

## 2017 STOKER AWARD FOR QUALITY

“Every job matters”

**Chris Hodgkinson**

Performance Analyst

He very quietly works to provide spreadsheets and computer programs that help us determine how we are doing – what is working well, and what needs work. He takes the information in FAMIS, and combines it with other programs to give us regular reports that help us plan and make informed decisions. Here is how he is described:

*“He has been very helpful in creating new spreadsheets for us that save us time and provide more analytical capability. We used to have to manually use spreadsheets from FAMIS and enter the data to create our own spreadsheets. Now with the click of a button I can see a comparison of information such as energy consumption in our buildings year over year.”*
