

Canadian Partnership for Tomorrow Project Webinar:
Environmental health research opportunities through CPTP and CANUE:
Today and in the future

Zoom Webinar

Thursday, February 13, 2020
12-1:00 p.m. EST

The Canadian Urban Environmental Health Research Consortium (CANUE), funded by CIHR's Environmental Health Signature Initiative, is advancing research on urban living and human health. One of CPTP's key collaborators, CANUE

provides pre-linked environmental exposure data for the cohort to help accelerate research to increase scientific understanding of the interactions among the physical features of the urban environment and health.

This webinar will provide an overview of the CANUE data and research opportunities made possible by linking CPTP's individual lifestyle, genetic and behavioural data with CANUE's environmental exposure metrics. This collaboration provides health researchers easy access to standardized urban environmental exposures, allowing them to tackle real-world problems related to exposures and the subsequent health outcomes. Ultimately, new knowledge enabled by the CANUE-CPTP partnership will help identify cost-effective actions that promote healthy childhood development and aging, reduce the burden of chronic disease, and minimize the impact of changing environments.

About the Speaker: Dr. Jeffrey Brook

Dr. Jeffrey Brook is CANUE's Principal Investigator and Scientific Director. He is also an Assistant Professor at the University of Toronto's Dalla Lana School of Public Health and Department of Chemical Engineering and Applied Chemistry. He has 25 years of experience as an Environment Canada scientist working at the science-policy interface. He is one of Canada's leading experts in air quality, recognized at all levels of government and academically, including for his substantial contributions in air pollution health research. Dr. Brook has led scientific assessments to inform policy nationally and internationally, and advised multi-stakeholder groups shaping policy.
