Faculty of Science Course Syllabus  
Department of Biology  
BIOL/MARI 3761 Marine Ecology  
Fall 2016

Instructor(s): Robert Scheibling  
rescheib@dal.ca  LSC 3089  
John O’Brien (TA)  
j.obrien@dal.ca  LSC 3087

Lectures: MW: 10:35-11:25  
LSC Rm C208

Laboratories: One field trip

Tutorials: Six 1-hour tutorials

Course Description

Building upon an understanding of basic ecological and evolutionary principles, and a familiarity with the major marine invertebrate and algal taxa, this course examines patterns and processes at organismal, population and community levels that determine the diversity and distribution of life in the sea.

Course Prerequisites

BIOL 2060.03 (or BIOA 3001.03) and (BIOL 2003.03 or BIOL 2004.03), and OCEA 2000X/Y.06 or (OCEA 2001.03 and OCEA 2002.03)

Course Objectives/Learning Outcomes

- Contrast the physical and chemical environment in the ocean with that on land, and explain how the ocean milieu has shaped the evolution of life and the structure and functioning of marine ecosystems

- Explain the interplay of biological interactions and physical factors in determining patterns of intertidal zonation on rocky shores

- Contrast developmental strategies of marine invertebrates with larval forms, in terms of evolutionary trade-offs and biogeographic patterns

- Account for variation in patterns of larval dispersal, settlement and recruitment among benthic invertebrates, in terms of oceanographic features and biological factors

- Explain processes that determine patterns of distribution, abundance and productivity of kelp beds/forests along temperate coasts
• Explain the roles of disturbance and biological interactions (competition, grazing, predation and disease) in shaping community organization in kelp beds/forests worldwide, and the impact of invasive species on the kelp-bed ecosystem of the Northwest Atlantic

• Describe the distribution, environmental features, and trophic structure of tropical coral reefs

• Account for the high productivity and diversity of coral reefs, and their vulnerability to environmental stressors and human impacts

• Describe the physical, chemical and biological environment of the deep-sea, and explain how this accounts for patterns of species abundance and diversity

• Account for the high productivity and biomass, but low species diversity, at hydrothermal vents

• Evaluate the effects of humans, past and present, on marine species, populations and ecosystems worldwide

• Conduct a manipulative field experiment and statistically analyze and interpret the results in the form of a scientific paper

• Work in teams to critically evaluate an anthropogenic impact in a marine system (at the species, population, or community level) and present an oral report in the form of a conference presentation

Course Policies

A late penalty of 10% per day will be applied to the field trip report. A missed exam may be replaced with a make-up exam pending a written excuse from a health practitioner.

Course Content

Module 1: Life on land and in the sea: worlds of contrast

Sept  7  CLASS INTRODUCTION
   Physical/chemical environment, suspension, swimming; filter feeding
   9  Light, sound, & pressure; ecosystem structure & function

Module 2: The rocky intertidal zone: a test bed for ecological theory

12  Environment, zonation
   Tutorial 1: Field project design and background
14  Competition & predation
   Student presentation groups assigned
16  Biological & physical factors; seaweeds & grazing
17  FIELD TRIP: Sandy Cove, Sambro (12:00-17:00; 0.2 m, 15:24)
19  Patchiness, succession, disturbance, latitudinal gradients
   Tutorial 2: Field data collation & image analysis
21  Vignette: intertidal adaptations - brittle stars, limpets
   Presentation outlines submitted

Module 3: Reproduction, larval ecology, & recruitment

23  Asexual & sexual reproduction, fertilization rate
   Presentation schedule announced
26  Larval developmental strategies, mortality
   Tutorial 3: Field data presentation
28  Dispersal, larval behaviour, settlement, recruitment
30  Vignette: fertilization ecology of free-spawners, coral mass spawning

Module 4: The rocky subtidal zone: a hot bed of biological interactions

Oct  3  Habitats, biological & physical factors, hydrodynamics
   FIELD REPORT: Data entry complete
   Tutorial 4: Field data interpretation
   5  Kelp beds/forests: distributional patterns, productivity
   7  Group presentation 1
10  THANKSGIVING HOLIDAY
12  Grazing, predation, disturbance
14  Group presentation 2
Module 5: Tropical coral reefs: Oases in a desert ocean

31 Reef distribution, origin & structure, biological assemblages
FIELD REPORT: Draft 1 figures returned
Tutorial 6: Field report Q & A

NOV 2 MIDTERM EXAM (Modules 1-4)
4 Group presentation 5
7-11 FALL STUDY BREAK & REMEMBRANCE DAY HOLIDAY
14 Coral biology & algal symbiosis
16 Coral productivity, species interactions, disturbance
FIELD REPORT DUE
18 Group presentation 6
21 Human impacts, climate change and the fate of reefs
23 Vignettes: Coral bleaching; fish predation on reefs

Module 6: The deep: mountains, plains & hot springs

25 Environment, patterns of abundance & diversity
28 Adaptations, symbioses, biological processes
30 Hydrothermal vents

Course review

Dec 2 Exam preparation, review
5 Course review and evaluation (optional)

ACCOMMODATION POLICY FOR STUDENTS

Students may request accommodation as a result of barriers related to disability, religious obligation, or any characteristic protected under Canadian Human Rights legislation. The full text of Dalhousie’s Student Accommodation Policy can be accessed here: http://www.dal.ca/dept/university_secretariat/policies/academic/student-accommodation-policy-wef-sep--1--2014.html

Students who require accommodation for classroom participation or the writing of tests and exams should make their request to the Advising and Access Services Centre (AASC) prior to or at the outset of
the regular academic year. More information and the Request for Accommodation form are available at www.dal.ca/access.

ACADEMIC INTEGRITY

Academic integrity, with its embodied values, is seen as a foundation of Dalhousie University. It is the responsibility of all students to be familiar with behaviours and practices associated with academic integrity. Instructors are required to forward any suspected cases of plagiarism or other forms of academic cheating to the Academic Integrity Officer for their Faculty.

The Academic Integrity website (http://academicintegrity.dal.ca) provides students and faculty with information on plagiarism and other forms of academic dishonesty, and has resources to help students succeed honestly. The full text of Dalhousie’s Policy on Intellectual Honesty and Faculty Discipline Procedures is available here:
http://www.dal.ca/dept/university_secretariat/academic-integrity/academic-policies.html

STUDENT CODE OF CONDUCT

Dalhousie University has a student code of conduct, and it is expected that students will adhere to the code during their participation in lectures and other activities associated with this course. In general:

“The University treats students as adults free to organize their own personal lives, behaviour and associations subject only to the law, and to University regulations that are necessary to protect

• the integrity and proper functioning of the academic and non – academic programs and activities of the University or its faculties, schools or departments;
• the peaceful and safe enjoyment of University facilities by other members of the University and the public;
• the freedom of members of the University to participate reasonably in the programs of the University and in activities on the University’s premises;
• the property of the University or its members.”

The full text of the code can be found here:
SERVICES AVAILABLE TO STUDENTS

The following campus services are available to help students develop skills in library research, scientific writing, and effective study habits. The services are available to all Dalhousie students and, unless noted otherwise, are free.
