

GIS Centre Top 10 Tools

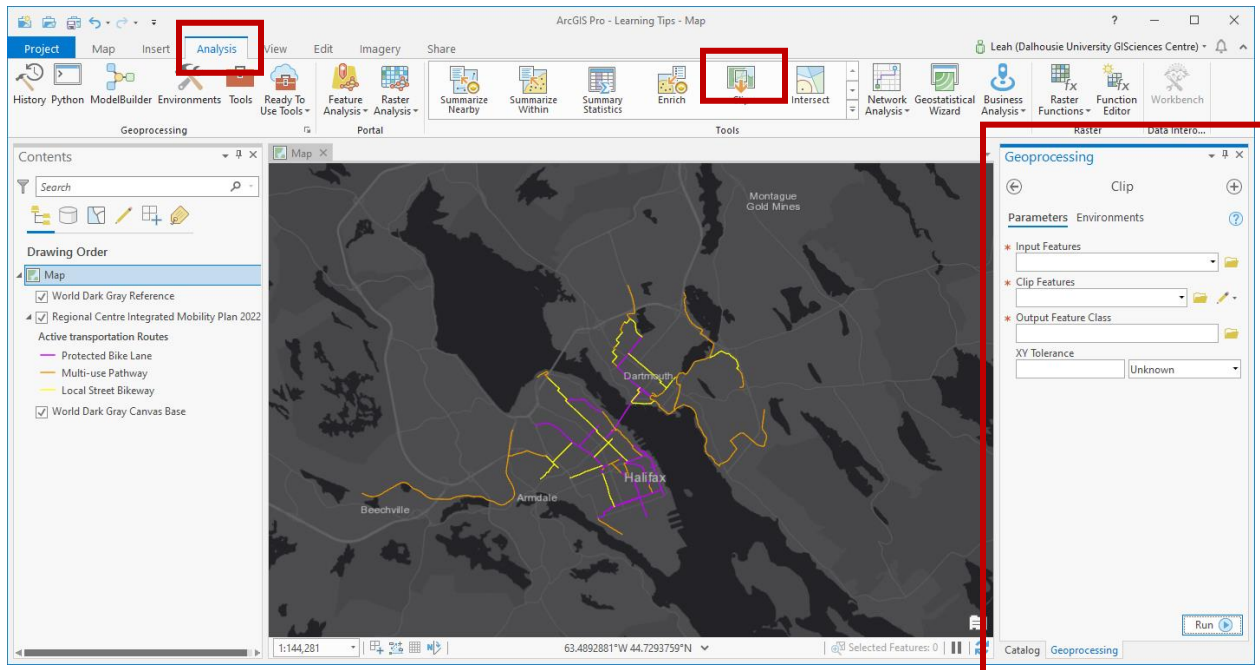

Clip – ArcPro

Extracts input features that overlay the clip features. Easy way to think about this is like making cookies. Cookie Dough is the input and Cookie Cutter is what is going to do the clip feature. (Also see Erase.)

(<https://pro.arcgis.com/en/pro-app/tool-reference/analysis/clip.htm>)

Where do I find it?

Parameters:

Input Features – (The cookie dough) the feature that you want clipped.

Clip Features – (The cookie cutter) the feature used to clip the input feature.

Output Feature Class – The data that is created – rename this.

XY Tolerance – (Generally leave this alone) the minimum distance separating all feature coordinates
