

# ANT'S EYE VIEW

## Materials Needed:

Magnifying glass

Hula hoop (optional)

Paper and pencils

Camera (optional)

## Description:

Find a spot to place your hula hoop (or a hula hoop sized area). Once you have your spot, get down on ground level and see your chosen area from an ant's view! See how many different things you can find and try drawing or writing down what you see. If you have a camera, you can try taking pictures too!

- How does it look different down at this level?
- Do you see insects? What are they doing?
- Does this make you think differently about micro-habitats at your feet? How so?
- How often do you think these micro-habitats change? Would it look different if you came back in a week, a day or an hour?
