Guide on How to Organize Resident Project Based on Type of Project	90
Sample Paper Outline	103

## PURPOSE

The residency program in Family Medicine at Dalhousie University has undergone revisions to become a Triple C Competency Based Curriculum<sup>1</sup>.

A number of steps have been taken in this process. There has been a complete revision of the program's **Curriculum Objectives**. The **field notes** have been revised and integrated with **In Training Assessment Reports (ITARs)**.

This document will introduce these core elements of the program's curriculum. It will also give you information on:

- CanMEDS FM;
- The structure of the Academic Curriculum;
- Guidelines around the Resident Project.

## RESPONSIBILITY

*Resident:* To review the relevant objectives prior to each clinical learning experience and determine with the supervisor what can and should be achieved.

*Supervisor/Preceptor:* To review the relevant objectives prior to each clinical learning experience and determine with the resident what can and should be achieved.

*Site and Program:* To ensure that each site provides the learning opportunities and structured evaluation stated in this document.

---

<sup>1</sup> Triple C **Comprehensive, Centered** in Family Medicine, **Continuity** of Patient Care, Learning Environment and Curriculum

## PREAMBLE TO THE CURRICULUM DOCUMENT FOR RESIDENTS

The delivery of the Dalhousie Family Medicine Residency Program is based on the provision of both strong clinical experiences and a focused academic curriculum. This delivery is grounded in the Four Principles of Family Medicine<sup>2</sup> and structured around the CanMEDS FM 2017 roles as developed by the CFPC National Working Group on the Postgraduate Curriculum. In this framework, the Family Medicine Expert integrates the competencies included in the roles of Communicator, Collaborator, Manager, Health Advocate, Scholar and Professional.

The CFPC Evaluation Objectives is the other document that has a major influence on the curriculum. It incorporates the Phases of the Clinical Encounter, the Skill Dimensions, the Priority Topics with their Key Features, and the Themes of Communication and Professionalism with their Observable Behaviours.

It is important to differentiate *curriculum objectives* and *assessment objectives*. It is the curriculum objectives that define the broad knowledge base that is required for residents to gain over the training program. It is the assessment objectives that form the basis of assessment of competency in a *sampling* of these areas. Thus it is appropriate that the Priority Topics drive our curriculum to a certain extent, but residents are expected to know more than what is included in the Key Features under each Priority Topic. Key Features are considered when planning the objectives of every seminar.

Residents are assessed on their participation and presentation in seminars and workshops, as well as in many other facets of the program. Please see the Bi-Annual Review document for a full list. Much of the assessment is accomplished in real clinical situations based on the clinical objectives in each clinical learning experience - this is known as workplace-based assessment (WBA). We focus on assessment *for* learning as well as assessment *of* learning. This means that we use all assessment tools to stimulate your learning and to see how you are doing at the same time. Documentation of the in-training assessment occurs with the use of Field Notes - which provide a narrative of what went well, with suggestions for improvement, with common reflection on multiple encounters from multiple observers. This information is summarized later to help populate the In-Training Assessment Reports (ITARs) for each clinical learning experience. Your preceptor will help you create a personalized learning plan with the completion of each Narrative ITAR. This and other information, and with some of your reflections, will be used twice per year by your Site Director (or their designate) to complete the Bi-Annual Resident Performance Review. A learning plan will also be developed to stimulate your learning and to help you achieve competence as quickly and efficiently as possible.

---

<sup>2</sup> 1) The Family Physician is a skilled clinician

2) The Family Physician is community-based

3) The Family Physician is a resource to a defined community

4) The doctor-patient relationship is central to the role of Family Physician

## THE TRIPLE C COMPETENCY-BASED CURRICULUM

The Dalhousie Family Medicine academic curriculum was extensively re-organized in 2013 and again in 2018. This reflected the national movement of all post-graduate Family Medicine Residency Programs to adopt the CFPC's Triple C competency-based curriculum.

The curriculum objectives are divided into the 7 CanMEDS-FM 2017 Roles:

- Family Medicine Expert
- Communicator
- Collaborator
- Leader
- Health Advocate
- Scholar
- Professional

Within each role the structure (headings and sub-headings) reflects the CanMEDS-FM enabling competencies. Each heading is written in language that emphasizes that it is the program's responsibility to provide a learning opportunity to the resident to accomplish the following objectives. The implication, of course, is that it is the residents' responsibility to avail themselves of the opportunity.

At the level of individual objectives, each objective is written in a competency-based manner. That is, completion of a certain clinical learning experience or having a certain clinical experience is no longer the goal. The goal is to achieve the clearly stated desired outcome.

In addition, wherever possible, the objective will reference the applicable Priority Topic/Key Feature (developed by the CFPC National Working Group on Certification). This will be indicated by a bracketed reference (e.g. Elderly 2 would obviously reference the second Key Feature in the Priority Topic: Elderly)

## Family Medicine Expert

The learning environment will provide opportunities for residents to learn to:

1. Practice generalist medicine
  - 1.1. Establish and maintain clinical knowledge, skills and attitudes required to meet the needs of adult patients.
    - 1.1.1. address health promotion, screening and disease prevention, while considering racial, cultural and gender differences, in the areas of:
      - 1.1.1.1. Well Adult Care
        - 1.1.1.1.1. Do a periodic health assessment in a proactive or opportunistic manner (Periodic Health Assessment/Screening 1).
        - 1.1.1.1.2. Selectively adapt the periodic health examination to that **patient's specific circumstances (Periodic Health Assessment/Screening 2).**
        - 1.1.1.1.3. Address lack of physical activity with a structured approach including assessment and exercise prescription.
        - 1.1.1.1.4. Inquire about safe levels of alcohol consumption and screen for use of other substances.
      - 1.1.1.2. Cardiovascular disease.
        - 1.1.1.2.1. Treat modifiable risk factors in patients at risk of stroke and other cardiovascular disease and offer antithrombotic treatment in appropriate populations. (Ischemic Heart Disease 2)
        - 1.1.1.2.2. Screen appropriate patients for hyperlipidemia. In patients with hyperlipidemia, establish target lipid levels, identify modifiable factors, give appropriate lifestyle advice, and periodically assess compliance (Hyperlipidemia 1-6).
      - 1.1.1.3. Cancer
        - 1.1.1.3.1. Be opportunistic in giving cancer prevention advice and apply the periodic health examination where indicated (Cancer 1, 2).
      - 1.1.1.4. Dermatology
        - 1.1.1.4.1. Be opportunistic discussing skin cancer prevention
      - 1.1.1.5. Endocrinology
        - 1.1.1.5.1. Screen appropriately for diabetes (Diabetes 1).
        - 1.1.1.5.2. Screen for and diagnose obesity, establish readiness to change and address with motivational interviewing and follow-up. Advise about treatment options (Obesity 1, 5, 6).
      - 1.1.1.6. Gastroenterology
        - 1.1.1.6.1. Counsel patients at high risk for hepatitis; vaccinate and offer post-exposure prophylaxis appropriately (Hepatitis 7).
      - 1.1.1.7. Infectious disease
        - 1.1.1.7.1. Promote immunization as appropriate (Immunization 1-3)
      - 1.1.1.8. Respiriology
        - 1.1.1.8.1. Take preventive measures in high-risk groups e.g. influenza and pneumococcal vaccination (Upper Respiratory Tract Infection 7; Chronic Obstructive Pulmonary Disease 5)
        - 1.1.1.8.2. Regularly evaluate and document smoking status, continuously adopt a multiple strategy approach to facilitating smoking cessation (Smoking Cessation 1-3).
    - 1.1.2. correctly diagnose and manage common problems in the following areas:
      - 1.1.2.1. Allergy

- 1.1.2.1.1. Recognize potential allergic symptoms (skin, ophthalmologic, ENT, systemic) and manage using allergy testing, avoidance, pharmacotherapy, and desensitization where appropriate. (Allergy 2, 3, 4, 10)
- 1.1.2.1.2. Document allergies to medication, environment and food. (Allergy 1)
- 1.1.2.2. Behavioural Medicine/Mental Health
  - 1.1.2.2.1. The family medicine resident will recognize and diagnose mental health problems commonly found in family practice including anxiety disorder (Anxiety 1-5), mood disorders (Depression 1-10), schizophrenia (Schizophrenia 1-8), personality disorders (Personality Disorder 1-5), post-traumatic stress disorder, phobic states, eating disorders (Eating Disorders 1-6), somatization disorders (Somatization 1-4), chronic pain syndromes and addiction (Substance Abuse 1-9).  
They will be able to:
    - 1.1.2.2.1.1. Demonstrate familiarity with the DSM diagnostic criteria for these common disorders.
    - 1.1.2.2.1.2. Demonstrate ability to appropriately screen for these disorders in high-risk groups.
    - 1.1.2.2.1.3. Demonstrate ability to assess cognitive status with an appropriate instrument (MMSE or MOCA).
    - 1.1.2.2.1.4. Take an appropriate history to generate differential diagnoses for symptoms, which also includes medical causes and contributors to rule out serious organic pathology.
    - 1.1.2.2.1.5. Assess patient's suicide risk, homicide risk and judgment.
    - 1.1.2.2.1.6. Identify comorbid psychiatric conditions.
    - 1.1.2.2.1.7. Identify the functional impact of the symptoms to help guide and evaluate treatment.
    - 1.1.2.2.1.8. The resident will develop a management plan and provide appropriate follow up for these disorders, including the ability to:
      - 1.1.2.2.1.8.1. Offer appropriate treatment in a way that promotes full **discussion of options and patient's own decision**-making.
      - 1.1.2.2.1.8.2. Use a multidisciplinary approach to treatment and management and refer appropriately.
      - 1.1.2.2.1.8.3. Use a multifaceted approach to treatment.
      - 1.1.2.2.1.8.4. Include psychosocial support as part of the treatment plan.
      - 1.1.2.2.1.8.5. Demonstrate knowledge of indications, side effect profile, common interactions and monitoring requirements of psychopharmacological agents such as antidepressants, antianxiety medications, mood stabilizers, antipsychotics and other commonly used agents.
      - 1.1.2.2.1.8.6. Demonstrate knowledge of different forms of therapy (including brief psychotherapy, couples and family therapy, behavior therapy, long-term psychotherapy) and the selection of patients for each modality.
      - 1.1.2.2.1.8.7. Demonstrate ability to skillfully and appropriately

- counsel for behaviour change using techniques of motivational interviewing (Counselling 1-3).
- 1.1.2.2.1.8.8. Monitor response to treatment using functional benchmarks, adjusting and augmenting as clinically indicated.
- 1.1.2.2.1.8.9. Diagnose and treat serious complications and side effects of medications.
- 1.1.2.2.2. Anticipate possible violent or aggressive behaviour and recognize the warning signs (Violent/Aggressive Patient 1).
- 1.1.2.2.3. Develop a plan within your practice environment to deal with patients who are verbally or physically aggressive (Violent/Aggressive Patient 1,4).
- 1.1.2.3. Cardiovascular Disorders
  - 1.1.2.3.1. Take an adequate history to make a specific diagnosis of life-threatening conditions in the patient with chest pain and begin timely treatment. (Chest Pain 1, 2, 3, 5)
  - 1.1.2.3.2. Have knowledge of the impact of valvular heart disease on long-term management including prognosis, appropriate medication and follow-up.
  - 1.1.2.3.3. Screen for hypertension, measure blood pressure correctly, and make a diagnosis on multiple visits, and investigate appropriately to rule out secondary causes. Be able to treat hypertension with pharmacological means. For patients with the diagnosis of hypertension assess periodically for end-organ complications (Hypertension 1, 2, 3, 4, 7, 9).
  - 1.1.2.3.4. Recognize and treat hypertensive crisis in timely fashion. Recognize need for workup for secondary hypertension (Hypertension 8).
  - 1.1.2.3.5. Demonstrate the ability to diagnose ischemic heart disease that is classic or atypical, and develop a plan in collaboration with the patient to reduce modifiable risk factors. (Ischemic Heart Disease 1, 2)
  - 1.1.2.3.6. Manage a patient with stable ischemic heart disease in a timely manner according to the severity of the disease, and coordinate appropriate follow-up (Ischemic Heart Disease 4, 5).
  - 1.1.2.3.7. Assess a patient who presents with a painful or swollen leg in terms of his/her risk for ischemic vascular disease or DVT, investigate appropriately and be aware of treatment options including outpatient management of DVT (Deep Vein Thrombosis 1, 2, 4, 5).
  - 1.1.2.3.8. Assess cardiovascular function, determine the underlying cause, and appropriately treat patients with heart failure (systolic and diastolic).
  - 1.1.2.3.9. Have an approach to arrhythmia with emphasis on common arrhythmias such as Atrial Fibrillation and PVCs.
- 1.1.2.4. Cancer
  - 1.1.2.4.1. Be aware of and actively inquire about side effects or expected complications of cancer treatment (Cancer 5).

- 1.1.2.4.2. Include recurrence or metastatic disease in the differential diagnosis in patients with a distant history of cancer who present with new symptoms (Cancer 6).
- 1.1.2.4.3. Know the management of common medical complications of patients with malignancy, including effusions, pathological fractures, hypercalcemia, neutropenia, and infections.
- 1.1.2.4.4. Know how to manage cancer pain, including the use of narcotics and co-analgesics (Palliative Care 4).
- 1.1.2.4.5. Understand the psychosocial issues facing cancer patients and how they might be addressed (Cancer 4).
- 1.1.2.5. Ears, Nose and Throat Disorders
  - 1.1.2.5.1. Diagnose otitis media upon visualization of the TM and include pain referred from other sources in the differential diagnosis of an earache (e.g. Tooth abscess, trigeminal Neuralgia, TMJ dysfunction, pharyngitis, etc.). Treat otitis media in an evidence-based fashion (Earache 1, 2, 4, 5, 6).
  - 1.1.2.5.2. Consider serious causes in the differential diagnosis of an ongoing earache (e.g. tumors, temporal arteritis, mastoiditis) (Earache 3).
  - 1.1.2.5.3. Differentiate viral from bacterial sinusitis and bronchitis and appropriately prescribe antibiotics (Upper Respiratory Tract Infections 2,3).
  - 1.1.2.5.4. Use an evidence-based approach to diagnosing pharyngitis; consider mononucleosis in investigating and managing patients with a sore throat (Upper Respiratory Tract Infection 6).
  - 1.1.2.5.5. Demonstrate an approach to vertigo with knowledge of benign and serious causes (BPV, stroke, labyrinthitis) (Dizziness 1,2).
- 1.1.2.6. Endocrinology
  - 1.1.2.6.1. Manage diabetes both in and out of hospital appropriately using lifestyle, oral agents, and insulin and provide patient and family education. Monitor for and manage complications (Diabetes 2,4,5).
  - 1.1.2.6.2. Appropriately investigate and manage patients suspected with thyroid disease and limit testing for thyroid disease to patients with a significant pre-test probability of abnormal results. In patients with diagnosed hypothyroidism, check thyroid-stimulating hormone levels only at appropriate times (Thyroid 1, 2).
- 1.1.2.7. Gastrointestinal Disorders
  - 1.1.2.7.1. Demonstrate the ability to diagnose and manage adult abdominal pain. Be able to distinguish between acute and chronic abdominal pain, generate a differential diagnosis and order appropriate investigations in a timely manner (Abdominal Pain 1, 2).
  - 1.1.2.7.2. Appropriately investigate and manage a patient presenting with upper or lower gastrointestinal bleeding (non-life threatening) (Gastrointestinal Bleed 1, 2, 4, 5, 6).
  - 1.1.2.7.3. Identify patients at high risk of GI bleed and modify treatment

- appropriately (Gastrointestinal Bleed 3).
- 1.1.2.7.4. Recognize extra intestinal manifestations in a patient with a diagnosis of inflammatory bowel disease (IBD) (Abdominal Pain 8).
  - 1.1.2.7.5. Include cardiac causes and other conditions as part of the differential diagnosis in patients presenting with dyspepsia and rule out serious conditions (Dyspepsia 1, 2, 3).
  - 1.1.2.7.6. Diagnose and manage specific pathology commonly seen in primary care (e.g.. gastroesophageal reflux disease, peptic ulcer **disease, ulcerative colitis, Crohn's disease, diverticulitis,** pancreatitis, irritable bowel syndrome, biliary disease) (Abdominal Pain 2).
  - 1.1.2.7.7. Establish a diagnosis (e.g.. infectious, malabsorption, immune, irritable bowel) and develop a management plan given a patient with acute or chronic diarrhea (Diarrhea 1, 2, 3, 4, 6, 7).
  - 1.1.2.7.8. Have an approach to diagnosis in a patient with abnormal liver enzymes differentiating hepatocellular and obstructive patterns (Hepatitis 1, 2).
  - 1.1.2.7.9. Assess infectivity and HIV status in patients with Hepatitis B and C, counsel regarding harm reduction, and monitor for complications (Hepatitis 4, 9).
- 1.1.2.8. Haematologic Disorders
- 1.1.2.8.1. Investigate the cause of low hemoglobin and classify the types of anemia, assess the risk of decompensation of anemic patients, and determine the iron status and investigate the causes of iron deficiency if present (Anemia 1, 2, 3, 4, 8).
  - 1.1.2.8.2. In patients with macrocytic anemia consider the possibility of a vitamin B12 deficiency and look for other manifestations of the deficiency (e.g. neurologic symptoms)(Anemia 6).
  - 1.1.2.8.3. Demonstrate some knowledge of common hematological malignancy (leukemia, lymphoma, myeloma) including the presenting symptoms, investigations and basic management.
  - 1.1.2.8.4. Be able to investigate and manage a patient presenting with a bleeding disorder, or an acute coagulopathy (warfarin overdose, liver disease, sepsis, etc.)
- 1.1.2.9. Infectious Disease
- 1.1.2.9.1. Demonstrate an awareness of serious and common causes of fever. Investigate patients with fever of unknown origin appropriately and treat fever resulting from serious causes in a timely fashion (e.g. meningitis) (Fever 4, 5, 6).
  - 1.1.2.9.2. Recognize and triage serious infection (pyelonephritis, cellulitis, meningitis, osteomyelitis, sepsis, pneumonia) including **antibiotic choice based on the patient's individual risk factors and a** decision about hospital admission (Infections 2, 3, 4).
  - 1.1.2.9.3. Use a selective approach in ordering cultures and make rational antibiotic choices in a timely fashion. In a febrile patient with a viral infection, do NOT prescribe antibiotics (Infections 1, 2; Fever 2, 3).
  - 1.1.2.9.4. Recognize that infections in the elderly may present atypically

(Fever 8).

1.1.2.10. Musculoskeletal

1.1.2.10.1. Use history and physical examination to rule out serious causes in a patient with low back or neck pain (Low-back Pain 1; Neck Pain 1, 2).

1.1.2.10.2. Use conservative management for back and neck pain including exercise, posture, and pain medication when necessary (Low-back pain 2, 3, 5; Neck Pain 3).

1.1.2.11. Neurologic Disorders

1.1.2.11.1. Diagnose stroke and differentiate, if possible, hemorrhagic from embolic/thrombotic stroke and assess patients presenting with neurological deficits in a timely fashion to determine eligibility for thrombolysis (Stroke 2, 3)

1.1.2.11.2. Involve the patient, the family, and other professionals as needed in decisions about intervention in patients with stroke. Evaluate the resources and supports needed to improve function, and include prevention of complications of stroke. Provide realistic prognostic advice (Stroke 4, 5, 7).

1.1.2.11.3. Have an approach to diagnosis and management of the patient who presents with loss of consciousness, altered level of consciousness, or delirium, including recognition of reversible conditions (shock, hypoxia, hypoglycemia, drug overdose) (Loss of Consciousness 2, 3, 4, 5, 6, 8).

1.1.2.11.4. Differentiate delirium due to general medication from dementia, drug intoxication/withdrawal, and psychotic disorders (Dementia 2).

1.1.2.11.5. Distinguish between pre-syncope/syncope and vertigo in patients with dizziness, generate an appropriate differential diagnosis and rule out serious conditions, review medications, and investigate appropriately.

1.1.2.11.6. Differentiate different types of tremors, i.e. resting tremor, intention tremor (Parkinsonism 4).

1.1.2.11.7. Accurately distinguish between idiopathic and atypical **Parkinson's disease, involve other health care professionals to enhance the patient's functional status, assess and anticipate side effects of anti-Parkinson medications, and look for other coexisting conditions** (Parkinsonism 1, 5, 6)

1.1.2.11.8. Be able to recognize and appropriately investigate benign versus life-threatening causes of headaches (trauma, subarachnoid hemorrhage, meningitis) (Headache 1, 2).

1.1.2.11.9. Diagnose and manage the common causes of headaches (e.g. migraine, tension, cluster) (Headache 3, 5).

1.1.2.12. Ophthalmologic Disorders

1.1.2.12.1. Distinguish serious from non-serious causes of a red eye always using a Snellen chart for visual acuity as well as fluorescein when necessary. Consider underlying systemic causes, when the diagnosis is iritis (Red Eye 1, 2, 9).

1.1.2.12.2. Distinguish allergic, viral and bacterial conjunctivitis and

- provide pseudomonas coverage for those with bacterial conjunctivitis using contact lenses (Red Eye 6, 7).
    - 1.1.2.12.3. Diagnose and manage other common eye lesions such as hordeolum, chalazion, pterygium, pingueculum.
  - 1.1.2.13. Renal and Urologic
    - 1.1.2.13.1. Have an approach to patients presenting with dysuria, identify high-risk patients (DM, underlying renal disease) investigate for UTI, STIs, prostatitis, vaginitis, etc. when appropriate and manage (Dysuria 1, 2, 3, 4).
    - 1.1.2.13.2. Have an approach to acute renal failure, including underlying cause, understand acute and chronic management and monitoring for complications.
    - 1.1.2.13.3. Understand presentation, investigations and management (medical and surgical) or renal calculi.
  - 1.1.2.14. Respiriology
    - 1.1.2.14.1. Include asthma and COPD as part of the differential diagnosis in a patient with respiratory symptoms (Asthma 1; Chronic Obstructive Pulmonary Disease 1)
    - 1.1.2.14.2. Objectively determine the severity of asthma or COPD (i.e. pulmonary function testing), and manage acute exacerbations appropriately including assessment for hospitalization (Asthma 4; Chronic Obstructive Pulmonary Disease 2, 3, 8).
    - 1.1.2.14.3. Effectively use monitoring, pharmacotherapy and lifestyle change to manage COPD and asthma (Asthma 5, 6; Chronic Obstructive Pulmonary Disease 4, 6, 7).
    - 1.1.2.14.4. Generate a broad differential diagnosis for cough (i.e. GERD, asthma, rhinitis, presence of a foreign body, medications, malignancy, pertussis) in patients with an acute, persistent or recurrent cough (Cough 1, 3).
    - 1.1.2.14.5. Assess the patient with pneumonia with regard to: risks for unusual pathogens, underlying neoplasia, identification of the appropriate patient population for hospitalization, rational antibiotic choices and arranging contact tracing where appropriate (Pneumonia 3, 5, 7, 11).
  - 1.1.2.15. Rheumatologic
    - 1.1.2.15.1. For patient presenting with joint pain, distinguish benign from serious pathology, using history and investigating appropriately (Joint Disorder 1)
    - 1.1.2.15.2. Have an approach to patients presenting with non-specific MSK complaints, to make the diagnosis of rheumatologic conditions, fibromyalgia, soft tissue injury and consider sources of referred pain (Joint Disorder 2, 4).
    - 1.1.2.15.3. Identify non-articular symptoms of rheumatic disease (Joint Disorder 8).
    - 1.1.2.15.4. In patients experiencing musculoskeletal pain actively inquire about the impact of the pain, treat with appropriate analgesics and consider aids and community resources (Joint Disorder 9).
  - 1.1.2.16. Skin Disorders

- 1.1.2.16.1. Distinguish benign from serious pathology (e.g. Melanoma, pemphigus, cutaneous T-cell lymphoma) by physical examination and appropriate investigations (e.g. Biopsy or excision) (Skin Disorder 2).
- 1.1.2.16.2. Understand the cutaneous manifestations of systemic disease and be able to diagnose using history, physical and appropriate investigations (Skin Disorder 3).
- 1.1.2.16.3. Have an approach to diagnosis and management of other common primary care dermatologic problems such as eczema, acne, skin infections (viral, bacterial, fungal, parasitic), psoriasis, allergic/contact conditions, skin ulcers (vascular, pressure).
- 1.1.2.17. Undifferentiated and/or multiple
  - 1.1.2.17.1. Investigate and manage weakness appropriately, differentiating generalized and specific weakness and identifying neurologic and other causes.
  - 1.1.2.17.2. Assess all spheres of function in a disabled patient and offer a multifaceted approach (rehabilitation, community support, lifestyle modification) (Disability 4, 5).
  - 1.1.2.17.3. In patients presenting with multiple medical problems take an appropriate history and prioritize to develop a mutually agreed agenda (Multiple Medical Problems 1, 2).
  - 1.1.2.17.4. In patients complaining of fatigue consider depression, adverse effects of medication and other medical causes (Fatigue 1, 2, 3).
- 1.2. Establish and maintain clinical knowledge, skills and attitudes required to meet the needs of elderly patients.
  - 1.2.1. Discuss the aging process and the implications of the biological changes associated with aging, the concepts of successful aging and the importance of a comprehensive approach to care.
  - 1.2.2. Focus on key determinants of health and their interrelationships in the elderly (eg. biological, psychological, socioeconomic).
  - 1.2.3. Differentiate between normal changes of aging and those changes that are pathological
  - 1.2.4. Describe the developmental challenges faced by the older person (e.g. dealing with loss, coping with chronic disease).
  - 1.2.5. Demonstrate a functional approach to history taking and treatment planning.
    - 1.2.5.1. Discuss the functional impact of illness in elderly patients including:
      - 1.2.5.1.1. Diagnoses often correlate poorly with function.
      - 1.2.5.1.2. Functional impairment may be a first sign of illness (Elderly 4).
    - 1.2.5.2. Describe and be able to assess the concepts of Basic Activities of **Daily Living (BADL's)** and Instrumental Activities of **Daily Living (IADL's)**.
    - 1.2.5.3. Use functional assessment tools such as the Katz ADL Index and incorporate this information into a comprehensive geriatric assessment including:
      - 1.2.5.3.1. Physical Health
      - 1.2.5.3.2. Mental Health including cognitive status and competency
      - 1.2.5.3.3. Socioeconomic status
      - 1.2.5.3.4. Environmental factors
      - 1.2.5.3.5. Level of Care

- 1.2.5.3.6. Belief system
- 1.2.5.4. Use functional rating scales in clinical situations
- 1.2.6. Include an assessment of social support available to the elderly patient.
- 1.2.7. Obtain corroborative information where appropriate from families or caregivers.
- 1.2.8. Perform a comprehensive geriatric assessment including:
  - 1.2.8.1.1. **Identify the patient's problems using a comprehensive patient problem list**
  - 1.2.8.1.2. **Establish the patient's diagnosis(es)**
  - 1.2.8.1.3. **Identify the patient's problem(s) associated with the diagnosis(es)**
  - 1.2.8.1.4. Rank the impact and importance of the problem
  - 1.2.8.1.5. Be able to deal with multiple interacting problems
  - 1.2.8.1.6. **Identify the patient's perspective**
  - 1.2.8.1.7. Establish realistic goals
- 1.2.9. Recognize and describe the non-specific presentation of the disease in the elderly (Elderly 5).
- 1.2.10. Demonstrate the ability to adapt their interviewing techniques to enable elderly people to understand and communicate with the resident.
- 1.2.11. Establish the expectations of the elderly person and reach common ground with regards to goals for management.
- 1.2.12. Help a patient establish and document their advance directives.
- 1.2.13. Describe the role and impact of the family or caregiver on the care of the elderly and be able to effectively recognize and manage problems that caregivers might encounter.
  - 1.2.13.1. Describe the importance of corroborative information in providing effective care for elderly patients.
  - 1.2.13.2. Discuss family dynamics (roles, conflict, role reversal) and their impact on the care provided to elderly patients.
  - 1.2.13.3. Describe signs of caregiver stress and fully assess caregiver needs.
  - 1.2.13.4. Manage and participate in family care conferences to see the value of information sharing, assessment of family supports and the opportunity to provide education and comfort to families in need.
- 1.2.14. Discuss the major geriatric clinical problem areas:
  - 1.2.14.1. Confusion or memory failure
  - 1.2.14.2. Falling or postural instability
  - 1.2.14.3. Reduced mobility
  - 1.2.14.4. Incontinence of urine
  - 1.2.14.5. Constipation and fecal incontinence
  - 1.2.14.6. Difficulties in activities of daily living
- 1.2.15. Safely prescribe medications to elderly patients taking into account the following issues:
  - 1.2.15.1. The pharmacodynamic and pharmacokinetic properties of commonly used medications in the elderly (e.g. antidepressants, beta blockers, oral hypoglycemics, NSAIDs, diuretics).
  - 1.2.15.2. A safe approach to drug dosing in the elderly, including required adjustments in renal impairment.
  - 1.2.15.3. The importance of drug monitoring, as well as strategies for enhancing treatment adherence.
  - 1.2.15.4. The dangers of polypharmacy in the elderly and learn to effectively

- monitor for hazardous drug- drug interactions as well as adverse drug reactions (Elderly 1).
- 1.2.15.5. The need to safely stop commonly used drugs and monitor for signs of withdrawal (e.g. SSRIs, benzodiazepines).
- 1.2.15.6. The need to choose drugs within a class that offer the best balance between therapeutic benefit and adverse effects
- 1.2.15.7. The importance of using non-pharmacological alternatives to drug therapy in the elderly wherever appropriate.
- 1.2.15.8. The over-the-counter drugs the patient may be using (Elderly 2)
- 1.2.15.9. The potential for substance abuse
- 1.2.16. Undertake a Cognitive Assessment including:
  - 1.2.16.1. Recognizing signs of declining cognitive function in elderly individuals, such as poor hygiene, memory complaints from patients of their family members and difficulty with IADLs such as banking and meal preparation.
  - 1.2.16.2. The use of cognitive assessment tools in appropriate situations and recognize their limitations in assessing cognition.
- 1.2.17. Undertake a Competency Assessment
  - 1.2.17.1. Describe the fundamental aspects of a competency assessment (e.g. Medical competence, financial competence, housing competence).
  - 1.2.17.2. Describe the laws pertaining to competence (e.g. POA, Public Guardian and Trusteeship, the Mental Health Act).
  - 1.2.17.3. Identify impaired and intact decision-making abilities as some may be retained in a given individual.
- 1.3. Establish and maintain clinical knowledge, skills and attitudes required to meet the needs of children and adolescents.
  - 1.3.1. Behavioural Issues:
    - 1.3.1.1. Evaluate and manage excessive crying and colic in infancy.
    - 1.3.1.2. Evaluate and manage feeding problems in infancy and food-related behavioural issues in childhood.
    - 1.3.1.3. Evaluate and manage bed wetting on an age-appropriate basis.
    - 1.3.1.4. Recognize, diagnose using appropriate clinical tools, refer and collaboratively manage Attention Deficit/Hyperactivity Disorder (Behavioural Problems 1-3).
  - 1.3.2. Cardiovascular disorders:
    - 1.3.2.1. Distinguish innocent and abnormal cardiac murmurs.
  - 1.3.3. Ear, nose and throat disorders: Diagnose, manage and refer when appropriate the following conditions: otitis externa, otitis media (Earache 1,4,7,8), sinusitis and pharyngitis (Upper Respiratory Tract Infection 2-4,6).
  - 1.3.4. Gastrointestinal Disorders: Diagnose and manage chronic GI conditions - constipation, chronic diarrhea, gastroesophageal reflux, lactose intolerance, chronic abdominal pain.
  - 1.3.5. Infectious Disease: Demonstrate knowledge of reportable diseases and parameters for interim exclusion from school and recreational activities.
  - 1.3.6. Musculoskeletal Disorders:
    - 1.3.6.1. Evaluate and manage a child presenting with limp, intoeing, alignment abnormalities/scoliosis, joint instability, swelling or pain.
    - 1.3.6.2. Evaluate fractures involving the growth plate and fractures/dislocations more common in children.
  - 1.3.7. Neurologic Disorders:
    - 1.3.7.1. Diagnose and manage common headaches in children.

- 1.3.7.2. Distinguish simple from complex febrile seizures and investigate/manage appropriately.
- 1.3.8. Psychiatric Disorders: Recognize the high prevalence of eating disorders in adolescents and manage appropriately (Eating Disorders 1).
- 1.3.9. Respiratory Disorders: Diagnose and manage common respiratory conditions (e.g. croup, asthma)
- 1.3.10. Skin disorders: Recognize and manage common skin conditions (e.g. atopic dermatitis, acne, viral exanthems, candidiasis, impetigo, seborrheic dermatitis, and cellulitis).
- 1.3.11. Recognize early signs of less common but serious problems.
  - 1.3.11.1. Recognize important rashes and investigate for possible serious underlying illness (petechiae, purpura, erythema nodosum, erythema migrans, café au lait spots).
  - 1.3.11.2. Recognize potential anaphylaxis, educate parents and patients and prescribe Medicalerts and EpiPen appropriately (Allergy 9).
  - 1.3.11.3. Evaluate severity of respiratory distress and manage respiratory emergencies (ex. epiglottitis, retropharyngeal abscess, anaphylaxis, foreign body aspiration, pneumonia, pneumothorax and status asthmaticus).
  - 1.3.11.4. Recognize and evaluate precocious puberty and primary amenorrhea.
  - 1.3.11.5. Recognize atypical presentations of common GI complaints (abdominal pain, vomiting, and constipation) that may suggest rare but serious complications.
  - 1.3.11.6. Recognize the significance of dysmorphism, congenital anomalies or developmental delay and refer for assessment.
- 1.3.12. Employ case-finding as well as evidence-based surveillance and screening tools (e.g. Rourke Baby Record) to detect illness, deviation from normal growth and development and prevent injury (Wellbaby Care 1) and to provide suggestions to encourage motor, language and social development (Well-baby Care 4).
- 1.3.13. Understand and be able to counsel parents about normal nutritional needs at different ages. Effectively monitor growth and suggest intervention as necessary (Well-baby Care 2).
- 1.3.14. Learn to administrate an organized vaccination program within family practice including routine vaccinations and those for travel and special populations. Discuss benefits, safety and side effects of vaccinations with parents (Well-baby care 2, 6; Immunization 1, 2, 4).
- 1.3.15. Provide education and advice on injury prevention and common behavioural and family issues.
- 1.3.16. When caring for adolescents, review and counsel about substance abuse, peer issues, home environment, diet/eating disorders, academic performance, social stress/mental illness and sexuality/STDs/contraception.
- 1.3.17. Have an approach to obesity in childhood including guidance on exercise and diet (Obesity 7, 8)
- 1.4. Establish and maintain clinical knowledge, skills and attitudes required in maternal and newborn care.
  - 1.4.1. Diagnose and manage complications of early pregnancy (threatened & inevitable abortion, ectopic pregnancy, trophoblastic disease).
  - 1.4.2. Conduct a first prenatal visit, discuss the rationale for all tests, explain routine prenatal visits (Pregnancy 4).
  - 1.4.3. Screen all pregnant women for abuse (Pregnancy 5).

- 1.4.4. Conduct a prenatal visit in the first, second, and third trimester including maternal and fetal high risk factors which influence prenatal morbidity and mortality.
- 1.4.5. Counsel a woman re indications and timing for ultrasound.
- 1.4.6. Counsel a healthy woman who is planning a pregnancy (Pregnancy 1).
- 1.4.7. Counsel women with specific risks (Pregnancy 1) including:
  - 1.4.7.1. Women over 35 or with a family history of genetic abnormalities.
  - 1.4.7.2. VBAC
  - 1.4.7.3. Women with specific medical diseases (diabetes, hypertension, multiple sclerosis, inflammatory bowel disease, etc.) during pregnancy.
  - 1.4.7.4. Women with a poor past obstetrical history i.e. (preterm labour, 2nd trimester pregnancy loss).
- 1.4.8. Ask the woman and her partner open-ended questions about feelings, worries, expectations at routine visits, prenatally, intra-partum and post-partum.
- 1.4.9. Counsel a woman in the third trimester on the use of analgesia, anaesthesia in labour, effects on the mother and fetus.
- 1.4.10. Counsel a woman regarding expectations for labour and delivery: ambulation, different positions for delivery, early mother-infant contact.
- 1.4.11. Counsel a woman regarding the potential for operative intervention such as forceps, caesarean section.
- 1.4.12. Manage common pregnancy symptoms.
- 1.4.13. Counsel a woman regarding signs of labour.
- 1.4.14. Take a detailed history on a new patient presenting in labour.
- 1.4.15. Describe normal rate of progress in nulliparous and multiparous patients.
- 1.4.16. Describe indications for induction or augmentation of labour (Pregnancy 8).
- 1.4.17. Describe indications for continuous electronic fetal monitoring.
- 1.4.18. Manage a normal labour.
- 1.4.19. Demonstrate ability to interpret fetal heart rate patterns.
- 1.4.20. Describe the indications, risks, and prerequisites for low forceps, vacuum extraction
- 1.4.21. Inform the woman and her partner about common positive and negative emotional experiences during and after pregnancy, such as body image, sexuality, ambivalent feelings about pregnancy and baby, fear of abnormalities, **"baby blues," intense attachment to baby, etc.**
- 1.4.22. Discuss emotional and organizational preparation for the baby.
- 1.4.23. Discuss parenting with the woman and her partner including their own experiences growing up, their expectations/philosophy of raising children.
- 1.4.24. Discuss benefits to mother & baby of breastfeeding; **explore the woman's and her partner's feelings and concerns about breastfeeding at least twice during the pregnancy.**
- 1.4.25. Discuss circumcision
- 1.4.26. Counsel a breastfeeding mother regarding initiation of breast feeding.
- 1.4.27. Diagnose and manage common breastfeeding problems (i.e. sore nipples, **engorgement, "not enough milk", difficulties latching on).**
- 1.4.28. Counsel a woman and her partner regarding normal neonatal/post- partum course prior to discharge from hospital including the normal sequence of the attachment process.
- 1.4.29. Perform a 6 week post-partum exam.
- 1.4.30. Diagnose and manage endometritis, subinvolution, infected episiotomy (Pregnancy 10).

- 1.4.31. Counsel a mother post C-section (e.g., activity, resuming intercourse, etc.).
- 1.4.32. Independently examine a newborn and recognize variants of normal (Newborn 1).
- 1.4.33. Provide normal newborn care.
- 1.4.34. Describe current neonatal screening programs.
- 1.4.35. **Recognize congenital anomalies and abnormalities, such as Down's Syndrome.**
- 1.4.36. Diagnose and manage common neonatal diseases and conditions.
  - 1.4.36.1. Jaundice
  - 1.4.36.2. Sepsis
  - 1.4.36.3. Murmurs
  - 1.4.36.4. Hypoglycemia
  - 1.4.36.5. Respiratory distress
  - 1.4.36.6. Orthopedic abnormalities
  - 1.4.36.7. IUGR
- 1.4.37. Manage the issues surrounding the care of newborns of mothers with medical/non-medical conditions (i.e. diabetes, drug abuse, auto-immune diseases, medication use, social issues, AIDS, etc.). 9.12.
- 1.4.38. 9.13. Describe the nutritional needs and normal growth pattern in the first weeks following birth for premature and full term infants.
- 1.5. Establish and maintain clinical knowledge, skills and attitudes required in the area of global health and care of the vulnerable and underserved:
  - 1.5.1. concerning basic travel medicine (Travel Medicine 1-8):
    - 1.5.1.1. To advise a patient on appropriate immunizations prior to overseas travel.
    - 1.5.1.2. To make recommendations concerning malaria prophylaxis, and other **health precautions including those around potable water and traveler's diarrhea.**
    - 1.5.1.3. To demonstrate an approach to the management of fever in the returning traveler.
  - 1.5.2. concerning the health of immigrants to Canada (Immigrants 1-6):
    - 1.5.2.1. To demonstrate awareness of overseas screening for immigrants and refugees to Canada.
    - 1.5.2.2. To apply appropriate screening recommendations, including assessment of vaccination status and updates as appropriate, for newly arrived landed immigrants.
    - 1.5.2.3. To inquire and maintain openness to the use of alternative healers, practices and medications.
    - 1.5.2.4. To demonstrate a knowledge of the demographics of new immigrants to Canada.
    - 1.5.2.5. To demonstrate an approach to finding information on diseases less commonly seen in Canada.
  - 1.5.3. acquire knowledge of the epidemiology of different underserved and vulnerable groups in Canada, including aboriginal populations, inner-city/homeless populations and Persons with Developmental Disabilities (PWDD) including:
    - 1.5.3.1. To demonstrate knowledge of the epidemiology of aboriginal health issues, including diabetes mellitus, metabolic syndrome, substance abuse and domestic violence.
    - 1.5.3.2. To describe key differences between aboriginal communities on and off reserves, including issues of inadequate housing and unclean water

- supply.
- 1.5.3.3. To demonstrate knowledge of the epidemiology of inner-city populations, including mental health concerns, substance abuse, impact of homelessness, lack of preventative medical care.
- 1.5.3.4. To demonstrate knowledge of the unique health and social challenges faced by PWDD
- 1.5.4. be familiar with basic global burden of disease, including the major causes of mortality worldwide:
  - 1.5.4.1. To demonstrate a basic clinical and epidemiological knowledge of diarrheal disease, HIV, malaria and tuberculosis.
  - 1.5.4.2. To demonstrate a basic understanding of the impact on health of individuals of migration, forced displacement, war and armed conflict.
- 1.6. Establish and maintain clinical knowledge, skills and attitudes required in **Men's health care.**
  - 1.6.1. **Be aware of men's less frequent access of the health care** system and thus the need to make efficient use of the visits that do occur.
  - 1.6.2. Sexual Health
    - 1.6.2.1. Exhibit sensitivity in dealing with issues of sexual dysfunction and inclusiveness with regards to sexual orientation.
    - 1.6.2.2. **Discuss men's role** in Sexually Transmitted Infection prevention, contraception and responsible fathering.
    - 1.6.2.3. Appropriately recognize and manage reproductive tract infections and problems:
      - 1.6.2.3.1. Sexually transmitted infections (Sexually Transmitted Infections 1-8)
      - 1.6.2.3.2. Urethritis
      - 1.6.2.3.3. Epididymitis
      - 1.6.2.3.4. Orchitis
      - 1.6.2.3.5. Prostatitis
      - 1.6.2.3.6. Benign prostatic hypertrophy (Prostate 6).
      - 1.6.2.3.7. Penile anomalies
      - 1.6.2.3.8. Scrotal and testicular abnormalities
      - 1.6.2.3.9. Genital trauma
      - 1.6.2.3.10. Erectile and ejaculatory dysfunctions
    - 1.6.2.4. Appropriately screen for, manage and refer neoplastic disease of the male genital tract.
      - 1.6.2.4.1. Penile carcinoma
      - 1.6.2.4.2. Testicular carcinoma
      - 1.6.2.4.3. Prostatic carcinoma (Prostate 1-5)
- 1.7. Establish and maintain clinical knowledge, skills and attitudes required in palliative care.
  - 1.7.1. Assess and manage pain and symptoms effectively through history, appropriate physical exam and relevant investigations (Palliative Care 4).
    - 1.7.1.1. Demonstrate knowledge of classification and neurophysiology of pain.
    - 1.7.1.2. Prescribe opioids effectively including initiating dosage, titration, breakthrough dosing, prevention of side effects, monitoring, dose equivalency and opioid rotation.
    - 1.7.1.3. Describe the clinical presentation of opioid neurotoxicity and be able to put a management plan in place to address the problem.
    - 1.7.1.4. Prescribe adjuvant modalities and medications for pain and symptom

relief.

- 1.7.1.5. Be aware of non-pharmacologic strategies for pain and symptom management.
- 1.7.1.6. Develop and implement management plans for other symptoms including: A) fatigue; B) anorexia and cachexia; C) constipation; D) dyspnea; E) nausea and vomiting; F) delirium; G) skin and mouth care; H) anxiety and depression.
- 1.7.2. Monitor the efficacy of symptom management plans.
- 1.7.3. Review and adjust management plans to accommodate the changes that may occur as the end of life approaches (Palliative Care 5)
- 1.7.4. Describe a management plan for urgent/emergent problems in the palliative setting including spinal cord compression, hypercalcemia, superior vena cava syndrome and terminal agitation.
- 1.7.5. Distinguish between physician-assisted suicide, euthanasia and terminal sedation, and withholding and withdrawing therapy.
- 1.7.6. Demonstrate an understanding of the personal, family and social consequences of life-threatening illness (Palliative Care 3).
- 1.7.7. Demonstrate cultural, gender, religious and aboriginal sensitivity in addressing end-of-life care.
- 1.7.8. Demonstrate the ability to develop a management plan that appropriately balances disease-specific treatment and symptom management according to the individual needs of the patient and family.
- 1.7.9. Demonstrate the role of the family physician in assessing and managing grief in patients and families including normal and atypical grief (Grief 1-4).
- 1.7.10. Identify and assess spiritual issues in end-of-life care (Palliative Care 3).
- 1.8. Establish and maintain clinical knowledge, skills and attitudes required in **Women's Health Care**.
  - 1.8.1. An awareness that many medical disorders manifest differently in women.
  - 1.8.2. An awareness of the widespread and complex health effects of sexual abuse on women and resources available to assist affected women.
  - 1.8.3. An awareness of effects on female patients regarding the public perception of women and body image.
  - 1.8.4. Obtain a detailed reproductive health history as part of a well woman visit – including history of risk factors for STIs.
  - 1.8.5. Counsel a woman regarding reproductive and contraceptive choices (Contraception 1,3).
  - 1.8.6. Counsel a woman regarding safe sex practices (Sex 1, Sexually Transmitted Infections 1).
  - 1.8.7. Diagnose and manage menstrual disorders, and irregularities throughout the life cycle.
  - 1.8.8. Diagnose and manage infection/inflammation of the reproductive tract, and urinary tract, including STIs (Sexually Transmitted Infections 2,6,7; Vaginitis 1-3).
  - 1.8.9. Diagnose and manage acute & chronic abdominal and pelvic pain, always considering pregnancy as a possible cause (Abdominal Pain 3).
  - 1.8.10. Diagnose and initiate management of endometriosis
  - 1.8.11. Diagnose and manage urinary incontinence & uterovaginal prolapse.
  - 1.8.12. Screen for, detect and manage genital tract neoplasia (Cancer 2).
  - 1.8.13. Diagnose and undertake initial management of infertility (Infertility 1-6).
  - 1.8.14. Counsel a woman regarding normal physical, psychological changes to be

- expected at the menopause and options for their management (Menopause 1-8).
- 1.8.15. Counsel a woman with an unwanted pregnancy regarding the choices available to her (Pregnancy 3)
  - 1.8.16. Identify and counsel women with eating disorders (Eating Disorders 2-6).
  - 1.8.17. Diagnose and manage breast lumps in women (Breast Lump 2).
  - 1.8.18. Counsel re recommendations and controversies of screening for breast cancer using clinical examination, self-examinations, and imaging and genetic testing (Breast Lump 1).
  - 1.8.19. Refer and provide primary care follow-up for breast cancer patients (Breast Lump 30).
  - 1.8.20. Initiate evaluation and treatment of victims of rape and sexual assault (including psychosocial and legal issues) (Rape/Sexual Assault 1-6).
2. Perform a patient centred clinical assessment and establish a management plan
  3. Plan and perform procedures and therapies for assessment and/or management
    - 3.1. generally and in the care of adults:
      - 3.1.1. Demonstrate the knowledge base required to effectively evaluate the indications for procedural and surgical procedures.
      - 3.1.2. Demonstrate the ability to conduct a comprehensive pre-operative assessment and identify important peri-operative issues. This includes knowledge of testing required and indications for anaesthesia consultation.
      - 3.1.3. Demonstrate awareness of the indications and contraindications of each procedure.
      - 3.1.4. Demonstrate the ability to mentally rehearse the landmarks, technical steps and potential complications of each procedure.
      - 3.1.5. Demonstrate knowledge of normal postoperative healing and the ability to identify and manage post-operative complications, i.e. infection, wound dehiscence, keloid formation.
      - 3.1.6. Demonstrate the ability to act effectively as a surgical assistant for major surgical procedure
      - 3.1.7. Skin Based Surgery:
        - 3.1.7.1. Local anaesthetic infiltration and digital block
        - 3.1.7.2. Abscess incision and drainage
        - 3.1.7.3. Insertion of sutures--simple interrupted, vertical mattress, horizontal mattress and subcuticular
        - 3.1.7.4. Laceration repair (suture and tissue adhesive)
        - 3.1.7.5. Skin biopsy-shave, punch and excisional
        - 3.1.7.6. Excision of cystic and solid lesions i.e. epidermoid cysts and lipomas
        - 3.1.7.7. Cryotherapy
        - 3.1.7.8. Removal of foreign body
        - 3.1.7.9. Surgical management of ingrown toenail
      - 3.1.8. Eye, ear, nose and throat procedural skills
        - 3.1.8.1. Instillation of fluorescein
        - 3.1.8.2. Slit lamp examination
        - 3.1.8.3. Removal of corneal or conjunctival foreign body
        - 3.1.8.4. Removal of cerumen
        - 3.1.8.5. Removal of foreign body from nose or ear
        - 3.1.8.6. Cautery for anterior epistaxis

- 3.1.8.7. Anterior nasal packing
- 3.1.8.8. Measurement of intraocular pressure
- 3.1.9. Gastrointestinal and genitourinary procedural skills
  - 3.1.9.1. Anoscopy
  - 3.1.9.2. Incision and drainage of a thrombosed external hemorrhoid
  - 3.1.9.3. Cryotherapy or chemical therapy of genital warts
  - 3.1.9.4. Aspirate breast cyst
  - 3.1.9.5. Pap smear
  - 3.1.9.6. Insertion and removal of an intrauterine device
  - 3.1.9.7. Endometrial aspiration/biopsy
- 3.1.10. Musculoskeletal procedural skills
  - 3.1.10.1. Splinting of injured extremities
  - 3.1.10.2. Reduction of minor dislocations/subluxations i.e. pulled elbow, finger dislocations
  - 3.1.10.3. Application of simple casts i.e. short arm cast, scaphoid cast, below knee walking cast
  - 3.1.10.4. Aspiration and injection of knee joint
  - 3.1.10.5. Aspiration and injection of the shoulder joint and subacromial bursa
  - 3.1.10.6. Corticosteroid injection for epicondylitis or plantar fasciitis
  - 3.1.10.7. Trigger point injection
  - 3.1.10.8.
- 3.1.11. Resuscitative procedural skills
  - 3.1.11.1. Intradermal, IV, IM and SC injections
  - 3.1.11.2. Venipuncture
  - 3.1.11.3. Peripheral intravenous line; adult and child
  - 3.1.11.4. Oral airway insertion
  - 3.1.11.5. Bag-valve-mask ventilation
  - 3.1.11.6. Endotracheal intubation
  - 3.1.11.7. Cardiac defibrillation
  - 3.1.11.8. Lumbar puncture
  - 3.1.11.9. Placement of transurethral catheter
  - 3.1.11.10. Nasogastric tube insertion
- 3.2. In maternal and newborn care
  - 3.2.1. Judge uterine size in early pregnancy - differentiate 8, 10, 12 week size uterus.
  - 3.2.2. Assess fetal presentation.
  - 3.2.3. Auscultate fetal heart
  - 3.2.4. Diagnose small-for-dates, large-for-dates
  - 3.2.5. **Assess a woman's breasts and nipples for potential problems with breast feeding**
  - 3.2.6. Skillfully perform a normal vaginal delivery
  - 3.2.7. Repair second degree perineal tears
  - 3.2.8. Recognize 3rd and 4th degree tears
  - 3.2.9. Recognize indications for episiotomy
  - 3.2.10. Do and repair an episiotomy
  - 3.2.11. Do ARM (artificial rupture of membrane)
  - 3.2.12. Apply scalp electrode
  - 3.2.13. Use a vacuum extractor or low forceps for failure to progress in the second stage
  - 3.2.14. Manage shoulder dystocia

- 3.2.15. Manage cord prolapsed, unexpected breech
- 3.2.16. Manage important complications of the third stage such as retained placenta and postpartum hemorrhage, uterine inversion
- 3.2.17. Recognize uterine rupture in VBAC
- 3.2.18. Assist at a caesarean section
- 3.2.19. Recognize and manage the adverse effects labour and delivery may have on full-term and preterm infants, i.e. asphyxia – (causes, prevention, detection, sequelae), trauma, drugs, especially analgesia and anaesthesia.
- 3.2.20. Describe the principles and procedures for neonatal resuscitation (Newborn 3) and perform a neonatal resuscitation, including bagging, insertion of ET tube (insertion of umbilical vein catheter is optional) (Newborn 3,4).
- 4. Establish a plan for ongoing care and timely consultation when appropriate
- 5. Actively facilitate continuous quality improvement for health care and patient safety, both individually and as part of a team
- 6. Establish an inclusive and culturally-safe practice environment
- 7. Contribute generalist abilities to address complex, unmet patient or community needs and emerging health issues, demonstrating community-adaptive expertise
  - 7.1. To recognize and appropriately manage acute, urgent and emergent presentations.
    - 7.1.1. Awareness and management of anaphylaxis (Allergy 4,7,8,9)
    - 7.1.2. Appropriate management of acute presentations of chest pain (Chest Pain 1,2,3,5)
    - 7.1.3. Recognize and manage the acutely ill, new or diagnosed diabetic patient and manage appropriately, including management of hypoglycemia, DKA and hyperglycemia (Diabetes 3,6,7)
    - 7.1.4. Recognize and manage potentially life-threatening upper respiratory presentations such as epiglottitis and retropharyngeal abscess (Upper Respiratory Infection 1).
    - 7.1.5. Appropriate management of epistaxis (Epistaxis 1-7)
    - 7.1.6. Appropriate management of poisoning including recognition of important toxidromes (Poisoning 2-7)
    - 7.1.7. Appropriate investigation and management of the febrile patient (Fever 4-7).
    - 7.1.8. Appropriate assessment, management and, if necessary, referral of patients presenting with potential fracture (Fractures 1-8), lacerations (Lacerations 1-7), bite wounds and burns.
    - 7.1.9. Appropriate assessment, stabilization, management and referral of patients presenting with multiple or complicated trauma (Trauma 1-10).
    - 7.1.10. Appropriate assessment, investigation and management of acute abdominal pain (Abdominal Pain 1, 4, 6) and GI bleed (Gastro-intestinal Bleed 1-6).
    - 7.1.11. Appropriate first line management of common infections (Fever 2, 3; Infections 1-6).
    - 7.1.12. Appropriate investigation and management of dehydration and electrolyte disturbances (Dehydration 2-5)
    - 7.1.13. Appropriate investigation and management of delirium (Dementia 2) and loss of consciousness (Loss of Consciousness 1-11).
    - 7.1.14. Appropriate assessment and management of new-onset headache (Headache 1,2)
    - 7.1.15. Appropriate assessment, stabilization, investigation and management of an acute seizure episode (Seizures 1-4)
    - 7.1.16. Appropriate recognition, assessment, management and referral of

ophthalmologic emergencies (red eye (Red Eye 1-9), acute visual loss, trauma etc.)

- 7.2. To develop a comprehensive approach to Domestic Violence (Domestic Violence 1-4).
- 7.3. To develop a comprehensive approach to Sexual Assault (Sexual Assault (Rape/Sexual Assault 1-5).
- 7.4. To develop a compassionate and effective approach to patients in crisis (Crisis 1-11).
- 7.5. To develop a compassionate and effective approach to the Difficult Patient (Difficult Patient 1-8).
- 7.6. To develop a compassionate and effective approach to patient requests for Medical Assistance in Dying (MAID)
  - 7.6.1. Understand the current ethical, legal and regulatory environment concerning MAID.
  - 7.6.2. **Understand and acknowledge the patient's request in the context of their** experience of suffering and within the continuity of a palliative approach to end of life care.
  - 7.6.3. Appropriate assessment of issues which may compromise patient autonomy (e.g. competence, depression).
  - 7.6.4. Provide compassionate, non-judgmental support in their decision process.
  - 7.6.5. When indicated, appropriately provide (or refer for provision) MAID according to accepted protocols.

## Communicator

The learning environment will provide opportunities for residents to:

1. Develop rapport, trust and ethical therapeutic relationships with patients and their families.
  - 1.1. develop the confidence and skills to manage routine patient encounters
  - 1.2. develop the confidence and skills to manage difficult or emotionally intense situations or interactions, including:
    - 1.2.1. When confronted with difficult patient interaction seek out information about patient's life circumstances, current context and functional status to better understand the patient's frame of reference.
    - 1.2.2. Identify own attitudes and beliefs, which may be contributing to the situation.
    - 1.2.3. Look for and attempt to limit the impact of personal feelings [e.g. anger, frustration] and remain vigilant for new symptoms and physical findings to be sure they receive adequate attention.
    - 1.2.4. Work towards establishing common ground and an atmosphere of safety and trust.
2. Elicit and synthesize accurate and relevant information from, and perspectives of, patients and their families
3. Share health care information and plans with patients and their families generally and in the following specific situations:
  - 3.1. Communicate effectively with children including:
    - 3.1.1. Adapt communication methods based on the age of the child always attempting to **maximize the child's participation in their medical care.**
    - 3.1.2. Effectively evaluate the illness experience and influence on relationships for children and their families especially for children with chronic conditions or critical illness.
    - 3.1.3. Find common ground with children and adolescents as well as parents in managing

- medical or developmental issues cognizant of personal/cultural differences in parenting.
- 3.2. Develop skill in the proper use of interpreters:
    - 3.2.1. To demonstrate the appropriate use of a medical interpreter in patient encounters.
    - 3.2.2. To demonstrate a working knowledge of the translation resources in the community.
  - 3.3. recognize the communication needs, both verbal and written, of patients who are illiterate, semi-literate or who are literate in a language other than English
    - 3.3.1. To constantly maintain awareness that a patient may not be able to read distributed materials, prescription information, etc. and to avoid putting the patient into an uncomfortable position with respect to his/her literacy.
    - 3.3.2. To provide materials appropriate to **patient's literacy level and linguistic ability, when possible.**
  - 3.4. Develop skills in the unique challenges of communication in palliative care situations:
    - 3.4.1. Demonstrate the ability to provide supportive counselling and resources to those coping with loss.
    - 3.4.2. Demonstrate the ability to discuss advance care planning, including developing, revising and implementing advance directives with patients and families.
  4. **Engage patients and their families in developing plans that reflect the patient's health care needs, values and goals**
    - 4.1. Develop a common understanding on issues, problems and plans with patients and their families in order to develop, provide and follow-up on a shared plan of care.
    - 4.2. Develop effective motivational interviewing skills in counseling patients around lifestyle issues and prevention of disease (Lifestyle 2-5).
  5. Document and share written and electronic information about the medical encounter to optimize clinical decision making, patient safety, confidentiality and privacy.

Collaborator
The learning environment will provide opportunities for residents to:
<ol style="list-style-type: none"> <li>1. Work effectively with others in a collaborative team-based model for patient care generally and specifically to.           <ol style="list-style-type: none"> <li>1.1. Collaborate in the care of the elderly through:               <ol style="list-style-type: none"> <li>1.1.1. Incorporating contributions from inter-professional team members into a thorough functional assessment.</li> <li>1.1.2. Recognize the role of the family physician as part of an inter-professional team in Long Term Care</li> </ol> </li> <li>1.2. Collaborate in the care of vulnerable and underserved populations by demonstrating an openness to and respect for appropriate communication with other professionals, including cultural interpreters and translators, legal aid workers, CAS workers, social workers, and members of other community support groups.</li> </ol> </li> <li>2. Work collaboratively in different models of maternity care including team-based approaches.</li> <li>3. Recognize and facilitate necessary transitions in care with other colleagues in the health professions, including but not limited to shared care, transfer of care and/or handover of care to enable continuity and safety</li> </ol>

## Leader

The learning environment will provide opportunities for residents to:

1. Contribute to the improvement of comprehensive, continuity-based, and patient-centred health care delivered in teams, organizations and systems
  - 1.1. Explore leadership roles and the skills required for these roles.
  - 1.2. Participate in activities that contribute to the effectiveness of their own program, primary practice, healthcare organizations and systems. Specifically:
    - 1.2.1. Participation in program, healthcare organization and/or community committees
    - 1.2.2. Become familiar with an effectively organized medical record
2. Engage in stewardship of health care resources
  - 2.1. **Recognize the need to balance the individual patient's** concerns against the responsible use of public resources.
  - 2.2. Recognize the impact of high-resource vs. low-resource public health interventions on population health
3. Demonstrate collaborative leadership in professional practice to enhance health care
4. Manage career planning, finances, and health human resources in a practice including developing familiarity with:
  - 4.1. Different methods of compensation
  - 4.2. Billing procedures and strategies
  - 4.3. Issues around commencing practice such as evaluating practice and locum opportunities, licensing, group versus solo practice, staffing issues, office equipment and layout
  - 4.4. Issues around personal and professional financial management such as accounting, tax planning, budgeting and debt management, insurance.

## Health Advocate

The learning environment will provide opportunities for residents to

1. **Respond to an individual patient's health needs by advocating with the patient** within and beyond the clinical environment
  - 1.1. recognize the role of Social Determinants of Health in the health of their patients and advocate with them as active partners for system-level change in a socially accountable manner.
  - 1.2. Identify patients who are vulnerable or marginalized and assist them in issues (e.g. housing, mobility, nutrition, access to financial resources etc.) that promote their health.
  - 1.3. Identify patients at risk because of social, family or other health situations; work appropriately with protective services when indicated
2. Act as a resource to their community, assess and respond to the needs of the community by advocating with them as active partners for system-level change in a socially accountable manner
  - 2.1. demonstrate awareness of community resources to help patients in the community
  - 2.2. learn principles and strategies for effective advocacy
  - 2.3. become aware of important societal and geopolitical trends which will affect their **patients' health such as climate change, global patterns of migration, economic globalization and patterns of income redistribution within Canada**

## Scholar

The learning environment will provide opportunities for residents to:

1. Engage in the continuous enhancement of their professional activities through ongoing learning
  - 1.1. Develop evidence based practices for the medical care of their patients
  - 1.2. Maintain and enhance their professional activities through ongoing self-directed learning based on reflective practice. (Learning 6-8)
2. Teach students, residents, the public and other health care professionals
3. Integrate best available evidence into practice considering context, epidemiology of disease, comorbidity, and the complexity of patients
  - 3.1. Critically evaluate medical evidence and apply this evidence in the care of their patients
  - 3.2. Develop skill at efficiently answering point of care questions using a variety of evidence-based strategies.
4. Contribute to the creation and dissemination of knowledge relevant to family medicine
  - 4.1. Complete a research project and presenting it to their colleagues and department.
  - 4.2. Participate in and conduct quality improvement activities

## Professional

The learning environment will provide opportunities for residents to:

1. Demonstrate a commitment to patients through clinical excellence and high ethical standards
  - 1.1. Demonstrate appropriate respect for the patient's safety and dignity, in particular appropriate boundaries, chaperoning and draping.
  - 1.2. **Demonstrate commitment to the patient's good**
    - 1.2.1. Understanding ethics as an integral part of every clinical encounter, not just when controversies arise.
    - 1.2.2. Understand fundamental ethical principles of family medicine, including respect for patient dignity and beneficence-in-trust.
    - 1.2.3. Understand and demonstrate specific professional qualities that stem from commitment to the good of their patients, such as effacement of self-interest, compassion, intellectual honesty, justice and prudence.
    - 1.2.4. In cases where there is ethical conflict between physician and patient, be prepared to transfer care to another physician if appropriate.
  - 1.3. Demonstrate ethical decision making and valid consent
    - 1.3.1. A patient-centered approach to key ethical issues in clinical practice, such as: informed consent, privacy/confidentiality, withholding and withdrawing medical interventions, surrogate decision making and advance directives.
    - 1.3.2. An appreciation of their own roles and responsibilities in decision making as well as those of patients, and respectfully discuss and manage value differences and conflicts.
  - 1.4. Demonstrate awareness of potential areas of conflict
    - 1.4.1. The issues of allocation of scarce resources, gatekeeper role and prioritization of need and how these relate to the duty to the patient.
    - 1.4.2. Situations where there is an obligation to a third party that may conflict with the duty to the patient.
    - 1.4.3. **The issues that may arise in a physician's relationship with the pharmaceutical industry.**
    - 1.4.4. The unique issues and responsibilities around prescribing controlled drugs.
    - 1.4.5. Set clear boundaries with respect to appointment length, prescribing practices and accessibility especially with those patients who have a personality disorder (Personality Disorder 1).
    - 1.4.6. Take steps to end the physician-patient relationship when it is in a patient's best interests and do so according to accepted guidelines.
  - 1.5. Demonstrate professional behaviour in the area of Patient Safety and Errors.
    - 1.5.1. Develop an awareness for cognitive biases and other aspects of critical thinking and how they may play a role in patient safety and medical errors.
    - 1.5.2. Develop and demonstrate skills in error/adverse event disclosure and apology.
    - 1.5.3. **Demonstrate awareness of the physician's role in prevention of iatrogenic infections and compliance with guidelines around hand washing.**
2. Demonstrate a commitment to society by recognizing and responding to societal needs in health care
  - 2.1. Develop a sense of cultural humility and the skills of cultural competence which enable constructive, helpful and professional provision of medical care to members of different cultural and socioeconomic groups
    - 2.1.1. **To demonstrate an awareness and sensitivity to the patient's culture, beliefs values,**

- gender and age.
- 2.1.2. To define her or his own background, culture, beliefs, values and biases and the impact these may have on interactions with patients
- 2.2. Develop an awareness of professional opportunities available to physicians interested in a career in Global Health in Canada (including in aboriginal populations, inner cities, and with immigrant and refugee populations) and overseas
- 2.3. Become aware of the concept of health as a human right and demonstrate knowledge of the Canadian Charter of Rights and Freedoms and the Universal Declaration of Human Rights as they pertain to health.
- 3. Demonstrate a commitment to the profession by adhering to standards and participating in physician-led regulation
  - 3.1. Demonstrate awareness of obligations to report patients at risk of harm to themselves or others.
  - 3.2. Demonstrate understanding of privacy legislation and physician confidentiality
  - 3.3. Demonstrate awareness of obligations to report situations of abuse or neglect concerning children, the elderly and other vulnerable populations.
  - 3.4. Demonstrate sensitivity to potential ethical issues in their collaborative relationships with nonmedical colleagues, institutions, professional associations, government bodies, etc..
  - 3.5. Contribute to the activities of professional associations locally, provincially and nationally.
- 4. Demonstrate a commitment to physician health and well-being to foster optimal patient care
  - 4.1. Demonstrate self-awareness and self-care while caring for their patients
  - 4.2. Display a commitment to personal health and balance between personal life and professional responsibilities.
- 5. Demonstrate a commitment to reflective practice
  - 5.1. Demonstrate a recognition of their own strengths and limitations and when to ask for help.
  - 5.2. Demonstrate a mindful approach to practice by maintaining composure and equanimity, even in difficult situations, and by engaging in thoughtful dialogue about values and motives

## **CURRICULUM DELIVERY**

One of the challenges with a distributed, multiple-site program such as Dalhousie's is that of delivering the curriculum at each site in a comprehensive and equitable manner. To accomplish this, the curriculum will be delivered using a variety of methods at each site. This will include, but not be limited to:

- Clinical Learning Experiences (both Family Medicine and other Specialty based)
- Hospital/Department rounds
- Postgraduate Medical Education modules (PGME) both video-conference and e-modules
- Academic Curriculum (both on-site and distributed)
- Problem-based Small Group Learning (PBSGL)
- The Annual Family Medicine Education Weekend

Some explanatory comments about the Academic Curriculum in particular are in order. The Academic Curriculum is a selection of clinical topics that have been deemed essential to present to residents in an academic manner. Each site will have different strategies to accomplish this (for example academic half days each week or academic days during core clinical learning experience). The Program Curriculum Committee has developed a list of topics (see below) that must be delivered at each site. In addition to these topics, each site has developed other topics, based on local interest and expertise.

## MANDATORY ACADEMIC CURRICULUM TOPICS

<b>Mandatory Academic Curriculum Topics 2018-2019</b>	
Abdominal Pain: Office Approach	Hyperlipidemia
Abnormal Uterine Bleeding	Hypertension
Abortion Care	Immigrants
Acne	Immunization
ADHD	Indigenous Health
Adolescent Health	Infertility
Allergies/Anaphylaxis	Inflammatory Bowel Disease
Anemia	Interactions with Pharmaceutical Representatives
Antimicrobial Stewardship	Ischemic Heart Disease
Anxiety	Low Back Pain, including red flags, yellow flags
Arrhythmia/Atrial Fibrillation	MAID
Arthritis: OA/RA/Gout	Menopause
Asthma	Motivational Interviewing
Boundary Issues	Neck and Shoulder Pain
Breastfeeding and Feeding of Infants	Obesity and Weight Loss
Cannabis	Occupational Medicine
Cerebrovascular Disease	Opioid Prescribing
Chronic Non-Malignant Pain	Osteoporosis
Congestive Heart Failure	Periodic Health Examination
Competency Assessment	Personality Disorders
Concussion	Poverty
Contraception	Prostate Disease
COPD	Post-Traumatic Stress Disorder
Dementia	Red Eye
Depression	Seizure Disorders
Diabetes	Sexually Transmitted Infections
Diarrhea	Skin Disorders
Dizziness	Smoking Cessation
Dyspepsia, GERD, Gastritis and Peptic Ulcer Disease	Substance Abuse
Ethics	Thyroid Disease
Evidence Based Medicine	Ulcers and Wound Care
Fatigue	Vaginitis
Gastrointestinal Bleed	Venous Thromboembolism
Headache	

## PORTFOLIOS

At the moment, the Dalhousie Residency does not require a formal learning portfolio. Evidence shows that reflection on clinical experience improves and deepens learning. We use the Bi-Annual Resident Performance Review (periodic review) to aid in this reflection. This process includes much of the data that would be in a portfolio. The Bi-annual Review involves resident reflection on their own, and with the Site Director, to develop individualized learning plans. Evidence shows that guided self-reflection is best at promoting growth. Residents may also choose to construct their own individualized learning portfolios. With this in mind, residents are encouraged to consider documenting their learning throughout the residency. Help and guidance are available for residents who are constructing a portfolio. Some of the portfolio can be documented through One45.

Examples of items that could be included in a portfolio:

- Procedures completed
- Conferences attended
- Seminars presented – with evaluations
- Clinical questions that have been researched
- Chronic problems managed
- Deliveries completed
- Pregnant women followed
- Learning plans
- Self, peer or observer assessments
- Chart notes
- Letters from patients
- Worksheets, checklists or logbooks of agreed upon activities
- Notes from meetings between the resident and his/ her teachers
- Samples of work demonstrating clinical competence
- Evidence of self-assessment and self-reflection
- Narratives describing personal experience and critical incidents
- Copies of summative evaluations.

## ASSESSMENT, EVALUATION and FEEDBACK

To ensure that residents are meeting curricular and program objectives, assessment of resident performance is conducted at regular intervals. The two main types of assessment are *formative* (providing timely feedback to help residents gauge their performance and take corrective action as necessary) and *summative* (ascertaining whether residents have met the stated objectives). The majority of assessment in the Dalhousie Family Medicine program is formative in nature.

Much formative feedback is delivered verbally during Clinical Learning Experiences (CLE). However, to help guide learning it is beneficial to document this feedback. In Family Medicine programs across the country, the documentation of feedback typically occurs on 'field notes.' These daily feedback forms, be in paper or electronic form, capture the output of the process of feedback that occurs between preceptor and resident.

Collected field notes provide evidence of competence that is used to inform the program of your progress. Data collected on field notes is often used to back up statements of performance on your In-Training Assessment Reports (ITARs) that are completed for each of your rotations.

The remainder of this section summarizes the components and is divided into the following:

- Policy on the Evaluation Process (p. xxx)
- Field Notes (p. xxx)
- Easy to Follow Instructions for Using Field Notes (p. xxx)
- Field Note Sample (p. xxx)
- Characteristics of a Good Field Note (p. xxx)
- Template for In-Training Assessment Process (p. xxx)
- In-Training Assessment Report (ITAR) for Family Medicine (p. xxx)
  - Selectivity (p. xxx)
  - Clinical Reasoning (p. xxx)
  - Professionalism (p. xxx)
  - Patient-Centered Approach (p. xxx)
  - Procedure Skills (p. xxx)
  - Communication Skills (p. xxx)
  - Overall Progress to Date (p. xxx)
- Bi-Annual Resident Performance Review Worksheet (p. xxx)

If you have any questions about evaluation and assessment during residency, feel free to contact your site evaluation coordinator or the chair of evaluation, Dr. Keith Wilson ([kwwilson@dal.ca](mailto:kwwilson@dal.ca)).

### Policy on the Evaluation Process

For a resident to successfully complete the program and have their name submitted to the College of Family Physicians of Canada (CFPC) all of the following documentation must be in order:

- An In-Training Assessment Report (ITAR) for each CLE successfully completed:
  - In our integrated sites, a Family Medicine ITAR will be completed every two months in the first four months of residency then every three months throughout residency. These ITARs are to be populated by data from field notes from core family medicine preceptors and the consultant preceptors that provide longitudinal CLEs for the residents at these sites.
  - For block-based sites, ITARs will be completed for each rotation. Core Family Medicine rotations will have a mid-point and final ITAR populated by data from field notes.

- Evaluation of Service (EOS), Learner Assessment of Family Medicine Preceptor as well as Resident Assessment of Consultant Faculty for all CLEs.
- The resident must demonstrate and document appropriate progress towards competence to enter unsupervised practice. This progress will be assessed by a detailed review bi-annually at a meeting between the resident and the Site Director (or Site Directors' designate). Field notes will be a key component of this process, as they provide written documentation of performance and feedback in the clinical environment.

**(For the complete Policy on the Evaluation Process see One45 Handouts and Links)**

You will receive email notifications for all clinical learning experience assessments (mid-term, final and half-day back)

To log onto the electronic evaluation system, follow these steps:

- Go to: [www.med.dal.ca](http://www.med.dal.ca)
- Click on: One45 Web Eval (left side menu)
- You will receive an e-mail with your username and password and instructions on how to access the system once an evaluation has been sent out for you.

**Evaluation of Service and Evaluation of Preceptor**

According to University regulations your feedback on the Service and on your preceptor is mandatory for each clinical learning experience (CLE) you complete. You will receive a notice and forms electronically through One45. We require **both** an evaluation of service and an evaluation of the supervisor(s).

**Field Notes**

Feedback and assessments are essential to your education. Feedback is most effective when it occurs immediately after an encounter, and with coaching. We suggest that you and your preceptor complete a **field note for each half day of clinical experience**. This will give you a wealth of information on how to practice effectively and will encourage reflection and deeper learning on your part. You will be given a (prescription sized) pad of these forms. You may be asked to complete a certain number of these field notes per rotation depending on your site. However it is most important to remember that the field note is simply **documentation of a process that is already taking place**: the feedback itself is the most important part.

In some sites this year, we are piloting electronic field notes. The same 'rules' apply in terms of expectations. If you are at a site that is piloting electronic field notes, please see the documentation provided at your site.

## EASY TO FOLLOW INSTRUCTIONS FOR USING FIELD NOTES

*This section explains the rationale for field notes as a method of evaluation, instructions for completing a field note and provides a sample field note.*

### What the process should deliver:

- During daily clinical work, encourage the gathering and documentation of case-specific comments and feedback with reflection and coaching from preceptors to residents.
- Consistency across the program, with properly documented feedback to stimulate improvement in competence:
  - based on performance through a wide spectrum of skills
  - linked to the CFPC Evaluation Objectives (key features and observable behaviours)
- A guide to teachers and learners, with evidence that competence is developing by:
  - helping inform ITARs, periodic reports, performance reviews, and resident's portfolio
  - acting as an aid memoir for periodic discussions on resident progress

### On the selected clinical sessions:

- Observe an encounter, part of an encounter or simply discuss the case with the resident as close to the time of the encounter as possible (preferably the same day).
- It is very important that both the preceptor and the resident are engaged in the discussion reflecting on the clinical situation. This requires face-to-face dialogue, with input from both partners during completion. Often it is helpful to have the resident do some or all of the writing of the field note, noting the demographic information, the problem/situation discussed, and the feedback given. This facilitates guided self-reflection.
- Indicate on the note if a direct observation has been involved. We encourage residents and faculty to use direct observation where ever possible as it can elicit more meaningful, directed feedback.
- Use the "Guide to the CFPC Evaluation Objectives" found on the field note pad to choose **one** phase of the encounter and **one** competency of **one** skill to be discussed. This encourages specific feedback to reinforce the take home message.
- The responsibility to initiate the discussion should be shared between faculty and resident.

### Important Background Information

Click here to go to the CFPC's Evaluation Objectives: <http://cfpc.ca/EvaluationObjectives/>

Or go to [www.cfpc.ca](http://www.cfpc.ca) and look under "For Teachers and Researchers" for the Evaluation Objectives and other tools.

### Feedback: To Be Shared, Specific and Focused

- Ensure the resident starts the discussion with their impressions.
- Together develop positive statements "**continue**" with shared "**suggestions for improvement**".
- Common reflection is an important part of the process and facilitates deeper learning.
- On selected occasions explore with the resident the pertinent Key Feature or Observable Behavior from the CFPC Evaluation Objectives.
- Reinforce the take home message/**coaching point**. It is recommended to stick with one pertinent and actionable point.

### Mid and End of Clinical Learning Experience

- Ensure direct observations/discussions have covered a variety of phases, skills and topics.

- Review your carbon copies of the field notes prior to or during assessment discussions and ITAR completion with the resident. Then return them to the site administrator for storage in the resident file.
- The resident keeps the other copy for their file/portfolio to be used in discussion with their primary preceptor and/or Site Director for the ongoing demonstration of their progress towards competency.

### Examples of Completed Field Notes:

**Procedure:** IUD Insertion; **Skill Dimension:** Procedural Skills; **Competency:** Informed Consent & Preparation; **Domains:** Office/Women's Health Care

**Continue:** Preceptor: "What do you think went well there? Resident: "I think the patient appreciated that I explained what was going to happen during the whole procedure."

**Suggestions for improvement:** Preceptor: "I usually try to plan for what I will need during the procedure and have it ready prior to starting."

**Follow up:** Preceptor: "Please always review our check list for IUD insertion while preparing for the procedure."

**Phase:** History; **Skill Dimension:** Communication; **Competency:** Non-Verbal; **Domain:** Office/Care of Adults

**Continue:** Resident: "As we discussed the last time I maintained good eye contact."

**Suggestions for improvement:** Preceptor: "I noticed you appeared to invade her personal space. If you try to stand back a little further it may improve your patient's comfort."

**Follow up:** Preceptor: "Perhaps we could video you this afternoon so you could see for yourself."

**Problem:** Ectopic Pregnancy; **Phase:** Investigation; **Skill Dimension:** Selectivity; **Competency:** Establishes Priorities; **Domain:** Emergency/Women's Health Care

**Continue:** Resident: "I identified the GYN/OBS history and the possibility of an ectopic pregnancy."

Preceptor: "Well done! It was great you used the key features for abdominal pain to help with this."

**Suggestions for improvement:** Preceptor: "Perhaps the next step is to understand the urgency for immediate further investigation and treatment and how to arrange for that in our community."

**Follow up:** Preceptor: "Tomorrow morning after rounds lets discuss how to best use the ER and X-ray in urgent situations."

**Problem:** Multiple Medical Problems; **Phase:** Management & Treatment; **Skill Dimension:** Clinical Reasoning; **Competency:** Set Goals/ Objectives; **Domain:** Office/Care of the Elderly

**Continue:** Resident: "I dealt with most of the problems she presented to me getting her flow sheets for diabetes and hypertension done."

**Suggestions for improvement:** Preceptor: "Thanks for going back when I noticed your description about her frequent falls was more limited than some of the notes on other less critical problems. With a patient like this I try to identify all the presenting problems early then put aside the less important today to deal properly with the more critical."

**Follow up:** Preceptor: "I think the Key Features on Multiple Medical Problems may help, please review them for discussion with me tomorrow morning."

## FIELD NOTE SAMPLE

### Guide To The CFPC Evaluation Objectives Phases Of The Clinical Encounter

A - History	D - Physical	G - Hypothesis
B - Diagnosis	E - Procedure	H - Investigation
C - Referral	F - Follow-Up	I - Management & Treatment

#### Selectivity

1. Appropriately Focused
2. Appropriately Thorough
3. Establishes Priorities
4. Urgent vs. Non-Urgent

#### Clinical Reasoning

5. Hypotheses / Diff. Dx
6. Gather Data (Hx & Px)
7. Interpret Data
8. Make Decisions
9. Set Goals/Objectives

#### Professionalism

10. Responsible/Reliable/  
Trustworthy
11. Knows Limits
12. Flexible / Resourceful
13. Evokes Confidence
14. Caring / Compassionate
15. Respect/Boundaries/  
Availability
16. Collegial
17. Ethical / Honest
18. Evidence Influence
19. Community Responsive
20. Good Balance
21. Mindful Approach

#### Patient Centered Approach

22. Explores Disease and Illness  
(Feelings, Ideas, Function &  
Expectations)
23. Whole Person/Context
24. Common Ground
25. Builds Relationship
26. Health Promotion / Prevention
27. Being Realistic

#### Procedure Skills

28. Decision to Act
29. Informed Consent &  
Preparation
30. During Procedure  
(Comfort/Safety)
31. Technical Skills
32. If Problems: Reevaluate
33. After Care / Follow-Up

#### Communication with both Colleagues and Patients

34. Listening Skills
- Language Skills
  35. Verbal
  36. Written
  37. Charting
- Non-Verbal Skills
  38. Expressive
  39. Receptive
40. Culture and Age  
Appropriateness
41. Attitudinal

## Domains of Care

Location of Care	Lifecycle
a. Office b. Emergency c. Hospital d. Home e. Long Term Care f. Community	g. Palliative Care h. Men's Health Care i. Women's Health Care j. Care of Adults k. Care of the Elderly l. Care of Children and Adolescents m. Maternal and Newborn Care

## **CHARTACTERISTICS OF A GOOD FIELD NOTE**

### **Purposes of a Field Note:**

1. For the Learner: support further development
2. For the Clinical and Academic Coach: provide evidence to support assessment, judgement around competency development and a prescription for future growth
3. For the Program: document the learners' path to support program summative decisions concerning program extension, enrichment, completion or termination

### **Principles:**

1. Field Notes do not replace feedback\*, they only document it.
2. In general terms, there are parts of clinical encounters that require thinking/problem solving (higher order skills\*\*) beyond basic knowledge. Focusing on these areas better support competency development and assessments.
3. Not all Field Notes require direct observation of the patient encounter but all Field Notes do require direct involvement and reflective discussion with the resident. Think broadly for sources of feedback and Field Notes... i.e. a Field Note could be based on their clinical reasoning following a discussion and/or chart review, witnessing their collaboration with AHC, professional behaviours, leadership skills, etc.
4. Competency-based assessment requires looking for patterns of performance and trajectory. If there is a previously identified area needing improvement, follow up on this is essential to ensure that improvement/growth has occurred.
5. Field Notes alone are not sufficient to ascertain competence. They must be part of an assessment system that collates, summarizes and interprets the data to make decisions. As such they should cover a broad range of identified desired competencies, pick up on past performance to follow trajectory and be numerous enough to provide a high-resolution picture of competency.

### **Characteristics of a Good Field Note:**

- Has a date (for trajectory)
- Identifies a topic and a competency
- Is behaviourally specific and uses clear unambiguous language
- Is detailed enough to paint a picture of the performance being commented on
- Is focussed on the individual (not a comparator to others)
- Is focussed on a manageable amount of information
- Is focused on higher order skills
- Includes an application of the assessment standards\*\*\*
- Has a judgement about the performance
- Identifies things to continue doing, things for further growth
- Promotes reflection

\*The characteristics of good feedback include:

- a) Ensuring the discussion is timely (at least the same day)
- b) Ensuring it is frequent (at least daily)
- c) Being specific and commenting on behaviours, not intentions or personal attributes
- d) Having reflective discussions that focus on challenging/discerning case characteristics
- e) Stimulating learning through making a judgement and documenting and discussing pertinent coaching points with each case
- f) Focusing on one take-home message each for the behaviours to continue and the behaviours to modify
- g) Making judgements based on standards, not comparators to others
- h) Using the CFPC Evaluation Objectives to help identify key messages

\*\* Higher Order Skills: Consider focusing on:

- a) History vs Physical Exam

- b) Diagnosis vs Treatment—(although higher order skills could go into treatment decisions if the focus is on patient centeredness and/or acuity rather than just knowledge)
- c) Data gathering vs Data interpretation

**TEMPLATE FOR IN-TRAINING ASSESSMENT PROCESS**

DALHOUSIE FAMILY MEDICINE'S TEMPLATE FOR IN-TRAINING ASSESSMENT PROCESS			
ITA TASKS / STEPS	DESCRIPTION	LEARNER ROLES	WHO DOES WHAT? LEARNER IN PARTNERSHIP WITH FACULTY/PRECEPTORS/ADMINISTRATORS/PATIENTS/ALLIED HEALTH CARE PARTNERS
<ul style="list-style-type: none"> <li>During daily clinical activities</li> <li>❖ Observe performances</li> <li>❖ Provide feedback</li> <li>❖ Document</li> </ul>	<ul style="list-style-type: none"> <li>Field notes</li> <li>End of shift clinical assessment</li> <li>Patient feedback forms</li> </ul>	<p>The learner will:</p> <ul style="list-style-type: none"> <li>❖ Seek opportunities to be observed</li> <li>❖ Seek feedback</li> <li>❖ Participate in a process of reflective learning with documentation</li> </ul>	<p>Assessors in partnership with residents:</p> <ul style="list-style-type: none"> <li>❖ Seek opportunities to observe performances</li> <li>❖ Provide feedback</li> <li>❖ Participate in reflection of the resident's clinical practice with documentation</li> </ul>
<ul style="list-style-type: none"> <li>Collect and organize documentation within a framework</li> <li>❖ Daily field notes</li> <li>❖ Other performance assessments</li> </ul>	<p>Portfolio and/or file collection of evidence</p>	<p>The learners will organize documented observations according to:</p> <ul style="list-style-type: none"> <li>❖ Learner's needs</li> <li>❖ Objectives</li> <li>❖ Program requirements</li> </ul>	<p>Administrative staff compiles and organizes the residents file with all relevant data for review twice annually with the Site Director or their designate.</p> <p>One copy of the field note is retained by faculty for use in completing the ITAR and after given to site administrative staff for placement on the permanent file.</p>
<ul style="list-style-type: none"> <li>Periodic assessment of progress based on organized documentation</li> </ul>	<p>Guided review and assessment</p>	<p>In order to systematically develop competence in comprehensive full scope family medicine the resident:</p> <ul style="list-style-type: none"> <li>❖ Will use the CFPC Evaluation Objectives</li> <li>❖ Provides self-assessment</li> <li>❖ Participates in process of guided self-assessment</li> </ul>	<p>All family medicine faculty will use the CFPC Evaluation Objectives to identify and assess the competencies necessary for the individual learner's future practice of comprehensive full scope family medicine.</p> <p>All faculty will provide the resident with assessment (ITAR) in-part populated with comments from field notes.</p> <p>Site Director or designate to review progress towards competence with the resident providing feedback and discussion with reflection to determine if the curriculum requires modification (twice annually).</p>

Review and update learning plans	Who takes action – what action is required	To describe the competencies necessary for their future practice each resident will actively participate in developing an appropriate series of learning plans throughout their residency by periodically: <ul style="list-style-type: none"> <li>❖ Reflecting on learning needs</li> <li>❖ Future career plans</li> <li>❖ Personal objectives</li> <li>❖ Community needs</li> </ul>	Primary Preceptor meets with the resident twice annually to review their progress specific to Family Medicine and establish their learning objectives with a learning plan. The Site Director and or Designate reviews with the resident twice annually to review their overall progress and establish their learning objectives with a learning plan
Adjust and adapt learning activities	Identifying resources Modifying curriculum Identifying target goals Modify/customize assessment <ul style="list-style-type: none"> <li>❖ Formative and summative</li> <li>❖ Frequency and/or type of periodic assessment</li> </ul>	Become actively involved in implementing the adapted learning experiences needed to achieve the competencies required for their future practice. Collaborate with Faculty: <ul style="list-style-type: none"> <li>❖ To identify personal goals for development and/or remediation</li> <li>❖ To identify needed resources</li> <li>❖ Modifying the curriculum</li> <li>❖ Customize the assessment</li> </ul>	Primary Preceptor and/or the Site Director and/or the Program Director works with the resident to establish target goals. They will identify appropriate resources with the needed modification of the curriculum. As appropriate the formative and summative assessment will be customised with a customized reporting system.
Reporting	With learner/resident to clarify plans Back to daily clinical supervisors Progress report to appropriate administrators/faculty Documentation for accreditation	Take ownership with reporting of the learning plan through: <ul style="list-style-type: none"> <li>❖ Discussion and documentation for implementation with appropriate faculty</li> <li>❖ Establish and document the necessary learning experiences to achieve the required competencies.</li> </ul>	The Primary Preceptor and/or the Site Director or their designate ensures: <ul style="list-style-type: none"> <li>❖ Both the resident and faculty have responded to the learning needs with appropriate documentation.</li> <li>❖ Progress reports are placed in resident's file by administrators.</li> </ul> Resident's file will be a permanent record for review.

## **IN-TRAINING ASSESSMENT REPORT (ITAR) for FAMILY MEDICINE**

The purpose of the in-training assessment report is to provide clear documentation of the resident's progress towards competence in the six essential family medicine skills. Each skill is defined. Please add specific comments about resident performance to outline where the resident has achieved competence, where they are progressing satisfactorily, areas to focus on for future development and any concerns. Please provide examples from field notes that support your narrative.

In order to document satisfactory progress, all six skill dimensions should be assessed in a **sampling** of the following content of comprehensive family medicine.

### **PGY1 - with readily available supervision**

### **PGY2 - independently with back up**

- Care of Children
  - Newborn care
  - Evidence based health promotion and prevention from infant to child
  - Acute illness in infants
  - Acute illness in school age children
  - Chronic illness
- Care of Adolescents
  - Evidence based health promotion and prevention
  - Issues around sexuality and reproductive health
  - Assessment of substance use/abuse
  - Social problems
  - Psychological/psychiatric problems
  - Suicide risk
  - Chronic illness (e.g. diabetes, asthma, IBD)
- Care of Adults
  - Evidence based health promotion and prevention
  - Chronic disease care (e.g. diabetes, CVD, arthritis, COPD etc.)
  - Complex patients with multiple diseases
  - Benign self-limited illnesses
  - Undifferentiated problems
  - Acute serious illness in ambulatory setting
  - Acute illness needing urgent care or hospitalization
  - Care of hospitalized patients
  - Behavioral Medicine
  - Life stages and transitions
  - Cancer care
  - Palliative care
  - Care of Women including Maternity Care
  - Care of Men
  - Emergency Medicine
  - Care of Underserved populations
  - Care of the Elderly
- Uncommon but serious and treatable conditions (red flags)
- Therapeutics
- Procedure Skills
- In order to be considered to be competent, at the end of residency the resident should demonstrate the ability to practice in all of the above areas.

## Selectivity

### *Definition*

Residents who demonstrate selectivity are able to set priorities, focus on what is most important and avoid a routine or stereotypical approach (such as a medical student might use). They are selective and adapt to the situation and the patient. They gather the most useful information without losing time on less contributory data; however they will explore a problem in detail when needed. They can distinguish urgent and non-urgent conditions and act appropriately for each.

Describe aspects of competence achieved in SELECTIVITY and developing competence including examples from field notes

Date: non-modifiable after submission

Date: next assessment and again non-modifiable after submission

Date: etc.

Describe areas for focus and further development in SELECTIVITY including examples from field notes

Date: non-modifiable after submission

Date: next assessment and again non-modifiable after submission

Date: etc.

- Progress as expected. No concerns.
- Some concerns about progress. A plan has been established between the resident and the preceptor and will be implemented and assessed through ongoing clinical exposure
- Significant concerns about progress – site level or program level remediation plan required. May need program support

## Clinical Reasoning

### *Definition*

Residents who demonstrate good clinical reasoning gather **the right information at the right time** and **interpret and synthesize** the information systematically. They consistently consider common and red flag conditions and organize their thinking to come to a reasonable problem list with short and long term management plans. They make appropriate decisions and set appropriate goals.

Describe aspects of competence achieved in CLINICAL REASONING and developing competence including examples from field notes

Date: non-modifiable after submission

Date: next assessment and again non-modifiable after submission

Date: etc.

Describe areas for focus and further development in CLINICAL REASONING including examples from field notes

- Progress as expected. No concerns.
- Some concerns about progress. A plan has been established between the resident and the preceptor and will be implemented and assessed through ongoing clinical exposure.
- Significant concerns about progress – site level or program level remediation plan required. May need program support

## Professionalism

### *Definition*

Professionalism means reliability, trustworthiness, respect and responsibility to patients, to colleagues, to oneself, to the profession, and to society at large; it deals with honesty, ethical issues, lifelong learning and the maintenance of the quality of care. Important attitudinal aspects such as caring and compassion fall under professionalism. It includes knowing and expanding one's limits of competence, dealing with uncertainty in a clinically appropriate and patient-centered manner and the ability to evoke confidence without arrogance. Professionalism implies attention to boundaries, commitment to patient wellbeing, respect for patients' culture and values (e.g. appropriate personal appearance) and willingness to assess one's own performance. It includes a commitment to reflective practice, evidence based medicine and learning from colleagues and patients as well as a commitment to personal health and seeking balance between personal life and professional responsibilities. The ability to behave professionally and collegially in difficult situations is essential. Professionalism means doing the right thing even when no one else may ever know.

Describe aspects of competence achieved in PROFESSIONALISM and developing competence including examples from field notes

Date: non-modifiable after submission

Date: next assessment and again non-modifiable after submission

Date: etc.

Describe areas for focus and further development in PROFESSIONALISM including examples from field notes

Date: non-modifiable after submission

- Progress as expected. No concerns.
- Some concerns about progress. A plan has been established between the resident and the preceptor and will be implemented and assessed through ongoing clinical exposure.
- Significant concerns about progress – site level or program level remediation plan required. May need program support.

## Patient-Centered Approach

### *Definition*

Residents who are patient centred demonstrate exploration of both the disease and the patient's personal experience of illness (e.g. FIFE). They show an active interest in their patients, and over time are able to describe important details of their lives. They work to enhance the relationship and gather day-to-day contextual information that will help guide them in making appropriate decisions with their patients. They work with their patients to come to agreement on the problems, the priorities, the goals and approach to management. They regularly address prevention and health promotion in clinical encounters. They manage time and resources effectively.

Describe aspects of competence achieved in PATIENT CENTERED APPROACH and developing competence including examples from field notes

Date: non-modifiable after submission

Date: next assessment and again non-modifiable after submission

Date: etc.

Describe areas for focus and further development in PATIENT CENTERED APPROACH including examples from field notes

Date: non-modifiable after submission

Date: next assessment and again non-modifiable after submission

Date: etc.

- Progress as expected. No concerns.
- Some concerns about progress. A plan has been established between the resident and the preceptor and will be implemented and assessed through ongoing clinical exposure.
- Significant concerns about progress – site level or program level remediation plan required. May need program support.

## Procedure Skills

### *Definition*

Residents who have an effective approach to procedures can decide if it is appropriate for them to do this procedure on this patient on this day. They prepare thoroughly for the procedure, including patient consent. They attend to the patient's comfort and safety throughout the procedure. If difficulties arise, they demonstrate the ability to re-evaluate and stop or seek assistance. They organize appropriate after care and follow up. They demonstrate appropriate technical skills.

Please review the Procedural Skills Log for this resident by clicking on the link below prior completing this section of the evaluation.

- Some concerns about progress. A plan has been established between the resident and the preceptor and will be implemented and assessed through ongoing clinical exposure.
- Significant concerns about progress – site level or program level remediation plan required. May need program support.

## Communication Skills

### With Members of the Health Care Team (Colleagues)

#### *Definition*

Residents who communicate well with colleagues take enough time and demonstrate the ability to listen so they truly understand their colleague's point of view. They are able to communicate accurately and clearly, both verbally (face to face, over the phone, etc.) and in writing (e.g. chart notes, consult letters, orders, prescriptions etc.). They display effective non-verbal skills, including attention to their own body language, responding to body language of a colleague, tone of voice, etc. They demonstrate respect for the opinions, values and ideas of their colleagues.

Date: etc.

- Progress as expected. No concerns.
- Some concerns about progress. A plan has been established between the resident and the preceptor and will be implemented and assessed through ongoing clinical exposure
- Significant concerns about progress – site level or program level remediation plan required. May need program support.

## Communication Skills

### With Patients

#### *Definition*

Residents who communicate well with patients demonstrate the ability to listen so that they truly understand the patient's needs. They are able to communicate clearly both verbally and in writing (e.g. letters, instructions). They display effective non-verbal skills, including attention to their own body language, responding to the body language of a patient, use of silence, etc. Their communication is appropriate to the culture and age of the patient. They demonstrate a respectful, caring and compassionate attitude.

Describe aspects of competence achieved in COMMUNICATION SKILLS with patients and developing competence including examples from field notes

Date: non-modifiable after submission

Date: next assessment and again non-modifiable after submission

Date: etc.

Describe areas for focus and further development in COMMUNICATION SKILLS including examples from field notes

## BI-ANNUAL RESIDENT PERFORMANCE REVIEW WORKSHEET

- The sections assigned to the resident **MUST** be completed and submitted three weeks prior to meeting with the Site Director or designate.
- The sections assigned to the administrator are expected to be completed upon receipt of the resident's submission and prior to the scheduled meeting between the resident and the Site Director or designate.
- The sections assigned to the Site Director or designate are expected to be completed at the time of the scheduled meeting with the resident.
- The bi-annual reviews are a great opportunity for you to define your short and long term personal learning objectives. The more thought you put into the process, the more you stand to gain from it! Please note that we are streamlining this process and that the following data points may change during your residency (although the timelines will remain the same)
- Additionally, during this upcoming year, we are implementing the use of "benchmarks" during your bi-annual review process. These benchmarks are used to ensure that you are meeting certain broad competencies at the right point in your training. You will be receiving more information on this process and rubric in the ensuing months.

# Resident Project Guide

## Department of Family Medicine

### Introduction

*"A strong research base is as fundamental to general practice, as to any academic discipline. Research and education are not different kinds of academic activity but complementary, the two sides of one coin. Research is organized curiosity. Curiosity involves asking questions; if others do not know the answers, research is needed. Education in which the answers are not based on research is indoctrination; research in which questions are not based on need is prevarication. The advance of general practice as an academic discipline depends on our ability to integrate research and education in the pursuit of excellence in clinical care."*

*Charles Bridge-Webb*

*Adapted from the George McQuitty Memorial Lecture, University of Calgary, 1982, Can Fam Physician 1983, Vol. 29:52*

The objectives for research in Family Medicine are detailed by the College of Family Physicians of Canada. The project promotes the attainment of four CanMeds roles: health advocate, medical expert, scholar and communicator.

All residents are required to complete a resident project as part of their residency program requirements. The resident project is an academic/scholarly one that **must** meet the standards described in this guide and **must** be completed successfully in order to fulfill the requirements of the residency training program.

The purpose of the resident project is to provide an opportunity for the resident to explore an area of personal interest in a scholarly manner. With guidance provided by their supervisor, the process involves finding answers to questions commonly encountered in primary care by critically reviewing the available literature. Where such answers are found lacking, the resident may choose to employ an appropriate methodology to design a study using proper scientific rigor to answer that question. By contributing to this scholarly activity, there is an opportunity for residents to positively impact primary care and the wider community.

There **is no requirement to conduct a research study**; however, it is hoped that the resident project will provide the resident with the opportunity to develop or practice primary care research skills. For those with more in-depth research interests, primary care research electives are available and inquiries should go to the Site Director.

#### **Goal:**

- To contribute to the understanding and/or effectiveness of Family Practice.

#### **Purpose:**

- To develop skills that the resident can use in order to be a resource to a family practice;
- To provide an evaluation of these skills for the resident transcript.

#### **Objectives:**

- To ask a question relevant to Family Medicine;
- To develop a way of answering the question, using appropriate resources and time lines;
- To write up the project and present it orally prior to completion of the residency.

#### **Project Goals:**

- To develop skills in asking and answering questions that are important and relevant to the discipline of Family Medicine;
- To stimulate creative and original thought based on questions encountered in practice;
- To practice the fundamentals of evidence-based care or other critical inquiry;
- To be able to communicate the results clearly to colleagues;
- To promote an interest in Family Medicine research.

#### **Expectations:**

The resident project must be aimed at answering a question in the field of Family Medicine. It can be in the form of a research

project, a practice quality improvement project, a position paper, educational tool, or a literature appraisal. The resident is expected to choose an area of interest to Family Medicine, propose a question, review the literature, and design a method of answering that question.

Family Medicine and Family Practice includes enhanced areas of expertise achieved and maintained by some family physicians, such as those recognized by the College of Family Physicians of Canada as Certificates of Added Competence (CACs). Approved CAC domains of care in Family Medicine include Care of the Elderly, Emergency Medicine, Family Practice Anesthesia, Palliative Care, Sport and Exercise Medicine, Addiction Medicine and Enhanced Surgical Skills.

PGY2 residents are expected to submit a written paper and give an oral presentation of their findings to their colleagues and faculty members at the **Resident Project Presentation Day** held at their Site Project Presentation event. The written documents will be graded and an award will be presented to the author(s) of the project judged to be the most outstanding. In addition, in some sites, PGY1 residents are expected to give a 10 minute presentation discussing the progress of their projects. Completed resident projects will be stored and available to review for internal use by residents and faculty.

#### **Ethics Issues:**

All residents who engage in research involving human beings require a full or an expedited ethics review by a research ethics board (REB). This applies also to research considered “minimal risk,” for example the examination of patient charts, patient/resident/physician surveys, etc. The resident should discuss this with the Project Coordinator. *If possible, it is advised that residents should consult with the Chair of the local Research Ethics Board (REB) regarding requirements for REB applications. If REB approval is necessary, it must be ensured that all requirements of the local REB are met for the resident project.*

#### **Multiple Authors “Author Contribution”:**

When a resident project involves multiple authors (colleague resident or others), each author must outline, in a section entitled “Author Contribution”, their individual contribution to the project. It is expected that each individual author’s contribution be substantial and that they review and approve of the final text.

#### **Type of Projects:**

##### 1. Research Project

This involves the posing of a question, reviewing the literature, selecting the methods needed to answer the research question, collecting original data, conducting the data analysis, and reporting the findings

Residents are encouraged to engage in original research. It is important for residents to be aware that research projects require more steps to complete than other types of projects and therefore may take longer to complete. Most research projects require approval by the local Research Ethics Board. Residents are advised to speak with their Project Coordinator about the need for ethical approval for their project.

##### 2. Practice Quality Improvement Project/Audit

This involves identifying a practice-based question, finding evidence-based guidelines/recommendations to guide the approach to clinical care with respect to the question, constructing an audit tool, auditing charts, and reporting the results along with recommendations.

##### 3. Position Paper/Essay

This involves an extensive treatise on a topic of importance to Family Medicine. Topics can also relate to a broad range of pertinent issues such as the history of medicine, medical philosophy, medical education, politics, etc. The report must include critically appraised evidence to support the argument being presented.

##### 4. Educational Tool

This involves developing a tool or resource useful for the education of physicians, other health care workers, patients or the public. The educational tool needs to be accompanied by a description of how the topic was selected, a literature review and the reason for the need of the tool.

##### 5. Literature Appraisal/EBM Review

This involves a detailed review of the literature on a specific topic pertinent to Family Medicine. Original research papers should be reviewed and appraised using critical appraisal skills.

### **Project Coordinator**

Each site has a Project Coordinator, whose role it is to discuss the project format and requirements with the resident on a regular basis and encourage the resident to adhere to the deadlines. In some cases the Project Coordinator may also be the Project Supervisor.

### **Project Supervisor**

Each resident must choose a Project Supervisor (or Project Supervisors) to counsel them on the content of their project. The Project Supervisor(s) may be a clinical supervisor, another family physician, a consultant or another appropriate individual with qualifications appropriate for the selected resident's project topic. If someone other than a family physician is selected, it is important to obtain advice on the relevance of the project to Family Medicine from the Project Coordinator.

### **Budget**

There are funds in each site's budget to cover some resident project expenses at that site. Each resident is allowed \$50 for minor expenses, but it is also possible to apply for more funding. This issue should be discussed with the Project Coordinator at the appropriate site. For amounts over \$50, a written budget must be submitted to the Project Coordinator at the appropriate site. All receipts must be submitted and expenses will be reimbursed. If funds are needed in advance, a written request can be submitted and receipts submitted at a later date.

### **Minimum Time Commitment (*please note timelines and conditions may vary from site to site*):**

Residents should expect to commit at least **40 hours of work** to their project. The program **may** allow the resident to use some independent learning time to work on their project, however; the amount of time permitted depends largely on the nature and scope of the project and therefore residents will need to discuss this with either the Project Coordinator or Project Supervisor. Time away from half-days back and academic half-days is not generally permitted.

### **Project Format**

Although projects can be presented in different formats (art-work/handbooks/DVD, etc.) the project paper should be a minimum of 2500 words and a maximum of 4000 words, double spaced, 12 font, excluding tables and references, and cannot exceed 10MB. The format of the written work should follow a scientific lay-out: *Abstract, Introduction, Background, Study Design/Method, Results, Discussion, Conclusion and Limitations*. Alternatives for the word count and format will be considered for special circumstances, and must be approved by the Project Coordinator.

### **Project Cover Page**

Make sure that you add a cover page to your project. The cover page must include the following:

1. name
2. title of project
3. site
4. name of project supervisor
5. type of project (research, literature review etc)
6. date

### **Plagiarism**

Plagiarism is a serious academic offence and can lead to expulsion. Please see the Dalhousie University website on plagiarism.

[http://www.dal.ca/dept/university\\_secretariat/academic-integrity/plagiarism-cheating.html](http://www.dal.ca/dept/university_secretariat/academic-integrity/plagiarism-cheating.html)

## Timelines:

### PGY1 year:

- ❖ The resident must discuss the project topic with the Project Coordinator.
- ❖ The resident will select and discuss the content of the project with their Project Coordinator (and Project Supervisor if applicable) by the end of the three-month PGY1 Family Medicine clinical learning experience, but no later than the **1<sup>st</sup> Tuesday in November**.
- ❖ The resident will develop a 2-3 page project proposal that they will submit to their Project Supervisor and their Project Coordinator. This proposal will state their research question/objective, a brief background literature, the type of project and the methodology they will use to answer the research question.
- ❖ Residents must have their PGY1 *Resident Project Proposal Form* (Form I) initiated and submitted via One45 by the **1<sup>st</sup> Tuesday in November** for their Project Coordinator to review/approve.
- ❖ Residents are required to distribute via One45 a *Project Supervisor Agreement Form* (Form II), which must be completed/signed by their Project Supervisor and submitted via One45 by the **1<sup>st</sup> Tuesday in December** for their Project Coordinator to review.
- ❖ Residents whose projects are research projects, must apply for approval through their local Research Ethics Board (REB). It should be noted that this can at times be a lengthy process, and residents must plan accordingly in order to allow sufficient time for punctual project completion.
- ❖ If necessary, the resident should write out a budget, and submit it to their Project Coordinator. (see below for budget guidelines)
- ❖ At some sites, PGY1 residents are required to present their proposal in a 10 minute oral format during their site's Resident Project Presentation Day (usually held in May), or at another venue, as determined by their site. PGY1 residents are to confirm details with their Project Coordinator.

### PGY2 year:

- ❖ The resident will review their project progress and distribute the *Project Progress Report* (Form III) via One45 to their Project Supervisor. This form is to be submitted by their supervisor via One45 no later than the **1<sup>st</sup> Tuesday of September**. The progress report will be reviewed by the Project Coordinator.
- ❖ Once the project is complete, the resident will distribute the *Resident Project Final Approval for Assessment Form* (Form IV) to their supervisor via One45 no later than the **1<sup>st</sup> Monday of January**. It will be approved by their Project Supervisor as being ready to be sent out for assessment. Project Coordinators will review these forms.
- ❖ The Final Project must be submitted to the resident's site designate (named by each site), and from there forwarded to the Education Committee Secretary ([fmcommittees@dal.ca](mailto:fmcommittees@dal.ca)) as a **single PDF document** by the **2<sup>nd</sup> Monday in February**. The PDF document must not exceed a file size of 10MB, and must be formatted in such a way as can easily be emailed and opened by project reviewers. The Education Committee Secretary will send the project to a project reviewer for assessment.
- ❖ A PowerPoint slide presentation of the resident project must be completed and submitted to the residents' site designate by the **1<sup>st</sup> Monday of May** of their PGY2 year.
- ❖ PGY2 residents will present their projects orally during their Site Project Presentation event.
- ❖ If a resident is concluding the program four months or more beyond the usual program end-date, submission of the written project can be deferred to 2 months before their concluding date, and an oral presentation will be arranged separately.

See the attached worksheet for timeline summaries. Please note that these deadlines may be modified if the nature of the project is such that data collection or analysis cannot be completed by the required dates. In that case, the resident must discuss the new timelines in advance with the Project Coordinator and new timelines will be formally established.

## Project Assessment

Completed resident projects should be forwarded by the site's designate (identified by each site) to the Department of Family Medicine Education Committee Secretary ([fmcommittees@dal.ca](mailto:fmcommittees@dal.ca)) as a single PDF file by the **2nd Monday in February**. The PDF document must be no larger than 10MB, and be formatted in such a way as can be easily emailed to and opened by project reviewers.

The Medical Education Committee Secretary will forward the completed resident projects to appropriate reviewers. Project reviewers are expected to complete their review within 4 to 6 weeks of accepting a project for review.

Late submissions may take longer to complete, and may result in a delay in program completion. Residents are strongly discouraged from submitting their project after the deadline.

A resident project must be deemed "Acceptable" or higher for the resident to successfully complete the residency program requirements.

If a project is assessed as "Requiring Revisions," the resident and the Project Supervisor and/or Project Coordinator will be informed by the Education Committee Secretary. The revised project will be sent to the Education Committee Secretary in a single PDF document that is no larger than 10MG and that has been formatted in such a way as can easily be emailed and opened by the project reviewer. The Education Committee Secretary will then forward it to the original project reviewer. If, after a second revision, the project is still deemed "Requiring Revisions" by the original reviewer, a second reviewer may be invited to review the project.

## Late Projects

Residents who miss the final project submission date may face a delay in receiving their letter of program completion. Hence, residents are encouraged to submit their final project by the appropriate deadline.

## Non-compliance

Non-compliance with the designated deadlines may result in the inclusion of a professional misconduct note in the resident file.

## Awards/Presentations

Projects receiving marks in the "outstanding" range, and some others receiving marks in the "highly acceptable" range may be considered for a variety of award nominations, including:

1. Dalhousie University Family Medicine: The *Dr. Doug Mulholland Award* for the best non-research and non-practice audit *resident project*. The projects are judged on originality, relevance to family medicine and critical thinking.
2. Dalhousie University Family Medicine: The *Dr. R. Wayne Putnam Award* for the best research or practice audit *resident project*.
3. Award competitions:
  - a. Faculty of Medicine Research Award Competition: up to three projects are nominated from the Department of Family Medicine
  - b. College of Family Physicians of Canada *research awards* for Family Medicine Residents: Up to one project is nominated from the Dalhousie University Department of Family Medicine
  - c. The College of Family Physicians of Canada *scholarly activity* award. Up to one project is nominated from the Dalhousie University Department of Family Medicine. This award aims to recognize outstanding family medicine scholarship performed by a resident.

## Resident Project Repository

A selection of completed and acceptable resident projects may be posted on Dalhousie University's Postgraduate Family Medicine Brightspace Page (under Resident Resources) for 2 years. This is to provide ideas and to serve as project examples for current Family Medicine Residents.

Questions regarding resident projects may be directed to:

Dr. Laura Sadler, Chair, Resident Project Sub-Committee  
Phone: 902-473-4700 ; Fax 902-473-8548  
E-mail: [LSadler@dal.ca](mailto:LSadler@dal.ca)

## Worksheet and Dates for Completion of Resident Project

### PGY1

Form	Task	Timelines	Dates No later than...	Task Complete
	Meet with Project Coordinator to begin formulating a type of project	July-September	suggested by early September	
	Select Project Supervisor	July-October	Suggested by early October	
	Begin conducting literature review	September-December		
<b>Project Proposal (Form I)</b>	<p>Residents must initiate and complete Form I (Resident Project Proposal) for Project Coordinators to review.</p> <p>A 2-3 page project proposal must be submitted to their Project Coordinator (and Project Supervisor if applicable).</p> <p>Residents are responsible for ensuring the form is completed in a timely manner, in compliance with deadlines.</p>		<b>1<sup>st</sup> Tuesday in November of the resident's PGY1 year</b>	
<b>Project Supervisor Agreement Form (Form II)</b>	<p>Residents are responsible for initiating Form II (Project Supervisor Agreement Form), to be completed and submitted by their project supervisor.</p> <p>Residents are responsible for ensuring the form is completed in a timely manner, in compliance with deadlines.</p>		<b>1<sup>st</sup> Tuesday in December of the resident's PGY1 year</b>	
	If the resident project is a research project, the resident must apply to their local Research Ethics Committee for approval. (NOTE: <i>This may be a lengthy process and residents must plan accordingly</i> )	September-February		
	At some sites, Proposal Presentation Day (10 minute presentation)		<b>Usually in May – date to be determined by each site</b>	

## Worksheet and Dates for Completion of Resident Project

### PGY2

	Education Committee Secretary will distribute projects for assessment	as received		
	PGY2 residents will present their projects orally during their Site Project Presentation event.		<b>Usually in May – date to be determined by each site</b>	

\* indicates a mandatory response

### Form-I: Resident Project Proposal

All family medicine residents are required to complete a resident project as part of their residency program requirements. The purpose of the resident project is to introduce the resident to the process of finding answers to questions commonly encountered in primary care.

Residents are expected to submit a written paper and give an oral presentation at their site's project presentation event in their final year of residency.

Types of Projects:

- Literature Appraisal/EBM Review
- Position Paper/Essay
- Educational Tool
- Practice Quality Improvement Project/Audit
- Research Project

Please submit this one45 form no later than the first Tuesday in November of your PGY1 year.

\*Proposed project supervisor's full name:

\*Project supervisor's email address:

Proposed co-supervisor(s) full name:

Proposed co-supervisor(s) email address:

\*Working Title of Resident Project:

\*Type of project:

- Research
- Educational Tool
- Literature Appraisal/EBM Review
- Position Paper/Essay
- Practice Quality Improvement/Audit
- other (if "other" please elaborate in the comment box below.)

Comment section, if "other" was selected:

\*Brief description:

\*Brief timeline:

Resident's comments for project coordinator(s):

Research Ethics Board (REB) Application Status:

	n/a	No	Yes
*Will this project require REB approval?			

If "No." please explain why:

\* indicates a mandatory response

**Form-II: Project Supervisor Agreement.**

**Please submit this one45 form no later than the first Tuesday in December of the PGY1 year.**

**Project Supervisor:**

All residents should have a Project Supervisor and a Project Coordinator.

The Project Supervisor will counsel the resident on the content of the project. The Project Supervisor may be a clinical supervisor in the home base Family Medicine Unit, another family physician, a consultant or another appropriate individual. If someone other than a family physician is selected, it is important to obtain advice on the relevance of the project to Family Medicine from the Project Coordinator.

The Project Coordinator will discuss the project format and requirements with the resident on a regular basis and encourage the resident to adhere to the deadlines. In some cases the Project Coordinator may also be the Project Supervisor.

\*I have agreed to be the Project Supervisor for this resident's project:

No

Yes

\*Project Supervisor's full name:

Proposed co-supervisor(s) full name, if applicable:

\*Are you, or one of the committee members for this resident project, a faculty member of Dalhousie's Department of Family Medicine?

No

Yes

\*Type of project:

Research

Educational Tool

Literature Appraisal/EBM Review

Position Paper/Essay

Practice Quality Improvement/Audit

other (if "other" please elaborate in the comment box below.)

Comment section, if "other" was selected:

**Research Ethics Board (REB) Application Status:**

	n/a	No	Yes
*Will this project require REB approval?			

If "No," please explain why:

\* indicates a mandatory response

### Form-III: Project Progress Report

**Please submit this one45 form no later than the first Tuesday in September of the PGY2 year.**

\*Project title:

\*Type of project:

- Research
- Educational Tool
- Literature Appraisal/EBM Review
- Position Paper/Essay
- Practice Quality Improvement/Audit
- other (if "other" please elaborate in the comment box below.)

Comments:

\*As the Project Supervisor, I have reviewed the progress of the resident project.

- No
- Yes

As the Project Co-Supervisor (if applicable), I have reviewed the progress of the resident project.

- No
- Yes

### Research Ethics Board (REB) Application Status:

	n/a	No	Yes
*Will this project require REB approval?			

\*Why, or why not?

	n/a	No	Yes
*If "Yes", has REB been obtained?			

If "No", what is the status/plan?

\* indicates a mandatory response

**Form IV: Project Final Approval for Assessment.**

**Please submit this one45 form no later than the first Tuesday in January of the PGY2 year.**

\*Project Title:

\*As the Project Supervisor, I have reviewed and approved the final draft copy of the resident project for assessment:

- No
- Yes

As the Project Co-supervisor (if applicable), I have reviewed and approved the final draft copy of the resident project for assessment:

- No
- Yes

Comments:

**Research Ethics Board (REB) Application Status:**

	n/a	No	Yes
*Did this project require REB approval?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
*If yes, was REB obtained?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

## Guide on How to Organize Resident Projects Based on Type of Project

PROJECT TYPE	Research	Practice Quality Improvement / Audit	Position Paper / Essay	Educational Tool	Literature Appraisal / EBM Review
<b>SECTIONS:</b>					
<b>Cover Page:</b> 1 page	Must include project title, author's name, name(s) of co-author(s) (if applicable), site, name(s) of Project Supervisor(s), type of project, and date.				
<b>Abstract:</b> ½ page	Summary of all the sections using the headings in the left column				
<b>Introduction:</b> ½ to 1 page	Brief introduction to why the topic was chosen and its relevance to family medicine				
<b>Background:</b> 2 to 3 pages	Summary of background literature and state research question.	Summary of background literature and state research question.	Summary of background literature and the position that will be taken.	Summary of background literature and provide evidence for relevance and indicate gaps.	Summary of background to topic for literature appraisal and state research question.
<b>Study Design / Method:</b> 1 to 2 pages	State objective(s). Describe study methods.	State objective(s). Describe study methods, inclusion and exclusion criteria.	State objective(s). Provide brief description of evidence development to support position (literature review).	State objective(s). Provide methodology for educational tool development, audience focus, visuals, language level, tool choice (paper, video), etc.	State objective(s). Describe how review was conducted, data-bases searched, terms used for searches and inclusion/exclusion criteria used. Method applied for appraisal.
<b>Results:</b> 3 to 5 pages	Present findings from data.	Present findings from data and describe the strength of the findings.	Detail position in relation to literature/evidence and, if appropriate, make recommendations or describe the meaning of the position and how it applies and will be incorporated in family medicine.	Statements need to be grounded in the literature. Describe the tool and how to implement it. Provide the tool in appendix.	Describe strength and summarize findings of literature/EBM review.
<b>Discussion:</b> 2 to 3 pages	Synthesize/interpret findings, link back to literature, make recommendations /next steps.	Synthesize the data and make recommendations /next steps.			Synthesize the literature, create meaning, and make recommendations and/or next steps.
<b>Strength / Limitations:</b> ½ page	Share limitations and highlight advantages and disadvantages of the data/literature				
<b>Conclusion:</b> ½ page	Summarize the results				
<b>References</b>	References should be appropriate, relevant, and the style should be consistent.				

## **Tips and Tricks When Doing a Family Medicine Resident Research Project**

Conducting research for your resident project can be rewarding and challenging. The following is intended to provide guidance and suggest resources to help with the research endeavor so you can competently complete your project with the time and resources you are prepared to expend. This guide is divided into 5 Steps:

- Step 1:** Select a topic, identify the research problem, and state a clear research question.
- Step 2:** Choose a research method.
- Step 3:** Find an appropriate supervisor.
- Step 4:** Write a research proposal.
- Step 5:** Ask the expert.

***Step 1: Select a topic, identify the research problem, and state a clear research question.***

Topic requirements are:

- It needs a strong relationship to family medicine
- You need to be curious/passionate about it
- It needs to address a gap in the research literature
- It needs to be doable within the allotted time and your skill set

### **Identifying your research problem/research question:**

Selecting your research question can be one of the most agonizing and critical steps in developing a solid research study. It defines your whole process, from what background literature you need to read, guiding what method you should use, analysis required, and the findings to report in order to answer the question. Your question should be clear, focused, concise, complex and arguable. This will take time. Step away from your computer; consider what drew you to your topic. What about it animates and matters to you? Listen to yourself and start formulating your question by following your own interests. Remember, you will spend a lot of time researching and writing about the proposed project: if it does not interest you in the beginning, it will certainly become very difficult to write about in the end.

Next, extensively research your topic. What have experts published in peer reviewed journals? How have they framed their research? What gaps, contradictions, or concerns arise for you as you read, talk to people, and visit places? Would doing a local project using existing studies enhance knowledge? Consult the literature! If you aren't sure how to do this, consult a subject librarian: <http://util.library.dal.ca/Subspecialists/>

### **More on research question formulation:**

*Source: Practical Advice on how to formulate your research question:* (edited from source <http://www.chsbs.cmich.edu/fattah/courses/empirical/03.htm>)

### **Keeping the Research Process in Focus:**

- heart of the research project is the problem
- must articulate an acceptable problem
- formulate a problem that is carefully phrased and that represents the single goal of the research effort

### **State the Problem Clearly and Completely**

- always state the problem in a complete grammatical sentence in as few words as possible

- be specific
- limit areas studied so that the study is of manageable size

### **Think, Consider and Estimate**

- be sure of the feasibility of your study

### **Edit Your Writing**

- choose your words carefully
- rewrite, rewrite, rewrite
- keep your sentences short

### **Every Problem Needs Further Delineation**

- eliminate any possibility of misunderstanding
- give full disclosure of what you intend to do and not do
- give the meanings of all terms used
- state the assumptions
- state the hypotheses and/or research question

### **Sample Research Questions** (source: <http://writingcenter.gmu.edu/?p=307>)

**Too simple:** *How are doctors addressing diabetes in the U.S.?*

**Appropriately Complex:** *What are common traits of those suffering from diabetes in America, and how can these commonalities be used to aid the medical community in prevention of the disease?*

The simple version of this question can be looked up online and answered in a few factual sentences; it leaves no room for analysis. The more complex version is written in two parts; it is thought provoking and requires both significant investigation and evaluation from the writer. As a general rule of thumb, if a quick Google search can answer a research question, it's likely not very effective.

### **Step 2: Choose a research method.**

There are several methods to choose from for conducting research.

#### **Qualitative/Exploratory Research**

- Qualitative research focusses on the interpretation of a situation, set of behaviors, or a setting.
- Analysis must take place within a context.
  - Note: Different researchers may view the same situation and obtain different results.
- Qualitative research answers "how" and "why."
  - E.g.: How do patients perceive?

#### **Quantitative/Explanatory Research**

- Focuses on causal relationships and their impact (outcomes).
- Quantitative Research answers "what" questions.

#### **Descriptive Research**

- Descriptive research describes data and characteristics about the population or phenomenon being studied.

- Descriptive research answers the questions "who", "what", "where", and "when."
- The research cannot describe what caused a situation. Thus, Descriptive Research cannot be used to create a causal relationship, where one variable affects another.
- Descriptive research classifies phenomena.
  - E.g.: We may simply wish to describe the participants in a study and how they act, believe, perceive the world, or look.
- Examples of research questions for descriptive studies:
  - What is the clients' degree of satisfaction with the services provided through the clinic's open access model?
  - What percentages of people living in Cairo have incomes below the poverty line?

***Step 3: Find an appropriate supervisor.***

A supervisor should be interested in your project and available to guide you. If you are having trouble finding one, talk to your resident project site coordinator.

***Step 4: Write a research proposal. This will also be required for ethics REB approval.***

A research proposal is a study plan that is to be followed in the course of a research study. It is important for you to understand your objectives, method, analysis plan, any budgetary requirements, as well as how prepared you are to do the work required and if you have the needed skills. From this you can identify where you will need assistance.

Research proposal sections:

1. One paragraph **introduction** to your research question/problem, why this is important to study, relevance to family medicine. A good first line of a research proposal begins: "The research objective of this proposal is..."
2. Write a **more in depth introduction**. After you have identified a pertinent problem and framed a purpose statement, then you need to craft an introduction. Among other things, the introduction to the proposal will include:
  - a. The problem statement
  - b. A brief summary of the literature
  - c. A brief description of any gaps in the literature
  - d. A Purpose statement as to why you are proposing the study and why others should care about the subject matter of your research proposal.
3. **Background/literature review**. Frame your project around the work of others. Remember that research builds on the extant knowledge base, that is, upon the **peer reviewed published work of others**. Be sure to frame your project appropriately, acknowledging the current limits of knowledge and making clear your contribution to the extension of these limits. Be sure that you include references to the work of others. Also frame your study in terms of its broader impact to the field and to society. Ex. "If successful, the benefits of this research will be..."

- 4. Methods.** Determine the Method of Investigation. The method section is the second of the two main parts of the research proposal. In good academic writing it is important to include a method section that outlines the procedures you will follow to complete your proposed study. Many scholars have written about the different types of research methods in articles and textbooks. It is a good idea to cite the method and provide a reference. The method section generally includes sections on the following:
- Research design;
  - Sample size and characteristics of the proposed sample;
  - Data collection and data analysis procedures

**5. Determine the Research Design**

- The next step in good academic writing is to outline the research design of the research proposal. For each part of the design, it is highly advised that you describe two or three possible alternatives and then tell why you propose the particular design you chose. For instance, you might describe the differences between experimental, quasi-experimental, and non-experimental designs before you elaborate on why you propose a non-experimental design.
- Determine the Sample Size and the Characteristics of the Sample. There are several free online sample size calculators, though you will need a basic understand of statistics to know how to use and interpret them. Some sites include:  
<http://www.stat.ubc.ca/~rollin/stats/ssize/>  
<http://www.raosoft.com/samplesize.html>  
<http://homepage.stat.uiowa.edu/~rlenth/Power/>
- In this section of your research proposal, you will describe the sample size and the characteristics of the participants in the sample size. Describe how you determined how many people to include in the study and what attributes they have which make them uniquely suitable for the study.

**6. Determine the Data Collection and Data Analysis Procedures**

- In this section you will describe how you propose to collect your data e.g. through a questionnaire survey if you are performing a quantitative analysis or through one-on-one interviews if you are performing a qualitative or mixed methods study.
- After you collect the data, you also need to follow a scheme as how to analyze the data and report the results. In a quantitative study you might run the data through Mintab, Excel or better yet SPSS, and if you are proposing a qualitative study you might use a certain computer program like ATLAS.ti to perform your analysis using a specific qualitative approach such as a narrative study, grounded theory study, or framework analysis, that exposes the main themes from the proposed interviews (see Tips and Tricks on Statistics).

**7. Software and analysis: There are several options for creating a database, cleaning your data and conducting your analysis.**

- The only free software for quantitative data analysis through Dalhousie is

Minitab, found here: <https://software.library.dal.ca/index.php> . Note, Minitab is only available for PC (not Macs). User guides and tutorials can be found here: <http://www.minitab.com/en-CA/training/> . Additionally, students familiar with conducting statistics in Excel can download the free add-on package to a windows suite. However, reviews demonstrate that Excel has many issues handling data correctly for analysis and is not as user-friendly as Minitab. If you can afford to buy, or find access to SPSS, it is user friendly and has a good tutorial, though it is not provided to students via Dal.

- b. The top qualitative software programs are Atlas.ti, NVivo, and MAXQDA. Atlas and MAXQDA have a student version for about \$99. Atlas.ti is \$199 for 12 months for students. Dedoose is available on 6 month (\$12.95) and 9 month (\$10.95) contracts for students.

8. **Ethics.** You will need to address any ethical considerations and how they will be dealt with including confidentiality, data storage etc. If Research Ethics Board (REB) approval is required for your study, you should check the website for the relevant REB review. Each site has its own REB process.

***Step 5: Ask the experts.***

Review your proposal with your supervisor and resident project site coordinator.

Depending on your research needs, you may also consult with the Research Methods Unit (RMU) at Dalhousie University. An initial consultation is free, though to use their services for data analysis is \$100 an hour. Early consultation can help you avoid costly mistakes.

## Tips and Tricks when Applying to a Research Ethics Board (REB) for a Family Medicine Resident Project

- When collecting data for a resident (research) project involving human beings, an ethics review from a recognized **Research Ethics Board (REB)** is required.
- This application requires a proposal with a brief background, methods and data analysis section. In addition, the REB is particularly interested in the **consent process** regarding research participants. It is paramount that research participants are volunteers, who are fully aware to what they consenting.
- The Tri-Council - Canadian Institutes for Health Research (CIHR), Social Science and Humanities (SSHRC) and National Science and Engineering Research Council (NSERC) – has developed a joint research ethics policy. See this link for the entire policy:  
[http://www.pre.ethics.gc.ca/pdf/eng/tcps2/TCPS\\_2\\_FINAL\\_Web.pdf](http://www.pre.ethics.gc.ca/pdf/eng/tcps2/TCPS_2_FINAL_Web.pdf)

The Tri-Council states:

*REBs shall consider whether information is identifiable or non-identifiable. Information is identifiable if it, alone or when combined with other available information, may reasonably be expected to identify an individual. The term “personal information” generally denotes identifiable information about an individual.*

However, there are some exceptions. The Tri-Council states:

*Research that relies exclusively on publicly available information does not require an REB review when: (a) the information is legally accessible to the public and appropriately protected by law; or (b) the information is publicly accessible and there is no reasonable expectation of privacy.*

- Chart reviews, or chart audits, also require REB approval when the resident is planning to discuss the results publicly (Resident Project Day). If a Chart audit is only used to improve the practice, no REB approval is required.
- A REB application adds time to the resident project; however, the work for the REB will be used for the final project.
- Many resident projects are considered “minimally invasive” and they may qualify for an “expedited review.” An expedited review usually takes between 3 to 4 weeks, while a full review may take up to 2 months.
- After REB approval has been obtained, no changes to the research instruments or recruitment strategy can be made. If that is required, the REB needs to be informed.
- Each family medicine resident, who requires REB approval, needs to obtain it in the province, or hospital, of their residency (Dalhousie University recognizes the REB certificate from Horizon Health Network (HHN) for New Brunswick residents and vice versa).
- Here are some links for REB websites in various provinces that residents can access for a specific REB application information and forms (each institute has a different process).

**New Brunswick**

<http://www.horizonnb.ca/home/research.aspx#>

<http://www.mta.ca/reb/Vitalite%20Guide%20Feb%202011%20English.pdf>

**Nova Scotia**

<http://www.dal.ca/dept/research-services/services/ethics-research-reviews/research-ethics-board-approval.html>

**Prince Edward Island**

<http://www.healthpei.ca/reb>

- Please consult with your **resident project site coordinator** regarding the need for an REB application and how to go about it.

## Tips and Tricks When Doing Statistics Family Medicine Resident Project

If you want to do a resident project that involves collecting data and requires statistical analysis, here are some tips of how you can go about that. Keep in mind that you are responsible for doing the work, and should be prepared to know how to collect data, enter data, run your own analysis and interpret your findings, though some resources are available to assist you.

### **ASSISTANCE RESOURCES:**

BEFORE you start collecting data, find somebody you can discuss your plan and statistical needs with. It could be your project supervisor, your resident project site coordinator and/or somebody else who can help you who is experienced with statistics. Resident project site coordinators can help you find someone to assist you. Also the Dalhousie University Research Methods Unit (see below) can be consulted. There will likely be a cost associated with receiving assistance, and these should be appropriately budgeted. Each resident has access to \$50 towards their resident project. Additional funds would require an application with proposal and budget to your resident project site coordinator. Funding is at the discretion of the Department.

### **Dalhousie Research Methods Unit**

If you need more sophisticated help you can consult with the Dalhousie Research Methods Unit <http://www.cdha.nshealth.ca/discovery-innovation/research-methods-unit>. [The initial consultation with them is free.](#)

### **Software Resources**

Several software packages are available to assist with statistical analysis and they often have helpful tutorials. Here are some examples:

#### **MINITAB**

Minitab is likely the easiest solution to your statistical software needs. You can directly enter your data in Minitab or import from excel. This program is free of charge from the Dalhousie website; <http://its.dal.ca/helpdesk/licences.html> (not for MAC users). [Minitab is useful for basic statistics, regression, ANOVA, reliability and survival analysis.](#)

Here is a YouTube getting started video: <http://www.youtube.com/watch?v=Ql88ytNBNgw>  
Or tutorials from Minitab: <http://www.minitab.com/en-GB/training/tutorials/default.aspx>

#### **SPSS**

Statistical Package for Social Sciences (SPSS) is a popular statistical analysis program that is fairly easy to learn with several resources available. Only Dalhousie University faculty can download SPSS programs. Resident project site coordinators can sometimes assist in finding access to a computer with SPSS.

#### **Microsoft Excel**

Microsoft Excel is included in most MS office suites and can be used to conduct some basic statistics and creates attractive charts and graphs. However, a quick Google search will provide concerns as the reliability of its statistical analysis accuracy, so use with caution. You can use Microsoft Excel sheets to enter data. These Excel sheets can be easily imported to the statistical package Minitab. In theory you can also import the Excel data sheet in SPSS but it has caused some problems in the past.

Here are some videos that may help with Excel sheets:

<http://noether.uoregon.edu/~dps/243/EXCEL.pdf>

<http://people.umass.edu/evagold/excel.html>

<http://office.microsoft.com/en-us/training/excel-statistical-functions-RZ001091922.aspx>

<http://www.youtube.com/watch?v=OTz2PQ-CdJU>

### **Statistical Analysis Software (SAS)**

If you require more advanced statistical techniques than the above options provide, you may want to use SAS or STATA, and unless you have advanced training and experience, you will likely need to hire assistance. It is recommended you consult with your supervisor, resident project site coordinator and/or the Research Methods Unit.

### **R**

R is free software for statistical computing and graphics. It compiles and runs on a wide variety of platforms such as Windows and MacOS. You can download from <http://www.r-project.org/>

## Tips and Tricks When Creating an Educational Tool Family Medicine Resident Project

Before you start thinking about developing an educational tool, you need to consult the literature to find out the following:

- Does a tool already exist?
- Could you revise an existing tool?
- Could you adopt an existing tool to local conditions?

If no educational tool exists for what you want to do, go back to the literature. Remember, an educational tool's information has to be grounded in the scientific literature.

Also, if you select an educational tool as your resident project, it needs to be accompanied by a literature review paper. The purpose of this is that the reviewer can assess that the information in the educational tool is scientifically sound.

Once you have determined that you want to create your own educational tool, you need to consider the following:

- Who is your audience?
- What is the message you want to provide?
- What is the medium you want to use for the educational tool?
  - Paper, Internet, Video etc.
    - Do you have easy access to such mediums?
- What reading level should you aim for? (readability)
- Should the tool be interactive, passive?
- Consider the cost of an educational tool?
  - Do you need professionals to help with the design and what is the cost?
  - Are you going to distribute the tool and how many copies and what is the cost?

Also, you need to consider if you will test your tool on the target audience. Even a small pilot test may inform you about the readability and validity of the educational tool.

An educational tool should be

- Fun
- Visually compelling
- Use images
- Limit text
- Make your material easy to understand
- Create a "story" plot

## **Tips and Tricks When Doing a Literature Review Family Medicine Resident Project**

When doing a literature review, you need to adhere to some conventions. Before you start you may find it helpful to consult with a university/hospital librarian on how best to access resources for the literature review.

- 1) Research question has to be relevant to family medicine.
- 2) Assess the level of evidence of the studies you are reviewing (page 2).
- 3) Focus of literature review (page 3).
- 4) Create a table that is the focus of your review (page 4).
- 5) Do not repeat word for word what you have in the tables in the text.
- 6) Use the same outline as a regular scientific study.
  - a. Introduction: why did you want to do this project
  - b. Background: set up the research question with some general literature.
    - i. Finish the section with a clear research question.
  - c. Methods need to include the following:
    - i. Search terms
    - ii. Inclusion and exclusion criteria
    - iii. Grey literature, if used
    - iv. Data sets used - e.g. PubMed
    - v. Number of articles pulled and ultimately reviewed
- 7) In the discussion describe the strengths and weaknesses of each article and synthesize the data. Use headings to help the reader. Answer the research question.
- 8) In the conclusion pull it all together, no new information should be added.
- 9) Acknowledgments: supervisor and others that may have helped you.
- 10) Use a standard bibliography format and do not mix bibliography styles.

## LEVELS OF EVIDENCE

Level of Evidence	Study Design	Definition	<i>How does sleeping with a bottle of juice versus a bottle of water affect children's dental hygiene?</i>
1	Randomized Control Trials (RCTs)	<p>RCTs are considered the most reliable form of scientific evidence.</p> <p>They involve the random assignment of participants to interventions and controls.</p>	<p>A group of children are randomly selected from the general population (each child has the same likelihood of being selected as all the others). This group is then randomly divided into two groups (A and B). Again, each child has an equal chance of being placed in either group.</p> <p>Group A is given a bottle of juice to sleep with at night. Group B is given a bottle of water to sleep with at night. The effect on the children's teeth is monitored for a set amount of time.</p>
2	Cohort Studies	<p>A Cohort Study is a study in which participants who presently have a certain condition and/or receive a particular treatment are followed over time.</p> <p>They are then compared with another group who are not affected by the condition.</p>	<p>A group of children who have poor dental health are followed across time. The habit of sleeping with a bottle of juice or water of the poor dental health group is compared to the sleep habits of a control group.</p>
	Ecological/ Epidemiological Studies	<p>Ecological studies look for associations between the occurrence of disease and exposure to known or suspected causes. The unit of observation is the population or community and may be defined in various ways.</p>	<p>Children with poor dental health are identified.</p> <p>Then correlations are made between (a) sleeping with a bottle of juice and dental health and (b) sleeping with a bottle of water and dental health.</p>
3	Case-Controlled Studies	<p>Case-control studies are a frequently used in epidemiological studies.</p> <p>Case-control studies compare participants who have a specific condition with participants who do not have the condition. Otherwise similar in order to identify factors that may contribute to the condition of interest.</p>	<p>Comparing children with poor dental health, with those who have good dental health who are the same age, ethnicity, socio-economic background, number of dental check-ups, etc.</p>
	Non-Randomized Control Trials	<p>The participants and interventions are not randomly assigned.</p>	<p>The first 50 to volunteer are instructed to have their child sleep with a bottle of juice, with the last 50 volunteers are instructed to have their child sleep with a bottle of water.</p>
4	Case-Series	<p>A number of individual cases of a particular condition are identified and followed individually over time.</p>	<p>Ten cases of poor dental hygiene in children are identified and intensely followed for a set amount of time.</p>
5	Expert Opinion	<p>The opinion of a professional who is considered an expert in their field.</p>	<p>The advice/opinion of a dentist who specializes in children's oral health and who has worked in the field for a long period of time.</p>

# SAMPLE PAPER OUTLINE

A review of evidence in support of school-based health promotion programs<sup>1</sup>

Introduction (1/2-1 page)

Background (1page)

Obesity

Why school-based programs?

Research Question: What are the features of a successful school based health program?

Methods (1/2-1 page)

Results (4-5 pages):

Features of successful programs

Peer-led

Collaborative – community

Dedicated school health coordinators

Incorporates national/provincial/regional guidelines

Parents as integral part of program and source of support for children

Role of family doctors in the school-based health program model

Gender and other subgroup analysis

Discussion (4-5 pages)

Conclusion (1 page)

Acknowledgement

Bibliography

Tables: the table becomes the central piece of your review. Do not repeat what is in the table in the text, but describe it in general terms.

---

<sup>3</sup> Dr. Kappagantula provided permission to use her resident project as a sample project outline and literature review table.

Sample Table for a Literature Review

Author	Design	n	Variables	Results	Limitations
Bjelland et al.	RCT	14 65	Sugared beverage intake, sedentary behaviour	Preventive initiatives more effective in girls, need to study gender subgroups	Crude estimates of sedentary behaviours, sampling bias, social desirability in data
Brown T, Summerbell C.	Literature Review	38	Weight outcome	School based interventions may have benefit but inconsistent, may be short-term, girls/younger children have more benefit, physical activity must be combined with diet interventions	Heterogeneity of studies evaluated, therefore difficult to generalize any findings.
Bryn Austin S et al.	Qualitative	9	Effectiveness of <i>School Health Index</i> , Role of external facilitator	Presence of external facilitator influenced effectiveness of <i>SHI</i> and ability of schools to implement health promotion initiatives	Most schools in one geographical location (New England), reliance on self-reported data, did not include an objective data source
Card A, Doyle E.	Qualitative	40	Effectiveness of School Health Coordinator in implementing health promotion strategies in Nfld.	School health coordinator can change the approach of health promotion in schools to involve social, environmental as well as physiological health determinants	Vague descriptors regarding effectiveness of school health coordinators, results very preliminary in nature
Crawford PB et al.	Position paper	n/ a	n/a	Using a bioethics framework further justifies the promotion of nutritional health through schools	n/a
