

Therapeutic Considerations¹ (includes off-label use)

	Neutral ²	No trials identified	Possibly Recommend	Recommend ³
	Neuropathic Pain	Fibromyalgia	Chronic Low Back Pain (CLBP)	Osteoarthritis (OA)
Acetaminophen			Worth trying despite lack of clinically meaningful benefit	Worth trying despite lack of clinically meaningful benefit
NSAIDs ORAL				
NSAIDs-TOPICAL				
TCAs				One trial ongoing
Duloxetine			Try if there is a neuropathic component	
Venlafaxine	Very limited evidence	Very limited evidence	Very limited evidence	Very limited evidence
Gabapentin			Try if there is a neuropathic component	
Pregabalin			Try if there is a neuropathic component	
Nabilone				
Nabiximol				

1. Based on trials versus placebo.
2. Evidence rated as low quality showed no statistically significant benefit versus placebo; no good evidence to support or refute use.
3. Recommendations are often based on low quality evidence and consideration of potential harm reduction compared with opioid alternatives.
