H. ALLEN BROOKS TRAVELLING FELLOWSHIP EXHIBITION

L A U R E N O L T E

*What is revealed about our place in the world
when construction systems are understood as a field of relations:
where social, material, and energetic flows
become architectural conditions?*

DALHOUSIE MEDJUCK
EXHIBITION SPACE
5410 SPRING GARDEN RD

14 - 18 SEPT 2026

M-F / 9-5

With the support of the H. Allen Brooks Travelling Fellowship, AFIELD, presents an ongoing body of research into past, present and future plant-based material cultures in Japan, Europe and North America. From kombu and silver grass in the mountains of Kyoto to bananas in Tenerife and tall grass prairie gama grass in Iowa, the plants in this exhibition weave material intelligence and traditional knowledge through the environmental and social networks that sustain them.

Fieldwork, photographs, and physical models are exhibited alongside in-process design work inspired by people and places encountered throughout the fellowship, reimagining how matter and meaning are cultivated and cycled through the built environment.

Laure Nolte is director of Fields, a design practice spanning from the material to the territorial. She is a designer, biomaterial researcher, and Visiting Assistant Professor at American University of Sharjah. She is a recipient of the 2024 - 2025 H. Allen Brooks Travelling Fellowship from Dalhousie University.
