Instructor(s): Jennifer Frail-Gauthier  jfrail@dal.ca  LSC 5014
Lectures:  11:35-12:25  Computer Science Building Rm 127
Laboratories:  3 hours per week (Thursdays B02 11:35 or B01 2:35; LSC 2102 by touch tanks)
Teaching Assistants:  Emma MacNutt-Burrows and Troy Palmer

Course Description
From the Undergraduate Calendar: A survey of the diversity, ecology and evolutionary history of the major invertebrate groups. Lectures will emphasize phylogenetics and diversity of body plans. Labs will emphasize identification and anatomy through dissections and observations.

This class is taught mostly from an evolutionary perspective (including molecular phylogeny), with ecology, form and function, and even paleontology. Instead of being taught from the “earliest invertebrates” to the “most vertebrate-like invertebrates” chronology, this course is taught in major evolutionary groups and patterns. You will have to use your previous BIOL 2003 knowledge to help with the backbone nuts and bolts. By the end of the semester, you will all be invertebrate zoologists. Pretty cool, huh?

This is an intense course, with a lot of information. You will have to memorize, but most importantly, understand. The bulk of your grade will come from being able to understand, analyze, evaluate and process information about invertebrate ecology and evolution... look for main connections, and look for WHY and HOW things are the same/different--- whether it’s the animals’ form and function or their evolution and phylogeny.

Course Prerequisites
BIOL 2003

Course Objectives/Learning Outcomes
Picking up from BIOL 2003, you will learn many things in BIOL 3301. By the end of this course you should be able to (this is not a complete list!):

✓ recall, recognize, classify and understand all Metazoan Phyla
✓ understand the process of evolution and phylogeny of invertebrates
✓ manage a lot of new information (by taking good lecture notes, reviewing frequently, and staying on top of available readings)
✓ critically analyze scientific papers (through your annotated bibliography), lectures, and guest talks
✓ prepare an oral presentation and annotated bibliographies
✓ understand why there are so many hypotheses surrounding invertebrate evolution
✓ ...and most importantly, appreciate the extreme diversity and complexity of these invertebrate groups!
Course Materials

No required textbooks: required readings will be posted to Bright Space. These will include articles from the primary literature, commentaries, Science blogs and other news-related web pages. 1-2 hours should be devoted each week to these readings/exploration. All of this information will be essential to integrate into the essay questions for the final exam. No clickers (Turning Technologies) are required for this class.

Lectures

Monday Wednesday Friday 11:35 to 12:25, Computer Science 127
Lectures are available for download on Bright Space. Full lecture PowerPoints will be available AFTER the lecture. BEFORE the lectures, I will have “Pre-Lecture Hot Topics” posted in .doc format. Some lectures will be discussion-based, following assigned readings/explorations. Some lectures may be guests as well!

Labs

Exact schedule will be based on Guest Availability and order may change throughout the semester. Labs are a mixture of wet-lab explorations, dissections, class debates, and guest demonstrations. The last three labs will be devoted to your presentations. It is very important for you to ask questions and participate in the labs. The in-class debates and discussions cover some of the big ideas and hypotheses about invertebrate evolution. For a few labs, I have preserved animals for dissection and examination. I will also have some smaller live animals to see in action! At the end of every lab, you will hand in a short critical summary of the information from the guest speaker or the discussion, or hand in a completed question sheet from dissections. This will help keep you engaged in the lab and will help develop your critical thinking and scientific communication—very important for future research in Honours and beyond.

Course Assessment

<table>
<thead>
<tr>
<th>Component</th>
<th>Weight (% of final grade)</th>
<th>Date</th>

<tr>
<td>Assignments*</td>
<td>55%</td>
<td>See details below</td>
</tr>
</tbody>
</table>

Assignment Evaluation Details* (55%)

Invertebrate Term Project (science literacy, academic writing, oral presentation): 35%
- Composed of three separate parts due at different times
- Information will be on BrightSpace and discussed in the first lab (January 11<sup>th</sup>) (criteria, instructions, etc.)
- Part 1 Annotated Bibliography due Feb 8th (12%)
- Part 2 Annotated Bibliography due March 15th (12%)
- Part 3 Presentation (11%) – In Lab March 22<sup>nd</sup>, 29<sup>th</sup>, April 5<sup>th</sup> (sign up for TOPIC in 2<sup>nd</sup> lab (January 18th). Presentation order will be determined by the end of February and will be based on topics.

Lab Summaries/Debates (15% total)
Depending on the type of lab (guest speaker, animal examination, dissection...), you will hand in a summary and/or drawing. Attendance will be taken in every lab. Summaries must be handed in by 11:59
PM of the same day. Guiding questions and criteria will be posted on BrightSpace to help write your summaries. These are not “busy work” assignments: they help you to maintain focus in the lab, and think critically during the guest lecture and lab. They also help in picking out the important information and critically analyzing information given to you. These will be graded on an all-or-nothing basis (details will be posted to BrightSpace). These will be worth 8%. The 7% for the debates will be graded based on content, quality of discussion, and participation. More information will be given before these labs.

Class Participation (5%)
Certain lectures will be attendance-mandatory. They may be guest lectures, or class discussion lectures based on assigned readings or website explorations. You will know in advance when these discussion or guest lectures will be.

Course Policies
Dalhousie has a new Student Declaration of Absence that is being “soft-launched” this academic term. SDA forms “replace sick notes for absences of three days or fewer that result in missed or late academic requirements. The submission of the form does not provide an automatic exemption from any academic requirements that were missed or late during an absence. Any alternate coursework arrangements for missed or late academic requirements are at the discretion of individual course instructor(s).”

Details on how to use the form can be found here: [https://www.dal.ca/campus_life/safety-respect/student-rights-and-responsibilities/academic-policies/Information%20for%20students.html](https://www.dal.ca/campus_life/safety-respect/student-rights-and-responsibilities/academic-policies/Information%20for%20students.html)

IMPORTANT: Because this is a soft-launch and a learning process for all, it is still necessary for you to contact Jen about your absences for labs, tests, or attendance-required lectures, and for your missed assignments/deadlines.

Extra Pointers to Ace Invertebrate Biology!
The framework that I will use to teach invertebrate zoology is, broadly, evolutionary. I hope by the end of the course that you will have a really good understanding of the evolution of the invertebrates, how organisms with different body plans evolved and who their ancestors might have been. You will get an introduction to paleontology, to evolution, to molecular phylogenetics, to ecology, and to the great and varied diversity of invertebrates on the planet. You will be able to wow your friends by your ability to identify ~97% of the animal life on planet earth!

Here is some advice to make sure you don’t get overwhelmed in BIOL 3301!

- Form a study group with other students for review sessions. Ask for help when you have a question, not just right before the exams. Post questions and topics on Bright Space, or ask during lecture (chances are, if you have a question about a topic, so do other students!)
- Explore online! Follow science and biology blogs on Twitter (i.e. Scientific American, New Scientist, NOAA, Nature...), watch David Attenborough, search Invertebrate topics in Google and/or Google Scholar regularly! The best way to learn is to be excited about learning—I’ll definitely help with that one! ☺️
Do the readings! You are given a manageable amount every week. Do not leave them until April!

Memorize the phylogeny. Memorizing is the base of the pyramid, and knowing this phylogeny will help you understand the HOW’s and the WHY’s of invertebrate evolution.

Study throughout the term. You should be reviewing every week at the minimum—don’t leave studying for the last minute. Studying should be a REVIEW of material, not learning it for the first time.

Think proactively and critically to best prepare yourself for the tests. What are some overall patterns of information you are learning? Themes, body plans, evolution, etc...

Most importantly, come to Jen if you have any issues! I am approachable and easy to reach. No question is too dumb, no concern is too little. Let’s have a great semester!
## Course Content

### Tentative Class Dates
*Topics flow from one lecture to the next; Guest lectures may change dates slightly*

### Tentative Lab Schedule
*Dates subject to change because of guest availability, however, the Annotated Bibliography due dates, midterm, and the presentation dates will not change.*

**April 12<sup>th</sup>-26<sup>th</sup> - Final Exam (Scheduled Exam Period)**
University Policies and Statements

This course is governed by the academic rules and regulations set forth in the University Calendar and by Senate

Academic Integrity
At Dalhousie University, we are guided in all of our work by the values of academic integrity: honesty, trust, fairness, responsibility and respect (The Center for Academic Integrity, Duke University, 1999). As a student, you are required to demonstrate these values in all of the work you do. The University provides policies and procedures that every member of the university community is required to follow to ensure academic integrity.
Information: [https://www.dal.ca/dept/university_secretariat/academic-integrity.html](https://www.dal.ca/dept/university_secretariat/academic-integrity.html)

Accessibility
The Advising and Access Services Centre is Dalhousie's centre of expertise for student accessibility and accommodation. The advising team works with students who request accommodation as a result of a disability, religious obligation, or any barrier related to any other characteristic protected under Human Rights legislation (Canada and Nova Scotia).
Information: [https://www.dal.ca/campus_life/academic-support/accessibility.html](https://www.dal.ca/campus_life/academic-support/accessibility.html)

Student Code of Conduct
Everyone at Dalhousie is expected to treat others with dignity and respect. The Code of Student Conduct allows Dalhousie to take disciplinary action if students don’t follow this community expectation. When appropriate, violations of the code can be resolved in a reasonable and informal manner—perhaps through a restorative justice process. If an informal resolution can’t be reached, or would be inappropriate, procedures exist for formal dispute resolution.

Diversity and Inclusion – Culture of Respect
Every person at Dalhousie has a right to be respected and safe. We believe inclusiveness is fundamental to education. We stand for equality. Dalhousie is strengthened in our diversity. We are a respectful and inclusive community. We are committed to being a place where everyone feels welcome and supported, which is why our Strategic Direction prioritizes fostering a culture of diversity and inclusiveness
Statement: [http://www.dal.ca/cultureofrespect.html](http://www.dal.ca/cultureofrespect.html)

Recognition of Mi’kmaq Territory
Dalhousie University would like to acknowledge that the University is on Traditional Mi’kmaq Territory. The Elders in Residence program provides students with access to First Nations elders for guidance, counsel and support. Visit or e-mail the Indigenous Student Centre (1321 Edward St) (elders@dal.ca).
