Sexton Construction Update September 18, 2017

Two new buildings are being constructed on Sexton Campus as part of the IDEA Project - a transformational $64-million investment to Dalhousie’s Engineering and Architecture campus. The Emera IDEA Building (formerly the Innovation Building) is adjacent to C and C1 Buildings, and the Design Building will be on Morris Street. Five other buildings are being renovated at the same time.

Emera IDEA Building:
The installation of the interior masonry and structural studs will begin mid-September. Installation of the brick façade on the Emera IDEA Building will begin mid-October and the roofing will start near the end of Sept 2017. This work will continue throughout the winter and into January 2018. The installation of the structural steel on the south end of the building will begin in early October 2017 and will increase the construction noise on site for approximately 2 weeks.

Design Building:
The Design Building will be home to a 400-seat auditorium and during the month of September there will continue to be rebar and concrete deliveries which may cause brief periods of congestion on Morris Street. Some of the deliveries will include large precast bleachers which will be offloaded on Sexton Field. These will help create the tiered auditorium. This activity will also increase the use and congestion of Morris St. The off-loading of the bleachers will take place on Sexton Field and not from Morris St.

Parking Disruption:
The flushing and testing for the new district energy lines will start on Sept 25 and be complete by Oct 4, 2017. The parking spacing in front of the N Building entrance will be blocked off during this period to house the equipment required for this activity. Further update to follow as we get closer to the end of the month.

Pedestrian and Traffic Disruptions
The sidewalk on the north side of Morris Street will continue to be protected by concrete barriers until October.

The renewal of Sexton Campus is underway thanks to the generous support of industry, private donors, the students of Dalhousie and the Government of Canada. Along with the two new buildings, several existing ones will be revitalized over the next two years, adding advanced technology and design labs; state-of-the-art engineering facilities; modern teaching and learning spaces; technology diversity programs; and incubation space linking students and faculty to industry and entrepreneurs.
