

# PM PAT MACISAAC'S SUSTAINABILITY AWARD

Project Manager Pat Macisaac recently received an Instant Sustainability Award from the Office of Sustainability for helping divert 24 tons from the landfill. The top floor of the CHEB is under construction and will be used as swing space for the university while other areas are being upgraded. Dozens of trades workers from FM are working to a tight deadline to turn the unfinished floor into office space for up to 110 people.

Pat and the Office of Procurement received several quotes for office furniture, but settled on one that was not only the most fiscally responsible, it also meant a large amount of furniture found a new home just in time. If not, the work stations would have been sent to the landfill in Ontario.
