Instructor: Theodore Kolokolnikov
Course webpage: http://www.mathstat.dal.ca/~tkolokol/classes/5220
Office: Chase building, 304
Email: tkolokol@gmail.com
Office hours: After each class. Or whenever I'm in the office. You can also email me to set up an appointment.

Handouts:

- Click here for class notes

Textbook: We will use Walter A. Strauss, Partial Differential Equations, an introduction as one of the references. Course notes will also be provided.

Evaluation: Homework (25%), midterm (25%), final (50%).

Intellectual Honesty and Plagiarism: While collaborating on homework is allowed, you must write your own solutions! Example of good collaboration: do a question independently, then cross-check solution with your friend. Example of cheating: your friend writes the solution, you blindly copy it down without any acknowledgement. If you cheat, you will get into lots of trouble. Suspected cases of cheating will be referred to the Faculty Academic Integrity Officer. Punishments can include a suspension from university for a year! It is not worth it. For details, please read the section on academic honesty in the student calendar.

Please also review official Faculty of Science policies and additional resources.
