

# Book Launch: Altered Inheritance

by Françoise Baylis

Science fantasy has officially become science fact: we are now capable of editing human DNA. It may soon be possible to cure terminally ill patients and couples carrying life-threatening diseases may one day be able to give birth to genetically modified babies. Is this the future we want? Who decides?

In *Altered Inheritance: CRISPR and the Ethics of Human Genome Editing* bioethicist and World Health Organization expert advisor Françoise Baylis engages these and countless other questions.

Françoise will be joined by retired CBC Maritime Noon host Costas Halavrezos.

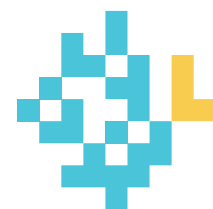

**Thursday, September 12 | 6:30-8:00pm**

Paul O'Regan Hall | Central Library

5440 Spring Garden Road

*Books will be available for purchase*
