

Canadian Space Agency (CSA) - Study on Technology Development in the Digital Health Market for Deep Space Exploration Healthcare Needs

The CSA has released a new Request for Proposals (RFP) for a “**Study on Technology Development in the Digital Health Market for Deep Space Exploration Healthcare Needs**”. This RFP has been sent to a limited number of suppliers through Task and Solutions Professional Services (TSPS), a required method of supply for professional services with pre-qualified suppliers. The objective of the proposed study is to examine the potential development of digital health solutions in the context of deep space exploration. The study intends to inform decision- makers about priority areas of technology development in areas such as diagnostics, clinical decision support, simulation and training based on their potential to be used in future exploration of deep space and to provide details on important economic benefits that may result from technological development in this area.

In recognition of the health-focus of this study and the advantages of a multi-disciplinary team with knowledge of the healthcare system and the digital health market, the CSA would like to facilitate partnerships between the selected suppliers and experts in the healthcare field. The CSA is therefore sending this notification to our distribution list in order to encourage interested experts to contact selected suppliers directly if they would like to collaborate.

A copy of the Statement of Work is attached for further details pertaining to the study.
