Sexton Construction Update November 2, 2016

Two new buildings are being constructed on Sexton Campus as part of the IDEA Project - a transformational $64-million investment to Dalhousie’s Engineering and Architecture campus. The **Innovation Building** is adjacent to C and C1 Buildings, and the **Design Building** will be on Morris Street.

**Demolition**

- Asbestos abatement continues on the Design Building (On Morris Street). This work will continue until November 7, 2016. Limited noise from this activity.
- Demolition of buildings on Morris St (R1 & R2) will commence on November 8/9, 2016. This activity will continue until November 18, 2016. Medium noise on this activity.

**Excavation and Rock Breaking:**

- Excavation and rock breaking continues on the Innovation site (adjacent C & C1). This work will continue until approximately November 30, 2016.
- Excavation and rock breaking on Morris St for the Design Building will begin around November 17, 2016 and continue until December 9, 2016.
*There will be heavy noise on these activities and they will be underway only during hours of operation allowed under HRM Bylaws.*
- Trucking of excavated materials from Innovation site to Sexton field will continue for the next 2 weeks (Nov 7 to 21, 2016). A ramp has been built to the field from the Morris street side.

**Other activities:**

- Four Sea Containers will be delivered and set in place on property off Barrington St. on Saturday, Nov 5, 2016.
- There is no planned interruption to vehicle or pedestrians between now and November 21. Regular construction traffic will be entering and exiting onto Morris St. and causing slight delays only. Update to follow once excavation starts at Design Building as some work will be close to the sidewalk on Morris St.

The renewal of Sexton Campus is underway thanks to the generous support of industry, private donors, the students of Dalhousie and the Government of Canada. Along with the two new buildings, several existing ones will be revitalized over the next two years, adding advanced technology and design labs; state-of-the-art engineering facilities; modern teaching and learning spaces; technology diversity programs; and incubation space linking students and faculty to industry and entrepreneurs.
