

Michael Power saves the day once again!

When FAMIS went down on September 22, 2017 – the vendor came up with a temporary solution that not only possessed security issues, it needed to be applied to each individual's computer. **Mike Power** quickly came up with an idea to set up a kiosk on the 4th floor of the CSB with updated required settings, so that anyone in need of urgent work could access it. It became an immediate success, as we saw many happy faces with the short-term solution. Kudos to Mike!
