Department of Family Medicine

Resident Project Guide

Updated for July 2018
Resident Project Guide
Department of Family Medicine

Introduction

"A strong research base is as fundamental to general practice, as to any academic discipline. Research and education are not different kinds of academic activity but complementary, the two sides of one coin. Research is organized curiosity. Curiosity involves asking questions; if others do not know the answers, research is needed. Education in which the answers are not based on research is indoctrination; research in which questions are not based on need is prevarication. The advance of general practice as an academic discipline depends on our ability to integrate research and education in the pursuit of excellence in clinical care."

Charles Bridge-Webb
Adapted from the George McQuitty Memorial Lecture, University of Calgary, 1982, Can Fam Physician 1983, Vol. 29:52

The objectives for research in Family Medicine are detailed by the College of Family Physicians of Canada. The project promotes the attainment of four CanMeds roles: health advocate, medical expert, scholar and communicator.

All residents are required to complete a resident project as part of their residency program requirements. The resident project is an academic/scholarly one that must meet the standards described in this guide and must be completed successfully in order to fulfill the requirements of the residency training program.

The purpose of the resident project is to provide an opportunity for the resident to explore an area of personal interest in a scholarly manner. With guidance provided by their supervisor, the process involves finding answers to questions commonly encountered in primary care by critically reviewing the available literature. Where such answers are found lacking, the resident may choose to employ an appropriate methodology to design a study using proper scientific rigor to answer that question. By contributing to this scholarly activity, there is an opportunity for residents to positively impact primary care and the wider community.

There is no requirement to conduct a research study; however, it is hoped that the resident project will provide the resident with the opportunity to develop or practice primary care research skills. For those with more in-depth research interests, primary care research electives are available and inquiries should go to the Site Director.

Goal:
• To contribute to the understanding and/or effectiveness of Family Practice.

Purpose:
• To develop skills that the resident can use in order to be a resource to a family practice;
• To provide an evaluation of these skills for the resident transcript.

Objectives:
• To ask a question relevant to Family Medicine;
• To develop a way of answering the question, using appropriate resources and time lines;
• To write up the project and present it orally prior to completion of the residency.

Project Goals:
• To develop skills in asking and answering questions that are important and relevant to the discipline of Family Medicine;
• To stimulate creative and original thought based on questions encountered in practice;
• To practice the fundamentals of evidence-based care or other critical inquiry;
• To be able to communicate the results clearly to colleagues;
• To promote an interest in Family Medicine research.

Expectations:
The resident project must be aimed at answering a question in the field of Family Medicine. It can be in the form of a research
project, a practice quality improvement project, a position paper, educational tool, or a literature appraisal. The resident is expected to choose an area of interest to Family Medicine, propose a question, review the literature, and design a method of answering that question.

Family Medicine and Family Practice includes enhanced areas of expertise achieved and maintained by some family physicians, such as those recognized by the College of Family Physicians of Canada as Certificates of Added Competence (CACs). Approved CAC domains of care in Family Medicine include Care of the Elderly, Emergency Medicine, Family Practice Anesthesia, Palliative Care, Sport and Exercise Medicine, Addiction Medicine and Enhanced Surgical Skills.

PGY2 residents are expected to submit a written paper and give an oral presentation of their findings to their colleagues and faculty members at the Resident Project Presentation Day held at their Site Project Presentation event. The written documents will be graded and an award will be presented to the author(s) of the project judged to be the most outstanding. In addition, in some sites, PGY1 residents are expected to give a 10 minute presentation discussing the progress of their projects. Completed resident projects will be stored and available to review for internal use by residents and faculty.

Ethics Issues:
All residents who engage in research involving human beings require a full or an expedited ethics review by a research ethics board (REB). This applies also to research considered "minimal risk," for example the examination of patient charts, patient/resident/physician surveys, etc. The resident should discuss this with the Project Coordinator. If possible, it is advised that residents should consult with the Chair of the local Research Ethics Board (REB) regarding requirements for REB applications. If REB approval is necessary, it must be ensured that all requirements of the local REB are met for the resident project.

Multiple Authors “Author Contribution”:
When a resident project involves multiple authors (colleague resident or others), each author must outline, in a section entitled “Author Contribution”, their individual contribution to the project. It is expected that each individual author’s contribution be substantial and that they review and approve of the final text.

Type of Projects:
1. Research Project
   This involves the posing of a question, reviewing the literature, selecting the methods needed to answer the research question, collecting original data, conducting the data analysis, and reporting the findings
   Residents are encouraged to engage in original research. It is important for residents to be aware that research projects require more steps to complete than other types of projects and therefore may take longer to complete. Most research projects require approval by the local Research Ethics Board. Residents are advised to speak with their Project Coordinator about the need for ethical approval for their project.

2. Practice Quality Improvement Project/Audit
   This involves identifying a practice-based question, finding evidence-based guidelines/recommendations to guide the approach to clinical care with respect to the question, constructing an audit tool, auditing charts, and reporting the results along with recommendations.

3. Position Paper/Essay
   This involves an extensive treatise on a topic of importance to Family Medicine. Topics can also relate to a broad range of pertinent issues such as the history of medicine, medical philosophy, medical education, politics, etc. The report must include critically appraised evidence to support the argument being presented.

4. Educational Tool
   This involves developing a tool or resource useful for the education of physicians, other health care workers, patients or the public. The educational tool needs to be accompanied by a description of how the topic was selected, a literature review and the reason for the need of the tool.

5. Literature Appraisal/EBM Review
   This involves a detailed review of the literature on a specific topic pertinent to Family Medicine. Original research papers should be reviewed and appraised using critical appraisal skills.
**Project Coordinator**
Each site has a Project Coordinator, whose role it is to discuss the project format and requirements with the resident on a regular basis and encourage the resident to adhere to the deadlines. In some cases the Project Coordinator may also be the Project Supervisor.

**Project Supervisor**
Each resident must choose a Project Supervisor (or Project Supervisors) to counsel them on the content of their project. The Project Supervisor(s) may be a clinical supervisor, another family physician, a consultant or another appropriate individual with qualifications appropriate for the selected resident’s project topic. If someone other than a family physician is selected, it is important to obtain advice on the relevance of the project to Family Medicine from the Project Coordinator.

**Budget**
There are funds in each site’s budget to cover some resident project expenses at that site. Each resident is allowed $50 for minor expenses, but it is also possible to apply for more funding. This issue should be discussed with the Project Coordinator at the appropriate site. For amounts over $50, a written budget must be submitted to the Project Coordinator at the appropriate site. All receipts must be submitted and expenses will be reimbursed. If funds are needed in advance, a written request can be submitted and receipts submitted at a later date.

**Minimum Time Commitment (please note timelines and conditions may vary from site to site):**
Residents should expect to commit at least **40 hours of work** to their project. The program **may** allow the resident to use some independent learning time to work on their project, however; the amount of time permitted depends largely on the nature and scope of the project and therefore residents will need to discuss this with either the Project Coordinator or Project Supervisor. Time away from half-days back and academic half-days is not generally permitted.

**Project Format**
Although projects can be presented in different formats (art-work/handbooks/DVD, etc.) the project paper should be a minimum of 2500 words and a maximum of 4000 words, double spaced, 12 font, excluding tables and references, and cannot exceed 10MB. The format of the written work should follow a scientific lay-out: **Abstract, Introduction, Background, Study Design/Method, Results, Discussion, Conclusion and Limitations.** Alternatives for the word count and format will be considered for special circumstances, and must be approved by the Project Coordinator.

**Project Cover Page**
Make sure that you add a cover page to your project. The cover page must include the following:
1. name
2. title of project
3. site
4. name of project supervisor
5. type of project (research, literature review etc)
6. date

**Plagiarism**
Plagiarism is a serious academic offence and can lead to expulsion. Please see the Dalhousie University website on plagiarism.
[http://www.dal.ca/dept/university_secretariat/academic-integrity/plagiarism-cheating.html](http://www.dal.ca/dept/university_secretariat/academic-integrity/plagiarism-cheating.html)
Timelines:

PGY1 year:

- The resident must discuss the project topic with the Project Coordinator.
- The resident will select and discuss the content of the project with their Project Coordinator (and Project Supervisor if applicable) by the end of the three-month PGY1 Family Medicine clinical learning experience, but no later than the 1st Tuesday in November.
- The resident will develop a 2-3 page project proposal that they will submit to their Project Supervisor and their Project Coordinator. This proposal will state their research question/objective, a brief background literature, the type of project and the methodology they will use to answer the research question.
- Residents must have their PGY1 Resident Project Proposal Form (Form I) initiated and submitted via One45 by the 1st Tuesday in November for their Project Coordinator to review/批准.
- Residents are required to distribute via One45 a Project Supervisor Agreement Form (Form II), which must be completed/signed by their Project Supervisor and submitted via One45 by the 1st Tuesday in December for their Project Coordinator to review.
- Residents whose projects are research projects, must apply for approval through their local Research Ethics Board (REB). It should be noted that this can at times be a lengthy process, and residents must plan accordingly in order to allow sufficient time for punctual project completion.
- If necessary, the resident should write out a budget, and submit it to their Project Coordinator. (see below for budget guidelines)
- At some sites, PGY1 residents are required to present their proposal in a 10 minute oral format during their site’s Resident Project Presentation Day (usually held in May), or at another venue, as determined by their site. PGY1 residents are to confirm details with their Project Coordinator.

PGY2 year:

- The resident will review their project progress and distribute the Project Progress Report (Form III) via One45 to their Project Supervisor. This form is to be submitted by their supervisor via One45 no later than the 1st Tuesday of September. The progress report will be reviewed by the Project Coordinator.
- Once the project is complete, the resident will distribute the Resident Project Final Approval for Assessment Form (Form IV) to their supervisor via One45 no later than the 1st Monday of January. It will be approved by their Project Supervisor as being ready to be sent out for assessment. Project Coordinators will review these forms.
- The Final Project must be submitted to the resident’s site designate (named by each site), and from there forwarded to the Education Committee Secretary (fmcommittees@dal.ca) as a single PDF document by the 2nd Monday in February. The PDF document must not exceed a file size of 10MB, and must be formatted in such a way as can easily be emailed and opened by project reviewers. The Education Committee Secretary will send the project to a project reviewer for assessment.
- A PowerPoint slide presentation of the resident project must be completed and submitted to the residents’ site designate by the 1st Monday of May of their PGY2 year.
- PGY2 residents will present their projects orally during their Site Project Presentation event.
- If a resident is concluding the program four months or more beyond the usual program end-date, submission of the written project can be deferred to 2 months before their concluding date, and an oral presentation will be arranged separately.

See the attached worksheet for timeline summaries. Please note that these deadlines may be modified if the nature of the project is such that data collection or analysis cannot be completed by the required dates. In that case, the resident must discuss the new timelines in advance with the Project Coordinator and new timelines will be formally established.
Project Assessment
Completed resident projects should be forwarded by the site’s designate (identified by each site) to the Department of Family Medicine Education Committee Secretary (fmccommittees@dal.ca) as a single PDF file by the 2nd Monday in February. The PDF document must be no larger than 10MB, and be formatted in such a way as can be easily emailed to and opened by project reviewers.

The Medical Education Committee Secretary will forward the completed resident projects to appropriate reviewers. Project reviewers are expected to complete their review within 4 to 6 weeks of accepting a project for review.

Late submissions may take longer to complete, and may result in a delay in program completion. Residents are strongly discouraged from submitting their project after the deadline.

A resident project must be deemed “Acceptable” or higher for the resident to successfully complete the residency program requirements.

If a project is assessed as “Requiring Revisions,” the resident and the Project Supervisor and/or Project Coordinator will be informed by the Education Committee Secretary. The revised project will be sent to the Education Committee Secretary in a single PDF document that is no larger than 10MG and that has been formatted in such a way as can easily be emailed and opened by the project reviewer. The Education Committee Secretary will then forward it to the original project reviewer. If, after a second revision, the project is still deemed “Requiring Revisions” by the original reviewer, a second reviewer may be invited to review the project.

Late Projects
Residents who miss the final project submission date may face a delay in receiving their letter of program completion. Hence, residents are encouraged to submit their final project by the appropriate deadline.

Non-compliance
Non-compliance with the designated deadlines may result in the inclusion of a professional misconduct note in the resident file.

Awards/Presentations
Projects receiving marks in the “outstanding” range, and some others receiving marks in the “highly acceptable” range may be considered for a variety of award nominations, including:

1. Dalhousie University Family Medicine: The Dr. Doug Mulholland Award for the best non-research and non-practice audit resident project. The projects are judged on originality, relevance to family medicine and critical thinking.
2. Dalhousie University Family Medicine: The Dr. R. Wayne Putnam Award for the best research or practice audit resident project.
3. Award competitions:
   a. Faculty of Medicine Research Award Competition: up to three projects are nominated from the Department of Family Medicine
   b. College of Family Physicians of Canada research awards for Family Medicine Residents: Up to one project is nominated from the Dalhousie University Department of Family Medicine
   c. The College of Family Physicians of Canada scholarly activity award. Up to one project is nominated from the Dalhousie University Department of Family Medicine. This award aims to recognize outstanding family medicine scholarship performed by a resident.

Resident Project Repository
A selection of completed and acceptable resident projects may be posted on Dalhousie University’s Postgraduate Family Medicine Brightspace Page (under Resident Resources) for 2 years. This is to provide ideas and to serve as project examples for current Family Medicine Residents.

Questions regarding resident projects may be directed to: Dr. Laura Sadler, Chair, Resident Project Sub-Committee
Phone: 902-473-4700 ; Fax 902-473-8548
E-mail: LSadler@dal.ca

### Project Proposal (Form I)
- Residents must initiate and complete Form I (Resident Project Proposal) for Project Coordinators to review.
- A 2-4 page project proposal must be submitted to their Project Coordinator (and Project Supervisor if applicable).
- Residents are responsible for ensuring the form is completed in a timely manner, in compliance with deadlines.
- 1st Tuesday in November of the resident’s PGY1 year

### Project Supervisor Agreement Form (Form II)
- Residents are responsible for initiating Form II (Project Supervisor Agreement Form), to be completed and submitted by their project supervisor.
- Residents are responsible for ensuring the form is completed in a timely manner, in compliance with deadlines.
- 1st Tuesday in December of the resident’s PGY1 year

- If the resident project is a research project, the resident must apply to their local Research Ethics Committee for approval. (NOTE: This may be a lengthy process and residents must plan accordingly)
- September-February

- At some sites, Proposal Presentation Day (10 minute presentation)
- Usually in May – date to be determined by each site

Form I: Resident Project Proposal.

All family medicine residents are required to complete a resident project as part of their residency program requirements. The purpose of the resident project is to introduce the resident to the process of finding answers to questions commonly encountered in primary care.

Residents are expected to submit a written paper and give an oral presentation at their site’s project presentation event in their final year of residency.

Types of Projects:
- Literature Appraisal/EBM Review
- Position Paper/Essay
- Educational Tool
- Practice Quality Improvement Project/Audit
- Research Project

Please submit this one form no later than the first Tuesday in November of your PGY1 year.

*Proposed project supervisor's full name:

*Project supervisor's email address:

Proposed co-supervisor(s) full name:

Proposed co-supervisor(s) email address:

*Working Title of Resident Project:

*Type of project:
- Research
- Educational Tool
- Literature Appraisal/EBM Review
- Position Paper/Essay
- Practice Quality Improvement/Audit
- other (if "other" please elaborate in the comment box below.)

Comment section, if "other" was selected:

</thead>
</table>

*Will this project require REB approval?

If "No." please explain why:
Form-II: Project Supervisor Agreement.

Please submit this one form no later than the first Tuesday in December of the PGY1 year.

Project Supervisor:

All residents should have a Project Supervisor and a Project Coordinator.

The Project Supervisor will counsel the resident on the content of the project. The Project Supervisor may be a clinical supervisor in the home base Family Medicine Unit, another family physician, a consultant or another appropriate individual. If someone other than a family physician is selected, it is important to obtain advice on the relevance of the project to Family Medicine from the Project Coordinator.

The Project Coordinator will discuss the project format and requirements with the resident on a regular basis and encourage the resident to adhere to the deadlines. In some cases the Project Coordinator may also be the Project Supervisor.

*I have agreed to be the Project Supervisor for this resident's project:

☐ No
☐ Yes

*Project Supervisor's full name:

[space for name]

Proposed co-supervisor(s) full name, if applicable:

[space for name]

*Are you, or one of the committee members for this resident project, a faculty member of Dalhousie's Department of Family Medicine?

☐ No
☐ Yes

*Type of project:

☐ Research
☐ Educational Tool
☐ Literature Appraisal/EBM Review
☐ Position Paper/Essay
☐ Practice Quality Improvement/Audit
☐ other (if "other" please elaborate in the comment box below.)

### Define Research Question
- **Outstanding (90-100)**
  - Clear rationale for study question
  - Clearly stated objectives
  - Innovative nature of project
- **Highly Acceptable (75 – 89)**
  - Clear rationale for study question only
  - Clearly stated objective
  - Study was somewhat innovative (question previously asked but interesting aspects of authors’ approach to the question)
- **Acceptable (60 – 74)**
  - Research question defined but not innovative
  - Objectives stated
- **Requires Revisions (<59)**
  - Research question not defined
  - Objectives not stated

### Relevance to Family Medicine (including domain specific competencies required for awarding Certificates of Added Competence (CAC) by the College of Family Physicians)
- **Outstanding (90-100)**
  - Study question appeals to the Family Medicine community
  - Relevance to family medicine clearly discussed
  - Linking the project to the principles of Family Medicine.
- **Highly Acceptable (75 – 89)**
  - Study question is of interest to the Family Medicine community
  - Relevance to Family Medicine discussed
- **Acceptable (60 – 74)**
  - Study question is potentially of interest to some of the Family Medicine community
  - Relevance to Family Medicine identified but not discussed
- **Requires Revisions (<59)**
  - Study question is of no interest to the Family Medicine community
  - Relevance to Family Medicine not identified or approved

### Background Literature Review
- **Outstanding (90-100)**
  - Comprehensive literature review
  - Differentiation of levels of evidence from different sources
  - Recent evidence reviewed
- **Highly Acceptable (75 – 89)**
  - Adequate literature review
  - Recent evidence reviewed but does not differentiate levels of evidence from different sources
- **Acceptable (60 – 74)**
  - Brief/short literature review
  - Limited, but adequate sources used
- **Requires Revisions (<59)**
  - Incomplete literature review
  - Does not include recent evidence
  - Does not differentiate levels of evidence from different sources

### Appropriateness of Study Design (to answer the research question)
- **Outstanding (90-100)**
  - Study design is scientifically sound and answers study question
  - Methods are clearly described with appropriate citation
- **Highly Acceptable (75 – 89)**
  - Study design answers the study question
  - Methods are clearly described
- **Acceptable (60 – 74)**
  - Study design answers the question, but more appropriate designs exist
  - Methods would benefit from further explanation
- **Requires Revisions (<59)**
  - Study design does not adequately answer the study research question

### Appropriateness of Data Analysis
- **Outstanding (90-100)**
  - The analysis answers the study question appropriately
  - Well described statistical analysis and rational for the approach chosen
- **Highly Acceptable (75 – 89)**
  - The analysis answers the study question
  - The rationale is explained
- **Acceptable (60 – 74)**
  - The analysis somewhat answers the study question but another statistical approach would be more appropriate
- **Requires Revisions (<59)**
  - The analysis is not able to answer the study question
  - Inappropriate statistical tests chosen

---

Note: YES/NO for final assessment.

### Instructions:
Judge level of achievement, based on the descriptors in the box and underline some descriptors for guidance or praise. “Requires Major Revisions” must include specific descriptors and comments to help the resident improve. Only provide a final grade for those in the Outstanding, Highly Acceptable, and Acceptable range. Give grades to projects requiring revisions only after the revisions have been satisfactorily completed.

### Comments (please add additional pages when needed):

### Identification of the Need for an Educational Tool
- **Outstanding (90-100)**
  - Problem clearly outlined (PICO format)
  - Objectives for development of the Tool are richly stated
- **Highly Acceptable (75-89)**
  - PICO clearly stated
  - Objectives less richly stated
- **Acceptable (60-74)**
  - Objectives not fully stated
- **Requires Revisions (<59)**
  - Problem not defined
  - Objectives not stated

### Relevance to Family Medicine (including domain specific competencies required for awarding Certificates of Added Competence (CAC) by the College of Family Physicians)
- **Outstanding (90-100)**
  - Question/Problem appeals to the Family Medicine community
  - Relevance to family medicine clearly discussed
  - Linking the project to the principles of Family Medicine.
- **Highly Acceptable (75-89)**
  - Question/Problem is of interest to the Family Medicine community
  - Relevance to Family Medicine discussed
- **Acceptable (60-74)**
  - Question/Problem is potentially of interest to some of the Family Medicine community
  - Relevance to Family Medicine identified but not discussed
- **Requires Revisions (<59)**
  - Question/Problem is of no interest to the Family Medicine community
  - Relevance to Family Medicine not identified or approved

### Information Gathering: Literature Review of the Identified Problem
- **Outstanding (90-100)**
  - Rich description of the literature on the identified problem
- **Highly Acceptable (75-89)**
  - Clear description of the literature on the identified problem
- **Acceptable (60-74)**
  - Literature review is basic, should include other sources
- **Requires Revisions (<59)**
  - Incomplete literature review to support the identified problem

### Information Gathering: Researching Existing Tools
- **Outstanding (90-100)**
  - Complete description of the literature on the value of existing Tools
  - Clearly described existing Tools
- **Highly Acceptable (75-89)**
  - Some review of the literature on the value of existing Tools
  - Less clearly described existing Tools
- **Acceptable (60-74)**
  - Sparse/basic literature description on existing Tools
- **Requires Revisions (<59)**
  - Absent description of literature of existing Tools

### Methodology
- **Outstanding (90-100)**
  - Development of the Tool clearly incorporates literature findings
  - Includes a thorough consideration of the applicability in practice of the Tool
- **Highly Acceptable (75-89)**
  - Development of the tool incorporates literature findings
  - Includes consideration to the applicability in practice of the Tool
- **Acceptable (60-74)**
  - Partial incorporation of the literature findings
  - Some consideration to the applicability in practice of the Tool
- **Requires Revisions (<59)**
  - Inadequate incorporation of the literature findings
  - Inadequate consideration to the applicability in practice of the Tool

## Dalhousie Family Medicine Resident Project Assessment Rubric for Literature Reviews and Position Papers

<table>
<thead>
<tr>
<th>Resident:</th>
<th>Assessor:</th>
<th>Date:</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Type of Project:</strong></td>
<td></td>
<td></td>
</tr>
<tr>
<td>☐ Literature Review</td>
<td>☐ Position Paper</td>
<td></td>
</tr>
</tbody>
</table>

### Outstanding (90-100)

- **Define question/thesis or presenting case**
  - Original question/thesis/position presented
  - Demonstrates the significance of the question with strong rationale
  - Uses rich detail and identifies perceptively what is at issue

- **Relevance to Family Medicine (including domain specific competencies required for awarding Certificates of Added Competence (CAC) by the College of Family Physicians)**
  - Question appeals to the Family Medicine community
  - Relevance to family medicine clearly discussed
  - Linking the project to the principles of Family Medicine.

- **Researching/Information gathering**
  - Conducted a comprehensive and recent review of the literature
  - Clear and structured approach; inclusion / exclusion criteria identified
  - Judiciously selected important sources to focus on; reject or qualify less reliable sources.

- **Presenting and evaluating sources/others’ perspectives**
  - Summarized diverse literature/views accurately and fairly
  - Consistently focuses on the most central and significant ideas
  - Critically evaluated sources/perspectives in a precise/nuanced manner.

### Highly Acceptable (75-89)

- **Define question/thesis or presenting case**
  - Clear question/thesis/position presented
  - Demonstrates judgment in the rationale for the importance of the question
  - Identifies some significant points

- **Relevance to Family Medicine (including domain specific competencies required for awarding Certificates of Added Competence (CAC) by the College of Family Physicians)**
  - Question is of interest to the Family Medicine community
  - Relevance to Family Medicine discussed

- **Researching/Information gathering**
  - Variety of sources used
  - Inclusion / exclusion criteria identified
  - Well-chosen sources according to clear criteria as appropriate
  - Balanced in perspectives; take into account strengths and limitations of sources.

- **Presenting and evaluating sources/others’ perspectives**
  - Summarized other’s view fairly, with few errors
  - Used appropriate methodologies/standards for critique
  - Balanced detail with focus in summary and/or critique

### Acceptable (60-74)

- **Define question/thesis or presenting case**
  - Less clear definition of the topic and question

- **Relevance to Family Medicine (including domain specific competencies required for awarding Certificates of Added Competence (CAC) by the College of Family Physicians)**
  - Question is potentially of interest to some of the Family Medicine community
  - Relevance to Family Medicine identified but not discussed

- **Researching/Information gathering**
  - Did not present the most relevant sources
  - Could be more balanced in the source used
  - Takes account of pitfalls in some sources.

- **Presenting and evaluating sources/others’ perspectives**
  - Needs to be more fair in summarizing the views of others

### Requires Revisions (<59)

- **Define question/thesis or presenting case**
  - Vague topic presented
  - Poorly thought-out rationale
  - Does not match the project that was carried out

- **Relevance to Family Medicine (including domain specific competencies required for awarding Certificates of Added Competence (CAC) by the College of Family Physicians)**
  - Question is of no interest to the Family Medicine community
  - Relevance to Family Medicine not identified or approved

- **Researching/Information gathering**
  - Fails to make use of appropriate literature
  - Makes use of unreliable sources.

- **Presenting and evaluating sources/others’ perspectives**
  - Presented others’ view in inaccurate or unfair ways
  - Fails to apply reasonable standards of rigour in evaluating evidence

Tips and Tricks When Doing a Family Medicine Resident Research Project

Conducting research for your resident project can be rewarding and challenging. The following is intended to provide guidance and suggest resources to help with the research endeavor so you can competently complete your project with the time and resources you are prepared to expend. This guide is divided into 5 Steps:

Step 1: Select a topic, identify the research problem, and state a clear research question.
Step 2: Choose a research method.
Step 3: Find an appropriate supervisor.
Step 4: Write a research proposal.
Step 5: Ask the expert.

Step 1: Select a topic, identify the research problem, and state a clear research question.

Topic requirements are:
- It needs a strong relationship to family medicine
- You need to be curious/passionate about it
- It needs to addresses a gap in the research literature
- It needs to be doable within the allotted time and your skill set

Identifying your research problem/research question:
Selecting your research question can be one of the most agonizing and critical steps in developing a solid research study. It defines your whole process, from what background literature you need to read, guiding what method you should use, analysis required, and the findings to report in order to answer the question. Your question should be clear, focused, concise, complex and arguable. This will take time. Step away from your computer; consider what drew you to your topic. What about it animates and matters to you? Listen to yourself and start formulating your question by following your own interests. Remember, you will spend a lot of time researching and writing about the proposed project: if it does not interest you in the beginning, it will certainly become very difficult to write about in the end.

Next, extensively research your topic. What have experts published in peer reviewed journals? How have they framed their research? What gaps, contradictions, or concerns arise for you as you read, talk to people, and visit places? Would doing a local project using existing studies enhance knowledge? Consult the literature! If you aren’t sure how to do this, consult a subject librarian: http://util.library.dal.ca/Subspecialists/

More on research question formulation:
Source: Practical Advice on how to formulate your research question: (edited from source http://www.chsbs.cmich.edu/fattah/courses/empirical/03.htm)

Keeping the Research Process in Focus:
- heart of the research project is the problem
- must articulate an acceptable problem
- formulate a problem that is carefully phrased and that represents the single goal of the research effort

State the Problem Clearly and Completely
- always state the problem in a complete grammatical sentence in as few words as possible
- be specific
- limit areas studied so that the study is of manageable size
Think, Consider and Estimate
- be sure of the feasibility of your study

Edit Your Writing
- choose your words carefully
- rewrite, rewrite, rewrite
- keep your sentences short

Every Problem Needs Further Delineation
- eliminate any possibility of misunderstanding
- give full disclosure of what you intend to do and not do
- give the meanings of all terms used
- state the assumptions
- state the hypotheses and/or research question

Sample Research Questions (source: http://writingcenter.gmu.edu/?p=307)

Too simple: *How are doctors addressing diabetes in the U.S.?*

Appropriately Complex: *What are common traits of those suffering from diabetes in America, and how can these commonalities be used to aid the medical community in prevention of the disease?*

The simple version of this question can be looked up online and answered in a few factual sentences; it leaves no room for analysis. The more complex version is written in two parts; it is thought provoking and requires both significant investigation and evaluation from the writer. As a general rule of thumb, if a quick Google search can answer a research question, it's likely not very effective.

*Step 2: Choose a research method.*

There are several methods to choose from for conducting research.

Qualitative/Exploratory Research
- Qualitative research focuses on the interpretation of a situation, a set of behaviors, or a setting.
- Analysis must take place within a context.
  - Note: Different researchers may view the same situation and obtain different results.
- Qualitative research answers "how" and "why."
  - E.g.: How do patients perceive?
- Focuses on causal relationships and their impact (outcomes).
- Quantitative Research answers "what" questions.

Descriptive Research
- Descriptive research describes data and characteristics about the population or phenomenon being studied.
- Descriptive research answers the questions "who", "what", "where", and "when."
- The research cannot describe what caused a situation. Thus, Descriptive Research cannot be used to create a causal relationship, where one variable affects another.
• Descriptive research classifies phenomena.
  o E.g.: We may simply wish to describe the participants in a study and how
    they act, believe, perceive the world, or look.
• Examples of research questions for descriptive studies:
  o What is the clients’ degree of satisfaction with the services provided though
    the clinic’s open access model?
  o What percentages of people living in Cairo have incomes below the poverty
    line?

Step 3: Find an appropriate supervisor.

A supervisor should be interested in your project and available to guide you. If you are
having trouble finding one, talk to your resident project site coordinator.

Step 4: Write a research proposal. This will also be required for ethics REB
approval.

A research proposal is a study plan that is to be followed in the course of a research study. It
is important for you to understand your objectives, method, analysis plan, any budgetary
requirements, as well as how prepared you are to do the work required and if you have the
needed skills. From this you can identify where you will need assistance.

Research proposal sections:

1. One paragraph introduction to your research question/problem, why this is
   important to study, relevance to family medicine. A good first line of a research
   proposal begins: “The research objective of this proposal is…”

2. Write a more in depth introduction. After you have identified a pertinent problem and
   framed a purpose statement, then you need to craft an introduction. Among other
   things, the introduction to the proposal will include:
   a. The problem statement
   b. A brief summary of the literature
   c. A brief description of any gaps in the literature
   d. A purpose statement as to why you are proposing the study and why
      others should care about the subject matter of your research proposal.

3. Background/literature review. Frame your project around the work of others. Remember
   that research builds on the extant knowledge base, that is, upon the peer reviewed
   published work of others. Be sure to frame your project appropriately, acknowledging the
   current limits of knowledge and making clear your contribution to the extension of these
   limits. Be sure that you include references to the work of others. Also frame your study in
   terms of its broader impact to the field and to society. Ex. “If successful, the benefits of this
   research will be…”

4. Methods. Determine the Method of Investigation. The method section is the second of
   the two main parts of the research proposal. In good academic writing it is important to
   include a method section that outlines the procedures you will follow to complete your
   proposed study. Many scholars have written about the different types of research
   methods in articles and textbooks. It is a good idea to site the method and provide a
   reference. The method section generally includes sections on the following:
5. **Determine the Research Design**
   a. The next step in good academic writing is to outline the research design of the research proposal. For each part of the design, it is highly advised that you describe two or three possible alternatives and then tell why you propose the particular design you chose. For instance, you might describe the differences between experimental, quasi-experimental, and non-experimental designs before you elaborate on why you propose a non-experimental design.
   b. Determine the Sample Size and the Characteristics of the Sample. There are several free online sample size calculators, though you will need a basic understand of statistics to know how to use and interpret them. Some sites include:
      - [http://homepage.stat.uiowa.edu/~rlenth/Power/](http://homepage.stat.uiowa.edu/~rlenth/Power/)
   c. In this section of your research proposal, you will describe the sample size and the characteristics of the participants in the sample size. Describe how you determined how many people to include in the study and what attributes they have which make them uniquely suitable for the study.

6. **Determine the Data Collection and Data Analysis Procedures**
   a. In this section you will describe how you propose to collect your data e.g. through a questionnaire survey if you are performing a quantitative analysis or through one-on-one interviews if you are performing a qualitative or mixed methods study.
   b. After you collect the data, you also need to follow a scheme as how to analyze the data and report the results. In a quantitative study you might run the data through Mintab, Excel or better yet SPSS, and if you are proposing a qualitative study you might use a certain computer program like ATLAS.ti to perform your analysis using a specific qualitative approach such as a narrative study, grounded theory study, or framework analysis, that exposes the main themes from the proposed interviews (see Tips and Tricks on Statistics).

7. **Software and analysis:** There are several options for creating a database, cleaning your data and conducting your analysis.
   a. The only free software for quantitative data analysis through Dalhousie is Minitab, found here: [https://software.library.dal.ca/index.php](https://software.library.dal.ca/index.php) . Note, Minitab is only available for PC (not Macs). User guides and tutorials can be found here: [http://www.minitab.com/en-CA/training/](http://www.minitab.com/en-CA/training/). Additionally, students familiar with conducting statistics in Excel can download the free add-on package to a windows suite. However, reviews demonstrate that Excel has many issues handling data correctly for analysis and is not as user-friendly as Minitab. If you can afford to buy, or find access to SPSS, it is user friendly and has a good tutorial, though it is not provided to students via Dal.
   b. The top qualitative software programs are Atlas.ti, NVivo, and MAXQDA. Atlas and MAXQDA have a student version for about $99. Atlas.ti is $199 for 12 months for students. Dedoose is available on 6 month ($12.95) and 9 month ($10.95) contracts for students.
8. **Ethics.** You will need to address any ethical considerations and how they will be dealt with including confidentiality, data storage etc. If Research Ethics Board (REB) approval is required for your study, you should check the website for the relevant REB review. Each site has its own REB process.

**Step 5: Ask the experts.**

Review your proposal with your supervisor and resident project site coordinator. Depending on your research needs, you may also consult with the Research Methods Unit (RMU) at Dalhousie University. An initial consultation is free, though to use their services for data analysis is $100 an hour. Early consultation can help you avoid costly mistakes.
Tips and Tricks when Applying to a Research Ethics Board (REB) for a Family Medicine Resident Project

- When collecting data for a resident (research) project involving human beings, an ethics review from a recognized Research Ethics Board (REB) is required.

- This application requires a proposal with a brief background, methods and data analysis section. In addition, the REB is particularly interested in the consent process regarding research participants. It is paramount that research participants are volunteers, who are fully aware to what they consenting.

- The Tri-Council - Canadian Institutes for Health Research (CIHR), Social Science and Humanities (SSHRC) and National Science and Engineering Research Council (NSERC) – has developed a joint research ethics policy. See this link for the entire policy: http://www.pre.ethics.gc.ca/pdf/eng/tcps2/TCPS_2_FINAL_Web.pdf

The Tri-Council states:

REBs shall consider whether information is identifiable or non-identifiable. Information is identifiable if it, alone or when combined with other available information, may reasonably be expected to identify an individual. The term “personal information” generally denotes identifiable information about an individual.

However, there are some exceptions. The Tri-Council states:

Research that relies exclusively on publicly available information does not require an REB review when: (a) the information is legally accessible to the public and appropriately protected by law; or (b) the information is publicly accessible and there is no reasonable expectation of privacy.

- Chart reviews, or chart audits, also require REB approval when the resident is planning to discuss the results publicly (Resident Project Day). If a Chart audit is only used to improve the practice, no REB approval is required.

- A REB application adds time to the resident project; however, the work for the REB will be used for the final project.

- Many resident projects are considered “minimally invasive” and they may qualify for an “expedited review.” An expedited review usually takes between 3 to 4 weeks, while a full review may take up to 2 months.

- After REB approval has been obtained, no changes to the research instruments or recruitment strategy can be made. If that is required, the REB needs to be informed.

- Each family medicine resident, who requires REB approval, needs to obtain it in the province, or hospital, of their residency (Dalhousie University recognizes the REB certificate from Horizon Health Network (HHN) for New Brunswick residents and vice versa).

- Here are some links for REB websites in various provinces that residents can access for a specific REB application information and forms (each institute has a different process).
New Brunswick
http://www.horizonnb.ca/home/research.aspx#

Nova Scotia
http://www.dal.ca/dept/research-services/services/ethics-research-reviews/research-ethics-board-approval.html

Prince Edward Island
http://www.healthpei.ca/reb

- Please consult with your resident project site coordinator regarding the need for an REB application and how to go about it.
Tips and Tricks When Doing Statistics
Family Medicine Resident Project

If you want to do a resident project that involves collecting data and requires statistical analysis, here are some tips of how you can go about that. Keep in mind that you are responsible for doing the work, and should be prepared to know how to collect data, enter data, run your own analysis and interpret your findings, though some resources are available to assist you.

ASSISTANCE RESOURCES:

BEFORE you start collecting data, find somebody you can discuss your plan and statistical needs with. It could be your project supervisor, your resident project site coordinator and/or somebody else who can help you who is experienced with statistics. Resident project site coordinators can help you find someone to assist you. Also the Dalhousie University Research Methods Unit (see below) can be consulted. There will likely be a cost associated with receiving assistance, and these should be appropriately budgeted. Each resident has access to $50 towards their resident project. Additional funds would require an application with proposal and budget to your resident project site coordinator. Funding is at the discretion of the Department.

Dalhousie Research Methods Unit
If you need more sophisticated help you can consult with the Dalhousie Research Methods Unit http://www.cdha.nshealth.ca/discovery-innovation/research-methods-unit. The initial consultation with them is free.

Software Resources
Several software packages are available to assist with statistical analysis and they often have helpful tutorials. Here are some examples:

MINITAB
Minitab is likely the easiest solution to your statistical software needs. You can directly enter your data in Minitab or import from excel. This program is free of charge from the Dalhousie website; http://its.dal.ca/helpdesk/licences.html (not for MAC users). Minitab is useful for basic statistics, regression, ANOVA, reliability and survival analysis.

Here is a youtube getting started video: http://www.youtube.com/watch?v=Ql88ytNBNqw

SPSS
Statistical Package for Social Sciences (SPSS) is a popular statistical analysis program that is fairly easy to learn with several resources available. Only Dalhousie University faculty can download SPSS programs. Resident project site coordinators can sometimes assist in finding access to a computer with SPSS.

Microsoft Excel
Microsoft Excel is included in most MS office suites and can be used to conduct some basic statistics and creates attractive charts and graphs. However, a quick Google search will provide concerns as the reliability of its statistical analysis accuracy, so use with caution. You can use Microsoft Excel sheets to enter data. These Excel sheets can be easily imported to the statistical package Minitab. In theory you can also import the Excel data sheet in SPSS but it has caused some problems in the past.

Here are some videos that may help with Excel sheets:
http://noether.uoregon.edu/~dps/243/EXCEL.pdf
http://people.umass.edu/evagold/excel.html
http://www.youtube.com/watch?v=OTz2PQ-CdJU

Statistical Analysis Software (SAS)
If you require more advanced statistical techniques than the above options provide, you may want to use SAS or STATA, and unless you have advanced training and experience, you will likely need to hire assistance. It is recommended you consult with your supervisor, resident project site coordinator and/or the Research Methods Unit.

R
R is free software for statistical computing and graphics. It compiles and runs on a wide variety of platforms such as Windows and MacOS. You can download from http://www.r-project.org/
Tips and Tricks When Creating an Educational Tool
Family Medicine Resident Project

Before you start thinking about developing an educational tool, you need to consult the literature to find out the following:

- Does a tool already exist?
- Could you revise an existing tool?
- Could you adopt an existing tool to local conditions?

If no educational tool exists for what you want to do, go back to the literature. Remember, an educational tool's information has to be grounded in the scientific literature.

Also, if you select an educational tool as your resident project, it needs to be accompanied by a literature review paper. The purpose of this is that the reviewer can assess that the information in the educational tool is scientifically sound.

Once you have determined that you want to create your own educational tool, you need to consider the following:

- Who is your audience?
- What is the message you want to provide?
- What is the medium you want to use for the educational tool?
  - Paper, Internet, Video etc.
    - Do you have easy access to such mediums?
- What reading level should you aim for? (readability)
- Should the tool be interactive, passive?
- Consider the cost of an educational tool?
  - Do you need professionals to help with the design and what is the cost?
  - Are you going to distribute the tool and how many copies and what is the cost?

Also, you need to consider if you will test your tool on the target audience. Even a small pilot test may inform you about the readability and validity of the educational tool.

An educational tool should be

- Fun
- Visually compelling
- Use images
- Limit text
- Make your material easy to understand
- Create a “story” plot

Tips and Tricks When Doing a Literature Review
Family Medicine Resident Project

When doing a literature review, you need to adhere to some conventions. Before you start you may find it helpful to consult with a university/hospital librarian on how best to access resources for the literature review.

1) Research question has to be relevant to family medicine.
2) Assess the level of evidence of the studies you are reviewing (page 2).
3) Focus of literature review (page 3).
4) Create a table that is the focus of your review (page 4).
5) Do not repeat word for word what you have in the tables in the text.
6) Use the same outline as a regular scientific study.
   a. Introduction: why did you want to do this project
   b. Background: set up the research question with some general literature.
      i. Finish the section with a clear research question.
   c. Methods need to include the following:
      i. Search terms
      ii. Inclusion and exclusion criteria
      iii. Grey literature, if used
      iv. Data sets used - e.g. PubMed
      v. Number of articles pulled and ultimately reviewed
7) In the discussion describe the strengths and weaknesses of each article and synthesize the data. Use headings to help the reader. Answer the research question.
8) In the conclusion pull it all together, no new information should be added.
9) Acknowledgments: supervisor and others that may have helped you.
10) Use a standard bibliography format and do not mix bibliography styles.
# LEVELS OF EVIDENCE

<table>
<thead>
<tr>
<th>Level of Evidence</th>
<th>Study Design</th>
<th>Definition</th>
<th>How does sleeping with a bottle of juice versus a bottle of water affect children’s dental hygiene?</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Randomized Control Trials (RCTs)</td>
<td>RCTs are considered the most reliable form of scientific evidence. They involve the random assignment of participants to interventions and controls.</td>
<td>A group of children are randomly selected from the general population (each child has the same likelihood of being selected as all the others). This group is then randomly divided into two groups (A and B). Again, each child has an equal chance of being placed in either group. Group A is given a bottle of juice to sleep with at night. Group B is given a bottle of water to sleep with at night. The effect on the children’s teeth is monitored for a set amount of time.</td>
</tr>
<tr>
<td>2</td>
<td>Cohort Studies</td>
<td>A Cohort Study is a study in which participants who presently have a certain condition and/or receive a particular treatment are followed over time. They are then compared with another group who are not affected by the condition.</td>
<td>A group of children who have poor dental health are followed across time. The habit of sleeping with a bottle of juice or water of the poor dental health group is compared to the sleep habits of a control group.</td>
</tr>
<tr>
<td></td>
<td>Ecological/Epidemiological Studies</td>
<td>Ecological studies look for associations between the occurrence of disease and exposure to known or suspected causes. The unit of observation is the population or community and may be defined in various ways.</td>
<td>Children with poor dental health are identified. Then correlations are made between (a) sleeping with a bottle of juice and dental health and (b) sleeping with a bottle of water and dental health.</td>
</tr>
<tr>
<td>3</td>
<td>Case-Controlled Studies</td>
<td>Case-control studies are a frequently used in epidemiological studies. Case-control studies compare participants who have a specific condition with participants who do not have the condition. Otherwise similar in order to identify factors that may contribute to the condition of interest.</td>
<td>Comparing children with poor dental health, with those who have good dental health who are the same age, ethnicity, socio-economic background, number of dental check-ups, etc.</td>
</tr>
<tr>
<td></td>
<td>Non-Randomized Control Trials</td>
<td>The participants and interventions are not randomly assigned.</td>
<td>The first 50 to volunteer are instructed to have their child sleep with a bottle of juice, with the last 50 volunteers are instructed to have their child sleep with a bottle of water.</td>
</tr>
<tr>
<td>4</td>
<td>Case-Series</td>
<td>A number of individual cases of a particular condition are identified and followed individually over time.</td>
<td>Ten cases of poor dental hygiene in children are identified and intensely followed for a set amount of time.</td>
</tr>
<tr>
<td>5</td>
<td>Expert Opinion</td>
<td>The opinion of a professional who is considered an expert in their field.</td>
<td>The advice/opinion of a dentist who specializes in children’s oral health and who has worked in the field for a long period of time.</td>
</tr>

SAMPLE PAPER OUTLINE

A review of evidence in support of school-based health promotion programs¹

Introduction (1/2-1 page)

Background (1 page)
  Obesity
  Why school-based programs?

Research Question: What are the features of a successful school based health program?

Methods (1/2-1 page)

Results (4-5 pages):
  Features of successful programs
    Peer-led
    Collaborative – community
    Dedicated school health coordinators
    Incorporates national/provincial/regional guidelines
    Parents as integral part of program and source of support for
    children
    Role of family doctors in the school-based health program model
    Gender and other subgroup analysis

Discussion (4-5 pages)

Conclusion (1 page)

Acknowledgement

Bibliography

Tables: the table becomes the central piece of your review. Do not repeat what is
in the table in the text, but describe it in general terms.

¹ Dr. Kappagantula provided permission to use her resident project as a sample
project outline and literature review table.
### Sample Table for a Literature Review

<table>
<thead>
<tr>
<th>Author</th>
<th>Design</th>
<th>n</th>
<th>Variables</th>
<th>Results</th>
<th>Limitations</th>
</tr>
</thead>
<tbody>
<tr>
<td>Bjelland et al.</td>
<td>RCT</td>
<td>14</td>
<td>Sugared beverage intake, sedentary behaviour</td>
<td>Preventive initiatives more effective in girls, need to study gender subgroups</td>
<td>Crude estimates of sedentary behaviours, sampling bias, social desirability in data</td>
</tr>
<tr>
<td>Brown T, Summerbell C.</td>
<td>Literature Review</td>
<td>38</td>
<td>Weight outcome</td>
<td>School based interventions may have benefit but inconsistent, may be short-term, girls/younger children have more benefit, physical activity must be combined with diet interventions</td>
<td>Heterogeneity of studies evaluated, therefore difficult to generalize any findings.</td>
</tr>
<tr>
<td>Bryn Austin S et al.</td>
<td>Qualitative</td>
<td>9</td>
<td>Effectiveness of School Health Index, Role of external facilitator</td>
<td>Presence of external facilitator influenced effectiveness of SHI and ability of schools to implement health promotion initiatives</td>
<td>Most schools in one geographical location (New England), reliance on self-reported data, did not include an objective data source</td>
</tr>
<tr>
<td>Card A, Doyle E.</td>
<td>Qualitative</td>
<td>40</td>
<td>Effectiveness of School Health Coordinator in implementing health promotion strategies in Nfld.</td>
<td>School health coordinator can change the approach of health promotion in schools to involve social, environmental as well as physiological health determinants</td>
<td>Vague descriptors regarding effectiveness of school health coordinators, results very preliminary in nature</td>
</tr>
<tr>
<td>Crawford PB et al.</td>
<td>Position paper</td>
<td>n/a</td>
<td>n/a</td>
<td>Using a bioethics framework further justifies the promotion of nutritional health through schools</td>
<td>n/a</td>
