail features, cable TV service and ResNet (high-speed Internet/wireless). Rates do not include the non-refundable $50 Residence Application Fee.

It is important to note that traditional residences have a mandatory meal plan; however, there are several options available for students. Traditional residences on
the Halifax campuses include: Howe Hall, Risley Hall, Shirreff Hall, Eliza Ritchie Hall, Gerard Hall, O’Brien Hall, Mini Residences and Residence Houses. Traditional residences on the Truro campus include: Chapman House, Fraser House, and Trueman House. Non-traditional residence options on the Halifax campuses include: Glengary Apartments and the Grad House. On the Truro campus a section of Trueman House is reserved for non-traditional accommodations. Meal plans are not required in non-traditional residences but are recommended. For up-to-date meal plan options and rates, please visit [http://www.dal.ca/foodservices](http://www.dal.ca/foodservices).

**Important:**

- Once offered admission to an academic program of study at Dalhousie, students are eligible to submit a residence application. The application will not be processed until both the $200 admission deposit and the $50 residence application fee have been paid.
- Students must be registered full-time at Dalhousie to apply to residence.
- No refund will be made to any resident who is dismissed for misconduct. Discretionary power in exceptional circumstances remains with the Director, Residence Operations, in conjunction with the Director, Residence Life or their designates.
- All residence students, new and returning, who have received notification of their room assignment, must pay a $500 deposit to confirm their acceptance. The deposit is due within the time frame specified by the Residence Office.
- $250 of the $500 deposit is refundable if cancellation is received prior to August 1. No refunds are made after August 1.
- The $50 residence application fee and $500 deposit can be paid by credit card (Mastercard, Visa, Amex) by visiting [http://www.dal.ca/admissions.html](http://www.dal.ca/admissions.html). For more payment options, please visit [http://www.dal.ca/admissions.html](http://www.dal.ca/admissions.html).
- No residence room will be held based on post-dated or “insufficient fund” cheques.
- Deposits or fees cannot be deducted from scholarships, fellowships, or similar awards.
- Residence agreements are for eight-month terms (September – April). Please note, residences close during the December break.

**A. Residence Term**

The residence term commences the Sunday prior to Labour Day and ends on the last day of the examination period in the College of Arts and Science in April. Students must vacate the residence 24 hours after their last exam and residences are closed over the December break.

If required, an additional fee is payable by all residents who are registered in a Faculty where the academic-session commences before or continues after the session of the College of Arts and Science. Special arrangements are to be made with the appropriate Residence Life Manager for accommodation for periods prior to or following the session as defined above.

**B. Payment of Residence Fees**

Payment may be made in full at registration or in two instalments. The first instalment must be paid in full by September 20, 2014. Interest is assessed weekly at a rate as set by the University and will be charged on all accounts outstanding after September 20, 2014 and on any second instalment outstanding after January 17, 2015. The student will be permitted to register for another session until all accounts are paid in full. A student whose account is delinquent for more than 30 days will be denied university privileges including access to transcripts. The student will be reinstated upon payment of the fees outstanding, the accrued interest, and a $50 reinstatement fee. For additional information regarding outstanding or delinquent accounts, please see [http://www.dal.ca/admissions.html](http://www.dal.ca/admissions.html).

All residence fees can be paid at the Student Accounts Office, the Student Service Centre (Sexton Campus), or online at [http://www.dal.ca/admissions.html](http://www.dal.ca/admissions.html). Students should make an appointment as soon as possible with the Assistant Manager of Student Accounts if they are having financial difficulties.

**C. Residence Communications**

All residences are wired for high-speed Internet/wireless, local telephone service and cable TV access. The cost is included in residence fees. Check out the website at [http://www.dal.ca/rescomm](http://www.dal.ca/rescomm).

*These services are subject to change.*
Awards

Scholarships, Awards, Financial Aid and Bursaries

The Registrar’s Office is responsible for:
- Undergraduate Scholarships
- Undergraduate Bursaries
- Temporary Loans
- Canada Student Loans
- Provincial Loans
- US Department of Education Loans
- Awards and Financial Aid Advice and Information

IMPORTANT NOTE: The University is reviewing the policy governing undergraduate awards. Consequently, portions of the following statement of policy may be modified or substantially altered and may be implemented during the course of the academic year of this Calendar.

A. Some Helpful Terms

1. Scholarships: A monetary award, at entrance or in-course and/or graduating level based on academic performance (in specific subject or group of subjects) and on the recognition of additional relevant attributes.

2. Bursary: An award granted on the basis of financial need.

3. Medal: An award based on recognition of an outstanding academic record at Dalhousie for a specific degree program in a particular subject.

4. Prize: A monetary award of any value, or a non-monetary award, based on general academic excellence, or proficiency in a specific area of study or competition.

5. External Award: An award given to the student of the university by an external agency. (The University may share in the selection, administration and/or payment of such an award).

6. Award: A monetary award, at entrance or in-course and/or graduating level based on academic performance (in specific subject or group of subjects) and on the recognition of additional relevant attributes.

B. Types of Awards

1. Scholarships: A monetary award, at entrance or in-course and/or graduating level based on academic performance (in specific subject or group of subjects) and on the recognition of additional relevant attributes.

2. Bursary: An award granted on the basis of financial need.

3. Medal: An award based on recognition of an outstanding academic record at Dalhousie for a specific degree program in a particular subject.

4. Prize: A monetary award of any value, or a non-monetary award, based on general academic excellence, or proficiency in a specific area of study or competition.

5. External Award: An award given to the student of the university by an external agency. (The University may share in the selection, administration and/or payment of such an award).

C. Scholarship Payments and Rebates

To receive scholarship funds, a student must be registered at least as a full-time student (minimum nine credit hours for degree students, six credit hours for technical students) at Dalhousie during the term(s) in which they are receiving the funds. Students registered in Graduate Studies, Medicine, Law and Dentistry (with the exception of Diploma in Dental Hygiene students), are ineligible to receive in-course scholarships or renew an existing scholarship. These faculties have their own awards programs. Insofar as scholarships, bursaries and governmental or Trust Deed should otherwise permit. (The University of King’s College has its own awards program.)

D. Award Duration

Dalhousie offers both renewable and non-renewable Entrance Awards. Non-renewable awards are held for one year. Renewable entrance awards are typically renewable for a maximum of four years. Holders of renewable awards are notified of either the renewal or the non-renewal of their awards. Please note that holders of renewable scholarships are NOT also entitled to hold Dalhousie in-course scholarships. (Please also refer to section “Graduation and Renewable or In-Course Scholarships” on page 601.)

E. Eligible Courses for Scholarship Assessment

The Registrar’s Office (Awards) considers those Dalhousie courses which are taken for credit in a designated degree/ diploma program during the academic year (or term in the Co-op program) as eligible courses for scholarship assessment. Correspondence courses are considered for scholarship purposes.

F. Scholarship GPA Calculation

The Scholarship GPA (SGPA) will be calculated for students who have completed a minimum of 30 credit hours of work over two terms within the preceding academic year. The Scholarship GPA will include all eligible courses attempted during this time period. Please note that the Scholarship GPA and the Seasonal GPA normally differ.

The Scholarship GPA, expressed to two decimal places, does not show on a student’s transcript.

G. Renewable Scholarships

Unless otherwise advised, a SGPA of 3.70 is required to maintain a renewable scholarship. Students must complete a full course load (a minimum of 30 credit hours) over two terms within the previous academic year and achieve a minimum SGPA of 3.70 to be considered eligible for renewal. Co-op students who are on a work term during the calendar year, must also complete 30 credit hours over two terms to be eligible. Students completing two work terms within one academic year must complete a minimum of 30 credit hours during their one academic term and achieve a minimum term SGPA of 3.70 to be considered. In those cases where students have taken more than 30 credit hours, assessment is based on all courses taken within the term(s) being assessed. Transfer credits do not count towards the credit hours reviewed for scholarship assessment.

Students who fail to re qualify for their renewable scholarship will be notified in writing or via email. If a student achieves the required 3.70 SGPA in the next academic year, or in any academic year within four of the original offer, the scholarship may be reinstated.

B. Portability of Undergraduate Scholarships

Many, but not all, entrance and in-course scholarships are portable among all Dalhousie undergraduate programs. Please contact the Awards Office prior to changing programs.

C. Scholarship Payments and Rebates

To receive scholarship funds, a student must be registered at least as a full-time student (minimum nine credit hours for degree students, six credit hours for technical students) at Dalhousie during the term(s) in which they are receiving the funds. Students registered in Graduate Studies, Medicine, Law and Dentistry (with the exception of Diploma in Dental Hygiene students), are ineligible to receive in-course scholarships or renew an existing scholarship. These faculties have their own awards programs. Insofar as scholarships, bursaries and governmental or Trust Deed should otherwise permit. (The University of King’s College has its own awards program.)

D. Award Duration

Dalhousie offers both renewable and non-renewable Entrance Awards. Non-renewable awards are held for one year. Renewable entrance awards are typically renewable for a maximum of four years. Holders of renewable awards are notified of either the renewal or the non-renewal of their awards. Please note that holders of renewable scholarships are NOT also entitled to hold Dalhousie in-course scholarships. (Please also refer to section “Graduation and Renewable or In-Course Scholarships” on page 601.)

E. Eligible Courses for Scholarship Assessment

The Registrar’s Office (Awards) considers those Dalhousie courses which are taken for credit in a designated degree/ diploma program during the academic year (or term in the Co-op program) as eligible courses for scholarship assessment. Correspondence courses are considered for scholarship purposes.

F. Scholarship GPA Calculation

The Scholarship GPA (SGPA) will be calculated for students who have completed a minimum of 30 credit hours of work over two terms within the preceding academic year. The Scholarship GPA will include all eligible courses attempted during this time period. Please note that the Scholarship GPA and the Seasonal GPA normally differ.

The Scholarship GPA, expressed to two decimal places, does not show on a student’s transcript.

G. Renewable Scholarships

Unless otherwise advised, a SGPA of 3.70 is required to maintain a renewable scholarship. Students must complete a full course load (a minimum of 30 credit hours) over two terms within the previous academic year and achieve a minimum SGPA of 3.70 to be considered eligible for renewal. Co-op students who are on a work term during the calendar year, must also complete 30 credit hours over two terms to be eligible. Students completing two work terms within one academic year must complete a minimum of 30 credit hours during their one academic term and achieve a minimum term SGPA of 3.70 to be considered. In those cases where students have taken more than 30 credit hours, assessment is based on all courses taken within the term(s) being assessed. Transfer credits do not count towards the credit hours reviewed for scholarship assessment.

Students who fail to re qualify for their renewable scholarship will be notified in writing or via email. If a student achieves the required 3.70 SGPA in the next academic year, or in any academic year within four of the original offer, the scholarship may be reinstated.

B. Portability of Undergraduate Scholarships

Many, but not all, entrance and in-course scholarships are portable among all Dalhousie undergraduate programs. Please contact the Awards Office prior to changing programs.

C. Scholarship Payments and Rebates

To receive scholarship funds, a student must be registered at least as a full-time student (minimum nine credit hours for degree students, six credit hours for technical students) at Dalhousie during the term(s) in which they are receiving the funds. Students registered in Graduate Studies, Medicine, Law and Dentistry (with the exception of Diploma in Dental Hygiene students), are ineligible to receive in-course scholarships or renew an existing scholarship. These faculties have their own awards programs. (The University of King’s College has its own awards program.)

D. Award Duration

Dalhousie offers both renewable and non-renewable Entrance Awards. Non-renewable awards are held for one year. Renewable entrance awards are typically renewable for a maximum of four years. Holders of renewable awards are notified of either the renewal or the non-renewal of their awards. Please note that holders of renewable scholarships are NOT also entitled to hold Dalhousie in-course scholarships. (Please also refer to section “Graduation and Renewable or In-Course Scholarships” on page 601.)

E. Eligible Courses for Scholarship Assessment

The Registrar’s Office (Awards) considers those Dalhousie courses which are taken for credit in a designated degree/ diploma program during the academic year (or term in the Co-op program) as eligible courses for scholarship assessment. Correspondence courses are considered for scholarship purposes.

F. Scholarship GPA Calculation

The Scholarship GPA (SGPA) will be calculated for students who have completed a minimum of 30 credit hours of work over two terms within the preceding academic year. The Scholarship GPA will include all eligible courses attempted during this time period. Please note that the Scholarship GPA and the Seasonal GPA normally differ.

The Scholarship GPA, expressed to two decimal places, does not show on a student’s transcript.

G. Renewable Scholarships

Unless otherwise advised, a SGPA of 3.70 is required to maintain a renewable scholarship. Students must complete a full course load (a minimum of 30 credit hours) over two terms within the previous academic year and achieve a minimum SGPA of 3.70 to be considered eligible for renewal. Co-op students who are on a work term during the calendar year, must also complete 30 credit hours over two terms to be eligible. Students completing two work terms within one academic year must complete a minimum of 30 credit hours during their one academic term and achieve a minimum term SGPA of 3.70 to be considered. In those cases where students have taken more than 30 credit hours, assessment is based on all courses taken within the term(s) being assessed. Transfer credits do not count towards the credit hours reviewed for scholarship assessment.

Students who fail to re-qualify for their renewable scholarship will be notified in writing or via email. If a student achieves the required 3.70 SGPA in the next academic year, or in any academic year within four of the original offer, the scholarship may be reinstated.
Students registered in Graduate Studies, Medicine, Dentistry (with the exception of Diploma in Dental Hygiene students), or Law are ineligible to receive in-course scholarships or renew an existing scholarship.

**H. Qualifying for In-Course Scholarships**

All undergraduate Dalhousie students not on a renewable scholarship, ineligible programs in the participating faculties, who have completed a full course load (a minimum of 30 credit hours) over two terms within the previous academic year and achieved a minimum SGPA of 3.70 will be considered eligible for in-course scholarships. Co-op students who are on a work term during the calendar year, must also complete 30 credit hours over two terms to be eligible. Students completing two work terms within one academic year must complete a minimum of 15 credit hours during their one academic term and achieve a minimum SGPA of 3.70 to be considered eligible. In these cases where students have taken more than 30 credit hours, assessment is based on all courses taken within the term(s) being assessed. Transfer credits do not count towards the credit hours reviewed for scholarship assessment.

Students registered in Graduate Studies, Medicine, Dentistry (with the exception of Diploma in Dental Hygiene students), or Law are ineligible to receive in-course scholarships or renew an existing scholarship.

**I. International Exchanges**

Students who have permission to study for one or two terms outside of Canada in an approved exchange program, and are considered to be full-time (normally 30 credit hours), can be considered eligible for in-course or renewable scholarship assessment. Students who hold a Dalhousie scholarship and are planning on studying abroad and are advised to contact the Assistant Registrar (Awards) with specific questions.

**J. Scholarship Assessment**

Students on renewable scholarships will be assessed for renewal in either June or September depending on completion of two academic terms. All other undergraduate students are assessed for in-course scholarships in June or September depending on completion of two academic terms.

**K. Changing Degree Programs or Faculties**

Changing degree programs or faculties can have implications for scholarship consideration. Scholarship holders considering degree changes should consult the Registrar’s Office - Awards. Scholarship holders considering taking a reduced course load should consult the Registrar’s Office - Awards before dropping courses. Students must complete a minimum of 30 credit hours over two terms within the academic year to qualify for renewal of their scholarships or an in-course scholarship. Also refer to sections G and H.

**L. Reduced Course Load and Retention of Scholarship**

Scholarship holders considering taking a reduced course load should consult the Registrar’s Office - Awards before dropping courses. Students must complete a minimum of 30 credit hours over two terms within the academic year to qualify for renewal of their scholarships or an in-course scholarship. Also refer to sections G and H.

**M. Record of Scholarships**

Awards are recorded on academic transcripts. The University retains the right to reassess the source funding of a student’s scholarship as circumstances may warrant (but there would be no reduction in the amount).

**N. Graduation and Renewal or In-Course Scholarships**

If you hold a renewable scholarship and you choose to graduate earlier than originally expected, and then you decide to return to upgrade your degree to a four-year degree, you must submit a request to upgrade your scholarship for the final year. In addition, if you graduate and then decide to upgrade your degree, you cannot be assessed for an in-course scholarship until a further 30 credit hours over two terms within the same academic year is completed and a minimum SGPA of 3.70 is achieved.

**O. Transfer Students**

With the exception of the First Nations and Indigenous Black Students Entrance Scholarships, transfer students are ineligible for scholarships in the year of transfer. After one full year, students would be considered on the same basis as other students for in-course awards. Please refer to section H. Qualifying for In-Course Scholarships.

**P. Taxation**

As long as you are a registered full or part-time student, you are not required to claim financial awards (i.e. scholarships, bursaries) as income on your taxes.

**Q. Withdrawing**

Award funds are credited to your student account with the expectation that you will remain registered at Dalhousie as at least a full-time student (minimum nine credit hours for degree students or six credit hours for technical students) within the applicable term. Therefore, if you reduce your course load or withdraw, these funds are expected to be returned to the University. However, depending on the time of the withdrawal, you may be entitled to retain a prorated portion of the scholarship. Contact us prior to your withdrawal and we can review your specific circumstances.

**R. Scholarship Appeals**

The deadline to appeal a scholarship decision for an entrance/in-course/renewable scholarship or entrance/bursary is October 31.

Students may appeal under the following grounds:

- extraordinary or compassionate circumstances;
- unfair scholarship decisions under the circumstances; and/or
- inconsistent scholarship decisions compared to other office decisions.

Students must submit their appeal, in writing, to the Assistant Registrar, Awards, in the Registrar’s Office, by the deadline noted above. The Letter should clearly outline the grounds for appeal and the remedy being sought. Students should include documentation, if applicable, to support the basis of their appeal. The decision of the Appeals Committee is final.

**S. Entrance Awards**

Please note: Students entering the Faculty of Agriculture should refer to “Entrance Awards,” section “B. Faculty of Agriculture” for available entrance scholarships.

Please note: Students entering third year Engineering (including students entering from Associated Universities) should refer to “In-Course Scholarships,” section “F. Faculty of Engineering” for available scholarships.

Applicable to those scholarships administered by the Registrar’s Office. Selection criteria may be different for those administered by individual faculties/schools/departments. Scholarships are available at the discretion of the Dean or Chair of the Department or School.

1. Entrance awards are available to students applying to Dalhousie directly from high school. Transfer students are not eligible for entrance scholarships with the exception of the First Nations and Indigenous Black Students Scholarships.

Entrants coming from Year II of a CEGEP are considered to be transfer students.

2. To be considered for entrance awards, applicants must submit a completed Dalhousie application for admission, a scholarship application including supporting documents (available through DalOnline), and an official transcript, to the Registrar’s Office by March 15th.

3. Students must be admitted, with a minimum 80% admission average (or 26 predicted points for 12th diploma candidates), to one of the following faculties to be eligible for entrance award consideration: Architecture and Planning, Arts and Social Sciences, Computer Science, Engineering, Health Professions, Management or Science. See Section B for details on Agriculture awards.

4. Students are first assessed for grades-based entrance scholarships using their first term final grades or midterm grades in the case of non-semestered schools.

5. An admission average is then calculated using the grades of the five courses required for admission to the applicable program.

6. An adjusted average is then calculated for all students which can add up to two additional points onto the admission average. Students can receive up to one additional point for taking/courting AP or IB level courses and up to another additional point for taking/completing more than the required five university-preparatory courses.

7. Applicants will be evaluated for entrance awards based on some or all of the following criteria: academic merit, extra-curricular activities, financial need, initiative to fund your own education, and leadership experience. For more information visit moneymatters.dal.ca.
Awards

A. Entrance Scholarship Funds

It is University practice to distribute scholarships among as many students as possible.

1. Entrance Awards (application required)

Three awards marked with an asterisk (*) are not administered by the Registrar’s Office. All awards administered by the Registrar’s Office require a minimum admission average to a Dalhousie program of 80% and a General Entrance Award Application submitted by March 15th unless otherwise stated to be eligible.

A. Entrance Scholarship Funds

- **A. Entrance Scholarship Funds**

  - **Albert Holmes Bursary**
    - Awarded to a student from Pictou County based on academic achievement, community involvement and financial need.
  - **5th Avenue Capital Corporation Bursary**
    - A $2,500 bursary to provide financial assistance to a student with demonstrated financial need and good academic standing entering university directly from high school.
  - **Sandy and Barbara Billishfield Bursary**
    - This endowed fund provides renewable bursaries annually to students entering Dalhousie with permanent disabilities and demonstrated financial need. The maximum value of bursaries may vary from year to year. To be considered, students must submit medical documentation regarding the nature of their disability, and a complete General Entrance Award Application.
  - **The Frank Hugh Bell Endowment Scholarship in Science**
    - This scholarship was established by a bequest from the estate of Barbara Bell who taught at Dalhousie in 1923 as a music student. This scholarship is awarded annually to honor her father, the late Mr. Francis Hugh Bell who was one of Dalhousie’s earliest graduates.
  - **The Burst Scholarship**
    - A scholarship valued at $24,000 ($6,000 per year) was established by Mr. David Burst with the intention of encouraging scholastic achievement by providing an incentive to capable high school students. Candidates for the Burst Scholarship must be graduating from Cole Harbour District High School in Nova Scotia and be eligible for admission to the first year of an undergraduate program leading to a first degree at Dalhousie University. They must also intend to pursue a program of full-time studies at Dalhousie. A nomination for a Burst Scholarship will not interfere with consideration of the nominee for other University scholarships. A student may not, however, hold a Burst Scholarship and another Dalhousie scholarship at the same time. Students must be nominated by their school to be considered for this scholarship, and should contact the Guidance Office for more information.
  - **George Barnes Scholarship**
    - The scholarship was established by Mary Barnes and Grace Barnes in memory of their father, George Barnes, to support Dalhousie students wishing to study in England as part of their academic program. Scholarships are awarded on the basis of academic and extracurricular excellence, financial need, and international experience.
    - Scholarships are open to Canadian students accepted into the First Year Study Abroad Program at the International Study Centre (ISC), at Heriot Watt Castle, England. Scholarship value: up to $5,000. Interested students should complete an application no later than one month prior to departure, available from the International Centre.
  - **R. Stanley Cumming Scholarship**
    - Established through a bequest from the Estate of Marion H. Cumming, in memory of her late husband, Professor R. Stanley Cumming, BA 1935. This scholarship, valued at $20,000 ($5,000 per year), is awarded to a student entering the Bachelor of Arts.
  - **Dalhousie Alumni/Leadership Association Scholarships**
    - A number of these scholarships, ranging in value from $1,000 to $2,000, are open to entering students who have achieved a good scholastic record in high school. Candidates must have played a leadership role in extracurricular activities such as community service, student government, athletics, or the visual or performing arts.
  - **Frank R. Davis Memorial Scholarships**
    - These scholarships are made possible by a fund established by Mrs. Davis in memory of her late husband, the Hon. Frank R. Davis, Minister of Public Health in the government of Nova Scotia and a graduate of this University. The scholarship will be awarded to deserving graduates of Bridgewater High School, on the nomination of the Supervisor of Schools and the Senior High School Staff. In selecting candidates, the governing considerations will be scholastic standing, usefulness of purpose, and interest in the common good.

**DSU: Accessibility Bursary**

The Dalhousie Student Union established this $1,000 renewable bursary assistance for an entering student with a permanent disability and demonstrated financial need. This bursary is administered and awarded in combination with the Johnson Foundation Bursary. The recipient will typically receive $1,000 from the DSU Bursary and an additional $1,500 annually from the Johnson Foundation Bursary for a combined annual amount of $2,500. To be considered, students must submit medical documentation regarding the nature of their disability.

Jeff D. & Mortha Edwards Scholarship for Black Canadian & Bermudian Students

Jeff Edwards was 21 in 1910 when he and many other blacks left Oklahoma for Canada seeking an escape from segregation and prejudice in the American South. He and his wife Martha homesteaded as pioneers at Anchor Valley, Alberta where they raised 10 children and contributed enormously to the community. Mr. Edwards embraced his new citizenship with pride, and when he died in 1973 at the age of 90, was remembered as a proud Canadian citizen who epitomized the spirit of black pioneers who settled the Canadian West. While Hugh McAlpine established this scholarship to honour the memory of Jeff & Mortha Edwards, he also dedicated it to his late father who in the late 1940's in a small northeastern Alberta town spoke to his sons of “a fine gentleman by the name of Mr. Jeff Edwards.” This scholarship, valued at $8,000 ($2,000 per year), is awarded to an entering student with preference to Canadian students of Black African descent (second preference to native Black Bermudian students). Scholarships will be awarded on the basis of financial need and citizenship.

Enormo Radio Group Scholarship

Two $2,000 scholarships will be awarded to students entering a Music degree program. Students must demonstrate artistic excellence and a commitment to performing arts in the community. To be eligible, students must be Canadian citizens or landed immigrants. Administered by the Fountain School of Performing Arts.

Facilities Management Employee Scholarship

Established by the Department of Facilities Management employees at Dalhousie, this scholarship supports up to two entering students each year who are children, grandchildren or spouses of Facilities Management Employees. Selection is based on financial need and community involvement.

Fairfax Financial Holdings Limited Entrance Award

Two renewable awards of $20,000 ($5,000 per year) each, are awarded annually to the most worthy candidates entering an undergraduate program. The scholarships were established to encourage scholastic achievement by providing an incentive to capable high school students who wish to obtain a university education and who might otherwise be prevented due to the cost of attending the university. Candidates must be Canadian citizens or landed immigrants. Administered by the Fountain School of Performing Arts.

Fairfax Financial Holdings Limited Entrance Award

Two renewable awards of $20,000 ($5,000 per year) each, are awarded annually to the most worthy candidates entering an undergraduate program. The scholarships were established to encourage scholastic achievement by providing an incentive to capable high school students who wish to obtain a university education and who might otherwise be prevented due to the cost of attending the university. Candidates must be Canadian citizens or landed immigrants. Administered by the Fountain School of Performing Arts.

First Nations & Indigenous Black Students Scholarships

Ten renewable entrance scholarships of $12,000 ($3,000 per year) each are available to First Nations and Indigenous Black students, who are residents of Nova Scotia, New Brunswick or Prince Edward Island, and are entering Dalhousie for the first time. Scholarships are available to students who are applying directly from high school as well as those who have attended another post-secondary institution. Scholarships will be awarded on the basis of a student’s financial need and academic standing.

Forgh Family Nova Scotia Undergraduate Scholarship

A Dalhousie Law graduate established this scholarship in support of black high school students from Nova Scotia wanting to pursue post secondary education at Dalhousie. This is one of our highest valued scholarships for entering undergraduates at a value of up to $10,000 per year to cover tuition, housing and books; recipients receive up to $8,000 over four years. One entering student is selected each year based on academic excellence, financial need and demonstrated participation in extracurricular activities, preferably leadership, and a social conscience within his or her community.
International Baccalaureate (IB) Scholarships

An endowment has been established by Frederick S. Fountain for students of Atlantic Canada who have demonstrated all around distinction. Preference is given to students in the Faculty of Arts and Social Sciences. These scholarships are valued at $13,000 ($8,000 per year).

Marjorie Manning Foundation Scholarships

Two non-renewable entrance scholarships are awarded to students from Atlantic Canada enrolling in the Faculty of Management who have demonstrated a high level of academic achievement and financial need.

C. D. Howe Scholarships in Engineering

The C. D. Howe Memorial Foundation has established an endowment to provide a scholarship of $5,000 to a student who is entering any undergraduate program offered by the Faculty of Computer Science. The student will receive $3,000 upon entering the program and will receive the remaining $2,000 at the beginning of the second year of the program.

Rowland C. Fraser Scholarships in Business Administration

Established by Mrs. Marie Frazee, and family, to honour the memory of her late husband Dr. Rowland Frazee (BComm 1948, LLD 1980). Dr. Frazee was an outstanding alumnus of Dalhousie University and a business leader in Canada for many decades. He joined the Royal Bank of Canada in 1939 as a bank teller and rose to the position of Chairman and CEO in 1980. The University’s fund is independent of any other such trusts. Candidates must fulfill the following conditions: a) be coming directly to Dalhousie from high school, b) be undertaking studies leading to their first baccalaureate degree and c) be a bona fide resident of the Shad Valley (in Halifax, Nova Scotia area) for at least three years prior to applying to Dalhousie. A candidate’s satisfaction of the residency requirement is confirmed by the J. D. Smurfett Trust Advisory Committee in Halifax. Subject to the availability of funds, these awards are renewable to the first degree (or four years maximum), based on SGPA of 2.1, with a full course load. Please note that the value of a holder’s scholarship will vary from year to year.

The Sligh Family Foundation Scholarship for African Students The Sligh Family Foundation Scholarship for African Students is a renewable scholarship valued at $25,000 per year and is funded by a generous gift by the Sligh Family Foundation. The scholarship will be awarded annually to a full-time undergraduate student who resides in Africa and is either entering into their first year or returning (current) year of studies in any program at Dalhousie
undergraduate. University. To be eligible, candidates must demonstrate financial need, hold good academic standing, and demonstrate involvement in their community.

Sigma Chi Leadership Award
The Sigma Chi Leadership Award recognizes the qualities of entering students who meet the standards of Sigma Chi membership, as described by the Jordan Standard: being of high character, a student of fair ability, with ambitious purposes, a congenial disposition, possessed of good morals, having a high sense of honour, and a deep sense of personal responsibility.

Alecander Sinclair Scholarship
Under the Will of the late Honourable Marion Wm., the University received an endowment for the purpose of providing scholarships to qualifying students from St. Mary’s Municipality, Guysborough County, Nova Scotia. Candidates are recommended by St. Mary’s Rural High School in consultation with the Registrar’s Office – Awards.

Katherine (Norman) Sprovid Scholarship
In honour of the memory of Katherine (Norman) Sprovid, and to recognize academic and other achievements of students graduating from rural high schools in Nova Scotia entering the Bachelor of Arts Program in the Faculty of Arts and Social Sciences.

Stanley William Sprovid Scholarship
The purpose of this scholarship is to honour the memory of Stanley William Sprovid (BA 1951, MA 1953) and recognize the achievements of students entering Dalhousie from Halifans West High School. Mr. Sprovid became head of the Social Science Department at Halifans West in 1996 and was later named Vice Principal. This scholarship is awarded to a student entering the Faculty of Arts and Social Sciences or the Faculty of Management who has demonstrated high academic achievement and a well-rounded approach to their academic and extracurricular activities.

The L. C. Stewart Trust Fund
This fund from the Estate of George M. Stewart came as a trust fund. The annual income from which is to be used for L. C. Stewart Scholarships to qualifying students from St. Mary’s District in the County of Guysborough, Nova Scotia. Candidates are recommended by St. Mary’s Rural High School in consultation with the Registrar’s Office – Awards.

L. A. & Edith Upham Scholarship
A memorial scholarship established at $20,000 ($5,000 per year) has been established to recognize the long association of the Upham family with Dalhousie University. This scholarship is offered to a Nova Scotia high school graduating student enrolled in the Faculty of Arts and Social Sciences.

Marguerite J. Vernon Scholarship
A trust has been established under the Will of the late Marguerite Vernon whereby, from time to time, a scholarship will be assigned to Dalhousie University for an entering student.

Ann & Ian Vessey Scholarship
This endowment provides a scholarship to a student from Prince Edward Island entering any undergraduate program. Preference will be given to a student who is graduating from Charlottetown Rural High School. Both I. J. Vessey and Ann M. Vessey (nee Agnew) graduated from Charlottetown Rural High School in 1977.

F. Huene Wells Scholarship
This scholarship of $1,000 is awarded on the basis of performance excellence to a student entering university. The first time directly from high school into a course of study leading to an undergraduate degree in music performance. It was established by Judith Wells and Karen Woodhouse in memory of F. Huene Wells, a businesswoman in Halifax, who was interested in music and thought university education was important. Contact the Foundation School of Performing Arts for more information.

Walker Wood Foundation Science Bursary
The Walker Wood Foundation established this $14,000 ($4,000 per year) bursary in support of a student with demonstrated financial need who is entering the Faculty of Science at Dalhousie. Preference is given to students from high schools within Atlantic Canada.

Don Wright Scholarship of Excellence
This annual scholarship funded by the Lillian and Don Wright Foundations, supports outstanding students who are entering the Faculty of Performing Arts in a Music degree program. While preference shall be given to awarding the scholarship to one student per year, if no one student merits the awarding of the scholarship, the awarding committee has the authority to award two scholarships to students who have applied and been accepted to study Music within the School. Where there is more than one eligible candidate, preference shall be given to the candidate deemed to have the most merit as judged by a majority of the Music Department Scholarships Committee.

2. Endowments and Annual Givings
The following endowments and annual givings are used to fund a select number of our Dalhousie Entrance Award programs and are administered by the Registrar’s Office in November. Unless noted, applications are not required.

Robert Bruce Scholarships
The University is a beneficiary of a bequest from the late Robert Bruce of Quebec whereby a portion of the annual income is to be used for both entrance and in-course scholarships, and for bursaries.

James and Abbie Campbell Memorial Scholarships
A bequest from the late Eila Alma MacAulay of Halifax made provision for the establishment of the James and Abbie Campbell Memorial Fund. The purpose of this fund is to promote the University’s music program through scholarships in music. Academically sound students who have demonstrated competency in music will be selected by the Faculty of School of Performing Arts for one of several James and Abbie Campbell/Music Scholarships. Other music students will be selected on the basis of their overall academic standing by the Registrar’s Office. The fund also provides in-course scholarships.

Dalhousie Club of New York Scholarships
A fund for this purpose, established by the Dalhousie Club of New York and placed in the hands of the Board of Governors of the University, endows several scholarships open to students entering the Faculties of Arts and Social Sciences or Science from high school.

Ann McInnes Scholarships
The University received from the Estate of Julia A. McInnes a bequest to provide scholarships in memory of her husband, Dr. Emenuee Ann McInnes.

Dr. Mary G. Hickman Memorial Scholarship
Under the Will of Frances Rose Hickman, this scholarship fund was established in memory of her late daughter Mary Hickman, MD 1972. This fund provides scholarships to recognize academic excellence at Dalhousie.

Christine Irvine Memorial Scholarship
This endowment scholarship, awarded to students who have demonstrated academic excellence, was established by the family of Christine Irvine, former Dean of Women at Dalhousie. by her brother Leslie M. Irvine. First preference will be given to students from Bridgewater, second preference Antigonish Valley and third preference Nova Scotia.

Percy Bertram Jollota Scholarships
The fund also provides in-course scholarships.

Robert Bruce Scholarships

Awards

3. A completed application for admission (and scholarship application with supporting documents if required) received by the Registrar's Office by March 1. See dal.ca/scholarships for an application form.

Participating high schools may each nominate one student and forward the application, upon which the award is based.

(B+), plus continued evidence of the qualities of character, leadership and service which the award is based. Scholarship averages are renewable on the achievement of a Grade Point Average of 3.30 per year for diploma programs). The scholarships will be awarded to students entering the first year of any program of study and are based on academic performance, financial need, leadership, and initiative to fund own education. These scholarships are open to Canadian high school graduates who are maintaining an 80% average in their senior year of high school. Application due date is March 1. See dal.ca/scholarships for an application form.

B. Faculty of Agriculture

A. Entrance Scholarships

Atlantic Scholars Awards (tuition and residence fees): $40,000 (approximate value based on tuition and residence accommodation). Atlantic Scholars Awards will provide tuition and residence fees (at shared-room rate, for as long as the recipient chooses to live in residence) for the length of the recipient's first diploma (up to two years) or degree (up to four years). The scholarship does not cover meals, books, and student fees. Students entering either technical or degree programs are eligible. Only those applicants who have achieved a minimum average of 85% on the courses required for admission shall be considered. Selection criteria include academic performance, geographic distribution, and extracurricular activity. The Atlantic Scholars Awards are tenable for a maximum of four years. Applications must be submitted via Dalhail on March 15.

Dean's Scholarship (international and residence fees): $35,000 (approximate value based on international differential fees and shared residence accommodation). Awarded to the top international applicant. Dean's Scholarships are tenable for a maximum of two years (technical students) or four years (degree students). Application not required.

Harrison McCain Scholarships: $16,000 ($4,000 per year renewable for three years for degree programs, $4,000 per year renewable for one year for diploma programs). The scholarships will be awarded to students entering the first year of any program of study and are based on academic performance, financial need, leadership, and initiative to fund own education. These scholarships are open to Canadian high school graduates who are maintaining an 80% average in their senior year of high school. Application due date is March 1. See dal.ca/scholarships for an application form.

Residence Scholarships:

- Guaranteed Entrance Scholarships: Scholarships valued at the shared-room rate of residence, each renewable for one year, may be awarded to outstanding applicants. No application required. Guaranteed Entrance Scholarships: students who have applied to the Faculty of Agriculture will automatically be considered for the following entrance scholarships based on academic performance. Awarding begins April 15.

High School Average Value

- 90% or higher $2,500
- 85% to 89.9% $1,500
- 80% to 84.9% $1,000

Predicted Points Value

- 36 or higher $2,500 renewable for a maximum of $10,000
- 33-35 $2,500 renewable for a maximum of $1,500
- 30-32 $2,000
- 28-29 $1,500
- 24-27 $1,000

IB Scholarships: IB diploma students who have applied to the Faculty of Agriculture will automatically be considered for the following entrance scholarships based on academic performance. Awarding begins April 15.

High School Average Value

- 80% to 84.9% $1,000
- 85% to 89.9% $1,500
- 90% or higher $2,500

Predicted Points Value

- 36 or higher $2,500 renewable for a maximum of $10,000
- 33-35 $2,500 renewable for a maximum of $1,500
- 30-32 $2,000
- 28-29 $1,500
- 24-27 $1,000

III. In-Course Awards

A. The Canadian Merit Scholarship Foundation

The program was started in 1999 to identify, recognize and reward well-rounded students who combine distinguished talents with character, leadership potential and a commitment to the community. In 1999, Dalhousie University became a participating member of those institutions where the CMSF National Awards (Lion Awards) are tenable. The scholarship consists of $8,000 (paid by the Foundation) and tuition (paid by the University), renewable to a total of four years of undergraduate study. The scholarships are renewable on the achievement of a Grade Point Average of 3.30 (B+), plus continued evidence of the qualities of character, leadership and service upon which the award is based. Participating high schools may each nominate one student and forward the requisite documents to the CMSF Awards Committee to be received by the November deadline.
Details of the process and criteria are available from your high school. Nominees must meet the admission requirements for Dalhousie University and the program which the student wishes to undertake.

IV. In-Course Scholarships
All undergraduate Dalhousie students not on a renewable scholarship, in eligible programs in the participating faculties, who have completed a full course load (at least 15 credit hours during their one academic term) and have a minimum GPA of 3.70 will be considered eligible for in-course scholarships. Students enrolled in a co-op program who are on a work term during the calendar year, must also complete 30 credit hours over two terms to be eligible. Students completing two work terms within one academic year must complete a minimum of 35 credit hours during their one academic term and achieve a minimum term GPA of 3.70 to be considered eligible. In these cases, if the student has not completed more than 30 credit hours, assessment is based on all courses taken within the term(s) being assessed. Transfer credits do not count towards the credit hours reviewed for scholarship assessment.

Students registered in the Faculty of Agriculture should refer to (page [108]) for in-course scholarship opportunities.

Students registered in Graduate Studies, Medicine, Dentistry (with the exception of Diploma in Dental Hygiene Students), or Law are ineligible to receive in-course scholarships or renew an existing scholarship.

Applicable to those scholarships administered by the Registrar's Office. Selection criteria may be different for those administered by individual faculties/schools/departments.

Please note that the automatic consideration is either for the renewal of an entrance renewable scholarship or for a one-year scholarship, but not both.

A. General - All Faculties

Golden Key International Honour Society
Dalhousie University has a participating chapter in the Golden Key International Society. The Golden Key Society is an academic honors society that recognizes the academic achievements of students. The society provides scholarships and leadership opportunities and career assistance to its student members. Students are invited to become members based upon criteria established by the society. For information please refer to the society's website: www.GoldenKeyGlobal.org.

Governor's Awards
In 1992, to mark the 125th anniversary of the founding of the Dalhousie Student Union, the Board of Governors established a set of awards to be known as Governor's Awards. Up to four awards can be made each year, for exceptional contributions or leadership opportunities to in-course scholarship opportunities.

Applicable to those scholarship opportunities administered by the Registrar's Office. Selection criteria may be different for those administered by individual faculties/schools/departments.

Please note that the automatic consideration is either for the renewal of an entrance prize or for a one-year prize, but not both.

Governor's Awards
In 1902, to mark the 125th anniversary of the founding of the Dalhousie Student Union, the Board of Governors established a set of awards to be known as Governor's Awards. Up to four awards can be made each year, for exceptional contributions or leadership opportunities to in-course scholarship opportunities.

Applicable to those scholarship opportunities administered by the Registrar's Office. Selection criteria may be different for those administered by individual faculties/schools/departments.

Please note that the automatic consideration is either for the renewal of an entrance prize or for a one-year prize, but not both.
The W. Andrew Mackay Alumni Scholarship

The Dalhousie Alumni Association established an annual scholarship in honour of Dr. W. A. Mackay, a former president of the University. The scholarships are available to students who have demonstrated high academic standing (GPA of at least 3.30) and who have shown an excellence in qualities of leadership, citizenship and sportsmanship. The award is taxable for one year in the Faculty of Arts and Social Sciences, Architecture and Planning, Computer Science, Engineering, Health Professions, Management and Science. Candidates are considered by nomination by their Department or School in the fall of each year.

MacKenzie Trust Scholarships

According to the Estate of Thomas George MacDonald, a Trust Fund was established for Archibald F. MacKenzie, and later bequeathed to Dalhousie University to provide in-course scholarships.

Nicholas M. MacLeod Memorial Scholarship

Under the will of Eve Edith MacLeod, this scholarship fund was established in memory of her late husband, Dalhousian alumnus Nicholas W. MacLeod, for the purpose of funding entrance and in-course scholarships for students in the Faculty of Arts and Social Sciences.

The Hector McInnes Memorial Scholarships

In December 1937, an anonymous donor gave the University $50,000 for undergraduate scholarships as a memorial to the late Mr. Hector McInnes.

Malcom Mosher Memorial Scholarship

Under the will of Milton Louis Morse Mosher, this scholarship fund was established in the memory of her father, to award scholarships to students studying in the areas of Social Sciences, Business and Economics.

The George R. Robertson Phi Delta Theta Fraternity Scholarship

An endowment has been established to provide a scholarship to a student in full-time study in the third or subsequent years at Dalhousie University. The selection of the awardee is based on several factors including a minimum Grade Point Average of 3.00, demonstrated activity in the Phi Delta Chapter and financial need. Application required.

The Lois J. Robertson Scholarships

The University received a generous bequest from the Estate of the late Lois Robertson. This fund has been allocated to undergraduate scholarships.

Joseph Duncan Stewart Scholarships

A bequest to the University provides for a number of in-course scholarships.

The John L. and Glenna E. Towse Scholarships

Awarded to a student who is entering the third year of the BSc (Agr) program. Selection criteria include academic performance and leadership in student and community affairs. This scholarship is not available to students receiving other scholarships of higher value.

Ralph H. Armstrong Memorial Award

The family and friends of the late Ralph Hallett Armstrong award a memorial award to a student who has successfully completed a first year of study at the Faculty of Agriculture. Former or current 4-H club members from Kings or Annapolis Counties in Nova Scotia are eligible. Selection is based on financial need and involvement in school, athletic and/or community organizations.

Associate Dean’s Scholarship

Awarded to a final year BSc (Ag) student based on academic merit.

Atlantic Council of Crop Life Canada Awards

Two awards are awarded to technical students from agricultural backgrounds who plan to pursue employment in the agricultural sector. Preference is given to students whose backgrounds, course and project work, summer employment and career plans reflect an interest in the crop protection industry.

Atlantic Poultry Conference Award

Awarded to a student whose course and project work reflect an interest in poultry. Preference will be given to seniors in the BSc (Ag) program who have either completed or have plans to complete a poultry-related research project in RESEM 4002/4003. This scholarship is offered bi-annually.

Dr. Roger S. Bacon Scholarship in Agriculture

In keeping with his lifetime interest and service to agriculture, the Honourable Dr. Roger S. Bacon Scholarship in Agriculture is awarded annually to a Nova Scotia student entering the final year of any program (technical, undergraduate or graduate) who has plans to pursue a long term career in agriculture. Selection criteria include career plans, academic performance and financial need. Dr. Roger S. Bacon was a family farmer and blueberry producer from Cumberland County, Nova Scotia, who served as an MLA for Iona constituency and during his political career was a well-respected and long serving Minister of Agriculture and for a time Premier of Nova Scotia.

Doug Bailey Memorial Scholarship

Farms Diary awards a scholarship to a student in any year of any program who is a family member of a farms Diary shareholder or employee, in memory of Doug Bailey, a former President and CEO. Selection criteria include leadership and extra-curricular and community activities, financial need and a sound academic record.

A. R. Banks Memorial Scholarship

Awarded to the second year BSc (Ag) student enrolled in the Animal Science option with the highest average from the first year of study.

Bible Hill Garden Club Scholarship

Awarded to a student from the Truro area. Preference is given to students at least the second year of study in Horticulture, preferably a landscape program. Selection criteria include academic performance and financial need.

David W. Brown Memorial Scholarship

The ACA Co-operative Limited/Eldis Valley Farms Limited awards two scholarships to students from either Nova Scotia or Prince Edward Island entering a second year of study. Selection criteria include financial need, academic performance, and interest in farming and in the poultry industry in particular.

Edward Brown Memorial Undergraduate Bursary

In memory of Edward Brown, Class of 1954, a bursary is awarded annually to an undergraduate student entering the fourth year of the BSc (Ag) program.

Dr. John Bubar Scholarship

Awarded to a New Brunswick student in the BSc (Ag) program in the second or third year and who is not in receipt of other significant scholarships. Selection criteria will include academic performance and financial need.

Merle Call Memorial Scholarship

Awarded to a senior undergraduate student or a graduate student from Atlantic Canada whose course or project work reflect an interest in organic agriculture. Selection criteria include academic performance, financial need and commitment to organic agriculture.

Vera Caldwell Memorial Bursary

Awarded to a deserving international student based on financial need. The bursary is in memory of Vera Caldwell who was a teacher and life-long learner who actively supported education for students from developing nations. Students who

608 Awards
In memory of Dr. Kenneth Cox, former Principal, this scholarship is awarded to a student entering the final year of the BSc (Agri) program.

Dorothy Creelman Cox Memorial Scholarship

Dorothy Creelman Cox was one of Dr. Kenneth Cox’s former students. She was an active member of the faculty and community, and her contributions were deeply appreciated.

Selection criteria include academic performance, demonstrated leadership ability, and interest in co-operation and co-operatives.

James Card Memorial Bursaries

At least three awards, sponsored by the estate of James Card, will be awarded to students in financial need. Preference will be given to international students.

Randy Casey Memorial Scholarship

A scholarship is awarded annually to a student from the Annapolis Valley entering a degree/diploma program at the Faculty of Agriculture who is interested in pursuing a career in agriculture. As a memorial to Randy Casey who worked for Stirling Fruit Farm for much of his life career, preference will be given to students with interests in the horticulture industry. Selection criteria include farm background and career plans, and academic performance.

Chartrons Scholarships

Compass Group Canada awards scholarships to outstanding students with high academic performance who have not qualified for other significant awards. Preference will be given to students living in residence.

Gerard Chiasson Memorial Award

The Inverness County Federation of Agriculture provides an award to a Cape Breton student who has completed at least one year of study at the Faculty of Agriculture. The bursary is awarded in memory of Gerard Chiasson, a past president of the Nova Scotia Federation of Agriculture who was also active in other local farm and community organizations. Selection criteria include financial need, involvement in community activities and leadership experience. Preference will be given to a student from Inverness County.

Chicken Producers of Nova Scotia Award

Awarded to a Nova Scotia student who shows a demonstrable interest in pursuing the study of poultry. Preference will be given to applicants with a farming background. Students in all years of study are eligible. A student may not receive this scholarship more than once.

Class of 1950 Award Fund

The Class of 1950 in commemoration of their fiftieth anniversary of graduation from the Dalhousie Faculty of Agriculture (formerly NSAC) established a fund to assist students in financial need.

George & Lottie Cook Memorial Scholarship

Awarded annually to a Nova Scotia student enrolled in the first or second year of the BSc (Agri) program. Selection criteria include academic performance and financial need.

The Renée Covill Scholarships

Established in 2010 by Bev’s husband, Bob, in recognition of her spirit and love of the garden at Dalhousie Faculty of Agriculture. The scholarship will go annually to a student who is enrolled in any year of study who has shown an interest in horticulture particularly landscape design and care. Preference will be given to mature students. Selection criteria will include career plans, academic performance and financial need.

Faculty of Agriculture Bursaries

Awards 609

Dairy Farmers of Nova Scotia Award

A scholarship is awarded annually to a returning student athlete based on financial need, involvement in a member of a college varsity team, recommendation from a coach and satisfactory academic performance.

Faculty of Agriculture Athletic Bursaries

Awarded to returning student athletes based on financial need, involvement in a member of a college varsity team, and satisfactory academic performance.

Faculty of Agriculture Bursaries

The Faculty of Agriculture has established a fund which will provide bursaries to assist students in financial need. Students must be in good standing and will have spent at least one term of full-time study at the Faculty of Agriculture and be registered on a full-time basis for both semesters for the full academic year. Students in need of financial assistance can apply for a bursary on an ongoing basis throughout the academic year.

Fall River Garden Club Bursary

Awarded to a student entering the second year of the BSc (Agri) program who has not received scholarships of higher value. Preference will be given to students from the Fall River, Waverley, Wellington, Oakfield, Lakeview or Windsor Junction, Nova Scotia areas. Other Nova Scotia students will be considered.

Farm Focus Scholarship

Awarded to a student entering the second year of study relating to horticulture. Preference will be given to students who have course and project work that reflect a commitment to environmental issues and career interests in growing plants (including farming). Selection criteria are academic performance, financial need and career plans.

Dorothy Creelman Cox Memorial Scholarship

Awarded to a female student entering the second year of the BSc (Agri) program in the Plant Science option. Selection criteria include academic performance and contribution to the college community.

Dr. Kenneth Cox Memorial Scholarship

In memory of Dr. Kenneth Cox, former Principal, this scholarship is awarded to a student entering the final year of the BSc (Agri) program.

Dartmouth Horticultural Society Scholarships

One scholarship will be awarded to a student beginning their studies in the Faculty of Agriculture who has committed their time and effort to raise awareness of social issues in their community and in their school. The second scholarship will be awarded to a returning student who has committed their time and effort to raise awareness of social issues in their community and on the Dalhousie Agricultural Campus. Secondary consideration will be given to academic performance and financial need.

Atlantic. Selection criteria include financial need, involvement in community activities and leadership experience. Preference will be given to students from the following priority: HRM; Nova Scotia; and elsewhere in Canada.

Ernest L. Eaton Memorial Scholarship

Awarded to a student entering the third year of the BSc (Agri) program who has not received scholarships of higher value. Selection is based on the student’s averages in the second year of their program.

Egg Farmers of Newfoundland & Labrador Scholarship

Awarded to a student entering the third year of the BSc (Agri) program. Selection criteria include financial need and academic performance. Preference will be given to students in the following priority: HRM; Nova Scotia; and elsewhere in Canada.

Faculty of Agriculture Alumni Family Scholarships

Awarded to family members of Dalhousie Faculty of Agriculture alumni. Selection criteria include academic performance and financial need. Students in any year of any program are eligible.

Farm Focus Scholarship

Awarded to a student entering the program of study relating to horticulture. Preference will be based on financial need and career plans. Preference will be given to students from the Fall River, Waverley, Wellington, Oakfield, Lakeview or Windsor Junction, Nova Scotia areas. Other Nova Scotia students will be considered.

Farm Focus Scholarship

Awarded to a student entering the second year of study. Selection is based on financial need and academic performance.

Ena Fenlon Memorial Scholarship

Sponsored by the Bedford Horticultural Society. Awarded to a second year student from the Bedford, Sackville, Wakefield district of Nova Scotia enrolled in Horticulture or Environmental Studies. In years where no student from Bedford, Sackville, Wakefield applies for the scholarship, consideration will be given to other students from HRM (excluding Haldimand and Dartmouth). Selection will be based on financial need, career plans and academic performance.

T. Bessie Milligan Gale Memorial Scholarship

Established in 2010 by Mrs.’s husband, Mr., in recognition of her spirit and love of the garden at Dalhousie Faculty of Agriculture. The scholarship will go annually to a student who is enrolled in any year of study who has shown an interest in horticulture particularly landscape design and care. Preference will be given to mature students. Selection criteria will include career plans, academic performance and financial need.
Awards

610 Awards

Dr. Herbert F. MacRae Memorial Dalhousie Faculty of Agriculture/ Macdonald College Exchange Award

This award is designed to support student and staff exchange between the Faculty of Agriculture of the Macdonald College of McGill University.

Joseph E. Mapleglock Memorial Bursaries

In honor of Joseph E. Mapleglock, who farmed for 50 years in Kings County, Nova Scotia, and in recognition of his appreciation for the importance of a good education, family members have established two bursaries to be made available to technology students at the Faculty of Agriculture. Eligible candidates will have successfully completed the first year of a technology program and demonstrate financial need. A letter of recommendation from a Faculty member must accompany this application. One of the two awards will be made available annually to a student in the Plant Science Technology program.

Bill MacKeown Memorial Award

In memory of Professor Emeritus Bill MacKeown, who taught Animal Science course work for 20 years, a bursary will be awarded annually to an Agriculture student in any year of any program to assist in furthering their education through travel/study to another country. This bursary has been made available through generous contributions from students, Faculty of Agriculture colleagues, friends and associates at church and within the agricultural industry, in particular, the sheep breeders of Nova Scotia. In applying for consideration students will submit a proposal to participate in such activities to study semester abroad toward their degree/diploma, attendance at a conference to make a presentation, a specialized training course or an internship or development project.

Donald McInnes Award

Sponsored by Pictus Mutual Insurance Company to commemorate the 40 years of service Donald McInnes provided on their Board of Directors. Selection criteria include commitment to and involvement in the community; leadership provided in student activities, academic performance and financial need. A student may not be selected for this award more than once.

H. A. L. McLaggan Memorial Scholarship

Awarded to a horticulture student in memory of H. A. L. McLaggan, who taught horticulture from 1953 to 1971.

Karen Meek Memorial Scholarship

In memory of Karen Meek who studied Agricultural Business at the Dalhousie Faculty of Agriculture (formerly NSAC), 1980-1982, a scholarship will be awarded annually to a student who has completed at least one year in the BSc (Ag) Environmental Science program. Selection criteria include academic performance, financial need and contribution to campus life. This scholarship is not available to students receiving other awards over $1,000.

John Miller Memorial Award

Awarded to an Nova Scotia student, in any year of any program whose course and project work reflect an interest in the hog industry. The bursary is in memory of John Miller, who served as Secretary Manager of Park Nova Scotia from 1983 to 1997.

John Reginald (Rog) Morel Memorial Scholarship

In memory of J. R. (Rog) Morel who graduated from Dalhousie Faculty of Agriculture (formerly NSAC) in 1947 and retired from a career with Farm Credit Canada, two bursaries are awarded to students from Colchester County, Nova Scotia, who have completed at least one year of study in any program at the Faculty of Agriculture. Selection will be based on financial need and some academic performance. To be eligible students must be maintaining a minimum 2.70 GPA in their cumulative studies. Preference will be given to students studying full-time.

A. C. Neish Memorial Trust Scholarship

Awarded to a student entering the final year of the BSc (Ag) program. Selection criteria include high academic performance and qualities of leadership as indicated by participation and achievement in both academic and non-academic activities.

Newfoundland and Labrador Federation of Agriculture Scholarships

To encourage local students to pursue careers in the Agri-products industry, the Newfoundland and Labrador Federation of Agriculture awards two scholarships to Newfoundland and Labrador students (preferably one from the East Coast and one from the West Coast) entering studies at the Faculty of Agriculture. Selection criteria include academic performance and financial need.
Newfoundland and Labrador Provincial Scholarships
The Newfoundland and Labrador government, through its Department of Education, awards three scholarships to Newfoundland and Labrador students entering a degree program at the Faculty of Agriculture. Selection will be based on academic performance.

Nova Scotia Animal Breeders’ Cooperative Limited Awards
Awarded to two students (one to a degree student and one to a technology student). Students must be returning Nova Scotia students studying in an animal science program whose home farm backgrounds, course and project work, and career interests reflect an interest in the dairy or beef industry.

Nova Scotia Federation of Agriculture Scholarship
Awarded to second year Nova Scotia students with farm or 4-H backgrounds (one technology and one degree). Selection criteria include financial need and academic performance.

Nova Scotia Federation of Agriculture 100th Anniversary Scholarship
In recognition of the 100th Anniversary of the Nova Scotia Federation of Agriculture in 1991, a scholarship is awarded to a Nova Scotia student with a farm background with financial need and solid academic record. Students studying in any year of an undergraduate program are eligible.

Nova Scotia Mink Breeders’ Association Award
In memory of Dr. Bruce Hunter, a recognized expert on naturally occurring diseases in mink. Awarded to a student in the BSc (Agri) Animal Science or similar program with an application to the mink industry. Preference will be given to a student whose course/project work demonstrates an interest in mink.

Nova Scotia Power Inc. University Scholarship
The Nova Scotia Power Inc. university scholarship is awarded to a Nova Scotia student entering on a full-time basis the first year of an undergraduate degree program at the Faculty of Agriculture. The scholarship is tenable for up to four years. Selection criteria include academic performance and demonstrated involvement in extra-curricular activities.

Nova Scotia Institute of Agrologists’ Scholarships
The NSA awards two scholarships to Nova Scotia students. One will be awarded to a student entering their third year of the BSc (Agri) program and the second, recognizing the current anniversary of NSA, to a student entering their second, third or fourth year of the BSc (Agri) program. A student may receive either award once.

Nova Scotia Veterinary Medical Association Bursary
The Nova Scotia Veterinary Medical Association Bursary will be awarded to a Nova Scotia student in the first year of the Animal Health Technology program. Selection criteria include financial need and academic performance.

Nova Scotia 4-H Club Council Award
Awarded to a second year Nova Scotia student in any program. Selection criteria include academic performance, financial need and participation in 4-H club activities.

Nutree Canada Inc. Scholarship
Awarded to a final year BSc (Agri) student in the Animal Science option. Selection criteria include academic performance, leadership qualities, and participation in student and community affairs.

Don Paully Award
Awarded in recognition of the many years of service and contributions to weed science in Nova Scotia by Don Paully to an undergraduate student who is carrying out a senior year research project in the area of pest management with a preference given to students involves in weed science, either through academic work or summer employment.

Robert Parent Memorial Scholarship
In memory of Robert Parent, Class of 1921, this scholarship will be awarded to an outstanding student studying in any year of any program who has not qualified for other significant awards.

Passionate Plants Person Award
Established by the Atlantic Rhododendron and Horticulture Society. Awarded to a second year Nova Scotia student in the Environmental Horticulture diploma program. Preference is given to students whose passion for plants is infectious and will most impact the way we regard and understand plants in both public and private environments. The student should also demonstrate communication and leadership abilities and financial need.

Pattern Law-Price Awards
Awarded to a full-time student who has achieved the highest grade in MGTA 2001 the previous year.

Purdue Nova Scotia Scholarship
Awarded to a Nova Scotia student with an interest in or background in swine production. Selection criteria include demonstrated interest in the swine industry (through course or project work), academic performance and financial need.

Pragnia Athletic Awards
These awards are awarded to returning students. These awards have been provided by Dr. André Letarte, a former Professor in the Animal Science Department. To be eligible students will be maintaining academic performance and will have been involved in either a varsity team or an intramural/recreational team. Selection criteria include financial need, leadership and contribution to student life.

Prince Edward Island Institute of Agrologists’ Scholarship
Awarded to a student from Prince Edward Island in the third or fourth year of the BSc (Agri) program. A student may not receive this award more than once. Selection criteria include academic performance, school and community involvement and financial need.

Stuart Breath Junior A Bearcat Hockey Education Award Fund
Awards are available to members of the Truro Junior A Bearcats Hockey Club. Selection is based on academic performance, community service and the recommendation of the team coaches. Students in second semester and second year must successfully complete the course work in the previous semester to be eligible for continued support.

Cliff & Grace Renu Memorial Scholarship
In memory of Cliff and Grace Renu, Class of 1934. International students in any year of program are eligible. Selection criteria include financial need, academic performance, and interest in and involvement in multi-cultural activities on campus.

Irene L. Rhodenizer Memorial Scholarship
In memory of Irene L. Rhodenizer, the Nova Scotia Federation of Agriculture honors a scholarship to a second year Nova Scotia student. Selection criteria include academic performance, involvement in student affairs and participation in the 4-H program.

J. Arnold Roberts Memorial Scholarship
Awarded to an outstanding student from Atlantic Canada studying in any year of any program who is not receiving scholarships of greater value.

Howard W. Power Memorial Award
Awarded by the Nova Scotia/Newfoundland Branch of Holstein Canada to students who have completed at least one year in any program. Preference will be given to second year students in the Diplomas in Business Management - Dairy Farming program. Applicants must be residents of Nova Scotia or Newfoundland and Labrador and members of Holstein Canada, or a member of a family with Holstein Canada membership. Selection criteria include: involvement in the dairy industry, extra-curricular involvement through athletics and clubs on campus, involvement in farm organizations, financial need and satisfactory academic performance.

Ted Rose Memorial Scholarship
Awarded to a student who plans to operate a livestock farm. Selection criteria include academic need, academic performance and a documented commitment to animal welfare.

Bonny Club of Truro International Student Bursary
Awarded annually by the Rotary Club of Truro to an international student. All students paying the international tuition differential are eligible for consideration. The students must be in both undergraduate and graduate programs. Preference will be given to students registered in a program of study and registered fall full time, with additional preference given to students studying for the full year. (With no more than four undergraduate students taking at least four courses per semester.) Special

Awards 611
Awards

Bruce Trenholm/Atlantic ’86 Scholarship
Awarded to a resident from Kings County, New Brunswick, working towards a degree or diploma in agriculture.

Gail Semple Memorial Scholarship
In memory of Gail Semple (nee Johnson, Truro, Nova Scotia), who had a strong commitment to animal welfare, a scholarship is awarded annually to a student who has completed at least one year of study and is planning to study veterinary medicine or who was admitted to AVC in the current year. To be eligible applicants must be either currently or previously registered as a Pre-Vet student, or currently in the first year of the DVM program at AVC, having completed their Pre-Vet requirements at the Faculty of Agriculture. Selection criteria include financial need, academic performance and a background with demonstrated experience in animal welfare. AVC students should contact awards@ualberta.ca for an application (application deadline: October 15th).

B. S. Sedli Memorial Bursary
Awarded to a student paying international student fees. Students in all programs of study are eligible. Preference will be given to students in undergraduate and technical programs and will be based on financial need.

Sport Leadership Award
The Sport Leadership Award recognizes a high school varsity athlete enrolting full time in a program of study and planning on participating in a sport at the varsity level at the Faculty of Agriculture. Applicants must have a high school average of 85% in the course required for admission to be eligible. Recipients of other major entrance scholarships are not eligible. Selection criteria include financial need, sport skills and leadership. The Sport Leadership Award may be renewable for one year.

Jennifer Hayes Starratt Scholarship
Named for Jennifer Hayes Starratt, who graduated in 1996 with a BSc (Agr) degree or diploma in agriculture. Awards are available to students entering the third or fourth year of the BSc (Agr) program. Selection criteria include financial need, academic performance and a background with demonstrated leadership qualities during their program.

Syngenta Pest Management Awards
Awarded to students whose course and project work reflect an interest in the Maritime potato industry. Applicants will be required to submit a 300-500 word essay expressing opinions on a topic relating to the crop protection industry - suggested topics include: the future of genetically modified plants/crops, the future of crop protection products in Maritime agriculture (the fit and relevance of the agri-chemical industry to today’s agric fixed industry). Selection criteria include academic performance, interest in the Maritime potato industry, and potato farming experience or background.

Eric Williams Memorial Scholarship
Sponsored by the Dairy Farmers of Newfoundland and Labrador. These scholarships are awarded to students from Newfoundland and Labrador who have completed at least one year of study at the Faculty of Agriculture in any program. Preference is given to students who have completed at least one year of study in the third or fourth year of the BSc (Agr) program. Selection will be based on academic performance and financial need. Preference will be given to someone with interest and experience in small farms.

Young Farmers’ Awards (sponsored by PEI Young Farmers’ Associations)
Awarded to a student returning to the Faculty of Agriculture for the last year of studies in either the degree program or other multiple year programs. To be eligible, a student must be a Prince Edward Island resident, must be returning to the Faculty of Agriculture for the last year of study in a program of study, and must be able to demonstrate financial need and potential impact of the bursary on the student’s lifestyle while at school.

F. W. Walsh Memorial Scholarship
In memory of the late Professor F. W. Walsh, this scholarship is awarded to a student who is admitted to the first year of a degree program at the Faculty of Agriculture. Selection is based primarily on academic performance. Financial need and participation in school and community affairs will also be considered.

Florence (Pineo) Ward Memorial Award
Awarded to students in financial need. Recipients will have completed at least one year of study in a technology, Bachel or BSc (Agri) program. Preference will be given to students with sound academic background who have come to the Faculty of Agriculture for technical training to enhance their employability but financial constraints are limiting their ability to continue their studies. Preference will be given to students from Boultier’s Point, Halifax County, and Advocate, Cumberland County.

Eric Williams Memorial Scholarships
Sponsored by the Dairy Farmers of Newfoundland and Labrador. These scholarships are awarded to students from Newfoundland and Labrador who have completed at least one year of study at the Faculty of Agriculture in any program (generally, one to a technical student and one to a degree student). Selection will be based on academic performance.

H. J. Fraser Memorial Prize for English
In memory of the late Professor H. J. Fraser, a prize is awarded to a second-year student who has achieved excellence and provided significant contribution to the discussion in a first-year English course at the Dalhousie Faculty of Agriculture.

Jack Harrington Memorial Scholarship
In memory of Jack Harrington, Class of ’70, a scholarship is awarded to a final year Diploma in Enterprise Management student. Selection criteria include leadership and involvement in athletic and other activities and a sound academic record.

Dr. Bill Jenkins Memorial Scholarship
In memory of Dr. Bill Jenkins, a graduate of the Class of 1938 who served as NSAC Principal from 1964 to 1972, a scholarship will be awarded to a second or third year undergraduate student in any of the Business degree programs. Selection criteria will include overall academic performance, leadership record and financial need.
2. Department of Engineering

- **Atlantic Farm Mechanization Show Scholarship**
  Awarded to a student from the Atlantic Provinces who has completed at least one year of study at the Faculty of Agriculture in the Engineering Diploma program or the Integrated Environmental Management major of the BSc (Agri) program. Selection is based on academic performance and the demonstrated potential for a career in the area of mechanization of agriculture.

- **Atlantic Land Improvement Contractors Association Award**
  Awarded to engineering students with a demonstrated ability and interest in soil, water, and land improvement.

- **Paul Babineau Memorial Scholarship**
  The Atlantic Farm Mechanization Show awards a scholarship in memory of Paul Babineau, a long-time Director on their board, to a student from the Atlantic Provinces who has completed at least one year of study at the Faculty of Agriculture in the Engineering Diploma program or the Integrated Environmental Management major of the BSc (Agri) program. Selection is based on academic performance and the demonstrated potential for a career in the area of mechanization of agriculture.

- **Donald E. Clark Memorial Scholarship**
  In memory of Donald E. Clark, former Professor and Head of the Engineering Department, one or more scholarships are awarded to final-year students in the Engineering Department. Selection criteria include academic performance, interest, and aptitude in the engineering field.

- **Nova Scotia Power Inc. Centennial Scholarships**
  Nova Scotia Power sponsors five scholarships with a two-year tenure to Engineering students entering the third year of the BEng program at Dalhousie Faculty of Engineering in September. Selection criteria include academic performance, personal attributes and involvement in extra-curricular activities. Applications must include a resume, transcript and essay, be submitted to the Head of the Engineering Department.

3. Department of Environmental Sciences

- **Charles M. Collins Memorial Scholarship**
  Awarded to a student enrolled in a program of study relating to Horticulture in memory of Charles McKim Collins who taught Horticulture at the Dalhousie Faculty of Agriculture (formerly NSAC) for 25 years, including supervision of the landscaping and maintenance of the campus grounds, and for whom the Collins Horticultural Building was named in 1975. Preference will be given to students studying in the Bachelor of Technology program in Environmental Landscape Horticulture who have not qualified for other significant awards.

- **John Higgins Memorial Scholarship**
  In memory of John Higgins who taught at the Dalhousie Faculty of Agriculture (formerly NSAC), the Atlantic Association of Landscape Designers sponsor a scholarship and a free association membership to a student entering the third year of the Bachelor of Technology in Environmental Landscape Horticulture program who has excelled in the area of landscape design during the Diploma in Technology (Managed Landscapes) program. Selection criteria include academic performance and skill and interest in landscape design.

- **Landscape Nova Scotia Award**
  Awarded to a Nova Scotia student studying in a landscape related program. Selection criteria include academic performance and financial need.

- **Raymond Webber Memorial Scholarship**
  Landscape Nova Scotia and the New Brunswick Horticultural Association jointly award a scholarship to the most promising second-year Diploma in Technology (Managed Landscapes) student. Selection criteria include academic performance and practical skills.

4. Department of Plant and Animal Sciences

- **Canadian Society of Animal Science Prize**
  The Canadian Society of Animal Science presents a book prior to a student in the fourth year of the Animal Science or Aquaculture options of the BSc (Agri) program. This award is selected on the basis of outstanding scholarship. No application is required.

- **Colonel Charles Coll Memorial Scholarship**
  Awarded to a student in the final year of an Animal Science major. Selection criteria include academic performance, involvement and interest in poultry, and achievement and contribution to 4-H.

- **Eastern Veterinary Technicians Association Bursary**
  Awarded to a student entering the second year of the Veterinary Technology program whose performance in the first year has demonstrated a caring attitude and a commitment to others. Students must not have received other scholarships of greater value.

- **Nova Scotia Egg Producers Association Scholarships**
  Awarded to students enrolled in the Animal Science major of the BSc (Agri) program whose course and project work show an interest in poultry. At least one scholarship will be awarded to a final-year student conducting a poultry related research project in RESM 4002 and RESM 4003.

- **G. G. Smeltzer Memorial Award**
  Awarded to a student entering the second year of the Veterinary Technology program whose performance in the first year has demonstrated a caring attitude and a commitment to others. Students must not have received other scholarships of greater value.

C. Faculty of Architecture and Planning

These scholarships are administered by the academic unit. Please consult the Faculty of Architecture and Planning for additional information.

- **75th Anniversary Alumni Family Scholarship**
  The Engineering Alumni Association established this award in 1995 in recognition of the 75th anniversary of the Association. This award of $1,750 is open to students registered in the penultimate or final undergraduate year of Computer Science, Architecture, Planning, or Engineering. The recipient must be a family member (son/daughter, spouse, grandchild, niece/nephew, brother/sister) of an engineering graduate and have achieved satisfactory academic standing. Application required. Deadline: September 30.

- **Aliant Amphora Scholarship**
  A one-year scholarship open to students registered in Year four or five of an Architecture, Planning, Computer Science, or Engineering program. Selection is carried out by the Scholarship and Awards Committee of the Faculty of Engineering. Application required. Deadline: September 30.

- **The Harry Kitz Fund**
  Interest from the fund, established in memory of the late Harry Kitz, is used to support one or more students in the Faculty of Architecture and Planning to undertake architectural design, research, or construction activities on public property in the Halifax Regional Municipality. Proposals are evaluated on their imagination, practicality, and potential value to the community. Application Deadline: May 31.

- **Mazankowski Foundation Entrance Scholarship**
  This foundation has established a $1,100 award for a student who fulfills or is expected to fulfill the minimum entrance requirements for admission to the BEDS program in Architecture or year three of the Bachelor of Computer Science or Engineering. The Scholarship is awarded on the basis of the applicant’s academic record at the Associated University of the Dalhousie University. The Committee may also weigh financial and other considerations in reaching a decision. Application required. Deadline: April 30.

- **The Jedlick Architectural Design Scholarship**
  The Centennial Group of Companies Limited established this award of $2,000 for a student with an outstanding record in Design in year three of the BEDS program. The successful applicant is selected at the year-end review in April and receives the scholarship at the start of the next academic term, in May. Application not required.

- **The Newfoundland and Labrador Association of Architects William J. Ryan Memorial Scholarship**
  The Newfoundland and Labrador Association of Architects established this $2,000 award to an Architecture student entering year four of the BEDS program who was born in...
Newfoundland and Labrador or had lived in the province for a minimum of three years prior to entering a university in the province, and who demonstrates: (a) the best design ability through assigned projects; (b) practicality of design and ability to show that she or he can make the solution workable; (c) aptitude for a particular or several aspects, other than design of architecture and the built environment; (d) an indication of the development of professional ability; (e) highest overall marks in classes of study other than design; (f) financial need, if candidate is equal to others at least three of the other criteria. Application not required.

Newfoundland and Labrador Alumni Undergraduate Scholarship

This award of $5,000 was established by the St. John’s Newfoundland Alumni Branch to a student registered in year four in Architecture, Planning, Computer Science, or Engineering. The scholarship is awarded primarily on the basis of the applicant’s academic record (first class mandatory) with preference given to students who were residents of Newfoundland and Labrador immediately prior to attending Dalhousie. The selection committee may weigh other considerations in reaching a decision. Deadline: September 30.

President’s Associates Entrance Scholarship

The President’s Associates Entrance Scholarship has been made possible by members of the Associate’s Program (1994-96). The members represent business, industry, friends, faculty, and university administrators. This award of $1,000 is made annually to a student in undergraduate Architecture, Planning, Computer Science or Engineering on the basis of their academic record. Candidates must have fulfilled or expect to fulfill the entrance requirements for the B.EDS program in Architecture or for entrance into third year of Engineering or Computer Science. Deadline: April 30.

Salvator Paradise Scholarship

Two scholarships, each worth $4,500 (subject to annual review), are awarded to a full-time fourth year Bachelor of Environmental Design Studies student and a full-time fifth year Master of Architecture student. They are based on the students’ practicability of design, collaboration, improvement during the architecture program, and financial need. Preference is given to students who are permanent residents of Atlantic Canada and who show potential for managing a private practice in architecture. Application deadlines: first week of January (B.EDS) and first week of May (M. Arch (MICH)).

The Shaw Group Environmental Design Scholarship

In the 1980s, The Shaw Group Limited established an award for the student in the School of Architecture who has derived the greatest benefit from Design courses during year three of the Bachelor of Environmental Design Studies program. To be eligible for this $2,500 award, a student must have been born in, and have permanent residence in, Atlantic Canada. The recipient is selected at the year-end review in April and receives the scholarship at the start of the next academic term in May. No application is required.

D. Faculty of Arts and Social Sciences

The following scholarships are administered by the Registrar’s Office. Applications are not required.

Nathan T. Ashkins Scholarship

Each year the Nathan T. Ashkins fund provides for a scholarship to a student in Arts and Science who is in beyond first year.

Robert Bruce Scholarship

Robert Bruce of Banlieue, Quebec, made a bequest to the University to establish bursaries and scholarships.

Dalhousie Club of New York Scholarships

A fund for this purpose, established by the Dalhousie Club of New York and placed in the hands of the Board of Governors of the University, endows several scholarships open to students in the Faculties of Arts and Social Sciences or Science.

Dr. Frederick J. Gaudet Scholarship

Dr. Gaudet bequeathed to the University in 1978 a sum of money to provide for a scholarship in Arts.

The Hymat J. Jacobson Scholarship

Under the will of the late Hymat J. Jacobson a bequest of $5,000 was given to the University to benefit the Humanities and Social Sciences.

The Khaki University Scholarships

From the Khaki University of Canada and the Young Men’s Christian Association Memorial Scholarship Fund, the trustees of Khaki University made a gift to Dalhousie University in 1923 of $6,000 to endow scholarships.

NewPage-Port Hawkesbury Mill Undergraduate Scholarship in Arts or Science

On the occasion of their 75th Anniversary St. Onus Ema have established an endowment to provide one undergraduate scholarship open to students in Arts and Science. To be eligible, candidates must reside in Nova Scotia, have demonstrated academic excellence and have exhibited a desire to learn. Students will be considered after one year at Dalhousie.

The Commodore Bruce S. Oland Scholarship

An annual scholarship that alternates between the Department of English and the Faculty of Management. Awarded automatically by the Registrar’s Office.

The Alan Pollack Scholarship

This scholarship of $1,000 was established by The Scots North British Society in Halifax in memory of the Rev. Dr. Alan Pollack. The awardee will be a second year student in the College of Arts and Science at Dalhousie University.

The Charles and Cecilia Zoeuling Scholarship

This fund was created by members of the Zoeuling family in memory of Mr. and Mrs. Charles Zoeuling for a scholarship beyond first year.

The following scholarships are administered by the academic unit. Please consult the departments or schools directly for details.

1. English

Allan and Una Bevan Memorial Scholarship

Colleagues and friends of the late Allan Bevan have established a memorial scholarship of about $1,000 a year. The scholarship is to be awarded, in the first place, to a student in the Major program (but in a student entering the third or fourth year of the Majors program). In the absence of a suitable candidate from the Major program, the scholarship will be awarded to a student entering the third or fourth year of the Honours program. If there are no suitable candidates from English, the selection will be made by the School of Performing Arts.

The Archibald MacMechan Chapter/IODE Scholarship in English

This scholarship was presented to Dalhousie University as an endowment by the Archibald MacMechan Chapter, Imperial Order Daughters of the Empire. It is awarded to a Dalhousie student of special ability in English, and preference is given to graduates who intended to study for a Master’s degree in English. Students registered at King’s are not eligible.

2. French

The French Department Scholarship

The French Department Scholarship is awarded to students entering the third or fourth year of a major or an Honours program in French, and who have spent a year studying in France. The award is based on merit and potential in French courses. At the discretion of the Department, the scholarship may also be awarded to outstanding students who have not studied abroad. This award is confirmed at a Departmental ceremony in the spring.

The Ruth Murray Scholarship for French Studies

An endowment fund has been established to honour the memory of Mrs. Ruth Murray by providing scholarships to students in the Department of French. These scholarships are open to undergraduate students who are academically sound and who are participating in a departmental program abroad. At the discretion of the Department, the fund may also be used to provide financial assistance for on-campus students majoring in French who have demonstrated above average academic ability. This award is confirmed at a Departmental ceremony in the spring.

3. History

The Atlantic World History Scholarship

Before travel and tourism became so common a part of everyday life, the connection between people and places was more intimate. This scholarship was created by Dalhousie History graduate Susan Boggie to encourage excellent senior students whose undergraduate studies have focused on the history of the social, cultural,
economic and political worlds that have been connected across and around the Atlantic Ocean. Recipients will have taken one or both of the History Department’s second year survey courses in Atlantic World history, as well as two or more other courses with substantial Atlantic World content. This scholarship is awarded annually.

The Gilbert F. Jones History Scholarship
This annual scholarship established by Dalhousie Music graduate Gilbert F. Jones will be awarded to an undergraduate student in their third year of study with a concentration in History. Preference will be given to students whose area of interest is in exploring the field of the Atlantic World and its relationship to the study of Atlantic Canada.

Laurel V. King Scholarship
This scholarship, in the amount of $1,000, has been established by Laurel V. King to reward students who have been particularly motivated by the discipline of History to achieve academic excellence. The scholarship is awarded annually to a student in the second or subsequent year of her degree program. The recipient will have History as a subject of concentration, will have shown good academic ability, and will have shown an excellent level of performance in History courses.

Preference is given to a female student.

The George E. Wilson Memorial Scholarship
On the occasion of the 50th anniversary of the graduation of the Class of 1938, a representative announced the establishment of a scholarship fund. The scholarships, in honour of Professor Wilson, are open to students in history.

4. Music, Fountain School of Performing Arts

The Bornoff/Garamie Memorial String Scholarship
A scholarship will be given to a student who is entering the third or fourth year of a music degree program who in the opinion of the School has demonstrated outstanding talent as a string player. The fund was established to honour the memory of two significant string music teachers, George Bornoff and Arthur Garamie.

Esano Audio Group Scholarship
A $1,000 scholarship will be awarded to a student in the third or fourth year of the Bachelor of Music concentration in Composition. To be eligible, students must be Canadian citizens or landed immigrants and must demonstrate artistic excellence and a commitment to performing arts in the community.

Honourable L. D. Currie Memorial Scholarship in Music
This fund is in memory of the Honourable Lauzon D. Currie in 1971. An annual scholarship in the amount of $1,000 is available to a Canadian in any year of Music. The successful student will have demonstrated competence in vocal or instrumental performance.

The Elvira Gonnella Scholarship in Voice
The Elvira Gonnella Scholarship in Voice, established in 1974, is given to a voice student entering his/her third or fourth year of a music degree program who in the opinion of the School has demonstrated a particular interest in continuing her career in the arts. Preference is given to students entering the third year of the Bachelor of Music (Vocal Performance) program or equivalent. If there are no eligible students in a given year, consideration may be given to a student entering his/her fourth year of University. The scholarship may also be split into two awards. The recipient will have a cumulative GPA of 3.50 or higher.

5. Spanish and Latin American Studies

Sonia Jones Scholarship
The Sonia Jones Scholarship provides assistance to advanced students of Spanish and Latin American Studies (honours or major) who are studying abroad in programs approved by the School.

6. Theatre, Fountain School of Performing Arts

Costume Studies Scholarship
Awarded annually to a full-time student in the final year of the Costume Studies Program.

Lyn Gratznick-Theatre Arts Guild Scholarship in Costume Studies
To honour the memory of Lyn Gratznick, this scholarship is awarded annually to one (or more) students in the Fountain School of Performing Arts’ Costume Studies Program who has (have) demonstrated artistic excellence in costume-making for theatre and who intends to pursue a career as a costume designer for a professional theatre company or an historic site.

Richardson Family Performing Arts Scholarship - Theatre
Four scholarships awarded annually to Theatre students entering their third or fourth year of Theatre study, one in each of the following areas: Acting, Costume Studies, Scenography and Technical Theatre and Stage Design, and Theatre Studies. Eligible students must demonstrate artistic excellence and have career aspirations focused on performing arts.

Richardson Family Performing Arts Scholarships - Theatre

Christine Zinck Scholarships
Four scholarships awarded annually in each of the four streams of Theatre: Acting, Costume Studies, Scenography and Technical Theatre and Stage Design and Theatre Studies.

Awards

Architecture, Planning, Computer Science, or Engineering program. Selection is based on a combination of grades and demonstrated financial need. Preference will be given to students who can demonstrate a financial need. Application required. Deadline: April 30.

Bruce and Dorothy Rosetti Engineering Entrance Scholarships

The Bruce and Dorothy Rosetti bequest provides five $1,000 awards to undergraduate students in the penultimate year of a program in Computer Science. Selection is made on the basis of the students’ academic record at Dalhousie. Application required. Deadline: September 30.

The Walter Gardner Stanfield Entrance Scholarships

The Walter Gardner Stanfield bequest provides two awards valued at $1,000 each to students who fulfill or expect to fulfill the minimum entrance requirements into third year of Engineering or Computer Science. Application required. Deadline: April 30.

Newfoundland and Labrador Alumni Undergraduate Scholarships

This award of $1,000 was established by the St. John’s Newfoundland Alumni Branch for a student registered in the second year in Architecture and Planning, Computer Science, or Engineering. The scholarship is awarded primarily on the basis of the applicant’s academic record (first class mandatory) with preference given to students who were residents of Newfoundland and Labrador immediately prior to attending Dalhousie. The selection committee will weigh other factors in reaching a decision. Application required. Deadline: September 30.

President’s Associates (Entrance) Scholarships

The President’s Associates Entrance Scholarship has been made possible by the generosity of business, industry, friends, faculty and university administrators. This award of $1,000 is given to a student in undergraduate Architecture and Planning, Computer Science or Engineering on the basis of the academic record. Candidates must have fulfilled or expect to fulfill the entrance requirements for an undergraduate degree program in Architecture or for entrance into third year of Engineering or Computer Science. Application required. Deadline: April 30.

F. Faculty of Engineering

Unless otherwise noted, applicants for these awards apply to the Scholarships and Awards Committee of the Faculty of Engineering. Students applying from Associated Universities for third year may obtain application forms from the Director/Head/Chair of Engineering at the Associated University or through the Office of the Associate Dean of Engineering at Dalhousie. Application deadlines for awards in this section are stated.

Hira and Kamal Abjja Engineering Scholarship

This scholarship valued at $2,000 has been established in memory of Mrs. Kamal Abjja, by her family. Prof. Abjja was Director of Continuing Education at the Technical University of Nova Scotia. Candidates must have fulfilled the requirements for entry to year three of any Engineering program at the time of application. The award is based on a combination of grades and demonstrated financial need. Preference will be given to students who can demonstrate a significant cultural contribution to the East India community. Interested students must complete an application form and a covering letter, explaining their qualifications for this award. Application required. Deadline: April 30.

A. David Blair Scholarship

An endowment has been established to provide an annual scholarship in memory of A. David Blair, who graduated from Dalhousie in 1967 with a BSc degree. Candidates for the scholarship will be those who have fulfilled the requirements for promotion from year two to year three in the Dalhousie Faculty of Engineering. The awardee will have achieved high academic standing and demonstrated financial need. Application deadline: April 30.

The Dr. Alan E. Cameron Scholarship

An anonymous donor established this award of $1,000 for students registered in the senior year of the Faculty of Engineering. The recipient will be selected on the basis of personality, leadership and scholarship. The letter of nomination on application should convey to the Committee the reasons the nominee or applicant is deemed worthy of the award. The Committee will accept either nominations or applications, by letter addressed to the Associate Dean of Engineering. Application required. Deadline: September 30.

The Atlantic Farm Mechanization Show established this award of $1,000. Eligible applicants are Canadian citizens/landed immigrants, residents of Atlantic Canada who are entering the Biological Engineering Program at Dalhousie. The scholarship is awarded on the basis of the applicant’s academic record at the Associated University or the previous years at Dalhousie with particular emphasis on performance in the machinery related courses - statics, strength of materials, dynamics of particles and dynamics of rigid bodies. The award is made on the recommendation of the chair of the Biological Engineering Program in consultation with the director of the student’s Associated University and with the faculty members of the Department of Biological Engineering. Application required. Deadline: April 30.

An anonymous donor established this award of $1,000 for students registered in the senior year of the Faculty of Engineering. The award is based primarily on the academic record of the applicant during the junior year, but will also take into account the personality, leadership ability and financial need of the applicant. Application required. Deadline: September 30.

CBE Limited, Consulting Engineers’ Scholarship

CBE Limited, Consulting Engineers established this award valued at $1,000. Eligible students are required in their senior or fifth year of Civil, Industrial, Mechanical or Electrical Engineering programs in the Faculty of Engineering. The Scholarship is awarded primarily on the basis of the applicant’s academic record. Other factors such as personality, initiative, community involvement, other awards held by the applicant, etc. may also weigh in the decision. Application required. Deadline: September 30.
Design and Construction Institute Engineering and Architecture Scholarship
The Design and Construction Institute (DCI) is a voluntary organization consisting of over 75 industry leaders whose common goal is to foster and advocate for the design and construction industry in Nova Scotia. This scholarship, valued at $1,000, will be awarded annually to students who show an aptitude for or are interested in the design and construction industries in Nova Scotia. The award will rotate between the Engineering and the Architecture and Planning Faculties. Candidates shall be in years 3 or 4 of an Engineering program or in the first year of the Masters in Architecture program. Students will be selected based on academic achievement and recommendations from professors. The recipient will submit a letter to DCI demonstrating their commitment to pursuing a career in the design and or construction industry. Application deadline: September 30.

The Percy Bertram Jollota Scholarship
Under the Will of the late M. Roy Foran, the University received an endowment which provides an annual scholarship for a student enrolled in their final year of the Chemical Engineering program with exceptional academic standing. Application required. Deadline: September 30.

The Dr. H. W. L. Doane, F. E. I. C. Scholarship
Nova Scotia Power Inc. established this scholarship valued at $400 in 1981 in recognition of dedicated service rendered by Mr. Doane as a member of the Nova Scotia Power’s Board of Directors from 1913 to 1981. A distinguished engineer, Mr. Doane graduated from Dalhousie in 1913, was invested as an Honorary Doctor in 1957, was presented with the Sexton Memorial Award in 1964, and was honorary president of the University’s Alumni Association. Eligible students are Nova Scotia students registered in the senior year of Civil Engineering. Basis is academic achievement, leadership ability and qualities of personality and character. Application required. Deadline: September 30.

The James L. Hall Scholarship
The recipient will submit a letter to DCI demonstrating their commitment to reaching a decision. Application required. Deadline: September 30.

The Jaeger, Mufti, Bakht and Tadros Engineering Scholarship Fund will provide one or more scholarships for engineering students, accepted into the third year of their undergraduate program in the Faculty of Engineering. The scholarship alternates between Engineering and Earth Sciences. Application not required.

discussed an interest in mathematical modeling and finite element analysis of academic record at Dalhousie. Preference will be given to a student who has completed his/her first year, who is planning on a career in Engineering or Geology with preference to those with interest in the field of Mining Geology. Application not required. Deadline: October 31.

The Jaeger, Mufti, Bakht and Tadros Engineering Scholarship Fund will provide one or more scholarships for engineering students, accepted into the third year of their undergraduate program in the Faculty of Engineering. The scholarship alternates between Engineering and Earth Sciences. Application not required.

The John J. Jodrey Scholarship
John J. Jodrey established this award valued at $2,000. Eligible students are Atlantic Canadian students registered in the penultimate year of an Engineering program. The scholarship is awarded on the basis of the applicant's academic record at Dalhousie University. Application required. Deadline: September 30.

The Percy Bertram Jollota Scholarship
Under the Will of the late M. Roy Foran, the University received an endowment which provides an annual scholarship for a student enrolled in their final year of the Chemical Engineering program with exceptional academic standing. Application required. Deadline: September 30.

Under the Will of the late M. Roy Foran, the University received an endowment which provides an annual scholarship for a student enrolled in their final year of the Chemical Engineering program with exceptional academic standing. Application required. Deadline: September 30.

The Dr. H. W. L. Doane, F. E. I. C. Scholarship
Nova Scotia Power Inc. established this scholarship valued at $400 in 1981 in recognition of dedicated service rendered by Mr. Doane as a member of the Nova Scotia Power’s Board of Directors from 1913 to 1981. A distinguished engineer, Mr. Doane graduated from Dalhousie in 1913, was invested as an Honorary Doctor in 1957, was presented with the Sexton Memorial Award in 1964, and was honorary president of the University’s Alumni Association. Eligible students are Nova Scotia students registered in the senior year of Civil Engineering. Basis is academic achievement, leadership ability and qualities of personality and character. Application required. Deadline: September 30.

The James L. Hall Scholarship
The recipient will submit a letter to DCI demonstrating their commitment to reaching a decision. Application required. Deadline: September 30.

The Jaeger, Mufti, Bakht and Tadros Engineering Scholarship Fund will provide one or more scholarships for engineering students, accepted into the third year of their undergraduate program in the Faculty of Engineering. The scholarship alternates between Engineering and Earth Sciences. Application not required.

The John J. Jodrey Scholarship
John J. Jodrey established this award valued at $2,000. Eligible students are Atlantic Canadian students registered in the penultimate year of an Engineering program. The scholarship is awarded on the basis of the applicant's academic record at Dalhousie University. Application required. Deadline: September 30.

The Percy Bertram Jollota Scholarship
Under the Will of the late M. Roy Foran, the University received an endowment which provides an annual scholarship for a student enrolled in their final year of the Chemical Engineering program with exceptional academic standing. Application required. Deadline: September 30.

Awards

Dr. S. K. Malhotra, former Dean of Graduate Studies and Professor for Civil Engineering. The $1,500 scholarship was established by his family and friends in memory of him. Application required. Deadline: September 30.

J. Douglas Kline Memorial Scholarship

The Halifax Water Commission established this award of $2,500. Eligible students are Nova Scotia students registered in the final year of the undergraduate Civil Engineering program in the Faculty of Engineering. The applicant must be involved in water-related studies in Civil Engineering. The scholarship is awarded on the basis of the applicant’s record at Dalhousie University. While academic excellence will be the primary criterion for the award, the selection committee may also weigh other considerations in reaching a decision. Application required. Deadline: April 30.

The Donald MacFadgen Memorial Scholarship

T. Donald MacFadgen to provide an annual scholarship to one or more worthy students demonstrating greatest improvement from the first to second year of the engineering degree program. Application not required.

Dorothy Macdonald Crummey Memorial Scholarship

This award was established by the family of the late Dorothy Macdonald Crummey to provide an annual scholarship to one or more worthy students entering their second year of study in the Bachelor of Applied Science (Food Science) Program. Ms. Macdonald attended the Halifax Ladies College (an affiliate of Dalhousie University), graduated with a diploma in Household Science in 1932 and worked as a dietitian at the Victoria General Hospital in Halifax. She married R. Donald Macdonald, an electrical engineer from the Nova Scotia Technical College. The scholarship is awarded to a male Dalhousie engineering student who was born in Nova Scotia and attended schools in Nova Scotia. The successful candidate will be among those who have fulfilled the requirements for promotion from year two to year three in the Dalhousie Faculty of Engineering. The recipient must have achieved excellent academic standing and demonstrated greatest improvement from the first to second year of the engineering degree program. Application not required. Deadline: September 30.

The Gordon C. McCausland Scholarship

This foundation has established a $3,100 award for a student who fulfills or is expected to fulfill the minimum entrance requirements for admission to the BDS program in Architecture, or for three of the Bachelor of Computer Science or Engineering. The scholarship is awarded on the basis of the applicant’s academic record at the Associated University or at Dalhousie. The Committee may also weigh financial and other considerations in reaching a decision. Application required. Deadline: April 30.

The Minas Basin Pulp and Power Company Limited Scholarships

Preference will be given to students from the Atlantic Provinces, the first studying Civil Engineering. The scholarship is awarded to the student with the highest academic achievement in the course “Corrosion an Degradation of Materials” or to an undergraduate student who receives top marks in a corrosion-related research project. The winner is expected to meet the local NACE International Section members and encourage to become a student member with the initial membership fee covered by the membership. Deadline: September 30.

The Minas Basin Scholarship

This award was established in 1985. Eligible candidates must have fulfilled or expect to fulfill the minimum entrance requirements into third year of the undergraduate Civil Engineering program in the Faculty of Engineering. The award is made on the basis of the applicant’s academic record at the Associated University or at Dalhousie. Selection is carried out by the Scholarships and Awards Committee of the Faculty of Engineering on the recommendation of the Chair of the Civil Engineering program. Application required. Deadline: April 30.

The George Geoffrey Meyrath Scholarship

Dr. George Geoffrey Meyrath established this award of $1,000. Eligible students are registered in the senior year of Civil Engineering in the Faculty of Engineering. The award is based primarily on the academic record of the applicant during the junior year, but will also take into account personality and leadership ability. A letter of nomination or application should convey the nominee’s or applicant’s own worthiness of the award. Selection will be carried out by the Scholarships and Awards Committee of the Faculty of Engineering in consultation with the Chair of the Civil Engineering program. Application required. Deadline: September 30.

Gordon C. McCausland Scholarship

Dr. Elizabeth C. McCausland established this award of $1,000. Eligible candidates must have fulfilled or expect to fulfill the minimum entrance requirements into third year of an undergraduate program in the Faculty of Engineering in the field of Mineral Resource and Materials Engineering. Application required. Deadline: April 30.

The John R. Kaye Memorial Scholarship

In 1981 a scholarship was established in memory of Mr. John R. Kaye, a notable engineer who served as Chairman of the Board at the Technical University of Nova Scotia, and received an honorary doctorate in 1961. This scholarship is to provide financial assistance to an engineering student who is a native born Nova Scotian, and well-rounded individual. The successful candidate will be among those who have fulfilled the requirements for promotion from year one to year two in the Dalhousie Faculty of Engineering. She will be academically sound and will have demonstrated motivation, diligence, and promise in succeeding and being a credit to the engineering profession. Application not required.

The Beef, Batten, and Associates scholarship provides financial assistance to a student who is a native born Nova Scotian, and well-rounded individual. The successful candidate will be among those who have fulfilled the requirements for promotion from year one to year two in the Dalhousie Faculty of Engineering. She will be academically sound and will have demonstrated motivation, diligence, and promise in succeeding and being a credit to the engineering profession. Application not required.

Dr. George Geoffrey Meyrath established this award of $1,000. Eligible students are registered in the senior year of Civil Engineering in the Faculty of Engineering. The award is based primarily on the academic record of the applicant during the junior year, but will also take into account personality and leadership ability. A letter of nomination or application should convey the nominee’s or applicant’s own worthiness of the award. Selection will be carried out by the Scholarships and Awards Committee of the Faculty of Engineering in consultation with the Chair of the Civil Engineering program. Application required. Deadline: September 30.
Dalhousie. This award of $1,000 is variable up to three years or more, subject to maintenance of an acceptable academic average. Eligible candidates must be "black" Canadian-born in Nova Scotia. The scholarship is awarded primarily on the basis of the applicant’s academic record for admission into third year and on the basis of the academic record at an Associated University or at the University entrance level. Other factors such as personality, initiative, community involvement and other awards held by the applicant may also be considered. Application required. Deadline: April 30.

Newfoundland and Labrador Alumni Undergraduate Scholarship
This scholarship of $1,000 was established by the St. John’s Newfoundland Alumni Branch. The scholarship is awarded on the basis of the applicant’s academic record (first class mandatory), with preference given to students who were residents of Newfoundland and Labrador immediately prior to attending university. The selection committee may consider other criteria in reaching a decision. The student must be registered in year four at Dalhousie in a program in Architecture, Planning, Engineering, or Computer Science. Application required. Deadline: September 30.

Everette Patterson Memorial Scholarship
This scholarship, valued at $2,000, was set up by a bequest from the estate of the late Allan D. Nickerson. It was established in memory of Allan D. Nickerson to promote academic excellence in Engineering studies. It is awarded primarily on the basis of the applicant’s academic record (first class standing). Mr. Nickerson graduated from the Nova Scotia Technical College in 1929. He received an Honorary degree (DEng) from the College in 1969. Nickerson to promote academic excellence in Engineering studies. It is awarded primarily on the basis of the applicant’s academic record while in attendance at this University. The Selection Committee may also weigh other factors in reaching a decision. Application required. Deadline: September 30.

Bruce and Dorothy Rosetti Engineering Undergraduate Scholarships
Bruce and Dorothy Rosetti established this award of $1,000 for men and women students who are registered in the penultimate year of a program in the Faculty of Engineering. The scholarship is awarded on the basis of the applicant’s academic record at the University and in the initial two years of study. Application required. Deadline: April 30.

Dr. Edward (Ted) Rhodes Scholarship in Engineering
Dr. Edward Rhodes, former President of the Technical University of Nova Scotia and former Principal of Dalhousie has established an annual scholarship to a third or fourth year Engineering student who has maintained an interest in music or the arts. Application required. Deadline: September 30.

Howard Ripley Scholarship
At the bequest of Howard Ripley, an endowment was established in 1935 to support one or more undergraduate scholarships annually to students registered in the Mechanical Engineering program. Professor Ripley graduated from NS Technical College in 1933. The award is based on academic excellence, with a preference given for alumni of Charles P. Allen High School, Bedford, NS. Subject to annual review, the scholarship is renewable so long as the recipient maintains an academic standing in the top quartile of all students registered in the Mechanical Engineering program. Application deadline: April 30.

The Nova Scotia Women in Engineering Scholarship
This scholarship, valued at $2,000, was established by the St. John’s Newfoundland Alumni Undergraduate Scholarship. The scholarship is awarded on the basis of the applicant’s academic record. The scholarship is awarded on the basis of the applicant’s academic record. Eligible candidates are registered in the Faculty of Engineering at Dalhousie. The selection committee may weigh other factors in reaching a decision. Application required. Deadline: September 30.

Bruce and Dorothy Rosetti Engineering Undergraduate Scholarships
Bruce and Dorothy Rosetti established this award of $1,000 for men and women students who are registered in the penultimate year of a program in the Faculty of Engineering. The scholarship is awarded on the basis of the applicant’s academic record at the University and in the initial two years of study. Application required. Deadline: April 30.

The Bruce and Dorothy Rosetti Bursary Scholarship
This bursary of $1,000 was established by the St. John’s Newfoundland Alumni Branch. The scholarship is awarded on the basis of the applicant’s academic record. Application required. Deadline: April 30.

The Shaw Group Scholarship in Civil Engineering
Since 1999, The Shaw Group Limited has awarded annually a one-year scholarship for the student who achieves the highest GPA within Civil Engineering studies and who has completed the penultimate year in Civil Engineering studies. To be eligible for the $2,500 award, a student must have been born in, and have a permanent residence in Atlantic Canada. The Scholarships and Awards Committee of the Faculty of Engineering selects the winner. Application required. Deadline: September 30.

The C. W. S. Sales Memorial Scholarships
In 1960, William Stairs, Son & Morrow Limited of Halifax, on the occasion of the 25th anniversary of the company in Nova Scotia. Eligible candidates are registered in the penultimate year of a program in the Faculty of Engineering. The scholarship is awarded on the basis of the applicant’s academic record. Eligible candidates are registered in the penultimate year of a program in the Faculty of Engineering. The scholarship is awarded on the basis of the applicant’s academic record. Application required. Deadline: September 30.

Dr. Edward (Ted) Rhodes Scholarship in Engineering
Dr. Edward Rhodes, former President of the Technical University of Nova Scotia and former Principal of Dalhousie has established an annual scholarship to a third or fourth year Engineering student who has maintained an interest in music or the arts. Application required. Deadline: September 30.

The Bruce and Dorothy Rosetti Bursary Scholarship
This bursary of $1,000 was established by the St. John’s Newfoundland Alumni Undergraduate Scholarship. The scholarship is awarded on the basis of the applicant’s academic record. Application required. Deadline: April 30.

The C. W. S. Sales Memorial Scholarships
In 1960, William Stairs, Son & Morrow Limited of Halifax, on the occasion of the 25th anniversary of the company in Nova Scotia. Eligible candidates are registered in the penultimate year of a program in the Faculty of Engineering. The scholarship is awarded on the basis of the applicant’s academic record. Eligible candidates are registered in the penultimate year of a program in the Faculty of Engineering. The scholarship is awarded on the basis of the applicant’s academic record. Application required. Deadline: September 30.
The profile of a student who has demonstrated high academic achievement, community service and financial need. Eligible candidates must be graduates of a high school in the Maritime Provinces (NS, NB, PEI). Application deadline: April 30

The Walter Gardner Stanfield Scholarship
The Walter Gardner Stanfield bequest provides two awards, valued at $1,000 each, to students who fulfil or are expected to fulfill the minimum (entrance) requirements into third year of Engineering or Computer Science. Application required. Deadline: April 30.

Dr. A. E. Stevens Scholarship
This $1,000 scholarship was established in 1981 in honour of Dr. A. E. Stevens, Director of Administration of the Nova Scotia Technical College and Acting President from 1975-1977. The award is made on the basis of scholarship, personality and leadership ability. Eligible students are registered in the senior year of the BEng in the Faculty of Engineering. Application required. Deadline: September 30.

The Weldon Scholarship
The Estate of Dr. R. S. Weldon established this award of $450 per year. It is renewable for two years, subject to maintenance of a high academic standing. Eligible students are to be registered in the Mechanical Engineering program in the Faculty of Engineering of this University. The award is based on the academic record of the applicant during year three of the program. Application required. Deadline: September 30.

The G. P. Wilson Engineering in Business Scholarship
This scholarship was established to honour Peter Wilson, born in Truro, and who attended King's College and completed his Engineering Diploma at Dalhousie. He graduated as a Mechanical Engineer from the Nova Scotia Technical College (NSTC) and went on to complete a Masters in Engineering Production in the area of Operations Research at the University of Birmingham in England. Professor Wilson was Executive Director of the Atlantic Industrial Research Institute, served as a Professor in Industrial Engineering, and was head of the Department of Mechanical Engineering at the Technical University of Nova Scotia and Dalhousie for more than 20 years. The G. P. Wilson Engineering in Business Scholarship is awarded to students who have completed the first year of engineering at any Canadian university, and who show outstanding promise to use engineering skills to improve Canadian business. The scholarship, in the amount of $1,000 per term, is tenable at Dalhousie University in years three, four and five of the Industrial Engineering program. This scholarship is renewable for occupants maintaining a GPA of 3.5 in each subsequent academic study term. Interested students must complete an application and provide an essay discussing their views on engineering in business. Deadline: January 15.

G. Faculty of Health Professions
Unlike other units, students may apply for these awards directly for details regarding application processes and deadlines.

1. School of Health and Human Performance

The Freda N. Wales Memorial Scholarship
This is an in course award given to a student entering the third or fourth year of study. The student must meet a commitment to pursuing a program specializing in outdoor leadership at Dalhousie University. Selection will be based on academic achievement and professional ability. Apply through the School.

VIIIth Pan American Wheelchair Games Scholarship
This is an in course award given to a student entering the third or fourth year of study in the School. The student must be committed to pursuing study in the area of recreation and leisure for the disabled. Selection is based on academic and professional capability.

2. College of Pharmacy

Samffi Antoin Scholarship
This scholarship is to be presented annually to an outstanding pharmacy student who has successfully completed one or many years at the College of Pharmacy.

The Ralph H. Jenkins Memorial Pharmacy Scholarship
This scholarship is awarded by the Prince Edward Island Pharmaceutical Association to a student from Prince Edward Island who has achieved a high academic standing.

The Col. J. B. B. MacKenzie Scholarship
This scholarship is awarded by the New Brunswick Pharmaceutical Society to a student from New Brunswick who excels in the first year courses of the Pharmacy curriculum.

The Dr. Jesse I. MacKnight Scholarship
This scholarship is awarded by the New Brunswick Pharmaceutical Society to the student from New Brunswick who excels in the second year courses of the Pharmacy class.

The New Brunswick Pharmaceutical Society Scholarship
This scholarship is awarded by the New Brunswick Pharmaceutical Society to the student from New Brunswick who excels in the third year courses of the Pharmacy curriculum.

3. School of Social Work

M. Caroline Prince Scholarship
An endowment of funds by the late M. Caroline Prince for the benefit of the School of Social Work provides for the award of one or more scholarships to students enrolled either in full time or part time study leading to the baccalaureate degree in Social Work. The award is made at the end of the winter term upon recommendation of course instructors to the School’s Bachelor of Social Work committee.

Calvin Ruck Scholarship
For BW and MSW African Nova Scotian students who have demonstrated a desire to improve the social conditions and further the interests of African Nova Scotian/Canadian people and their communities through the study and practice of Social Work. Careful consideration will be given to the purposes and vision of NAACP and to the qualities of courage, generosity, patience, and leadership that characterize Dr. Ruck’s life and work. Application required.

H. Faculty of Management

Unlike otherwise stated, these scholarships are administered by the academic unit. Please consult the departments directly for details.

Acadian Lines Limited Scholarship
Acadian Lines Limited has established a fund to provide a scholarship to a student, beyond first year, who has demonstrated superior academic performance in the preceding year(s) of the commerce program and, who has demonstrated outstanding leadership in the University’s program of intramural athletics.

The Wilfred R. Adam Scholarship
A scholarship is offered to the student in Commerce who, at the end of third year, has attained the highest average mark in COMB 1101, 2102, 3105. The endowment for this scholarship is provided by funds and co-religionists of the late Professor Adam. Application is not required.

The Vincent Chew Memorial Endowment
This award is given annually to the top academic student in the final year of the Bachelor of Management Bachelor of Science (Recreation) who demonstrates strong leadership, organizational and communication skills through volunteer work, extracurricular or school activities. In the event of students equally meeting the criteria above, preference will be given to a deserving student from New Brunswick or Nova Scotia.

The Eaton Foundation Scholarship in Business Studies
A scholarship will be awarded annually to a student entering fourth year in the Commerce program who has the highest average mark in Introduction to Marketing, Consumer Behaviour, and Marketing Research, and who has demonstrated high academic standing throughout his or her previous years of study. The award was established by the Eaton Foundation, a philanthropic organization dedicated to supporting the arts, education, health, and social welfare across Canada with the generous support of the T. Eaton Co. Limited and Mr. John David Eaton. Application not required.

Stewart Lockie Gibson Scholarship in Commerce
Several scholarships of varying amounts will be awarded annually to third and fourth year students of scholarship standing and good character who are proceeding to a degree in Commerce. Application not required. Awarded automatically by the Registrar’s Office.
Samuel S. Jacobson Scholarship

A bequest of the late Samuel S. Jacobson, of Yarmouth, Nova Scotia, enables one or two scholarships or bursaries. Preference is to be given to Nova Scotia students who are proceeding towards the Bachelor of Commerce degree. Awarded automatically by the Registrar's Office. Application not required.

The Harry Marplant Scholarships in Commerce

A bequest of the late Harry Marplant, of Yarmouth, Nova Scotia, enables one or two scholarships per year to be awarded to students working towards degrees in Commerce. These will normally be awarded to students in their third or fourth years. Application not required. Awarded automatically by the Registrar's Office.

McCord Printing and Typsetting Limited Scholarship

The business firm of McCord Printing and Typsetting Limited established an endowment in 1985 to provide annually for a scholarship to a student in the School of Business. The scholarship is open to a student, beyond first year, who has distinguished himself or herself scholarly and/or in extracurricular activities. Application required.

Norman Newman Family Business Award

This scholarship is offered to a student with a background of business and the community. For students beyond first year in the Commerce program, Management program, or in the MBA program, a competition involving a case study of a family business is the basis of awarding of the scholarship, with a first and second place winner. Application required.

The Commodore Bruce S. Oland Scholarship

An annual scholarship that alternates between the Department of English and the Faculty of Management. Awarded automatically by the Registrar's Office. Application not required.

The Sagewood Group Award for Entrepreneurship

This is an annual award designed to encourage entrepreneurship among Bachelor of Commerce students who have completed at least two full years. The scholar will be awarded an amount of $500 plus the value of a semester of entrepreneurship-related activities. The criteria for selection will include academic standing (GPA of 3.0 or greater), enrolment in the entrepreneurship curriculum (or equivalent), and a written proposal on why the student intends to pursue an entrepreneurial path. The award will be administered through the Norman Newman Centre for Entrepreneurship.

Ronald G. Smith Scholarship

This scholarship was established in recognition of the distinguished service rendered by Ronald G. Smith. An amount of $500 will be awarded to a Nova Scotia student entering the fourth year of the Bachelor of Commerce or Bachelor of Management student wishing to pursue entrepreneurship-related activities. The criteria for selection will include academic standing (GPA of 3.0 or greater), enrolment in the entrepreneurship curriculum (or equivalent), and a written proposal on why the student intends to pursue an entrepreneurial path. The award will be administered through the Norman Newman Centre for Entrepreneurship.

The Percy Berton Jellows Scholarships

Established in 2008 to recognize Edward Berton’s contributions to the School of Business, the annual fellowship is for a third or fourth year Bachelor of Commerce or Bachelor of Management student wishing to pursue a career in entrepreneurship. Application required.

The Constance MacFarlane Scholarship

An endowment fund has been established to provide a scholarship to a deserving student in the second or subsequent year of the Honours program in either biology or marine biology. Candidates must have completed at least one course in each of biology and botany.

The Carl Mushkat Memorial Scholarships

The Carl Mushkat Memorial Fund was established at Dalhousie University in 1979 as a bequest under the Will of the late Carl Mushkat. The fund provides scholarships to students in mathematics or science.

NewPage-Port Hawkesbury Mill Undergraduate Scholarship in Arts or Science

On the occasion of their 25th Anniversary, Stans Farms have established an endowment to provide one undergraduate scholarship open to students in Arts and Science. To be eligible, candidates must reside in Nova Scotia, have demonstrated academic excellence and have exhibited a desire to learn. Students will be considered after one year at Dalhousie.

The Alan Pollock Scholarship

This scholarship of $1,000 was established by the Scott North British Society in Halifax in memory of the Rev. Dr. Alan Pollock. The awardee will be a second year student in the College of Arts and Science at Dalhousie University.

Betty Spencer Scholarship

Betty Spencer was born in Saint John, New Brunswick in 1910. She graduated from Saint John Vocational School and worked for a time at Wasson's Pharmacy where she met her husband. They retired in Bangor, Maine and later in St. Andrews, New Brunswick. Although Betty had no specific connection to Dalhousie, she generously bequeathed this endowment through her Will. Preference is given to students from the Atlantic provinces and recipients cannot hold other Dalhousie scholarships or bursaries.

The Rose Stewart Smith Scholarships

A significant bequest established these memorial scholarships for students who excel in the sciences or mathematics.

The following scholarships are administered by the Faculty of Science. Please consult the departments directly for details.

Faye Sibley Undergraduate Research Award

Undergraduate students wishing to obtain research experience under the supervision of a grant holding faculty member over the summer should submit the NSERC Undergraduate Summer Research Award application to their department. Eligible students for the Faye Sibley Award must be in a 20 credit BSc program at Dalhousie University or at King's College. The $5,000 award is tenable during the period of May 1 to August 31 and is supplemented by additional funds. The award is distributed to the best applicant(s) on behalf of Faye (Naugle) Sibley, who graduated from Dalhousie University in 1953 with a major in biochemistry. The Faye Sibley Award is the top Faculty of Science undergraduate research award. See your department for deadlines and procedures.

Laing Summer Undergraduate Research Awards

Undergraduate students wishing to obtain research experience under the supervision of a grant holding faculty member over the summer should submit the NSERC Undergraduate Summer Research Award application to their department. Eligible students for the Laing Summer Research Award must be in a 20 credit BSc program at Dalhousie University or at King's College. The $5,000 award is tenable during the period of May 1 to August 31 and is supplemented by additional funds. The award is distributed to the best applicant(s) on behalf of John and Emily Laing Foundation. See your department for deadlines and procedures.

Warr Summer Undergraduate Research Awards

Undergraduate students wishing to obtain research experience under the supervision of a grant holding faculty member over the summer should submit the NSERC Undergraduate Summer Research Award application to their department. Eligible students for the Warr Award must be in a 20 credit BSc program at Dalhousie University or at King's College and the student must be born in Nova Scotia and have 'bona fide' residence in Nova Scotia. The $1,000 award is tenable during the period of May 1 to August 31 and is supplemented by additional funds. The award is distributed to the best applicant(s) on behalf of John Richard Freeman Warr Memorial. See your department for deadlines and procedures.

1. Biology

Hugh P. Bell Scholarship in Biology

In 1950 the Class of 1928 established the H. P. Bell Fund to provide one or more annual scholarships. Each year the Biology Department will select the most
Awards

3. Earth Sciences

J. Ewart Blanchard Memorial Scholarship
This scholarship was established in memory of Dr. J. Ewart Blanchard 1921 - 2003. Dr. Blanchard was an early physics pioneer in Nova Scotia. He was the first geophysicist appointed to Dalhousie's Physics Department and received an Honorary Degree from Dalhousie in 2000. One or more scholarships will be awarded each year to students enrolled in the degree programs of either the Department of Physics and Atmospheric Science or the Department of Earth Sciences who have achieved academic excellence and best exemplifies the qualities of initiative, experimental skill, leadership and enthusiasm for geophysics.

Canadian Institute of Mining and Metallurgy Earth Science Scholarship for New Brunswick Students
Awarded to a student entering second or subsequent year in an earth science discipline. Applicants must have been born in New Brunswick or resided in New Brunswick for seven years, or have his/her immediate family reside in that province.

Canadian Society of Exploration Geophysicists Scholarship
This scholarship is available to a student attending Dalhousie University and will be awarded to a Canadian citizen with first class standing during the first three years of the class.

J. Ewart Blanchard Memorial Scholarship
This scholarship was established in memory of Dr. J. Ewart Blanchard 1921 - 2003. Dr. Blanchard was an early physics pioneer in Nova Scotia. He was the first geophysicist appointed to Dalhousie's Physics Department and received an Honorary Degree from Dalhousie in 2000. Awarded to a student entering second or subsequent year in an earth science discipline. Applicants must have been born in New Brunswick or resided in New Brunswick for seven years, or have his/her immediate family reside in that province.

Canadian Society of Exploration Geophysicists Scholarship
This scholarship is available to a student attending Dalhousie University and will be awarded to a Canadian citizen with first class standing during the first three years of the class.

J. Ewart Blanchard Memorial Scholarship
This scholarship was established in memory of Dr. J. Ewart Blanchard 1921 - 2003. Dr. Blanchard was an early physics pioneer in Nova Scotia. He was the first geophysicist appointed to Dalhousie's Physics Department and received an Honorary Degree from Dalhousie in 2000. One or more scholarships will be awarded each year to students enrolled in the degree programs of either the Department of Physics and Atmospheric Science or the Department of Earth Sciences who have achieved academic excellence and best exemplifies the qualities of initiative, experimental skill, leadership and enthusiasm for geophysics.

8. Psychology and Neuroscience

Briner Memorial Scholarship in Psychology
The Charles J. Briner Memorial Fund was established during 1971 in memory of the late Dr. Briner, Acting Chairman of the Department of Psychology. The income is awarded to a third year Honours student. Students eligible for the Honours Certificate in Psychology in the year equivalent to the fourth year of the Honours Psychology program are eligible for the prize. The Briner Memorial Scholarship is restricted to Dalhousie Honours Psychology students and is not open to joint Honours students from other departments or other universities. The scholarship will be awarded to the student who shows the greatest potential as a researcher in experimental psychology.

J. College of Sustainability

Yinger Gately Scholarships
A fund has been established to provide one or more annual scholarships for third and fourth year students enrolled in the Environment, Sustainability and Society Major Honours degree, based on academic achievement in the previous year.

V. Prizes, Medals, and Awards

Unless otherwise noted, the following awards are administered by the academic unit or the Department of Athletics.

A. General - All Faculties

The Alumni Association Medal
The Society of Alumni Association provides a medal which is awarded each year to the graduating student in the University who has exhibited the most outstanding qualities of personality, scholarship and leadership during a course of studies at the campus. Selection is carried out by a Committee appointed by the Awards Committee of the DalTech Alumni Association.
1. Candidates for these prizes must be registered full-time undergraduate or graduate students at Dalhousie University.

2. Three copies of each composition must be sent in by the candidate:
   a) These compositions must be typewritten, double spaced and on one side of the paper only.
   b) A pseudonym is to be typed at the end of each typewritten entry and the pseudonym must be different for each, different pseudonyms may be used for prose and poetry.
   c) Compositions are to be accompanied by a sealed envelope bearing the same pseudonym to be opened by the judge.
   d) The envelope shall contain a typewritten copy of the poem as it is to be submitted, the name and address of the candidate should not appear on the poem.

3. Candidates submitting more than one prose entry must use the same pseudonym for each, different pseudonyms may be used for prose and poetry.

4. Candidates for the DeMille Prize may submit one entry each of the essay and short story sections.

5. The poetry contest winner of a first prize is eligible to compete again, and no winner of a second prize is eligible for a second prize in the same year.

6. The poetry contest winner of a first prize is eligible to compete again, and no winner of a second prize is eligible for a second prize in the same year.

7. Entries must reach the Department of English on the deadline.

8. Entries are adjudicated by a panel of judges which includes a professional writer. The decision of the judges is final.

9. No prize will be awarded for any composition that does not attain to a sufficiently high standard of merit.

10. The Dalhousie Review will offer the first option to publish winning compositions. A copy of each winning composition is deposited in the University archives. Contestants retain ownership of copyright.

Awards 623
Awards

The Kim Rilda LeBlanc Memorial Award in Healing and the Arts

This award is established to recognize outstanding interdisciplinary initiatives between the arts and the health sciences, and it honours the memory of this former graduate student in English. The competition is open to undergraduate and graduate students in the Faculties of Arts and Social Sciences, Medicine, and Health Professions. Faculty may nominate students who have completed an outstanding project, thesis, or research essay that combines work in the humanities or the arts with work in medicine or health care. Nomination letters, accompanied by three copies of the candidate’s project, thesis, or research essay are to be submitted by April 15 each year to The Chair, Kim Rilda LeBlanc Memorial Award Committee, Department of English.

This medal is awarded to the student who is judged to be the leading First Class standing among graduates of technical programs.

Governor General’s Bronze Medal

Offered by His Excellency the Governor General of Canada, this medal is awarded on graduation to the recipient who has demonstrated good academic achievement combined with leadership qualities and contribution to University life. The Association will recommend a candidate or candidates to the Head of Student Services.

The Robert and Katherine MacDonald Award

An endowment has been established to provide an annual prize for Chinese students at Dalhousie. The recipient will be engaged in undergraduate studies and be a member of the Dal-TUNS Chinese Students’ Association or its successor. The recipient will have demonstrated good academic achievement combined with leadership qualities and contribution to University life. The Association will recommend a candidate or candidates to the Head of Student Services.

Another award

In honour of a former swim coach, Nigel Kemp, one or more annual awards are given to members of the Dalhousie University varsity swim team. Entering returning students must have achieved a minimum average of 80% from high school. Returning students must have achieved a minimum GPA of 3.0. Gender equity is considered by the selection body.

Gordon S. Rankin Memorial Scholarship

Gordon Rankin, born in Halifax in 1933, graduated from Dalhousie in 1957 with a Bachelor of Commerce degree. He played both varsity football and basketball, holding the position of Captain for a period of time on both teams. As a continuing tribute to Gord, this scholarship was formed to assist athletes in financing their time at Dalhousie. This award is coordinated through the International Health Office.

B. Convocation Awards

The following four awards are administered by the Registrar’s Office and are awarded at Convocation.

Governor General’s Silver Medal

Offered by His Excellency the Governor General of Canada, this medal is awarded to the undergraduate student who has achieved the highest academic standing among graduates of baccalaureate programs.

Governor General’s Bronze Medal

Offered by His Excellency the Governor General of Canada, this medal is awarded to the undergraduate student who has achieved the highest academic standing among graduates of technical programs.

University Silver Medal

This medal is awarded to the student who is judged to be the leading first class honors student among graduates of baccalaureate programs. The recipient cannot have received the Governor General’s Silver Medal.

Avery Prize

This prize, sponsored by J. F. Avery, MD, will be awarded on graduation to the student standing highest among graduates of the general degree program. The recipient cannot have received the Governor General’s Silver Medal or University Silver Medal.

For the aforementioned medals and prize, a student who is completing a second Dalhousie degree will have only those courses required for a second degree used so as to determine their cumulative average. In addition, any disciplinary action by the Senate Discipline Committee shall be deemed sufficient cause for any student to be ineligible.

C. Faculty of Agriculture

For more information on deadlines and application procedures, please visit www.moneymatters.dal.ca

Canadian Agricultural Economics Association Prize

The Canadian Agricultural Economics Association presents a book prize to a graduating student from the Agricultural Economics or Agricultural Business option of the BSc (Ag) program. This prize is selected on the basis of overall performance.

Canadian Society of Animal Science Prize

The Canadian Society of Animal Science presents a book prize to the student in the fourth year of the Animal Science or Aquaculture options of the BSc (Ag) program. This prize is selected on the basis of outstanding scholarship.

Cobequid Dog Club Scholarship

Awarded to an Nova Scotian student who is admitted to a veterinary college.

K. de Gus Memorial Prize for Plant Science

Established in 1984, the Noel Eman Memorial Award is presented annually to a student in the fourth year of the Diploma in Technology (Enterprise Management) program who complete business plans during the business project course (MOSM 0225). A student who has received an FCC Farm Business Planning Award is not eligible for a second one. Cash prizes are distributed based on the number of submissions from participating students (as individuals or teams).

The Kim Rilda LeBlanc Memorial Award in Healing and the Arts

In memory of the late K. de Gus, a prize is awarded to a technical graduate. Selection is based on high standing in course work, and preference is given to students in the horticultural field.

The Ketchum Manufacturing Company Limited Prize is awarded to a graduate of Dalhousie who has demonstrated leadership in global health and a commitment to improving the health of marginalized communities during their time at Dalhousie. This award is coordinated through the International Health Office.

The Dr. Ron Steward Award for Student Leadership in Global Health

Dr. Ron Steward was introduced to scientific research by an undergrad research project, thus beginning a career in research and teaching. Research and teaching.

The Canadian Agricultural Economics Association Prize

This prize is given in recognition of excellent work in completing the thesis project for the Bachelor of Community Design.

University Medal in Community Design
This medal is awarded annually to the graduate who has attained the highest academic standing in Community Design.

E. Faculty of Arts and Social Sciences

The Clay Ramsey of Nova Scotia Prize
To provide an annual prize to the student in the Faculty of Arts and Social Sciences who has written the best paper dealing with (any aspect of) the influence of Scottish culture within Canada. This award was established by the Clay Ramsey of Nova Scotia in recognition of the contribution of George Ramsay, 19th earl of Dalhousie, founder of Dalhousie University.

1. Canadian Studies

University Medal in Canadian Studies
A University Medal has been established for the student with the highest standing among those who graduate with First Class Honours.

2. Classics

Nicole Knox Award
The Nicole Knox Award was established by family, friends, faculty and students to honour the memory of Nicole Knox by supporting the annual prize. This award is given annually to the student who has achieved the highest success in the study of both Latin and Greek language.

University Medal in Classics
The Department of Classics offers to the top First Class Honours graduate a medal in recognition of superior achievement in Classics.

3. Contemporary Studies

University Medal in Contemporary Studies
The Department of Contemporary Studies offers to the top First Class Honours graduate a medal in recognition of superior achievement.

4. Creative Writing

University Medal in Creative Writing
Awarded to the top First Class Honours graduate for recognition of superior achievement in Creative Writing.

5. Early Modern Studies

University Medal in Early Modern Studies
The Department of Early Modern Studies offers to the top First Class Honours graduate a medal in recognition of superior achievement.

6. English

The Avice Bennett Prize
This prize ($100 plus a complete set of the New Canadian Library) is one of six established by Mr. Avice Bennett, Chairman and President of McCulland and Stewart to mark the company’s 90th anniversary and the 40th anniversary of the
New Canadian Library, of which the founding general editor was Dalhousie Professor Emeritus Dr. Malcolm M. Ross. It is awarded each year for the best essay on Canadian literature submitted from an undergraduate course at Dalhousie during the current academic year. Essays may have been written for courses in any department, but they should focus explicitly on a Canadian literary topic and not on history or culture more generally, and they must be written in English. Essays should be nominated by instructors; clean copies should be submitted by the specified date.

Barbara Bennett Chistik Prize
This prize is awarded annually to an outstanding first year student enrolled in introductory English at Dalhousie University. Section instructors will normally make nominations, which shall consist of a letter from the instructor on why the student should receive the award, the student’s final grade, and a sample essay. The prize winner will be determined by a selection committee consisting of one member of the Undergraduate Committee and the co-ordinator of tutor-markers in the English Department.

Graham Creighton Prize in English
Established by his son, Wilfrid Creighton, this prize is in honour of Graham Creighton, 1904 graduate of Dalhousie. Graham Creighton and his wife raised six children in their home on LeMarchant Street. All six children attended Dalhousie and graduated between 1915 and 1927. This prize is awarded annually to students majoring in English or in Honours English and entering their fourth year of study.

Samantha Li Award
The Samantha Li Memorial Award was established by family, friends, faculty, and students to honour the memory of Samantha Li by supporting the annual prize of approximately $350 for a student in the Honours program in English. The recipient chosen will most closely reflect the academic and personal qualities of Samantha Li: intellectual reach and creativity; a passion for the exploration of literature and ideas; generosity toward and engagement with fellow students and professors.

Paul McIsaac Memorial Prize
A memorial gift provides for an annual prize for an undergraduate student, who shows an engaging and original mind, in the second or third year of study in the Honours or Majors program in English.

Margaret Nicoll Pond Memorial Prize in English
A prize in English of about $500 per year has been endowed by Mr. F. H. Pond of Halifax in memory of his wife, the late Margaret Nicoll Pond, a gifted teacher of English and a devoted alumna and governor of Dalhousie University. The prize will be awarded, on recommendation of the Department, to a woman graduate of Dalhousie University who leads her class in English.

The James W. Fisher Upperclass Fellowship in English
Two fellowships are awarded by the English Department to outstanding students who propose to do graduate work in English at a university approved by the faculty.

The University Medal in English
Each year the Department of English offers a medal to the top First Class Honours graduate in recognition of superior achievement in the program.

Varma Prizes in Gothic Literature
These prizes were established to honour the memory and spirit of the late Devendra Varma who taught at Dalhousie University in the Department of English. Applicants should be undergraduate English majors or Honours English students. Prizes shall be awarded to the winners of a gothic short story contest.

European Studies
University Medal in European Studies
A University Medal has been established for the student with the highest standing among those who graduate with First Class Honours.

French

Prix de l’Alliance française
An annual book prize awarded to a third or fourth year student who has achieved outstanding results in the study of French language and literature. Suitable candidates are proposed by the Department before March 15. The award is bestowed at an official ceremony at the Alliance française in the Spring.

Alliance française is an internationally renowned non-profit organization with a mission to promote French language and culture.

Prix de l'Ambassadeur de Suisse au Canada
A book prize, the gift of the Ambassador of Switzerland in Canada, is awarded to a graduating student who has won distinction by their work in the French language. This award is conferred at a Departmental ceremony in the spring.

Prix du Conseil du Liban
A book prize, the gift of the Consul of Lebanon, is awarded to a graduating student who has demonstrated excellence in their work in the French language. This award is conferred at a Departmental ceremony in the spring.

Prof. & Mrs. Robert Loyal McIntosh Prize in French
This fund provides an annual prize for a Major or Honours student in the Department of French who has demonstrated a superior level of achievement in the core courses required for second year Major and Honours students. Currently these courses are 2048, 2250 and 2252.

Marcelle Cendres Sandhu Memorial Prize
Collington, friends and students of the late Marcelle Cendres Sandhu have established an annual prize to be awarded to a Major or Honours student in the Department of French who achieves excellence in third or fourth year French grammar courses.

Sahak Matij French Scholarship
This fund provides an annual prize for a Major or Honours student in the Department of French, who is raising a family. Students must show enthusiasm toward the study of French and exemplary effort in their studies.

University Medal in French
The top First Class Honours graduate will receive the University Medal in French, in recognition of superior achievement.

Gender and Women’s Studies

University Medal in Gender and Women’s Studies
A University Medal has been established for the student with the highest standing among those who graduate with First Class Honours.

German

Graham Creighton Prize in German
A prize in German of about $500 per year has been endowed by the late Mrs. Jeanette Goodman a bequest made to Dalhousie University to fund a prize(s) for the highest standing in German. This prize is awarded annually to an outstanding student who has demonstrated a superior level of achievement in German language. This award is conferred at a Departmental ceremony in the spring.

Marcelle Cendres Sandhu Memorial Prize
Colleagues, friends and students of the late Marcelle Cendres Sandhu have established an annual prize to be awarded to a Major or Honours student in the Department of French who achieves excellence in third or fourth year French grammar courses.

Prof. & Mrs. Robert Loyal McIntosh Prize in German
This fund provides an annual prize for a Major or Honours student in the Department of German, who is raising a family. Students must show enthusiasm toward the study of German and exemplary effort in their studies.

University Medal in German
The top First Class Honours graduate will receive the University Medal in German, in recognition of superior achievement.

History

The Edith and Rose Goodman Prize in History
Under the Will of the late Mrs. Jeanette Goodman a bequest was made to Dalhousie University to fund a prize(s) for the highest standing in History. The prize is awarded on the recommendation of the Department of History.

The Commonwealth History Prize
To facilitate and encourage the study of Commonwealth or British history, this prize is awarded annually for the best undergraduate essay on a topic relating to the history of Britain and/or the Commonwealth countries. The prize is funded by a gift from Dr. David Jessop and Dr. Karen Osterrieder.

University Medal in History
The top First Class Honours graduate in the Department of History is awarded a medal in recognition of superior achievement.

The Dr. George E. Wilson Prize in History
Under the Will of the late Mrs. Jeanette Goodman a bequest was made to Dalhousie University to fund a prize(s) for the highest standing in Canadian History. This prize is awarded on the recommendation of the Department of History.
12. History of Science and Technology

University Medal in History of Science and Technology

The History of Science and Technology program offers the top First Class Honours graduate a medal in recognition of superior achievement.

13. International Development Studies

University Medal in International Development Studies

A University Medal has been established for the student with the highest standing among those who graduate with First Class Honours.

14. Italian Studies

University Medal in Italian Studies

A University Medal has been established for the student with the highest standing among those who graduate with First Class Honours.

15. Linguistics

University Medal in Linguistics

A University Medal in Linguistics Program offers the top First Class Honours graduate a medal in recognition of superior achievement.

16. Music, Fountain School of Performing Arts

The Atlantic Barber Shop Harmony Award

The Nova Scotia Chapter of the Society for the Preservation and Encouragement of Barber Shop Quartet Singing in America has established a fund to award an annual prize to a student enrolled in an undergraduate degree program in Music, who, in the estimation of the School, demonstrates outstanding aptitude and achievement leading to a professional career in that field.

Professor Ray D. Byham Memorial Prize in Piano Studies

A prize established with donations made by family, colleagues and friends of Professor Ray D. Byham, who taught at Dalhousie from 1949-1993, to provide one (or more) annual prize(s) to a student(s) entering their fourth year piano studies. The prize is to be used to provide financial assistance toward continued piano performance studies at Dalhousie, a recognized piano-intensive workshop, a chamber music festival or similar event. The recipient will have a cumulative GPA of at least 3.5, with at least two years prior, consecutive residency in the Dalhousie Bachelor of Music (Piano Performance) program or equivalent.

James and Abbie Campbell Prize, Campbell Incentive Award

The School of Performing Arts may from time to time award prizes to outstanding students from the James and Abbie Campbell Memorial Fund. The Campbell Incentive Award may on occasion be awarded under special circumstances.

James A. Faraday Memorial Music Award

This annual scholarship is for a percussion student in the third or fourth year of a music degree program. To be considered, students must demonstrate a high standard of performance, a love for music, a positive attitude and a collaborative spirit. The Scholarship Committee will work in consultation with faculty members from the percussion program to choose an eligible student. The award will be made in the spring of each year. The award was established by family and friends to honour the memory of James A. Faraday, percussion teacher, mentor and friend, who inspired students at Dalhousie for over 30 years.

Dalhousie Alumni Association (Women’s Division) Medal in Music

The Women’s Division provides an annual medal to the graduating student who achieves the highest cumulative GPA in music subjects over the four year Bachelor of Music degree.

Dalhousie Women’s Alumni Prize

This prize is presented to the graduating student who has achieved a high cumulative average in music subjects during the four year Bachelor of Music degree program.

The Beatrice Davies Music Prize

A fund has been established by members of the Dalhousie community to mark Women’s Centennial Year (1985) at the University. The purpose of the fund is to provide an annual in-course prize to a female student in the Bachelor of Music program on the combined basis of high academic standing and performance ability. The prize is named after the first graduate in music in 1909.

The Ernst and Dorothy Heighes Memorial Prize

A prize established through bequests received from the estates of the late Dr. Ernst Heighes and his wife Dorothy, in the spirit of their keen interest and support for Dalhousie’s Applied Skills training programs and for the public performances of its students. Preference will be given to an outstanding student in the third or fourth year of the Bachelor of Music in Performance with a focus on voice and improvisation. The value of the prize shall not be less than $400.

The Lowe C. Huber Memorial Prize in Music

This prize is awarded annually from a fund in memory of the late mayor Lowe C. Huber bestowed by his widow and family, to an undergraduate Music student of outstanding potential in brass performance. The minimum value of this prize is $100.

The Erik Perith Memorial award

An award established to honour the memory of Erik Perith, a former Director of Cultural Activities at Dalhousie University. An annual prize will be awarded to a female vocal student who has completed the third year of a Bachelor of Music, or Bachelor of Arts Combined Honours, Music and Theatre, and who, in the opinion of the School, has demonstrated both outstanding achievement in vocal performance, and an aptitude for a career in opera and/or musical theatre. The prize will be awarded in conjunction with the opening night performance of the annual Opera Workshop.

Richardson Family Experiential Learning Award

This award provides financial aid for music students who are attending experiential learning workshops, festivals and conferences, based on nomination from department faculty members. Preference will be made to grant one $1,000 award to a student accepted in the Halifax Opera Workshop, or successor program, and the other $1,000 award to a student accepted into the Scotia Festival of Music, or successor program. This annual fund award was established by Bill Richardson, a graduate of Dalhousie’s Schulich School of Law, and by Colin and Debbie Richardson, both of whom worked in support of numerous music student productions in the Dalhousie Arts Centre.

The Royal Saint George’s Society of Halifax Prize in Music

The Royal Saint George’s Society of Halifax has established a prize in recognition of the University’s successful role in the musical training and cultural enrichment of the community. This prize will be awarded annually to a student entering the third or fourth year of an undergraduate degree program in music who, in the estimation of the School, shows particular potential as an instrumentalist.

The Georg Tintner Night concert Prize

This fund was established by family, colleagues and friends, to honour the musical legacy and spirit of Dr. Georg Tintner, conductor and Music Director of the Halifax Symphony Orchestra from 1983-1994 and devoted supporter of Dalhousie’s Music performance activities. An annual prize will be awarded to an instrumental or voice student enrolled in a music degree program who, in the estimation of the audition panel, demonstrates exceptional musical talent with the potential for a professional performance career. The prize will be awarded at the annual Concerto Night concert.

The William Orrin Trinca Recital Prize

The School of Performing Arts may, upon the recommendation of the Piano Faculty, award this prize to a piano student who has demonstrated a high level of performance on his/her third year or graduation recital. This prize will be awarded only when it is deemed warranted. This award is named after the late Canadian pianist and Dalhousie faculty member, William Trinca.

The William Trinca Scotia Festival Memorial Prize

This prize is awarded upon the recommendation of the Piano Faculty to a senior level Piano student who has achieved a high standard of performance. This prize is to be applied to tuition costs for participation in the Young Artists Program of the Scotia Festival of Music. This award is named after the late Canadian pianist and Dalhousie faculty member, William Trinca.

University Medal in Visual Arts

The University Medal in Visual Arts offers a medal to the highest ranking student of the year who graduates with the equivalent of a First Class Honours degree in the Bachelor of Music program.
17. Philosophy
The F. Hilton Page Memorial Prize in Philosophy
This annual prize is normally awarded to the honours graduate whose Honours essay is judged to be outstanding.

Dr. H. L. Stewart Memorial Scholarship
This prize is awarded to the student with the best record entering the final year of an Honours Philosophy degree program.

University Medal in Philosophy
The Department of Philosophy offers a medal to the top First Class Honours graduate in recognition of superior achievement in the program.

18. Political Science
The James H. Aitchison Award
In 1979, colleagues of Dr. J. H. Aitchison established a fund from which an annual prize would be awarded in recognition of the best undergraduate honours essay. The fund was established to honor Professor Aitchison who was instrumental in founding the Department.

Commonwealth Political Philosophy Prize
Established by John W. Beveridge (BA Hon 1971) for students who demonstrate interest and achievement in the field of political philosophy. The prize name derives from Commonwealth, understood as society and government that endeavours to serve and represent community, without tending towards a totalitarian system. This prize is awarded annually to the student who has achieved the highest grade in a course in political philosophy at Dalhousie University.

European Union Centre of Excellence (EUCE) Prize
Established by EUCE for the best essay on Europe and the European Union. The value of the prize is $100 and is open to all Dalhousie students.

The Eric Dennis Gold Medal
Established by Jennifer William Dennis and Mrs. Dennis, this medal will be awarded on graduation to the student who stands first among those taking First Class Honours in Government and Political Science. (This is the University Medal in Political Science.)

The H. B. McCulloch Memorial Prize in Political Science
This prize will be awarded annually to the student who, among all the first and second year students registered in introductory courses in political science, is judged to have written the best essay in the second term.

19. Religious Studies
University Medal in Religious Studies
A University Medal has been established for the student with the highest standing among those who graduate with First Class Honours.

20. Russian Studies
University Medal in Russian Studies
The Department of Russian Studies offers a medal to the top First Class Honours graduate in recognition of superior achievement in the program.

21. Sociology and Social Anthropology
The Rev. S. H. Prince Prize in Sociology
A bequest under the will of the late Dr. S. H. Prince established a fund to provide an annual prize to be available to students at either Dalhouse or King’s.

University Medal in Social Anthropology
The Department of Sociology and Social Anthropology offers a medal to the top First Class Honours graduate in the Social Anthropology program in recognition of superior achievement.

University Medal in Sociology
The Department of Sociology and Social Anthropology offers a medal to the top First Class Honours graduate in the Sociology program in recognition of superior achievement.

22. Spanish and Latin American Studies
Department of Spanish and Latin American Studies Citizenship Award
This Citizenship Award recognizes the contributions of an individual to build a community atmosphere within the Department of Spanish and Latin American Studies.

Dr. James E. Holloway, Jr. Memorial Prize
The Holloway Memorial Prize is awarded to a graduating student with an Honours degree (completed in the Department of Spanish and Latin American Studies) who has written a thesis with a focus upon Latin America.

Sylvia Coffey Memorial Award
This Sylvia Coffey Memorial Award is given to a female Spanish and Latin American Studies student studying in one of our programs abroad in Latin America.

The de Carpentier Memorial Prize
Established as a gift in memory of the late Norman S. and Helier S. de Carpentier and their sister, Phyllis de Carpentier Nielsen, the de Carpentier Memorial Prize is to be awarded on the recommendation of the Executive Committee of the Department to an outstanding student in the Department of Spanish and Latin American Studies.

The Reverend J. R. Hibbits Memorial Prize
To honour the memory of a scholar, donor, and friend of the department, this prize is awarded annually to the graduating student with the highest overall honours GPA.

University Medal in Spanish and Latin American Studies
The Department of Spanish and Latin American Studies offers a medal to the top First Class Honours graduate in recognition of superior achievement in the Spanish and Latin American Studies program.

23. Theatre, Fountain School of Performing Arts
Andrew and David Stitt Memorial Prize
To honour the memory of Theatre students Andrew and David Stitt, two prizes will be awarded annually to two students entering the third year of the Acting Program who have shown promise in, and passion for, acting.

Blackmore Award
This award was created by Neptune Theatre of Halifax to honour scenic carpenters John and William Blackmore. The award is given to a student in his or her third year of a Theatre BFA program who has shown promise in, and passion for, work in Technical Theatre and Stage Design.

Department of Theatre Awards Fund
This fund supports four awards to recognize the achievements of outstanding students in the Department of Theatre: the Basil Cook Award for students in Costume Studies, the Blanche Potter Award for students in Technical Scenography, the Martin Surette Award for students in Acting, and the Robert Merritt Award for students in Theatre Studies. The award will normally be made during the student’s third year of study in the School of Performing Arts.

Jopling Award for Out of Country Theatre Studies
Earnings from this fund are used to support an annual award to assist students enrolled in the School of Performing Arts to further their knowledge of theatre by study in another country during the summer. Eligible students must be enrolled full-time in a program of study in the School of Performing Arts and have completed at least one year (both fall and winter semesters) of their program of study. In addition, eligible students will have been accepted to study theatre at an institution in a country other than Canada.

University Medal in Theatre
The Department of Theatre offers the top First Class Honours graduate a medal in recognition of superior achievement.

Women’s Division - Dalhousie Alumni Association Medal in Costume Studies
This medal is presented annually to the graduating student with the highest cumulative GPA in the Costume Studies Program.

Christine Zinck Book Award
This award recognizes an outstanding graduating honours student in Theatre Studies.
24. Transition Year Program

Morrise Saffron Prize
A bequest under the will of the late Morris Saffron established an endowment to provide an annual prize to a student in the Transition Year Program who is judged to have made the greatest academic achievement during the year.

Jonathan Skete Memorial Prize
Friends, faculty and former students of the Transition Year Program have established an endowment from which to fund an annual prize. The award honours the memory of Jonathan Skete who, following completion of the TYP, was graduated with a BComm degree and then served several years with the RCMP. An annual prize is available to a Black student who is enrolled in the Transition Year Program. Contact the Director of the Program for details.

F. Faculty of Computer Science

Ada Byron Award
The Ada Byron Award recognizes the leadership and contributions of an individual to the promotion and development of women in computer science.

Citizenship Award
The Citizenship Award recognizes the contributions of an individual to building a community atmosphere within the Faculty of Computer Science.

Dean’s List Award
Students enrolled in an undergraduate major 20 credit program offered by the Faculty of Computer Science who, with at least 2.0 credits of courses offered at Dalhousie in the academic term being assessed, are automatically considered for the Dean’s List designation. Students are eligible to receive the award for each term in which they achieve a minimum 3.50 GPA for the term being assessed. Part-time students are also eligible for the Dean’s List if they have completed at least 1.5 credits during the academic year but less than 1.5 credits in any one term. Students cannot receive both a Dean’s List Award and a Sexton Scholar Award in any one term.

Gold, Silver and Bronze Awards
The Gold ($2,500), Silver ($2,000) and Bronze ($1,500) awards recognize the academic achievements of the top three students who are graduating second, third, and fourth years of study. To be eligible, students must be enrolled in an undergraduate major 20 credit program offered by the Faculty of Computer Science with at least 2.0 credits per term in the student's two academic terms prior to the award assessment, have completed at least five credits per year of study towards their computer science degree (including transfer credits), have completed all applicable CSCI core courses required for the degree and must have completed at least one academic term of 2.0 credits or more to complete for their computer science degree. All eligible students are automatically considered for these awards which are based solely on cumulative GPA. Students are assessed following the winter term.

Leadership Award
The Leadership Award recognizes the leadership and contributions of an individual in building a community atmosphere within the Faculty of Computer Science.

Mobil Oil Award
This award is given to the student with the highest GPA across CSCI 3120 and one of CSCI 3110 or CSCI 3111. Students are automatically assessed for the award at the end of the winter term or at their first eligibility.

Sexton Scholar Award
Students enrolled in an undergraduate 20 credit major program offered by the Faculty of Computer Science with at least 2.0 credits of courses offered at Dalhousie in the academic term being assessed, are automatically considered for the Sexton Scholar designation. Students are eligible to receive the award for each term in which they achieve a minimum 3.80 GPA for the term being assessed. Students cannot receive both a Dean’s List Award and a Sexton Scholar Award in any one term.

University Medal in Computer Science
A medal is awarded to the top first Class Honours graduate in both BSc and BSc in recognition of superior achievement in computer science.

G. Faculty of Engineering

Adelaide Award in the Aesthetics of Structure
Dr. John Adelaide established this award of $1,000 to be made to a graduating student in either the School of Architecture’s Master of Architecture program, or Civil Engineering. The award will be granted to the graduating student who demonstrates in a project both aesthetic principles in buildings and bridges, and applied restraints of architecture and structural engineering. The award will alternate between Architecture and Civil Engineering. Selection is by Scholarship and Awards Committee of the Faculty of Engineering on the recommendation of one professor of Structural Engineering, one professor of Architecture, one Consulting Structural Engineer, and one Consulting Architect. Deadline: Architecture - no application required. Engineering - March 31.

The Engineers (Nova Scotia) Award
Engineers Nova Scotia provides an award each year to a student graduating in engineering who demonstrates outstanding potential to serve their profession in an ethical manner as a Professional Engineer. The award will be awarded annually to students of the graduating class in consultation with their Engineering Department members. The award is an engraved certificate and $1,000. Selection will be made by the Student Affairs Committee of Engineers Canada and based on a written and oral presentation.

Atlantic Farm Mechanization Show Graduation Award
Presented annually to the student graduating in Biological Engineering who has exhibited the greatest aptitude in the machinery-related courses and who has demonstrated the greatest potential for a career in Biological Engineering. Value: $1,000.

Atlantic Land Improvement Contractors Association/Environmental Engineering Association Award
Presented annually to the student graduating in Environmental Engineering program who has exhibited the greatest aptitude in the environmental engineering courses and who has demonstrated the greatest potential for a career in environmental engineering. Value: $570.

The Louis I. Baker Awards in Technical Communication
Established by Dr. Max L. Baker in memory of his wife Louis are two prizes for the Technical Writing category valued at $300 and $200 each, and two prizes for the Oral Presentation category valued at $100 and $50 each. Dr. Baker was Professor Emeritus at Dalhousie and a former Head of Mechanical Engineering. Competition is open to all Dalhousie students registered in Engineering. Oral Presentation - students required to give a presentation in the third year. Technical Writing - students registered in the final year. The recipients shall be selected in February each year. The theme and rules governing the competition are available from the Office of the Associate Dean of Engineering. The details are published in the guidelines for the Baker Awards. Deadline: December - Technical Writing; January – Oral Presentation.

Camp 7 Iron Ring Award
Established by Camp 7 Charities, The Corporation of the Seven Wardens, this award is given to a graduating Engineering student who displays a uniquely high professional attitude towards their academic program that has produced quality academic results. Students are nominated for this award by their department, from those who have applied for undergraduate scholarships.

The Canadian Society for Chemical Engineering Medal
The Canadian Society for Chemical Engineering Medal is presented annually to the third year student in Chemical Engineering with the highest overall average during the third year of studies at Dalhousie.

The Canadian Society for Civil Engineering Certificate
In 1985, the Canadian Society for Civil Engineering established a Certificate of Achievement that is awarded annually to the student graduating in Civil Engineering with the highest aggregate in the last two years of study.

The Canadian Society of Mechanical Engineering Medal
The Canadian Society of Mechanical Engineering Medal is presented each year to the student graduating in Mechanical Engineering with the highest overall average.

Class of 1985 Award
The Class of 1985 Award is presented to the student graduating in Biological and Environmental Engineering program who has exhibited the most outstanding
Awards

that period and enjoyed a long and prestigious career as a professional engineer.
Engineer and Head of the Engineering Department, taught Graphics throughout
remembrance of Dr. H. R. Theakston who for several decades was University
highest standing in Engineering Graphics. It was established in 1964 in
This non-monetary award is presented each year to the student who achieves the
highest overall average in the program of studies at Dalhousie.
The Dr. H. R. Theakston Memorial Award
The family of the late Dr. H. R. Macdonald provided for a prize in his memory
to be awarded each year to a student completing the Bachelor of Engineering
program in Civil Engineering with a good academic average. The prize is awarded
by the Scholarships and Awards Committee on the recommendation of the Chair
of the Civil Engineering program. The award is $500.
The Ira P. MacNab Prize
The late Dr. Ira P. MacNab, an alumnus of the University, provided funds for an
annual award to be presented to the student graduating in Mechanical Engineering
with the highest overall average in a program of studies at Dalhousie. The award
is $75.
The Kenneth F. Marginson Award
This prize is awarded annually to the student who achieves the highest standing in
the first year of the Bachelor of Engineering program. Only students who are
enrolled in University for the first time are eligible to receive this award.
Presentations of this award is made to the student enrolling in the second year of the
Bachelor of Engineering program. This prize is funded from an endowment of
$2,500, established by an anonymous donor, in honour of Professor Kenneth F.
Marginson, a former Head of the Department.
The Mining Society of Nova Scotia Centennial Scholarship Medal
The Mining Society of Nova Scotia Centennial Scholarship Medal will be
awarded annually to a Mining or Materials Engineering student graduating at
Dalhousie who demonstrates the best all-around merit in the course of studies at Dalhousie.
The award is $500.
The Society of Chemical Industry Merit Award
The Society of Chemical Industry Merit Award is presented annually to the student
graduating in Chemical Engineering with the highest overall average during the senior year of a program of studies at Dalhousie.
The award is a gold key bearing the crest of the society, and a year’s subscription to Chemical Engineering.
The William Sloss Memorail Award
This prize consists of a medal which is presented annually to the student who shows outstanding ability in metallurgy, physical properties of metals or the use of metals in the arts of industry.
The Dr. H. R. Threakston Memorial Award
This non-monetary award is presented each year to the student who achieves the
highest standing in Engineering Graphics. It was established in 1964 in
remembrance of Dr. H. R. Threakston who for several decades was University
Engineer and Head of the Engineering Department, taught Graphics throughout
that period and enjoyed a long and prestigious career as a professional engineer.
The award consists of a certificate suitable for framing.
University Medal in Biological Engineering
This is awarded annually to the graduate who has attained the highest
academic standing in Biological Engineering.
University Medal in Chemical Engineering
This is awarded annually to the graduate who has attained the highest
academic standing in Chemical Engineering.
University Medal in Civil Engineering
This is awarded annually to the graduate who has attained the highest
academic standing in Civil Engineering.
University Medal in Electrical and Computer Engineering
This is awarded annually to the graduate who has attained the highest
academic standing in Electrical and Computer Engineering.
University Medal in Environmental Engineering
This is awarded annually to the graduate who has attained the highest
academic standing in Environmental Engineering.
University Medal in Food Science
This is awarded annually to the graduate who has attained the highest
academic standing in Food Science.
University Medal in Industrial Engineering
This is awarded annually to the graduate who has attained the highest
academic standing in Industrial Engineering.
University Medal in Mechanical Engineering
This is awarded annually to the graduate who has attained the highest
academic standing in Mechanical Engineering.
University Medal in Materials Engineering
This is awarded annually to the graduate who has attained the highest
academic standing in Materials Engineering.
University Medal in Mineral Resource Engineering
This is awarded annually to the graduate who has attained the highest
academic standing in Mineral Resource Engineering.
The Bob Walter Award
Given to the student who best combines fellowship, sportsmanship and
scholarship, the Bob Walter Award is the highest honour which the Engineering
Society can bestow upon its graduates. The award consists of an engraved gift and
a certificate suitable for framing. Instituted in the 1940/41 academic year, the
award honours the memory of an outstanding engineering student who was
president of the Dalhousie Engineering Society.
H. Faculty of Health Professions
1. University Medals
In the College of Pharmacy, the School of Health and Human Performance, School of Health Sciences and School of Nursing, a University medal is awarded annually at the spring convolution to a graduating student who demonstrates outstanding academic performance. The medal is only awarded if the following criteria have been met:
a. The candidate has successfully completed the equivalent of three full-time
years in his/her respective baccalaureate program (90 credit hours) at Dalhousie.
b. Has met the FHP cumulative GPA requirement or better on courses taken at
Dalhousie towards the degree.
c. Of those eligible, has the highest GPA.
All credits taken towards the degree at Dalhousie will be used in the calculations. Transfer credits taken prior to entry into the program are not counted towards either the 90 credit hours criterion, or towards the cumulative GPA requirement. Classes taken on Letter of Permission while registered in the program are
included in the 90 credit hours eligibility criterion and calculated as part of the
cumulative GPA requirement.

Students graduating in the full convolution are eligible for University Medal consideration in the following spring convolution.
As the School of Social Work does not offer a three-year (90 credit hour) BSW degree, it is not eligible for the University Medal.
2. School of Health and Human Performance

Canadian Society for Exercise Physiology

The Society provides an annual medal to the School to be awarded to an outstanding student in the Bachelor of Science (Kinesiology) program. The recipient will be the graduating student who has achieved the highest academic standing in their undergraduate class in the scientific portion of the curriculum.

The Dr. M. J. Ellis Award

This award was established to give recognition to a graduating student who demonstrates exceptional interest and ability in research in one of the four undergraduate degree programs.

Matthew Knox Award

This award was inaugurated in 2005 to recognize and honor the accomplishments of the individual whose name this award bears. Matthew Knox, a fourth-year Bachelor of Science (Kinesiology) student was one of three Dalhousie students in 2005 to win one of the three Rhodes Scholarships, awarded annually to Canadian Atlantic region for study at Oxford University. The Rhodes Scholarship, first established in 1902, is the oldest of the international study awards available to Canadian students. Of the 81 Dalhousie students to have won this award, since its inception, Matthew Knox was the first ever recipient from the Faculty of Health Professions.

The criteria for the Rhodes Scholarship, set down in the Will of the British philanthropist and colonial pioneer, are high academic achievement, integrity of character, a spirit of unselfishness, respect for others, potential for leadership and physical vigor. These basic characteristics are directed at fulfilling Cecil Rhodes’ hopes that Rhodes Scholars would make an effective and positive contribution throughout the world. These criteria will be used as guidelines in the determination of appropriate prospective student recipients in the School of Health and Human Performance for the Matthew Knox Award on a perpetual basis.

Leisure Research Congress Award

The Fifth Canadian Congress on Leisure Research set up an endowment to provide an annual award to a student who has graduated from the Bachelor of Science (Recreation) program. The recipient will have attained a cumulative GPA of 3.00 or higher and will have demonstrated an aptitude for research related to recreation and leisure.

PHE (Physical and Health Education) Canada Student Award

This award recognizes undergraduate student leadership in the field of health, physical education, recreation or dance.

The Dr. Hugh A. Noble Award

This award goes to a graduating student from one of our four undergraduate degree programs in the School of Health and Human Performance. The awarding is based on academic accomplishments, qualities of citizenship as shown by involvement outside the University, leadership qualities as demonstrated in activities inside the University, and an estimate of the candidate’s potential for contributing to the profession.

Dr. John C. Polley Sportsperson Award

This award is presented to a student who has contributed significantly to the development of a sport.

Dr. J. Singleton Leadership Award

This award is given annually in recognition of a Dalhousie University student’s involvement and commitment to Therapeutic Recreation professional organizations.

Vincent Chew Memorial Award

Vincent Chew graduated from Dalhousie University with a Bachelor of Commerce degree in 1997 and a Law degree in 2001. He was working as Communications and Marketing Manager with the International Council for Sport Science and Physical Education when he passed away in 2008 as a result of a road accident in Berlin, Germany. Prior to that, he was with the 15th Asian Games in Qatar, and the Commonwealth Games in Melbourne, Australia. An avid sports and music fan, he enjoyed his varied interests while traveling extensively. Considering his passion for sport, sport management, and business, the Vincent Chew Memorial Award has been established by his parents at Dalhousie that will recognize academic excellence in the joint Recreational Management degree program (Bachelor of Management/Bachelor of Science (Recreation)).

University Medal in Health and Human Performance

Please refer to H. Faculty of Health Professions, 1. University Medals on page 630 for details.

The Women’s Division of the Dalhousie-Alumni Association H&HP Medals

Three awards are available to students in the School of Health and Human Performance. For the students who achieve the highest standing in each of the Bachelor of Science (Recreation), the Bachelor of Science (Health Promotion) and the Bachelor of Science (Kinesiology) degree, the Women’s Division sponsors a medal.

3. School of Health and Human Performance

3a. For Graduating Students

BHSc Faculty Award

This award is given to the graduating student with the highest cumulative GPA following four consecutive years in the BHSc program.

DRANIMAGE Award

This award is given to a full-time student graduating in Nuclear Medicine Technology who has achieved the highest cumulative GPA for their discipline-specific courses.

Tom Mackenzie Memorial Award

This award, in memory of Tom Mackenzie, a 1977 graduate of the School of Radiological Technology, is awarded to a graduating Radiological Technology student and is based on high standards of clinical practice and the respect of patients’ rights and needs in individuals.

Dr. Robert H. Martin Prize

In memory of Dr. Robert H. Martin, this prize is awarded to a member of the graduating class in Nuclear Medicine Technology with the highest combined evaluation in clinical and academic performance over the four years of the degree.

Radiologist’s Awards

These awards are sponsored by the QEII Health Sciences Radiologist Group and are awarded to a graduating student in each of the Nuclear Medicine Technology, Diagnostic Medical Ultrasound and Radiological Technology programs with highest cumulative GPA.

Medigan Award for Clinical Achievement

This award is presented to a student who has successfully completed the third year of the BHSc degree in Respiratory Therapy.

University Medal in Health Sciences

Please refer to H. Faculty of Health Professions, 1. University Medals on page 630 for details.

3b. For Other Students

Dorothy Archibald Award

This award is sponsored by Dorothy Archibald, a lifetime member with CAMRT, who is dedicated in her retirement to advancement of the Medical Radiation Technology profession. Awarded to two full-time students (one in each of Nuclear Medicine Technology and Radiological Technology) who have successfully completed Clinical Practicum II.

Margaret Barrett-Banks Memorial Award

This cash award is sponsored by the Margaret Barrett-Banks memorial fund in memory of Dr. Margaret Barrett-Banks, a dedicated health professional and educator.

Ian Collins Memorial Pediatric Award

This award is given to the graduating student with the highest cumulative GPA.

BHSc Faculty Award

This award is given to the graduating student with the highest cumulative GPA.

University Medal in Health Sciences

Please refer to H. Faculty of Health Professions, 1. University Medals on page 630 for details.

Women’s Division of the Dalhousie-Alumni Association H&HP Awards

Three awards are available to students in the School of Health and Human Performance. For the students who achieve the highest standing in each of the Bachelor of Science (Recreation), the Bachelor of Science (Health Promotion) and the Bachelor of Science (Kinesiology) degree, the Women’s Division sponsors a medal.
Awards

Elsevier Canada Book Award
This award is sponsored by Elsevier Canada and is awarded to two full-time students: a Respiratory Therapy student who has completed first year and a Diagnostic Imaging student who has completed first year. These awards are based on highest cumulative GPA and completion of Clinical Practicum I.

Cynthia Johnson Evans Award
This award is sponsored by the Nova Scotia Society of Diagnostic Medical Sonographers, in memory of Cynthia Johnson Evans, former educator and sonographer. It is awarded to the student who has consistently demonstrated high standards of clinical practice upon completion of year three in Diagnostic Medical Sonography.

Heather Mattice Memorial Award
The family and friends of Heather Mattice, a former student of Nuclear Medicine Technology, established this award in her memory. It is given to a student entering year one in Nuclear Medicine Technology and is based on financial need, academic standing, community and campus involvement and recommendation of the Nuclear Medicine Technology faculty.

Nova Scotia College of Medical Laboratory Technologists (NSCLT) Awards
These three awards, sponsored by NSCLT, are given to students, one from each of the classes entering second, third, and fourth years of BScHSc in Diagnostic Cytopathology, and who have consistently demonstrated clinical and academic excellence and maintained a minimum GPA of 3.30. Students who have completed their first year must also demonstrate diagnostic excellence and clinical proficiency as well as excellence in professional practice and respect for the patient.

All Cameron Memorial Award
This award is sponsored by the Dalhousie Students Association of Health Sciences in memory of All Cameron. All was a respiratory therapy student at the Dalhousie School of Health Sciences from 2011 until she lost her battle with leukemia in 2013. This gift is awarded to a full-time respiratory therapy student who has entered clinical practice II (RPT 2500).

T Kendall Medical Marketing Limited Award
This award is given to a student completing the third year in Respiratory Therapy and is based on GPA, commitment to clinical excellence during the three years of study and evidence of extracurricular involvement.

4. School of Nursing (Convocation Awards)

Undergraduate Alumni Leadership Award
The recipient of this award is a student graduating from the Basic Degree Program or the Post RN Degree Program who has demonstrated significant leadership during her/his years of study.

Matthew Ayer Award for Community Nursing
The Matthew Ayer award was established in 2008 by the family and friends of Matthew Ayer in his memory. Matthew was a student in the RNBN program at the time of his death in October 2007. The recipient of this monetary award is a student in the Bachelor of Science (Nursing) Program at the School of Nursing, Dalhousie University, who has excelled in working with populations living on the margins of society due to social injustices.

Capital Health Award for Professional Practice in Nursing (Basic Stream and Advanced Standing Stream - Basic Degree Program)
Selected by her/his peers, this award recognizes a student graduating from the Basic Degree Program (May Convocation) and the Advanced Standing Stream (October Convocation) who has demonstrated the qualities of professional practice. The recipient of this monetary award epitomizes the Standards of Nursing Practice of accountability and responsibility, continuing competence and application of knowledge and advocacy, and the CNAA Code of Ethics for Registered Nurses.

Melda Dukovski Memorial Award
Melda Dukovski (née Cseceky) graduated from Victoria General Hospital School of Nursing in 1962 and worked in many areas of nursing across Canada. She and several of her family members experienced struggles with cancer and benefited from the nursing care they received. This award is provided by Mrs. Dukovski’s husband, in her memory, and was originally presented to a student graduating from the Victoria General Hospital School of Nursing. The recipient of this monetary award is a student graduating from the Basic Degree Program who has demonstrated interest and proficiency in Oncology Nursing.

Mary-Lou Ellerton Prize in Clinical Nursing
Professor Mary-Lou Ellerton was the Associate Director, Undergraduate Program Planning and Development at the School of Nursing, Dalhousie University. She was a graduate of the Universities of Ottawa and McGill and joined the faculty of the Dalhousie School of Nursing in 1979. She devoted her professional life to fostering excellence in clinical practice and made many significant contributions to both graduate and undergraduate programs in the School of Nursing as well as to the University and the broader nursing profession. Professor Ellerton was a woman of courage, integrity, wisdom and wit. She was posthumously awarded the IWK Health Centre’s highest honour, the Award of Distinction. The recipient of this award is a graduating student who has consistently received excellent evaluations in the clinical nursing components of the program.

Elsevier Canada Award
The recipient of this monetary award is a student graduating from the Basic Degree Program or the Post RN Degree Program who has shown progressive academic achievement.

Heather Fraser-Davy Book Award
Heather Fraser-Davy was a professor with the Dalhousie School of Nursing for more than 24 years. She received her PhD in Adult Education from Dalhousie. She taught Pedestriatic and Surgical nursing as well as Maternal-Child nursing. Heather was involved in establishing a link with the Quanso Margaret College, Department of Nursing, Edinburgh, Scotland. She also worked with the Tanzania project which linked the School of Nursing, Dalhousie and the School of Nursing, University of Daru Salum. She is Past President and a Life Member of the Atlantic Region of Canadian Association of University Schools of Nursing. Heather also held an Honorary Research Associate position in the School of Education, Dalhousie University. The recipient of this monetary award is a graduating student who has demonstrated interest in international nursing and nurse midwifery.

Highest Academic Achievement Certificate (Basic Degree Program and Post RN Degree Program)
The recipient of this award is a student graduating from the Basic Degree Program and Post RN Degree Program with the highest cumulative GPA.

Highest Academic Achievement Prize (Undergraduate Degree Program)
The recipient of this monetary award is a student graduating from the Basic Degree Program or the Post RN Degree Program with the highest cumulative GPA.

IWK Medical, Dental and Scientific Staff award for Excellence in Children’s Nursing
The recipient of this monetary award is a student graduating from the Basic Degree Program who has demonstrated excellence in the area of Children’s Nursing.

IWK Medical, Dental and Scientific Staff award for Excellence in Women’s and Newborn Nursing
The recipient of this monetary award is a student graduating from the Basic Degree Program who has demonstrated excellence in the area of Women’s and Newborn Nursing.

IWK Health Centre Prize for Excellence in the Care of Children and Families
The recipient of this monetary award is a student who has demonstrated critical thinking, advocacy and autonomy in nursing children and their families in hospitals, homes and communities.

Elizabeth MacKinnon Lambie Award for Nutrition
Elizabeth Lambie was a professor at Dalhousie School of Nursing for more than 23 years. She taught classes on human nutrition, the role of nutrition in health promotion and community development, and the economic, social and physical determinants of eating practices. She is a Life Member of the Atlantic Region of the Canadian Association of University Schools of Nursing; a Charter member, Past President, Nova Scotia Dietitians Association; Past President, Fellow, Canadian Dietitians Association; Past President, Public Health Association of Nova Scotia, and Board Member, International Council on Women’s Health Issues. The recipient of this monetary award is a graduating student who has demonstrated the ability to apply community nutrition knowledge to the nursing profession.
An endowment fund was established by Ortho Pharmaceutical (Canada) Ltd. in 1990 in memory of Mr. F. R. Clayton. The recipient of this prize of a book is presented in memory of Mr. F. R. Clayton (Class of 1912) in a deserving student completing third year courses of the pharmacy program.

The William Killorn Award

This award is presented annually to a fourth year pharmacy student who has demonstrated a genuine and unfailing commitment to the practice of pharmacy.

The Margaret J. Butcher Award

This award is presented to a student who has had a positive influence on the activities of the College of Pharmacy; who is regarded by others as hardworking and unpretentious; and who has a genuine and unfailing commitment to the practice of pharmacy.

The William Killorn Award

This award is presented to a student who has had a positive influence on the activities of the College of Pharmacy; who is regarded by others as hardworking and unpretentious; and who has a genuine and unfailing commitment to the practice of pharmacy. The student must be a graduate of a high school in Nova Scotia and should not be the recipient of other concurrent awards. The Selection Committee may also consider the financial need. This award is sponsored by the Pharmacy Association of Nova Scotia.

The J. G. Duff Pharmacy Award

This award is presented to a student from New Brunswick on the basis of academic achievement, financial need and participation in student activities at the College of Pharmacy. The award is made available through a bequest of the late Mr. Charles D. Dickison.

The Sister Frances de la Vella Award

This award, a reference book or a subscription to a professional journal, is offered annually by the Nova Scotia Branch of the Canadian Society of Hospital Pharmacists and is presented to a graduating student entering a hospital pharmacy residency program, who is a member of CSHP, and excels in the PBL curriculum.

The Doreen Darby Award for Excellence

This award is presented annually to a student who has demonstrated a good academic standing and whose contributions to undergraduate life at the university level.

The Robert C. Dickison Memorial Award

This award is presented to a student from New Brunswick on the basis of academic achievement, financial need and participation in student activities at the College of Pharmacy. The award is made available through a bequest of the late Mr. Charles D. Dickison.

The Margaret J. Butcher Award

This award is presented to a student who has had a positive influence on the activities of the College of Pharmacy; who is regarded by others as hardworking and unpretentious; and who has a genuine and unfailing commitment to the practice of pharmacy. The student must be a graduate of a high school in Nova Scotia and should not be the recipient of other concurrent awards. The Selection Committee may also consider the financial need. This award is sponsored by the Pharmacy Association of Nova Scotia.

The Margaret J. Butcher Award

This award is presented to a student who has had a positive influence on the activities of the College of Pharmacy; who is regarded by others as hardworking and unpretentious; and who has a genuine and unfailing commitment to the practice of pharmacy.
Awards

Scott Knowles Memorial Pharmacy Award
This award is established by family, friends, and colleagues in memory of Scott Knowles, a graduate of the Class of 2007. The award is presented to a student from New Brunswick who exhibits a high degree of professionalism and possesses leadership qualities. Preference will be given to a student returning to New Brunswick to practice in an independent, retail, community-based pharmacy.

Dr. Jessie L. MacKnight Miss Mona W. Fleming Award in Hospital Pharmacy
This award is presented annually to a student from New Brunswick and to a student from Nova Scotia who has completed outstanding work in the hospital portion of the practical experience program and in the fourth year multi-skill laboratory class. It is donated by the recipients who demonstrate an interest in hospital pharmacy practice.

The Helen Corson Marshall Award in Pharmacy
This award was established in memory of Helene Corson Marshall, a student of the Maritime College of Pharmacy, by her family. This award is to be given annually to a student (or students) who has successfully completed one or more years of the class leading to a degree in pharmacy and who is enrolled in pharmacy at the University for the ensuing year. Candidates must have obtained a satisfactory academic standing and must show promise of making future contributions to the profession of pharmacy. Financial need may be considered.

The Donald Moore Memorial Award in Pharmacy
This award was established with donations made by family, friends, and colleagues in memory of the late Donald Moore, a well-known leader in hospital pharmacy and an interest in practicing community pharmacy. The recipient must demonstrate satisfactory academic standing and community pharmacy at the University for the ensuing year. Candidates must have attained a second highest aggregate mark during his/her four years at the College of Pharmacy.

McNeill, Rhodes, Karayannan Award
This award will be given to a pharmacy student at the completion of her/his third or fourth year of the program. The recipient must have attained satisfactory academic standing and must be an active member of the class participating in college activities such as For the Health Of It, the class quiz, and be a member of an intramural team.

Merck Frost Evidence-Based Clinical Practice Award
This award is donated to a graduating student who has demonstrated outstanding interest, aptitude and leadership in the development and application of evidence-based and evidence-based care in practice and research.

Merck Sharp and Dohme Pharmacy Award
This award, the books, The Merck Index and The Merck Manual, are presented to the student entering third year who excels in pharmaceutical sciences (medicinal chemistry, pharmacokinetics).

Roger Montigny Memorial Award
This award is presented to a third year student from Prince Edward Island who has demonstrated a passion for pharmacy and an interest in practicing community pharmacy. The recipient must demonstrate satisfactory academic standing and financial need.

Donald Moore Memorial Award in Pharmacy
This award was established with donations made by family, friends, and colleagues in memory of the late Donald Moore, a well-known leader in hospital and community pharmacy in New Brunswick. This award is presented to students entering third year, who have demonstrated well-rounded skills by making a significant and continuing contribution to the student body at the College of Pharmacy and/or Dalhousie University.

Natural Medicines Comprehensive Database Recognition Award
The recipient of this award will be a graduating student who demonstrates an interest in natural products. The recipient will receive a one-year subscription to Natural Medicines Comprehensive Database website, a series of booklets entitled Natural Medicines in the Clinical Management of Disease, and an Award Certificate.

New Brunswick Pharmaceutical Society Centennial Medal
In conjunction with its 100th anniversary of incorporation, the Society has established this commemorative medal to be presented annually to the New Brunswick student who has attained the highest aggregate mark during his/her four years at the College of Pharmacy.

The Nova Scotia Association of Certified Dispensers Price
This prize, of a book, will be awarded annually to the top student in the first year multi-skills laboratory. The price was established in 1984 with the gift of funds to provide the initial award and to set up an endowment to provide subsequent awards.

The Nova Scotia College of Pharmacists Centennial Award
In conjunction with its 100th anniversary of incorporation, the Society has established an award. Candidates will have a satisfactory academic standing and show aptitude for the profession. The financial need of the student may be considered in selecting recipients for the award.

Nova Scotia College of Pharmacists Memorial Award
This Society has established an award in memory of past members and friends of the Society. The award is available to a qualifying student who possesses good academic standing and aptitude for the profession. The financial need of the student may be considered in selecting the recipient for the award of $1,000.

Nova Scotia Pharmacy Award
This award is given to the student who excels in the second year Pharmacology class.

CPPI Centennial Leadership Award (External)
This award, presented jointly by the Canadian Pharmacists Association (CPA), and enables a third year student to join pharmacists and fellow students at the Annual General Meeting of the Canadian Pharmacists Association. The award program exposes student winners to several facets of the profession including the pharmaceutical industry, innovative pharmacy practice sites, hospitals and government agencies wherever possible. Selection is based on academic achievement and outstanding contributions to undergraduate activities.

Eric & Ryan Post-Pharmacy Leadership Award
This award is presented to a student who is completing their third year and has demonstrated financial need and has also made significant contributions to pharmacy life at the College.

The B. Trevor Puglsey Memorial Pharmacy Award
This award was established by a bequest from the Estate of B. Trevor Puglsey for an undergraduate student who has completed one or more years of the pharmacy class. The criteria for the selection of the recipient is based on academic standing, aptitude for pharmacy and qualities of character. Financial need may also be considered.

The Mrs. Vera B. Puglsey Award
This award was established by a bequest from the Mrs. Vera B. Puglsey estate. This award will be presented annually to a student who successfully completed one or more years of the class leading to a degree in pharmacy and who is enrolled in pharmacy at the University for the ensuing year. Candidates must have obtained a satisfactory academic standing and must show promise of making future contributions to the profession of pharmacy.

The Nova Scotia College of Pharmacists Centennial Award
This Society has established an award. Candidates will have a satisfactory academic standing and show aptitude for the profession. The financial need of the student may be considered in selecting recipients for the award.

The Mrs. Vera B. Puglsey Award
This award was established by a bequest from the Mrs. Vera B. Puglsey estate. This award will be presented annually to a student who successfully completed one or more years of the class leading to a degree in pharmacy and who is enrolled in pharmacy at the University for the ensuing year. Candidates must have obtained a satisfactory academic standing and must show promise of making future contributions to the profession of pharmacy.

John J. Ryan Pharmacy Administration Awards
These two awards are presented annually to the student who excels in PHAR 4060 (Advanced Patient Health Management) and PHAR 1060 (Pharmacy Law and Health Care Ethics). Financial need will also be considered. This award was made possible through income of the John J. Ryan Fund.

The Mrs. Vera B. Puglsey Award
This award was established by a bequest from the Mrs. Vera B. Puglsey estate. This award will be presented annually to a student who successfully completed one or more years of the class leading to a degree in pharmacy and who is enrolled in pharmacy at the University for the ensuing year. Candidates must have obtained a satisfactory academic standing and must show promise of making future contributions to the profession of pharmacy.

Sandoz Pharmacy Administration Award
These two awards are presented annually to the student who excels in PHAR 4060 (Advanced Patient Health Management) and PHAR 1060 (Pharmacy Law and Health Care Ethics). Financial need will also be considered. This award was made possible through income of the John J. Ryan Fund.

The Nova Scotia Pharmacists Centennial Award
This Society has established an award. Candidates will have a satisfactory academic standing and show aptitude for the profession. The financial need of the student may be considered in selecting recipients for the award.

The Mrs. Vera B. Puglsey Award
This award was established by a bequest from the Mrs. Vera B. Puglsey estate. This award will be presented annually to a student who successfully completed one or more years of the class leading to a degree in pharmacy and who is enrolled in pharmacy at the University for the ensuing year. Candidates must have obtained a satisfactory academic standing and must show promise of making future contributions to the profession of pharmacy.

Sandoz Pharmacy Administration Award
These two awards are presented annually to the student who excels in PHAR 4060 (Advanced Patient Health Management) and PHAR 1060 (Pharmacy Law and Health Care Ethics). Financial need will also be considered. This award was made possible through income of the John J. Ryan Fund.

Dr. Samar R. Singh Prize in Anatomy
An endowed fund has been established for the purpose of providing a prize to the highest standing student in first year anatomy among Nursing and Pharmacy enrollees. The prize, consisting of a book or books to the approximate value of
$100, is a memorial to Dr. Singh, a long-time member of the Department of Anatomy. The awardee will be selected by the Head of the Department.

The Whelan Family Award in Pharmacy

This award is presented to a student from New Brunswick who shows an aptitude for patient-centered care as demonstrated by excelling in Pharmacy Skills Lab.

University Medal in Pharmacy

Please refer to G. Faculty of Health Professions, 1. University Medals on page 620 for details.

6. School of Social Work

Dalhousie University Women Alumnae Medal

This medal is presented annually to the BSW graduating student with the highest cumulative GPA in the Baccalaureate program in the School of Social Work.

Russell Leger Memorial Humanitarian Award

This award was established to honour the memory of Russell Leger, who received a Bachelor's degree in Social Work from Dalhousie University in 1977. His work at home and abroad exemplified his commitment to community development, peace and social justice. The award is presented to a graduating BSW or MSW student, who is nominated on the basis of achievement with a continued involvement in critical social issues.

The School of Social Work BSW Alumnae Award

This alumni award has been established to support financial awards to be given to students in the Bachelor of Social Work degree program who demonstrate the highest values of humanity, community, and service in the study of Social Work as reflected in contributions to the learning environment of the School. A student must be nominated for this award.

J. Bernard MacNell Memorial Award

For a BSW student in their second year of studies who achieves high academic standing and who best meets the criteria of financial need and shows promise of making future contributions to the profession of social work in the areas of community or corrections.

I. Faculty of Management

Andrew Peacock Memorial Award

An annual award named in honour of Dr. Andrew Peacock, Professor in the Rowe School of Business. Students who are in good standing and are enrolled in the Bachelor of Management or Bachelor of Commerce degree in the second or third year of study are eligible. Students must have demonstrated interest and understanding of the issues related to persons with disabilities, have demonstrated voluntary and experience or interest in working in the not-for-profit sector. Application required in the fall term. Apply to the department.

1. Commerce

The Wilfred Berman Memorial Prize

The Wilfred Berman Memorial Prize is payable from the income of a fund provided by former students of the late Professor Wilfred Berman to the student obtaining the highest mark in the course in first year Accounting.

Commerce Alumni Association Awards

The Commerce Alumni Association sponsors seven annual two-monetary awards to recognize academic achievement. There is one award for each of Accounting, Finance, Entrepreneurship, Marketing Management, Marketing Logistics, International Business and Managing People and Organizations.

The Stewart Luckie Gibson Memorial Prize

The Rowe School of Business offers a prize to the graduating student in the general Bachelor of Commerce program who has achieved the highest overall standing.

The D. C. Mackay Award in Money Management

An endowment has been established by Dr. Douglas C. Mackay, a successful investment banker, valued alumnus and active member of the Rowe School of Business Advisory Committee. A major prize is available to a student whose program concentration is Finance, whose career preparation is Money Management, who achieves excellent performance in COMM 3206 and who achieves satisfactory performance in research in the Money Management area.

Christopher Mckee Award of Merit

This award is established in memory of Christopher Mckee, a Commerce graduate of 1981, through the generosity of his family. The recipient will have at least a "B" average, and will have made significant contribution to the university as an organizer, or participant in university or community activities. Application to department is required.

John R. E. Parker Prize in Accounting

Established by Professor John Parker and Joan Parker, who are passionate about the accounting profession, this prize is awarded to a Commerce student for excellence in attaining the best overall mark in Intermediate Financial Accounting I and Cost Management.

University Medal in Commerce

The Rowe School of Business offers a medal to the top graduating student in the Bachelor of Commerce program. The awardee will be the one who has fulfilled the high scholastic standard for this award.

2. Management

University Medal in Management

The Faculty of Management offers a medal to the top graduating student in the Bachelor of Management program. The awardee will be the one who has fulfilled the high scholastic standard for this award.

Peter Dolph Memorial Prize in Biochemistry

In memory of Professor Peter Dolph, this prize is awarded annually to the fourth year science student who is judged to have the best overall performance in the Honours Research Project (Biochemistry 4804/4805).

Kilner MacMillan Memorial Book Prize

This prize is awarded annually to the student who attains the highest aggregate mark for the three half-courses, BIOC 3700, 3300 and 3400.

Douglas Russell Memorial Book Prize

In memory of Dr. Douglas Russell, the Department of Biochemistry and Molecular Biology has established a prize to be awarded to the student with the highest aggregate mark in Biochemistry 2300, a course which owes its existence in large part to his efforts.

The Society of Chemical Industry, Canadian Section, Merit Award

This award is presented annually to a graduate student in Biochemistry who is judged to have the highest standing in the final year. A minimum average of 75% is required.

University Medal in Biochemistry and Molecular Biology

The Department of Biochemistry and Molecular Biology offers a medal to the top First Class Honours graduate in the Biochemistry program. The awardee will be the one who has attained the high scholastic standard of the Department.
2. Biology

The Adams Prize

On the occasion of the retirement of Dr. John G. Alderson, friends, colleagues and students established an endowment to provide an annual prize to be awarded for the best achievement in Biology for the fourth year of the course to a student who has shown exceptional ability academically. The recipient will be determined during the Cameron conference poster and oral presentations. In the event that there is more than one student whose research project meets these criterion, overall GPA will be the deciding factor.

The Cameron conference poster and oral presentations. In the event that there is more than one student whose research project meets these criterion, overall GPA will be the deciding factor.

Cecelia Rajaratnam Memorial Prize in Plant Cell Biology

This prize will be awarded annually to a top fourth year honour student whose research project best achieves the aims of the undergraduate program in Plant Cell Biology. The recipient will be determined during the Cameron conference poster and oral presentations. In the event that there is more than one student whose research project meets these criterion, overall GPA will be the deciding factor.

University Medal in Biology

The Department of Biology offers a medal to the top First Class Honours graduate in the Biology program in recognition of superior achievement.

University Medal in Marine Biology

The Department established this medal in 1985-86 to be awarded, where appropriate, to the student who stands highest among the First Class Honours graduates in the Marine Biology program.

3. Chemistry

The John Hamilton Barrett Prize

This is the gift of his widow, Mrs. Marjorie Barrett. It is offered annually at the end of the fourth year of the course to a student who has shown exceptional ability in chemistry or other science. Application not required.

The Canadian Society for Chemistry Silver Medal

This CSC Silver Medal is provided to each university with a chemistry department and is awarded to the student with the highest standing in chemistry and allied subjects in the penultimate year. The successful student receives a medal and an inscribed certificate. Application not required.

The John Hamilton Barrett Prize

This endowment was established to provide an annual prize to the student who has submitted and defended the best Honours Research Project in Chemistry. Dr. Barrett received his BSc (Honours) from Dalhousie in 1935 and held many senior positions with the Canadian Armed Forces and the Department of National Defence. Application not required.

Chemistry Achievement award

This award is available to undergraduate students in the chemistry program and is awarded on the basis of academic standing, demonstrated proficiency in chemistry, and other criteria such as employment, community service and extra-curricular activities. Application not required.

Walter J. Chute Prize in Chemistry

This endowment was established to provide an annual prize to a chemistry student, with an outstanding record in organic chemistry, entering his or her final year in the Honours Chemistry program. Application not required.

The CRC Freshman Achievement Award

Awarded on the basis of outstanding academic achievement in freshman chemistry, the CRC Press Freshman Achievements Award is given to more than 2,000 schools. Winning students receive a complimentary copy of the CRC Handbook of Chemistry and Physics and a commemorative award to be mounted on the inside front cover. Application not required.

The Hugh Graeme Fraser Memorial Prize in Advanced Chemistry

This award was founded by members of the Class of 1931 and is awarded annually to a student at the end of his/her third year, who has, in the opinion of the Department, shown such aptitude for the subject that he or she is entitled to be the one who is deemed to be the best, assessed on academic standing and work term performance.

The Dr. J. G. Ogden Memorial Prize in Marine Biology

This prize will be awarded annually to a top fourth year honour student whose research project best achieves the aims of the undergraduate program in Marine Biology. The recipient will be determined during the Cameron conference poster and oral presentations. In the event that there is more than one student whose research project meets these criterion, overall GPA will be the deciding factor.

The Undergraduate Student Society Spirit of Chemistry Prize

The Spirit of Chemistry Prize

This endowment was established to provide an annual prize to the student who has demonstrated excellence in organic chemistry, and who help promote the subject through their enthusiastic participation in their studies and chemistry related activities. To be eligible to receive this prize, students must be majoring in chemistry, have a minimum of 2.50 GPA, and must be nominated by a professor or instructor. Application not required.

Hypercube Scholar Award

Awarded to a graduating student going on to graduate school, where molecular modeling might be part of his/her future. Winning students receive a complimentary copy of HyperChem software plus a small commemorative plaque. Application not required.

The CSC Silver Medal is provided to each university with a chemistry department and is awarded to the student with the highest standing in chemistry and allied subjects in the penultimate year. The successful student receives a medal and an inscribed certificate. Application not required.

The John Hamilton Barrett Prize

This endowment was established to provide an annual prize to the student who has submitted and defended the best Honours Research Project in Chemistry. Dr. Barrett received his BSc (Honours) from Dalhousie in 1935 and held many senior positions with the Canadian Armed Forces and the Department of National Defence. Application not required.

Chemistry Achievement award

This award is available to undergraduate students in the chemistry program and is awarded on the basis of academic standing, demonstrated proficiency in chemistry, and other criteria such as employment, community service and extra-curricular activities. Application not required.

Walter J. Chute Prize in Chemistry

This endowment was established to provide an annual prize to a chemistry student, with an outstanding record in organic chemistry, entering his or her final year in the Honours Chemistry program. Application not required.

The CRC Freshman Achievement Award

Awarded on the basis of outstanding academic achievement in freshman chemistry, the CRC Press Freshman Achievements Award is given to more than 2,000 schools. Winning students receive a complimentary copy of the CRC Handbook of Chemistry and Physics and a commemorative award to be mounted on the inside front cover. Application not required.

The Hugh Graeme Fraser Memorial Prize in Advanced Chemistry

This award was founded by members of the Class of 1931 and is awarded annually to a student at the end of his/her third year, who has, in the opinion of the Department, shown such aptitude for the subject that he or she is entitled to be the one who is deemed to be the best, assessed on academic standing and work term performance.

The Dr. J. G. Ogden Memorial Prize in Marine Biology

This prize will be awarded annually to a top fourth year honour student whose research project best achieves the aims of the undergraduate program in Marine Biology. The recipient will be determined during the Cameron conference poster and oral presentations. In the event that there is more than one student whose research project meets these criterion, overall GPA will be the deciding factor.

The Undergraduate Student Society Spirit of Chemistry Prize

The Spirit of Chemistry Prize

This endowment was established to provide an annual prize to the student who has demonstrated excellence in organic chemistry, and who help promote the subject through their enthusiastic participation in their studies and chemistry related activities. To be eligible to receive this prize, students must be majoring in chemistry, have a minimum of 2.50 GPA, and must be nominated by a professor or instructor. Application not required.

Hypercube Scholar Award

Awarded to a graduating student going on to graduate school, where molecular modeling might be part of his/her future. Winning students receive a complimentary copy of HyperChem software plus a small commemorative plaque. Application not required.

Oswald Knop Prize in Chemistry

This prize is awarded to the top student (or students, in the event of a tie) for the best achievement in both course and laboratory work in the 2000 level inorganic chemistry course.

The Society of Chemical Industry, Canadian Section, Merit Award

This award (an engraved gold key and subscription to Chemistry and Industry) may be made to the Honours graduate in chemistry with the highest standing in the final year. A minimum average of 75% is required. Application not required.

The Spirit of Chemistry Prize

The undergraduate Student Society Spirit of Chemistry Prize is meant to benefit students who are majoring in chemistry, and who help promote the subject through their enthusiastic participation in their studies and chemistry related activities. To be eligible to receive this prize, students must be majoring in chemistry, have a minimum of 2.50 GPA, and must be nominated by a professor or instructor. Application not required.

Undergraduate award in Analytical Chemistry

The Division of Analytical Chemistry of the American Chemical Society offers a number of gift subscriptions to Analytical Chemistry. These awards are intended to recognize students who have shown an aptitude for a career in analytical chemistry. Application not required.
University Medal in Chemistry
The Department of Chemistry offers a medal to the top First Class Honours graduate in recognition of superior achievement in chemistry.

4. Earth Sciences
The David Bartle Memorial Award
The family, friends, and classmates of David Bartle established in 1984 an endowed fund to provide an annual prize in his memory. The Dalhousie Geology Club in consultation with the Departmental Chairman will select a student in second year Earth Sciences who has demonstrated both a good academic record and leadership qualities.

Canadian Society of Petroleum Geologists Award
The Society sponsors an annual award consisting of a certificate and a one year student membership to an undergraduate student who has demonstrated outstanding competence in petroleum geology or closely related fields.

Canadian Society of Petroleum Geologists Student Industry Field Trip
The society sponsors a field trip to a third year Earth Sciences student who has an interest in petroleum geology, sedimentology and stratigraphy. The award consists of travel expenses and field expenses for a trip to the Sambro Island Basin and Rocky Mountains of Western Canada.

G.V. Douglas Memorial Prize in Earth Sciences
In 1958-59, friends and former students of the late Professor G.V. Douglas, established a memorial fund from which the interest would provide a prize to be awarded to an outstanding student in first year Earth Sciences.

Geological Association of Canada Student Prize
This award is on academic standing. This prize is awarded annually to a student entering fourth year. The prize will consist of a one year free membership in the GAC and a GAC "Special Paper" volume to be chosen by the recipient.

Michael J. Keon Memorial Award
This award was established to encourage greater participation of women in science. It is to be awarded to a female student entering the second year earth science program who shows an interest in and commitment to the pursuit of a career in sciences and whose performance is of honours calibre.

MacEachern-Ponsford Memorial Award
Family, friends and classmates of Ian Joseph MacEachern and Mark Anthony Ponsford have established a memorial fund. The purpose of the endowment is to provide an annual award to a student who has completed the second year of a program majoring in Earth Sciences, whose academic performance is of an honours calibre and who has been an active participant in student activities. The award is to be made on the recommendation of the Chairman of the Earth Sciences Department after consultation with the Dalhousie Geology Club and departmental staff.

Mineralogical Association of Canada Student Prize
This award is open to an undergraduate student who has completed at least second year and has demonstrated excellence in one of mineralogy, crystallography, geochemistry, petrology and mineral deposits. The recipient will receive the choice of one of the MAC special publications.

The Mining Society Centennial Scholarship Medal
The Mining Society of Nova Scotia sponsors annual medals to students who have distinguished themselves during university studies in the mineral, metallurgical or petroleum fields. The Department awards the medal allocated to Dalhousie to the best all round graduating student.

University Medal in Earth Sciences
The Department of Earth Sciences offers to the top First Class Honours graduate a medal in recognition of superior achievement.

5. Economics
The Anonymous Economics Prize
This prize, consisting of a book(s) and a sum of money, is open to the Dalhousie undergraduate who is not in the final year of study and who has shown through an essay during the second year of study on economics, the best promise of successfully applying economic theory to the solution of human problems as determined by the selection committee.

Econometrics Prize
The purpose of this prize is to provide an annual prize for an undergraduate Economics major. The Econometrics Prize will be awarded to the undergraduate Economics major with the highest combined average in the Econometrics I (ECON 3310) and Econometrics II (ECON 3339) sequence of courses.

Economic Theory Prize
The purpose of this prize is to provide an annual prize for an undergraduate Economics major. The Economic Theory Prize will be awarded to the undergraduate Economics major with the highest combined average in the Intermediate Microeconomics (ECON 2200 or 2220) and Intermediate Macroeconomics (ECON 2301) sequence of courses.

Economics Honours Thesis Prize
The purpose of this prize is to provide an annual prize for an undergraduate Economics major. The Economics Honours Thesis Prize will be awarded to the undergraduate Economics honours student with the best honours thesis, as determined by the Selection Committee.

Economics International Student Essay Prize
The purpose of this prize is to provide an annual prize for an undergraduate Economics major. The prize will be awarded to the undergraduate Economics 2+2 international student with the best essay written in their third year, as determined by the Selection Committee.

Principles of Economics Prize
The purpose of this prize is to provide an annual prize for an undergraduate Economics major. The prize will be awarded to the undergraduate Economics major with the highest combined average in the Principles of Microeconomics (ECON 1101) and Principles of Microeconomics (ECON 1102) sequence of courses.

University Medal in Economics
The Department of Economics offers a medal to the top First Class Honours graduate in recognition of superior achievement in Economics.

6. Environmental Science
Environmental Science Award
This award is given to an Environmental Science student in her his third year of study who has shown academic promise in her his environmental course work.

Environmental Science Honours Society Award
The Honours Society Award is awarded annually to students graduating with a B.Sc. Honours Major in Environmental Science or B.Sc. Combined Honours or a Double Major in Environmental Science who have achieved a cumulative GPA of 3.5 or more.

Environmental Science Thesis Prize
This prize is awarded annually to the student who is judged to have submitted and defended the best Honours Thesis.

Owen Hartman Prize
The Owen Hartman Prize is granted annually to an Environmental Science student who is deemed to have contributed significantly to Environmental Science school life.

University Medal in Environmental Science
Environmental Science offers to the top First Class Honours graduate a medal in recognition of superior achievement in environmental science.

7. Mathematics and Statistics
Barnwell Prize
The Barnwell Prize will be awarded annually to the student registered in the Co-op Mathematics Program who has the best cumulative academic record, subject to the restrictions that the prize can be awarded only once to a given individual and that the winner must have performed acceptably in all work term assignments.

The Dr. Emil and Mrs. Stella Blum Prize in Mathematics
A fund was established by Dr. Emil Blum in memory of his parents Emil and Stella Blum. The prize will be awarded to an advanced major or honours Mathematics student who achieves the highest grade in second year calculus.

The Katherine M. Buttershow Prize
This prize will be awarded annually to the student standing highest in the advanced mathematics courses.
Undergraduate book  Page 638  Wednesday, March 12, 2014  12:03 PM

638 Awards

Ken Dunn Memorial Prize

The fund which was established in memory of Ken Dunn will provide an annual prize to a student who has completed the third year of an Honours program in Mathematics or Statistics, or a combined Honours program in Mathematics and Statistics.

Barry Ward Fawcett Memorial Prize

Established by friends and colleagues of the late Dr. Barry Ward Fawcett who was an associate professor of Computing Science from 1982 until his untimely death at age 47 in 1991. The Department of Computing Science offers this prize to an undergraduate student who has completed between 30 and 60 credit hours, registered in a mathematics or statistics program, and has achieved the highest grade in MATH/CSCI 2113 (Discrete Structures II).

The Ellen McCaughin McFarlane Prize

A Fund has been established in memory of Ellen McCaughin McFarlane, Class of 1927. Initially, the Fund is to provide an annual prize to an Honours mathematics student who at the end of his/her first year* in the honours program has achieved the highest standing. (*Normally, this would be upon the completion of the second year at Dalhousie.)

The Walter Prize

This prize will be awarded annually to the student with the highest standing in MATH 1010.

The Sir William Young Gold Medal

Founded by the bequest of the late Sir William Young, this medal will be awarded on graduation to the student who stands first among those taking First Class Honours in Mathematics, this is the University Medal in Mathematics.

University Medal in Statistics

The Department established this medal as an award to the student who stands highest among the First Class Honours graduates in the Statistics program.

8. Microbiology and Immunology

Ron Carr Award

The Department of Microbiology and Immunology offers a book award to a student who displays academic achievement, commitment to the betterment of colleagues, makes substantial contributions to the broader community and is involved in extra-curricular activities in the arts or environment.

Honsor Student Prize

The Department of Microbiology and Immunology offers $100 award for outstanding academic achievement during the Honours Program.

University Medal in Microbiology and Immunology

The Department of Microbiology and Immunology offers to the top First Class Honours graduate a medal in recognition of superior achievement in the program.

9. Physics and Atmospheric Science

The Dr. William J. Archibald Prize in Physics

An annual prize will be awarded to a student who is considered by the Physics Department to be the most promising among those entering a second year Honours Physics program with first class standing.

The Dr. E. W. Gullip Memorial Prize

This is to be awarded to the undergraduate student who best exemplifies the qualities of Dr. E. W. Gullip in showing initiative, experimental skill, leadership and enthusiasm for Physics, thereby making an outstanding contribution to physics in this University. This prize will not necessarily be awarded every year.

The James Gordon MacGregor Memorial Prizes

Relatives of the late Dr. J. G. MacGregor contributed to the James Gordon MacGregor Memorial Fund which now provides awards to undergraduates in the study of physics. The undergraduates are known as scholars.

The Dr. A. Stanley MacKenzie Prizes in Physics

These prizes will be awarded by the Department of Physics and Atmospheric Science to the most promising students in the first two years of the Physics program. The fund was established under the will of the late Miss Mary Alice Smith.

The Burgess McKintick Prizes in Physics

The funds for these prizes come from the estate of F. J. A. McKintick who graduated in 1894 with Honours in Mathematics and Mathematical Physics. He was the first Dalhousie graduate to receive the 1851 Exhibition Scholarship. The prices are in memory of his brother, Burgess McKintick, who graduated in 1877. A prize will be awarded to undergraduate students achieving the highest standing in each of Physics 1280/1290, 1300 and the core second year Physics courses. No student may receive more than one such prize in any one year. A prize will be awarded to the female Honours students who achieves first class standing in any of fourth year, third year with first class standing in the fourth year or fourth year, third year with first class standing. Consideration will occur in the fall.

Burgess McKintick Summer Research Studentships in Physics

The Department offers up to two 3-4 month studentships for first year students intending to go into an Honours Physics program at Dalhousie.

Darrell Montgomery Memorial Prize

An endowment has been set up to provide an annual prize to a third year student in the Phys-ecs 1000/3010 experimental laboratory who is deemed to have shown a love of experimentation, the qualities of leadership and participation in student activities in physics related areas.

The Diploma in Meteorology Prize

This prize is awarded to the student with the highest GPA in the program.

Dr. Masayoshi Sembu Memorial Prizes

One prize will be awarded to an undergraduate student attending courses typically taught by Masayoshi Sembu, who, in the opinion of the faculty, possess outstanding skills, interest, promise, and determination in theoretical physics. The other prize will be awarded to a student in Physics (major or honours) in their third or fourth academic year who, compared to the previous academic year, exhibits the greatest improvement in his/her studies.

The University Medal in Physics

The Department of Physics and Atmospheric Science offers to the top First Class Honours graduate a medal in recognition of superior achievement in the Physics class.

10. Psychology and Neuroscience

Dr. Lylem E. White Prize

A bequest from the Estate of Dr. Lylem E. White established an endowment to fund a prize to an undergraduate student in Psychology and in Neuroscience. The Department assigns prizes for use in recognizing the best performance of a student in second year in each program.

Dr. W. E. Hensig Prize in Psychology

A fund has been established to provide one or more annual prizes to students who have achieved the highest performance in the introductory psychology course(s) and who are undertaking a Major or Honours degree in Psychology or Neuroscience.

Francis L. Stewart Memorial Prize in Psychology

A fund has been established to provide a prize to a fourth year Honours student who shows outstanding potential as a scientist practitioner in Clinical Psychology.

Susan Paula Forward Memorial Prize in Psychology

Established in the memory of Susan Paula Forward who graduated in 1994 with a Bachelor of Science with Honours in Psychology. She achieved academic excellence during her time, being on the Dean’s list for three consecutive years and receiving the University Medal in Psychology upon graduation. This prize is awarded to a graduating Psychology student who has achieved an excellent academic standing, with a strong background and demonstrated interest in pain research and child development.

The David and Ruth Hatcher Undergraduate Neuroscience Prize

The Neuroscience Institute Prize was established in 1998 by donations from members of the Neuroscience Institute, Dalhousie University. Upon receiving a generous gift from Dr. David and Mrs. Ruth Hatcher, the Neuroscience Institute changed the name of the prize in honour of the Halteds. The prize is awarded to a fourth year Neuroscience Honours student who shows outstanding potential as a researcher in Neuroscience.

University Medal in Neuroscience

The Department of Psychology and Neuroscience offers a medal to the top graduating student with First Class Honours in the program.

University Medal in Psychology

The Department of Psychology and Neuroscience offers a medal to the top graduating student with First Class Honours in the program.

638 Awards
K. College of Sustainability

Deborah Burack Price
This prize is awarded annually in March to an ESS student who has contributed significantly to academic life in the College of Sustainability. Faculty members nominate students to the Awards Committee.

ESS Academic Improvement Prize
This prize is awarded annually in March to an ESS student in her/his fourth year of study who has shown the most academic improvement in her/his course work throughout the degree.

ESS First-year Prize
This prize is awarded annually in March to an ESS student in her/his second year of study who had the highest GPA in her/his first year courses at Dalhousie.

ESS Honours Society
Awarded to ESS students graduating with a cumulative GPA of 3.7 or higher.

ESS Second-year Prize
This prize is awarded annually in March to an ESS student in her/his third year of study who had the highest GPA in her/his second year courses at Dalhousie.

ESS Student Travel Award
A fund has been established to support ESS students for travel with grants of $300 - $500. Students submit a cover letter and budget to the College of Sustainability Awards Committee. The cover letter should explain how the proposed travel will contribute to research experiences or to the application or expansion of the undergraduate academic experience. The budget should include all expected sources of income (including other successful and unsuccessful grant applications) and a list of expected experiences.

ESS SUST-star Prize
This prize is awarded annually to the ESS student graduating with the highest average in all SUST classes.

ESS Thesis Prize
This prize is awarded annually to the student that is judged to have submitted and defended the best Honours thesis.

Rookie-of-the-year Prize
This prize is awarded annually in March to an ESS student in her/his first year of study who had the highest GPA in her/his first year courses at Dalhousie. Faculty members nominate students to the Awards Committee.

University Medal in Environment, Sustainability and Society
This prize of Sustainability offers to the top First Class Honours graduate a medal in recognition of superior achievement in Environment, Sustainability and Society. Awarded at Convocation.

VI. Financial Aid and Loans

A. Government Student Loans

IMPORTANT: Please note that federal and provincial student loan regulations include stipulations for the Borrower in terms of the minimum course load, expressed as a percentage of the normal course load at the University, which the Borrower must carry in order to benefit from the program. This minimum must be maintained throughout the academic year, e.g., a student who wishes to receive either money or interest-free status under the Canada Student Loan Plan for the entire academic year must carry not fewer than 60 per cent of the normal course load (expressed in credit hours) for each term. Please note, to be eligible for provincial loan funding from Newfoundland, you must be registered in 80% of the normal course load. At Dalhousie, the normal credit hour load for student loan purposes is 30. The Borrower must carry not fewer than 18 credit hours, distributed equally between the terms, i.e., six. If your particular program does not conform to this scheme, you should apply to Student Aid for funding for only that term in which your course load would fulfill this regulation. Federal and provincial rules can differ on this matter.

If you must drop or add courses, exercise care so as not to jeopardize your provincial rules can differ on this matter.

B. Addresses of Provincial Student Aid Authorities

Canadian students are to apply for government assistance to the appropriate agency in that province or territory in which the applicant is a bona fide resident.

Undergraduate book  Page 640  Wednesday, March 12, 2014  12:03 PM

The University has established a temporary loan program to assist registered Dalhousie students with certain types of short-term financial difficulty when no other resource is available. Students must provide proof of their ability to repay the loan within the time period. (Loans are not made for tuition fee payment.) These loans have a short interest-free period, after which interest will be charged. Refer to the Temporary Loan Application for further details. Applications may be picked up in the Registrar’s Office, Room 130, Henry Hicks Administration Building, the Sexton Campus Student Service Centre, or online at http://moneymatters.dal.ca.

Visit the University’s bursary program for a maximum of five years. (For secondly) other high schools in the province of Nova Scotia. The recipient may be considered in subsequent years for further assistance. Apply through the general online bursary program.

The University’s bursary program is intended as possible supplementary assistance to help qualifying students with a portion of their educational costs.

The concept of the fund was developed in response to a medical emergency. Prior to the establishment of this Fund, Students, Staff, Faculty and Friends of Dalhousie joined together to provide special funding to assist a student. A donor will decide upon the distribution of funds. This committee will consist of the President of the Student Union, Dean of Students, Coordinator of International Students, president of all “A” societies (including the Engineering Undergraduate Society, the Graduate Student Society, the Architecture Students Association, the Graduate Planning Society and the Computer Science Society). Distribution of funding will be subject to the judgment of the committee taking into account the individual circumstances and needs.

The University has funds for the purpose of assisting its students who may face certain types of financial situations. These bursaries are awarded primarily on the basis of demonstrable need as determined by the appropriate University office or committee, satisfactory academic standing (as defined in Academic Regulations) is also expected. Students whose financial needs are exceptionally large and/or students whose academic standing is unsatisfactory may not be assisted. Normally, bursaries will be awarded only to students who have utilized all other forms of assistance under the Canada Student Loan Program and/or corresponding provincial or territorial loan programs or bank loans. Normally, receipt of the first installment of such funding is a prerequisite to the University’s consideration of an application for bursary assistance. Students may access the bursary program for five years of funding.

A. General—All Faculties

Distribution of funding will be subject to the judgment of the committee taking into account the individual circumstances and needs.

For Architecture and Planning, Computer Science &
A limited number of bursaries are available annually to students who have exhibited a record of considerable leadership achievement. Candidates must also demonstrate consistent satisfactory academic accomplishment. The Selecting Committee may consider such other matters as financial need, service to the University and the community, and character. Submit completed forms to the Department of Athletics and Recreation, which will forward your application with supplementary information.

Dalhousie Memorial Bursary Fund
From time to time Dalhousie contributions have been made to the University as a memorial subscription in honor of some student or former student. Until now there has been no proper place into which these funds could be channeled. Because of these occurrences a Dalhousie Memorial Bursary Fund has been established. The existence of the fund will be commemorated by a book of remembrance to be located in a prominent place in the Killam Library. Names of persons in whose memory contributions have been made by relatives, friends, individuals or groups, to the Memorial Fund will be recorded in the book, along with the date of their birth and death. The pages will be turned on a regular basis. All money contributed to the Fund will be invested by the Board of Governors and only the investment income will be awarded. The award will be available to any full-time Dalhousie student who is a full-time Dalhousie student, has already registered and in attendance at courses, who can show a need for additional support. A student in straitened financial circumstances may be considered for possible assistance by applying through the general online bursary program. For further information please contact the External Relations Office, Dalhousie University.

Alfred George Duvalle Memorial Bursary
This fund provides one bursary to a qualifying Dalhousie student. Applicants must be matriculants of Halifax West High School, be enrolled in first year studies in an undergraduate program (as commonly understood), and demonstrate financial need to the satisfaction of the Selecting Body. The Jason Paquet Memorial Bursary
This bursary, valued at $500 has been established in memory of Jason Paquet by his family, friends, fellow students, faculty and alumni of mechanical engineering. Mr. Paquet was registered as a fourth year mechanical engineering student at the time of his death. Eligible students are to be registered in the Junior Year of the Mechanical Engineering program of the Faculty of Engineering. The award is based primarily on financial need. Preference will be given to students who were residents of Prince Edward Island prior to attending Dalhousie. Deadline: September 30.

The Rod Shoveller Memorial Bursary
This $500 bursary has been established by the Student Union of Dalhousie and is supported by students, alumni, family, friends and colleagues. Mr. Shoveller was the Athletic Director of TUNS from 1980 to 1991 and acted as counsellor, mentor and friend to the hundreds of students who came to know his compassion and understanding. Eligible students are entering their penultimate term of study in the Faculty of Architecture and Planning, Computer Science, or Engineering. The award is made on the basis of participation in Dalhousie athletics, with an emphasis on intramurals and financial need, provided that the applicant is registered with the Athletics Office. Preference will be given to a student entering first year of the undergraduate program of the Faculty of Engineering. Application deadline: April 30.

The Dr. H. G. Sherwood Memorial Entrance Bursary
This $300 bursary has been established in memory of Dr. H. G. Sherwood by former employees, friends and colleagues. Dr. Sherwood was a dedicated professor in the Mining Engineering program at Dalhousie for many years. Eligible candidates must have fulfilled or expect to fulfill the minimum entrance requirements into year three of the Mining Engineering undergraduate program in the Faculty of Engineering. The Bursary is awarded on the basis of the applicant’s academic standing in an Associate Degree in Mining Engineering or the previous years at Dalhousie. While academic excellence will be the primary criterion for the award, the selection committee may also weigh other considerations in reaching a decision. Deadline: April 30.

Lloyd Hopkins Wickwire Bursary
An endowment has been established through a bequest from the Estate of Lloyd H. Wickwire, an alumnus of the Nova Scotia Technical College and Dalhousie University. This endowment is meant to provide annual bursaries to students studying engineering at Dalhousie University. Applicants must demonstrate financial need and be in good academic standing. Apply through the general online bursary program.

Susan (Cory) Wickwire Bursary in Engineering
An endowment has been established in memory of Susan (Cory) Wickwire, a former school teacher whose four sons are University alumni. The bursary is open to students for promotion from year one to year two in the Dalhousie Faculty of Engineering. The recipient will have demonstrated financial need and satisfactory academic standing. Apply through the Faculty of Engineering. Contact the department for the deadline.

W. Lee and S. Wong Bursary
This bursary celebrates 50 years of friendship between Wayne Lee and Sam Wong which roots in Halifax. To be awarded to international students within the Engineering Faculty (Undergraduate) on the basis of character, positive attitude and need. Apply through the general online bursary program. Deadline: October 15.

F. Faculty of Health Professions

1. College of Pharmacy

P. NOTE: The College administers the following bursaries. Applications are available directly from the College of Pharmacy and, upon completion, must be submitted to the College.

Malcolm and Aileen Campbell Bursary in Pharmacy
This bursary was established in 2012 to honour Malcolm and Aileen Campbell, alumni of the College of Pharmacy, and the contributions they made to the pharmacy profession in the province of Nova Scotia. The recipient will be a student entering first year of the pharmacy program at Dalhousie who demonstrates financial need. Preference will be given to a student from Prince County. For details of application procedure please contact the College of Pharmacy.

Alice and Louis Cassidy Award
This award was established by Louis Cassidy in memory of Alice Cassidy who graduated from Pharmacy in 1932 and practiced in the profession for over 50 years. This fund annually supports one or more bursaries for students in the Pharmacy program who have demonstrated satisfactory academic standing and financial need.

The Bert and Betty Collins Bursary
An endowment has been established to award an annual bursary to a deserving pharmacy student from New Brunswick who is enrolled in the first, second and third years of the Pharmacy program. These students must have satisfactory academic standing and financial need.

The Jack Kidd/ACA Bursary
In 1982, an endowment was established first for a scholarship and then in 1987 changed to a bursary that recognizes 45 years of service of Mr. Jack Kidd, a pharmaceutical sales representative, with Astra Inc. It is awarded to a student from New Brunswick or Prince Edward Island who has successfully completed one or more years of the class leading to a degree in pharmacy and who is enrolled in pharmacy at the University for the ensuing year. The student must have satisfactory academic standing and demonstrate financial need.

Lavina Davis Bursary
This bursary is awarded to a second, third or fourth year student from the Atlantic Provinces who has satisfactorily completed at least one year of study at the College of Pharmacy and who demonstrates financial need.
Awards

646  Awards

at least four courses and be in good academic standing. Applications are available to students enrolled in the accelerated program must have completed at least one full year of studies. Students in the second or third year of the Bachelor of Nursing program. Students on oncology/palliative care nursing elective course(s) in their program of study will be given preference over other applicants. Students must complete the School of Nursing Undergraduate Bursary Application and also submit a written application to the School of Nursing, demonstrating their interest and proficiency in Cancer Nursing, as well as a desire to establish a career and practice in Cancer Nursing. Contact the School of Nursing for the deadline. These bursaries are open to students enrolled in the Bachelor or Master of Social work program at Dalhousie University who demonstrate financial need. Preference given to a student born in, or a resident of, the Halifax County. Up to eight bursaries of $2,000 each to support students who have been accepted into the international exchange program and might otherwise not be able to participate in the exchange without external funding. These bursaries were originally created by Mr. Scott Shepherd (MBA 1983), the Northeast Trade Finance - Mary Grover LeBlanc Memorial Fellowship. It was renamed the Northeast Trade Finance - Thomas J. Bata Memorial Fellowship in 2010, in memory of Thomas Bata (1914-2008). Mr. Bata immigrated to Canada in 1939 from the former Czechoslavakia to form the Bata Shoe Company of Canada. Long before it was fashionable to do so, he provided opportunities for education and advancement to people of all races and cultures. He introduced his workforce to modern technology and previously unknown standards of quality and workmanship and helped many of them establish businesses of their own. Apply through the Center for International Trade and Transportation. Two bursaries are funded annually by Loblaw Investments in order to assist students enrolled in the Rowe School of Business. Students must demonstrate financial need and be of satisfactory academic standing. Application required to the Rowe School of Business. Contact the Rowe School of Business for the deadline. 4. School of Social Work 1. The following Bursaries are offered by the Registrar's Office.

Hannah G. Matheson Bursaries

These bursaries are open to students enrolled in studies in the School of Social Work at either the undergraduate or graduate level. Apply through the general online bursary program.

Nicholas P. Meagher Memorial Bursary

Established in honour of Nicholas P. Meagher who received a BSc from Dalhousie in 1948 and was a popular and respected pharmacist at Dunsworth's Pharmacy on Quinpool Road for all of his working life. This fund annually supports one or more bursaries to students in the Pharmacy program who have demonstrated financial need.

New Brunswick Pharmacological Society Bursaries

The New Brunswick Pharmacological Society offers four bursaries to students enrolled in the School of Pharmacy who have achieved satisfactory academic performance and demonstrate financial need.

Shoppers Drug Mart Community Pharmacy Bursaries

Shoppers Drug Mart will sponsor three bursaries to students enrolled in the Bachelor of Science in Radiological Technology who have successfully completed clinical practicum 1, 2, 3, 4. This award is based on the students' professional attributes and accountability, involvement in the student association or school committees, and GPA. Contact the department for the deadline.

The Janet Lee Myers Memorial Bursary

To provide an annual bursary(ies) for one (or more) student(s) enrolled in the Bachelor of Science in the field of Social Work. Normally, successful applicants will be given preference over other applicants. Students must demonstrate financial need and be of satisfactory academic standing. Application required to the School of Social Work. Contact the School of Social Work for the deadline.

Lloyd MacInnis Memorial Bursary

The Lloyd Y. MacInnis Memorial Award Fund was established to provide an annual bursary to a qualifying student who is continuing his or her studies at the School in the baccalaureate program beyond first year. Apply through the general online bursary program.

Jane Wisdom Memorial Bursary

When Jane Wisdom began her caring work in Halifax shortly before the Great Explosion of 1917, she was truly a pioneer in what has come to be known as Social Work. It is in recognition of her distinguished service that anonymous donors in 1977 established an endowment fund whereby one or more annual bursaries to one or more deserving students would be granted to students in the baccalaureate program of the School of Social Work at Dalhousie University. Apply through the general online bursary program.

The Tung Chun Ngan Memorial Bursary

To provide a bursary to a student entering their fourth year of the Bachelor of Nursing program who has achieved satisfactory academic performance and demonstrate financial need.

The New Brunswick Pharmaceutical Society Bursaries

The New Brunswick Pharmacological Society offers four bursaries to students enrolled in the School of Pharmacy who have achieved satisfactory academic performance and demonstrate financial need.

Shoppers Drug Mart Community Pharmacy Bursaries

Shoppers Drug Mart will sponsor three bursaries to students enrolled in the Bachelor of Science in Radiological Technology who have successfully completed clinical practicum 1, 2, 3, 4. This award is based on the students' professional attributes and accountability, involvement in the student association or school committees, and GPA. Contact the department for the deadline.

The Janet Lee Myers Memorial Bursary

To provide an annual bursary(ies) for one (or more) student(s) enrolled in the Bachelor of Science in the field of Social Work. Normally, successful applicants will be given preference over other applicants. Students must demonstrate financial need and be of satisfactory academic standing. Application required to the School of Social Work. Contact the School of Social Work for the deadline.
H. Faculty of Science

Alysia D. Abriel Memorial Bursary
Dr. Mondor-C. Uotila created this bursary to honor the memory of her grandmother, Alysia Abriel, who always followed her passions. The bursary is to assist a female student enrolled in the Honours Biology, Chemistry or Biochemistry program who has demonstrated financial need and a good academic standing. Apply through the general online bursary program. Deadline: October 15.

The veggies Budry Bursary
Manoj Walia is a member of a family of WWII refugees from Estonia who immigrated to Canada in 1950 via Sweden. This bursary is to provide financial assistance to undergraduate science students enrolled at Dalhousie University who demonstrated financial need and satisfactory academic standing. Apply through the general online bursary program. Deadline: October 15.

Audrey-Lex Dowson Memorial Bursary
A memorial bursary is open annually to one or more female students enrolled in the Bachelor of Science program who have demonstrated financial need and satisfactory academic standing. Apply through the general online bursary program. Deadline: October 15.

David Andrew Dougall Memorial Bursary
The intent of this award is to encourage and assist one or more students whose academic and financial status merit consideration. Please apply to the Department of Biology in September of each academic year.

Allan Choliner Hill Bursary
The Allan Choliner Hill Bursary endowment was established by his daughter Alison Biermann-Hill in her father’s memory. A bursary is available to a second or third-year chemistry student. Apply through the general online bursary program. Deadline: October 15.

Mathematics and Statistics Bursary Fund
An annual bursary to be awarded to a student enrolled in the second, third or fourth year of an undergraduate program, leading to degrees in Mathematics or Statistics at Dalhousie University. The recipient will have demonstrated financial need and satisfactory academic standing. Apply through the general online bursary program. Deadline: October 15.

Professor W. Russell MacNeill Memorial Bursaries
Any residual income remaining in the Fund after the annual scholarships have been determined may, after consultation with the Department of Economics, be used to fund one or more bursaries for deserving students entering the fourth year of the Honours program in Economics. Awarded by the Department of Economics and the Registrar’s Office. Application not required.

Elizabeth McKenna Bursaries
The Elizabeth McKenna Scholarship Fund was established in 1928 for the purpose of providing what are known today as bursaries. Applicants must be bona fide residents of one of the Maritime Provinces and be entering the first year in the College of Arts and Science. Apply through the general online bursary program. Deadline: October 15.

Dr. Catherine Olding Hub Memorial Bursary
This bursary was established in memory of Catherine Olding Hub. The recipient must be a resident of one of the Atlantic provinces, must be studying in the Department of Biology, Bachelor of Science program and demonstrate financial need. Apply through the general online bursary program. Deadline: October 15.

Ron Hayes and Dixie Pellatt Bursary in Biochemistry and Molecular Biology
This bursary is to honor the memory of Ron Hayes and Dixie Pellatt by providing an annual bursary to a student enrolled in a BSc program in Biochemistry and Molecular Biology. Eligible recipients will have completed at least one year of study in their undergraduate program at Dalhousie. The bursary recognizes both academic excellence and financial need. Apply through the general online bursary program. Deadline: October 15.

Yau Hing Shum-Ngan Memorial Bursary
Dr. Ngan established this bursary in memory of his mother, Yau Hing Shum-Ngan. The bursary shall be awarded to a first-year undergraduate student enrolled with the Faculty of Science with demonstrated financial need. Apply through the general online bursary program. Deadline: October 15.

I. College of Sustainability

Anubh & Victoria Stuart International Internship Bursary
This bursary provides one or more international internship bursaries for second or third-year students enrolled in the Environment, Sustainability and Society (ESS) undergraduate program of the College of Sustainability.

Deborah Raccurd Bursary
This bursary supports a student who wishes to participate in an internship or experiential learning opportunity with the College of Sustainability.

VIII. Continuing Education Awards and Bursaries

Students who are engaged in part-time studies for credit are eligible to be considered for awards and financial assistance. Each of these is described briefly below.

The Frederick Thomas Parker Award for Part-Time Studies
This award will provide an appropriate and flexible means of encouraging students intending to undertake degree or diploma studies at Dalhousie on a part-time basis. The selection committee will take into account both academic performance and financial need, depending upon circumstances. Applications are available at the College of Continuing Education.

Canada Student Loan for Part-Time Students
This particular federal loan is intended to help students who have a small cash-flow problem at the beginning of their studies. In order to qualify on the basis of class load for a standard academic year, a student must be tuition to take between 20% and 59% of a course load. The application form is available from Nova Scotia Student Aid Office, and is to be completed by the Registrar’s Office.

Dalhousie University Undergraduate Bursaries
Students who are registered in six credit hours per term will be considered for bursaries. Apply through the general online bursary program through the moneymatters.dal.ca

Program dates: Fall: September 15 - October 15
Winter: January 15 - February 15
Summer: May 15 - June 15

Dalhousie Temporary Loans
Students who are engaged in part-time studies for credit will be considered for temporary loans. Such loans are intended for short-term needs, and repayment is required after the expiration of a predetermined grace period. Application is to be made at the Registrar’s Office.

Singh, Dr. Samar B., Prize in Anatomy ............................................................. 634
Singleton, Dr. J. Singleton Leadership Award .................................................. 631
Skeete, Jonathan, Memorial Prize ..................................................................... 629
Slaight, The Slaight Family Foundation Scholarship for African Students ..... 604
Smeltzer, G.G. Smeltzer Memorial Award ......................................................... 613
Smith, Charles A. Smith Memorial Bursary ....................................................... 642
Smith, Ronald G., Scholarship ......................................................................... 621
Society of Chemical Industry Merit Award ..................................................... 650
Society of Chemical Industry, Canadian Section, Merit Award ..................... 635
Sociology and Social Anthropology ................................................................. 628
Solano, David M., Scholarship .......................................................................... 606
Spanish and Latin American Studies ............................................................... 615
Spavold, Katherine (Norman) Spavold Scholarship ......................................... 605
Spavold, Stanley William Spavold Scholarship ................................................. 642
Spencer, Betty Scholarship ................................................................................ 621
Spirit of Chemistry Prize .................................................................................. 636
Sport Leadership Award ................................................................................... 612
Stairs, C.W., Memorial Scholarship ................................................................. 619
Stairs, William Stairs Memorial Prize ............................................................... 650
Stanfield, The Rl. Honourable Robert L., Bursary ............................................... 642
Stanfield, Walter Gardner, Scholarships ........................................................... 620
Starratt, Dennis Starratt Scholarship in Engineering ........................................ 619
Statement of Scholarship Terms ....................................................................... 600
Stead, Phillip Stead Memorial Leadership Award .............................................. 625
Steelc, Rose Steele Prize In Nursing ................................................................. 633
Steeves, Dr. A. E. Steeves Scholarship .............................................................. 620
Steward, Dr. Ron Steward Award for Student Leadership in Global Health .... 624
Stewart Smith, Ross, Scholarships ................................................................... 621
Stewart, Dr. H.L., Memorial Scholarship ........................................................... 628
Stewart, Frances L., Memorial Prize in Psychology ............................................ 658
Stewart, I.C., Trust Fund .................................................................................... 605
Stewiacke Valley Garden Club Scholarship .................................................... 612
Steyn, Carel, Stellenbosch International Student Bursary ................................ 628
Student Aid and Scholarships .......................................................................... 601
Student's Medical Response Trust Fund .......................................................... 640
Sverman, William D. Sverman Memorial Award ............................................. 612
Teva Canada Pharmacy Award ........................................................................ 634
Theakston, Dr. H.R., Memorial Award ............................................................... 630
Theatre ............................................................................................................. 615
Tiner, Dr. H.T., Memorial Award ........................................................................ 627
Todd, E. Walter, Scholarship ............................................................................. 622
Towe, John L., and Glenda E., Scholarships ....................................................... 608
Transfer Students ............................................................................................... 601
Transition Year Program ................................................................................... 629
Trenholm, Bruce Trenholm/Atlantic '86 Scholarship ........................................ 612
Trimmer, Dean and Marie Trimmer Bursary ...................................................... 642
Tritt, William Tritt Racial Prizes ......................................................................... 627
Tupp, Helen Tupp Mennon Bursary ................................................................. 612
Tuppen, James W., Graduate Fellowship in English ....................................... 626
Turner, Dr. Gerald, Bursary .............................................................................. 642
Types of Awards ................................................................................................. 600
U
Undergraduate Alumni Leadership Award ...................................................... 632
Undergraduate Award in Analytical Chemistry ................................................ 636
University Medal ............................................................................................... 633
University Medal in Agricultural Business ....................................................... 625
University Medal in Animal Science ................................................................ 625
University Medal in Aquaculture .................................................................... 625
University Medal in Biochemistry and Molecular Biology .............................. 635
University Medal in Biological Engineering .................................................... 630
University Medal in Biology ............................................................................ 636
University Medal in Canadian Studies .............................................................. 625
University Medal in Chemical Engineering ..................................................... 630
University Medal in Chemistry ....................................................................... 637
University Medal in Civil Engineering .............................................................. 630
University Medal in Computer Science ............................................................ 625
University Medal in Computer Engineering ..................................................... 625
University Medal in Contemporary Studies ..................................................... 626
University Medal in Creative Writing .............................................................. 625
University Medal in Early Modern Studies ....................................................... 625
University Medal in Earth Sciences ................................................................. 637
University Medal in Economics ....................................................................... 637
University Medal in Electrical and Computer Engineering ............................ 630
University Medal in Engineering ..................................................................... 625
University Medal in English ............................................................................ 626
University Medal in Environmental Landscape Horticulture ......................... 625
University Medal in Environmental Sciences .................................................. 630
University Medal in Environmental Studies .................................................... 630
University Medal in Environmental Science ................................................... 637
University Medal in French ............................................................................. 625
University Medal in Gender and Women's Studies ......................................... 626
University Medal in German ........................................................................... 626
University Medal in Health and Human Performance ..................................... 631
University Medal in Health Sciences ................................................................ 631
