Invertebrate Biology  
Winter 2017

Lecture: Jen Frail-Gauthier  
jfrail@dal.ca  
LSC 5126  
Laboratory: Christine Angelidis  
christine.angelidis@dal.ca  
LSC 6078  
Lectures: M W F  12:35-1:25  
LSC 206  
Laboratories: B01: 2:35 Thursdays  
LSC 2102 (by the touch tanks)  
B02: 12:35 Thursdays  

Teaching Assistants: Gabrielle Picard and Troy Palmer

Course Description
This class is taught mostly from an evolutionary perspective (including molecular phylogeny), with ecology, form and function, and even paleontology. Instead of being taught from the “earliest invertebrates” to the “most vertebrate-like invertebrates” chronology, this course is taught in major evolutionary groups and patterns. You will have to use your previous BIOL 2003 knowledge to help with the backbone nuts and bolts. By the end of the semester, you will all be invertebrate zoologists. Pretty cool, huh?

This is an intense course, with a lot of information. You will have to memorize, but most importantly, understand. The bulk of your grade will come from being able to understand, analyze, evaluate and process information about invertebrate ecology and evolution... look for main connections, and look for WHY and HOW things are the same/different--- whether it’s the animals’ form and function or their evolution and phylogeny.

Course Prerequisites
BIOL 2003

Course Objectives/Learning Outcomes
Picking up from BIOL 2003, you will learn many things in BIOL 3301. By the end of this course you should be able to (this is not a complete list!):
- recall, recognize, classify and understand all Metazoan Phyla
- understand the process of evolution and phylogeny of invertebrates
- manage a lot of new information (by taking good lecture notes, reviewing frequently, and staying on top of available readings)
- critically analyze scientific papers (through your annotated bibliography), lectures, and guest talks
- prepare an oral presentation and annotated bibliographies
- understand why there are so many hypotheses surrounding invertebrate evolution
- ...and most importantly, appreciate the extreme diversity and complexity of these invertebrate groups!
Course Materials
No required textbooks: required readings will be posted to Bright Space. These will include articles from the primary literature, commentaries, Science blogs and other news-related web pages. 1-2 hours should be devoted each week to these readings/exploration. All of this information will be essential to integrate into the essay questions for the final exam.

Lectures
Monday Wednesday Friday 12:35 to 1:25, LSC 206
Lectures are available for download on Bright Space. Full lecture PowerPoints will be available AFTER the lecture. BEFORE the lectures, I will have “Pre-Lecture Hot Topics” posted in .doc format (similar to BIOL 2003 if you took it in Fall 2013 -2014). Some lectures will be discussion-based, following assigned readings/explorations. Some lectures may be guests as well!

Labs
Exact schedule will be based on Guest Availability and order may change throughout the semester. For most labs, B02 will not start until 12:35 PM. B01 will still start at 2:35. We will remind you weekly when your lab will start.

Each lab will be an exploration, where guest researchers, professors, students and industry professionals will present information about their specific invertebrate phyla, and have materials available for you to examine in person. It is very important for you to ask questions and participate in the labs. In the weeks where there are no available guest speakers, we will have in-class debates and discussions about some of the big ideas and hypotheses about invertebrate evolution. For a few labs, I have preserved animals for dissection and examination. I will also have some smaller live animals to see in action! At the end of every lab, you will hand in a short critical summary of the information from the guest speaker or the discussion. This will help keep you engaged in the lab and will help develop your critical thinking and scientific communication — very important for future research in Honours and beyond.

Course Assessment

<table>
<thead>
<tr>
<th>Component</th>
<th>Weight (% of final grade)</th>

</tr>
<tr>
<td>Assignments</td>
<td>55%</td>
<td>See details below</td>
</tr>
</tbody>
</table>

Assignment Evaluation Details (55%)

Invertebrate Term Project (science literacy, academic writing, oral presentation): 35%
- Composed of three separate parts due at different times
- Information will be on BrightSpace and discussed in the first lab (January 7th) (criteria, instructions, etc.)
- Part 1 Annotated Bibliography due Feb 9th (12%)
- Part 2 Annotated Bibliography due March 16th (12%)
- Part 3 Presentation (11%) – In Lab March 23rd, 30th, April 6th (sign up for TOPIC in 1st lab (January 12th). Presentation order will be determined by the end of February and will be based on topics.
Lab Summaries/Debates (15% total)
Depending on the type of lab (guest speaker, animal examination, dissection...), you will hand in a summary/drawing. Attendance will be taken in every lab. Summaries must be handed in by 11:59 PM of the same day. Guiding questions and criteria will be posted on BrightSpace to help write your summaries. These are not “busy work” assignments: they help you to maintain focus in the lab, and think critically during the guest lecture and lab. They also help in picking out the important information and critically analyzing information given to you. These will be graded on an all-or-nothing basis (details will be posted to BrightSpace). These will be worth 8%. The 7% for the debates will be graded based on content, quality of discussion, and participation. More information will be given before these labs.

Class Participation (5%)
This year, I am able to replace the “Friday Lectures” with REAL lectures. The information in these Friday Lectures were (in my opinion!) really interesting. I am going to use this information and develop lectures around the readings and explorations associated with them. For these lectures, attendance will be recorded and participation in class discussions will also count for your grade. You will know in advance when these discussion lectures will be.

Conversion of numerical grades to Final Letter Grades follows the Dalhousie Common Grade Scale

Course Policies
Please let me or Christine know as soon as you can if you cannot attend lab/presentation, write a test, or hand in an assignment due to medical or personal reasons.

Extra Pointers to Ace Invertebrate Biology!
The framework that I will use to teach invertebrate zoology is, broadly, evolutionary. I hope by the end of the course that you will have a really good understanding of the evolution of the invertebrates, how organisms with different body plans evolved and who their ancestors might have been. You will get an introduction to paleontology, to evolution, to molecular phylogenetics, to ecology, and to the great and varied diversity of invertebrates on the planet. You will be able to wow your friends by your ability to identify ~97% of the animal life on planet earth!

Here is some advice to make sure you don’t get overwhelmed in BIOL 3301!

- Form a study group with other students for review sessions. Ask for help when you have a question, not just right before the exams. Post questions and topics on BbLearn, or ask during lecture (chances are, if you have a question about a topic, so do other students!)
- Explore online! Follow science and biology blogs on Twitter (i.e. Scientific American, New Scientist, NOAA, Nature...), watch David Attenborough, search Invertebrate topics in Google and/or Google Scholar regularly! The best way to learn is to be excited about learning—Christine and I'll definitely help with that one! 😊
- Do the readings! You are given a manageable amount every week. Do not leave them until April!
- Memorize the phylogeny in “The New View of Animal Phylogeny”. Memorizing is the base of the pyramid, and knowing this phylogeny will help you understand the HOW’s and the WHY’s of invertebrate evolution.
- Study throughout the term. You should be reviewing every week at the minimum—don’t leave studying for the last minute. Studying should be a REVIEW of material, not learning it for the first time.
- Think proactively and critically to best prepare yourself for the tests. What are some overall patterns of information you are learning? Themes, body plans, evolution, etc...
Most importantly, come to us if you have any issues! We are approachable and easy to reach. No question is too dumb, no concern is too little. Let’s have a great semester!

**Course Content**

**Tentative Class Dates**
*Topics flow from one lecture to the next; Guest lectures may change dates slightly*

**Tentative Lab Schedule**
*Dates subject to change because of guest availability, however, the Annotated Bibliography due dates, midterm, and the presentation dates will not change.*

**April 12th-26th** - Final Exam (Scheduled Exam Period)
ACCOMMODATION POLICY FOR STUDENTS

Students may request accommodation as a result of barriers related to disability, religious obligation, or any characteristic protected under Canadian Human Rights legislation. The full text of Dalhousie’s Student Accommodation Policy can be accessed here:

Students who require accommodation for classroom participation or the writing of tests and exams should make their request to the Advising and Access Services Centre (AASC) prior to or at the outset of the regular academic year. More information and the Request for Accommodation form are available at www.dal.ca/access.

ACADEMIC INTEGRITY

Academic integrity, with its embodied values, is seen as a foundation of Dalhousie University. It is the responsibility of all students to be familiar with behaviours and practices associated with academic integrity. Instructors are required to forward any suspected cases of plagiarism or other forms of academic cheating to the Academic Integrity Officer for their Faculty.

The Academic Integrity website (http://academicintegrity.dal.ca) provides students and faculty with information on plagiarism and other forms of academic dishonesty, and has resources to help students succeed honestly. The full text of Dalhousie’s Policy on Intellectual Honesty and Faculty Discipline Procedures is available here:
http://www.dal.ca/dept/university_secretariat/academic-integrity/academic-policies.html

STUDENT CODE OF CONDUCT

Dalhousie University has a student code of conduct, and it is expected that students will adhere to the code during their participation in lectures and other activities associated with this course. In general:

“The University treats students as adults free to organize their own personal lives, behaviour and associations subject only to the law, and to University regulations that are necessary to protect
• the integrity and proper functioning of the academic and non – academic programs and activities of the University or its faculties, schools or departments;
• the peaceful and safe enjoyment of University facilities by other members of the University and the public;
• the freedom of members of the University to participate reasonably in the programs of the University and in activities on the University's premises;
• the property of the University or its members.”

The full text of the code can be found here:

COPYRIGHT

All members of the Dalhousie community are expected to comply with their obligations under Canadian copyright law. Dalhousie copyright policies and guidelines, including our Fair Dealing Guidelines, are available at http://www.dal.ca/dept/copyrightoffice.html. Copyright questions should be directed to the Copyright Office at copyright.office@dal.ca.
SERVICES AVAILABLE TO STUDENTS

The following campus services are available to help students develop skills in library research, scientific writing, and effective study habits. The services are available to all Dalhousie students and, unless noted otherwise, are free.
