WHAT IS AN ACCOUNTABILITY FRAMEWORK?

An accountability framework is a written document that articulates activities and establishes clear standards and expectations against which achievements can be measured and results evaluated. The Department of Anesthesia has adapted its accountability framework from the Treasury Board of Canada Secretariat's *Guide for the Development of Results-based Management and Accountability Frameworks*.

DEPARTMENTAL ACCOUNTABILITY FRAMEWORKS

Thus far, the Treasury Board's framework has been modified for use by the Department of Anesthesia's Office of Research and the Blood Management Service. The framework has proven to be an effective tool in identifying, monitoring and tracking salient outcomes and productivity in these two departmental areas.

The uniqueness of the Department of Anesthesia's clinical needs and activities once again necessitated a modification of the framework's content. The *Clinical Accountability Framework*, in keeping with the Office of Research and Blood Management Service frameworks, has four key sections:

- | | |
|---|---|
| 1. Profile: | In this section, the need for an accountability framework within the departmental and district health authority context is described, as is the department's governance structure. |
| 2. Results Chain: | In this section, a flow chart that links resources devoted to clinical care to clinical outcomes through a logical sequence of activities and outputs is provided. |
| 3. Measurement and Reporting Plan: | A key element of any accountability framework is the identification of the most appropriate indicators of clinical activity and productivity, current targets, and how to measure indicators and report results. |
| 4. Evaluation Strategy: | The purpose of measuring and reporting results is to inform sound decision making and performance management. The evaluation strategy outlines a cyclical, iterative strategy for ongoing learning from results and strategy adjustments as required. |

The information contained in each of these sections is specific to the clinical work being done by the Department of Anesthesia at Capital District Health Authority (CDHA).

APPROACH

Throughout November and December 2009, Department of Anesthesia clinicians and the Executive Director of Anesthesia formed a small working group (*see Contributors, Appendix A*) that met regularly over a four-week period. The group drafted the accountability framework best suited to the department's clinical activities and needs and reached consensus on clinical activities, outputs, indicators and outcomes.

The draft was then distributed to all departmental clinicians for input. This input was incorporated into a second draft of the framework.

Draft II was brought forward to a January 2010 departmental town hall meeting. Changes resulting from this feedback were incorporated into *Draft III*, which was once again distributed department wide for final approval.

WHY AN ACCOUNTABILITY FRAMEWORK?

The Department of Anesthesia initially identified the need for a Clinical Accountability Framework during its 2007 and 2008 departmental strategic planning sessions; the need for a framework was endorsed once again in 2009.

The accountability framework serves many purposes:

- It supports departmental values of transparency and accountability by describing the clinical work that occurs within the department
- It establishes clear standards and expectations against which actual performance is reported
- It enhances credibility with stakeholders of the department's clinical care
- It supports a management culture based on ongoing learning and results
- It supports AFP requirements to the Department of Health, which in turn positions the department positively for future negotiations

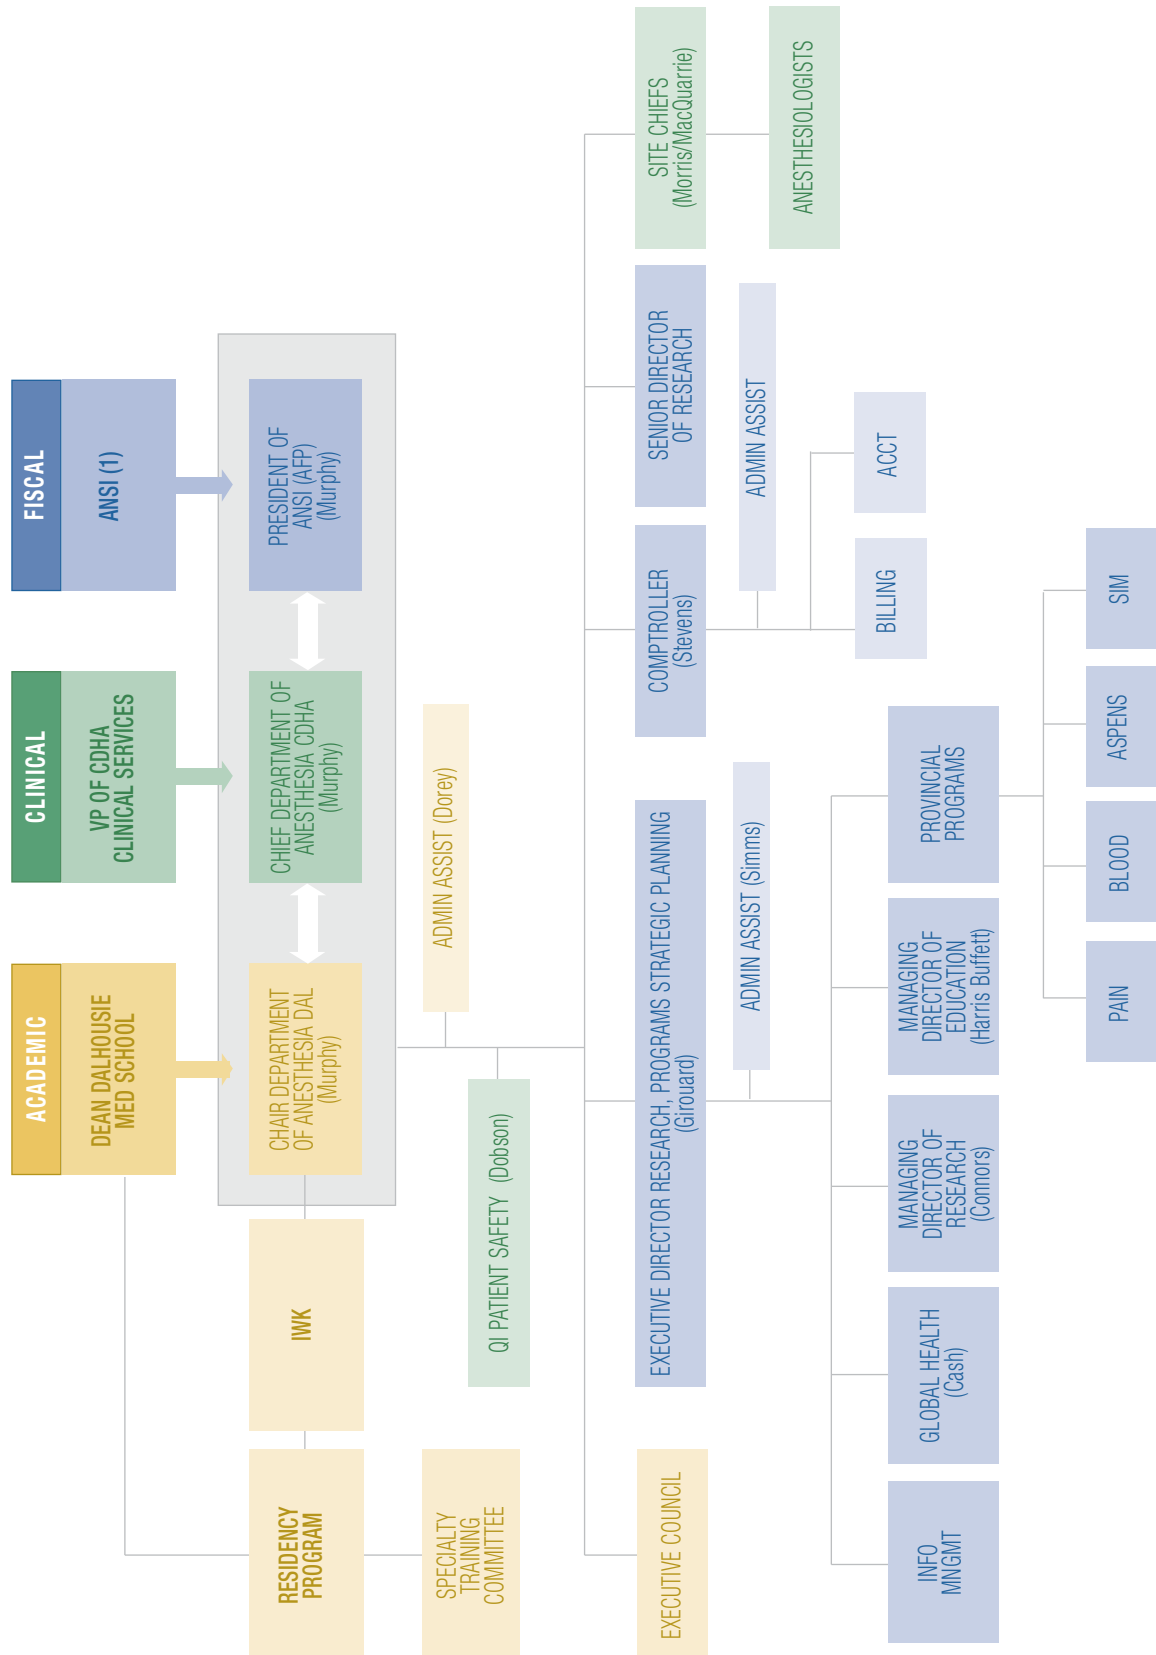

BACKGROUND/CONTEXT

The Department of Anesthesia has a four-fold mandate encompassing safe, quality patient care, education, research and stewardship of people's health at home and abroad.

Created in 1945, the Department of Anesthesia has grown to provide a full spectrum of critical care and general clinical services. It subspecializes in cardiac surgery, neurosurgery, obstetrics, pediatrics, thoracic surgery and transplantation. To date, the department has performed a record number of clinical procedures and has recruited and maintained some of the best and brightest anesthesiologists locally and abroad.

The aim of the department is to foster a culture of excellence in clinical practice and programs. In 2007, the department established its collective vision and mission, and the ways by which these could be achieved. In addition, during the department's initial and subsequent strategic planning sessions, it determined that a Clinical Accountability Framework needed to be developed and implemented.

GOVERNANCE STRUCTURE

RESULTS CHAIN

The results chain is a logic model (or flow chart) that identifies the linkages between the various activities undertaken by anesthesiologists and the achievement of outcomes. It serves as a succinct roadmap that shows the chain of results connecting the resources devoted to clinical practice to key activities and outputs, and identifies indicators that demonstrate progress and final outcomes.

The resources committed to clinical activity in the department include staff time, number of people, compensation, equipment and space; these represent the majority of resources consumed by the department.

The activities identified here are not an all-inclusive list, but rather a reflection of the major activities the majority of clinicians engage in on a daily/weekly basis.

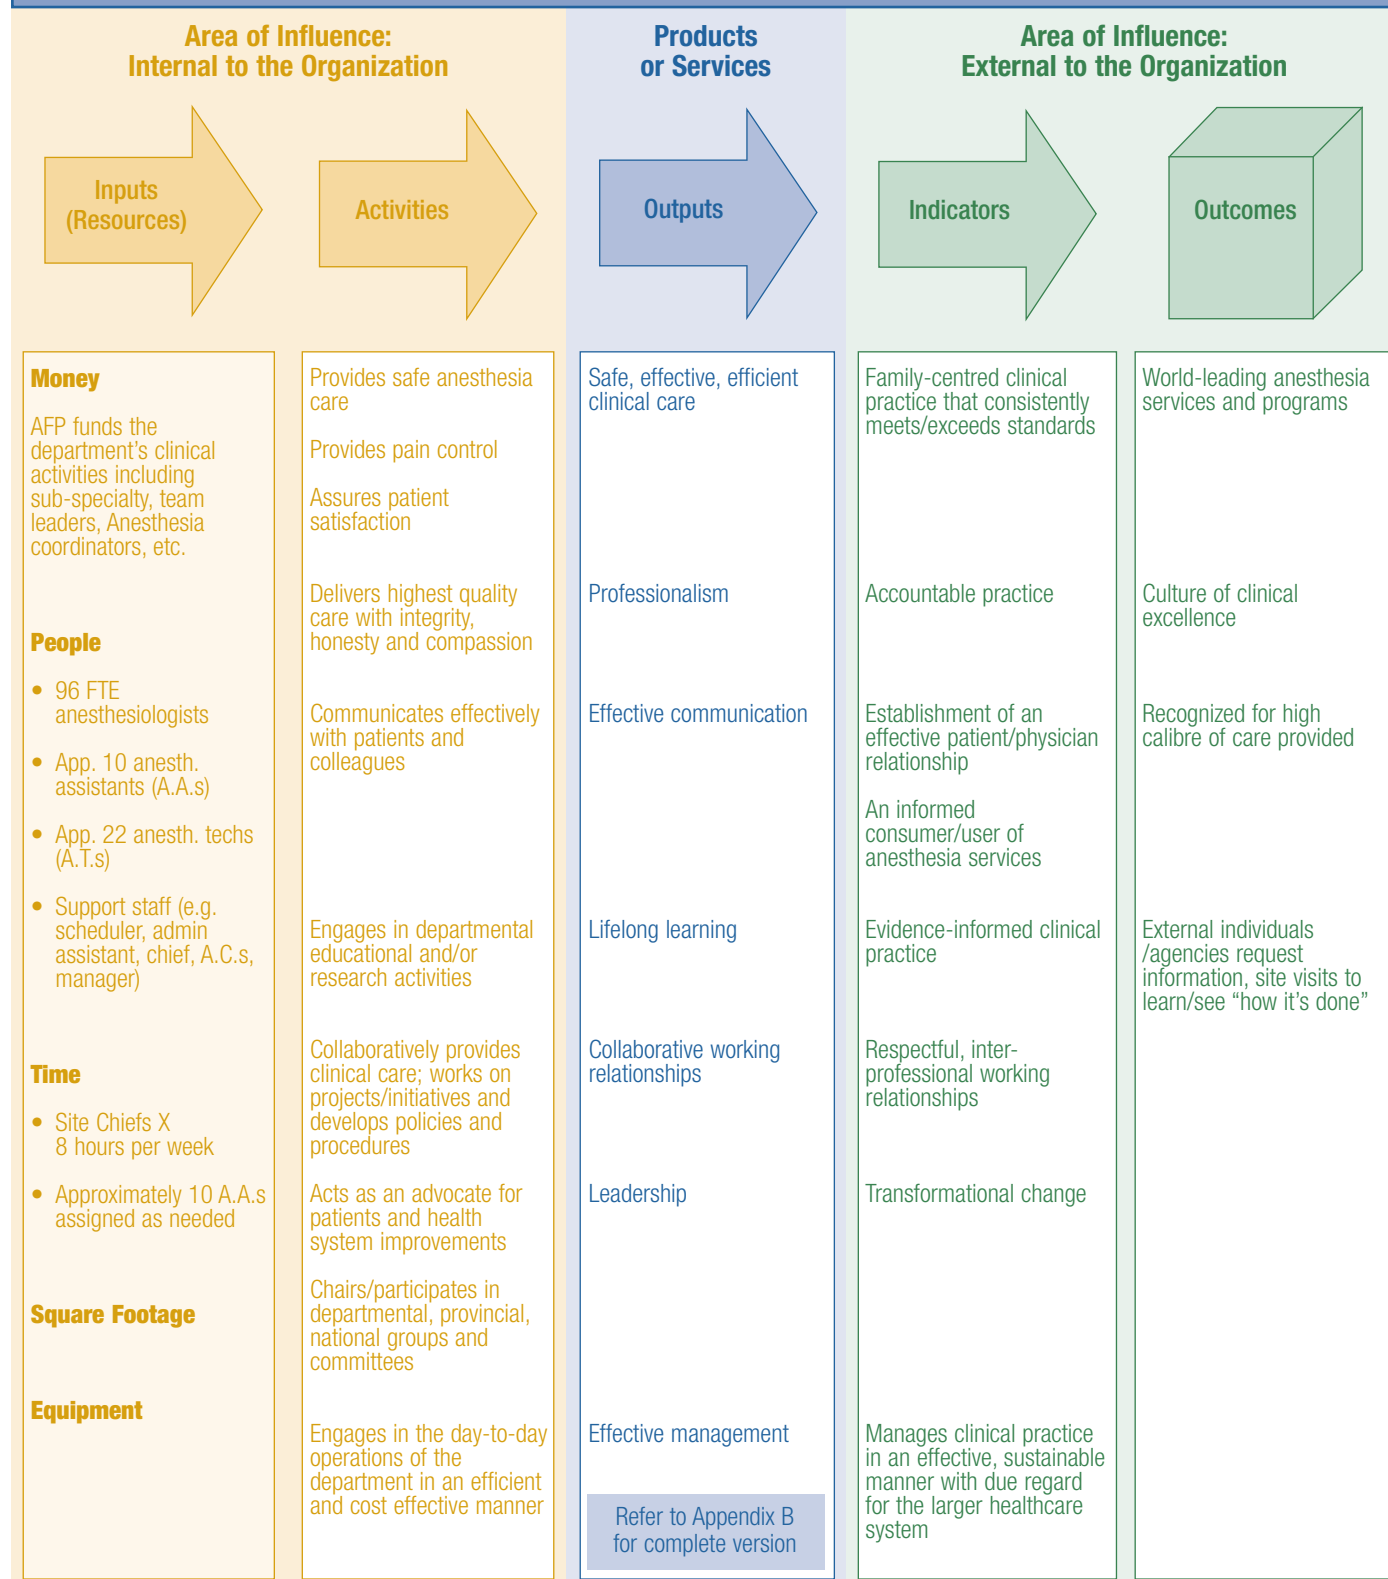

The following proviso should be noted in regard to the indicators and targets: only those occurrences that are a direct result of care being provided by an anesthesiologist and/or are within the control and purview of anesthesia are considered. Anesthesiology is an interdependent discipline with many variables not entirely within its control or scope. Consequently, only those actions and results that are clearly the direct responsibility of the anesthesiologist have been identified as indicators/targets.

In addition, it should be noted that the targets have, for the most part, a desired success rate of 100%. This reflects the department's belief that patients deserve safe, effective, efficient care 100% of the time. While this may not be attainable in all instances, it remains the department's goal as it strives to provide world-leading anesthesia services within a culture of excellence.

The following is a snapshot or summary of the clinical results chain, which is more fully explained in *Appendix B (Comprehensive Results Chain)*.

RESULTS CHAIN

A clinical department that continues to provide world-leading anesthesia services and programs in support of CDHA's mission.

MEASUREMENT AND REPORTING PLAN

The comprehensive list of departmental clinical activities and key indicators identified in the results chain have been grouped in the measurement and reporting plan according to safe care, professionalism, effective communication, lifelong learning, collaborative working relationships, leadership and effective management. From these activities and key indicators flow more specific, detailed indicators and targets.

As previously stated, it needs to be clearly understood that the indicators identified refer to the results of care provided directly by the anesthesiologist and are within the control and purview of anesthesiology. Those variables not within the control or scope of anesthesiology are not included in this document.

In addition, it should be noted that the targets have, for the most part, a desired success rate of 100%. This reflects the department's belief that patients deserve safe, effective, efficient care 100% of the time. While this may not be attainable in all instances, it remains the department's goal as it strives to provide world leading anesthesia services within a culture of excellence.

The measurement tools to be used and the person responsible for gathering the relevant data are also identified in the measurement and reporting plan.

A preliminary report based on the indicators/targets identified will be provided to the chief of the department in May of each year with a final report in September of each year. This will serve to inform the Department of Anesthesia's strategic planning process and be consistent with CDHA's business planning cycle. Key stakeholders for reporting purposes include the department chief; the executive director; the Department of Health; and the public through the Department of Anesthesia's annual report.

Catagory/Activity	Indicator	Target	Measurement Tool	Responsibility
Deliver safe, effective, efficient and evidence-based clinical care	Family-centred clinical practice that consistently meets and/or exceeds standards	<ul style="list-style-type: none"> 100% compliance with CAS 'Guidelines to the Practice of Anesthesia' 	<ul style="list-style-type: none"> Biannual (January/June) audit Anesthesia Information Management System 	Quality Improvement Office
		<ul style="list-style-type: none"> 100% of patients have a pre-op assessment completed consistent with department guidelines 	<ul style="list-style-type: none"> Annual chart audits of airway; pain management plan (July) 	Q.I. Office

Catagory/Activity	Indicator	Target	Measurement Tool	Responsibility
	Cognizant of Royal College requirements for residency education (CanMeds) and actively participates in/ contributes to the education of residents	• Volunteers to serve as a mentor and/or agrees when asked	Biannual (January/June)	
		• Accepts medical students as assigned	Biannual (January/June)	
		• Provides learning opportunities to residents as required	Bimonthly	Residency Program
		• 95% of ITERS are completed according to guidelines	Monthly	Residency Program
		• Provides timely, constructive feedback to residents	Daily Monthly As required	Residency Program
Leadership	Transformational change	• A change in practice or procedure is instituted	• Chief • C.V.	
		• Trending reflects that new programs, initiatives and projects are underway e.g. Collaborative Pain Network	• Chair's report • Subspecialty reports	Chair/Chief
		• A new initiative/program is undertaken internal/ external	• Chair's report • Subspecialty reports	Chair/Chief
		• Synergistic partnerships are established	• Chair's report • Subspecialty reports	Chair/Chief
Effective Management	Manages clinical practice in an effective, sustainable manner with due regard for the larger healthcare system	• 80% attendance at assigned meetings e.g. subspecialty, operational, scientific advisory	• Audit minutes	Office of Education
		• 80% attendance at departmental strategic planning sessions	• Attendance	Executive Director
		• 100% completion of billing cards as per departmental guidelines	• AIMS	Comptroller
		• 100% compliance with assigned shifts/on call schedule, clinical practice guidelines	• AC report • Comptroller's report • Clinical Practice Guidelines	Scheduler Q.I. Office
		• 100% usage of available technology e.g. AIMS, emails, etc.	Monthly audits for 1 year post implementation	Executive Director I.T.
		• Appropriate resources utilized		

EVALUATION STRATEGY: LIFE CYCLE MODEL

The life cycle approach to evaluation aims to establish a culture firmly rooted in results, ongoing evaluation and learning.

The life cycle approach to evaluation and delivering results supports

- Results that are clearly defined and aligned with departmental priorities
- Early detection of variances requiring adjustment/modifications
- Clear reporting of results
- Use of data/results to inform strategic analysis and priority setting
