

## Teamwork at Its Finest

FM fast-tracked our recent request to have an automatic door opener installed in tutorial room 2L25 within a matter of days for a student starting second year. The student is very pleased and thankful. FM's departments of planning, lock shop, access control, electrical and carpentry really stepped up in order to push this project through as they immediately saw this as a priority. They prioritized workloads, obtained material in short order, and maintained tight communications. Everyone was on board to help improve the student's access to the room.
