2819	Ramus meningeus	Ramus spinosus	Meningeal branch	Meningeal branch		

2820	Rami ganglionares ganglii otici	Radix sensoria ganglii otici	Branches to otic ganglion	Branches to otic ganglion		
2821	Divisio anterior		Anterior division	Anterior division		
2822	Nervus pterygoideus medialis		Nerve to medial pterygoid muscle	Nerve to medial pterygoid muscle		
2823	Nervus muscoli tensoris veli palatini		Nerve to tensor veli palatini muscle	Nerve to tensor veli palatini muscle		
2824	Nervus muscoli tensoris tympani		Nerve to tensor tympani muscle	Nerve to tensor tympani muscle		
2825	Nervus massetericus		Masseteric nerve	Masseteric nerve		
2826	Nervi temporales profundi		Deep temporal nerves	Deep temporal nerves		
2827	Nervus pterygoideus lateralis		Nerve to lateral pterygoid muscle	Nerve to lateral pterygoid muscle		
2828	Nervus buccalis		Buccal nerve	Buccal nerve		
2829	Divisio posterior		Posterior division	Posterior division		-
2830	Nervus auriculotemporalis		Auriculotemporal nerve	Auriculotemporal nerve		
2831	Nervus meatus acustici externi		Nerve to external acoustic meatus	Nerve to external acoustic meatus		
2832	Rami membranae tympani		Branches to tympanic membrane	Branches to tympanic membrane		
2833	Rami parotidei		Parotid branches	Parotid branches		
2834	Nervi auriculares anteriores		Anterior auricular nerves	Anterior auricular nerves		
2835	Rami temporales superficiales		Superficial temporal branches	Superficial temporal branches		
2836	Nervus lingualis		Lingual nerve	Lingual nerve		
2837	Rami isthmi faucium		Branches to isthmus of fauces	Branches to isthmus of fauces		
2838	Nervus sublingualis		Sublingual nerve	Sublingual nerve		
2839	Rami linguales		Lingual branches	Lingual branches		
2840	Ramus ganglionaris submandibularis posterior	Radix parasymphathica ganglii submandibularis	Posterior branch to submandibular ganglion	Posterior branch to submandibular ganglion	Parasympathetic root of submandibular ganglion	Radix sensoria ganglii submandibularis
2841	(Rami ganglionares sublinguales)	(Radices ganglii sublinguales)	(Branches to sublingual ganglion)	(Branches to sublingual ganglion)	(Roots of sublingual ganglion)	
2842	Nervus alveolaris inferior		Inferior alveolar nerve	Inferior alveolar nerve		
2843	Nervus mylohyoideus		Nerve to mylohyoid muscle	Nerve to mylohyoid muscle		
2844	Plexus dentalis inferior		Inferior dental plexus	Inferior dental plexus		
2845	Rami dentales inferiores		Inferior dental branches	Inferior dental branches		
2846	Rami gingivales inferiores		Inferior gingival branches	Inferior gingival branches		
2847	Nervus mentalis		Mental nerve	Mental nerve		
2848	Rami mentales		Mental branches	Mental branches

2853	Radices nervi facialis		Roots of facial nerve	Roots of facial nerve		
2854	Radix motoria		Motor root	Motor root		
2855	Nervus intermedius		Intermediate nerve	Intermediate nerve		Nerve of Wrisberg
2856	Ganglion geniculi		Geniculate ganglion	Geniculate ganglion		
2857	Geniculum	Genu	Geniculum	Geniculum	Genu	

2858	Rami intracraniales		Intracranial branches	Intracranial branches		
2859	Nervus petrosus major	Radix parasymphatica ganglii pterygopalatini	Greater petrosal nerve	Greater petrosal nerve	Parasympathetic root of pterygopalatine ganglion	Radix intermedia ganglii pterygopalatini
2860	Nervus canalis pterygoidei		Nerve of pterygoid canal	Nerve of pterygoid canal		Nerve of Vidian
2861	Nervus stapedius		Nerve to stapedius muscle	Nerve to stapedius muscle		
2862	Chorda tympani		Chorda tympani	Chorda tympani		
2863	Nervus facialis proprius		Facial nerve proper	Facial nerve proper		<i>Endnote 157</i>
2864	Nervus auricularis posterior		Posterior auricular nerve	Posterior auricular nerve		
2865	Ramus occipitalis		Occipital branch	Occipital branch		
2866	Ramus auricularis		Auricular branch	Auricular branch		
2867	Ramus digastricus		Digastric branch	Digastric branch		
2868	Ramus stylohyoideus		Stylohyoid branch	Stylohyoid branch		
2869	Plexus intraparotideus		Parotid plexus	Parotid plexus		
2870	Divisio superior	Divisio temporofacialis	Superior division	Superior division	Temporofacial division	
2871	Rami temporales		Temporal branches	Temporal branches		
2872	Rami zygomatici		Zygomatic branches	Zygomatic branches		
2873	Divisio inferior	Divisio cervicofacialis	Inferior division	Inferior division	Cervicofacial division	
2874	Rami buccales		Buccal branches	Buccal branches		
2875	(Ramus lingualis)		(Lingual branch)	(Lingual branch)		Branch of Cruveilhier
2876	Ramus marginalis mandibularis		Marginal mandibular branch	Marginal mandibular branch		
2877	Ramus cervicalis	Ramus colli	Cervical branch	Cervical branch		
2878	<b>Nervus vestibulocochlearis</b>	<b>Nervus cranialis VIII</b>	<b>Vestibulocochlear nerve</b>	<b>Vestibulocochlear nerve</b>	<b>Cranial nerve VIII</b>	
2879	<b>Nervus vestibularis</b>		<b>Vestibular nerve</b>	<b>Vestibular nerve</b>		
2880	Ganglion vestibulare		Vestibular ganglion	Vestibular ganglion		Ganglion of Scarpa
2881	Ramus communicans cochlearis	Ramus communicans vestibulocochlearis; Anastomosis vestibulocochlearis	Cochlear communicating branch	Cochlear communicating branch	Vestibulocochlear communicating branch.	Anastomosis of Oort
2882	Pars superior	Nervus utriculoampullaris; Nervus vestibularis superior	Superior part	Superior part	Utriculo-ampullary nerve; Utriculoampullary nerve; Superior vestibular nerve	
2883	Nervus utricularis		Utricular nerve	Utricular nerve		
2884	Nervus ampullaris anterior		Anterior ampullary nerve	Anterior ampullary nerve		
2885	Nervus ampullaris lateralis		Lateral ampullary nerve	Lateral ampullary nerve		
2886	Pars inferior	Nervus vestibularis inferior	Inferior part	Inferior part	Inferior vestibular nerve	
2887	Nervus ampullaris posterior	Nervus vestibularis posterior	Posterior ampullary nerve	Posterior ampullary nerve	Posterior vestibular nerve	
2888	Nervus saccularis		Saccular nerve	Saccular nerve		
2889	<b>Nervus cochlearis</b>		<b>Cochlear nerve</b>	<b>Cochlear nerve</b>		
2890	Ganglion cochleare	Ganglion spirale cochleare	Cochlear ganglion	Cochlear ganglion	Spiral ganglion.	Organ of Corti

## ENDNOTES

---

149 *Cellula implicants*. The **Cellula implicants** includes Schwann cells and olfactory ensheathing cells/glia in the Olfactory nerves.

150 *Terminatio neuralis libera*. TH had unencapsulated and encapsulated sensory corpuscles also listed under *Terminatio neuralis libera*. Free nerve endings are found in most connective and epithelial tissues.

151 *Terminatio folliculi pili*. Entity (and term) restored from TH. Hair follicles are innervated by a triad of receptor types: lanceolate, Ruffini and free nerve endings that compose the **Piloneural complex** (Munger BL, Ide C 1988 The structure and function of cutaneous sensory receptors. *Arch Histol Cytol* 51:1-34). In humans, microneuronographic studies by Vallbo et al. (Vallbo AB, Olausson H, Wessberg J, Kakuda N 1995 Receptive field characteristics of tactile units with myelinated afferents in hairy skin of human subjects. *J Physiol, Lond* 486:783-795) corroborate these findings.

152 *Complexus epithelialis tactus*. This term is from *Integumentum commune* of TH. The **Merkel cell-neurite complex** includes the *Epithelocytus tactilis* (Merkel cell) and the *Meniscus tactilis* (Merkel's tactile disc), a cup-shaped expansion of the nerve ending.

153 *Corpuscula sensoria capsulata*. **Encapsulated sensory corpuscles** are subdivided according to the organization of the Schwann-cell component of the capsules (see Chouchkov C 1978 Cutaneous Receptors. *Adv Anat Embryol Cell Biol* 54(5):1-63, and Darian-Smith I 1984 The sense of touch. In *Hb Physiol, The Nervous System III*, pp 739-788; Amer Physiol Soc, Bethesda, MD).

154 *Corpusculum sensorium fusiforme*. Receptors without a defined lamellation, found in dermis and joint capsules.

155 *Corpusculum ovoideum*. Receptors with asymmetrical Schwann-cell lamination, found in papillary dermis, and known as Meissner corpuscles. In mucocutaneous junctional areas (lips, external genitalia), they are known as Dogiel corpuscles and Krause end bulbs (Chouchkov C 1978 Cutaneous Receptors. *Adv Anat Embryol Cell Biol* 54(5):1-63). Golgi-Mazzoni corpuscles, found in the subcutaneous tissue of human fingers, also belong to this category (Halata Z 1975 The Mechanoreceptors of the Mammalian Skin. Ultrastructure and morphological classification. *Adv Anat Embryol Cell Biol* 50(5):1-77; Chouchkov 1978).

156 *Corpusculum lamellosum*. Receptors with a highly-ordered symmetrical lamellation, found associated with skin and joint capsules. They are composed of an outer fluid-filled capsule (*Schwannocytus capsularis* or Outer Schwann cell) with 20-30 concentric cellular laminae, and around the neurite, a compact inner core (*Schwannocytus lamellaris* or Inner Schwann cell), surrounding the fibre (there are about 60 layers of concentrically packed lamellar cells). The neurite enters the Pacini corpuscle via the *Spatium intermedium fissum* (Cleft intermediate space).

157 *Nervus facialis proprius*. New term for the peripheral part of *Nervus facialis*. Alternatively, the various parts of the Facial nerve may be mentioned (*Pars meatica*, *Pars labyrinthica*, *Pars tympanica*, *Pars pyramidalis*, *Pars mastoidea*, *Pars extracranialis*) as suggested by Ronald Bleys, Utrecht; see Lang J 1992 *Klinische Anatomie des Ohres*. Springer, Vienna-New York). The *Nervus facialis proprius* would become: *Nervus facialis*, *Pars extracranialis*.

158 *Nervus sinus carotici*. Given its size, the term **Nervus sinus carotici** (Carotid sinus nerve; see Toorop et al. 2009 *J Vasc Surg* 50:177-182) is more appropriate (suggested by Ronald Bleys, Utrecht).

159 *Nervus accessorius*. Although it was suggested that Cranial roots and Vagal communicating branches of the *Nervus accessorius* are uncommon (Lachman N, Acland RD, Rosse C 2002 Anatomical evidence for the absence of a morphologically distinct cranial root of the accessory nerve in man. *Clin Anat* 15:4-10; Ryan S, Blyth P, Duggan N, Wild M, Al-Ali S 2007 Is the cranial accessory nerve really a portion of the accessory nerve? *Anat Sci Int* 82:1-7), a recent microsurgical approach on 43 adult cadavers revealed that Cranial roots of the Accessory nerve exist in the majority of adult humans (Tubbs RS, Benninger B, Loukas M, Cohen Gadol AA 2014 Cranial roots of the accessory nerve exist in the majority of adult humans. *Clin Anat* 27:102-107).

160 *Ramus trapezius*. The *Ramus trapezius* forms with branches from the cervical plexus the **Plexus subtrapezialis**. As the *Ramus sternocleidomastoideus*, this branch can be identified in the Lateral cervical triangle.

161 *Ramus posterior nervi cervicalis secundi*. The first 3-4 cervical nerves form the **Plexus cervicalis profundus** (of Cruveilhier).

---

162 *Nervus pectoralis medialis*. A loop, the **Ansa pectoralis** may connect the medial and lateral pectoral nerves.

163 *Ramus cutaneus posterior nervi lumbalis primi*. The Nervi clunium superiores and Rami cutaneus posteriores are the same Gluteal cutaneous branches.

164 *Ramus cutaneus posterior nervi sacralis primi*. The Nervi clunium medii and the Ramus cutaneus posterior refer to the same gluteal cutaneous branches.

165 *Ganglia paravertebralia*. The Paravertebral ganglia include the Ganglia intermedia and the Ganglia trunci sympathici.

166 *Ganglion cervicothoracicum*. The Ganglion cervicothoracicum may be the Inferior cervical ganglion or a fusion of the Inferior cervical and the First thoracic ganglia.

167 *Ganglion impar*. The Sympathetic trunk often ends by forming an enlargement, the Ganglion impar, with the contralateral trunk in front of the Os coccygis.

168 *Plexus perivasculares*. The term Plexus perivasculares replaces Plexus periarteriales, since neural plexuses are also found around veins.

169 *Plexus cavernosus*. The term **Lateral sellar plexus** was suggested by Parkinson D (1995 J craniofac Surg 6:55-68).

170 *Rami orbitales*. One of these Orbital branches is the **Ramus sinus cavernosi anterior**, as described by Oomen KPO, Ebbeling J, de Ru JA, Hordijk GJ, Bleys RLAW (2011) A previously undescribed branch of the pterygopalatine ganglion. Am J Rhinol Allergy 25:1-4). Another Orbital branch has been termed **Ramus sinus cavernosi posterior** (Ronald Bleys, Utrecht, personal communication).

171 *Plexus aorticus abdominalis*. The Plexus intermesentericus is a synonym of the Plexus aorticus abdominalis; in TA as separate entries.

172 *Plexus entericus aganglionaris*. The enteric aganglionic plexuses are networks of nerve fibres consisting of axons and enteric glia but without regular nerve cell bodies. They exist in the mucosa (Plexus aganglionaris mucosus), in the muscularis mucosae (Plexus aganglionaris muscularis mucosae), in the two layers of the muscular coat (circular and longitudinal muscle plexus: Plexus aganglionaris internus muscularis and Plexus aganglionaris externus muscularis) and underneath the serosa (serosal plexus; Plexus aganglionaris serosus). The extreme aganglionic plexus (Plexus aganglionaris extremus) is situated directly at the innermost border of the circular muscle, between the ganglionic external submucosal plexus and the inner border of the circular muscle. Some authors add this plexus to the circular muscle plexus (Brehmer A, Rupprecht H, Neuhuber W 2010 Two submucosal nerve plexus in human intestines. Histochem Cell Biol 133:149-161).
