

## **OBJECTIVES FOR WEDNESDAY SEMINARS**

### **Medical Complications of Neurologic Injury**

1. To identify common medical complications following neurologic injuries such as stroke, acquired brain injury, spinal cord injury and non-traumatic spinal conditions, and neuromuscular conditions such as Guillain Barre Syndrome, including: neuropathic pain, spasticity, pressure injuries, neurogenic bowel and bladder, chronic regional pain syndrome, and heterotopic ossification.
2. To understand the pathophysiology of these medical complications.
3. To describe an approach to management of these medical complications.
