

Publications (Kevin Duffy)

- Aronitz EM, Kamermans BA, Duffy KR (2021) Development of parvalbumin neurons and perineuronal nets in the visual cortex of normal and dark-exposed cats. *Journal of Comparative Neurology* 529: 2827-2841.
- DiCostanzo NR, Crowder NA, Kamermans BA, Duffy KR (2020) Retinal and optic nerve integrity following monocular inactivation for the treatment of amblyopia. *Frontiers in Systems Neuroscience* 14:32.
- Lingley AJ, Mitchell DE, Crowder NA, Duffy KR (2019) Modification of peak plasticity induced by brief dark exposure. *Neural Plasticity* 2019:3198285.
- Mitchell DE, Crowder NA, Duffy KR (2019) The critical period for darkness-induced recovery of the vision of the amblyopic eye following early monocular deprivation. *Journal of Vision* 19: 1-13.
- Mitchell DE, Aronitz E, Bobbie-Ansah P, Crowder NA, Duffy KR (2019) Fast recovery of the amblyopic eye acuity of kittens following brief exposure to total darkness depends on the fellow eye. *Neural Plasticity* doi: 10.1155/2019/7624837
- Lingley AJ, Bowdridge JC, Farivar R, Duffy KR (2018) Mapping of neuron soma size as an effective approach to delineate differences between neural populations. *Journal of Neuroscience Methods* 304, 126-135.
- Holman KD, *Duffy KR*, Mitchell DE (2018) Short periods of darkness fail to restore visual or neural plasticity in adult cats. *Visual Neuroscience* 35, 1-9.
- Duffy KR*, Fong, MF, Mitchell DE, Bear MF (2018) Recovery from the anatomical effects of long-term monocular deprivation in cat lateral geniculate nucleus. *Journal of Comparative Neurology* 526, 310-323.
- Fong MF, Mitchell DE, *Duffy KR*, Bear MF (2016) Retinal inactivation promotes recovery from amblyopia. *Proceedings of the National Academy of Sciences* 113, 14139-14144.
- Crocker-Buque A, Currie SP, Luz LL, Grant SG, *Duffy KR*, Kind PC, Daw MI (2016) Altered. *Human Molecular Genetics* pii: ddw244. [Epub ahead of print].
- Duffy KR*, Lingley AJ, Holman KD, Mitchell DE (2016) Susceptibility to monocular deprivation following immersion in darkness either late into or beyond the critical period. *Journal of Comparative Neurology*, 524, 2643-2653.
- Mitchell DE, MacNeil K, Crowder NA, Holman K & *Duffy KR* (2015) Recovery of visual functions in amblyopic animals following brief exposure to total darkness. *Journal of Physiology* 594, 149-167.

- Song S, Mitchell DE, Crowder NA & *Duffy KR* (2015) Postnatal accumulation of intermediate filaments in the cat and human primary visual cortex. *Journal of Comparative Neurology* 523, 2111-2126.
- Mitchell DE, Crowder NA, Holman K, Smithen M & *Duffy KR* (2015) Ten days of darkness causes temporary blindness during an early critical period in felines. *Proceeding of the Royal Society* 282 (1803).
- Duffy KR*, Bukhamseen DH, Smithen MJ & Mitchell DE (2015) Binocular eyelid closure promotes anatomical but not behavioural recovery from monocular deprivation. *Vision Research* 114, 151-160.
- Mitchell DE & *Duffy KR* (2014) The case from animal studies for balanced binocular treatment strategies for human amblyopia. *Ophthalmic Physiology* 34, 129-145.
- Duffy KR*, Holman K & Mitchell DE (2014) Shrinkage of X cells in the lateral geniculate nucleus after monocular deprivation revealed by FoxP2 labeling. *Visual Neuroscience* 31, 253-261.
- Duffy KR* & Mitchell DE (2013) Darkness alters maturation of visual cortex and promotes fast recovery from monocular deprivation. *Current Biology*, 23:382-386.
- O'Leary TP, Kutcher MR, Mitchell DE & *Duffy KR* (2012) Recovery of neurofilament following early monocular deprivation. *Frontiers in Systems Neuroscience* 6:22.
- Duffy KR*, Crowder NA & LeDue EE (2012) Investigation of cytoskeleton proteins in neurons of the cat lateral geniculate nucleus. *Journal of Comparative Neurology* 520: 186-199.
- Duffy KR* & Duffy MS (2011) An in situ method for the examination of calcium-dependent proteolysis. *Journal of Neuroscience Methods* 201: 333-339.
- Mitchell DE, Kennie J & *Duffy KR* (2011) Preference for binocular concordant visual input in early postnatal development remains despite prior monocular deprivation. *Vision Research* 51: 1351-1359.
- Duffy KR* & Slusar JE (2009) Monocular deprivation provokes alteration of the neuronal cytoskeleton in developing cat lateral geniculate nucleus. *Visual Neuroscience* 11:1-10.
- Kutcher MR & *Duffy KR* (2007) Cytoskeleton alteration correlates with gross structural plasticity in the cat lateral geniculate nucleus. *Visual Neuroscience* 24:775-785.
- Duffy KR* & Hubel DH (2007) Receptive field properties of neurons in the primary

visual cortex under photopic and scotopic lighting conditions. *Vision Research* 47:2569-2574.

Duffy KR, Murphy KM, Frosch MP & Livingstone MS (2007) Cytochrome oxidase and neurofilament reactivity in monocularly deprived human primary visual cortex. Cerebral Cortex, 17, 1283-1291.

Duffy KR & Livingstone MS (2005) Loss of neurofilament labeling in the primary visual cortex of monocularly deprived monkeys. Cerebral Cortex, 15, 1146-1154.

Murphy KM, Duffy KR & Jones DG (2004) Experience-dependent changes in NMDAR1 expression in the visual cortex of an animal model for amblyopia. Visual Neuroscience, 21, 653-670.

Duffy KR & Livingstone MS (2003) Distribution of non-phosphorylated neurofilament in squirrel monkey V1 is complementary to the pattern of cytochrome-oxidase blobs. Cerebral Cortex, 13(7), 722-727.

Pack CC, Livingstone MS, Duffy KR, Born RT (2003) End-stopping and the aperture problem: two-dimensional motion signals in macaque V1. Neuron, 39, 671-680.

Murphy KM, Duffy KR, Jones DG & Mitchell DE (2001) Development of CO blobs in the visual cortex of normal and visually deprived cats. Cerebral Cortex, 11, 122-135.

Fava MA, Duffy KR, Murphy KM (1999) Experience-dependent development of NMDAR1 Subunit expression in the lateral geniculate nucleus. Visual Neuroscience, 16(4), 781-789.

Duffy KR, Murphy KM & Jones DG (1998) Analysis of postnatal growth of visual cortex. Visual Neuroscience, 15(5), 831-839.

Trepel C, Duffy KR, Pegado VD & Murphy KM (1998) Patchy distribution of NMDAR1 subunit immunoreactivity in developing visual cortex. The Journal of Neuroscience, 18(9), 3404-3415. [C.T. and K.R.D. contributed equally to this work]
