

Muhammed's Quick Thinking

Muhammed Anzal's, quick thinking and prompt attention prevented a fire from spreading at the AC Biomass Plant. At the beginning of his shift he heard a noise from the control room office and checked the cameras to find smoke coming from the thermal oil pump that was running (pump #1). He went to check the pump and found fire and smoke in the area of the coupling between the pump and motor. He immediately went back to the office to confirm which pump was running. He switched the pump off, extinguished the fire and then opened some doors to let the smoke out of the area and notified his supervisor.
