

# Top Notch HVAC Instrumentation Team

We wanted to jointly write to you in appreciation of **Dalhousie's HVAC/Instrumentation team**. It is clear they take great pride in what they do, and care about our facilities, and the people that occupy them. Their collective efforts maintaining our supply, exhaust, and filtration systems has helped to reduce the university's energy usage, minimizes system downtime, and ensures occupant comfort and safety.

While this group's dedication and skill have always been seen as top-notch, during a recent incident in the Chemistry building they truly went over-and-above to verify that the ventilation systems in the area were operating correctly, helping to ensure the ongoing safety of those within the facility.

Despite their tremendously busy work schedules, the HVAC team confirmed system data and completed a thorough inspection of the air handlers and associated filtration. Without their collective efforts, the impacts to academic teaching would have been much larger than they were. We would also like to specifically mention and thank **Tim Hubley and Terry Conrad**, who took time on their days off and came in over the weekend to provide physical airflow measurement data for the area in question. Please rest assured that their efforts do not go un-noticed - and that they are very much appreciated by all involved.

*Dr. Charles L. B. Macdonald  
Dean, Faculty of Science*

*Craig Arthur, CRSP, P.Eng  
Manager, Industrial Safety, Office of Environmental Health & Safety*
